Passavant's cushion (pas'av-ans) [Gustav Passavant, German surgeon, 1815-1893]. See under *cushion*.

Passiflora (pas-if-lo'rah) [L. *pas'sio* passion + *flos* flower]. A genus of twining plants of the warmer parts of America; passion flower. Many species are actively medicinal. *P. incarnata* (may-pop), of the United States, is narcotic and sedative. Dose of fluidextract, 5-10 minims (0.333-0.666 cc.).

passion (pash'un) [L. *pas'sio* suffering]. 1. Pain or suffering. 2. Strong emotion. **ileac p.** Same as *ileus*.

passional (pash'un-al). Marked by or exhibiting passion. **p. attitude**. See *attitude*.

passive (pas'iv) [L. *passivus*]. Neither spontaneous nor active; not produced by active efforts.

passivism (pas'iv-izm). Sexual perversion with subjection of the will to another's.

passulæ (pas'u-le). Latin for raisins.

pasta (pas'tah), pl. *pas'tae* [L.]. Paste. **p. peptonata**, Scheich's paste.

paste (pást) [L. *pas'ta*]. A soft, viscid substance; often an escharotic mixture. **Abbot's p.**, a paste prepared from arsenous acid, morphine, and creosote: used for killing the nerve of a tooth.

Alexander's p., a paste for treatment of burns, consisting of ichthyol 4 Gm., olive oil 12 Gm., wool fat 105 Gm. **almond p.**, a magna prepared from bitter almonds: used as a lip salve and dressing for chapped fingers, etc. **arsenical p.**, a caustic paste containing arsenic. **Beck's p.**, a paste consisting of 1 part of bismuth subnitrate and 2 parts of sterile petrolatum: injected for the treatment of tuberculous cavities and chronic sinuses.

bismuth p. See *Beck's p.* **Bougard's p.**, a caustic cancer paste containing mercuric chloride, mercuric sulphide, zinc chloride, arsenic, starch, and flour. **Bourdin's p.**, nitric acid mixed with sublimed sulphur: escharotic. **Brooke's p.**, oleate of mercury, 28 parts; petrolatum, 14 parts; ichthyol, 1 part; starch and zinc oxide, each 7 parts; salicylic acid, 1.2 parts: useful in skin diseases. **Buckley's p.**, a paste containing trioxymethylene: used for desensitizing dentin.

Canquoin's p., zinc chloride mixed with flour and water. **Delbet's p.**, a paste for wound dressings, consisting of tincture of iodine 6 cc., chloroform 6 cc., wax 50 Gm. **dermatologic p.**, a paste made of starch, dextrin, zinc oxide, calcium carbonate, or sulphur, together with glycerin, petrolatum, or a fat and containing some medicine. **dextrinated p.**, a preparation of equal parts of dextrin, glycerin, and distilled water: used as a vehicle for medicinal pastes. **Dupuytren's p.**, a caustic paste of arsenous anhydride, calomel, and gum. **Esmarch's p.**, a caustic paste used in the treatment of cancerous and other growths: made of 1 part of arsenic, 1 of morphine sulphate, 8 of calomel, and 48 of acacia. **flour p.**, a thin mixture of flour and water: used in surgery. **Frère Cosme's p.**, a caustic paste made from 1 part arsenic, 5 parts mercuric sulphide, and 2 parts burnt sponge. **fruit p.**, inspissated fruit juice: used in pharmacy. **guarana p.**, guarana. **jube p.**, a fruit paste originally prepared from jubes. **Lassar's p.**, a dressing for erythema, intertrigo, etc.: petrolatum, 6 ounces; zinc oxide and starch, each, 6 drachms; and salicylic acid, 30 grains. **London p.**, a paste containing quicklime and caustic soda. **Marsden's p.**, a mixture of 2 parts of arsenous acid with 1 part of gum acacia: used as an escharotic. **Mayet's p.**, a paste made of 1 part of zinc oxide, 8 parts of zinc chloride, and 7 parts of flour: used in cancer. **Morison's p.** See *Morison's method*, under *method*. **phosphorus p.**, phosphorus made into a paste with flour: a rat poison. **Piffard's p.**, a paste made of 1 part of copper sulphate, 5 parts of tartrated soda, and 2 parts of caustic soda: used in testing the urine for sugar. **Robinquet's p.**, a paste for cancer, made of equal parts of zinc chloride and flour with gutta-percha. **Schleich's p.**, an adhesive paste for fixing bandages on wounds; called also *pasta peptonata*. **serum p.**, a paste prepared from dried and sterilized blood serum: used as a dressing for wounds. **sulphuric acid p.**, a mixture of sulphuric acid and powdered saffron in equal parts: used as a caustic. **Unna's p.**, a paste made of 1 oz. of zinc oxide and 2 oz. each of mucilage of acacia and glycerin. It is applied with a brush to eczematous patches. **Veiel p.**, equal parts of zinc oxide and petrolatum, with 4 per cent of boric acid: used for furuncles. **Vienna p.**, a caustic paste of potash and lime. **Ward's p.**, a confection of black pepper.

pastern (pas'tern). The portion of a horse's foot occupied by the first and second phalanges. **p. bone**. See under *bone*.

Pasteur's fluid, liquid solution (pas-terz') [Louis Pasteur, French chemist and bacteriologist, 1822-1895]. See *Pasteur's solution*, under *solution*.

Pasteurella (pas-ter-el'ah) [Louis Pasteur]. A genus of bacterial organisms, in the form of rod-shaped cells, gram-negative, and showing bipolar staining. It includes the organism of bubonic plague and of the hemorrhagic septemicias of animals, organisms formerly included under the genus *Bacillus*. **P. aviseptica**, a short nonmotile, gram-negative organism showing polar staining and found in the blood of fowls suffering from chicken cholera, which it causes. Called also *Bacillus avisepticus*, *B. of chicken cholera*, *B. cholerae-avium*, *B. cholerae-gallinarum*, and *B. gallinarum*. **P. bovisseptica**, short nonmotile rods from the blood and fluids of animals dying of European cattle plague. **P. cholerae-gallinarum. See *P. aviseptica*. **P. pes'tis**, a short, thick, gram-negative, rod-shaped organism which shows polar staining and involution forms. It is highly virulent for most laboratory animals and causes bubonic plague in man. Called also *Bacillus pestis* and *Yersin's bacillus*. **P. suisseptica**, a small, nonmotile, gram-negative organism closely resembling the *P. aviseptica*. It is found in cases of swine plague and causes the disease. Called also *Bacillus suidica* and *B. suisseptica*.**

pasteurellosis (pas-ter-el-o'sis). Any one of a group of fatal infectious diseases of various animals, caused by bacteria of the hemorrhagic septemicia group. **p. bubalo'rum**. Same as *barbone*.

pasteurin (pas-tu'rin). A proprietary antiseptic fluid mixture.

pasteurization (pas'tur-iz-a'shun) [after Louis Pasteur, French chemist and biologist, 1822-1895]. The arrest or checking of fermentation by heating, usually to 60 C., for thirty minutes.

pasteurizer (pas'tu-ri-zer). An instrument used in effecting pasteurization.

Pastia's sign (pas'te-ahz) [C. Pastia, contemporary Rumanian physician]. See *sign*.

pastil (pas'til) [Fr. *pastille*]. A troche or lozenge; also an aromatic mass to be burnt as a fumigant.

pastille (pas-tél'). Same as *pastil*. **Sabouraud's p's**, lozenges of barium platinocloride with acetate of starch and collodion: used to indicate by their change of color the strength of roentgen rays.

pastometer (pas-tom'et-er). An instrument for indicating when milk that is being pasteurized has reached the pasteurization temperature.

past pointing. See *pointing test*, under *tests*.

patarchur (pat-ar-choor'). An East Indian plant, *Plectranthus secundus*: administered for the relief of stranguery.

patch (patsh) [L. *pila'cium*; *πιττάκιον*]. An area differing from the rest of a surface. **drab-colored p.**, a peculiar spot on the liver after various tropical hepatic diseases. **Hutchinson's p.**, a reddish or salmon-yellow patch of the cornea in syphilitic keratitis. **mucous p.**, condyloma latum: a lesion characteristic of syphilis. **opaline p.**, a mucous patch of the mouth sometimes seen in syphilis. **Peyer's p's**, whitish patches of lymph follicles in the mucous and submucous layers of the small intestine. **salmon P.**, a salmon-colored spot in the cornea in syphilis of that structure. **white p.**, a white opaque spot on the pericardium or on the capsule of the spleen, due to rubbing against a nodule of a rib in rachitis.

patchouli, patchouly (pat-shoo'le). A labiate herb of India, *Pogostemon patchouli*: used chiefly in perfumery.

patefaction (pat-e-fak'shun) [L. *patefa'cere* to lay open]. The act of laying open.

patella (pat-el'ah) [L. "pan"]. The kneecap, or kneecap; a lens-shaped sesamoid bone situated in the front of the knee, in the tendon of the quadriceps extensor femoris muscle. **floating p.**, a patella which is floated up from the condyles by a large effusion in the knee. **riders' painful p.**, tenderness and pain in the patella of horseback riders.

patellapexy (pat-el'ap-ek-se) [*patella* + *πῆξις* fixation]. The operation of suturing the patella to the lower end of the femur.

patellar (pat-el'ar) [L. *patella'rius*]. Of or pertaining to the patella.

patelliform (pat-el'if-orm). Shaped like the patella.

patellofemoral (pa-tel'o-fem'o-ral). Pertaining to the patella and the femur.

patency (pa'ten-se) [L. *pa'tens* open]. The condition of being wide open.

patent (pa'tent) [L. *pa'tens*]. Wide open, or patulous.

path (path). The course, or set of fibers, along which any nervous impulse moves, whether esodic or exodic; particularly the intracranial or intraspinal portion of such a course.

pathema (path-e'mah), pl. *pathemas* or *pathem'ata* [*πάθημα* disease]. Any disease state or morbid condition.

pathematology (path'e-mat-ol'o-je) [*πάθημα* disease + *λόγος* treatise]. 1. Pathology. 2. The science treating of mental affections and of the passions.

pathetic (path-et'ik) [L. *pathet'icus*; *παθητικός*]. Pertaining to the feelings.

patheticus (path-et'ik-us). 1. Either nerve of the fourth pair. 2. The superior oblique muscle of the eye.

pathetism (path-et-izm) [*παθητός* passive]. Hypnotism, or mesmerism.

pathfinder (path'find-er). A device for locating strictures of the urethra; also dental instrument for tracing the course of root canals.

pathic (path'ik) [L. *path'icus*; *παθικός*]. One who submits himself or herself to the unnatural sexual desires of another.

patho-amine (path-o-am'in). An amine causing disease, or formed as the product of a disease process; a ptomaine.

patho-anatomy (path'o-an-at'o-me). Pathologic anatomy.

pathobiology (path'o-bi-ol'o-je). Same as *pathology*.

pathobolism (path-ob'o-lizm) [*πάθος* disease + *metabolism*]. A condition of perverted metabolism of a disease nature.

pathodontia (path-o-don'she-ah) [*πάθος* disease + *δούς* tooth]. The department of dentistry which deals with diseases of the teeth.

pathoformic (path-o-for'mik) [*πάθος* disease + *L. forma* form]. Pertaining to the beginning of disease: said of symptoms at the beginning of mental disorder.

pathogen (path'o-jen) [*πάθος* disease + *γεννάν* to produce]. Any disease-producing micro-organism or material.

pathogenesis, pathogenesy (path-o-jen'es-is, path-o-jen'es-e) [*πάθος* disease + *γένεσις* origin]. The development of morbid conditions or of disease. **drug p.**, the production of symptoms of disease by the use of drugs.

pathogenic, pathogenetic (path-o-jen'ik, path'o-jen-et'ik). Giving origin to disease or to morbid symptoms.

pathogenicity (path-o-jen-is'it-e). The state of being pathogenic.

pathogeny (path-o-jen-e). Same as *pathogenesis*.

pathognomonic (path-og-no-mon'ik) [*πάθος* disease + *γνωμονικός* showing]. Pointing out the nature of a disease or illness.

pathognomy (path-og'no-me) [*πάθος* disease + *γνώμη* opinion]. 1. The science of the signs and symptoms of disease. 2. The recognition of the nature of a disease by observation of the unconscious revelation of the feelings and passions of the patient.

pathognostic (path-og-nos'tik). Same as *pathognomic*.

pathography (path-og'raf-e) [*πάθος* disease + *γράφειν* to write]. A history or description of disease.

patholesia (path-o-le'ze-ah). An hysterical condition.

pathologic, pathological (path-o-loj'ik, path-o-loj-ik-al). Pertaining to pathology.

pathologico-anatomic (path-o-loj'ik-o-an-at-om'ik). Pertaining to pathologic anatomy.

pathologist (path-ol'o-jist). One learned or skilled in pathology.

pathology (path-ol'o-je) [*πάθος* disease + *λόγος* discourse]. That branch of medicine which treats of the essential nature of disease, especially of the structural and functional changes caused by disease. **cellular p.**, that which regards the cells as starting points of the phenomena of disease and that every cell descends from some preexisting cell (Virchow). **comparative p.**, that which institutes comparisons between various diseases of the human body and those of the lower animals. **dental p.**, the sum of knowledge regarding diseases of the teeth. **exotic p.**, a system of pathology foreign to the country or school in which it has found a lodgment. **experimental p.**, the study of artificially induced disease processes. **functional p.**, the study of the changes of function due to morbid tissue changes. **general p.**, that which takes cognizance of pathologic conditions, which may occur in various diseases and in different organs. **geographical p.**, pathology in its geographic and climatic relations. **humoral p.**, the opinion that disease is due to abnormal conditions of the fluids of the body. **medical p.**, **internal p.**, that which relates to morbid processes which are not accessible to operative interference. **plant p.**, vegetable pathology. **solidistic p.**, that opinion which attributes disease to rarefaction or condensation or the solid tissues. **special p.**, the study of the pathology of particular diseases or organs. **surgical p.**, **external p.**, the study of the pathology of such diseases as are accessible to operative interference. **vegetable p.**, the pathology of plant diseases.

patholysis (path-ol'is-is) [*πάθος* disease + *λύσις* dissolution]. The dissolution of disease.

pathomaine (path'o-mān). Any one of the pathogenic cadaveric alkaloids.

pathomania (path-o-ma'ne-ah) [*πάθος* disease + *μανία* madness]. Moral insanity.

pathometabolism (path'o-met-ab'o-lizm) [*πάθος* disease + *metabolism*]. Metabolism in disease.

pathometry (path-om'et-re) [*πάθος* disease + *μετρέειν* to measure]. Sir Ronald Ross' term for the quantitative study of parasitic invasion and infection in individuals or groups of individuals.

pathomimecry (path'o-mim'ek-re). Pathomimesis.

pathomimesis (path'o-mim-e'sis) [*πάθος* disease + *μιμῆσις* mimicry]. The imitation or feigning of disease; malingering.

pathomorphism (path-o-mor'fizm). Perverted or abnormal pathology.

pathonomia, pathonomy (path-o-no'me-ah, path-on'o-me) [*πάθος* disease + *νόμος* law]. The sum of knowledge regarding the laws of disease.

patho-occlusion (path'o-ok-lu'zhun). Malocclusion.

pathophilia (path-o-fil'e-ah) [*πάθος* disease + *φιλεῖν* to love]. The condition in which a patient adapts himself and his mode of life to some chronic affection.

pathophobia (path-o-fo'be-ah) [*πάθος* disease + *φόβος* fear]. Morbid dread of disease.

pathophoresis (path'o-fo-re'sis) [*πάθος* disease + *φόρος* bearing]. The transmission of disease.

pathophoric (path-o-for'ik). Pathophorous.

pathophorous (path-o'o-rus). Conveying or transmitting disease.

pathopoiesis (path'o-poi-e'sis) [*πάθος* disease + *ποιεῖν* to make]. 1. The causation of disease. 2. The tendency of the individual to become diseased.

pathopsychology (path'o-si-kol'o-je) [*πάθος* disease + *psychology*]. The psychology of mental disease; pathologic psychology.

pathoradiography (path'o-ra-de-og'raf-e). Pathoröntgenography.

pathoröntgenography (path'o-rent-gen-og'raf-e). The study of pathologic lesions by the röntgenogram.

patient (pa'shent) [L. *pa'tiens*]. A person who is ill or who is undergoing treatment for disease.

outp. See *outpatient*.

Patrick's test (pat'riks) [Hugh Talbot Patrick, neurologist in Chicago, born 1860]. See under *tests*.

patrilineal (pat-ril-in'e-al) [L. *pa'ter* father + *lin'ea* line]. Descended through the male line.

patroclinous (pat-ro-kl'i-nus) [*πατήρ* father + *κλινεῖν* to incline]. Inheriting or inherited from the father. Cf. *matroclinous*.

patrogenesis (pat-ro-gen'es-is) [*πατήρ* father + *γενεῖν* to produce]. A form of reproduction in which the chromatin of the new organism is derived entirely from the sperm cell.

patten (pat'n). A metallic support to be worn under the sound foot in hip joint disease.

pattern (pat'ern). A design or arrangement of figures. **action p.**, Crile's term for the congenital or acquired manner in which certain stimuli produce certain actions in individuals. **muscle p.**, a number of muscles organized in a definite fashion and responding as a whole to a stimulus. **stimulus p.**, a group of stimuli resulting from a particular situation.

patulous (pat'u-lus) [L. *pat'ulus*]. Spreading somewhat widely apart; open.

paucine (paw'sin). A yellow, flaky alkaloid, $C_{27}H_{38}N_8O_6.6\frac{1}{2}H_2O$, from the paucou nut, the fruit of *Pentaclethra macrophylla*, an African plant.

Paullinia (pawl-in'e-ah) [L., after C. F. Paullini, 1643-1712]. A genus of sapindaceous plants of tropical America. *P. cupa'na* affords guarana (q. v.). *P. pinna'la*, of Brazil, is used homeopathically.

paulocardia (paw-lo-kar'de-ah) [*παῦλα* pause + *καρδία* heart]. 1. Abnormal prolongation of the period of rest in the cardiac cycle. 2. A subjective sensation of stoppage of the heart beat.

Paul of Aegina, Paulus Aegineta (ej-in'e'tah). A celebrated Greek medical writer who practised in Alexandria during the first half of the seventh century, and was distinguished as surgeon and obstetrician. Of his many works, only one has survived, a compendium of medicine in seven books.

Paul's sign (pawlz) [Constantin Charles Théodore Paul, French physician, 1833-1896]. See *sign*.

Paul's test (pawlz) [Gustav Paul, Austrian physician, born 1859]. See under *tests*.

Paul-Mixter tube [Frank Thomas Paul, English surgeon, born 1851; Samuel Jason Mixter, Boston surgeon, 1855-1926]. See under *tube*.

Paullinia (pawl-in'e-ah). See *guarana*.

paunch (pawntsh). See *rumen*.

pause, compensatory (pawz). The prolonged pause following an extrasystole which compensates for the extra beat, so that the total rate of the beat remains constant.

pausimonia (paw-se-me'ne-ah) [*παῦσις* pause + *μήν* month]. Menopause.

Pauzat's disease (po-zahz') [Jean Eugène Pauzat,

French physician]. Osteoplastic periostitis of the metatarsus.

pavement epithelium (pāv'ment). See *epithelium*.

pavilion (pav-il'yun) [L. *papilio* butterfly, tent]. A dilated or flaring expansion at the end of a passage. **p. of the ear**, the auricle, **p. of the oviduct**, its outer, or fimbriated, end. **p. of the pelvis**, its upper, flaring portion.

Pavloff. See *Pavlov*.

Pavlov's method, stomach (pahv'lov) [Ivan Petrovich Pavlov, Russian physiologist, born 1848]. See *method and stomach*.

pavon (pa'von). A proprietary opium preparation representing the total alkaloids of the drug.

pavor nocturnus (pa'vor nok-tur'us) [L.]. Night terrors: a kind of nightmare of children.

Pavy's disease, solution (pa'vez) [Frederick William Pavy, English physician, 1829-1911]. See *disease and solution*.

Pawlik's fold, triangle (pahv'liks) [Karel J. Pawlik, gynecologist in Prague, 1849-1914]. See *fold and triangle*.

Pawlow. See *Pavlov*.

pawpaw (paw'paw). 1. Same as *papaw*. 2. The shrub *Asim'ina triloba*, of North America, and its fruit.

paxine (paks'in). A proprietary vermifuge and sedative for infants. Dose, 10-60 minims (0.666-4 cc.).

Paxton's disease (paks'tonz). See *disease*.

Payr's method (pīrz) [Erwin Payr, German surgeon, born 1871]. See under *method*.

payta (pa'tah). A white bark resembling cinchona from an unidentified species of *Aspidosperma*.

paytamine (pa'tam-in). An alkaloid, $C_{21}H_{24}N_2O$, from payta bark.

paytine (pa'tin). An alkaloid, $C_{21}H_{24}N_2O \cdot H_2O$, from payta bark.

P. B. Abbreviation for *Pharmacopoeia Britannica*, British pharmacopeia.

Pb. The symbol for lead [L. *plum'bum*].

Pb(C₂H₃O₂)₂. Lead acetate.

PbCO₃. Lead carbonate.

PbCrO₄. Lead chromate.

P. B.-E. Abbreviation for German *Perlsucht Bacillen-emulsion*, a form of tuberculin prepared from a culture of bacilli of bovine tuberculosis.

PbI₂. Lead iodide.

Pb(NO₃)₂. Lead nitrate.

PbO. Lead monoxide.

PbO₂. Lead dioxide.

PbS. Lead sulphide.

PbSO₄. Lead sulphate.

P. C. Abbreviation for L. *pondus civi'le*, avoirdupois weight.

P. c. Abbreviation for L. *post cibum*, after food.

Pc. Abbreviation for *convergence near point*.

P. Cc. Abbreviation for *periscopic concave*.

P. C. M. O. Abbreviation for *Principal Colonial Medical Officer*.

P. Cx. Abbreviation for *periscopic convex*.

P. D. Abbreviation for *potential difference and inter-pupillary distance*.

Pd. The chemical symbol for *palladium*.

p.-d. An abbreviation for *prism-diopler*.

peach fever (pēch). See *fever*.

Péan's operation, position (pa-az') [Jules Péan, French surgeon, 1830-1898]. See *operation and position*.

peanut (pe'nut). The edible fruit of *Ar'achis hypo-gae'a*, a leguminous plant cultivated in warm and hot regions. Its fixed oil is a substitute for olive oil.

pearl (perl). 1. A small calcareous concretion from various species of mollusks, formerly regarded as having sovereign curative powers. 2. A small medicated granule; also a glass globule with a single dose of volatile medicine. 3. Any one of the rounded masses of tough sputum seen in the early stages of an attack of bronchial asthma. **epidermic p's**, **epithelial p's**, rounded concentric masses of epithelial cells found in certain papillomas and epitheliomas. Called also *pearly bodies*. **Epstein's p's**, small, whitish-yellow masses on either side of the raphe of the hard palate of the new-born. **gouty p.**, a sodium urate concretion on the cartilage of the ear in gouty persons. **Laënnec's p's**, soft casts of the smaller bronchial tubes expectorated in bronchial asthma.

pearlash (perl'ash). Impure potassium carbonate in crystals.

pearl disease. Tuberculosis of the peritoneum and mesentery of cattle.

Pearson's solution [George Pearson, English physician, 1751-1828]. See *solution*.

peat (pēt). Carbonized vegetable matter found in bogs: used in peat baths and as a dry absorbent dressing.

pebble (peb'l). A kind of rock crystal from which lenses are sometimes cut.

pebeco (peb'ek-o). A proprietary tooth paste containing potassium chlorate.

pébrine (peb-rēn') [Fr.]. An infectious disease of silkworms caused by *Nosema bombycis*.

peccant (pek'ant) [L. *pec'cans* sinning]. Unhealthy; causing illness or disease.

peciloblast, poeciloblast (pe-sil'o-blast) [*ποικίλος* mottled + *βλαστός* germ]. A deformed or malformed red blood corpuscle.

pecilocyte (pes'il-o-sit') [*ποικίλος* spotted + *κύτος* cell]. Same as *peciloblast*.

pecilocythemia (pes-il'o-si-the'me-ah) [*pecilocyte* + *αἷμα* blood]. The presence of pecilocytes in the blood.

pecilocytosis (pes'il-o-si-to'sis). Same as *pecilocythemia*.

pecilonymy (pes-il-on'i-me). See *poikilonymy*.

pecilothermal, pecilothermic, pecilothermous (pes'il-o-ther'mal, -mik, -mus). See *poikilothermal*.

pecilothermism (pe-sil-o-ther'mizm). The quality of being poikilothermal.

Pecquet, cistern of, reservoir of (pek-ā') [Jean Pecquet, French anatomist, 1622-1674]. The receptaculum chyli.

pectase (pek'tās). A nitrogenous ferment associated with pectose in fruits; it coagulates various pectins.

pecten (pek'ten) [L. for *comb*]. The os pubis. **p. os/sis pu'bis** [B N A], **p. pu'bis**, the pectineal line. **p. scl'e'rae**, the crustlike edge of the sclera around the entrance of the optic nerve. Called also *scleral rim*.

pectenine (pek'ten-in). A poisonous alkaloidal compound from a Mexican cactus, *Ce'reus pecten*.

pectic acid (pek'tik). See *acid*.

pectin (pek'tin) [*πηκτός* congealed]. A polysaccharide from fruits and plants, the base of vegetable jelly. It is formed by the transformation of the pectose of unripe fruit and consists largely of the methyl and other esters of galacturonic acid.

pectinase (pek'tin-ās). A ferment, derivable from most plants, which coagulates all the pectins, and liquefies pectins which have been coagulated by pectase.

pectinate (pek'tin-āt) [L. *pec'ten* comb]. Shaped like a comb.

pectineal (pek'tin'e-al) [L. *pec'ten* comb, pubes]. Pertaining to the os pubis.

pectineus (pek'tin'e-us) [L.]. See under *muscles, table of*.

pectiniform (pek-tin'if-orm) [L. *pec'ten* comb + *for'ma* form]. Comb shaped.

pectization (pek-tiz-a'shun) [πηκτικός curdling]. Coagulation or gelatinization; a term used in colloidal chemistry.

pectoral (pek'to-ral) [L. *pectora'lis*]. 1. Pertaining to the breast or chest. 2. Serviceable in diseases of the chest; bechic.

pectoralgia (pek-to-ral'je-ah) [L. *pec'tus* breast + ἄλγος pain]. Pain in the breast.

pectoralis (pek-to-ra'lis) [L.]. See *muscles, table of*.

pectoriloquy (pek-to-ril'o-kwé) [L. *pec'tus* breast + *lo'qui* to speak]. Transmission of the sound of spoken words through the chest wall. It is indicative of excavation of the lung when heard alone; if it is combined with bronchophony, it indicates consolidation of the lung. **aphonic p.**, the sound of the whispered voice transmitted through a serous, but not through a purulent, exudate within the pleura; Baccelli's sign. **whispering p.**, the transmission of the sound of whispered words through the walls of the chest.

pectorin (pek'to-rin). A proprietary remedy for pulmonary tuberculosis.

pectorophony (pek-to-rof'o-ne) [L. *pec'tus* breast + φωνή voice]. Exaggeration of the vocal resonance heard on auscultation.

pectose (pek'tós). A principle in unripe fruits and plants from which pectin is derived.

pectosinase (pek'to-sin-ās). A ferment which changes pectose into pectin and pectin into various fermentable sugars.

pectous (pek'tus). Pertaining to, composed of, or resembling pectin; having a firm, jelly-like consistence.

pectunculus (pek-tung'ku-lus) [L. dim. of *pec'ten* comb]. Any one of the series of small longitudinal ridges on the aqueduct of Sylvius.

pectus (pek'tus) [L.]. The breast: the chest or thorax. **p. carina'tum** [L. "keeled breast"], chicken breast; pigeon breast; undue prominence of the sternum. **p. excava'tum**, funnel breast.

pedal (ped'al) [L. *peda'lis*; *pes* foot]. Pertaining to the foot or feet, or to a pes.

pedarthroace (pe-dar-throk'a-sé) [παῖς child + *arthroace*]. Caries of the joints in children.

pedatrophia, pedatrophny (pe-dat-rof'e-ah, pe-dat-ro-fé) [παῖς child + *atrophia* or *atrophy*]. 1. Infantile atrophy. See under *atrophy*. 2. Tabes mesenterica.

pederast (pe'der-ast). One who practises pederasty.

pederasty (pe'der-as-té) [παῖς boy + ἐραστής lover]. Sexual intercourse with boys by the anus.

pedesis (pe-de'sis) [πῆδησις leaping]. The quick darting movement of fine particles of solid matter in a limpid liquid; brownian movement.

pediadontia (pe-de-ad-on'she-ah). Same as *pedodontia*.

pediadontist (pe''de-ad-on'tist). Same as *pedodontist*.

pediadontology (pe''de-ad-on-tol'o-je). Same as *pedodontia*.

pedialgia (ped-e-al'je-ah) [πῆδιον foot + ἄλγος pain]. Neuralgic pain in the foot.

pediatric (pe-de-at'rik). Pertaining to diseases of children.

pediatrician (pe-de-at-rish'un). A specialist in the treatment of children's diseases.

pediatrics (pe-de-at'riks) [παῖς child + ἰατρία cure]. That branch of medicine which treats of the diseases of children and their treatment.

pediatrist (pe-de-at'rist). Same as *pediatrician*.

pediatry (pe'de-at-re). Same as *pediatrics*.

pedicellate, pedicellated (ped-is'il-ät, ped'is-il-a-ted). Same as *pediculate*.

pedicellation (ped-is-el-a'shun). The development of a pedicle.

pedicle (ped'ik-el) [L. *pedic'ulus*]. 1. The stem of a tumor or of a flap. 2. The process which connects the lamina of a vertebra with the centrum.

pedicled (ped'ik-lä). Having a pedicle.

pedicterus, paedicterus (pe-dik'ter-us) [παῖς child + ἰκτερος jaundice]. Jaundice of new-born infants; icterus neonatorum.

pedicular (ped-ik'u-lar) [L. *pedicula'ris*]. Pertaining to or caused by lice.

pediculate (ped-ik'u-lät) [L. *pedicula'tus*]. Provided with a pedicle.

pediculation (pe-dik-u-la'shun) [L. *pedicula'tio*]. 1. Infestation with lice. 2. The process of forming a pedicle.

pediculicide (ped-ik'u-lis-id) [L. *pedic'uli* lice + *ca'e're* to kill]. Destroying lice.

pediculin (ped-ik'u-lin). A proprietary remedy for lice; crude naphthalin (35 per cent) and chalk (65 per cent).

pediculofrontal (ped-ik''u-lo-fron'tal). Pertaining to the pedicles of the frontal convolutions.

Pediculoides ventricosus. A small mite of the family Tarsonemidae, found in the straw of various cereals and producing a peculiar urticaroid der-

Pediculoides ventricosus, male and female.

matitis known as *straw-mattress dermatitis* and *grain itch*. See *straw itch*, under *itch*.

pediculoparietal (ped-ik''u-lo-pa-ri'et-al). Pertaining to the pedicles of the cerebral convolutions and to the parietal region.

pediculophobia (ped-ik''u-lo-fö-be-ah) [L. *pedic'ulus* louse + φόβος fear]. Morbid dread of infestation with lice.

pediculosis (ped-ik-u-lo'sis) [L. *pedic'ulus* louse]. Lousiness; a skin disease produced by lice. **p. capillit'i**, **p. cap'itis**, lousiness of the hair of the head. **p. corporis**, the presence of lice on the body or in the clothing. **p. inguina'lis**, **p. pu'bis**, the presence of crab lice in the pubic hairs. **p. palpebra'rum**, the presence of crab lice in the eyelashes. **p. vestimen'ti**, **p. vestimen'to'rum**. Same as *p. corporis*.

pediculous (ped-ik'u-lus). Infested with lice.

pediculus (ped-ik'u-lus), pl. *pedic'uli*. 1. Latin for louse. 2. Latin for pedicle. 3. A genus of the Hemiptera. **P. cap'itis**, the head louse, which may carry typhus fever, favus, and impetigo. **P. corporis**, **P. vestimen'ti**, the cootie or body louse. It transmits typhus fever, trench fever, relapsing fever, and perhaps other diseases, and causes urticaria and melanoderma. **P. huma'nus**, a term that includes both the head and the body lice. **P. inguina'lis**, the crab louse. **P. pu'bis**, the crab louse, which infests the hairy parts in the genital region. See *Phthirus pubis*.

pedicure (ped'ik-ür) [L. *pes* foot + *cu'ra* care]. A chiropodist, or corn doctor.

pediluvium (ped-il-u've-um) [L. *pes* foot + *lu've're* to wash]. A foot bath.

Pediococcus (ped'e-o-kok'kus) [πῆδιον instep + κόκκος berry]. A genus of bacteria. **P. ac'idilac'tici**, a species found in malt mash and hay decoction and generating lactic acid. **P. al'bus**, a nonpathogenic species found in spring water. **P. auranti'acus**, a species found in water and in garden soil, and forming an orange-yellow pig-

ment. **P. cerevis'iae**, a species found in beer, generating traces of lactic acid. **P. maggio'rae** is found in the skin of the foot and in the nasal passages: it is not known to be pathogenic.

pediodontia (pe'de-o-don'she-ah). Same as *pedodontia*.

pedionalgia (ped-e-o-nal'je-ah) [*πῆδιον* sole + *ἄλγος* pain]. Pain in the sole of the foot.

pediophobia, paediophobia (pe-de-o-fo'be-ah) [*παῖδιον* child + *φόβος* fear]. Morbid dread of infants or of dolls.

pediphalanx (ped-if-a'lanks) [*L. pes* foot + *phalanx*]. A phalanx of the foot. Cf. *maniphalanx*.

pedistibulum (ped-is-tib'u-lum) [*L.*]. The stapes.

peditis (ped-i'tis) [*L. pes* foot + *itis*]. Inflammation of the pedal bone of the horse.

pedobaromacrometer (pe'do-bar'o-mak-rom'-et-er) [*παῖς* boy + *βάρος* weight + *μακρός* long + *μέτρον* measure]. An instrument for measuring and weighing infants.

pedobarometer (pe'do-bar-om'-et-er) [*παῖς* child + *βάρος* weight + *μέτρον* measure]. An instrument for weighing infants.

pedodontia (pe-do-don'she-ah) [*παῖς* child + *ὀδούς* tooth]. The department of dentistry which deals with the teeth and mouth conditions of children.

pedodontics (pe-do-don'tiks). Same as *pedodontia*.

pedodontist (pe-do-don'tist). A dentist who specializes in pedodontia.

pedodynamometer (ped'o-di-nam-om'-et-er) [*L. pes* foot + *dynamometer*]. An instrument for measuring the strength of a leg.

pedogamy (pe-dog'am-e) [*παῖς* child + *γάμος* marriage]. Fertilization by the union of separate cells having the same chromatin ancestry: called also *endogamy*.

pedograph (ped'o-graf) [*L. pes* foot + *γράφειν* to write]. An imprint on paper of the weight-bearing surface of the foot, surrounded by a pencil-marked contour of the upper foot.

pedologist (pe-dol'o-gist). A specialist in pedology.

pedology, paidology (pe-dol'o-je, pi-dol'o-je) [*παῖς* child + *λόγος* treatise]. The systematic study of the life and development of children.

pedometer (pe-dom'-et-er) [*παῖς* child + *μέτρον* measure]. 1. An instrument for measuring infants. 2. An instrument for recording the number of steps taken in walking.

pedomorphism (pe-do-mor'fiz-m) [*παῖς* child + *μορφή* form]. The retention of infantile characters in the adult organism.

pedonosology (pe'do-nos-ol'o-je) [*παῖς* child + *νόσος* disease + *λόγος* treatise]. Pediatrics.

pedontia (pe-don'she-ah). Pedodontia.

pedontology (pe-don-tol'o-je). Pedodontia.

pedophilia (pe-do-fil'e-ah) [*παῖς* child + *φιλεῖν* to love]. The condition of being fond of children.

pedophilic (pe-do-fil'ik). Fond of children.

pedophobia (pe-do-fo'be-ah). Fear or dread of children.

peduncle (ped'ung-kl) [*L. peduncul'us*]. A stem or supporting part. **callosal p's**, bands which go on either side from under the callosum to the fissure of Sylvius. **cerebellar p's**, one of the fibrous bands by which the cerebellum is attached to the brain stem. There are three peduncles on each side: the *superior p.*, or brachium conjunctivum; the *middle p.*, or brachium pontis; the *inferior p.*, or corpus testiforme. **cerebral p's**, a large white bundle, which forms the ventral portion of the midbrain. It passes from the upper margin of the pons upward and lateralward under cover of the temporal lobe to the optic tract. Called also *crus cerebri*. **olfactory p.**, the constricted portion of the brain which bears the olfactory lobe. **pineal p.**, a slender band going

forward on either side from the pineal body. **thalamic p.**, any one of several bundles of fibers extending from the thalamus to every part of the cerebral cortex.

peduncular (ped-ung'ku-lar). Pertaining to a peduncle.

pedunculate, pedunculated (ped-ung'ku-lat, ped-ung'ku-la-ted). Provided with a peduncle.

pedunculus (ped-unk'u-lus). See *peduncle*. **p. cer'e'br'i** [B N A]. See *cerebral peduncle*, under *peduncle*. **p. cor'poris pinea'lis**, the peduncle of the pineal body. **p. flocc'uli** [B N A], the lateral expansion of the posterior medullary velum toward the flocculus.

peenash (pe'nash) [India]. Rhinitis due to the presence of insect larvae in the nose.

peg. See *dowel*.

pegamoid (peg'am-oid). A collodion preparation: used in treating textile fabrics.

pegnin (peg'nin). A proprietary preparation for coagulating the casein of milk preparatory to infant feeding (Dungern).

peinotherapy (pi-no-ther'ap-e) [*πείνα* hunger + *θεραπεία* cure]. Hunger cure or starvation cure; severe fasting as a means of cure.

pelada (pe-la'dah) [Fr. *pelade*]. Alopecia areata.

pelage (pe'lej) [Fr.]. The hairs of the body, limbs, and head collectively.

pelagia (pe-la'je-ah) [L.]. An erysipelatous disease of the hands or face.

pelagin (pel'aj-in). A proprietary treatment for sea sickness; a solution of ether, cocaine, anti-pyrene, and caffeine.

Pel'amis bico'lor. A poisonous sea snake of the Indian ocean.

Pel-Ebstein disease (pel-āb'stin) [Pieter Kluzes Pel, Dutch physician, 1852-1919; Wilhelm Ebstein, German physician, 1836-1912]. See under *disease*.

pelicology (pel-ik-ol'o-ge) [*πελίκα* pelvis + *λόγος* treatise]. The study of the pelvis.

pelicometer (pel-ik-om'-et-er) [*πελίκα* pelvis + *μέτρον* measure]. Same as *pelvimeter*.

pelidisi (pel-id'e-se) [term coined from *L. pondus* decies *linearis divisus sidentis* (altitudo) meaning weight ten line divided sitting height]. The unit of Pirquet's index for determining the nutritive condition of children. It is obtained by dividing the cube root of ten times the weight (in grams) by the sitting height (in centimeters). A pelidisi of 94 or less indicates undernutrition; of 95-100, good nutrition, and of 101 or above, overnutrition.

pelidnoma (pel-id-no'mah) [*πελιδνώμα*; *πेलίος* livid]. A livid spot or patch on the skin.

pelio'ma (pe-le'o-mah). 1. A livid spot. 2. Peliosis. **p. typho'sum**, a state marked by livid spots on the extremities.

peliosis (pel-e-o'sis) [*πελίος* livid]. Same as *purpura*. **p. rheumatica**. See *purpura rheumatica*.

pellagra (pel'ag-rah, pel-a'grah) [*L. pel'lis* skin + *ἄγρᾱ* seizure]. An endemic skin and spinal disease of southern Europe (Casal, 1735; Frapolli, 1771), occurring frequently also in the southern and central parts of the United States. It is now regarded as well established that the disease is due to a deficiency of certain unidentified substances (vitamin B₂ or G) contained in lean meat, milk, and yeast. It is marked by a recurring erythema of the surface of the body, which is followed by exfoliation of the epidermis. There are weakness and debility, digestive disturbance, spinal pain, convulsions, melancholia, and idiocy. It is called also *Italian leprosy*, *Lombardy leprosy*, and *may-idism*. **p. sine pellagra**, pellagra in which the characteristic eruption is not present. **typhoid p.**, pellagra characterized by continued high temperature.

pellagragenic (pel-ag-rah-jen'ik). Causing pellagra.

pellagral (pel-ag'ral). Pertaining to pellagra.

pellagramin (pel-ag'ram-in). Vitamin B₂ or G.

pellagraphobia (pel-ag-rah-fo'be-ah). An insane or unreasonable dread of pellagra.

pellagrazein, pellagrocein (pel-ah-gra'ze-in, pel-ah-gr'o'se-in). Poisonous ptomaines from damaged maize, regarded as the probable cause of pellagra.

pellagrin (pel-ah'grin). A person affected with pellagra.

pellagrologist (pel-ag-rol'o-jist). One who makes a special study of pellagra.

pellagrology (pel-ag-rol'o-je). The study of pellagra.

pellagrosarium (pel-ag-ro-sa're-um). A hospital for patients affected with pellagra.

pellagrose, pellagrous (pel-ag'rōs, -ah'grus). Affected with pellagra; of the nature of pellagra.

pellant (pel'ant) [L. *pellare* to drive]. Depurative.

pellate (pel'ät). To repel or tend to separate.

pellet (pel'et). A small pill or granule.

pelletierine (pel-et-i'e-rin) [from *Pelletier*, a French chemist and manufacturer]. An optically inactive, water-soluble fluid alkaloid, the beta-2-piperidyl-propion-aldehyde of conine, C₅H₉NH.CH₂.CH₂.CHO, from the root bark of pomegranate. It is employed as a tenicide. Dose, 10–20 grains (0.666–1.5 Gm.); of sulphate, 3–6 grains (0.2–0.4 Gm.). Called also *punicine*. **p. hydrobromide**, a brownish liquid: used in paralysis of the eye muscles. Dose, 4–8 minims (0.25–0.5 cc.). **p. hydrochloride**, a teneuge. Dose, 5–8 grains (0.3–0.5 Gm.). **p. sulphate**, a syrupy liquid, a mixture of the sulphates of pelletierine and isopelletierine: a tenicide. Dose, 4–6 grains (0.20–0.4 Gm.). **p. tannate**, a tasteless, hygroscopic powder, soluble in 700 parts of water and in 80 parts of alcohol: used as a tenicide. Dose, 8–24 grains (0.5–1.5 Gm.), followed by a purgative.

pellicle (pel'ik-l) [L. *pellicula*]. A thin skin or film; also a thin scum on the surface of a liquid.

pellicular, pelliculous (pel-ik'u-lar, pel-ik'ul-us). Characterized by a pellicle.

pellidol (pel'id-ol). A proprietary name for diacetylamilidoazotoluene.

pellitory (pel'it-o-re). Any plant of the genera *Pyrethrum* and *Paricaria*.

pellote (pa-yo'tah). A narcotic preparation made by the natives of South America from *Anhalonium lewinii*.

pellotine (pel'o-tin). An alkaloid, C₁₃H₁₉NO₃, from *Anhalonium williamsonii*: a hypnotic. Dose, $\frac{3}{4}$ –1 grain (0.02–0.06 Gm.). **p. hydrochloride**, a colorless, crystalline compound, C₁₃H₁₉NO₃HCl, soluble in water and slightly so in alcohol: used as a hypnotic. Dose, $\frac{3}{4}$ –1½ grains (0.05–0.1 Gm.).

pellucid (pel-u'sid) [L. *pellucidus*, from *per* through + *lucere* to shine]. Translucent.

pelma (pel'mah) [πέλμα sole]. The sole of the foot.

pelmatic (pel-mat'ik) [πέλμα sole]. Pertaining to the sole of the foot.

pelmatogram (pel-mat'o-gram) [πέλμα sole + γράμμα mark]. An impression of the sole of the foot; a footprint.

pelohemia (pe-lo-he'me-ah) [πηλός mud + αἷμα blood]. Undue thickness of the blood.

pelopathy (pe-lop'ath-e) [πηλός mud + πάθος illness]. Same as *pelotherapy*.

pelosine (pe-lo'sin). A colorless alkaloid from the root of *Chondrodendron papeira*; said to be identical with bebeerine.

pelotherapy (pe-lo-ther'ap-e) [πηλός mud + θεραπεία cure]. The therapeutical use of earth or mud.

peltate (pel'tät) [L. *pel'ta* shield]. Shield shaped.

peltation (pel-ta'shun) [L. *pel'ta* shield]. The protective influence of inoculation with a serum.

pelveoperitonitis (pel've-o-per-it-o-ni'tis). Pelvic peritonitis. See *peritonitis*.

pelvic (pel'vik). Pertaining to the pelvis.

pelvicellulitis (pel-ve-sel-u-li'tis). Pelvic cellulitis.

pelviclismometer (pel've-kli-se-om'et-er) [*pelvis* + κλίσις inclination + μέτρον measure]. An instrument for measuring the inclination and the diameters of the pelvis.

pelvifixation (pel've-fiks-a'shun). Surgical fixation of a displaced or wandering pelvic organ.

pelvigraph (pel'vig-raf) [*pelvis* + γράφειν to write]. A recording pelvimeter.

pelvilithotomy (pel've-lith-ot'o-me). Pelviolithotomy.

pelvimeter (pel-vim'e-ter) [L. *pel'vis* pelvis + μέτρον measure]. An instrument for measuring the diameters and capacity of the pelvis.

pelvimetry (pel-vim'et-re). The measurement of the dimensions and capacity of the pelvis. **combined p.**, pelvimetry in which measurements are made both within and outside the body. **digital p.**, pelvimetry performed with the hands. **external p.**, that in which the measurements are made outside the body. **instrumental p.**, measurement of the pelvis with the pelvimeter. **internal p.**, that in which the measurements are made within the vagina. **manual p.**, that which is performed with the hands.

pelviography (pel-ve-og'raf-e). Pelvioradiography.

pelviolithotomy (pel've-o-lith-ot'o-me). Removal of stone from the kidney by incision through the renal pelvis.

pelvioperitonitis (pel've-o-per'it-o-ni'tis). Same as *pelvipерitonitis*.

pelvioplasty (pel've-o-plas'te) [*pelvis* + πλασσειν to form]. A plastic operation on the pelvis for its permanent enlargement.

pelvioradiography (pel've-o-ra-de-og'raf-e). Examination of the pelvis by the roentgen ray.

pelviscopy (pel-ve-os'ko-pe) [L. *pel'vis* pelvis + σκοπεῖν to view]. The inspection or visual examination of the pelvis or pelvic viscera.

pelviostomy (pel-ve-os'to-me) [*pelvis* + στόμη mouth]. Resection of the renal pelvis with implantation of the ureter into the lower end of the pelvis.

pelviotomy (pel-ve-ot'o-me) [*pelvis* + τέμνειν to cut]. 1. The cutting of the pelvic bones. 2. Incision into the pelvis of the kidney.

pelvipерitonitis (pel've-per-it-on-i'tis). Pelvic peritonitis. See *peritonitis*.

pelvirectal (pel-ve-rek'tal). Pertaining to the pelvis and the rectum.

pelvis (pel'vis) [L. "basin"]. 1. Any basin-like structure, as the sac in the kidney, of which the ureter is the outlet. 2. The basin-shaped ring of bone at the posterior extremity of the trunk, supporting the spinal column and resting upon the lower extremities. It is composed of the two innominate bones at the sides and in front, and the sacrum and coccyx behind. It is divided by the iliopectineal line into the *false pelvis* above and the *true pelvis* below. The upper extremity of the pelvic canal is known as the *inlet*, *brim*, or *superior strait of the p.* The true pelvis is limited below by the *inferior strait* or *outlet*, formed by the coccyx, the symphysis pubis, and the ischium of either side. The outlet of the pelvis is closed by the coccygeus, levator ani, and perineal fascia, which form the *floor of the p.* The inlet and outlet of the pelvis have each three *diameters*—an anteroposterior, a conjugate, and an oblique. **p. aequabil'iter justo major**, one unusually and symmetrically large in all its dimensions. **p. aequabil'iter justo minor**, one with all its dimensions equally reduced. **assimi-**

Split pelvis.

Pelvis spinosa (acanthopelvis).

Kyphotic pelvis (from above).

Typic flat rachitic pelvis.

Simple flat pelvis.

Osteomalacic pelvis (minor grade).

Coxalgic pelvis.

Pseudo-osteomalacic pelvis.

lation p., an elongated pelvis in which the lumbar or coccygeal vertebra resembles a sacral vertebra. **axis of p.**, the perpendicular to the anterior diameter at either the inlet or outlet. **beaked p.**, one with the pelvic bones laterally compressed and pushed forward. **brim of the p.**, the upper entrance to the intrapelvic space; the inlet, isthmus, margin, or superior strait. **caoutchouc p.** Same as *India rubber p.* **Capuron's cardinal points of p.** See under *point, cardinal.* **cordate p.**, **cordiform p.**, one that is somewhat heart shaped. **coxalgic p.**, one deformed in consequence of hip joint disease. **Deventer's p.**, a pelvis which is shortened anteroposteriorly. **diameters of the p.** See under *diameter.* **dwarf p.**, a small pelvis with the bones united by cartilage. **dynamic p.**, the pelvis of a woman in labor. **elastic p.**, an osteomalacic pelvis. **false p.**, the part above the iliopectineal line. **fetal p.** Same as *masculine p.* **fissured p.**, a rachitic pelvis in which the ilia are pushed forward so as to be nearly parallel. **flat p.**, a pelvis contracted in the anteroposterior direction. **floor of the p.**, the nonbony material forming the lower boundary of the pelvis. **funnel-shaped p.**, a female pelvis with normal-sized inlet, but greatly narrowed outlet. **giant p.** Same as *p. aequabiliter justo major.* **halisteretic p.**, a deformed pelvis resulting from softening of the bones on account of absorption of their lime salts. **Hauder's p.** Same as *p. spinosa.* **inclination or obliquity of the p.**, the angle between the axis of the body and that of the pelvis. **India rubber p.**, an osteomalacic pelvis, the bones of which may be stretched. Called also *caoutchouc p.* **infantile p.** Same as *funnel-shaped p.* **inverted p.** Same as *split p.* **justo-major p.**, a pelvis whose diameters are increased in equal proportions. **p. justo major.** See *p. aequabiliter justo major.* **p. justo minor.** See *p. aequabiliter justo minor.* **Kilian's p.**, an osteomalacic pelvis. **kyphoscoliotic p.**, an irregularly contracted pelvis due to rachitic kyphoscoliosis. **kyphotic p.**, one characterized by increase of the conjugate diameter at the brim, with decrease of the transverse diameter at the outlet. **large p.**, the false pelvis. **lordotic p.**, one in which the spinal column has an anterior curvature in the lumbar region. **p. major,** the false pelvis. **malacosteon p.**, a rachitic pelvis. **masculine p.**, a woman's pelvis shaped like that of a man. **p. minor,** the true pelvis. **Nägele's p.**, **oblique p.**, one so distorted that the conjugate diameter takes an oblique direction. **p. na'na,** a dwarf pelvis. **p. obte'cta,** a variety of kyphotic pelvis in which the spinal column extends horizontally across the pelvic inlet. **osteomalacic p.**, one affected with osteomalacia. **p. ova'lis,** a depression in the inner wall of the tympanum, at the bottom of which is the fenestra ovalis. **p. pla'na.** See *flat p.* **planes of the p.**, two imaginary surfaces which touch all points of the pelvic circumference, called respectively the plane of pelvic expansion and the plane of pelvic contraction. **Prague p.** Same as *spondylolisthetic p.* **pseudo-osteomalacic p.**, a rickety pelvis simulating one affected with osteomalacia. **rachitic p.**, one distorted from rickets. **reduced p.** Same as *p. aequabiliter justo minor.* **renal p.**, **p. rena'lis,** the cavity in the kidney of which the ureter is the outlet. **reniform p.**, a kidney-shaped pelvis. **Roberts' p.**, one with a rudimentary sacrum and great narrowing of the transverse and oblique diameters. **Rokitansky's p.** Same as *spondylolisthetic p.* **rostrate p.** Same as *beaked p.* **p. rotun'da,** a depression in the inner wall of the tympanum, at the bottom of which is the fenestra rotunda. **round p.**, one with an inlet of nearly circular outline. **rubber p.**, an elastic or osteomalacic pelvis. **scoliotic p.**, one with a diminished oblique diameter. **simple flat p.**, one with a shortened anteroposterior diameter. **small p.**, the true pelvis.

p. spino'sa, a rachitic pelvis with the crest of the pubis very sharp. **split p.**, one with a congenital separation at the symphysis pubis. **spondylolisthetic p.**, a pelvis in which the last lumbar vertebra is dislocated in front of the sacrum. Called also *Prague p.* and *Rokitansky's p.* **p. spu'ria,** the false pelvis. **triangular p.**, one with a triangular inlet. **triradiate p.**, a beaked pelvis. **true p.**, the part below the iliopectineal line.

pelvisacrum (pel-ve-sa'krum). The pelvis and the sacrum together.

pelvissection (pel-ve-sek'shun) [*pelvis* + *sec'tio* a cutting]. A cutting of the pelvic bones, such as pubiotomy and symphysiotomy.

pelvitherm (pel-ve-therm') [*L. pelvis* + *θέρμη* heat]. An apparatus for applying heat to the pelvic organs through the vagina.

pelvitomy (pel-vit'o-me) [*pelvis* + *τομή* a cutting]. The operation of cutting the pelvis at any point in order to facilitate delivery.

pelvitrochanterian (pel've-tro-kan-te're-an). Relating to the pelvis and the great trochanter of the femur.

pelviureteroradiography (pel've-u-re'ter-o-ra-de-og'raf-e). Radiography of the ureter and renal pelvis.

pelvoscopy (pel-vos'ko-pe) [*L. pelvis* + *σκοπεῖν* to examine]. Examination of a pelvis, particularly of the renal pelvis.

pelycalgia (pel-ik-al'je-ah) [*πέλυξ* pelvis + *ἄλγος* pain]. A general term for all forms of pelvic pain.

pelycochirometresis (pel'ik-o-ki'ro-met-re'sis) [*πέλυξ* pelvis + *χέρ* hand + *μέτρον* measurement]. Manual pelvimetry; the estimation of the pelvic diameters and spaces by means of the hand.

pelycogram (pel'ik-o-gram) [*πέλυξ* pelvis + *γράμμα* mark]. A roentgenogram of the pelvis.

pelycography (pel-ik-og'raf-e) [*πέλυξ* pelvis + *γράφειν* to write]. Roentgen-ray examination of the pelvic contents after pneumoperitoneum.

pelycology (pel-ik-ol'o-je) [*πέλυξ* pelvis + *λόγος* treatise]. A treatise on or the study of the pelvis; the sum of knowledge regarding the pelvis.

pelycometry (pel-e-kom'et-re). Same as *pelvimetry*.

permican (pem'ik-an). A food of North American Indians, being a preparation of dried meat.

pemphigoid (pem'fig-oid) [*πέμφιξ* blister + *εἶδος* form]. Like or resembling pemphigus.

pemphigus (pem'fig-us) [*πέμφιξ* blister]. A disease characterized by the formation of bullae, which, after absorption, leave pigmented spots. It may be attended with itching and burning, and usually involves the general health of the patient. **p. acu'tus,** a form of rapid course occurring chiefly in children. **p. arthrit'icus,** dermatitis herpeticiformis. **p. benign'us,** a very mild or slight form. **p. circina'tus,** a form in which the bullae are arranged in circles. **p. contagio'sus,** an endemic disease of warm regions, such as the Philippines and the tropical East. It is marked by a vesicular eruption, which affects chiefly the groin and axilla. **p. diphtherit'icus,** pemphigus attended with superficial sloughing. **p. dissemina'tus,** a variety with scattered bullae. **p. folia'ceus,** a form with flaccid, scabby bullae. **p. gangraeno'sus,** gangrenous dermatitis. **p. haemorrhag'icus,** pemphigus associated with hemorrhage. **p. hyster'icus,** a variety ascribable to hysteria, gestation, or disease of sexual organs. **p. lepro'sus,** the bullous eruption of leprosy. **p. malig'nus,** a severe and sometimes fatal type. **p. neonato'rum,** a form occurring in young infants, and ascribed to a microbic origin. **p. prurigin'o'sus,** a kind attended with severe itching. **p. solita'rius,** a variety with only one bulla. **p. syphilit'icus,** a syphilitic eruption of bullae. **p. veg'etans,** a

form in which the bullae are followed by fungoid growths; a malignant and generally fatal type. Called also *Neumann's disease*. **p. vulgaris**, an ordinary and uncomplicated form which is followed by replacement of the epidermis.

pencil (pen'sil) [L. *penicil'lum*]. A roll or stick, as of caustic; a roll of lint; a tent.

Penjdeh or **Penjdeh sore** (penj'deh) [*Penjdeh*, a place in Central Asia]. Same as *furunculus orientalis*.

pendular (pen'du-lar). Having a pendulum-like movement.

pendulous (pen'du-lus) [L. *pen'dulus*]. Hanging loosely; dependent.

pendulum rhythm (pen'du-lum). See *rhythm*.

penetrating (pen'e-tra-ting) [L. *pen'etrans*]. Piercing; entering deeply.

penetration (pen-e-tra'shun) [L. *penetra'tio*]. 1. The act of piercing or entering deeply. 2. The focal depth of a lens, or its power of giving a clear definition at various depths.

penetrolology (pen-e-trol'o-je). The study of radiant energy.

penetrometer (pen-e-trom'et-er). An apparatus for measuring the penetrating power and intensity of the roentgen ray.

penghavar djambi (pen'gah-war jam'be). See *penjavar*.

penial, **penile** (pe'ne-al, pe'n'il). Pertaining to the penis.

Penic. cam. Abbreviation for L. *penicil'lum camel'i num*, a camel's hair brush.

penicilliosis (pen-is-il'e-o'sis) The condition caused by infection with *Penicillium*.

Penicillium (pen-is-il'e-um) [L. *penicil'lum* brush, roll]. A genus of molds which develop fruiting organs resembling a broom, or the bones of the hand and fingers.

P. crustaceum. See *P. glaucum*. Other species sometimes found parasitic on man are: *P. barbae*, *P. bouffardi*, *P. minimum*, *P. monticola*. **P. glaucum**, the common bluish-green mold. It is a factor in the ripening of Camembert cheese, making it white, soft, and creamy.

Penicillium (Rivas).

penile (pe'n'il). Pertaining to the penis.

penis (pe'nis) [L.]. The male organ of copulation. It is composed of a root, body, and extremity, or glans penis. The root is attached to the descending portions of the pubic bone by the *crura*, the latter being the extremities of the corpora cavernosa. The body consists of two parallel cylindrical bodies, the *corpora cavernosa*, and beneath them the *corpus spongiosum*, which is perforated by the urethra. The glans is covered with mucous membrane, and ensheathed by the prepuce, or foreskin. **p. captivus**, a condition in which, from deep vaginismus, the corona of the fully introduced penis is encircled, and attempts to withdraw the penis cause great pain to both parties. **clubbed p.**, a condition in which the penis is curved when erect. **p. palmaris**. See *webbed p.* **webbed p.**, a penis that is enclosed by the skin of the scrotum. Called also *p. palmaris*.

penischisis (pen-is'kis-is) [*penis* + *σχισις* splitting]. Any fissured state of the penis; a term including epispadias, hypospadias, and paraspadias.

penitis (pe-ni'tis). Inflammation of the penis.

penjar yambi (pen'jah-var yam'be). The hairs of various species of *Polypo'dium* and *Poa'thea*; sometimes prescribed as a styptic and hemostatic.

Penjdeh sore (penj'deh) [*Penjdeh*, a town of Afghanistan]. See *furunculus orientalis*.

pennate (pen'at). Penniform.

penniform (pen'if-orm) [L. *pen'na* feather + *for'ma* form]. Shaped like a feather.

pennyroyal (pen-e-ro'i'al). A popular name for various labiate plants, especially *Mentha pulegium* (European p.), *M. canadensis*, and *Hedeoma pulegioides* (American p.). See *Mentha* and *Hedeoma*.

pennyweight (pen'e-wät). Twenty-four grains troy weight. See *weights and measures, table of*.

penology, **poenology** (pe-nol'o-je) [πῶνῃ penalty + λόγος treatise]. The science of the punishment and prevention of crime.

penoscrotal (pe-no-skro'tal). Relating to the penis and the scrotum.

pentabasic (pen-tah-ba'sik). Having five replaceable atoms of hydrogen in the molecule.

pentachromic (pen-tah-kro'mik) [πέντε five + χρώμα color]. Able to distinguish five colors only; said of such a partially color blind person.

Pentaclethra (pen-tah-kle'thrah). See *paucine*.

pentad (pen'tad). Any element or radical with a valence of five.

pentadactyl (pen-tah-dak'til) [πέντε five + δάκτυλος finger]. Having five fingers or toes on a hand or a foot.

pentaglucose (pen-tah-glu'kōs). Any sugar whose formula contains five atoms of carbon.

pental (pen'tal). A colorless, oily, liquid hydrocarbon, (CH₂)₂C·CH·CH₃, or trimethylethylene, a homologue of ethylene. It is used as an anesthetic in minor operations. Dose, by inhalation, 1½-2½ fluidrachms (5-10 cc.).

pentamethylendiamine (pen-tah-meth'il-en-di-am'in). See *cadaverine*.

pentamethyl violet. See *methyl violet*, under *violet*.

pentane (pen'tän). An anesthetic liquid hydrocarbon, C₅H₁₂, obtained by the distillation of petroleum. It is one of the constituents of petroleum ether.

pentaploid (pen'tap-loid). See *polyploid*.

Pentastoma (pen-tas'to-mah) [πέντε five + στόμα mouth]. A genus of endoparasitic, wormlike arthropods. *P. constrictum* and *P. taeniorides* occur in the human subject. *P. denticulatum* is the larva of *L. nguai'ula rhinaria*, occurring in the nose.

pentatonic (pen-tah-tom'ik) [πέντε five + atom]. 1. Containing five atoms. 2. Containing five replaceable hydrogen atoms.

Pentatrachomonas (pen'tah-trik-om'o-nas). A genus of intestinal trichomonads marked by having five anterior flagella. **P. ar'din delte'ili**. A flagellate parasite resembling *Trichomonas hominis*, but having five anterior flagella. It seems to be pathogenic for man.

pentatrachomoniasis (pen'tah-trik-o-mo-ni'as-is). Infestation of the intestine with *Pentatrachomonas*.

pentavaccine (pen-tah-vak'sin) [πέντε five + vaccine]. A vaccine containing dead cultures of the bacteria of typhoid, paratyphoid A, paratyphoid B, cholera, and Malta fever.

pentavalent (pen-tav'al-ent). Same as *quinivalent*.

pentene (pen'tën). Same as *amylene*.

pentenzyme (pen'ten-zim). A proprietary digestant preparation.

pentodyne (pen'to-din). A proprietary analgesic, antiseptic, and antipyretic. Dose, 2-10 grains (0.133-0.666 Gm.).

pentone (pen'tōn). Same as *valylene*.

pentosan (pen'to-san). Any member of a group of compounds having the composition $(C_5H_8O_4)_n$; found in various foods and plant juices. They are gums which yield pentose on hydrolysis. **methyl p.**, a pentosan which on hydrolysis yields methyl pentoses.

pentosazon (pen-to-sa'zon). A crystalline compound formed by treating a pentose with phenyl hydrazine, sometimes abnormally occurring in the urine.

pentose (pen'tōs). Any sugar or carbohydrate containing five atoms of carbon. The pentoses are nonfermentable and are sometimes found in the urine.

pentoside (pen'to-sid). A union of a pentose with some other substance. Compounds of pentoses with purine and pyrimidine bases are found in the nucleic acids.

pentosuria (pen-to-su're-ah) [*pentose* + *ούρουν* urine]. The occurrence of pentose in the urine.

pentosuric (pen-to-su'ric). Affected with pentosuria; also a person so affected.

pentoxide (pen-tox'id). An oxide containing five atoms of oxygen.

Penzoldt's test (pen'zōldz) [Franz *Penzoldt*, physician in Erlangen, 1849-1927]. See under *tests*.

peonin (pe'o-nin). A dye, the amide of pararosolic acid; used as a test for a certain range of hydrogen ion concentration.

peotillomania (pe-o-til-o-ma'ne-ah) [*πέος penis* + *τῆλαυν to pull* + *μανία madness*]. A tickle movement consisting in pulling at the penis: called also *pseudomasturbation*.

peotomy (pe-ot'o-me) [*πέος penis* + *τέμνειν to cut*]. Surgical removal of the penis.

pepo (pe'po) [L. 'pumpkin']. Pumpkin seed; the dried ripe seeds of the pumpkin, *Cucurbita pepo*: diuretic and useful against tapeworm. Dose of crushed seeds, 1-3 oz. (31-93 Gm.); of resin, 10-15 grains (0.66-1 Gm.).

pepper (pe'per) [L. *pi'per*]. The dried fruit of *Piper nigrum* and other plants of that genus. **black p.** contains piperine, a volatile oil, and an acid resin. It is carminative, counterirritant, stimulant, and antiperiodic. Dose, 5-20 grains (0.33-1.25 Gm.); of confection (*confectio pip'ris*), 1 drachm (4 Gm.); of oleoresin, $\frac{1}{2}$ -1 grain (0.016-0.066 Gm.); of fluidextract, 15-45 minims (1-3 cc.). **cayenne p.**, **red p.** See *Capsicum*. **water p.** See *Polygonum hydropiper*. **white p.**, a milder prepared form of the ordinary or black pepper.

peppermint (pep'er-mint). The labiate herb *Mentha piperita*. The leaves and tops are employed chiefly to prepare peppermint oil (*oleum menthae piperitae*) which is an aromatic carminative and flavoring agent, and are used in colic, flatulence, headache, rheumatism, etc. It affords oil of peppermint (see *oil*) and menthol. Dose of fluidextract, 30-60 minims (2-4 cc.); of oil, 1-3 minims (0.065-0.2 cc.); of spirit, 5-15 minims (0.3-1 cc.); of syrup, 1 fluidrachm (4 cc.).

pepsase (pep'sās). Pepsin considered as an enzyme or nonorganizing ferment.

pepsic (pep'sik). Same as *peptic*.

pepsin (pep'sin) [L. *pepsi'num*, from *πέψω digestion*]. The proteolytic enzyme of the gastric juice which changes the native proteins of the food into proteoses and peptones. It acts best in the presence of 0.2-0.3 per cent of hydrochloric acid. Pepsin is used in medicine as a digestant and as a remedy for dyspepsia. It is usually prepared from the stomachs of pigs. Dose, 10-15 grains (0.66-1 Gm.); of wine (*vi'num pep'sini*), $\frac{1}{2}$ -1 fl.oz. (16-32 cc.). **aromatic p.**, a mixture of 10 per cent of pepsin with tartaric acid, sodium chloride, and milk sugar. **ostrich p.**, a pepsin prepared in Argentina from the gizzard of the ostrich or rhea.

saccharated p. (L. *pepsi'num saccharatum*), pepsin (10 parts) mixed with sugar of milk (90 parts). Dose, 10-30 grains (0.66-2 Gm.). **solution of p.** (*li'quor pep'sini*), a solution of pepsin, 1 part in 25. Dose, 2-4 fluidrachms (8-16 cc.).

pepsinase (pep'sin-ās). One of a class of enzymes which split native proteins to peptides in acid solution.

pepsinate (pep'sin-āt). To treat or charge with pepsin.

pepsinia (pep-sin'e-ah). The secretion of pepsin. It may be normal, excessive (hyperpepsinia), deficient (hypoepsinia), or totally absent (apepsinia).

pepsiniferous (pep-sin-if'er-us) [*pepsin* + L. *fer're to bear*]. Producing or secreting pepsin.

pepsinogen (pep-sin'o-jen) [*pepsin* + *γεννᾶν to produce*]. A zymogen in or from the gastric cells which is changed into pepsin by hydrochloric acid.

pepsinogenous (pep-sin-oj'en-us). Producing pepsin.

pepsinum (pep-si'num). See *pepsin*.

pepsorthin (pep-sor'thin). A preparation of papain, magnesium peroxide, betanaphthol, and sodium bicarbonate: used in dyspepsia.

peptamine (pep-tal'min). A proprietary preparation for migraine of anaphylactic origin.

peptamine (pep-tam'in). Any amine derived from a polypeptide.

peptarnis (pep-tar'nis). Peptone of beef: used as a food for invalids.

peptase (pep'tās). 1. A malt derivative capable of acting on albumin. 2. An enzyme which splits peptides to amino-acids.

peptenzyme (pep'ten-zim). A proprietary digestant.

peptic (pep'tik) [*πепτικός*]. Pertaining to pepsin or to digestion.

peptidase (pep'tid-ās). One of a class of enzymes which split peptides or peptones to amino-acids. The same as *ereptase*.

peptide (pep'tid). A compound formed by the union of two or more amino-acids. When two amino-acids unite, the result is a *dipeptide*; when three, a *tripeptide*; when more than three, a *polypeptide*.

peptidolytic (pep-tid-o-lit'ik) [*peptide* + *λύω to dissolve*]. Splitting up peptides.

peptinotoxin (pep-tin-o-toks'in). A poisonous intestinal product of imperfect stomach digestion.

peptization (pep-tiz-a'shun). Increase in the degree of dispersion of a colloid solution; the liquefaction of a colloid gel to form a sol.

peptobromelgon (pep'to-brōm-i-gon). A preparation of bromine and protein: used like the bromides.

peptocrinin (pep-to-krin'in). A substance obtained from the mucosa of the intestine having properties like secretin.

peptogaster (pep'to-gas-ter) [*πέπτεω to digest* + *γαστήρ belly*]. The alimentary tract.

peptogenic, peptogenous (pep-to-jen'ik, pep-to-jen-us) [*πέπτεω to digest* + *γεννᾶν to produce*]. 1. Producing pepsin or peptones. 2. Of the nature of a peptogen. 3. Promoting digestion.

peptoid (pep'toid). A product of proteolytic digestion, distinguished by not giving the biuret reaction.

pepto-iodoigon (pep'to-i-o-di-gon). A preparation of iodine and protein: used like iodoform.

peptolysis (pep-tol'is-is) [*peptone* + *λύω destruction*]. The splitting up of peptone.

peptolytic (pep-to-lit'ik). Splitting up peptone.

peptomangan (pep-to-man'gan). A proprietary preparation containing peptones with manganese and iron.

peptomedullin (pep'to-med-ul'in). A peptonized therapeutical preparation of bone marrow.

peptone (pep'tŏn) [πέπτων digesting]. A derived protein produced by the hydrolysis of a native protein either by an acid or by an enzyme. Peptones are readily soluble in water, are levorotatory, and are not precipitated by heat by ammonium sulphate, nor by the action of alkalis, or acids. They include *amphipeptone*, *antipeptone*, *hemipeptone*, and *propeptone*. **beef p.**, a peptone made from beef by treating it with extract of pancreas. **casein p.**, **milk p.**, a light-brown powder, soluble in water: a nutrient for convalescents. **Dunham's p.** See *Dunham's solution*, under *solution*. **gelatin p.**, a peptone formed during the digestion of gelatin with pepsin. **Höchst's p.** Same as *silk p.* **silk p.**, peptone obtained from silk: used as a test for the presence of peptone splitting ferments, either by changes in optical activity or by the precipitation of tyrosine. **venom p.**, a peptone from snake poison. **p. water**. See under *culture medium*. **Witte's p.**, a proprietary dry peptone prepared from fibrin.

peptonemia, **peptonaemia** (pep-to-ne'me-ah) [*peptone* + *αἷμα* blood]. The presence of peptones in the blood.

peptonic (pep-ton'ik). Pertaining to or containing peptone.

peptonize (pep'to-nīz). To convert into peptones.

peptonoid (pep'to-noid). Any substance resembling peptone.

peptonoids (pep'to-noids). A proprietary pre-digested food prepared from beef, milk, and gluten.

peptonuria (pep-to-nū're-ah) [*peptone* + οὔρον urine]. The presence of peptones in the urine. See *albumosuria*. **enterogenous p.**, that which is due to disease of the intestine. **hepatogenous p.**, that which is due to disease of the liver. **nephrogenic p.**, that which is due to disease of the kidney. **puerperal p.**, that which occurs during the puerperium. **pyogenic p.**, that which is associated with a suppurative process.

peptonutrine (pep-to-nū'trīn). A nutrient tonic preparation of peptonized beef and the carbohydrates of wheat.

pepto-ovarin (pep-to-o'va-rin). A peptonized therapeutical preparation of animal ovaries.

peptosin (pep'to-sin). A proprietary digestant preparation of pepsin.

peptothyroid (pep-to-thī'roid). A peptonized preparation of the thyroid: used therapeutically.

peptothyroidin (pep'to-thī-roid'in). A peptonized therapeutical preparation of animal thyroids.

peptotoxin (pep-to-toks'in). Any toxin or poisonous base developed from a peptone; also a poisonous cadaveric alkaloid or ptomaine occurring in certain peptones and putrefying proteins. **cholera p.**, a poisonous substance resembling a peptone, produced by the cholera bacillus.

peptovarin (pep-to'va-rin). See *pepto-ovarin*.

peptozym (pep'to-zīm). A substance thought to exist in peptone solutions, and having the power of preventing the coagulation of the blood.

per-. A prefix, the Latin *per*, "through": in composition sometimes meaning "very."

per anum (per a'num). Latin for *by the anus*.

peracephalus (per-as-ef'al-us) [L. *per* through + *acephalus*]. A fetal monster with neither head nor arms, and with a defective thorax.

peracetate (per-as'et-ăt). An acetate containing more acetic acid than the ordinary acetate.

peracid (per-as'id). An acid containing more than the usual quantity of oxygen.

peracidity (per-as-id'it-e). Excessive acidity.

peracute (per-ak-ūt') [L. *peracutus*]. Excessively acute or sharp.

peradrenalone (per-ad-ren'al-ŏn). A substance formed by the oxidation of adrenalone.

peralgia (per-al'gah). A proprietary analgesic and sedative, amidopyrine diethyl barbiturate.

perarticulation (per'ar-tik-u-la'shun) [L. *per* through + *articulatio* joint]. Same as *diarthrosis*.

peratodynia (per'at-o-din'e-ah) [περάω to pierce + ὀδύνη pain]. Cardialgia or heartburn.

perboral (per-bo'al). A highly oxidated proprietary compound of paraboric and paraiodosulphonic acid: used as an antiseptic.

percept (per'sept). The object perceived.

perception (per-sep'shun) [L. *perceptio*]. The receiving of an impression through the senses.

facial p. Same as *facial vision*. See *vision*.

p. time, **p. reflex**. See *time* and *reflex*.

perceptive (per-sep'tiv). Pertaining to perception.

perceptivity (per-sep-tiv'it-e). Ability to receive sense impressions.

perceptorium (per-sep-to're-um). Same as *sensorium*.

perchloric acid (per-klo'rik). A volatile liquid, HClO₄, the highest oxyacid of chlorine.

perchloride (per-klo'rid). A chloride which contains more chlorine than the ordinary chloride.

perchlormethylformate (per-klor-meth-il-for'măt). Diphosgene.

percine (per'sin). A protamine from the sperm of yellow perch, *Perca flavescens*.

percolate (per'ko-lăt) [L. *percolare*]. 1. To strain; to submit to percolation. 2. To trickle slowly through a substance. 3. A liquid that has been submitted to percolation.

percolation (per-ko-la'shun) [L. *percolatio*]. The extraction of the soluble parts of a drug by causing a liquid solvent to flow slowly through it.

percolator (per'ko-la-tor). A vessel used in percolating drugs.

per contiguum (per kon-tig'u-um). In contiguity: arranged in such a way that the edges touch.

per continuum (per kon-tin'u-um). Without separation or break.

percuss (per-kus') [L. *percutere*]. To subject to percussion.

percussion (per-kush'un) [L. *percussio*]. The act of striking a part with short, sharp blows as an aid in diagnosing the condition of the parts beneath by the sound obtained (Auenbrugger, 1761).

auscultatory p., auscultation of the sound produced by percussion. **coin p.** See *coin test*, under *tests*. **deep p.**, percussion in which a firm blow is struck in order to obtain a note from a deep-seated tissue. **drop p.**, **drop stroke p.**, percussion in which the hammer is allowed to fall by its own weight on to the pleximeter, the elements considered in the examination being the sound heard, the vibrations felt in the handle of the hammer, and the rebound of the hammer seen. Called also *Lersch's p.* **finger p.**, that in which the fingers of one hand are used as a plexor, and those of the other as a pleximeter. **Goldscheider's p.** 1. See *threshold p.* 2. Same as *orthopercussion*. **immediate p.**, **direct p.**, that in which no pleximeter is used. **instrumental p.**, that in which a plexor or hammer is used. **Korányi's p.** See *Korányi's auscultation*, under *auscultation*. **Krönig's p.**, auscultatory percussion over the apex of the lungs in the diagnosis of tuberculosis. **Lersch's p.** See *drop stroke p.* **mediate p.**, that in which a pleximeter is employed. **Murphy's p.** See *piano p.* **p. note**, the sound elicited on percussion. **palpatory p.**, a combination of palpation and percussion, affording tactile rather than au-

Immediate percussion (Külbs).

ditory impressions. **piano p.**, percussion by striking the body by the four fingers one after the other, beginning with the little finger. Called also *Murphy's p.* **respiratory p.**, percussion during respiration so as to bring out the difference in the percussion notes of inspiration and expiration. **tangential p.**, percussion with the pleximeter placed vertically on the body, the strokes being applied to the surface of the skin. **threshold p.**, percussion performed by tapping lightly with the finger upon a glass rod pleximeter, one end of which, fitted with a rubber cap, rests upon an intercostal space, the rod being held at an angle to the surface of the thorax and parallel to the borders of the organ to be delimited. This method confines the percussion vibrations to a very restricted area. Called also *Goldscheider's p.* **p. wave**, the primary or chief ascending wave of the pulse tracing.

Strong percussion (Külbs).

Weak percussion (Külb).

percutaneous (per-ku-ta-ne-us) [L. *per* through + *cutis* skin]. Performed through the skin.

percussor (per-kus'or) [L. "striker"]. An instrument for use in performing percussion.

percussopunctator (per-kus-o-punk'ta-tor). An instrument for performing multiple acupuncture.

percussor (per-kus'or) [L. "striker"]. An instrument for use in performing percussion.

percussor (per-kus'or) [L. "striker"]. An instrument for use in performing percussion.

Percy cautery or method (per'se) [James F. Percy, American surgeon, born 1864]. See *cautery*.

perdotat (per'do-lat). A proprietary analgesic compound.

perdynamin (per-di'nam-in). An animal iron preparation containing albumin. It is a nutrient fluid and is used in anemic conditions, phthisis, and the vomiting of pregnancy.

pereirine (per-e'ir-in) [Port. *pere'ira* brier]. A white alkaloid, $C_{10}H_{15}N_2O$, from the bark of *Geissospermum lae've* (*vello'sia*), a tree of tropical America; antiperiodic, antipyretic, and tonic. Daily dose, 30 grains (2 Gm.).

perencephaly (per-en-sef'al-e) [*πῆρα* pouch + *ἐγκέφαλος* brain]. Cystic disease of the brain.

perennial (per-en'e-al) [L. *peren'nis*, from *per* through + *an'nus* year]. Lasting through the year or for several years.

perethnol (per-eth'in-ol). A colloidal suspension prepared from fresh horse heart in chloroethylene and alcohol for Vernes' test for syphilis. See *Vernes' test*, under *tests*.

Perez's sign (pa-räths') [Jorje Perez, Spanish physician, died 1920]. See under *sign*.

Perezia (per-e'ze-ah). See *pípitzaohac*.

perezon (per'e-zon). Pípitzaohic acid.

perforation (per-fla'shun) [L. *perfora'tio*]. 1. The act of blowing air into a space in order to force secretions or other substances out. 2. A form of natural ventilation in which the air is brought into the room as a result of the movement of natural air currents.

perforans (per'fo-ranz) [L.]. Penetrating: a term applied to various muscles and nerves. **p. gas'seri**, the musculocutaneous nerve. **p. ma'nus**, the flexor profundus digitorum muscle.

perforated (per'fo-ra-ted) [L. *perfora'tus*]. Pierced with holes.

perforation (per-fo-ra'shun) [L. *perfora're* to pierce through]. 1. The act of boring or piercing through a part. 2. A hole made through a part or substance. **Bezold's p.**, perforation of the inner surface of the mastoid bone.

perforator (per'fo-ra-tor). An instrument for piercing the bones, and especially for perforating the fetal head. **Blot's p.**, an instrument for performing craniotomy in difficult labor.

perforatorium (per'for-a-to're-um). The pointed structure on the head of a spermatozoon; the acrosome.

perfrication (per-frik-a'shun) [L. *perfrica're* to rub]. Rubbing with an ointment or embrocation.

perfrigeration (per-frij-er-a'shun) [L. *per* very + *fri'gere* to be cold]. Frostbite.

perfusion (per-fu'zhun). A pouring through or into.

pergenol (per-je'no'l). A mixture of sodium perborate and sodium bitartrate, known as "solid hydrogen dioxide."

perhydrol (per-hi'drol). 1. A proprietary 30 per cent solution of hydrogen peroxide. 2. Magnesium peroxide.

peri- [*περί* around]. A prefix signifying "around."

periacinal, periacinous (per-e-as'in-al, per-e-as'in-us) [*περί* around + L. *acin'us* berry]. Situated around an acinus.

periadenitis (per'e-ad-en-i'tis) [*περί* around + *ἀδὴν* gland + *-itis* inflammation]. Inflammation of the tissues around a gland.

periadventitial (per'e-ad-ven-tish'al). Outside of the adventitia.

perialientitis (per-e-a'le-en-i'tis) [*περί* around + L. *alie'nus* foreign + *-itis* inflammation]. Inflammation around a foreign body, as a biliary concretion.

periamygdalitis (per'e-am-ig-dal-i'tis) [*περί* around + *ἀμυγδάλῃ* tonsil + *-itis* inflammation]. Inflammation of the tissue around the tonsil.

perianal (per-e-a'nal) [*περί* around + L. *a'nus* anus]. Located around the anus.

periangiitis (per'e-an-ji'tis) [*περί* around + *ἀγγεῖον* vessel + *-itis* inflammation]. Inflammation of the tissue around a blood or lymphatic vessel.

periangiocholitis (per'e-an'je-o-ko-li'tis). Inflammation of the tissues around the bile ducts, or interlobar capillaries of the liver.

periangioma (per-e-an-je-o'mah) [*περί* around + *ἀγγεῖον* vessel + *-ωμα* tumor]. A tumor which surrounds a blood vessel.

perianth (per'e-anth) [*περί* around + *ἄνθος* flower]. The floral envelop, including the calyx and corolla.

periaortic (per-e-a-or'tik). Around the aorta.

periaortitis (per'e-a-or-ti'tis). Inflammation of the tissues around the aorta.

periapical (per-e-a-pik'al). Surrounding the apex of the root of a tooth.

periappendicitis (per'e-ap-en-dis-i'tis) [*peri-* + *appendicitis*]. Inflammation of the appendix vermiformis and the surrounding tissues. **p. decidua'lis**, a condition in tubal pregnancy in which, on account of adhesions between the appendix and the fallopian tube, decidual cells are present in the peritoneum of the appendix.

periappendicular (per'e-ap-en-dik'u-lar). Around the appendix vermiformis.

periapt (per'e-apt) [*περιπλεον* amulet]. A substance worn in the belief that it wards off disease.

periarterial (per-e-ar-te're-al). Around an artery.

periarteritis (per'e-ar-ter-i'tis) [*περί* around + *ἀρτηρία* artery + *-itis* inflammation]. Inflammation of the tissues around an artery. **p. nodo'sa**, a variety producing thickening of the coats of the artery, with nodular swellings.

periarticular (per-e-ar-thrik) [*περί* around + *ἄρθρον* joint]. Around a joint.

periartthritis (per'e-ar-thri'tis). Inflammation of the tissues around a joint.

periarticular (per'e-ar-tik'u-lar) [*περί* around + *L. articulus* joint]. Situated around a joint.

periatrinal (per-e-a'tre-al). Around the atrium or auricle of the heart.

periauricular (per-e-aw-rik'u-lar). 1. Around an auricle of the heart. 2. Around the concha of the ear.

periaxial (per-e-aks'e-al) [*περί* around + *ἄξων* axis]. Situated around an axis.

periaxillary (per-e-aks'il-a-re). Situated around the axilla.

periaxonal (per-e-aks'o-nal) [*περί* around + *ἄξων*]. Occurring around an axon.

periblast (per'e-blast) [*περί* around + *βλαστός* germ]. The protoplasm of a cell outside of the nucleus.

periblepsis (per-e-blep'sis) [*περί* around + *βλέψις* looking]. The staring expression of an insane person.

peribronchial (per-e-brong'ke-al). Situated around a bronchus.

peribronchiolar (per-e-brong-ki'o-lar). Around the bronchioles.

peribronchiolitis (per'e-brong-ke-o-li'tis). Inflammation of the tissues around the bronchioles.

peribronchitis (per'e-brong-ki'tis). Inflammation of the investment of a bronchus or bronchial tube.

peribulbar (per-e-bul'bar). Surrounding the bulb of the eye.

peribursal (per-e-ber'sal). Surrounding a bursa.

pericaecal (per-e-se'kal). See *pericecal*.

pericaecitis (per-e-se-si'tis). Same as *pericecitis*.

pericanalicular (per'e-kan-al-ik'u-lar). Occurring around canaliculi.

pericapsular (per-e-kap'su-lar). Surrounding a capsule.

pericardectomy (per'e-e-kar-dek'to-me). Pericardectomy.

pericardiac, pericardial (per-e-kar'de-ak, per-e-kar'de-al). Pertaining to the pericardium.

pericardicentesis (per-e-kar'dis-en-te'sis) [*περικάρδιον* pericardium + *κέντησις* puncture]. The surgical puncture of the pericardium.

pericardiotomy (per'e-e-kar-de-ek'to-me) [*pericardium* + *ἐκτομή* excision]. Complete removal of the pericardium.

pericardiocentesis (per-e-kar'de-o-sen-te'sis). Pericardiocentesis.

pericardiolysis (per'e-e-kar-de-ol'is-is) [*pericardium* + *λύσις* loosening]. The operation of freeing adhesions between the visceral and parietal pericardium.

pericardiomediatinitis (per-e-kar'de-o-me-de-as-tin-i'tis). Pericarditis with mediastinitis; inflammation of the pericardium and mediastinum.

pericardiophrenic (per-e-kar'de-o-fren'ik). Pertaining to the pericardium and the diaphragm.

pericardiopleural (per-e-kar'de-o-plu'ral). Pertaining to the pericardium and the pleura.

pericardiorrhaphy (per'e-e-kar-de-o-af'e) [*pericardium* + *ραφή* suture]. The operation of suturing a wound in the pericardium.

pericardiosymphysis (per-e-kar'de-o-sim'fis-is) [*pericardium* + *σύνφυσις* adhesion]. Adhesion between the visceral and parietal layers of the pericardium.

pericardiotomy (per'e-e-kar-de-ot'o-me) [*περικάρδιον* pericardium + *τέμνειν* to cut]. Surgical incision of the pericardium.

pericarditic (per'e-kar-dit'ik). Pertaining to pericarditis.

pericarditis (per'e-kar-di'tis) [*περικάρδιον* pericardium]. Inflammation of the pericardium. The disease is attended by elevation of temperature, pain in the precordial region, rapid pulse, cough, and dyspnea. The pericardium is covered with fibrous deposits, giving it a roughened surface, which causes a friction murmur occurring with the heart beats. Later effusion into the sac takes place, producing bulging of the precordia and an area of dullness. **adhesive p.**, that in which the two layers of the pericardium adhere to each other. **p. calculo'sa**, pericarditic calcareous deposit in the pericardium. **p. callo'sa**, a variety of chronic fibrous pericarditis marked by facial cyanosis, edema, and full, tortuous jugular veins, without pulsation and without typical signs of pericarditis. It occurs during childhood. **carcinomatous p.**, that which is associated with malignant disease of the pericardium. **dry p.**, that in which there is no effusion. **p. episteno-cardica**, the symptom complex of stenocardia, fever, pericarditis, and myocardial insufficiency (Sternberg). **external p.**, that which chiefly affects the outer surface of the pericardium. **p. exter'na et inter'na**, inflammation of the outer and inner surfaces of the pericardium. **fibrous p.**, a chronic pericarditis in which the adhesions become replaced by fibrous bands. **hemorrhagic p.**, that in which there is a bloody exudate. **localized p.**, a form with white or milky spots. **mediastinal p.**, inflammation of the exterior surface of the pericardium and the mediastinal tissue. **obliterating p.**, an adherent pericarditis which leads to the obliteration of the pericardial cavity. **purulent p.**, a form with effusion of a purulent fluid. **serofibrinous p.**, a variety attended with a serous fluid effusion containing a little fibrin. **tuberculous p.**, a variety caused by tuberculous disease.

pericardium (per-e-kar'de-um) [*L.*; *περί* around + *καρδία* heart]. The membranous sac which contains the heart. It consists of an external layer of dense fibrous tissue derived from the cervical fascia, and an inner serous layer (*visceral p.*, *cardiac p.*, or *epicardium*), which surrounds the heart directly and is reflected over the inner surface of the fibrous coat, forming the *parietal p.* The base of the pericardium is attached to the central tendon of the diaphragm, and the cavity of the pericardium contains from 5 to 20 cc. of a thin, serous liquid, the *pericardial fluid*. **bread-and-butter p.**, a pericardium having a peculiar appearance, produced by the rubbing together of its two surfaces in fibrous pericarditis. **cardiac p.**, visceral pericardium. **parietal p.**, that fold of the pericardium which is not in contact with the heart. **shaggy p.**, a pericardium with a shaggy coat of fibrous exudate. **visceral p.**, the epicardium; the fold of the pericardium which is in contact with the heart.

pericardosis (per'e-kar-do'sis). Infection of the pericardium.

pericardotomy (per'e-kar-dot'o-me). Same as *pericardiotomy*.

pericarp (per'e-karp) [*περί* around + *κάρπος* fruit]. The seed vessel or ripened ovary of a flower.

pericaryon (per-e-kar'e-on). See *periharyon*.

pericecal (per-e-se'kal). Surrounding the cecum.

pericecitis (per-e-se-si'tis). Inflammation of the tissues around the cecum.

pericellular (per-e-sel'u-lar) [*περί* around + *L. cellula* cell]. Surrounding a cell.

pericemental (per-e-se-men'tal). Pertaining to the pericementum.

pericementitis (per'e-se-men-ti'tis) [*περί* around + *L. caementum* cement + *-itis* inflammation]. Periodontitis; inflammation of the pericementum.

chronic suppurative p., pyorrhea alveolaris.

pericementoclasia (per-e-se-men-to-kla'se-ah) [*pericementum* + *κλάσις* breaking]. Disintegration

- of the pericementum and alveolar bone without loss of the overlying gingival tissue. It results in pocket formation. Cf. *pyorrhoea alveolaris*.
- pericementum** (per'-e-se-men'tum) [*περί* around + *L. caementum* cement]. The membrane or tissue which occupies the space between the root of a tooth and the alveolus of the jaw. Called also *peridental membrane*, *dental periosteum*, *periodontium*, and *alveolodental membrane*.
- pericentral** (per-e-sen'tral). Surrounding a center.
- pericephalic** (per'-e-sef-al'ik). Surrounding the head.
- pericerebral** (per-e-ser'e-bral). Surrounding the brain.
- perichareia** (per'-e-kar-i'ah) [*περιχάρεια*]. Insane and vehement rejoicing.
- pericholangitis** (per'-e-ko-lan-i'tis) [*περί* around + *χολή* bile + *ἀγγείον* vessel]. Inflammation of the tissues that surround a bile duct.
- pericholecystitis** (per'-e-ko'-le-sis-ti'tis). Inflammation of the tissues around the gallbladder.
- perichondrial** (per-e-kon'dre-al). Pertaining to or composed of perichondrium.
- perichondritis** (per'-e-kon-dri'tis). Inflammation of the perichondrium.
- perichondrium** (per-e-kon'dre-um) [*περί* around + *χόνδρος* cartilage]. The membrane which covers the surface of a cartilage. It is a layer of white, fibrous tissue prolonged over the cartilage from neighboring parts.
- perichondroma** (per'-e-kon-dro'mah). A tumor arising from the perichondrium.
- perichord** (per'e-kord). The investing sheath of the notochord.
- perichordal** (per-e-kor'dal) [*περί* around + *χορδή* cord]. Situated around the notochord.
- perichorioid** (per'-e-ko-re-oi'dal). Perichorioid.
- perichorioidal** (per'-e-ko-ro-i'dal). Surrounding the chorioid coat.
- perichrome** (per'e-krōm) [*περί* around + *χρῶμα* color]. A nerve cell in which the Nissl bodies are arranged in rows beneath the cell membrane. Cf. *arkyochrome*, *gyrochrome*, and *stichochrome*.
- perichymate** (per-e-ki'māt). An enamel prism.
- periclasia** (per-e-kla'se-ah). Same as *periodontoclasia*.
- periclastral** (per-e-klaws'tral). Around the clastrum of the brain.
- pericolitis** (per'-e-ko-li'tis) [*περί* around + *κόλον* colon]. Inflammation around the colon, especially of the peritoneal coat of the colon. **p. dextra**, pericolicitis affecting the ascending colon. **membranous p.** See *Jackson's membrane*, under *membrane*. **p. sinis'tra**, inflammation of the surrounding connective tissue and peritoneum at the lower part of the descending colon. It is comparable to appendicitis, except for its situation on the left side.
- pericolonitis** (per'-e-ko-lon-i'tis). Same as *pericolitis*.
- pericolpitis** (per'-e-kol-pi'tis) [*περί* around + *κόλπος* vagina]. Inflammation of the tissues around the vagina.
- Peric'oma townsvillen'sis**. A fly allied to the phlebotomus flies of the family Psychodidae found in Australia, which bites very severely.
- periconchal** (per-e-kong'kal) [*περί* around + *κόγχη* concha]. Situated around the concha.
- periconchitis** (per'-e-kong-ki'tis) [*περί* around + *κόγχη* eye socket]. Inflammation of the lining of the orbit.
- pericorneal** (per-e-kor'ne-al). Surrounding the cornea.
- pericoronar** (per'-e-kor'o-nal). Around the crown of a tooth.
- pericoronitis** (per'-e-ko-ron-i'tis) [*peri* around + *coro'na* crown]. Inflammation around the crown of a tooth.
- pericoxitis** (per-e-koks-i'tis). Inflammation of the tissues about the hip joint.
- pericranial** (per-e-kra'ne-al). Pertaining to the pericranium.
- pericranitis** (per'-e-kra-ni'tis) [see *pericranium*]. Inflammation of the periosteum of the skull.
- pericranium** (per-e-kra'ne-um) [*περί* around + *κράνιον* cranium]. The cranial periosteum.
- pericystic** (per-e-sis'tik). Situated about a cyst.
- pericystitis** (per'-e-sis-ti'tis) [*περί* around + *κύστις* bladder]. Inflammation of the tissues around the bladder.
- pericystium** (per-e-sis'te-um). The vascular envelop of certain cysts.
- pericytial** (per-e-sish'al) [*περί* around + *κύτος* cell]. Situated around a cell.
- peridectomy** (per-e-dek'to-me) [*περί* around + *ἐκτομή* excision]. Same as *periomy*.
- peridendritic** (per'-e-den-drit'ik). Surrounding the dendrites.
- peridental** (per-e-den'tal). Same as *periodontal*.
- peridentium** (per-e-den'she-um). Periodontium.
- peridentoclasia** (per'-e-den-to-kla'se-ah) [*περί* around + *L. dens* tooth + *κλάσις* breaking]. The breaking down of the tissues surrounding the teeth.
- periderm** (per'e-derm) [*περί* around + *δέρμα* skin]. The rete malpighii of the skin.
- peridermal** (per-e-der'mal). Pertaining to the periderm; cuticular.
- peridesmic** (per-e-dez'mik). Around a ligament; pertaining to the peridesmium.
- peridesmitis** (per'-e-dez-mi'tis). Inflammation of the peridesmium.
- peridesmium** (per-e-dez'me-um) [*περί* around + *δέσμων* band]. The areolar membrane which covers the ligaments.
- peridiastole** (per'-e-di-as-to-le) [*περί* around + *diastole*]. The interval between the systole and the diastole.
- peridiastolic** (per'-e-di-as-tol'ik). Prediastolic.
- perididymis** (per-e-did'im-is) [*περί* around + *διδυμος* testicle]. The tunica vaginalis testis.
- perididymitis** (per'-e-did-im-i'tis). Inflammation of the perididymis.
- peridiverticulitis** (per'-e-di-ver-tik-u-li'tis). Inflammation of structures around a diverticulum of the intestine.
- peridental** (per-e-don'tal). Periodontal.
- peridentia** (per-e-don'she-ah). Periodontia.
- peridentoclasia** (per-e-don-to-kla'se-ah). Same as *periodontoclasia*.
- periductal** (per-e-duk'tal). Surrounding a duct.
- periduodenitis** (per'-e-du-o-de-ni'tis). A condition marked by a deformed duodenum surrounded and fixed by peritoneal adhesions.
- periencephalitis** (per'-e-en-sef-al-i'tis) [*περί* around + *ἐγκέφαλος* brain]. Inflammation of the surface of the brain; meningitis with cortical encephalitis.
- periencephalomeningitis** (per'-e-en-sef'al-o-men-in-j'i'tis) [*περί* around + *ἐγκέφαλος* brain + *μηνίγξ* membrane]. Chronic inflammation of the cerebral cortex and meninges; paresis or general paralysis of the insane.
- periendothelioma** (per'-e-en-do-the-le-o'mah). A tumor combining the characteristics of a perithelioma and an endothelioma.
- perienteric** (per'-e-en-ter'ik). Situated around the intestine.
- perienteritis** (per'-e-en-ter-i'tis) [*περί* around + *ἐντερων* intestine]. Inflammation of the peritoneal coat of the intestine.
- perienteron** (per-e-en'ter-on) [*περί* around + *ἐντερων* intestine]. The primitive perivisceral cavity of the embryo.
- periependymal** (per'-e-ep-en-dim-al). Situated around the ependyma.

periepithelioma (per'e-ep-e-the-le-o'mah). A tumor which sometimes affects the suprarenal body, and may lead to a large metastatic growth of the liver.

Pérrier's operation (per-e-az') [Charles *Pérrier*, French surgeon, 1838-1914]. See under *operation*.

periesophageal (per'e-e-so-fa'-je-al). Situated around the esophagus.

periesophagitis (per'e-e-sof-aj-i'tis). Inflammation of the tissues around the esophagus.

perifistular (per-e-fis'tu-lar). Around a fistula.

perifollicular (per-e-fol-ik'u-lar). Surrounding a follicle.

perifolliculitis (per'e-fol-ik-u-li'tis). Inflammation around the hair follicles.

perigangliitis (per'e-gang-le-i'tis). Inflammation of tissues around a ganglion.

periganglionic (per'e-gang-le-on'ik). Situated around a ganglion.

perigastric (per-e-gas'trik). Situated around the stomach; pertaining to the peritoneal coat of the stomach.

perigastritis (per'e-gas-tri'tis) [*περί* around + *γαστήρ* stomach]. Inflammation of the peritoneal coat of the stomach.

perigemmal (per-e-jem'al). Surrounding a taste bud or other bud.

periglandular (per-e-glan'du-lar). Surrounding a gland or glands.

periglandulitis (per'e-glan-du-li'tis). Inflammation of the tissues about a glandule or glandules.

periglial (per-e-gli'al). Surrounding the glia cells of the brain.

periglossitis (per-e-glos-i'tis). Inflammation of the tissues around the tongue.

periglottic (per-e-glot'ik). Situated around the tongue.

periglottis (per-e-glot'is) [*περί* around + *γλῶττα* tongue]. The mucous membrane of the tongue.

perihepatic (per'e-hep-at'ik) [*περί* around + *ήπαρ* liver]. Situated or occurring about the liver.

perihepatitis (per'e-hep-at-i'tis) [*περί* around + *ήπαρ* liver]. Inflammation of the peritoneal capsule of the liver. **p. chronica hyperplas-tica**, a disease in which the peritoneal covering of the liver becomes converted into a white mass resembling the icing of a cake. Called *frosted liver*, *icing liver*, *zuckerguss-leber*, etc.

perihernial, periherniary (per-e-her-ne'al, per-e-her-ne-a-re). Situated or occurring around a hernia.

perihysterica (per-e-his-ter'ik) [*περί* around + *ιστέρα* uterus]. Around the uterus.

peri-insular (per-e-in'su-lar). Surrounding an insula, particularly the island of Reil.

perijejunitis (per'e-jej-u-ni'tis). Inflammation around the jejunum.

perikaryon (per-e-kar'e-on) [*περί* around + *κάρυον* nucleus]. The main protoplasmic mass of a cell; the cell body as distinguished from the nucleus and the processes.

perikeratic (per-e-ker-at'ik). Surrounding the cornea.

perilabyrinth (per-e-lab'ir-inth). The tissues that surround the labyrinth of the ear.

perilabyrinthitis (per'e-lab-ir-in-thi'tis). Inflammation of the tissues around the labyrinth.

perilaryngeal (per'e-lar-in'je-al). Situated around the larynx.

perilaryngitis (per'e-lar-in-ji'tis) [*περί* around + *λάρυγξ* larynx]. Inflammation of the areolar tissue around the larynx.

perilenticular (per-e-len-tik'u-lar). Surrounding the crystalline lens.

periligamentous (per'e-lig-am-en'tus). Around a ligament.

perilobar (per-e-lo'bar). Surrounding a lobe.

perilymph (per'e-limf) [*περί* around + *L. lym'pha* lymph]. The fluid contained in the space between the osseous and the membranous labyrinth of the ear.

perilymphadenitis (per'e-lim-fad-en-i'tis). Inflammation of the tissues around a lymph gland.

perilymphangeal (per'e-lim-fan'je-al). Around a lymphatic vessel.

perilymphangitis (per'e-lim-fan-ji'tis). Inflammation around a lymphatic vessel.

perilymphatic (per'e-lim-fat'ik). 1. Pertaining to the perilymph. 2. Located around a lymphatic vessel.

perimastitis (per'e-mas-ti'tis) [*περί* around + *μαστός* breast]. Inflammation of the connective tissue around the mammary gland.

perimedullary (per-e-med'u-la-re). Surrounding the medulla oblongata or the marrow of a bone.

perimeningitis (per'e-men-in-ji'tis) [*περί* around + *μηνιγξ* membrane]. Inflammation of the dura; pachymeningitis.

perimeter (per-im'et-er) [*περί* around + *μέτρον* measure]. 1. The line that bounds any plane figure. 2. An instrument for measuring the field of vision. **bed p.**, a perimeter for examining the eyes of bedridden patients. **dental p.**, an instrument for measuring the circumference of a tooth.

perimetric (per-e-met'rik). Pertaining to the perimetry.

perimetritic (per'e-met-rit'ik). Pertaining to perimetritis.

perimetritis (per'e-me-tri'tis) [*περί* around + *μήτρα* uterus]. Inflammation of the perimetrium.

perimetrium (per-e-me'tre-um) [*περί* around + *μήτρα* womb]. The peritoneal covering of the uterus.

perimetrosalpingitis (per-e-met'ro-sal-pin-ji'tis). Pelvic inflammation, including perimetritis, parametritis, perisalpingitis, etc.

perimetry (per-im'et-re) [*περί* around + *μέτρον* measure]. The measuring of the field of vision.

perimyelis (per-e-mi'el-is) [*περί* around + *μυελός* marrow]. Same as *endosteum*.

perimyelitis (per'e-mi-el-i'tis). 1. Inflammation of the perimyelis. 2. Spinal meningitis.

perimyelography (per'e-mi-el-og'raf-e) [*περί* around + *μυελός* marrow + *γραφειν* to record]. Roentgen-ray examination after injecting iodized oil or other contrast fluid into the subarachnoid space of the spinal cord.

perimyo-endocarditis (per-e-mi'o-en-do-kar-di'tis). Pericarditis associated with myocarditis and endocarditis.

perimysial (per-e-mis'e-al). Pertaining to the perimysium.

perimysiitis, perimysitis (per'e-mis-e-i'tis, -mis-i'tis). Inflammation of the perimysium.

perimysium (per-e-mis'e-um) [*περί* around + *μῦς* muscle]. The delicate sheath of connective tissue that surrounds each fasciculus of muscular fiber.

perinaeum (per-e-ne'um). See *perineum*.

perineal (per-e-ne'al). Pertaining to the perineum.

perineauxesis (per'in-e-awks-e'sis) [*περίναιον* perineum + *αύξησις* increase]. Same as *colpoperineorrhaphy*.

perineocele (per-e-ne'o-sēl) [*περίναιον* perineum + *κήλη* hernia]. A hernia lying between the rectum and the prostate, or between the rectum and vagina; perineal hernia.

perineocolporectomyomectomy (per-e-ne'o-kol'po-rek'to-mi-o-mek'to-me) [*perineum* + *κόλπος* vagina + *rectum* + *μυομα* + *έκτομή* excision]. Removal of a myoma by cutting the perineum, vagina, and rectum.

perineoplasty (per-e-ne'o-plas-te) [*περίναιον*

perineum + *πλάσσειν* to shape]. Plastic surgery of the perineum.

perineorrhaphy (per'-e-ne-or'-a-fe) [*περίλαιον* perineum + *ράφή* suture]. Saturation of the perineum, performed for the repair of a laceration.

perineoscrotal (per-e-ne-o-skro'tal). Pertaining to the perineum and scrotum.

perineostomy (per-e-ne-os'to-me) [*perineum* + *στόμα* a mouth]. Urethrostomy through the perineum: called also *Poncet's operation*.

perineosynthesis (per-e-ne'-o-sin'the-sis) [*περίλαιον* perineum + *σύνθεσις* a placing together]. Surgical restoration of a completely lacerated perineum.

perineotomy (per'-e-ne-ot'-o-me) [*περίλαιον* perineum + *τομή* to cut]. A surgical incision through the perineum anteroposteriorly.

perineovaginal (per-e-ne'-o-vaj'in-al). Pertaining to the perineum and the vagina.

perineovaginorectal (per-e-ne'-o-vaj'in-o-rek'-tal). Pertaining to the perineum, vagina, and rectum.

perineovulvar (per-e-ne-o-vul'var). Pertaining to the perineum and the vulva.

perinephrial (per-e-nef're-al). Pertaining to the perinephrium.

perinephritic (per'-e-nef-rit'ik) [*περί* around + *νεφρός* kidney]. 1. Situated or occurring around the kidney. 2. Pertaining to or caused by perinephritis.

perinephritis (per'-e-nef-ri'tis) [*περί* around + *νεφρός* kidney + *-ιτις* inflammation]. Inflammation of the perinephrium. It is marked by fever, local pain, and tenderness on pressure.

perinephrium (per-e-nef're-um) [*περί* around + *νεφρός* kidney]. The peritoneal envelop and other tissues around the kidney.

perineum (per-e-ne'um) [*περίλαιον*]. The space, or area, between the anus and the genital organs. It is limited in front by the pubic arch, behind by a line joining the tuberosities of the ischia, and on either side by the rami of the ischium. It is occupied by the urethra and vagina in the female, and by various muscles, nerves, and vessels.

perineural (per-e-nu'ral). Surrounding a nerve or nerves.

perineurial (per-e-nu're-al). Pertaining to the perineurium.

perineuritic (per-e-nu-rit'ik). Pertaining to or suffering from perineuritis.

perineuritis (per'-e-nu-ri'tis). Inflammation of the perineurium.

perineurium (per-e-nu're-um) [*περί* around + *νεῦρον* nerve]. The sheath which encloses each funiculus of a nerve fiber. See *nerve*.

perinuclear (per-e-nu'kle-ar). Situated or occurring around a nucleus.

periocular (per-e-ok'-u-lar). Situated or occurring around the eye.

period (pe're-od) [*περί* around + *ὁδός* way]. An interval or division of time; the time for the regular recurrence of a phenomenon. **half-life p.**, the period after which half of a radioactive element is so transformed that it is no longer of therapeutical potency. **incubation p.**, the period of time between the moment of entrance of the infecting organism into the body and the first appearance of the symptoms of the consequent disease. **intersystolic p.**, the atrioarotid interval. See under *interval*. **iso-electric p.**, the moment in muscular contraction when the electrodes are so related to the contraction wave that no deflection of the galvanometer is produced. **lag p.**, the time which elapses after a micro-organism is introduced into a nutrient medium before reproduction begins. **monthly p.**, the time of menstruation. **presphygmie p.**, a short period

(0.07 to 0.09 second) early in the systole of the ventricles when both the auriculoventricular and semilunar valves are closed. During this period the blood flow in the auricles and ventricles ceases.

reaction p., the stage of rallying from shock after trauma. **refractory p.**, a short period succeeding the time at which a nerve or muscle enters into a condition of functional activity during which the nerve or muscle does not respond to a second stimulus.

periodic (pe-re-od-ik) [*περιοδικός*]. Recurring at certain intervals.

periodicity (per'-e-o-dis'it-e). Recurrent at regular intervals of time. **filarial p.**, the periodic recurrence every night of filaria in the blood of a person who has been infected.

periodocasein (per-i'-o-do-ka'se-in). An iodine and casein preparation for use in goiter and myxedema.

periodontal (per'-e-o-don'tal) [*περί* around + *ὀδούς* tooth]. Situated or occurring around a tooth; pertaining to the alveolodental ligament.

periodontia (per-e-o-don'she-ah) [*περί* around + *ὀδούς* tooth]. That branch of dentistry which treats of the periodontal tissues and its diseases.

periodontist (per-e-o-don'tist). A dentist who specializes in periodontia.

periodontitis (per'-e-o-don-ti'tis). Inflammation of the periodontium. **apical p.**, periodontitis of the apex of the root of a tooth.

periodontium (per'-e-o-don'she-um) [*περί* around + *ὀδούς* tooth]. See *pericementum*.

periodontoclasia (per'-e-o-don-to-kla'se-ah) [*περί* around + *ὀδούς* tooth + *κλάσις* breaking]. Destruction of periodontal tissue; pyorrhea alveolaris.

periodontology (per-e-o-don-tol'-o-je) [*περί* around + *ὀδούς* tooth + *λόγος* treatise]. That department of dentistry which treats of disorders and diseases of the periodontal tissues.

peridoscope (pe-re-od'-o-skōp) [*περί* around + *ὁδός* way + *σκοπεῖν* to view]. A calendar or dial indicating the probable date of parturition.

periomphalic (per-e-om-fal'ik) [*περί* around + *ὄμφαλος* navel]. Around the umbilicus.

perionychia (per'-e-o-nik'e-ah). Same as *perionychium*.

perionychium (per'-e-o-nik'e-um) [*περί* around + *ὄνυξ* nail]. The epidermis bordering a nail.

perionyx (per-e-o-niks) [*περί* around + *ὄνυξ* nail]. A relic of the eponychium persisting as a band across the root of the nail, seen in the eighth month of fetal life.

perionyxis (per'-e-o-niks'is) [*περί* around + *ὄνυξ* nail]. Inflammation of the skin surrounding a fingernail or toenail.

perioophoritis (per'-e-o-of-o-ri'tis) [*περί* around + *ὤον* egg + *φέρειν* to bear]. Inflammation of the peritoneum around the ovary.

perioophorosalingitis (per'-e-o-of'-o-ro-sal-pin-jit'is) [*περί* around + *ὤον* egg + *φέρειν* to bear + *σάλπιγξ* tube]. Inflammation of the tissues around the ovary and oviduct.

perioothecitis (per-e-o'-o-the-si'tis) [*περί* around + *ὠθήκη* ovary + *-ιτις* inflammation]. Inflammation of the peritoneum around the ovary.

perioothecosalingitis (per-e-o'-o-the-ko-sal-pin-jit'is) [*περί* around + *ὠθήκη* ovary + *σάλπιγξ* tube + *-ιτις* inflammation]. Inflammation of the tissues around the ovary and the fallopian tube.

periophthalmia (per-e-of-thal'me-ah). Same as *periophthalmiitis*.

periophthalmic (per'-e-of-thal'mik). Situated around the eye.

periophthalmitis (per'-e-of-thal-mi'tis). Inflammation of the tissues around the eye.

periole (per'e-o-pl) [*περί* around + *ὄπλον* hoof]. The smooth, shiny layer on the outer surface of the hoofs of animals.

perioptometry (per'e-op-tom'et-re) [*περί* around + *ὀπτός* visible + *μέτρον* measure]. The measurement of the peripheral acuity of vision or of the limits of the visual field.

perioral (per-e-o'ral) [*περί* around + *L. os* mouth]. Situated or occurring around the mouth.

periorbit (per-e-or'bit). Periorbita.

periorbita (per-e-or'bit-ah) [*περί* around + *L. orbita* orbit]. The periosteum of the eye socket.

periorbital (per-e-or'bit-al). Situated around the eye socket.

periorbititis, periorbitis (per'e-or-bit-i'tis, per'e-or-bi'tis). Inflammation of the periorbita.

periorchitis (per'e-or-ki'tis) [*περί* around + *ὄρχις* testis + *-itis* inflammation]. Inflammation of the tunica vaginalis testis. **p. adhaesi'va**, a variety in which the two layers of the tunica vaginalis are more or less adherent.

periost (per'e-ost). Same as *periosteum*.

periosteal (per-e-os'te-al). Pertaining to the periosteum.

periosteitis (per'e-os-te-i'tis). Same as *periostitis*.

periosteodema (per-e-os'te-o-de'mah). Same as *perioste-oedema*.

perioste-oedema (per-e-os'te-o-ed-e'mah). Edema of the periosteum.

periosteoma, periostoma (per'e-os-te-o'mah, per'e-os-to'mah). A morbid bony growth surrounding a bone.

periosteomedullitis, periostomedullitis (per-e-os'te-o-med-ul-i'tis, per-e-os'to-med-ul-i'tis). Inflammation of the periosteum and the marrow.

periosteomyelitis (per-e-os'te-o-mi-e-li'tis) [*περί* around + *ὀστέον* bone + *μύελος* marrow + *-itis* inflammation]. Inflammation of the entire bone, including periosteum and marrow.

periosteophyte (per-e-os'te-o-fi't) [*periosteum* + *φυτὸν* growth]. A bony outgrowth on the periosteum.

periosteorrhaphy (per'e-os-te-or'af-e) [*periosteum* + *ράφω* suture]. The suturing together of the margins of severed periosteum.

periosteosis (per-e-os-te-o'sis). The development of periosteomas.

periosteotome (per-e-os'te-o-tōm) [*περί* around + *ὀστέον* bone + *τέμνειν* to cut]. An instrument for cutting the periosteum; also an instrument for separating the periosteum from the bone.

periosteotomy (per'e-os-te-ot'o-me) [*περί* around + *ὀστέον* bone + *τομή* a cut]. Surgical incision or slitting of the periosteum.

periosteous (per-e-os'te-us). Pertaining to or of the nature of periosteum.

periosteum (per-e-os'te-um) [*περί* around + *ὀστέον* bone]. The tough fibrous membrane surrounding a bone. It adheres to the surface of the bones, excepting at their cartilaginous extremities. It consists of two closely united layers, the outer one made up of connective tissue, with occasionally a few fat cells; the inner one of fine elastic fibers, forming a dense network. **p. alveola're** [B N A], **alveolar p.**, **alveolo-dental p.**, the pericementum. **dental p.** Same as *pericementum*.

periostitis (per'e-os-ti'tis). Inflammation of the periosteum. The condition is generally chronic, and is marked by tenderness and swelling of the bone and an aching pain. Acute periostitis is due to infection, and is characterized by diffuse suppuration, severe pain, constitutional symptoms, and usually results in necrosis. **p. albumino'sa**, **albuminous p.**, a form accompanied by the exudation of a clear, albuminous liquid into a flattened cavity beneath the periosteum; called also *serous abscess* and *periosteal ganglion*. **dental**

p., inflammation of the dental periosteum. **diffuse p.**, a noncircumscribed periostitis of the long bones. **hemorrhagic p.**, a form in which blood is extravasated beneath the periosteum. **p. inter'na cra'nii**, inflammation of the endocranium; external pachymeningitis. **precocious p.**, syphilitic osteoperiostitis occurring as an early symptom.

periostoma (per-e-os-to'mah). Periosteoma.

periostomedullitis (per-e-os'to-med-ul-i'tis). See *periosteomedullitis*.

periostosis (per'e-os-to'sis). A bony growth formed about a bone.

periostosteitis (per'e-os-tos-te-i'tis). Periostitis and osteitis occurring together.

periostome (per-e-os'to-tōm). Same as *periosteolome*.

periosteotomy (per'e-os-tot'o-me). Same as *periosteotomy*.

periotic (per-e-o'tik) [*περί* around + *ὄψ* ear].
1. Situated about the ear, especially the internal ear.
2. The petrous and mastoid portions of the temporal bone, at one stage a distinct bone.

perioparitis (per'e-o-var-i'tis). Same as *perioprophoritis*.

periovular (per-e-o'vu-lar). Surrounding an ovum.

peripachymeningitis (per-e-pak'e-men-in-j'i'tis) [*περί* around + *παχὺς* thick + *μηνίγγεα* membrane]. Inflammation of the substance between the dura and the bone.

peripancratic (per-e-pan-kre-at'ik). Surrounding the pancreas.

peripancraticitis (per-e-pan'kre-at-i'tis) [*περί* around + *πάγκρεας* pancreas]. Inflammation of tissues around the pancreas.

peripapillary (per-e-pap'il-a-re). Situated around the optic papilla.

peripatetic (per'e-pat-et'ik). Walking about, as, *peripatetic* typhoid.

peripenial (per-e-pe'ne-al). Around the penis.

peripericarditis (per'e-per-e-kar-di'tis). Inflammation around the pericardium producing adhesions of the pericardium to the pleura and chest wall.

periphacitis (per'e-fa-si'tis) [*περί* around + *φακός* lens + *-itis* inflammation]. Inflammation of the capsule of the eye lens.

periphakitis (per-e-fak-i'tis). Periphacitis.

peripharyngeal (per'e-far-in'je-al). Situated around the pharynx.

peripherad (per-if'er-ad). Toward the periphery.

peripheral, peripheric (per-if'er-al, per-if'er-ik). Pertaining to or situated at or near the periphery.

peripheraphose (per-if'er'af-ōz). Any aphose originating in the peripheral ocular mechanism.

peripheric (per-if'er-ik). Peripheral.

peripherocentral (per-if'er-o-sen'tral). Both peripheral and central, but primarily or preponderatingly peripheral.

peripheroreceptor (per-if'er-o-sep'tor). Any one of the receptors at the peripheral ends of the sensory peripheral neuron which receive the stimulus.

peripheromittor (per-if'er-o-mit'or). A terminal mittor placed in connection with the ceptor of a muscle fiber or gland cell which transmits the impulse to the fiber or cell.

peripheroneural (per-if'er-o-nu'al). Pertaining to the nerves situated at the surface of the body.

peripherophose (per-if'er-o-fōz) [*periphery* + *phose*]. Any phose originating in the eye or the optic nerve.

periphery (per-if'er-e) [*περιφέρεια*; *περί* around + *φέρειν* to bear]. The outward part or surface.

periphlebitic (per'e-fleb-it'ik). Pertaining to *periphlebitis*.

periphlebitis (per-'if-le-bi'tis) [*perí* around + *φλέβ* vein]. Inflammation of the tissues around a vein, or of the external coat of a vein.

periphoria (per-if-o're-ah) [*perí* around + *φορός* bearing]. Same as *cyclophoria*.

Periplaneta (per-e-plan-e'tah). A genus of roaches.

periplast (per'ip-last) [*perí* around + *πλάσσειν* to mold]. The protoplasm within a cell and outside of the nucleus.

periplastic (per-e-plas'tik). Formed from or relating to the periplasm: said of flagella.

peripleural (per-e-plu'r'al). Surrounding the pleura.

peripleuritis (per''e-plu-ri'tis) [*perí* around + *πλευρά*]. Inflammation of the tissues between the pleura and the chest wall.

periplocin (per-ip-lo'shin). A crystallizable glucoside, $C_{30}H_{52}O_{12}$, from *Periplocia græca*: it acts like digitalin as a heart tonic and slower of the pulse. Subcutaneous dose, $\frac{1}{100}$ to $\frac{1}{8}$ grain (0.007-0.001 Gm.).

peripneumonia (per'ip-nu-mo'ne-ah) [*perí* around + *πνεύμων* lung]. Pneumonia; also pleuropneumonia. **p. no'tha**, a variety of acute bronchitis simulating pneumonia, congestion of the lungs.

peripneumonitis (per-e-nu-mo-ni'tis). Peripneumonia.

peripolar (per-ip-o'lar). Situated about a pole or the poles.

periportal (per-ip-or'tal). Situated around the portal vein.

periproctic (per-e-prok'tik) [*perí* around + *πρωκτός* anus]. Situated around the anus.

periproctitis (per''e-prok-ti'tis) [*perí* around + *πρωκτός* anus]. Inflammation of the tissues surrounding the rectum and anus.

periprostatic (per''e-pros-tat'ik). Situated about the prostate.

periprostatitis (per''e-pros-ta-ti'tis). Inflammation of the tissues and structures around the prostate gland.

peripyema (per-e-pi-e'mah) [Gr.]. Suppuration surrounding a part, as a tooth.

peripylephlebitis (per''e-pi-le-fle-bi'tis) [*perí* around + *πύλη* gate + *φλέβ* vein + *-itis* inflammation]. Inflammation of the tissue about the portal vein.

peripyllic (per-e-pi'lik) [*perí* around + *πύλη* gate]. Around the portal vein.

peripyloric (per-e-pi-lor'ik). Around the pylorus.

perirectal (per-e-rek'tal). Around the rectum.

perirectitis (per''e-rek-ti'tis). Same as *periproctitis*.

perirenal (per-e-re'nal) [*perí* around + *L. ren* kidney]. Situated around a kidney.

perirhinal (per-e-rí'nal) [*perí* around + *ῥίς* nose]. Situated about the nose.

perisalpingitis (per''e-sal-pin-jí'tis) [*perí* around + *σάλπιγξ* tube]. Inflammation of the tissues and peritoneum around an oviduct.

perisalpingoovaritis (per''e-sal-ping''o-o-var-i'tis). Inflammation resulting in adherent oviducts and ovaries.

perisalpinx (per-e-sal'pinks). The peritoneal cover of the upper border of the oviduct.

perisclerium (per-e-skle're-um) [*perí* around + *σκληρός* hard]. Fibrous tissue surrounding ossifying cartilage.

periscopic (per-is-kop'ik) [*perí* around + *σκοπεῖν* to see]. Affording a wide range of vision.

perisigmoiditis (per''e-sig-moi-di'tis). Inflammation of the peritoneal covering of the sigmoid flexure.

perisinuitis (per''e-si-nu-i'tis). Inflammation of the tissues around a sinus.

perisinuous (per-is-in'u-us). Situated around a venous sinus.

perisinusitis (per-e-si-nu-si'tis). Same as *perisinuitis*.

perispermatis (per''e-sper-mat-i'tis). Inflammation of the tissues about the spermatic cord. **p. sero'sa**, encysted hydrocele of the cord.

perisphæra (per-e-spër). The outer region of the aster in nerve cells.

perisplanchnic (per-e-splank'nik) [*perí* around + *σπλάγχνον* viscus]. Around a viscus or the viscera.

perisplanchnitis (per''e-splank-ni'tis). Inflammation around the viscera; perivisceritis.

perisplenic (per-e-splen'ik). Occurring around the spleen.

perisplenitis (per''is-ple-ni'tis) [*perí* around + *σπλήν* spleen]. Inflammation of the peritoneal coat of the spleen and of the structures around it. **p. cartilagin'ea**, inflammatory overgrowth of the capsule of the spleen, causing a thickening of cartilaginous hardness.

perispondylic (per-e-spon-dil'ik). Around a vertebra.

perispondylitis (per''is-pon-dil-i'tis) [*perí* around + *σπόνδυλος* vertebral]. Inflammation of the parts around a vertebra.

Perisporiaceæ (per-e-spo-re-a'se-a). A family of the Ascomycetes including the penicillium and aspergillus molds.

perissad (per-is'ad). Any element or radical with an odd-numbered valence.

peristalsis (per-is-tal'sis) [*perí* around + *στάσις* contraction]. The wormlike movement by which the alimentary canal propels its contents. It consists of a wave of contraction passing along the tube. A similar form of contraction is seen in other tubes that are provided with both longitudinal and circular muscular fibers. **mass p.**, strong peristaltic movements, which last only a few seconds, but move the intestinal contents from one section of the colon to another. **reversed p.**, that which impels the contents of the intestine cephalad.

peristaltic (per-is-tal'tik). Of the nature of peristalsis.

peristaltin (per-e-stal'tin). A glucoside, $C_{14}H_{18}O_8$, of cascara sagrada.

peristaphyline (per-is-taf'il-in) [*perí* around + *σταφυλή* uvula]. Situated around the uvula.

peristaphylitis (per''e-staf-il-i'tis). Inflammation of the tissues about the uvula.

peristole (per-is-to-le) [*perí* around + *στέλλειν* to place]. The capacity of the stomach wall to surround or grasp its contents following the ingestion of food.

peristolic (per-e-stol'ik). Pertaining to peristole.

peristoma (per-is'to-ma). Peristome.

peristomal, peristomatous (per''e-sto-mal, per-is-tom'a-tus) [*perí* around + *στόμα* mouth]. Around the mouth.

peristome (per-is-tōm) [see *peristomal*]. A groove running from the cytosome in certain protozoa.

peristrumitis (per''e-stru-mi'tis). Inflammation extending from an inflamed goiter to the surrounding structures.

peristrumous (per-e-stru'mus). Around or near a goiter.

perisynovial (per''e-si-no've-al). Around a synovial structure.

perisystole (per-e-sis'to-le) [*perí* about + *systole*]. The pause after the diastole and before the systole.

perisystolic (per''e-sis-tol'ik). Presystolic.

peritectomy (per-it-ek'to-me) [*perí* around + *ἐκτομή* excision]. Excision of a ring of conjunc-tion around and very near the cornea, followed by cauterization of the trench thus made: done for pannus.

peritendineum (per'e-ten-din'e-um). The sheath of a tendon.

peritendinitis (per'e-ten-din-i'tis). Inflammation of a tendon sheath. **p. sero'sa**. Same as *ganglion* (2d def.).

peritenon (per-e-te'non) [*περί* around + *τενών* tendon]. The connective tissue structures associated with a tendon.

perithecium (per-ith-e'se-um) [*περί* around + *θήκη* cover]. A cup or flask-shaped envelop enclosing the fructification of certain fungi and molds.

perithelial (per-e-the'le-al). Pertaining to the perithelium.

perithelioma (per'e-the-le-o'mah). A tumor of the perithelium; a form of tumor appearing to spring from the adventitia of the blood vessels, especially of the brain.

perithelium (per-e-the'le-um) [*περί* around + *θήλη* nipple]. The layer of cells and fibrils that surrounds the capillaries and smaller vessels. **Eberth's p.**, a partial layer of cells on the external surface of the capillaries.

perithoracic (per'e-tho-ras'ik). Surrounding the thorax.

perithyroiditis (per'e-thi-ro-i-di'tis). Perithyroiditis.

perithyroiditis (per'e-thi-roid-i'tis). Inflammation of the capsule of the thyroid body.

peritomist (per-it-o-mist). 1. A circumciser. 2. A performer of peritomy of any kind.

peritomize (per-it'o-mīz). To perform the operation of peritomy upon.

peritomy (per-it'o-me) [*περί* around + *τομή* cut]. 1. The treatment of pannus by the removal of a circular strip of the conjunctiva from around the cornea. 2. Circumcision.

peritoneal (per-it-o-ne'al). Pertaining to the peritoneum.

peritonealgia (per'it-o-ne-al'je-ah) [*peritoneum* + *ἄλγος* pain]. Pain in the peritoneum.

peritoneocentesis (per-it-o'ne-o-sen-te'sis) [*peritoneum* + *κέντησις* puncture]. Puncture of the peritoneal cavity for the purpose of obtaining fluid.

peritoneoclysis (per-it-o'ne-o-kli'sis). Injection of water or nutrient fluids into the peritoneal cavity in anemia or the algid stage of cholera (Sir B. W. Richardson, 1854).

peritoneomuscular (per-it-o-ne'o-mus'ku-lar). Pertaining to or composed of peritoneum and muscle.

peritoneopathy (per-it-o-ne-op'ath-e) [*peritoneum* + *πάθος* disease]. Any disease of the peritoneum.

peritoneopericardial (per-it-o-ne'o-per-e-kar'-de-al). Pertaining to the peritoneum and pericardium.

peritoneopexy (per-it-o'ne-o-peks-e) [*peritoneum* + *πῆξις* fixation]. Fixation of the uterus by the vaginal route.

peritoneoplasty (per-it-o'ne-o-plas-te) [*peritoneum* + *πλασσειν* to form]. The operation of covering a broad area with peritoneum.

peritoneoscope (per-it-o'ne-o-skōp). An instrument for performing peritoneoscopy.

peritoneoscopy (per-it-o-ne-os'ko-pe) [*peritoneum* + *σκοπεῖν* to view]. Examination of the peritoneum by an instrument inserted through the abdominal wall.

peritoneotomy (per'it-o-ne-o-t'o-me) [*peritoneum* + *τομή* cut]. Incision into the peritoneum.

peritoneum (per'it-o-ne'um), [*peritoneum* + *περιτόναιον*; *περί* around + *τείναν* to stretch]. The serous membrane which lines the abdominal walls (*parietal p.*) and invests the contained viscera. It is a strong, colorless membrane, with a smooth surface, and forms a closed sac except in the female, in whom it is continuous with the

mucous membrane of the fallopian tubes. **parietal p.**, that which lines the abdominal and pelvic walls and the under surface of the diaphragm. **visceral p.**, that reflected at various places over the viscera, forming a complete covering for the stomach, spleen, liver, ascending portion of the duodenum, jejunum, ileum, transverse colon, sigmoid flexure, upper end of rectum, uterus, ovaries; it also partially covers the descending and transverse portions of the duodenum, the cecum, ascending and descending colon, the middle part of the rectum, the posterior wall of the bladder, and the upper portion of the vagina. The peritoneum serves to hold the viscera in position by its folds, some of which form the *mesenteries*, which connect portions of the intestine with the posterior abdominal wall; others, the *omenta*, folds attached to the stomach; and still others, the *ligaments* of the liver, spleen, stomach, kidneys, bladder, and uterus. The space between the visceral and parietal peritoneums is the *peritoneal cavity*, which consists of the *pelvic-peritoneal cavity* below and the *general peritoneal cavity* above. The general peritoneal cavity communicates by the foramen of Winslow with the cavity of the great omentum, which is also known as the *lesser peritoneal cavity*.

peritonism (per'it-o-nizm). A condition of shock simulating peritonitis, but without inflammation of the peritoneum.

peritonitis (per'it-o-ni'tis). Inflammation of the peritoneum; a condition marked by exudations in the peritoneum of serum, fibrin, cells, and pus. It is attended by abdominal pain and tenderness, constipation, vomiting, and moderate fever. **adhesive p.**, that which is characterized by adhesions between the visceral and parietal layers. **biliary p.** See *choleperitoneum*. **p. chron'ica fibro'sa incapsulans**, a chronic peritonitis marked by the formation on the intestine of a white coating of fibrous tissue undergoing hyaline degeneration: called also *iced intestine* and *Zuchergussdarm*.

circumscribed p., that which is limited to a portion of the peritoneum. **p. deformans**, chronic peritonitis producing shortening of the mesentery so that the intestines are drawn up in loops toward the spine. **diaphragmatic p.**, that which affects the under, or peritoneal, surface of the diaphragm. **diffuse p.**, **general p.**, that which is not localized. **encysted p.**, peritonitis in which there is a collection of pus or serum enclosed by adhesions. **fibrocaceous p.**, tubercular peritonitis with fibrous and caseous degeneration. **general p.**, inflammation of the greater part of the peritoneum. **hemorrhagic p.**, that which is attended with hemorrhagic effusion. **localized p.** Same as *circumscribed p.* **pelvic p.**, perimetritis; peritonitis situated in the pelvis. **puerperal p.**, that which occurs in childbed. **septic p.**, that which is due to a pyogenic micro-organism. **serous p.**, that which is attended with a copious liquid exudation. **silent p.**, acute peritonitis which causes sudden death without betraying its presence by any symptoms. **terminal p.**, primary peritonitis in the late stages of a wasting disease. **traumatic p.**, simple acute peritonitis due to traumatism or injury. **tuberculous p.**, that which accompanies tuberculosis of the peritoneum.

peritonization (per'it-o-niz-a'shun). The operation of covering an injured surface of an abdominal organ with peritoneum; peritoneoplasty.

peritonize (per'it-o-nīz). To cover with peritoneum.

peritonissilar (per-e-ton'sil-ar). Situated around or near a tonsil.

peritonissillitis (per'it-on-sil-i'tis). Inflammation of the peritonissilar tissues.

peritracheal (per-e-tra'ke-al). Situated around the trachea.

Peritricha (per-it'rik-ah) [*περί* around + *θρίξ*

- hair]. A group of bacteria including those forms which are surrounded by flagella.
- peritrichal, peritrichic, peritrichous** (per-it'-rik-al, per-e-trik'ik, per-it'rik-us) [*περί* around + *τριχί* hair]. Having flagella distributed over the whole surface: said of micro-organisms.
- peritrochanteric** (per'e-tro-kan-ter'ik). Situated about a trochanter.
- perityphlic** (per-e-tif'lik) [*περί* around + *τύφλον* cecum]. Around the cecum.
- perityphlitis** (per'e-tif-li'tis) [*περί* around + *τύφλος* blind + *-itis* inflammation]. Inflammation of the peritoneum surrounding the cecum; appendicitis. **p. actinomycot'ica**, actinomycosis whose principal seat is pericecal.
- periumbilical** (per'e-um-bil'ik-al). Situated around the umbilicus.
- periungual** (per-e-ung'wal). Around the nail.
- periureteric** (per'e-u-re-ter'ik). About the ureter.
- periurethritis** (per-e-u're-ter-i'tis) [*περί* around + *ουρητήρ* ureter + *-itis* inflammation]. Inflammation of the tissues around a ureter.
- periurethral** (per'e-u-re'thral). Occurring around the urethra.
- periuethritis** (per'e-u-re-thri'tis) [*περί* around + *ουρήθρα* urethra + *-itis* inflammation]. Inflammation of the tissues around the urethra.
- periueterine** (per-e-u'ter-in). Situated around the uterus.
- periuvarial** (per-e-u'vu-lar). Around the ovula.
- perivaginal** (per-e-vaj'in-al). Around the vagina.
- perivaginitis** (per'e-vaj-in-i'tis). Same as *pericolpitis*.
- perivascular** (per-e-vas'ku-lar). Situated around a vessel.
- perivascularitis** (per'e-vas-ku-li'tis). Inflammation of a perivascular sheath.
- perivenous** (per-e-ve'nus). Around a vein.
- perivertebral** (per-e-ver'te-bral). Surrounding a vertebra.
- perivesical** (per-e-ves'ik-al) [*περί* around + *L. vesica* bladder]. Occurring around the bladder.
- perivisceral** (per-e-vis'er-al). Occurring around a viscus or the viscera.
- perivisceritis** (per'e-vis-er-i'tis). Inflammation around a viscus or around the viscera.
- perivitelline** (per-e-vit-el'in). Situated around a vitellus or yolk.
- perixenitis** (per-e-zen-i'tis) [*περί* around + *ξένος* strange]. Inflammation occurring around a foreign body in a tissue or organ.
- perkinism, perkinsism** (per'kin-izm, per'kin-sizm) [Elisha Perkins, of Norwich, Connecticut, 1740-1799]. An obsolete form of metallothrapy; the therapeutical use of metallic tractors.
- Perkins' tractor**. See *perkinism* and *tractor*.
- perlèche** (per-lesh') [Fr.]. A contagious microbic disease attacking the labial commissures of children causing them to lick their lips and resulting in a thickening and desquamation of the epithelium at the corners of the mouth. Sometimes smarting fissures are formed.
- Perles' bodies and test** (per'lāz) [Max Perles, German pathologist, 1843-1881]. See under *body, tests*.
- Perlia's nucleus** (per'le-ahz) [Richard Perlia, contemporary German oculist]. See *nucleus*.
- perlingual** (per-ling'wal) [*L. per* through + *lin'gua* tongue]. Through the tongue. The term is applied to the administration of medicines which are resorbed from the surface of the tongue.
- perloid** (per'loid). A proprietary form of capsule.
- Perlsucht** (per'lookt) [German]. Tuberculosis of the mesentery and peritoneum in cattle.
- permanganate** (per-man'gan-āt). Any salt of permanganic acid (q. v. under *acid*).
- permeability** (per-me-a-bil'i'te). The property or state of being permeable. See also *osmosis*.
- capillary p.**, in the reaction to nonspecific protein therapy the endothelial cells of the capillaries become more permeable.
- permeable** (per-me-ah-bl) [*L. per* through + *med're* to pass]. Not impassable; pervious; that may be traversed.
- permutit** (per-mu'tit). An exchange silicate. A glass made by fusing felspar, kaolin, pearl ash, and soda. When crushed and placed in water it removes the calcium and magnesium from the water and gives up, "exchanges," sodium, thus softening the water.
- perna** (per'nah). A chlorinated naphtha.in. Those who handle this substance are subject to a serious acne, called *perna disease*, *chlorine acne* and *halogen acne*.
- pernasal** (per-na'sal) [*L. per* through + *nasus* nose]. Performed through the nose.
- pernicious** (per-nish'us) [*L. perniciosus*]. Tending to a fatal issue.
- pernio** (per'ne-o). Latin for *chilblain*.
- pernocton** (per-nok'tōn). A proprietary hypnotic preparation.
- pero** (pe'ro) [*L. "a boot"*]. The external layer of the olfactory lobe of the brain, giving rise to the olfactory nerves.
- perobranchius** (pe-ro-bra'ke-us) [*πηρός* maimed + *βραχίον* arm]. A fetus with deformed feet and arms.
- perocephalus** (pe-ro-sef'al-us) [*πηρός* maimed + *κεφαλή* head]. A monster fetus with a deformed head.
- perochirus** (pe-ro-ki'rus) [*πηρός* maimed + *χείρ* hand]. A fetus with malformed hands.
- perocormus** (pe-ro-kor'mus) [*πηρός* maimed + *κορμός* body]. Perosomus.
- perodactylus** (pe-ro-dak'til-us) [*πηρός* maimed + *δάκτυλος* finger]. A fetus with deformity of fingers or toes, or both, especially absence of one or more digits.
- perogen** (per-o-jen). A preparation for making an oxygen bath, consisting of a catalyzer and sodium perborate wrapped separately. When the two substances are mixed in the bath water, oxygen is liberated.
- peromelus** (pe-rom'el-us) [*πηρός* maimed + *μέλος* limb]. A fetus with malformed limbs.
- peronaeus** (per-o-ne'us) [*περόνη* pin]. See *muscles, table of*.
- peronarthrosis** (per'o-nar-thro'sis) [*περόνη* pin + *άρθρον* joint]. An articulation in which the surfaces are convex in one direction and concave in the other.
- perone** (per-o'ne) [*περόνη* brooch]. The fibula.
- peroneal** (per-o-ne'al) [*περόνη* pin]. Pertaining to the fibula.
- peroneotibial** (per-o-ne-o-tib'e-al). Pertaining to the fibula and tibia.
- peroneus** (per-o-ne'us). See *muscles, table of*.
- peronin** (per-o-nin). A proprietary white powder, $C_6H_5CH_2C(OH).C_7H_7NO.HCl$, a hydrochloride of the benzyl ester of morphine. It is a narcotic; used in irritative coughs, as those of phthisis and bronchitis. Dose, $\frac{1}{2}$ -1 grain (0.022-0.066 Gm.).
- Peronospora** (per-o-nos'po-rah) [*περόνη* point + *σπόρος* seed]. A genus of mildew fungi. *P. ferro'ni* and *P. lu'tea* were once supposed to cause yellow fever.
- pero-olfactorius** (pe'',ro-ol-fak-to're-us). The outer part of the olfactory bulb.
- Per. op. emet.** Abbreviation for *L. perac'ta operatio'ne emet'ica*, when the action of the emetic is over.
- peropus** (pe'ro-pus) [*πηρός* maimed + *πούς* foot]. A fetus with malformed limbs.

peroral (per-o'ral) [L. *per* through + *os*, *oris*, the mouth]. Performed through the mouth.

per os (per os) [L.]. By the mouth.

peroscols (per-os'kolz). An antiseptic liquid preparation of hydrogen dioxide, salicylic acid, etc.

perosomus (pe-ro-so'mus) [πρὸς maimed + σῶμα body]. A monster fetus with a body or trunk greatly deformed.

perosseous (per-os'e-us) [L. *per* through + *os* bone]. Transmitted through bone.

peroxidase (per-oks'id-ās). A substance (possibly an enzyme) which decomposes organic peroxides.

peroxide (per-oks'id). That oxide of any element which contains more oxygen than any other. More correctly applied to compounds having such linkage as —O—O—; for instance, hydrogen peroxide, H—O—O—H.

peroxol (per-oks'ol). A preparation of hydrogen peroxide with such a principle as menthol (forming menthoxol) or camphor (camphoxol).

peroxydase (per-ok'sid-ās). Same as *peroxidase*.

peroxydasis (per-ok-si-da'sis). The action produced by peroxydase.

peroxydol (per-ok'se-dol). Sodium perborate.

perplication (per-plik-a'shun) [L. *per* through + *plicare* to fold]. The closure of a divided vessel by drawing its bleeding end through an incision in its own wall.

perpoena (per-pe'nah). A proprietary analgesic and antirheumatic agent; a white powder, said to be a coal tar derivative. Dose, 5-10 grains (0.3-0.6 Gm.).

per primam (per pri'mam). See *per primam intentionem*.

per primam intentionem (per pri'mam in-ten-she-o'nem). Latin for *by first intention*.

per rectum (per rek'tum) [L.]. Through or by the rectum.

persalt (per'sawlt). A salt of a peracid; a salt the acid radical of which has a higher valence than the protosalt.

per saltum (per sal'tum) [L.]. By leaps.

per secundam (per se-kun'dam). See *per secundam intentionem*.

per secundam intentionem (per se-kun'dam in-ten-she-o'nem). Latin for *by second intention*.

persensitized (per-sen'sit-izd). See under *cell*.

perseveration (per-sev'er-a'shun). Persistence of one reply or one idea in response to various questions.

persio (per'se-o). Same as *cudbear*.

persodin (per-so'din). A proprietary preparation of sodium persulphate containing free sulphuric acid.

personal equation (per'so-nal). See *equation*.

personality (per-son-al'i-te). That which constitutes, distinguishes, and characterizes a person. **disordered p.**, a mental condition in which the patient thinks that he is some other person than himself. **multiple p.**, a mental state in which the patient seems to have a double or multiple consciousness, such personalities being usually separated from one another by complete amnesia. **psychopathic p.**, a hereditary tendency to mental disorder. **shut-in p.**, a personality which habitually responds inadequately to normal social appeal.

perspiratio insensibilis. Insensible perspiration. See under *perspiration*.

perspiration (per-spir-a'shun) [L. *perspire* to breathe through]. 1. Sweating; the functional excretion of sweat. 2. Sweat. **insensible p.**, those gaseous emanations from the body which do not appear in the form of sensible sweat or moisture, such as gaseous productions arising from the lungs in exhalation and from the skin by vaporization. **sensible p.**, perspiration which appears as moisture upon the skin.

perstriction (per-strik'shun). Ligation or compression of a blood vessel for the arrest of hemorrhage.

persulphate (per-sul'fat). A sulphate which contains more sulphuric acid than the ordinary sulphate.

persulphide (per-sul'fid). A sulphide which contains more sulphur than the ordinary sulphide.

per tertiam intentionem (per ter'she-am in-ten-she-o'nem). Latin for *by third intention*.

Perthes' disease (pär'tēz) [G. *Perthes*, German physician, 1869-1927]. Osteochondritis deformans juvenalis.

Pertik's diverticulum (per'tiks) [Otto *Pertik*, Hungarian physician, 1852-1913]. See *diverticulum*.

per tonal (per-to'nal). Acetyl-amido-ethoxy-benzene, recommended as an antipyretic similar to acetphenetidin.

per tubam (per tu'bam) [L.]. Through a tube: chiefly used of the eustachian tube.

pertussin (per-tus'in). A remedy for whooping cough, asthma, bronchitis, etc.: a syrup prepared from the fluidextract of thyme.

pertussis (per-tus'is) [L. *per* intensive + *tus'sis* cough]. Same as *whooping cough*.

peruanum (per-u-a'num). An element said to have been discovered in 1899 in a mineral from Peru.

perugen (per'u-jen). A proprietary preparation resembling balsam of Peru in appearance and action.

peruol (per'u-ol). A clear, odorless, oil, benzyl benzoate, the most active element of balsam of Peru: used in scabies.

peruscabin (per-u-ska'bin). Benzyl benzoate: used along with 3 parts of castor oil in scabies.

peruvian bark (pe-ru've-an). See *Cinchona*. **p. balsam**. See *balsam of Peru*.

peruvín (pe-ru'vin). Cinnamic alcohol derived from peruvian balsam.

perversion (per-ver'shun) [L. *per* through + *ver'sio* a turning]. A turning aside from the normal course; a morbid alteration of function which may occur in emotional, intellectual, or volitional fields. **sexual p.**, any abnormality of the sexual instinct. A person with abnormal sexual instincts is called a *sexual pervert*.

pervert (per'vert). A perverted person; especially a *sexual p.*, or a person who indulges in unnatural sexual acts.

per vias naturales. Latin for *by the natural ways*.

per vigilium (per vij-il'e-um) [L.]. Sleeplessness; insomnia.

pervious (per've-us) [L. *per'vius*]. Permeable; not impassable; that may be traversed.

pes (pēz), pl. *pe'des*. 1. Latin for *foot*. 2. The lower or anterior part of the crus cerebri. See *basis pedunculi*. **p. accessorius**, the eminentia collateralis. **p. anserinus**, the goose's foot; the terminal radiation of the facial nerve. **p. calcarineus**. See *talipes calcaneus*. **p. ca'vus**, hollow foot; excessive curvature or hollowness of the sole of the foot. **p. corvi'nus**, the crow's foot; a set of wrinkles at the outer canthus of the eye. **p. equinus**. See *talipes equinus*. **p. febricitans**, elephantiasis. **p. g'igas**, macropodia. **p. hippocam'pi**, the lower end of the hippocampus major. **p. lemnis'ci**, a bundle of aberrant pyramidal fibers associated with the mesial fillet. **p. olfacto'rius**, the inner layer of the olfactory bulb. **p. pedun'culi. See *basis pedunculi*. **p. pla'nus**, flatfoot; undue flatness of the sole and arch of the foot. **p. va'rus**. See *talipes varus*.**

pessary (pes'ar-e) [L. *pessa'rium*]. 1. An instrument placed in the vagina to support the uterus or rectum. 2. A medicated vaginal suppository. **cup p.**, a pessary the top of which has a cuplike

shape to fit over the os uteri. **Gariel's p.**, a hollow rubber pessary which can be inflated. **Gehrung p.**, a pessary for cystocele, being a Hodge pessary bent on itself so as to form a double horsehoe, one lever being a little shorter than the

Pessaries: a, Smith-Hodge; b, Gehrung; c, Menge; d, ring. (Macfarlane.)

other. **Hodge's p.**, a pessary for retrodeviations of the uterus. **lever p.**, a pessary which acts on the principle of the lever. **Menge's p.**, a ring pessary with a fixed crossbar holding a detachable stem. **ring p.**, a round or ring-shaped pessary. **stem p.**, a pessary with a stem for introduction into the uterine canal. **Zwanck's p.**, a pessary with two wings.

pessima (pes'im-ah). A skin disease characterized by papules and bordered with inflammatory patches.

pessimism (pes'im-izm) [L. *pes'simus* worst]. A morbid or insane disposition to put the worst construction upon everything. **therapeutical p.**, a tendency to undervalue the curative properties of drugs.

pessulum, pessum, pessus (pes'u-lum, pes'sum, pes'us) [πείσων, πείσός pessary]. Latin names for a pessary.

pest (pest). Same as *plague*. **chicken p.**, fowl plague. **scratching p.**, Anjeszky's disease. **Siberian p.**, anthrax.

peste-boba (pes'ta-bo'bah). See *Trypanosoma venezuelense*.

pest house (pest hows). A hospital for persons with contagious diseases.

pesticemia, pesticaemia (pes-tis-e-me-ah) [L. *pes'tis* place + *αἷμα* blood]. 1. The presence of plague germs (*Pasteurella pestis*) in the blood. 2. *Septicemic plague*.

pestiferous (pes-tif'er-us) [L. *pestif'erus*; *pes'tis* plague + *fer're* to bear]. Causing or propagating a pestilence.

pestilence (pes'til-ens) [L. *pestil'en'tia*]. Any virulent contagious or infectious epidemic disease; also an epidemic of such a disease.

pestilential (pes-til-en'shal). Of the nature of a pestilence; producing an epidemic disease.

pestis (pes'tis). Latin for *plague*. **p. ma'jor**, oriental plague of the usual form. **p. mi'nor**, a mild form of oriental plague.

pestle (pes'l) [L. *pestil'lum*]. An instrument for pounding drugs in a mortar.

pestology (pes-tol'o-je). The scientific study of pests.

petalobacteria (pet'al-o-bak-te're-ah) [πέταλον leaf + *bacteria*]. Bacteria which become so aggregated as to form thin pellicles.

petalococcus (pet'al-o-kok'us) [πέταλον leaf + κόκκος berry]. Any representative of a group of cocci which become so aggregated as to form thin pellicles.

petechia (pe-te'ke-ah), pl. *pete'chiae* [L.]. A small spot formed by the effusion of blood, as in typhus or purpura. The spots of typhoid are also sometimes called petechiae.

petechial (pe-te'ke-al). Characterized by or of the nature of petechiae.

petechiasis (pe-te'ki-as-is). A tendency to the formation of petechiae; a condition marked by petechiae.

Peterman test (pe'ter-man) [Mynie G. Peterman, American physician, born 1896]. See under *tests*.

Peters' ovum (pa'terz) [H. Peters, obstetrician in Vienna]. See *ovum*.

Petersen's bag (pa'ter-senz) [F. Petersen, surgeon in Kiel, born 1845]. See *bag*.

petiole (pet'e-öl) [L. *peti'olus*, dim. of *pes* foot]. A stem, stalk, or pedicle.

peti'olus epiglott'idis [B N A]. The pedicle or lower end of the cartilage of the epiglottis.

petit mal (pet-e-mahl) [Fr. "little illness"]. A relatively mild form of epileptic attack. See *epilepsy*.

Petit's canal, triangle (ptēz) [I. François Pourfour du Petit, French anatomist and surgeon, 1664-1741. 2. Jean Louis Petit, French surgeon, 1674-1750]. See *canal, triangle*.

petits maux (pa-tef' mo') [Fr. "little pains"]. The slight pains preluding the beginning of labor.

Petrén's method or treatment (pa-trenz') [Karl Petré, Swedish physician, 1869-1927]. See under *treatment*.

petrification (pet-rif-ak'shun) [L. *pet'ra* stone + *fa'cere* to make]. Conversion into a stonelike substance.

Petri's dishes (pa'trēz) [R. J. Petri, German bacteriologist, 1852-1922]. Shallow glass dishes for use in bacteriological work. **P.'s reaction** or **test**. See under *tests*.

pétrissage (pa'trēs-sahzh') [Fr.]. A kneading action in massage.

petrobran (pet-ro-bran). A proprietary preparation of petrolatum and bran.

petroccipital (pet-rok-sip'et-al). Petro-occipital.

petrochondrin (pet-ro-kon'drin). A proprietary preparation of mineral oil and Irish moss; used in constipation.

petrogen (pet-ro-jen). A proprietary liquid petrolatum preparation which forms an emulsion with water and is used as a vehicle for various remedies.

petrogenous (pet-roj'en-us) [L. *pet'ra* rock + γεννάν to produce]. Derived from rocks; a term applied to the hypothesis that endemic goiter is caused by waters impregnated from certain geological formations.

petrohol (pet-ro-hol). A trade name for isopropyl alcohol.

petrolagar (pet-röl-ag'ar). An emulsion of 65 cc. of liquid petrolatum, 1 Gm. of agar, 0.1 Gm. of sodium benzoate, 2 Gm. of sugar, and water to make 100 cc. It is given to promote peristalsis. Dose, 4 fluidrachms (15 cc.).

petrolate (pet-ro-lät). Same as *petrolatum*.

petrolatoma (pet-ro-la-to'mah). A tumor developing consecutive to injection of liquid petrolatum.

petrolatum (pet-ro-la'tum) [L.]. A yellowish ointment-like substance, a mixture of hydrocarbons of the methane series obtained by distilling off the more volatile portions of petroleum. It is used as a basis for ointments and as a soothing application to the skin. Called also *paraffin*, *cosmolin*, *vaselin*, and *petroleum jelly*. **p. al'bun**, white petrolatum. Petrolatum which by care in preparation is kept white in color. **liquid p.**, **p. liq'u'idum**, a mixture of liquid hydrocarbons official in the U. S. P., as heavy liquid petrolatum and light liquid petrolatum. **p. mol'le**, **p. spis'sum**, soft petrolatum: petroleum jelly, dureolum, vaselin, or cosmoline. **p. saponat'um liq'u'idum**, a preparation made by shaking together liquid paraffin 10 parts, oleic acid 5 parts, and spirit of ammonia 2½ parts: used as a solvent for iodine, phenol, etc. Called also *liquid petrox.* **p. saponat'um spis'sum**, a mixture of oleic acid 5 parts, spirit of ammonia 2½ parts, and enough paraffin to make 100 parts: used as a vehicle for iodine, phenol, etc. Called also *solid petrox.*

petroleum (pe-tro'le-um) [L. *pet'ra* stone + *oleum* oil]. A thick natural oil obtained from wells and springs especially dug in the earth. It consists

of a mixture of various hydrocarbons of the paraffin and olefin series. It has been used as an expectorant, diaphoretic, and vermifuge; also in skin diseases, etc. Dose, 5-10 minims (0.33-0.66 cc.).

petrolin (pet'ro-lin). A variety of paraffin from petroleum.

petrolization (pet-rol-i-za'shun). The spreading of petroleum on water for the purpose of destroying mosquito larvae therein.

petromastoid (pe-tro-mas'toid) [petrous + mastoid]. 1. Pertaining to the petrous and mastoid bones. 2. The petiotic bone.

petromortis (pet-ro-mor'tis). See *garage poisoning*, under *poisoning*.

petro-occipital (pe''tro-ok-sip'it-al). Pertaining to the petrous and occipital bones.

petropharyngeus (pet''ro-far-in'je-us). An occasional muscle arising from the lower surface of the petrous portion of the temporal bone and inserted into the pharynx.

petrosa (pe-tro'sah) [L. "stony"]. The petrous portion of the temporal bone.

petrosal (pe-tro'sal). Pertaining to the petrous portion of the temporal bone.

petrosalpingostaphylinus (pe''tro-sal-pin''go-staf-il'i-nus) [πέτρα stone (petrous) + σάλπιγξ tube + σταφυλή uvula]. The levator palati muscle.

Petroselinum (pe''tro-sel-i'nium) [L.; πέτρα stone + σέλινον parsley]. A genus of umbelliferous plants. See *parsley*.

petrosomastoid (pe-tro-so-mas'toid). Same as *petromastoid*.

petrosphenoid (pe-tro-sfē'noid). Pertaining to the sphenoid bone and the petrous portion of the temporal bone.

petrosphere (pet'ro-sfēr). The solid structure of the earth as distinguished from the atmosphere and the aquasphere.

petrosquamosal, petrosquamous (pe''tro-skwa-mo'sal, pe-tro-skwa'mus). Pertaining to the petrous and the squamous portions of the temporal bone.

petrostaphylinus (pet''ro-staf-il'i-nus). The levator palati. See *muscles*, table of.

petrosulfol (pe-tro-sul'fol). A proprietary form of sulphonated bitumen prepared from petroleum and sulphur. In the treatment of skin diseases its action is similar to that of ichthyol.

petrous (pe'trus) [L. *petrosus*]. Resembling a rock. **p. bone**, the petrosa, or petrous portion of the temporal bone.

petrox (pe'trox). See *petroxolin*.

petroxolin (pet-rok'so-lin). A solution or suspension of a medicament in a mixture of ammonia soap and petrolatum or liquid petrolatum.

Petruschky's litmus whey (pe-trush'kēz) [Johann Petruschky, German bacteriologist, born 1863]. See *whey*.

Pettenkofer's test (pet'en-kof-erz) [Max von Pettenkofer, chemist in Munich, 1818-1901]. See *tests*.

Petzetaki's reaction or test (pet-za-tah'kēz). See under *tests*.

Peucedanum (pu-sed'a-num). See *oroselinum*.

pexin (peks'in) [πῆξις fixation]. Same as *lab*.

pexinogen (peks-in'o-jen) [pexin + γεν to produce]. Same as *renninogen*.

Peyer's glands, patches (pi'erz) [Johann Conrad Peyer, Swiss anatomist, 1653-1712]. See *gland, patch*.

Peyrot's thorax (pa-rōz') [Jean Joseph Peyrot, surgeon in Paris, 1843-1918]. See *thorax*.

Pffannenstiel's incision (fan'en-stēl) [gynecologist in Breslau, 1862-1909]. See *incision*.

Pfaundler's reaction (pfownd'lerz) [Meinhard

Pfaundler, German physician, born 1872]. Mandelbaum's reaction. See under *reaction*.

Pfeifer's disease (fi'ferz) [Emil Pfeifer, contemporary German physician]. See *disease*.

Pfeifferella (fi-fer-el'ah) [named after Richard F. J. Pfeiffer]. A genus of Mycobacteriaceae. They are nonmotile, gram-negative rods and produce a characteristically honey-like growth on potato. **P. mal'lei**, the organism causing glanders in horses and in man. It is a small rod with rounded ends which is usually identified by the Strauss reaction, q. v., and by agglutination.

Pfeiffer's bacillus, phenomenon (fi'ferz) [Richard Friedrich Johannes Pfeiffer, bacteriologist in Breslau, born 1858]. See *bacillus* and *phenomenon*.

Pferdepest (pfer'de-pest) [Ger.]. See *horse-sickness*.

Pfűger's law (fie'gerz) [Eduard Friedrich Wilhelm Pfűger, physiologist in Bonn, 1829-1910]. See *law*.

Pfropfhebeephrenia (pfropf'he-be-fre'ne-ah) [Ger.]. See *grafted hebephrenia*, under *hebephrenia*.

Pfuhl's sign (pfooz) [Edward Pfuhl, German physician, born 1852]. See under *sign*.

P. G. Abbreviation of *Pharmacopoeia Germanica*, German pharmacopoeia.

pH or Ph. The symbol commonly used in expressing hydrogen ion concentration. It signifies the logarithm of the reciprocal of the hydrogen ion concentration expressed as a power of ten.

phacitis (fa-si'tis). Same as *phakitis*.

phaco-anaphylaxis (fa'ko-an-if-al-ak'sis) [φακός lens + *anaphylaxis*]. Anaphylaxis or hypersensitiveness to protein of the crystalline lens.

phacocoele (fa'ko-sēl) [φακός lens + κήλη hernia]. The escape of the eye lens from its proper place; a displaced eye lens.

phacocyst (fa'ko-sist) [φακός lens + κύστις bladder]. The capsule of the lens.

phacocystectomy (fak'o-sis-tek'to-me) [φακός lens + κύστις bladder + ἐκτομή excision]. Excision of a portion of the capsule of the lens for cataract.

phacocystitis (fak'o-sis-ti'tis) [φακός lens + κύστις bladder + -itis inflammation]. Inflammation of the capsule of the crystalline lens.

phaco-eresis (fak-o-er-e'sis) [φακός lens + ἐρησις removal]. Removal of the lens in cataract by means of suction with an instrument known as *eresiphake*. Called also *Barraguer's method*.

phacoglaucoma (fa'ko-glau-ko'mah) [φακός lens + *glaucoma*]. The structural changes in the lens produced by glaucoma.

phacoid (fak'oid) [φακός lens + εἶδος form]. Shaped like a lens or a lentil.

phacoidoscope (fa-koid'os-kōp) [φακός lens + εἶδος form + σκοπεῖν to see]. Same as *phacoscope*.

phacolysis (fa-kol'is-is). Same as *phakolysis*.

phacomalacia (fa'ko-mal-a'she-ah) [φακός lens + μαλακία softness]. Softening of the lens; a soft cataract.

phacometachoresis (fa''ko-met-ah-ko-re'sis) [φακός lens + μεταχώρησις displacement]. Displacement of the eye lens.

phacometecesis (fa'ko-met-es-e'sis) [φακός lentil + μετοίκησις migration]. Same as *phacometachoresis*.

phacometer (fak-om'et-er) [φακός lens + μέτρον measure]. An instrument for measuring the refractive power of lenses.

phacoplanesis (fa'ko-plan-e'sis) [φακός lens + πλάνησις wandering]. Wandering lens; preternatural mobility of the eye lens.

phacosclerosis (fa'ko-skle-ro'sis) [φακός lens + σκληρός hard]. Hardening of the eye lens; a hard cataract.

phacoscope (fa'ko-skōp) [φακός lens + σκοπεῖν

to view]. An instrument for viewing accommodative changes of the eye lens.

phacoscotasmus (fa'ko-sko-taz'mus) [φακός lens + σκοτασμός a clouding]. The clouding of the lens of the eye.

phacotherapy (fak-o-ther'ap-e) [φακός lens + θεραπεία treatment]. Heliotherapy.

phacotomy (fak-o-ti'z-mas). A ferment from an aqueous extract of the crystalline lens.

phaenogam (fe'no-gam). Phanerogam.

phenology (fe-nol'o-je). Phenology.

phenotype (fe'no-tip). Phenotype.

phaeochrome (fe-o'króm). See *phaeochrome*.

phage (fāj). Same as *bacteriophage*.

phagedena, phagedaena (faj-e-de'nah) [φαγέδαινα; φαγείν to eat]. Rapidly spreading and sloughing ulceration. **sloughing p.**, hospital gangrene. **tropical p.**, an infectious phagedena occurring in the tropics in repeated attacks. It sometimes results in a chronic atonic ulcer.

phagedenic (faj-e-den'ik) [φαγεδαινικός]. Rapidly spreading and eating; like phagedena.

phagedenoma, phagedaenoma (faj'ed-en-omah) [φαγεδαινωμα]. A phagedenic ulcer.

phagmesis (fag-me'sis). Presence of feathers instead of hairs.

phagocaryosis (fag'o-kar-e-o'sis). Phagokaryosis.

phagocytale (fag'o-sit-ab-l). Capable of being subject to phagocytosis.

phagocyte (fag'o-sit) [φαγείν to eat + κύτος cell]. Any cell that destroys micro-organisms or harmful cells by enveloping and absorbing them. Phagocytes are either fixed (endothelial cells, etc.) or free (leukocytes). The two forms of leukocytes which are phagocytic are the large lymphocyte (*macrophage*) and the polymorphonuclear leukocyte (*microphage*). **educated p.** See *educated corpuscle*, under *corpuscle*. **endothelial p.** See *endotheliocyte*. **globuliferous p.**, one which takes up the blood corpuscles. **melaniferous p.**, one which takes up the blood pigment.

phagocytic (fag-o-sit'ik). Pertaining to or produced by phagocytes.

phagocytin (fag-o-si'tin). A proprietary preparation of nucleic acid employed in septic and venereal infections (Rosenberg).

phagocytoblast (fag-o-si'to-blast) [phagocyte + βλαστός germ]. A cell which gives rise to phagocytes.

phagocytolysis (fag-o-si-to-lis'is). Destruction of phagocytes; also destruction of the phagocytic power of leukocytes.

phagocytolytic (fag-o-si-to-lit'ik). Pertaining to phagocytolysis.

phagocytose (fag-o-si'tós). To envelop and destroy bacteria and other foreign bodies.

phagocytosis (fag'o-si-to'sis). The destruction of micro-organisms and injurious cells by phagocytes. **induced p.**, phagocytosis aided by subjecting bacteria to the action of blood serum. **spontaneous p.**, phagocytosis of bacteria taking place in an indifferent medium.

phagodynamometer (fag'o-di-nam-om'et-er) [φαγείν to eat + δύναμις force + μέτρον measure]. An apparatus for measuring the force exerted in chewing food.

phagokaryosis (fag'o-kar-e-o'sis) [φαγείν to eat + κάρων nucleus]. Phagocytic action on the part of the cell nucleus.

phagolysis (fag-o-lis'is) [φαγείν to eat + λύσις solution]. The destruction of phagocytes by bacteria.

phagolytic (fag-o-lit'ik). Pertaining to phagolysis.

phagomania (fag-o-ma'ne-ah) [φαγείν to eat + μανία madness]. Insanity characterized by insatiable hunger.

phagopyrism, phagopyrismus (fag-o-pi'rizm,

fag'o-pi-riz'mus) [φαγείν to eat + πύρ fever]. A condition of hypersensitiveness to certain foods, such as pork, buckwheat, oysters, cheese, etc., causing symptoms of mild poisoning on the ingestion of such foods.

phagopyrosis (fag'o-pi-ro'sis). Pyrosis following eating.

phagotherapy (fag-o-ther'ap-e) [φαγείν to eat + θεραπεία treatment]. Treatment by feeding.

phagotoxin (fag-o-tok'sin). A proprietary saturated aqueous solution of oxygen: used in treating burns, boils, etc.

phakitis (fa-ki'tis) [φακός lens + -ιτις inflammation]. Inflammation of the eye lens.

phakolysis (fak-o-lis'is) [φακός lens + λύσις destruction]. Discussion of the crystalline lens, followed by extraction. An operation for the relief of high myopia.

phakometer (fak-om'et-er). See *phacometer*.

phakoscope (fa'ko-skōp) [φακός lentil + σκοπεῖν to view]. See *phacoscope*.

phalacrosis (fal-ak-ro'sis) [φαλάκρωσις baldness]. Same as *alopecia*.

phalangeal (fal-lan'je-al). Pertaining to a phalanx.

phalanges (fal-lan'jēz). Plural of *phalanx*. **Deiters' p.**, modified cuticular plates forming the ends of sustentacular epithelial cells of the reticular membrane of the organ of Corti.

phalange (fal-an-jēt). The distal phalanx.

drop p., dropping of the distal phalanx and loss of power to extend it when the hand is prone.

phalangitis (fal-an-jit'is) [φάλαγγ phalanx]. Inflammation of one or more phalanges.

phalangization (fal-an-jiz-a'shun). The formation of a stump which will serve as a finger.

phalanx (fa'lanks), pl. *phalan'ges* [φάλαγγ]. 1. Any bone of a finger or toe. 2. Any one of a set of plates disposed in rows which makes up the lamina reticularis. **ungual p.**, the terminal phalanx of a finger or toe.

phallalgia (fal-al'je-ah) [φαλλός penis + άλγος pain]. Pain in the penis.

phallaneurysm (fal-an'u-rizm) [φαλλός penis + άνεύρυσμα aneurysm]. Aneurysm of the penis.

phallic (fal'ik) [φαλλικός]. Pertaining to the penis.

phalliform (fal'if-orm) [phallus + L. *for'ma* form]. Shaped like the phallus or penis.

phallin (fal'in). A deadly toxalbumin from *Amanita phalloides*. It breaks up red blood corpuscles and expels the blood serum from the bowels. There is no known antidote except the transfusion of fresh blood or of a salt solution.

phallitis (fal-i'tis) [φαλλός penis + -ιτις inflammation]. Inflammation of the penis.

phallocampsis (fal-o-kamp'sis) [φαλλός penis + κάμψις bending]. Curvature of the penis when erect.

phallocrypsis (fal-o-krip'sis) [φαλλός penis + κρύψις hiding]. Retraction of the penis.

phallogdynia (fal-o-din'e-ah) [φαλλός penis + δόνην pain]. Pain in the penis.

phalloid (fal'oid) [φαλλός penis + είδος form]. Resembling a penis.

phallonecus (fal-on'g'kus) [φαλλός penis + όγκος tumor]. A morbid swelling or tumor of the penis.

phalloplasty (fal'o-plas-te) [φαλλός penis + πλασσειν to shape]. The plastic surgery of the penis.

phallorrhagia (fal-o-ra'je-ah) [φαλλός penis + ρηγνύναι to burst forth]. Hemorrhage from the penis.

phallus (fal'us) [φαλλός]. The penis.

phan (fan) [φανερός evident]. The external manifestation or expression of a physical character. Cf. *gen*.

- phanerogam** (fan'er-o-gām) [φανέρως visible + γάμος marriage]. A true seed-bearing plant.
- phanerogenetic, phanerogenic** (fan'er-o-jen-et'ik, -jen'ik) [φανέρως evident + γεννᾶν to cause]. Having a known cause. Cf. *cryptogenetic*.
- phaneromania** (fan'er-o-ma'ne-ah) [φανέρως evident + μανία madness]. An obsession of abnormal and persistent attention to some exterior growth, as a wart; nail-biting is an example.
- phaneroscope** (fan'er-os-kōp) [φανέρως evident + σκοπεῖν to see]. An instrument for illuminating the skin and rendering it translucent.
- phaneroscopy** (fan'er-os'ko-pe). The examination of the skin by the phaneroscope.
- phanerosis** (fan'er-o'sis) [φανέρως evident]. The act of becoming visible; the setting free of a substance which has previously been undemonstrable owing to its being held in combination.
- phanic** (fan'ik) [φαίνειν to appear]. Apparent, visible.
- phandonorn** (fan'o-dorn). A proprietary name for cyclohexenyl ethyl barbituric acid, used like barbitol as a hypnotic. Average dose, 3 grains (0.2 Gm.). Called also *cyclobarbitol*.
- phantasia** (fan-ta'ze-ah) [φαντασία appearance]. An imaginary or illusory appearance.
- phantasm** (fan'tazm) [φάντασμα appearance]. An optical illusion; a vision resulting from disease.
- phantasmatology** (fan'taz-mat-ol'o-je) [φάντασμα phantom + λόγος discourse]. The sum of what is known regarding apparitions and phantasms.
- phantasmatomoria** (fan-taz'mat-o-mo're-ah) [φάντασμα image + μορία folly]. Childishness or dementia with absurd delusions.
- phantasmology** (fan-taz-mol'o-je). Phantasmatology.
- phantasmoscopia** (fan'taz-mo-sko'pe-ah) [φάντασμα image + σκοπεῖν to view]. The seeing of insane or delirious phantasms.
- phantom** (fan'tum) [φάντασμα]. 1. A phantasm. 2. A model of the body or of a part thereof. **Schultze's p.**, a model of the female pelvis used in teaching obstetrics.
- phaochrome** (fa'o-krōm). See *pheochrome*.
- phaochromocyte**. See *pheochromocyte*.
- phaochromocytoma**. See *pheochromocytoma*.
- phar., pharm.** Abbreviations for *pharmacy, pharmaceutical*, and *pharmacopeia*.
- Phar. B.** Abbreviation for *Pharmaciae Baccalaureus*, Bachelor of Pharmacy.
- Phar. C.** Abbreviation for *Pharmaceutical Chemist*.
- Phar. D.** Abbreviation for *Pharmaciae Doctor*, Doctor of Pharmacy.
- Phar. G.** Abbreviation for *Graduate in Pharmacy*.
- Phar. M.** Abbreviation for *Pharmaciae Magister*, Master of Pharmacy.
- pharmacial** (far'mak-al). Pertaining to pharmacy.
- pharmaceutic, pharmaceutical** (far-mas-u'tik, far-mas-u'tik-al) [φάρμακευτικός]. Pertaining to pharmacy or to drugs.
- pharmaceutics** (far-mas-u'tiks). 1. The art of the apothecary. 2. Pharmaceutical preparations.
- pharmaceutist** (far-mas-u'tist). A pharmacist.
- pharmacist** (far'mas-ist). An apothecary or drug-gist.
- pharmacodiagnosis** (far'mak-o-di-ag-o-no'sis) [φάρμακον drug + διάγνσις]. The employment of drugs in the diagnosis of disease.
- pharmacodynamic** (far'mak-o-di-nam'ik) [φάρμακον medicine + δύναμις power]. Pertaining to the effects of medicine.
- pharmacodynamics** (far'mak-o-di-nam'iks). The study of the action of medicines.
- pharmacogen-endocrinology** (far'mak-o-en-dokrin-ol'o-je). The study of the influence of drugs on the activity of the ductless glands.
- pharmacognostics** (far-mak-og-nos'tiks). Pharmacognosy.
- pharmacognosy** (far-mak-og'nō-se) [φάρμακον medicine + γνῶσις knowledge]. That branch of pharmacology which treats of the characteristics of crude drugs.
- pharmacography** (far-mak-og'rah-fe) [φάρμακον drug + γράφειν to write]. An account or written description of drugs.
- pharmacologist** (far-mak-ol'o-jist). One who makes a study of drugs, their nature and action.
- pharmacology** (far-mak-ol'o-je) [φάρμακον medicine + λόγος discourse]. The sum of knowledge regarding drugs; as now used the term is restricted to the study of the action of drugs, and in this sense it has the same meaning as *pharmacodynamics*.
- pharmacomania** (far'mak-o-ma'ne-ah) [φάρμακον drug + μανία madness]. Insane fondness for taking or administering medicines.
- pharmacology** (far'mak-o-or-ik-tol'o-je) [φάρμακον drug + ορυκτός mineral + λόγος treatise]. Pharmaceutical mineralogy; the study of mineral drugs.
- pharmacopedia, pharmacopedics** (far'mak-o-pe-de-ah, far'mak-o-pe'diks) [φάρμακον drug + παιδεία instruction]. The science which deals with the properties and preparations of drugs.
- pharmacopeia, pharmacopoeia** (far'mak-o-pe-ah) [φάρμακον medicine + ποιεῖν to make]. An authoritative treatise on drugs and their preparations. A pharmacopeia is, in the modern acceptance of the word, a book containing a list of products used in medicine, with descriptions, chemical tests for determining identity and purity and also formulas for certain mixtures of these substances. It also generally contains a statement of average dosage. The United States Pharmacopeia is revised and issued every ten years, under the supervision of a national committee.
- pharmacopeial** (far'mak-o-pe'al). Pertaining to or recognized by the pharmacopeia.
- pharmacophobia** (far'mak-o-fo-be-ah) [φάρμακον drug + φόβος fear]. Insane dread of drugs or medicines.
- pharmacopsychosis** (far'mak-o-si-ko'sis) [φάρμακον drug + psychosis]. Southard's term for any one of the group of mental diseases due to alcohol, drugs, or poisons.
- pharmacotherapy** (far'mak-o-ther'ap-e) [φάρμακον drug + θεραπεία treatment]. The treatment of disease by medicines.
- pharmacy** (far'mas-e) [φάρμακον medicine]. 1. The art of preparing and compounding medicines. 2. An apothecary's shop. **chemical p.**, Same as *pharmaceutical chemistry*. **galenic p.**, the pharmacy of vegetable medicines.
- pharyngalgia** (far-in-gal'je-ah) [φάρυγξ pharynx + άλγος pain]. Pain in the pharynx.
- pharyngeal** (far-in'je-al) [L. *pharynx*]. Pertaining to the pharynx.
- pharyngectomy** (far-in-jek'to-me) [φάρυγξ pharynx + ἐκτομή excision]. Surgical removal of a part of the pharynx.
- pharyngemphraxis** (far'in-jem-fraks'is) [φάρυγξ pharynx + ἔμφραξις stoppage]. Obstruction of the pharynx.
- pharyngismus** (far-in-jiz'mus). Muscular spasm of the pharynx.
- pharyngitic** (far-in-jit'ik). Affected with or of the nature of pharyngitis.
- pharyngitis** (far-in-jit'is) [φάρυγξ pharynx]. Inflammation of the pharynx. **acute p.**, that which is due to cold and exposure. It is attended with pain in the throat, especially on swallowing, dryness, followed by moisture of the pharynx, congestion of the mucous membrane and fever. Called also *catarrhal p.* **atrophic p.**, a chronic pharyngitis which leads to wasting of the submucous tissue. **catarrhal p.** See *acute p.* **chronic**

p., that which results from repeated acute attacks or is due to tuberculosis or syphilis. It is attended with excessive secretion, and in the severe ulcerated varieties by pain and dysphagia. **croupous p.**, that which has the false membrane of true croup. **diphtheric p.**, diphtheria of the pharynx. **follicular p.**, **glandular p.**, clergyman's sore throat with enlargement of the pharyngeal glands. **gangrenous p.**, a form characterized by gangrenous patches. **granular p.**, a chronic variety in which the mucous membrane becomes granular. **p. herpetica**, membranous or aphthous sore throat. A form of acute pharyngitis characterized by the formation of vesicles, which give place to excoriations. **hypertrophic p.**, a chronic form which leads to thickening of the submucous tissues. **membranous p.**, pharyngitis with a fibrinous exudate leading to the formation of a false membrane. **phlegmonous p.**, acute parenchymatous tonsillitis attended with the formation of abscesses. **p. sicca**, an atrophic pharyngitis in which the throat becomes dry. **p. ulcerosa**, ulcerated or hospital sore throat; pharyngitis ascribed to the breathing of vitiated air. It is attended with fever, pain, and prostration, and the formation of ulcers covered by a yellow, membrane-like deposit.

pharyngo-amygdalitis (far-ing-'go-am-ig-dal-i'-tis). Inflammation of the pharynx and tonsil.

pharyngocele (far-in-'go-sēl) [φάρυγγ pharynx + κήλη hernia]. Hernial protrusion of a part of the pharynx; a hernial pouch or other cystic deformity of the pharynx.

pharyngocceratosis (far-ing-'go-ser-at-o'-sis). Pharyngokeratosis.

pharyngodynia (far-in-go-din'e-ah) [φάρυγγ pharynx + δόνην pain]. Pain in the pharynx.

pharyngo-epiglottic, **pharyngo-epiglottidean** (far-ing-'o-ep-e-glot'ik, -glot-id'e-an). Pertaining to the pharynx and epiglottis.

pharyngo-esophageal (far-ing-'go-e-sof-a'-je-al). Pertaining to the pharynx and esophagus.

pharyngoglossal (far-in-go-glos'al). Pertaining to the pharynx and the tongue.

pharyngoglossus (far-in-go-glos'us). The muscular fibers from the superior constrictor of the pharynx to the tongue.

pharyngokeratosis (far-in-'go-ker-at-o'-sis). Keratosis of the pharynx.

pharyngolaryngeal (far-in-'go-lar-in-'je-al). Pertaining to the pharynx and the larynx.

pharyngolaryngitis (far-in-'go-lar-in-'ji'tis) [φάρυγγ pharynx + λάρυγγ larynx]. Inflammation of the pharynx and the larynx.

pharyngolith (far-in-'go-lith) [φάρυγγ pharynx + λίθος stone]. A concretion in the walls of the pharynx.

pharyngology (far-in-gol'o-je) [φάρυγγ pharynx + λόγος treatise]. The sum of what is known regarding the pharynx.

pharyngomaxillary (far-in-'go-maks'il-a-re). Pertaining to the pharynx and the jaw.

pharyngomycosis (far-in-'go-mi-ko'sis) [φάρυγγ pharynx + μύκης fungus]. Any bacterial disease of the pharynx.

pharyngonasal (far-in-go-na'sal). Pertaining to the pharynx and the nose.

pharyngo-oral (far-in-go-o'ral). Pertaining to the pharynx and the mouth.

pharyngopalatine (far-ing-o-pal'at-in). Pertaining to the pharynx and the palate.

pharyngoparalysis (far-ing-'o-par-al'is-is) [pharynx + paralysis]. Paralysis of the pharyngeal muscles.

pharyngopathy (far-in-gop'ath-e) [pharynx + πάθος disease]. Disease of the pharynx.

pharyngoperistole (far-in-go-per-is'to-le) [phar-

ynx + περιστολή a drawing out]. Narrowing of the pharynx.

pharyngoplasty (far-ing'o-plas-te) [pharynx + πλάσσειν to form]. Plastic operation on the pharynx.

pharyngoplegia (far-'in-go-ple'je-ah) [φάρυγγ pharynx + πληγή stroke]. Paralysis of the muscles of the pharynx.

pharyngorhinitis (far-in-'go-ri-ni'tis). Inflammation of the nasopharynx.

pharyngorhinoscopy (far-in-'go-ri-nos'ko-pe). Examination of the nasopharynx and posterior nares with the rhinoscope.

pharyngoscleroma (far-in-'go-skle-ro'mah). Scleroma of the pharynx.

pharyngoscope (far-in-'go-skōp) [φάρυγγ pharynx + σκοπεῖν to see]. An instrument for inspecting the pharynx.

pharyngoscopy (far-in-gos'ko-pe). The examination of the pharynx.

pharyngospasm (far-in-'go-spazm) [φάρυγγ pharynx + σπασμός spasm]. Spasm of the pharyngeal muscles.

pharyngostaphylinus (far-in-'go-staf-il-i'nus). The palatopharyngeus muscle.

pharyngostenosis (far-ing-'o-sten-o'sis) [pharynx + στενῶσις narrowing]. Narrowing of the lumen of the pharynx.

pharyngotherapy (far-in-go-ther'ap-e) [pharynx + θεραπεία]. The treatment of pharyngeal disorders, and especially the irrigation of the nasopharynx in infectious diseases.

pharyngotome (far-in-'go-tōm) [φάρυγγ pharynx + τέμνειν to cut]. A cutting instrument used in pharyngeal surgery.

pharyngotomy (far-in-got'o-me) [φάρυγγ pharynx + τέμνειν to cut]. Surgical incision of the pharynx. **external p.**, pharyngotomy done from the outside. **internal p.**, that which is performed from within the pharynx. **lateral p.**, the opening of the pharynx from one side. **subhyoid p.**, section of the larynx through the thyrohyoid membrane.

pharyngotonsillitis (far-in-'go-ton-sil-i'tis). Inflammation of the pharynx and the tonsil.

pharyngotyphoid (far-in-go-ti'fo'id). Enteric fever with angina and sore patches on the tonsils.

pharyngoxerosis (far-in-'go-ze-ro'sis) [φάρυγγ pharynx + ξηρός dry]. Dryness of the pharynx.

pharynx (far'inks) [φάρυγγ pharynx]. The musculo-membranous sac between the mouth and nares and the esophagus. It is continuous below with the esophagus, and above it communicates with the larynx, mouth, nasal passages, and eustachian tubes. The part above the soft palate is the *nasopharynx*, and communicates with the posterior nares and the eustachian tube. The lower portion consists of two sections—the *oropharynx*, which communicates with the mouth, and the *laryngopharynx*, which opens into the larynx and esophagus. The posterior cavity of the pharynx is designated the *retropharynx*. The pharynx is lined by mucous membrane containing ciliated epithelium in the nasopharynx, and with squamous epithelium below. Outside of this is a fibrous or cellular coat enclosed by a muscular layer made up of the stylopharyngeus and the pharyngeal constrictor muscles.

phase (fāz) 1. The view that a thing presents to the eye. 2. In physical chemistry, any aspect of a substance which is homogeneous in physical state and percentage composition, e. g., ice and steam as phases of water. In heterogeneous chemical systems, phases are separated by surfaces of discontinuity, e. g., oil and water in contact. **apophylactic p.**, negative phase. **continuous p.** Same as *dispersion medium*. See *medium*. **disperse p.**, the internal or discontinuous portion of a colloid system. It is an-

- alogous to the solute in a solution. Called also *internal p.* **external p.** Same as *dispersion medium*. See under *medium*. **internal p.** Same as *disperse p.* **p. of meditation**, the time elapsing between the occurrence of the injury and the development of tremor in a traumatic neurosis. **mitotic p.**, that stage in mitosis in which the reduction of the chromosomes occurs. Called also *reduction p.* **motofacient p.** See *motofacient*. **negative p.**, the initial lowering of the opsonic index following an injection of vaccine or bacterin. **nonmotofacient p.** See *motofacient*. **Nonne-Apelt p.** See *Nonne-Apelt reaction*, under *reaction*. **positive p.**, the rise above unity in the opsonic index which follows the negative phase. **postmitotic p.**, the stage following the reduction of the chromosomes in karyokinesis. **premeiotic p.**, **prereduction p.**, the stage in mitosis which precedes the reduction of the chromosomes. **reduction p.** See *mitotic p.* **synaptic p.**, synapsis.
- phaselin** (fas'e-lin). A medicine derived from two species of *Phaseolus*; digestive, stimulant, and soothing: used externally and internally.
- phaseolin** (fa-se'o-lin). A protein from the kidney-bean.
- phaseolunatin** (fa-se-o-lu'na-tin). A bitter glucoside, $C_{10}H_{17}O_6N$, found in the lima bean (*Phaseolus lunatus*).
- phase rule**. See under *rule*.
- phasin**, **phasine** (fa'sin). Any one of a group of nitrogenous substances found in seeds, bark, and other plant tissues, which agglutinate red blood corpuscles.
- phatne** (fat'ne). A tooth socket.
- phatnoma** (fat-no'mah), pl. *phatnomas* or *phatno'mata* [φάρνωμα]. A tooth socket.
- phatnorrhagia** (fat-no-ra'je-ah) [φάρτη tooth socket + ραγία hemorrhage]. Hemorrhage from a tooth socket.
- phatnorrhea** (fat-no-re'ah) [φάρτη tooth socket + ροία flow]. Pyorrhea alveolaris.
- Ph. B.** Abbreviation for *British Pharmacopoeia*.
- pheasant's eye**. A common name for the plant *Adonis vernalis*. See *Adonis*.
- phecin** (fe'sin). A proprietary preparation claimed to be sulphate of the dihydrate of benzene, $C_6H_4(OH)_2SO_4$; it is antiseptic, and is used in diseases of the urinary tract.
- phediuretin** (fed'i-u-re'tin). Same as *pheduretin*.
- pheduretin** (fed-u-re'tin). A diuretic and anodyne phenol preparation. Dose, 5-15 grains (0.33-1 Gm.).
- phellandrene** (fel-an'drēn). A liquid hydrocarbon, $C_{10}H_{16}$, occurring in fennel oil, elemi oil, the oil of water hemlock, and Australian eucalyptus.
- phellandrium** (fel-an'dre-um). The fruit of *P. aquaticum*; also its homeopathic preparations.
- Phelps' operation** (felps) [Abel Mix Phelps, surgeon in New York, 1851-1902]. See *operation*.
- phen-**. A prefix indicating derivation from benzene.
- phenacaine** (fen-ak-a'in). Holocaine hydrochloride, ethemyl-paradiethoxy-diphenyl-amidine hydrochloride, $CH_3C(N.C_6H_4.O.C_2H_5)(NH.C_6H_4.O.C_2H_5).HClH_2O$, a local anesthetic: used like cocaine in a 1 per cent aqueous solution, especially in eye operations.
- phenacetin** (fen-as-et-e'in). Same as *phenacetolin*.
- phenaceticin** (fe-nas'et-in). A trade name for acetphenetidin.
- phenacetinum** (fe-nas-et-i'num). Acetphenetidin.
- phenacetolin** (fen-as-et'o-lin). A red powder, $C_{16}H_{19}O_2$; used as an indicator. It has a $\mu\eta$ range of 5 to 6, being yellow at 5 and red at 6.
- phenacodin** (fen-ak-o'din). A sedative or head-ache powder, compounded of acetphenetidin, caffeine, codeine, and guarana (Fuchs, 1903).
- phenacylidin** (fe-nas'il'id-in). An antipyretic agent, $C_6H_4(OC_2H_5)NH_2.CO_2C_6H_5$; for use chiefly in veterinary medicine.
- phenadul** (fen'ad-ul). A proprietary analgesic and antiseptic.
- phenakistoscope** (fe-nak-is'to-skōp) [φανακίστρος deceiver + σκοπεῖν to view]. Same as *stroboscope*.
- phenalgene** (fe-nal'jēn). A proprietary analgesic preparation of acetanilid.
- phenalgin** (fe-nal'jin). A proprietary acetanilid mixture.
- phenalin** (fen'ah-lin). A proprietary preparation of phenolphthalein in tablet form: used as a cathartic.
- phenamine** (fen'am-in). Phenocoll.
- phenandyne** (fen-an'din). A nonirritating and nonescharotic preparation of phenol: used like compound solution of cresol.
- phenanthrene** (fe-nan'thrēn). A colorless, crystalline hydrocarbon, $(C_6H_4.CH)_2$, obtained by distilling certain mercury ores and by passing the vapors of certain benzene compounds through a red-hot tube.
- phenantipyrene** (fe'n'an-te-pi'rin). An antipyretic recommended for typhoid fever, rheumatism, and pneumonia.
- phenarsenamine** (fen-ar-sen'am-in). A Canadian make of arsphenamine.
- phenate** (fe'nāt). Any salt of phenic acid; a carbolate.
- phenatol** (fen'at-ol). Phenol-ethyl-ether, $C_6H_5.O.C_2H_5$, an oily liquid: analgesic and antipyretic.
- phenatrocin** (fe-nat'ro-sin). A proprietary analgesic and antiseptic preparation.
- phenazone** (fen'az-ōn). Same as *antipyrine*.
- phenegol** (fen-e'gol). The mercuric potassium salt of nitroparamphenolsulphonic acid, $NO_2.O.C_6H_4.SO_2OK.HgOK.SO_2.C_6H_4.O.NO_2$; a reddish-brown powder, antiseptic and emetic.
- phenethylol** (fen-eth'il-ol). Same as *benzyl carbinol*.
- phenetidin** (fe-net'id-in). A substance, the ethyl ester of para-aminophenol, $NH_2.C_6H_4.OC_2H_5$; used in preparing acetphenetidin. It often appears in the urine after the administration of acetphenetidin.
- phenetiduria** (fe-net'id-in-u're-ah). The presence of phenetidin in the urine.
- phenetol** (fen'et-ol). Ethyl phenate; an oily liquid, $C_6H_5.O.C_2H_5$.
- phenetsal** (fe-net'sal). Acetyl paraminophenyl salicylate, $C_6H_4(OH).COO.C_6H_4.NH.CO.CH_3$, a crystalline substance containing 50 per cent of salicylic acid. It is used like the latter in acute rheumatism, and also as an intestinal antiseptic. Dose, 15-50 grains (1-6 Gm.). Called also *sal-ophen*.
- phengophobia** (fen-go-fō-be'ah) [φέγγος light + φόβος fear]. Morbid intolerance or dread of light.
- phenic acid** (fe'nik). Carbolic acid. See *acid*.
- phenicate** (fen'e-kāt). To charge with phenic acid, or phenol.
- phenidin** (fen'id-in). Same as *acetphenetidin*.
- phenin** (fe'nin). Same as *acetphenetidin*.
- phenixin**, **phoenixin** (fe-niks'in). See *carbon tetrachloride*.
- phenmethylool** (fen-meth'il-ol). Benzyl alcohol. See under *alcohol*.
- phenobarbital** (fe-no-bar'bit-al). Phenylethyl-barbituric acid or phenylethylmalonylurea, $C_6H_5.(C_2H_5).C(CO.NH)_2CO$, a white colorless substance: used as a hypnotic in nervous insomnia and states of nervous excitement and as a sedative in epilepsy. Dose, $\frac{1}{2}$ -5 grains (0.03-0.3 Gm.). Introduced under the proprietary name *luminal*.
- phenobromate** (fe-no-bro'māt). A proprietary bromphenol preparation: used in dysmenorrhea.

phenoco (fe'no-ko). A mixture of creosote and higher phenol homologues in soap solution: used as a germicide and antiseptic.

phenocoll (fe'no-kol) [L. *phenocol'um*]. Aminoacetphenetidin; an antipyretic and analgesic substance, $C_8H_9O.C_6H_4.NH.CO.CH_2.NH_2.H_2O$, from coal tar. Dose of the hydrochloride, 10-15 grains (0.66-1 Gm.). **p. acetate**, a salt in bulky needles; well suited for hypodermic use. **p. carbonate**, a crystalline powder, $C_6H_4(OC_2H_5)NH.CO:CH_2.NH_2.CO_2$; antiseptic and antipyretic. **p. hydrochloride**, a salt in colorless needles, $C_6H_4(OC_2H_5).NH.COCH_2NH_2.HCl$: antipyretic, antiseptic, and analgesic. Dose, 5-15 grains (0.3-1 Gm.). **p. salicylate**. Same as *salocol*.

phenocollum (fe-no-kol'um). Latin for *phenocoll*.

phenocreosote (fe-no-kre'o-söt). A name for various preparations of creosote and carbolic acid.

phenodin (fe'no-din) [*φαινώδης* blood red]. Hematin.

pheniodine (fe-no-i'o-din). A preparation of iodine and phenol used internally in septic conditions, such as puerperal sepsis and pneumonia.

phenol (fe'no-l). 1. Carbolic acid; a colorless, crystalline compound, C_6H_5OH , obtained by the distillation of coal tar. By the addition of 10 per cent of water it is converted into a clear liquid with a peculiar odor and a burning taste. It unites with bases, forming salts called *carbates*. Phenol is a powerful antiseptic, disinfectant, and germicide, and is extremely poisonous. It is used in 3 per cent solution as a dressing for wounds and ulcers; also in diphtheria, fetid bronchitis, etc., to check fermentation and decomposition. It is also employed as a disinfectant for surgical instruments, for the hands of the operator and the field of operation, and for rooms, drains, etc. Internally it is given in typhoid fever, whooping cough, and acid dyspepsia. The pure substance is caustic and locally anesthetic. Dose, 1-2 minims (0.065-0.13 cc.); phenol water is a 3 per cent solution; the ointment contains 10 per cent; the glycerite contains 1 part of acid to 4 parts of glycerol. 2. Any hydroxyl derivative from a carbocyclic compound in which the hydroxyl is united directly

to a ring carbon atom, as **p. bismuth**,

bismuth phenolate, $C_6H_5O.Bi(OH)_2$. **p. camphor**, a mixture of phenol and camphor in various proportions: antiseptic and germicide. Used for a local anesthetic in toothache. **p. diiodide**, a reddish-violet antiseptic powder, $C_6H_3I_2.OH$: used as a wound dressing. **p. liquefac'tum**, an aqueous solution of phenol containing 88 per cent. **monobromop.**, a violet-colored, strong-smelling, oily fluid, $C_6H_4Br.OH$: antiseptic. **orthomonochlorop.**, a colorless liquid, $C_6H_4Cl.OH$ (2:1): an antiseptic, useful in skin diseases. **paramonochlorop.**, a crystalline antiseptic, $C_6H_3Cl.OH$ (4:1). **paranitrop.**, an indicator, $NO_2.C_6H_4.OH$, used in the determination of hydrogen ion concentration. It has a *pH* range of 5-7. **p. red**, an indicator, phenosulphonphthalein, q. v., used in the determination of hydrogen ion concentration. It has a *pH* range of 6.8 to 8.4, being yellow at 6.8 and red at 8.4. **p. salicylate**, *salol*. **phenosulphonphthalein**. See *phenosulphonphthalein*.

phenolase (fe'no-lās). A ferment which oxidizes phenols and aromatic amines.

phenolate (fe'no-lāt). A compound of a phenol with a metal in which the hydrogen of the hydroxyl is replaced by a univalent metal.

phenolated (fe'no-la-ted). Charged with phenol.

phenolax (fe'no-laks). A proprietary preparation of phenolphthalein.

phenoleum (fe-no'le-um). A proprietary antiseptic and germicide preparation.

phenolic (fe-nol'ik). Pertaining to or derived from phenol.

phenolid (fen'o-lid). A compound said to contain acetanilid and sodium bicarbonate or sodium salicylate. Dose, 5-10 grains (0.333-0.666 Gm.).

phenolin (fen'o-lin). An antiseptic solution of cresol in potassium soap.

phenolization (fen-ol-iz-a'shun). Treatment of infected wounds by subjecting them to the energetic action of strong carbolic acid.

phenologist, phaenologist (fe-nol'o-jist). An expert or specialist in phenology.

phenology, phaenology (fe-nol'o-je) [*φαινείν* to shine out + *λόγος* treatise]. A study of the effects of climate upon the life and health of living organisms.

phenololipoid (fe-nol-o-li'poid). A compound of phenol with a lipid, such as cholesterol with camphor as the connecting link. It is believed to combine the parasitotropic power of phenol and the antitoxic power of cholesterol and yet to be free from the organotropic action of phenol.

phenolphthalein (fe-nol-thal'e-in). A condensation product of phenol and phthalic anhydride. Its sodium salt is $C_6H_4OH.C(C_6H_4O).C_6H_4.COONa$. It is used as an indicator with a *pH* range of 8.3 to 10, being colorless at 8.3 and red at 10; it is also used as a purgative in 7-grain (0.5 Gm.) doses.

p. sodium ricinate, a yellowish antiseptic and rubefacient. **p. sulphoricinate**, a yellowish, antiseptic fluid: used in tuberculosis of the throat and nose.

phenolquinine (fe-nol-kwin'in). Quinine phenolate.

phenolsulphonphthalein (fe'no-l-sul-fōn-thal'e-in). A brand of phenolsulphonphthalein.

phenolsulphonic acid (fe-nol-sul-fon'ik). Asepsol.

phenolsulphonphthalein (fe'no-l-sul-fōn-thal'e-in). A condensation product of phenol and orthosulpho-benzoic acid, $C_6H_4(SO_3).C(C_6H_4OH)_2$. It is an indicator and the mother of indicators. Its monosodium salt, $(C_6H_4OH)_2C.C_6H_4.SO_3ONa$, a red, crystalline powder, is used as a test for the secreting power of the kidney. After hypodermic injection it appears in the urine in from ten to fifteen minutes in normal conditions; delay beyond such time indicates disorder of renal function. Called also *phenol red*.

phenoltetrachlorphthalein (fe'no-l-tet-rah-klor-thal'e-in). A coal tar derivative: used as a purgative by subcutaneous injection and as a diagnostic agent for hepatic function intravenously. See under *tests*.

phenoltetraiodophthalein (fe'no-l-tet'rah-i'odo-thal'e-in). A coal tar derivative used in cholecystography.

phenomenon (fe-nom'en-on) [L. *phaenomenon*; *φαινόμενον* thing seen]. Any remarkable appearance; any sign or objective symptom. **arm p.** Same as *Pool's p.* (2d def.). **p. of Arthus**, the subcutaneous tissues of the rabbit can, by repeated injections of horse serum, be sensitized and thus made to react so as to cause their destruction, the rest of the body meanwhile showing no increase of sensitiveness. **Aschner's p.**, slowing of the pulse following pressure on the eyeball: it is indicative of cardiac vagus irritability. **Aubert's p.**, by an optic illusion, when the head is turned toward one side a vertical line appears to incline toward the other side. **Babinski's p.**, extension and spreading in place of flexion of the toes when the sole is excited: it is characteristic of hemiplegia due to a lesion in the pyramidal tract, or of the anterolateral portions of the spinal cord. **Babinski's combined flexion p.** See *Babinski's sign* (4), under *sign*. **Becker's p.**, pulsation of the retinal arteries in exophthalmic goiter. **Bell's p.**, an outward and upward rolling of the eyeball on the attempt to close the eye: it occurs on the

affected side in peripheral facial (Bell's) paralysis, **blanching p.** See *Schultz-Charlton p.* **Bordet's p.** See *serum test*, under *tests*. **Bordet-Gengou p.** See *fixation of complement*. **cervicolumbar p.**, sensations in the neck associated with a lesion in the lower part of the spinal cord; or weakness of the lower limbs on movement of the neck when a lesion exists in the upper part of the cord. **chameleon p.**, the assumption of a green color by a potato culture of *Bacillus pyocyaneus* at the point where touched by a platinum wire. **cogwheel p.**, when a hypertonic muscle is passively stretched it resists, and this resistance sometimes takes the form of an irregular jerkiness; called also *Negro's p.* **Collie p.**, when pure neon is enclosed in a glass tube with a globule of mercury and shaken it glows with a bright, orange-red color, and when the globule rolls it appears to be followed by a flame. **Danysz's p.**, decrease of the neutralizing influence of an antitoxin when a toxin is added to it in divided portions instead of all at once. **Déjerine-Lichtheim p.**, in subcortical motor aphasia, while the patient cannot speak he can indicate with his fingers the number of syllables in a word. **dental p.**, thermal and tactile sensations in the gums with toothache, produced by repeated faradic stimulation of hyperesthetic lines on the body (Calligaris). **Deny-Leclef p.**, phagocytosis taking place in a test tube on mixing therein leukocytes, bacteria, and their immune serum. **d'Herelle's p.** See *Twort-d'Herelle p.* **diaphragm p.**, **diaphragmatic p.**, the movement of the diaphragm as seen through the walls of the body; its variations have a certain diagnostic value. Called also *phrenic phenomenon* and *phrenic wave*. **Doppler's p.**, the pitch of a whistle on a rapidly moving body, like a locomotive, is higher when the body is approaching the listener. **Duckworth's p.**, arrest of breathing before stoppage of the heart's action in certain fatal brain affections. **Eisenberg's p.**, with increasing concentration of the agglutinins added to a bacterial emulsion the absolute absorption by the bacteria rises, while the coefficient of absorption falls. **Erb's p.** See *Erb's sign* (1), under *sign*. **Erben's p.**, temporary slowness of the pulse on stooping or sitting down: said to characterize certain cases of neurasthenia. **face p.**, **facialis p.** Same as *Chvostek's sign*, under *sign*. **Fahraeus p.** Same as *erythrocyte sedimentation reaction*, under *reaction*. **finger p.** See *Songue's p.* **Friedreich's p.**, the percussion sound over a cavity in the lung is raised on deep inspiration. **Galassi's pupillary p.** Same as *Westphal-Pilcz p.* **Gärtner's p.**, the degree of fulness of the veins of the arm as it is raised to varying heights indicates the degree of pressure in the right auricle. **Gengou-Moreschi p.**, complement fixation test for the differentiation of human from animal blood. **Grasset's p.**, **Grasset-Graussel p.**, inability of a patient to raise both legs at the same time, though he can do either separately: seen in incomplete organic hemiplegia. **Hapke's p.**, unusually prominent presentation of the parietal bone of the head of the first one of twins. **Hata p.**, increase in severity of an infectious disease when a small dose of a chemotherapeutical remedy is given. **d'Herelle's p.** See *Twort-d'Herelle p.* **Hering's p.**, a faint murmur heard with the stethoscope over the lower end of the sternum for a short time after death. **hip p.**, Joffroy's reflex. See under *reflex*. **hip-flexion p.**, in paraplegia, when the patient attempts to rise from a lying position or when he lies down, he first flexes the hip of the paralyzed side. **Hochsinger's p.**, pressure on the inner side of the biceps muscle produces closure of the fist in tetany. **Holmes' p.** See *rebound p.* **Hunt's paradoxical p.**, in dystonia musculorum deformans, if the examiner attempts forcible plantar flexion of the foot which is in dorsal spasm there is produced increase of the dorsal spasm, but if the

patient is ordered to extend the foot he will perform plantar flexion. **jaw-winking p.**, raising of the upper eyelid when the jaw is pressed downward, and slight ptosis when the mouth is closed. **knee p.**, the patellar tendon reflex. **Koch's p.**, the sudden collapse of tuberculous animals when a fresh culture of tubercle bacilli is injected within the peritoneum. The exudate that forms contains lymphocytes almost exclusively. **Kohnstamm's p.** See *after-movement*. **Kühne's muscular p.** Same as *Porret's p.* **leg p.** See *Schlesinger's sign*, under *sign*. **Leichtenstern's p.** See *Leichtenstern's sign*, under *sign*. **Litten's diaphragm p.**, a movable horizontal depression on the lower part of the sides of the thorax, seen in respiration. **Lust's p.**, abduction with dorsal flexion of the foot on tapping the external popliteal nerve just below the head of the fibula: indicative of spasmophilia. **metallic p.** See under *sound* and *tingling*. **Mills-Reincke p.**, the mortality from all diseases decreases as a result of water purification. **mouth p.** See *lip reflex*, under *reflex*. **muscle p.**, the tendency of striated muscle to contract in hard lumps upon tapping; this condition was frequently seen in overexerted soldiers in the late war. **Nasaroff's p.**, gradual decrease in the difference between the rectal temperature before and after the bath, seen after repeated cold baths. **Negro's p.** See *cogwheel p.* **Neisser-Doering p.**, suppression of the normal hemolytic action of human serum due to the presence of some anti-hemolytic substance; sometimes seen in renal cirrhosis and arteriosclerosis. **Neisser-Wechsberg p.** See *deviation of complement*. **orbicularis p.** Same as *Westphal-Pilcz p.* **Ossler's p.**, agglutination of the platelets of blood directly after it is withdrawn from the circulation. **palmoplantar p.**, a yellowish discoloration of parts of the palms and soles in typhoid fever; Filipovitch's sign. **paradoxical diaphragm p.** Same as *Litten's diaphragm p.* **paradoxical p.** of dystonia. See *Hunt's paradoxical p.* **paradoxical pupil p.** Same as *Westphal-Pilcz p.* **peroneal-nerve p.** Same as *Lust's p.* **Pfeiffer's p.**, cholera vibrios, introduced into the peritoneal cavity of a guinea-pig that has been immunized against cholera, lose their motility, disintegrate, and pass into solution. The disintegration can be followed under the microscope by removing a portion of the peritoneal contents from time to time. The same result is observed if a bacteriolytic serum (against cholera) is introduced along with the bacteria into the peritoneal cavity of a normal guinea-pig. The dilution of the serum which just fails to produce bacteriolysis in a given time determines the titer of the serum. **phrenic p.** 1. Rhythmical spasm of the left half of the diaphragm; seen in tetanus. 2. See *diaphragmatic p.* **Pilcz-Westphal p.** See *Westphal-Pilcz p.* **Pool's p.** 1. Same as *Schlesinger's sign*, under *sign*. 2. Contraction of the muscles of the arm following the raising of the arm above the head with the forearm extended, so as to cause stretching of the brachial plexus: seen in postoperative tetany. **Porret's p.** the passage of a continuous current through a living muscle fiber causes an undulation proceeding from the positive toward the negative pole. **Purkinje's p.**, the phenomenon that fields of equal brightness but different color become unequally bright if the intensity of the illumination is decreased. **radial p.**, the involuntary dorsal flexion of the wrist which occurs on palmar flexion of the fingers. **rash extinction p.** See *Schultz-Charlton p.* **rebound p.**, when the examiner grasps the patient's wrist and attempts to draw the arm into extension against the patient's resistance and then suddenly releases the wrist the patient's hand rebounds toward his body. A similar rebound occurs in the lower extremity. The phenomenon indicates motor disorder due to cerebellar lesion. Called also *Holmes' p.* **Rieckenberg's p.**, when the blood of a mouse cured of a trypano-

some infection (or with a chronic infection) is mixed with the same strain of trypanosomes from another mouse masses of blood platelets adhere to the flagella end of the trypanosomes or may completely cover some of the trypanosomes. **Ritter-Rollet p.**, flexion of the foot upon gentle electric stimulation, and its extension upon energetic stimulation. **Rumpel-Leede p.**, the appearance of minute subcutaneous hemorrhages below the area at which a rubber bandage is applied not too tightly for ten minutes upon the upper arm: characteristic of scarlet fever and hemorrhagic diathesis. **Rust's p.**, in cases of caries or cancer of the upper cervical vertebrae the patient supports his head with his hands when lying down or when rising from a lying position. **Schramm's p.**, visibility with the cystoscope of a whole or part of the posterior urethra: seen in spinal cord disease. **Schüller's p.**, in functional hemiplegia. **Schultz-Charlton p.**, localized blanching of the rash of scarlet fever after intracutaneous injections of serum from normal persons or scarlet fever convalescents; called also *blanching p.* and *rash extinction p.* **Souque's p.**, a phenomenon seen in incomplete hemiplegia, consisting of involuntary extension and separation of the fingers when the arm is raised. Called also *finger p.* **staircase p.**, successive increase in the contractions of a muscle repeatedly stimulated with stimuli of equal intensity. **Strassmann's p.**, phenomena seen in the umbilical cord of the still attached placenta. When the umbilical cord is ligated, the umbilical arteries contract and the umbilical vein remains filled with blood. The slightest tapping upon the fundus uteri will be felt at the lower end of the umbilical cord, and if pressure is applied to the fundus uteri, the umbilical vein becomes distended with blood at its extremity. **Strümpell p.**, involuntary flexion of the ankle on flexing the hip and knee. **Theobald Smith's p.**, guinea-pigs which have been used for standardizing diphtheria antitoxin and have thus been injected with a small dose of blood serum become highly susceptible to the serum and may die very promptly if given a rather large second dose of the same serum a few weeks later. See *anaphylaxis*. **tibial p.**, Strümpell's sign. See under *sign*. **toe p.**, extension of the toes on stimulation of the sole of the foot: seen in certain morbid conditions. **tongue p.**, a slight blow upon the tongue produces a contraction with the appearance of deep depressions; seen in tetany. Called also *Schulze's sign* and *tongue test*. **Traube's p.**, a double diastolic and systolic murmur heard at the femoral and other peripheral arteries, as in aortic insufficiency, and sometimes in mitral stenosis. **Trousseau's p.**, spasmodic contractions of muscles provoked by pressure upon the nerves which go to them; seen in rickets, etc. **Twort-d'Herelle p.**, the phenomenon of transmissible bacterial lysis; bacteriophagia; when to a broth culture of typhoid or dysentery bacilli there is added a drop of filtered broth emulsion of the stool from a convalescent typhoid or dysentery patient, complete lysis of the bacterial culture will occur in a few hours. If a drop of this lysed culture is added to another culture of the bacilli lysis will take place exactly as in the first. A drop of this culture will then dissolve a third culture, and so on through hundreds of transfers. d'Herelle attributes this phenomenon to the action of an ultramicroscopic parasite of bacteria which he named the *bacteriophage*. By some this phenomenon is believed to be caused not by a living organism, but by an autolytic enzyme produced by the bacteria. **Tyndall p.**, illumination by a transverse beam of light renders visible the particles floating in gases or liquids. **Wedensky's p.**, on applying a series of rapidly repeated stimuli to a nerve, the muscle contracts quickly in response to the first stimulus and then fails to respond further; but if the stimuli are applied to the nerve at a slower rate, the muscle responds to all of them. **Westphal's p.**, Westphal's sign. See *sign*. **West-**

phal-Pilcz p., contraction of the pupil, followed by dilatation, after vigorous closing of the lids; caused by tension of the orbicularis muscle. **zone p.**, an excess of amboceptor or immune body often lessens or even suspends the specific activity which is known to be present in a serum and which appears at a different dilution. This seems to be a colloid phenomenon in which the constituents must be in certain proportions to each other in order that the specific activity may be manifested, and is spoken of as zone phenomenon. Called also *deviation of the complement*.

phenopyrine (fe-no-pi'rin). An oily liquid composed of phenol and antipyrine in equal parts: antiseptic.

phenoquin (fe'no-kwin). See *cinchophen*.

phenoresorcin (fe'no-re-sor'sin). A compound of carbolic acid (67 parts) with resorcin (33 parts): used in skin diseases.

phenosal (fe'no-sal). Paraphenetidin acetosalicylate, $C_2H_3O.C_6H_4.NH.CO.CH_3.O.C_6H_4.COOH$, a salt in colorless plates or needles; antipyretic: used in acute rheumatism. Dose, 7-8 grains (0.466-0.5 Gm.).

phenosalyl (fe-no-sal'il). A thick, syrupy disinfectant and antiseptic compound of phenol (8 Gm.), salicylic acid (1 Gm.), menthol (0.1 Gm.), and lactic acid (3 Gm.). Said sometimes to contain benzoic acid. Called also *Christmas' solution*.

phenostal (fen'os-tal). Diphenyloxalic ester, $(CO_2.C_6H_5)_2$, a disinfectant and bactericide.

phenosuccin (fe-no-suk'sin). Pyrantin.

phenosuccinate (fe-no-suk'sin-ät). Any compound of an amide derivative of succinic acid and phenol with a base. **sodium p.**, an analgesic and antipyretic remedy.

phenotype (fe'no-tip) [*φαίνειν* to display + *τύπος* type]. 1. The visible characters common to a group of individuals. 2. A group of individuals alike in appearance, but having a different heredity.

phenotypic (fe-no-tip'ik). Alike in appearance, but different in heredity.

phenoxin (fe-noks'in). Carbon tetrachloride.

phenoxy-. A prefix indicating the presence of the group OC_6H_5 , composed of phenyl and an atom of oxygen.

phenoxycaffeine (fe'noks-e-kaf'e-in). A white, crystalline substance, $C_8H_9(OC_6H_5)N_4O_2$: antineuralgic, hypnotic, and anesthetic. Dose, 4 grains (0.26 Gm.).

phenoxyproprandiol (fe-nok'se-pro-pran'de-ol). See *autodyne*.

phenozygous (fen-oz'ig-us) [*φαίνειν* to show + *ζύγον* yoke, zygoma]. Having the cranium much narrower than the face, so that the zygomatic arches are seen when the skull is viewed from above.

phentetiothalein sodium. The sodium salt of a dibasic dye, phenoltetraiodophthalein: used for roentgenological examination of the gallbladder and simultaneous test of hepatic function.

phenychinoline (fen-ik-in'o-lin). Any one of a group of chinoline derivatives of the general formula $C_8H_6(C_6H_5)N$: actively fatal to microscopical and infusorial organisms.

phenyform (fen'if-orm). A proprietary antiseptic powder for wounds, being a combination of phenol and formaldehyde.

phenyl (fe'nil). The univalent radical, C_6H_5 . **p. carbinol**. See *benzyl alcohol*, under *alcohol*. **p. hydrate**, phenol, carbolic acid. **p. salicylate**. Salol, $OH.C_6H_4.CO.O.C_6H_5$, a white, crystalline powder, nearly insoluble in water, but soluble in chloroform, ether, oils, and in 10 parts of alcohol. It is split up in the intestine into salicylic acid and phenol. It is an antirheumatic, antiseptic, and antipyretic, and is used in neuralgia and rheumatism, in jaundice, and in gonorrhea to sterilize the bladder

- contents. Dose, 5-15 grains (0.333-1 Gm.). 2. Any one of that group of the esters of salicylic acid to which normal salol belongs.
- phenylalanine** (fe-nil'al-an-in). Same as *phenylamino propionic acid*. See under *acid*.
- phenylamine** (fen-il'am-in). Aniline.
- phenylaminoethanol sulphate**. A synthetic compound, $(C_6H_5.CHOH.CH_2NH_2)_2H_2SO_4$, having the properties of ephedrine and proposed as a substitute for it. Called also *phenylethanolamine*.
- phenylbenzamide** (fen-il-ben'zam-id). Benzamide.
- phenylbromoacetone** (fe'n'il-bro-mo-as'et-o-ni'tril). See *bromobenzylcyanide*.
- phenylcarbamylamine chloride**. A war gas, $C_6H_5.NC.Cl_3$, which causes lacrimation.
- phenylchinaldine** (fe'n'il-kin-al'din). See *phenylquinaldine*.
- phenylcholine** (fe-nil-kin'o-lin). A quinine derivative, $C_6H_5N.C_6H_5$, more active than quinine.
- phenyldimethylpyrazolone** (fen-il-di-meth-il-pi-ra'zo-lon). Antipyrine.
- phenylene** (fe'n'il-ēn). The divalent radical $C_6H_4=$.
- phenylene-diamine** (fe'n'il-ēn-di-am'in). $C_6H_4(NH_2)_2$. See *ursol*.
- phenylethanolamine** (fen'n'il-eth'an-ol-am'in). See *phenylaminoethanol sulphate*.
- phenylethene** (fen-il-eth'ēn). Styrol.
- phenylethylalcohol** (fe'n'il-eth-il-al'ko-hol). A local anesthetic, $C_6H_5.CH_2.CH_2OH$. See under *alcohol*.
- phenylethylamine** (fen-il-eth-il-am'in). A liquid compound, $C_6H_5.CH_2.CH_2.NH_2$, formed by the decomposition of phenylaminopropionic acid.
- phenyl-ethyl-barbituric acid**. Phenobarbital.
- phenylethylmalonylurea** (fe'n'il-eth-el-mal'o-nil-u-re'ah). Phenobarbital.
- phenylgalactosazone** (fe'n'il-gal-ak-to'saz-ōn). See *galactosazone*.
- phenylglucosazone** (fe'n'il-glu-ko'saz-ōn). See *glucosazone*.
- phenylglycol** (fe-nil-gli'kol). A crystalline compound, $C_6H_5.CHOH.CH_2OH$, derivable from styrol bromide.
- phenylhydrazine** (fe-nil-hi'draz-in). An oily liquid principle, $C_6H_5.NH.NH_2$, the hydrochloride of which is used as a test for dextrose. See *phenylhydrazine test*, under *tests*.
- phenylhydroxylamine** (fe'n'il-hi-drok-sil'am-in). An industrial poison, $C_6H_5.NH.OH$, especially in certain chemical works.
- phenylic** (fe-nil'ik). Pertaining to phenyl.
- phenyl-lactosazone** (fe'n'il-lak-to'saz-ōn). See *lactosazone*.
- phenylmethane** (fe-nil-meth'an). Diphenylmethane.
- phenylmethylacetone** (fen-il-meth-il-as'et-ōn). Acetophenone.
- phenylmethylcarbinol** (fe'n'il-meth-il-kar'bin-ol). A local anesthetic, $C_6H_5.CHOH.CH_3$.
- phenylmethylpyrazol** (fe'n'il-meth-il-pi-ra-zol). A substituted pyrazol, $C_6H_5.C_3H_2N_2.CH_3$, of diuretic action. Dose, 15-30 grains (1-2 Gm.).
- phenylmethylquinoline** (fen'il-meth'il-kwin'o-lin). See *phenylquinaldine*.
- phenylon** (fen'il-on). Same as *antipyrine*.
- phenylpropionic acid** (fen'il-pro-pi-on'ik). Hydrocinnamic acid. See under *acid*.
- phenylquinaldine** (fen-il-kwin-al'din). An analgesic and antiperiodic, phenylmethylquinoline, $CH_3.C_6H_5N.C_6H_5$, in colorless soluble crystals. Dose, 1-3 grains (0.06-0.2 Gm.).
- phenylsemicarbazide** (fen'il-sem'e-kar'baz-id). See *cryogenine*.
- phenylurea** (fen-il-u-re'ah). A hypnotic compound, $NH_2.CO.NH.C_6H_5$, prepared from urea and aniline.
- phenylurethan** (fe-nil'u-re-than). Same as *ephorin*.
- pheochrome** (fe'o-krōm) [φαῖος dark + χρώμα color]. Staining dark with chromium salts: said of certain embryonic cells. Same as *chromaffin*.
- pheochromoblast** (fe-o-krō'mo-blast). Any one of the embryonic structures which develop into pheochrome cells.
- pheochromocyte** (fe-o-krō'mo-sit) [pheochrome + κύτος cell]. A chromaffin cell.
- pheochromocytoma** (fe-o-krō'mo-si-to'mah). A tumor arising from chromaffin cells.
- phesin** (fe'sin). A patented reddish-brown powder, acetparaphenetidin sodium sulphate, $C_6H_5.O.C_2H_5.SO_3Na.NH.CO.CH_3$: antipyretic and antineuralgic. Dose, 8-15 grains (0.5-1 Gm.).
- Ph.G.** 1. Abbreviation for *Graduate in Pharmacy*.
2. Abbreviation for *Pharmacopoeia germanica*, German pharmacopoeia.
- phial** (fi'al) [φιάλη]. A vial or small bottle.
- phialide** (fi'al-id). Small ninepin-shaped bodies projecting from the rounded head of the conidophore of *Aspergillus* and which carry chains of conidia.
- Phialophora** (fi-al-of'er-ah). A genus of hyphomycetous fungi. *P. verrucosa* causes a skin lesion resembling blastomycosis.
- Philagrius** (fi-la'gre-us). A Greek physician who practised in the second half of the fourth century in Thessalonica. He was the author of numerous writings, only small fragments of which remain.
- philanthropist** (fil-an'thro-pist). A person who exerts himself for the well being of his fellow man.
- philanthropy** (fil-an'thro-pe) [φιλεῖν to love + ἄνθρωπος man]. Practical benevolence toward mankind.
- philiater** (fil-i'at-er) [φιλός fond + ἰατρεία healing]. A person interested in medical science.
- Philinus** (fil-i'nus). A Greek physician of Cos, who lived about 250 B.C. He was a pupil of Herophilus, and is believed to have been one of the founders of the school of the Empirics.
- Philip's glands** (fil'ips) [Robert William Philip, Scotch physician, born 1857]. See under *gland*.
- Philisteon** (fil-is'te-on). A Greek physician of Sicily in the fourth century B.C.
- phillyrin** (fil'ir-in). A crystalline substance, $C_{27}H_{34}O_{11}$, from the leaves and bark of various species of *Phillyrea*. It has antimalarial properties.
- philocatalase** (fi-lo-kat'al-ās) [φιλεῖν to love + catalase]. A substance existing in the tissues and serving to protect catalase from the destructive action of anticatalase.
- philocytase** (fi-lo-si'tās) [φιλεῖν to love + cytase]. Same as *amboceptor*.
- philoneism** (fil-o'ne-izm) [φιλεῖν to love + νέος new]. Abnormal love of novelty.
- philopatridomania** (fi'lo-pat'rid-o-ma-ne-ah) [φιλόπατρις patriotic + μανία madness]. Insane desire to return to one's native land.
- philothion** (fil-o-thi'on) [φιλεῖν to love + θείον sulphur]. A substance obtained from yeast and animal tissue, having the power of forming hydrogen sulphide from powdered sulphur.
- philter, philtre** (fil'ter). A drug or substance to provoke love or carnal appetite.
- philtrum** (fil'trum) [φιλτρον love potion]. 1. The groove at the median line of the upper lip.
2. A philter.
- phimosietomy** (fi-mo-se-ek'to-me) [phimosi + ἐκτομή excision]. Circumcision for phimosis.
- phimosiis** (fi-mo'sis) [φίμωσις a muzzling or closure]. Tightness of the foreskin, so that it cannot be drawn back from over the glans; also the

- analogous condition in the clitoris. **p. vagina** 'lis, atresia of the vagina.
- phimotic** (fi-mot'ik). Pertaining to phimosis.
- phlebalgia** (fleh-al'je-ah) [φλέψ vein + άλγος pain]. Neuralgia due to varices within or on the surface of a nerve.
- phlebangioma** (fleh-an-je-o'mah) [φλέψ vein + ανγίωμα]. A venous aneurysm. **l**
- phlebarteriectasia** (fleh-ar-te-re-ek-ta'se-ah) [φλέψ vein + αρτηρία artery + έκτασις extension]. General dilatation of veins and arteries.
- phlebarteriodialysis** (fleh-ar-te-re-o-di-al'is-is) [φλέψ vein + αρτηρία artery + διάλυσις separation]. Arteriovenous aneurysm.
- phlebectasia, phlebectasis** (fleh-ek-ta'zhe-ah, fle-bek-tas'is) [φλέψ vein + έκτασις dilatation]. A varicosity; a dilatation of a vein. **p. laryn-gis**, permanent dilatation of the veins of the larynx.
- phlebectomy** (fleh-ek'to-me) [φλέψ vein + έκτομή excision]. Excision of a vein, or of a part of a vein.
- phlebectopia, phlebectomy** (fleh-ek'to'pe-ah, fleb-ek'to-pe) [φλέψ vein + έκτοπός out of place]. Displacement of a vein.
- phlebemphraxis** (fleh-em-fraks'is) [φλέψ vein + ἔμφραξις stoppage]. The stoppage of a vein by a plug or clot.
- phlebeptatit** (fleh-ep-at-i'tis) [φλέψ vein + ηπατίτις]. Inflammation of the hepatic vein.
- phlebexairesis** (fleh-ex-i-re'sis). An operation for extracting veins analogous to neuraxairesis.
- phlebin** (fleh'in) [φλέψ vein]. A pigment supposed to exist in venous blood.
- phlebismus** (fleh-iz'mus) [φλέψ vein]. Obstruction and consequent turgescence of veins.
- phlebitic** (fleh-it'ik). Pertaining to phlebitis.
- phlebitis** (fleh-i'tis) [φλέψ vein]. Inflammation of a vein. The condition is marked by infiltration of the coats of the vein and the formation of a thrombus of coagulated blood. The disease is attended by edema, stiffness, and pain in the affected part, the development of a red cord at the site of the vein, and in the septic variety by pyemic symptoms. **adhesive p.**, a phlebitis which tends to the obliteration of the vein. Called also **plastic p.** and **proliferative p.** **anemic p.**, **chlorotic p.**, a form associated with anemia or chlorosis. **gouty p.**, a variety dependent upon the gouty diathesis, often recurrent, and sometimes occlusive. **p. migrans, migrating p.**, phlebitis recurring in different parts of the same limb. **p. nodularis necrotisans**, a form in which tuberculous nodules of the skin are formed, becoming necrotic at the center and spreading slowly. **obliterating p., obstructive p.**, phlebitis that permanently closes the lumen of a vein. **plastic p.** See **adhesive p.** **proliferative p.** See **adhesive p.** **puerperal p.**, septic inflammation of uterine or other veins following childbirth. **recurrent p.**, that which reappears after periods of disappearance. **septic p.**, that which depends upon a septic process, as in erysipelas, cancer, or tuberculosis. In it the thrombus breaks down and septic emboli are carried to distant parts of the body. Called also **suppurative p.** **sinus p.**, inflammation of a cerebral sinus. **suppurative p.**, that which is characterized by the formation of pus; often an extension of a suppurative process external to the vein.
- phlebocholosis** (fleh'o-ko-lo'sis) [φλέψ vein + χολώδης maimed]. Disease of veins.
- phleboclysis** (fleh-o-kl'i'sis) [φλέψ vein + κλύσις injection]. Injection of saline solution into a vein.
- phlebogram** (fleh'o-gram) [φλέψ vein + γράμμα writing]. A tracing of the movements of a vein made with a phlebograph or sphygmograph.
- phlebograph** (fleh'o-graf) [φλέψ vein + γράφειν to write]. 1. An instrument for recording the venous pulse. 2. Same as **phlebogram**.
- phlebography** (fleh-og'raf-e) [φλέψ vein + γράφειν to write]. 1. A description of the veins. 2. The graphic recording of the venous pulse.
- phlebooid** (fleh'o'id) [φλέψ vein + εἶδος form]. Resembling a vein, or composed of veins.
- phlebolite, phlebolith** (fleh'o-lit, fleb'o-lith) [φλέψ vein + λίθος stone]. A calculus or concretion in a vein; a vein stone.
- phlebolithiasis** (fleh'o-lith-i'as-is) [φλέψ vein + λίθιασις]. That condition which predisposes to the development of vein stones.
- phlebology** (fleh-ol'o-je) [φλέψ vein + λόγος treatise]. The sum of what is known regarding the veins.
- phlebometritis** (fleh'o-met-ri'tis) [φλέψ vein + μήτρα uterus + -itis inflammation]. Inflammation of the veins of the uterus.
- phlebomyomatosis** (fleh'o-mi-o-mat-o'sis) [φλέψ vein + μυομαλoσις]. A condition in which the muscular fibers of a vein become overgrown, producing thickening of the walls.
- phlebopexy** (fleh'o-peks-e) [φλέψ vein + πήξις fixation]. Extraneous transplantation of the testicle, with preservation of the reticulum of veins: done for varicocele.
- phlebophthalmotomy** (fleh'of-thal-mot'o-me) [φλέψ vein + ὀφθαλμός eye + τέμνειν to cut]. Same as **ophthalmophlebectomy**.
- phleboplasty** (fleh'o-plas-te) [φλέψ vein + πλάσσειν form]. Plastic operation for the repair of a vein.
- phleborrhagia** (fleh-or-a'je-ah) [φλέψ vein + ῥηγνύναι to burst forth]. Copious hemorrhage from a vein.
- phleborrhaphy** (fleh-or'af-e) [φλέψ vein + ῥαφή suture]. The operation of suturing a vein.
- phleborrhexis** (fleh-o-rek'sis) [φλέψ vein + ῥήξις rupture]. Rupture of a vein.
- phlebosclerosis** (fleh'o-skle-ro'sis) [φλέψ vein + σκληρός hard]. Sclerosis or hardening of a vein, especially of the inner coats of a vein.
- phlebostasia** (fleh-os-ta'ze-ah). Phlebostasis.
- phlebostasis** (fleh-os'tas-is) [φλέψ vein + στάσις stoppage]. 1. Retardation of the flow of blood in the veins. 2. Temporary abstraction of a portion of the blood from the general circulation by compressing the veins of the extremity.
- phlebotostepsis** (fleh'o-strep'sis) [φλέψ vein + στρέφειν to turn]. The surgical twisting of a vein.
- phlebothrombosis** (fleh'o-throm-bo'sis) [φλέψ vein + θρόμβοσις]. Thrombosis of a vein.
- phlebotome** (fleh'o-tōm). A knife or lancet for use in phlebotomy; a fleam.
- phlebotomist** (fleh-ot'o-mist). One who practises venesection; a bleeder.
- phlebotomize** (fleh-ot'o-miz). To bleed; to take blood from by phlebotomy.
- Phlebotomus** (fleh-ot'o-mus). A genus of dipterous insects. **P. argen'tipes**, the species which transmits kala-azar in India. **P. nogu'chi**, a species that transmits *Bartonella bacilliformis*, the organism of Oroya fever. **P. papatas'sil**, the sandfly, a dipterous insect of India and the Mediterranean countries, which conveys by its bite an infection known as *sandfly fever*. See under *fever*. **P. verruco'rum**, a fly abounding in Peru and regarded as the conveyor of the infection of *verru-ga peruviana* or Oroya fever.
- phlebotomy** (fleh-ot'o-me) [φλέψ vein + τέμνειν to cut]. The opening of a vein for blood-letting; venesection. **bloodless p.**, phlebostasis.
- phlegm** (flem) [φλέγμα]. 1. One of the four humors of the body, according to the obsolete humoral pathology. 2. Mucus, especially that of the throat and nose.
- phlegmasia** (fleg-ma'zhe-ah) [φλεγμασία heat, inflammation]. Inflammation or fever. **p. alba do'lens, p. do'lens**, phlebitis of the femora-

- vein, occasionally following parturition and typhoid fever. It is characterized by swelling of the leg, usually without redness. Called also *leukophlegmasia*, *milk leg*, and *white leg*. **cellulitic p.**, swelling and inflammation of the leg after childbirth from infection of the connective tissue. **p. malabarica**, elephantiasis. **thrombotic p.** Same as *p. alba dolens*.
- phlegmatic** (fleg-mat'ik) [φλεγματικός]. Characterized by an excess of the supposed humor called phlegm; hence, heavy, dull, and apathetic.
- phlegmon** (fleg'mon) [φλεγμονή]. Inflammation of the connective tissue, leading to ulceration or abscess. **diffuse p.**, phlegmona diffusa. **Du-puytren's p.**, phlegmonous suppurative in the anterolateral portion of the neck on one side. **gas p.**, one attended with the formation of gases. See *gas gangrene*, under *gangrene*. **ligneous p.**, induration of the subcutaneous connective tissue of the neck with little suppuration, fever, or pain; running a chronic progressive course. Called *Reclus' disease*. **woody p.**, ligneous phlegmon.
- phlegmona diffusa** (fleg'mo-nah dif-u'sah). A more or less extensive inflammation of the cutaneous and subcutaneous tissues, with symptoms resembling both deep erysipelas and flat carbuncle, and attended with constitutional symptoms. Called also *phlegmonous cellulitis*.
- phlegmonous** (fleg'mon-us). Of the nature of a phlegmon; attended with formation of phlegmons.
- phlobaphene** (flo'ba-fen) [φλοιος bark + βαφή dye]. One of a series of compounds resembling resins and differing from the latter only in that they dissolve in dilute ammonia water. They are derived from tannin by boiling with acids and are characterized by their brown color.
- phlogetan** (flo'jet-an). A proprietary nucleoprotein substance obtained from albuminoid bodies: used subcutaneously in tabes.
- phlogin** (flo'jin). A proprietary preparation of phenylchinolin-carbonic acid, tannic acid, and fullers' earth: for treatment of gout and rheumatism.
- phlogistic** (flo-jis'tik). Inflammatory.
- phlogisticozymoid** (flo-jis'tik-o-zimoid). A hypothetical substance supposed to supply the necessary feeding ground for inflammatory processes.
- phlogiston** (flo-jis'ton) [φλογιστός burnt]. The supposed principle of fire and combustion. This term was proposed by Stahl in 1697, who supposed that combustible substances were compounds of phlogiston and that combustion is due to the phlogiston leaving the other structures of the substance behind. With the discovery of oxygen, the use of the term was discontinued.
- phlogocyte** (flo'go-sit) [φλόγωσις inflammation + κύτος cell]. A cell characteristic of tissue in an inflamed state; a plasma cell.
- phlogocytosis** (flo'go-si-to'sis). Presence of phlogocytes in the blood.
- phlogogen** (flo'go-jen) [see *phlogogenic*]. A body that has the power of causing inflammation.
- phlogogenic** (flo'go-jen'ik) [φλόξ flame + γεννᾶν to produce]. Causing inflammation.
- phlogogenous** (flo'goj'en-us). Phlogogenic.
- phlogosin** (flo'go'sin) [φλόγωσις inflammation]. A crystallizable, nonnitrogenous substance, from cultures of the *Staphylococcus aureus*. Introduced into the eye, it produces an intense suppurative process.
- phlogosis** (flo'go'sis) [φλόγωσις]. Inflammation; also erysipelas.
- phlogotic** (flo-got'ik). Inflammatory.
- phlogozelotism** (flo-go-zel'ot-ism) [φλόγωσις inflammation + ζηλότης zealot]. A perverse habit of ascribing to every disease an inflammatory origin.
- phloretin** (flo'r'e-tin). A white, crystalline compound, $C_{15}H_{14}O_6$, derived from phlorhizin. It is the phloroglucin ester of paraoxyhydratropic acid. It is said to possess febrifuge properties.
- phlorhizin** (flo-r'i'zin) [φλοιοός bark + ῥίζα root]. A bitter glucoside, $C_{21}H_{34}O_{10} + 2H_2O$, from the root bark of apple, cherry, plum, and pear trees. It breaks down into glucose and phloretin: it is tonic and antiperiodic. Dose, 15-30 grains (1-2 Gm.). **p. diabetes**. See *diabetes*.
- phlorhizinize, phloridzinize** (flo'r'iz-in-iz, flor-id-zin-iz). To bring under the influence of phlorhizin.
- phloridzin** (flo-rid'zin). Same as *phlorhizin*.
- phlorizin**. Same as *phlorhizin*.
- phloroglucin** (flo-ro-glu'sin) [phlorhizin + γλυκός sweet]. A sweet, crystalline, trihydric, phenol, $C_6H_3(OH)_3$, obtainable from the bark of apple and other trees: used as a test for woody fiber and for hydrochloric acid and for the identification of pentose in the urine. **p. vanillin**. See *Guenzberg's test*, under *tests*.
- phloroglucinol, phloroglucol** (flo-ro-glu'sin-ol, -glu'kol). Phloroglucin.
- phlorol** (flo'rol). Any oily liquid, $C_6H_5(OC_2H_5)_2$, derived from creosote. See *phenetol*.
- phlorose** (flo'r'os). A sugar formed when phlorhizin is boiled with dilute acids. Glucose.
- phlorrhizin**. Same as *phlorhizin*.
- phloryl** (flo'r'il). A principle obtainable from creosote.
- phlyctena** (flik-te'nah), pl. *phlyctenae* [L. *phlyctæna*; φλύκταινα]. 1. A blister made by a burn. 2. A small, bladder-like pustule containing lymph or a thin ichor.
- phlyctenar** (flik'ten-ar). Pertaining to or marked by phlyctenae.
- phlyctenoid** (flik'ten-oid) [*phlyctena* + εἶδος form]. Resembling a phlyctena.
- phlyctenosis** (flik'ten-o'sis) [φλυκταίνωσις]. Any phlyctenular disease or lesion. **p. streptogenes**, a disease of the skin due to a streptococcus.
- phlyctenotherapy** (flik'ten-o-ther'ap-e) [*phlyctenula* + θεραπεία treatment]. Treatment by the subcutaneous injection of the serum from blisters raised on the patient's own body by applying cantharides.
- phlyctenular** (flik'ten-u-lar). Associated with the formation of phlyctenules or vesicles, or of prominences that look like vesicles.
- phlyctenula, phlyctenula** (flik'ten-ūl, flik'ten-u-lah) [L. *phlyctæna*; φλύκταινα blister]. A minute vesicle, or an ulcerated nodule of the cornea or of the conjunctiva.
- phlyctenulosis** (flik'ten-u-lo'sis). The condition marked by the formation of phlyctenules.
- physoremid** (fis-o-rem'id). Koch's bacillus emulsion in capsules.
- phlyzaciium** (fi-za'se-um) [φλυζάκιον]. 1. A little pustule. 2. Same as *ecthyma*. **p. acutum**. See *ecthyma*.
- phobia** (fo'be-ah) [φόβος fear]. Any persistent insane dread or fear.
- phobic** (fo'bik). Of the nature of or pertaining to phobia or morbid fear.
- phobophobia** (fo-bo-fo'be-ah) [φόβος fear + φόβος fear]. A condition in psychasthenia marked by fear of one's own fears.
- phobrol** (fo'brol). A proprietary 50 per cent solution of chlorometacresol in potassium ricinoleate: used as a disinfectant.
- Phocas' disease** (fo-kahz') [B. G. Phocas, French physician]. See *Tillaux's disease*, under *disease*.
- phocenic acid** (fo-sen'ik). Valerianic acid. See *acid*.
- phocomelus** (fo-kom'el-us) [φώκη seal + μέλος limb]. A fetus with hands and feet, but no armor legs.

- phogosin** (fo'go-sin). A heat-resistant crystalline substance extracted from staphylococci which has a chemotactic action on leukocytes similar to that of staphylococci.
- phonacoscope** (fo-nak'o-skōp). The apparatus used in phonacoscopy.
- phonacoscopy** (fo-nak-os'ko-pe) [φωνή voice + σκοπεῖν to view]. Combined auscultation and percussion by means of a bell-shaped resonating chamber containing a percussion hammer, which is held on the anterior thoracic wall while the examiner listens at the back of the thorax.
- phonal** (fo'nal) [φωνή voice]. Pertaining to the voice.
- phonation** (fo-na'shun) [φωνή voice]. The utterance of vocal sounds. **subenergetic p.**, hypophonia. **superenergetic p.**, hyperphonia.
- phonatory** (fo-na-to-re). Subserving or pertaining to phonation.
- phonautograph** (fo-naw'to-graf) [φωνή voice + αὐτός self + γράφειν to write]. An apparatus which registers the vibrations of the air caused by the voice.
- phoneme** (fo'nēm) [φώνημα sound]. An insane hallucination of voices.
- phendoscope** (fo-nen'do-skōp) [φωνή voice + ἔνδον within + σκοπεῖν to see]. A stethoscope that intensifies auscultatory sounds. The instrument contains two parallel plates of vulcanite, one of which is in contact with the chest of the patient, and the other, vibrating in unison with it, transmits the sound to the observer's ear.
- phendoskiascope** (fo-nen''do-ski'as-kōp). A phendoscope combined with a fluorescent screen for observing the heart movements at the same time as the heart sounds are heard.
- phonetic** (fo-net'ik) [φωνητικός]. Pertaining to the voice or to articulate sounds.
- phonetics** (fo-net'iks). The science of vocal sounds.
- phoniatrics** (fo-ne-at'riks) [φωνή voice + ιατρικός curing]. The treatment of speech defects.
- phonic** (fo'nik) [φωνή voice]. Pertaining to the voice.
- phonism** (fo'nizm) [φωνή voice]. A sound or sensation of hearing produced by the effect of something seen, felt, tasted, smelt, or thought of.
- phono-auscultation** (fo''no-aws-kul-ta'shun). Auscultation in which a tuning-fork is placed over the organ to be examined and its vibrations are listened to through a stethoscope placed over the same organ.
- phonocardiogram** (fo-no-kar'de-o-gram) [φωνή voice + καρδία heart + γράμμα mark]. An instrument for registering variation in the heart's tone.
- phonocardiography** (fo''no-kar-de-og'raf-e). The mechanical recording of the sounds of the heart.
- phonogram** (fo'no-gram) [φωνή voice + γράμμα mark]. A graphic record of a sound, as, for instance, a heart sound.
- phonograph** (fo'no-graf) [φωνή voice + γράφειν to write]. An instrument for recording and reproducing sounds and speech.
- phonology** (fo-nol'o-je) [φωνή voice + λόγος sound]. The science which treats of vocal sounds; phonetics.
- phonomania** (fo-no-ma'ne-ah) [φωνή murder + μανία madness]. Insanity marked by a tendency to commit murder.
- phonomassage** (fo''no-mas-ahzh'). The treatment of ear disease by an apparatus which carries more or less of musical vibration into the auditory canal.
- phonometer** (fo-nom'et-er) [φωνή voice + μέτρον measure]. A device for measuring the intensity of sounds.
- phonomyoclonus** (fo-no-mi-ok'lo-nus). A condition in which a sound is heard on auscultation over a muscle affected with myoclonus, whether it is at rest or contracting.
- phonopathy** (fo-nop'ath-e) [φωνή voice + πάθος disease]. Any disease or disorder of the organs of speech.
- phonophobia** (fo-no-fō-be-ah) [φωνή voice + φόβος fear]. Morbid dread of speaking aloud.
- phonophore** (fo'no-fōr) [φωνή sound + φέρειν to carry]. 1. An ossicle of the ear. 2. A kind of improved stethoscope, acting on the principle of an ear trumpet, and rendering the sounds more audible.
- phonophotography** (fo''no-fō-tog'raf-e) [φωνή sound + photography]. Photographic recording of the movements of a diaphragm set up by waves of sound.
- phonopneumomassage** (fo''no-nu''mo-mas-ahzh') [φωνή sound + πνεύμα air + μασσείν to knead]. Air massage of the middle ear.
- phonopsia** (fo-nop'se-ah) [φωνή voice + ὄψις vision]. A subjective sensation as of seeing colors, caused by the hearing of sounds.
- phonoreceptor** (fo''no-re-sep'tor) [φωνή sound + receptor]. A receptor for sound stimuli.
- phonoscope** (fo'no-skōp) [φωνή sound + σκοπεῖν to view]. 1. An apparatus for recording photographically the movements of a diaphragm set up by the sounds of the heart. 2. An instrument for auscultatory percussion.
- phonoscopy** (fo-nos'ko-pe). Recording of the heart sounds by the phonoscope.
- phoria** (fo're-ah) [φέρειν to bear]. The direction or tendency of the visual lines, as in orthophoria, heterophoria, exophoria, etc.
- phoroblast** (fo'ro-blast) [φορεῖν to bear + βλαστός germ]. Connective tissue.
- phorocyte** (fo'ro-sit). A connective tissue cell.
- phorocytosis** (fo'ro-si-to'sis). Proliferation of connective tissue cells.
- phorology** (fo-rol'o-je) [φορεῖν to carry + λόγος treatise]. The study of disease carriers.
- phorometer** (fo-rom'et-er) [φορεῖν to bear + μέτρον measure]. An instrument for ascertaining the degree and kind of heterophoria, or eye declination.
- phorometry** (fo-rom'et-re) [see *phorometer*]. The use of the phorometer.
- phorone** (fo'rōn). A yellowish, oily substance, $C_8H_{14}O$, obtained from acetone, camphoric acid, etc.
- phoro-optometer** (fo''ro-op-tom'et-er). An optic instrument combining the revolving three-cell trial frame, the double rotatory prism of 30 degrees, the Maddox multiple rod, and the phorometer.
- phoroplast** (fo'ro-plast) [φορεῖν to bear + πλαστός formed]. Connective tissue.
- phoropter** (fo-rop'ter). A phorometer fitted with a battery of cylindrical lenses.
- phoroscope** (fo'ro-skōp). A fixed trial frame for eye testing, with a head rest which may be fastened to the table or the wall.
- phorotone** (fo'ro-tōn) [φορά motion + τόνος tension]. An instrument for exercising the muscles of the eye.
- phorozoon** (fo-ro-zō'on) [φορά motion + ζῶον animal]. The asexual stage in the life history of an organism.
- phorxal** (forks'al). A hematogenic preparation of animal blood.
- phose** (fōz) [φῶς light]. Any subjective sensation, as of light or color. See *aphose*, *centraphose*, *centrophose*, *chromophose*, *peripheraphose*, *peripherophose*, etc.
- phosferrin** (fos-fer'in). A preparation of phosphoric acid, ferric chloride, and glycerin.
- phosferrol** (fos-fer'ol). A proprietary preparation of glycerophosphates, iron, strychnine, cod liver oil, and malt extract.
- phosgene** (fos'jēn). A suffocating and highly poisonous war gas, carbonyl chloride, $COCl_2$.

- phosgenic** (fos-jen'ik) [*φῶς* light + *γενῆναι* to produce]. Photogenic; light producing.
- phosiron** (fos-ir'ern). The neutral iron salt of a complex phosphotartaric acid, containing 19 per cent of iron and 65 per cent of phosphorus.
- phosis** (fo'sis): The production of a phose.
- phosate** (fos'öt). A preparation of creosote (80 per cent) and phosphoric anhydride (20 per cent); a syrupy liquid; used in tuberculosis like creosote carbonate.
- phosphagen** (fos'faj-en). A hexose-phosphoric acid present in striated muscle which is reduced in amount on muscle contraction.
- phosphagon** (fos'fag-on). An elixir of the alkaline glycerophosphates; proprietary.
- phosphatase** (fos'fat-äs). An enzyme which splits the phosphoric acid esters of carbohydrates.
- phosphate** (fos'fat) [*L. phos'phos*]. Any salt of phosphoric acid. **acid p.**, any phosphate in which only one or more of the three replaceable hydrogen atoms of the acid are taken up. In U. S. P. terminology it refers only to the disodium monohydrogen phosphate. **alkaline p.**, a phosphate of an alkaline metal, as sodium or potassium. **ammoniomagnesium p.**, a double salt of ammonium and magnesium with orthophosphoric acid, $Mg(NH_4)PO_4 \cdot 6H_2O$; nearly allied to and often associated with triple phosphate. **earthy p.**, a phosphate of any one of the alkaline earth metals. **normal p.**, any phosphate in which all the replaceable hydrogen atoms are replaced. **stellar p.**, calcium phosphate, in star-shaped masses of crystals, occurring in urinary deposits. **triple p.**, ammoniomagnesium phosphate.
- phosphated** (fos'fa-ted). Containing phosphates.
- phosphatemia** (fos-fa-te'me-ah) [*phosphate* + *αἷμα* blood]. The presence of phosphates in the blood.
- phosphatase** (fos'fat-äs). An enzyme which brings about the synthesis of phosphoric acid esters by carbohydrates.
- phosphatic** (fos-fat'ik). Pertaining to or containing phosphates.
- phosphatide** (fos'fat-id). Any one of a class of lipid substances which are esters of orthophosphoric acid; they include lecithin and cephalin.
- phosphatine** (fos'fa-tin) [Gr.]. Any one of a considerable group of phosphorus compounds resembling the phosphates and found in the brain substance.
- phosphatol** (fos'fat-ol). A thick, yellowish-red liquid preparation of creosote (90 per cent) and phosphorus trichloride, used in tuberculosis.
- phosphatometer** (fos-fa-tom'et-er). An instrument for measuring the phosphates of the urine.
- phosphatoptosis** (fos'fat-op-to'sis) [*phosphate* + *πτῶσις* fall]. The spontaneous precipitation of phosphates from the urine.
- phosphaturia** (fos-fat-u're-ah) [*phosphate* + *οὐρον* urine]. 1. A high percentage of phosphates in any given specimen of urine. 2. Ready precipitation of the earthy phosphates from the urine; phosphatopsis.
- phosphene** (fos'fēn) [*φῶς* light + *φαίνειν* to show]. A luminous appearance caused by pressing upon the eyeball. **accommodation p.**, the streak of light surrounding the visual field seen in the dark after accommodation.
- phosphergot** (fos-fer'got). A preparation of sodium phosphate and ergot, exhibited in three or more forms or modifications: used in melancholia, hysteria, chlorosis, etc.
- phosphide** (fos'fid). Any binary compound of phosphorus and another element or radical.
- phosphin** (fos'fin). 1. Hydrogen phosphide, PH_3 ; a gas and radical. 2. A coal tar dye extremely destructive to infusorial life. It is used as a stain. Called also *Philadelphia yellow*.
- phosphite** (fos'fit). Any salt of phosphorous acid.
- phospho-albumin** (fos'fo-al-bu'min). 1. An albuminous substance containing phosphorus. 2. A preparation of brain, spinal cord, and testes; used in anemia, chlorosis, and neurasthenia. Dose, 4-8 grains (0.26-0.5 Gm.).
- phosphobion** (fos'fo-be-on). A proprietary preparation offered for the treatment of insomnia.
- phosphoglobulin** (fos'fo-glob'u-lin). Same as *nucleo-albumin*.
- phosphoglucoprotein** (fos'fo-glu-ko-pro'te-in). A phosphorus containing glucoprotein.
- phosphoguaiacol** (fos'fo-gwi'ak-ol). Guaiacol phosphite, a proprietary remedy.
- phospholipin** (fos'fo-lip'in). A lipin containing phosphorus which on hydrolysis yields fatty acids, glycerin, and a nitrogenous compound. Lecithin is the best known example.
- phosphology** (fos'fol'o-je) [*phosphorus* + *λόγος* discourse]. The doctrine of the effect of excess or deficiency of oxidizable phosphorus compounds in the bioplasm.
- phosphonium** (fos'fo-ne-um). The univalent radical, PH_4 , forming compounds analogous to those of ammonium.
- phosphonuclease** (fos'fo-nu'kle-äs). See *nucleo-ldase*.
- phosphoprotein** (fos'fo-pro'te-in). A protein consisting of a compound of the protein molecule with some as yet undefined phosphorus containing substance other than nucleic acid or lecithin. To this group belong the vitelline of egg yolk and casein of milk.
- phosphoptomaine** (fos'fo-to'ma-in). Any one of a class of toxic compounds found in the blood in phosphorus poisoning.
- phosphorated, phosphoretted, phosphu-rettet** (fos'fo-ra-ted, fos'fo-ret-ed, fos'fu-ret-ed). Charged or combined with phosphorus.
- phosphorenesis** (fos'fo-ren'es-is). Any disease due to excess of calcium phosphate in the body.
- phosphorescence** (fos'fo-res'ens). The emission of light without appreciable heat.
- phosphorescent** (fos'fo-res'ent). Exhibiting light without heat.
- phosphorhidrosis, phosphoridrosis** (fos'fo-rid-ro'sis) [*phosphorus* + *ἰδρωσις* sweating]. The secretion of luminous sweat.
- phosphoric acid** (fos'for'ik). See *acid*.
- phosphorism** (fos'fo-rizm). Chronic phosphorus poisoning.
- phosphorized** (fos'fo-rizd). Containing phosphorus.
- phosphorous acid** (fos'fo-rus). See *acid*.
- phosphoruria** (fos'fo-ru're-ah) [*phosphorus* + *οὐρον* urine]. The presence of free phosphorus in the urine.
- phosphorus** (fos'fo-rus) [*φῶς* light + *φορεῖν* to carry]. A nonmetallic, translucent element; poisonous and highly inflammable; symbol, P; atomic weight, 31.04. It occurs in the three forms—*amorphous*, *metallic*, and *vitreous*. It is obtainable from bones, urine, and various minerals. The ordinary, or vitreous, phosphorus is the kind used in medicine, and is very inflammable and exceedingly poisonous. Free phosphorus causes a fatty degeneration of the liver and other viscera, and the inhalation of its vapor often leads to necrosis of the lower jaw. Therapeutically, it is used in rickets, osteomalacia, nervous and cerebral disease, scrofula, and tuberculosis; as a genital stimulant in sexual exhaustion, and as a tonic in conditions of exhaustion. Dose of phosphorated oil (*oleum phosphoratum*), 1-3 minims (0.066-0.18 cc.); of compound syrup, 1-2 fluidrachms (4-8 cc.); of elixir, 15-60 minims (1-4 cc.); of spirit, 1-5 minims (0.066-0.33 cc.); of tincture (Thompson's), 1 fluidrachm (4 cc.); of phosphorus in substance, $\frac{1}{128}$ to grain (0.0005-0.0013 Gm.). **amorphous**

- p., red p.,** a dark-red, amorphous substance, not poisonous. **metallic p., rhombohedral p.,** an allotropic form with a metallic luster produced by heating ordinary phosphorus. **ordinary p., vitreous p.,** a waxy solid, exceedingly poisonous.
- phosphotal** (fos'fo-tal). Creosote phosphite: a proprietary remedy.
- phosphotungstic acid** (fos-fo-tung'stik). See *acid*.
- phosphuret** (fos'fu-ret). Same as *phosphide*.
- phosphuretted** (fos'fu-ret-ed). See *phosphorated*.
- phosphuria** (fos-fu're-ah). Same as *phosphaturia*.
- phot.** Same as *photo*.
- photalgia** (fo-tal'je-ah) [φῶς light + ἄλγος pain]. Pain, as in the eye, caused by light.
- photochromy** (fo-tal'o-kro-me) [φῶς light + ἄλλος different + χρώμα color]. Allotropic change with color alteration due to light, as the change of yellow into red phosphorus.
- photaugiaphobia** (fo-taw'je-ah-fo'be-ah) [φωταυγία glare + φόβος fear]. Abnormal intolerance of a glare of light.
- photo** (fōt) [φῶς light]. The C. G. S. unit of illumination, being one lumen per square centimeter.
- photechy** (fo'tek-e) [φῶς light + ἦλω echo]. The power shown by certain substances of becoming radioactive after having been exposed to radiation.
- photerythrous** (fo-te-rit'h'rus) [φῶς light + ἐρυθρός red]. Sensitive to the red rays of the spectrum: said of a form of color blindness in which green is not clearly recognized.
- photesthesia** (fo-tes-the'sis) [φῶς light + αἴσθησις feeling]. Sensitiveness to light.
- photic** (fo'tik). Pertaining to light.
- photism** (fo'tizm) [φῶς light]. A visual image; a sensation of color produced by a sensation of hearing, taste, smell, or touch.
- photo-actinic** (fo''to-ak-tin'ik). Giving off both luminous and actinic rays.
- photobacterium** (fo''to-bak-te're-um). A genus or form of photogenic bacteria from putrescent flesh.
- photobiotic** (fo''to-bi-ot'ik) [φῶς light + βίος life]. Living in the light only.
- photocatalyst** (fo-to-kat'al-ist). A substance by means of which sunlight is utilized as chlorophyll in the photosynthesis of carbohydrates by green plants.
- photocatalyzer** (fo''to-kat'al-i-zer). Photocatalyst.
- photocauterization** (fo''to-kaw-ter-iz-a'shun) [φῶς light + cauterization]. Cauterization by radioactive means, such as radium, roentgen rays, etc.
- photocautery** (fo-to-kaw'ter-e). 1. Same as *photocauterization*. 2. An instrument for producing photocauterization.
- photoceptor** (fo-to-sep'tor) [φῶς light + ceptor]. A nerve ceptor which receives sensations of light; photoreceptor.
- photochemical** (fo-to-kem'ik-al). Pertaining to the chemical properties of light.
- photochemistry** (fo-to-kem'is-tre) [φῶς light + chemistry]. The branch of chemistry which deals with the chemical properties or effects of light rays.
- photocinetic** (fo''to-sin-et'ik). Photokinetic.
- photodermatism** (fo-to-der'mat-izm) [φῶς light + δέρμα skin]. Sensitiveness to light in epithelial cells.
- photodromy** (fo-tod'ro-me) [φῶς light + δρόμος running]. The phenomenon of moving toward (*positive p.*) or away from (*negative p.*) light; as in the case of particles in suspension.
- photodynamic** (fo''to-di-nam'ik) [φῶς light + δύναιμι power]. Powerful in the light: said of the action exerted by fluorescent substances in the light.
- photodynamics** (fo''to-di-nam'iks). The science of the activating effects of light.
- photodynia** (fo-to-din'e-ah) [φῶς light + ὀδύνη pain]. Photalgia.
- photodysphoria** (fo''to-dis-fo're-ah) [φῶς light + δυσφορία distress]. Intolerance of light; photophobia.
- photo-electricity** (fo''to-e-lek-tris'ti'e) [φῶς light + electricity]. Electricity developed by the action of light.
- photo-electron** (fo''to-e-lek'tron). An electron emitted from a metallic surface when the latter is illuminated with light, especially with light of short wavelength.
- photo-element** (fo-to-el'em-ent). A galvanic element which is decomposed under the influence of light and produces photo-electricity.
- photo-erythema** (fo''to-er-ith-e'mah). Erythema due to exposure to light.
- photo-esthetic** (of-to-es-thet'ik) [φῶς light + αἰσθησις sensation]. Pertaining to or having the sensation of light.
- photofluoroscope** (fo''to-flu-or'o-skōp). A form of fluoroscope used in making either observations or photographs by means of roentgen rays.
- photogastroscope** (fo-to-gas'tro-skōp) [φῶς light + γαστήρ stomach + σκοπεῖν to see]. An apparatus for photographing the interior of the stomach.
- photogen** (fo'to-jen) [see *photogene*]. A substance supposed to exist in photogenic bacteria and to be the cause of their luminescence.
- photogene** (fo'to-jen) [φῶς light + γεννᾶν to produce]. Same as *after-image*.
- photogenesis** (fo-to-jen'es-is) [φῶς light + genesis]. The production of phosphorescence, or the emission of light, as by bacteria.
- photogenic, photogenous** (fo-to-jen'ik, fo-toj-en-us). Produced by light or producing light.
- photogram** (fo'to-gram) [φῶς light + γράμμα record]. The photographic record of a physiologic experiment.
- photohematachometer** (fo''to-hem'at-ak-om'et-er) [φῶς light + αἷμα blood + ταχύς swift + μέτρον measure]. A device for making a photographic record of the speed of the blood current.
- photohenric** (fo-to-hen'rik) [φῶς light + henry]. Noting a change in inductive capacity due to the action of light.
- photohmic** (fo-to-o'mik). Noting a change in electric resistance produced by light.
- photo-inactivation** (fo''to-in-ak-tiv-a'shun). Inactivation of complement by light.
- photokinetic** (fo''to-kin-et'ik) [φῶς light + κινητικός pertaining to motion]. Moving in response to the stimulus of light.
- photology** (fo-tol'o-je) [φῶς light + λόγος treatise]. 1. The branch of physics which treats of light. 2. Same as *photalgia*.
- photolysis** (fo-tol'is-is) [see *photolyte*]. 1. Chemical decomposition by the action of light. 2. Lysis or solution of cells under the influence of light.
- photolyte** (fo'to-lit) [φῶς light + λύειν to dissolve]. Any substance decomposable by the action of light.
- photolytic** (fo-to-lit'ik). Decomposed by light.
- photomagnetism** (fo-to-mag'net-izm). Magnetism induced by the action of light.
- photomania** (fo-to-ma'ne-ah) [φῶς light + μανία madness]. Maniacal symptoms developed under the influence of light.
- photometer** (fo-tom'et-er) [φῶς light + μέτρον measure]. A device for measuring the intensity of light. **Forster's p.** Same as *photopiometer*.
- photomethemoglobin** (fo''to-meth-hem-o-glo-bin). A compound formed by the action of light on methemoglobin.

photometry (fo-toim'et-re) [φῶς light + μέτρον measure]. 1. The measurement of light. 2. The reactions of an organism to varying intensities of light.

photomicrograph (fo-to-mik'ro-graf) [φῶς light + μικρός small + γράφειν to record]. 1. The photograph of a microscopic object. 2. A photograph of very minute size.

photomicrography (fo''to-mi-krog'raf-e). The production of photomicrographs.

photomicroscope (fo-to-mi'kro-skōp). A microscope and camera combined for making photomicrographs.

photomicroscopy (fo-to-mi-kros'ko-pe). Photography of enlarged pictures of minute objects with the photomicroscope.

photomorphism, photomorphosis (fo-to-mor'fizm, fo''to-mor-fo'sis) [φῶς light + μορφή form]. The structural effects in organisms due to light.

photoncia (fo-ton'se-ah) [φῶς light + ὄγκος tumor]. Swelling due to the action of light.

photonosus (fo-ton'o-sus) [φῶς light + νόσος disease]. Any disease or disorder, as of the eyes, due to excess of light.

photopathy (fo-top'ath-e) [φῶς light + πάθος affection]. 1. Any pathologic effect produced by light. 2. The attractive or repulsive influence of light upon organisms.

photoperceptive (fo''to-per-sep'tiv) [φῶς light + perceptive]. Able to perceive light.

photopharmacology (fo''to-far-mak-ol'o-je) [φῶς light + pharmacology]. The study of the effects of light and other radiations on drugs and on their pharmacological action.

photophilic (fo-to-fil'ik) [φῶς light + φιλεῖν to love]. Loving light; fond of light.

photophobia (fo-to-fo'be-ah) [φῶς light + φόβος fear]. Abnormal intolerance of light.

photophobic (fo-to-fo'bik). Pertaining to or affected with photophobia.

photophone (fo''to-fōn) [φῶς light + φωνή voice]. An instrument for producing sound by the action of waves of light.

photophore (fo''to-fōr) [φῶς light + φέρειν to bear]. A rhinoscopic or laryngoscopic lamp.

photopia (fo-to'pe-ah) [φῶς light]. Light adaptation; the adjustment of the eye for bright light. Cf. *scotopia*.

photopic (fo-top'ik) [φῶς light + ὄψ vision]. Adapted to see in the light. See under *vision*.

photopsia, photopsy (fo-top'se-ah, fo-top-se) [φῶς light + ὄψ vision]. An appearance as of sparks or flashes due to retinal disease.

phototarmosis (fo''to-tar-mo'sis) [φῶς light + παραμώσις sneezing]. Sneezing caused by the influence of light.

phototometer (fo-top-tom'et-er) [φῶς light + ὀπτός seen + μέτρον measure]. A device for testing the acuity of vision by determining the smallest amount of light that will render an object just visible.

photometry (fo-top-tom'et-re). Measurement of light perception.

photoradiometer (fo''to-ra-de-om'et-er). An apparatus for measuring the quantity of roentgen rays penetrating any given surface.

photoreceptive (fo''to-re-sep'tiv) [φῶς light + receptive]. Photoperceptive.

photoreceptor (fo''to-re-sep'tor) [φῶς light + receptor]. A nervous end-organ or receptor sensitive to light.

photoscope (fo-to-skōp) [φῶς light + σκοπεῖν to see]. A kind of fluoroscope.

photoscopy (fo-tos'ko-pe) [φῶς light + σκοπεῖν to view]. The same as *skiascopy*.

photosensitive (fo-to-sen'sit-iv). Sensitive to light.

photosensitize (fo-to-sen'sit-iz) [φῶς light + sensitize]. To sensitize a substance or an organism to the influence of light.

photosynthesis (fo-to-sin'the-sis) [φῶς light + σύνθεσις synthesis]. A chemical combination caused by the action of light.

phototaxis (fo-to-taks'is) [φῶς light + τάξις arrangement]. The movement of cells and microorganisms under the influence of light.

phototherapy (fo-to-ther'ap-e) [φῶς light + therapy]. The treatment of disease by the influence of light, especially by variously concentrated light rays.

phototropism (fo-tot'ro-pizm) [φῶς light + τρόπος a turning]. 1. The tendency of an organism to turn or move toward (*positive p.*) or away from (*negative p.*) light. 2. Change of color produced in a substance by the action of light.

photovoltaic (fo-to-vol'tik) [φῶς light + voltic]. A term applied to electromotive force due to light.

photoxylin (fo-toks'il-in). [φῶς light + ξύλον wood]. A kind of pyroxylin prepared from wood pulp: used in preparing a colloidion, and employed in microscopy and minor surgery.

photuria (fo-tu're-ah) [φῶς light + ούρον urine]. The excretion or passage of urine having a luminous appearance.

Phragmidiothrix (frag-mid'e-o-thriks) [φραγμός inclosure + -ιδιον diminutive ending + θρίξ hair]. A genus of encapsulated bacteria whose cells appear as branchless threads. These cells divide into three directions and give rise to a cell strand. Separate cells may grow through the capsule and give rise to branches.

phragmoplast (frag'mo-plast) [φραγμός inclosure + πλαστός formed]. The barrel-shaped spindle within which the midbody forms in mitosis.

phren (fren) [φρήν]. 1. The diaphragm. 2. The mind or intellect.

phrenalgia (fren-al'je-ah) [φρήν mind + ἄλγος pain]. 1. Same as *psychalgia*. 2. Pain in the phragm.

phrenasthenia (fren-as-the'ne-ah, frēn'as-the-ni'-ah) [φρήν mind + ἀσθένεια weakness]. Feebleness of mind.

phrenetic (fren-et'ik). Maniacal; a maniac.

phrenic (fren'ik) [L. *phren'icus*; φρήν mind; diaphragm]. 1. Pertaining to the mind. 2. Pertaining to the diaphragm. **p. avulsion**. See under *avulsion*.

phrenicectomy (fren-is-ek'to-me) [*phrenic* nerve + ἐκτομή excision]. Resection of the phrenic nerve for the same purpose as phrenicotomy.

phrenico-exairesis (fren'ik-o-ex-i-re'sis). Phrenic avulsion. See under *avulsion*.

phrenicotomy (fren-ik-ot'o-me) [*phrenic* nerve + τομή incision]. Surgical division of the phrenic nerve for the purpose of causing one-sided paralysis of the diaphragm, which then becomes pushed up by the viscera so as to compress a diseased lung.

phrenitis (fren-i'tis) [φρήν mind + -itis inflammation]. 1. Delirium or frenzy. 2. Inflammation of the diaphragm.

phrenoblabia (fren-o-bla'be-ah) [φρήν mind + βλάβη hurt]. Mental disorder.

phrenocardia (fren-o-kar'de-ah) [φρήν mind + καρδία heart]. A psychic condition characterized by pain in the cardiac region, respiratory disorders, and cardiac palpitation. Called also *triad of Hertz, cardiasthenia*, and *cardiovascular neurasthenia*.

phrenocolic (fren-o-kol'ik). Connecting the diaphragm and colon.

phrenocolopexy (fren-o-ko'lo-peks-e) [φρήν diaphragm + κόλον colon + πήξις fixation]. The operation of anchoring the prolapsed colon to the diaphragm.

phrenodynia (fren-o-din'e-ah) [φρήν mind + ὀδύνη pain]. Pain in the diaphragm.

phrenogastric (fren-o-gas'trik). Pertaining to the diaphragm and the stomach.

phrenoglottic (fren-o-glot'ik). Pertaining to the diaphragm and the glottis.

phrenograph (fren-o-graf) [φρήν diaphragm + γράφω to write]. An apparatus for recording the movements of the diaphragm.

phrenohepatic (fren-o-he-pat'ik) [φρήν diaphragm + ἥπαρ liver]. Pertaining to the diaphragm and the liver.

phrenology (fren-ol'o-je) [φρήν mind + λόγος discourse]. The study of the mind and character from the shape of the skull.

phrenopathic (fren-o-path'ik). Psychopathic.

phrenopathy (fren-op'ath-e) [φρήν mind + πάθος disease]. Any mental disease or disorder.

phrenopericarditis (fren'o-per-e-kar-di'tis) [φρήν diaphragm + pericarditis]. A condition in which the apex of the heart is attached to the diaphragm by adhesions.

phrenoplegia (fren-o-ple'je-ah) [φρήν mind; diaphragm + πλῆγη stroke]. 1. A sudden attack of mental disorder. 2. Loss or paralysis of the mental faculties. 3. Paralysis of the diaphragm.

phrenoptosis (fren-op-to'sis) [φρήν diaphragm + πτώσις falling]. Downward displacement of the diaphragm.

phrenosin (fren'o-sin). A galactoside, probably $C_{48}H_{91}NO_8$ (Levene), obtained from brain substance. It yields on hydrolysis galactose, sphingosine, and phrenosinic acid.

phrenosinic acid (fren-o-sin'ik). See *acid*.

phrenospasm (fren'o-spazm) [φρήν diaphragm + σπασμ]. 1. Spasm of the diaphragm. 2. Cardiospasm.

phrenosplenic (fren-o-splen'ik). Connecting the diaphragm and the spleen.

phrenosterol (fren-o-ste'rol). A sterol from brain substance.

phrictopathic (frik-to-path'ik) [φρικτός producing a shudder + πάθος disease]. Causing a shudder: a term applied to a peculiar shuddering sensation caused by irritating an hysterical anesthetic area during recovery.

phrenema (fro-ne'mah) [φρήνημα mind]. That portion of the cortex of the brain which is occupied by thought centers or association centers.

phronetal (fro-ne'tal). Pertaining to thought.

phrynin (fri'nin) [φρήνη toad]. A poisonous substance obtainable from the skin and secretions of various toads. Its properties resemble those of digitalin.

phrynolysine (frin-ol'is-in) [φρήνη toad + λύσις destruction]. The lysine or toxin from toad venom.

phthalate (tha'lāt). A salt of phthalic acid.

phthalein (thal'e-in). Any one of a series of coloring matters formed by the condensation of phthalic anhydride with the phenols. Some of them have a purgative action. See *phenolphthalein*. **alpha-naphthol p.**, an indicator used in the determination of hydrogen ion concentration. It has a pH range of 9.3-10.5. **orthocresol p.**, an indicator used in the determination of hydrogen ion concentration. It has a pH range of 8.2-9.8.

phthaleinometer (thal'e-in-om'et-er). An instrument for use in performing phenolsulphonphthalein tests.

phthinoïd (thi'noid). Tuberculous.

phthiremia (thir'e-me-ah) [φθειρεν to corrupt + αἷμα blood]. A depraved state of the blood.

phthiriasis (thir-i'as-is) [φθειρίασις, φθελρ louse]. Infestation with lice. See *pediculosis*. **p. capitis**, lousiness of the hair of the head. **p. corporis**, the presence of lice on the body or clothing. **p. inguinalis**, the presence of crab lice on the pubic hairs.

phthiriophobia (thir'e-o-fo'be-ah) [φθειρίασις lousiness + φόβος fear]. Morbid dread of lice.

Phthirius (thir'e-us) [φθελρ louse]. A genus of the Hemiptera. **P. pubis**, the pubic or crab louse. It causes a dermatitis called phthiriasis.

phthisic (tiz'ik) [φθισικός]. 1. Affected with phthisis. 2. A popular name for asthma.

phthisical (tiz'ik-al) [φθισικός]. Affected with phthisis, or of the nature of phthisis.

phthisicky (tiz'ik-e). Affected with asthma.

phthisin (thi'sin). A therapeutical preparation of the bronchial glands of animals: used in lung diseases.

phthisiogenesis (tiz'e-o-jen'es-is). The development of phthisis.

phthisiogenetic, phthisiogenic (tiz'e-o-jen-et'ik, tiz-e-o-jen'ik). Causing, or pertaining to the causation of, phthisis.

phthisiology (tiz-e-ol'o-je) [φθίσις wasting + λόγος word]. The sum of knowledge in regard to phthisis.

phthisiomania (tiz'e-o-ma'ne-ah) [phthisis + μανία madness]. A morbid and mistaken belief that one has consumption.

phthisiophobia (tiz'e-o-fo'be-ah) [phthisis + φόβος fear]. Morbid dread of phthisis.

phthisiotherapeutical (tiz'e-o-ther-ap-u'tik-al). Of or relating to the treatment of phthisis.

phthisiotherapeutics (tiz'e-o-ther-ap-u'tiks). Phthisiotherapy.

phthisiotherapeutist, phthisiotherapist (tiz'e-o-ther-ap-u'tist, tiz-e-o-ther-ap-ist). One who makes a specialty of the treatment of phthisis.

phthisiotherapy (tiz'e-o-ther-ap'e) [phthisis + therapy]. The treatment of phthisis.

phthisis (thi'sis) [φθίσις; φθελρ to consume]. 1. A wasting away of the body or a part of the body. 2. Pulmonary consumption; pulmonary tuberculosis: a disease marked by progressive wasting or emaciation of the body, obstinate cough, with the expectoration of opaque matter and sometimes of blood, loss of strength, hectic fever, night sweats, and diarrhea. The disease is due to the presence of the tubercle bacillus (*Mycobacterium tuberculosis*) in the lungs, the pathologic lesion consisting of the development of granular consolidations, which eventually undergo softening, with the formation of cavities or vomicae. **abdominal p.**, tuberculosis of the intestines and mesenteric glands. **bacillary p.**, that due to the bacillus of tuberculosis. **basal p.**, tuberculosis of the base of the lung. **black p.** Same as *anthracosis*. **bronchial p.**, tuberculosis of the bronchial glands. **p. bulbi**, shrinkage and wasting of the eye. **colliers' p.**, a form of interstitial pneumonia seen in colliers, and due to the inhalation of particles of coal dust. **p. con firma'ta**, the second stage of tuberculosis of the lungs. **p. cor'neae**, the shriveling and disappearance of the cornea after suppurative keratitis. **p. despera'ta**, the third stage of tuberculosis of the lungs. **diabetic p.**, the caseous bronchopneumonia of diabetic patients. **essential p.** (of the eye), ophthalmomalacia. **fibroid p.** 1. Chronic phthisis in which fibrous tissue is developed in the lung. 2. Interstitial pneumonia. **flax dressers' p.**, a form of pneumoconiosis occurring in flax dressers. **p. flo'rida**, swift or galloping consumption. **glandular p.**, tuberculosis of the lymphatic glands. **grinders' p.**, a combination of tuberculosis and silicosis of the lungs occurring among grinders in the cutlery trade and due to the inhalation of the steel dust. **hepatic p.**, tuberculosis of the liver. **p. incip'iens**, the first stage of tuberculosis of the lungs. **knife grinders' p.**, grinders' phthisis. **laryngeal p.**, tuberculosis of the larynx. **Mediterranean p.**, Malta fever. **miners' p.**, anthracosis. **p. nodo'sa**, miliary tubercle. **non-bacillary p.**, any pseudotuberculosis not due

to a bacillus. **p. pancreatica**, a wasted condition associated with disease of the pancreas. **p. phlegmatica**, tuberculous disease without loss of flesh. **potters' p.**, a combination of tuberculosis and silicosis of the lungs in potters due to inhalation of dust. **pulmonary p.**, tuberculosis of the lung. **stone cutters' p.**, pulmonary disease of stone cutters due to the inhalation of particles of stone. **p. ventriculi**, atrophy of the mucous membrane of the stomach and alimentary canal.

phthisopyrine (thiz-o-pi'rin). A proprietary tuberculosis remedy containing acetylsalicylic acid, sodium arsenite, and camphoric acid.

phthisoremid, phthysoremid (this-o-re'mid). Koch's bacillary emulsion in capsule form.

phulluah (foo'loo-ah). An oily medicine obtained in India from a plant: used in snake bite, rheumatism, sprains, etc., as an anodyne, antiseptic, and stimulant.

phycochrome (fi-'ko-kro-m) [φύκος seaweed + χρώμα color]. 1. A blue-green pigment from various fresh-water algae of the simplest type. 2. Any plant or species of alga of the class Phycochromophyceae.

phycochromoprotein (fi-'ko-kro-mo-pro'te-in). A chromoprotein of the seaweeds as distinguished from the hemochromoproteins.

phycocyan (fi-'ko-si'an). A blue chromoprotein found in seaweeds.

phycoerythrin (fi-'ko-er'ith-rin). A red chromoprotein found in seaweeds.

Phycomycetes (fi-'ko-mi-se'tēz) [φύκος seaweed + μύκης fungus]. A group of molds including the mucors.

Phydip'pus tripuncta'tus. A venomous spider of America.

phygagalactic (fi-'go-gal-ak'tik) [φεύγειν to avoid + γάλα milk]. Checking the secretion of milk; galactophygous.

phylacagoc (fi-'lak-ag-o'ik) [φυλάξις guardian + ἀγός leading]. Inducing the formation of phylaxins or protective antibodies.

phylacogen (fi-'lak'o-jen) [φύλαξ guard + γεν- to produce]. A proprietary preparation said to be a filtrate of bacterial cultures which, when injected into the body, tends to stimulate the formation of specific defensive proteins.

phylactic (fi-'lak'tik). Pertaining to or producing phylaxis.

phylaxin (fi-'laks'in) [φύλαξ guard]. Any defensive protein found in immunized animals or persons. There are two classes of phylaxins. The first, or *mycophylaxins*, act by destroying the micro-organisms themselves; the second, or *toxophylaxins*, destroy or neutralize the poisonous products of the bacteria.

phylaxiology (fi-'lak-se-ol'o-je). The study and practice of phylaxis or protection against infection.

phylaxis (fi-'laks'is) [φύλαξ a guard]. Protection against infection; the bodily defense against infection.

phyletic (fi-'let'ik). Pertaining to phylogeny.

phylamin (fil'am-in). A proprietary preparation of fresh spinach juice.

phyllo-erythrin (fil-o-er'ith-rin). A derivative of chlorophyll formed in the intestinal canal of ruminant animals and found also in their bile.

phyllopyrrole (fi-'lo-pir'ol). Trimethylethylpyrrole, (CH₃)₃C₄(NH)C₂H₅, from bile pigments.

phyllosan (fil'o-san). A proprietary chlorophyll preparation for anemia, chlorosis, etc.

phyllyrin (fil'ir-in). A substance, C₂₄H₃₄O₁₁, in silvery flakes: antipyretic.

phylogenesis, phylogeny (fi-'lo-jen'es-is, fi-'loj'en-e) [φύλον tribe + γένεσις generation]. The evolution or ancestral history of a race or group of animals. Cf. *ontogeny*.

phylogenetic, phylogenic (fi-'lo-jen-et'ik, fi-'lo-jen'ik). Pertaining to phylogeny.

phyloporphylin (fil-o-por'fir-in). A compound C₂₂H₂₄N₄O₈, from chlorophyll, very similar to hematorporphylin.

phyloxanthine (fil-oks-an'thin). A compound formed together with phyllocyanic acid by treating chlorophyll with hydrochloric acid.

phylum (fi'lum), pl. *phy'la* [φύλον race]. One of the primary or main divisions of the animal or vegetable kingdom.

phyma (fi'mah), pl. *phy'mata* [φύμα growth]. Any skin tumor or cutaneous tubercle; especially, a circumscribed swelling on the skin, larger than a tubercle, and produced by exudation into the subcutaneous tissue or the corium.

phymatiasis (fi-mat-i'as-is). Same as *tuberculosis*.

phymatoid (fi'mat-e-o'id) [φύμα growth + εἶδος form]. Resembling a tumor or phyma.

phymatorhusin (fi'mat-o-ru'sin) [φύμα growth + ῥύσις issue]. A dark pigment from hair and melanotic tumors. It is a form of melanin.

phymatorrhysin (fi'mat-o-ris'in). Same as *phymatorhusin*.

phymatosis (fi-mat-o'sis). A condition characterized by the presence of phymata.

phymochrom (fi'mo-kro-m). An arsenic compound of the thymus gland, used internally in skin diseases.

physalides (fis-al'id-ēz). The plural of *physalis*.

physaliform, physalliform (fis-al'if-orm) [φυσάλλis bubble + L. *for'ma* shape]. Resembling bubbles.

physaliphore (fis-al'if-ōr) [physalis + φερέω to carry]. 1. A globular cavity in certain brood cells of cancers. 2. More correctly, the cell itself which contains such a cavity. Cf. *physalis*.

physalis (fis'al-is), pl. *physal'ides* [φυσάλλis bubble]. 1. A large brood cell from a cancer. 2. More correctly, a spherical cavity found in certain cells, such as the large brood cells of cancers or the giant cells of sarcoma.

physallization (fis-al-iz-a'shun) [φυσάλλis bubble]. The formation of a permanent froth when a liquid is shaken together with a gas.

Physaloptera (fis-al-op'ter-ah). A genus of nematode worms of the family Strongylidae found in the stomach and intestines of man and other vertebrates. **P. caucas'ica** occurs in Russia. **P. mor'dens**, a round worm not uncommon in negroes in East Africa.

physconia, physcony (fis-ko'ne-ah, fis'ko-ne) [φύσκων pot-belly]. Enlargement or swelling of the abdomen.

physiatrics (fiz-e-at'riks) [φύσις nature + ιατρεία healing]. The cure of disease by nature.

physic (fiz'ik) [φυσικός natural]. 1. The art of medicine and of therapeutics. 2. A medicine, especially a cathartic. **Culver's p.** See *Lep'tandra*.

physical (fiz'ik-al) [φυσικός]. Pertaining to nature or to the body.

physician (fiz-ish'un). An authorized practitioner of medicine. **attending p.**, a physician who attends a hospital at stated times to visit the patients and give directions as to their treatment. **resident p.** Same as *intern*.

Physick's operation, pouches, tincture, etc. (fiz'iks) (Philip Syng *Physick*, American surgeon, 1768-1837). See under *operation, pouch, tincture*.

physicochemical (fiz'ik-o-kem'ik-al). Pertaining to physics and chemistry.

physicogenic (fiz'ik-o-jen'ik). Due to physical causes; of physical origin, as opposed to *psychogenic*.

physicotherapeutics, physiotherapy (fiz'ik-o-ther-ap-u'tiks, fiz'ik-o-ther'ap-e). Same as *physical therapy*.

physics (fiz'iks) [phósis nature]. The science of the laws and phenomena of nature, but especially of the forces and general properties of matter.

physicum (fiz'ik-um). A preliminary examination in German universities leading to a doctor's degree.

physinosis (fiz-in-o'sis) [phósis nature + νόσος disease]. Any disease due to physical agents.

physiochemical (fiz'e-o-kem'ik-al). Pertaining to physical chemistry.

physiocrasy (fiz-e-ok'ras-e) [phósis nature + κρατείν to rule]. The passive tendency in therapeutics which permits nature to take its course with little interference by man. Cf. *anthropocracy*.

physiognomy (fiz-e-og'no-me) [phósis nature + γνῶμων a judge]. 1. The determination of mental or moral character and qualities by the face. 2. The countenance, or face. 3. The facial expression and appearance as a means of diagnosis.

physiologic, physiological (fiz'e-o-loj'ik, fiz'e-o-loj'ik-al). 1. Pertaining to physiology or the functions of the body and organs. 2. Normal; not pathologic.

physiologic-anatomical (fiz-e-o-loj'ik-o-an-at-om'ik-al). Pertaining to physiology and anatomy.

physiologist (fiz-e-o-lo-jist). A specialist in the study of physiology.

physiology (fiz-e-ol'o-je) [phósis nature + λόγος discourse]. The science which treats of the functions of the living organism and its parts.

animal p., the physiology of animals. **comparative p.**, the study and comparison of the physiology of animals or plants of various species. **general p.**, the science of the general laws of life and functional activity. **morbid p.**, the study of functions as modified by disease. **pathologic p.**, the study of disordered function or of function in diseased tissues. **special p.**, the physiology of particular organs. **vegetable p.**, the physiology of plants.

physiomedical (fiz'e-o-med'ik-al). Of or relating to physiomedicalism.

physiomedicalism (fiz'e-o-med'ik-al-izm) [phósis nature + medicalism]. A system of medical treatment in which only plant remedies are used, excluding those which are poisonous.

physionomy (fiz-e-on'o-me) [phósis nature + νόμος law]. The science of the laws of nature.

physiopathic (fiz'e-o-path'ik) [phósis nature + πάθος disease]. Babiniski's term for the non-psycho-pathic functional nervous disorders.

physiopathologic (fiz'e-o-path-o-loj'ik). Pertaining to both the physiologic and pathologic conditions.

physiopathology (fiz'e-o-path-ol'o-je) [physiology + pathology]. The science of functions in disease, or as modified by disease.

physiophyly (fiz-e-of'il-e) [phósis nature + φύλην tribe]. The evolution of bodily functions.

physiopsychic (fiz'e-o-si'kik) [phósis nature + ψυχή mind]. Relating to both body and mind.

physiosis (fiz-e-o'sis) [φυσιούσις a puffing up]. Distention of the abdomen with flatus.

physiotherapy (fiz'e-o-ther'ap-e) [phósis nature + θεραπεία cure]. Physical therapy; the use of natural forces, such as light, heat, air, water, and exercise, in the treatment of disease.

physique (fiz-ék'). Bodily structure, organization, and development.

physocoele (fi'so-sél) [φύσα air + κήλη tumor]. 1. A tumor filled with gas. 2. A hernial sac filled with gas. 3. Dilatation of the scrotum with gas.

physohematometra (fi'so-hem'at-o-me'trah) [φύσα air + αἷμα blood + μήτρα womb]. The presence of gas and blood within the uterus.

physohydrometra (fi'so-hi-dro-me'trah) [φύσα air + ὕδωρ water + μήτρα womb]. Air or gas and serum in the uterine cavity.

physometra (fi'so-me'trah) [φύσα air + μήτρα womb]. Air or gas in the uterine cavity.

physopyosalpinx (fi-so-pi-o-sal'pinx) [φύσα air + πύον pus + σάλπιγξ tube]. Presence of pus and gas in the oviduct.

Physostigma (fi-so-stig'mah) [φύσα bellows + στίγμα stigma]. A genus of tropical leguminous plants. The poisonous seed of *P. venenosum*, Calabar bean, a climbing plant of Africa, contains the alkaloids, physostigmine and calabarine. Physostigma is a motor depressant, miotic, and antispasmodic, in large doses producing death by paralysis of respiration. It is employed in tetanus, trismus, and other spasmodic affections; as an expectorant in bronchitis, asthma, and emphysema, and as a stimulant in atonic constipation and dilatation of the stomach. Dose of extract, $\frac{1}{16}$ – $\frac{1}{8}$ grain (0.004–0.01 Gm.); of fluidextract, 1–3 minims (0.066–0.2 cc.); of tincture, 5–15 minims (0.333–1 cc.).

physostigmine (fi-so-stig'min). A miotic alkaloid from Calabar bean, $C_{15}H_{21}N_3O_3$. Called also *eserine*. It is highly poisonous, and is used as a miotic. Internal dose, $\frac{1}{128}$ – $\frac{1}{64}$ grain (0.0005–0.001 Gm.); for external use, $\frac{1}{16}$ – $\frac{1}{8}$ grain (0.001–0.003 Gm.). The salicylate and sulphate are the salts commonly used.

p. salicylate, a compound, $C_{15}H_{21}N_3O_3 \cdot C_7H_5O_3$, is used as a miotic in paralysis of accommodation for the purpose of overcoming mydriasis and for reducing intra-ocular tension. Dose, $\frac{1}{16}$ grain (0.0001 Gm.); externally, by instillation, a 0.5 to 1 per cent solution is employed. **p. sulphate**, ($C_{15}H_{21}N_3O_3 \cdot 2H_2SO_4 + 7H_2O$), is used in veterinary medicine.

physostigmism (fi-so-stig'min-izm). Poisoning by physostigmine.

physovenine (fi-sov'en-in). A crystalline alkaloid, $C_{14}H_{19}N_3O_3$, from Calabar beans.

phytagglutinin (fi-tag-lu'tin-in). A phytotoxin which has the power of agglutinating red blood corpuscles.

phytalbumin (fi-tal-bu'min) [φυτόν plant + albumin]. Vegetable albumin.

phytalbumose (fi-tal-bu-mōs) [φυτόν plant + albumose]. An albumose of vegetable origin.

phytase (fi'tās). A ferment, found in the liver and the blood, which splits phytin into inosite and phosphoric acid.

phytin (fi'tin). 1. A phosphorus compound derived from seeds, probably $[CH_2OPO(OH)_2]_2$; used as a nutrient. 2. A proprietary digestive and appetizer, said to be the potassium and magnesium salt of anhydro-oxyethylene diphosphoric acid.

phyto- [φυτόν plant]. A prefix indicating relation to a plant or plants.

phyto-anaphylactogen (fi'to-an-af-il-ak'to-jen). See *phytosensilinogen*.

phyto bezoar (fi-to-be'zor) [φυτόν plant + bezoar]. A hair ball composed of vegetable matter such as skins, seeds, and the fibers of fruit and vegetables. Called also *food ball*. See *hair ball*.

phytochemistry (fi-to-kem'is-tre) [φυτόν plant + chemistry]. The study of the chemical processes that take place in plants.

phytocholesterol (fi'to-ko-le'ster-ol). Same as *phylostero*.

phytodem (fi-to-dem'ik) [φυτόν plant + ἐπιδemic]. An epidemic attack of any disease of plants.

phytogenesis (fi-to-jen'es-is) [φυτόν plant + γένεσις generation]. The origin and development of plants.

phytogenetic, phytogenic (fi'to-jen-et'ik, fi-to-jen'ik). Phytogenous.

phytogenous (fi-to-jen-us) [φυτόν plant + γεννᾶν to produce]. Derived from a plant, or caused by a vegetable growth.

phytoglobulin (fi-to-glob'u-lin) [φυτόν plant + globulin]. Vegetable globulin.

phytoid (fī'toid) [*φυτόν* plant + *εἶδος* form]. Resembling a plant.

Phytolacca (fī-to-lak'ah) [*φυτόν* plant + *L. lac'ca* lac]. A genus of plants of many species, mostly poisonous. The fruit of *P. decandra* (*phytolacca ca fructus*), poke berry, also the root of the same (*p. radix*), poke root, an alternative, cathartic, emetic, and antirheumatic. They have been used in rheumatism, parasitic diseases of the skin, hemorrhoids, and granular conjunctivitis. Dose of either the fruit or root in substance, 5-30 grains (0.333-2 Gm.); of fluidextract of root, 5-30 minims (0.333-2 cc.); of tincture, 8-60 minims (0.533-4 cc.).

phytolaccin (fī-to-lak'sin). A concentration prepared from the root of *Phytolacca decandra*. Dose, 1-3 grains (0.066-0.19 Gm.).

phytolin (fī'to-lin). A proprietary preparation of *Phytolacca decandra*; said to cure obesity. Dose, 10 minims (0.66 cc.).

Phytomonas (fī-tom'o-nas). 1. A genus of Bacteriaceae pathogenic for plants. 2. A protozoan found in the juice of some plants.

phytoparasite (fī-to-par'as-īt) [*φυτόν* plant + *parasite*]. Any parasitic vegetable organism or species.

phytopathogenic (fī'to-path-o-jen'ik). Producing disease in plants.

phytopathology (fī'to-path-ol'o-je) [*φυτόν* plant + *pathology*]. 1. The pathology of plants. 2. The pathology of morbid conditions caused by schizomycetes and other vegetable parasites.

phytophagous (fī-tof'ag-us) [*φυτόν* plant + *φαγείν* to eat]. Eating vegetable food.

phytopharmacology (fī'to-far-mak-ol'o-je) [*φυτόν* plant + *pharmacology*]. The study of the effect of drugs on plant growth.

phytophosphin (fī-tof'o-sin). A calcium salt of inositol phosphoric acid containing 25 per cent of calcium oxide and 40 per cent of organic phosphoric acid.

phytoplasm (fī'to-plazm) [*φυτόν* plant + *πλάσμα* thing formed]. Vegetable protoplasm.

phytoprecipitin (fī'to-pre-sip'it-in). A precipitin produced by immunization with protein substances of plant origin.

phytoroides (fī-to-roī'dēz). A proprietary antifet preparation of thyroid extract, *phytolacca*, *Fucus vesiculosus*, etc.

phyto-sensitogen (fī'to-sen-sit-in'o-jen) [*φυτόν* plant + *sensitogen*]. A protein substance of vegetable origin capable of inducing anaphylaxis; called also *phyto-anaphylactogen*.

phytosis (fī-to'sis) [*φυτόν* plant]. Any disease of bacterial origin.

phytosterin (fī-tos'ter-in) [*φυτόν* plant + *στέαρ* fat]. Same as *phytosterol*.

phytosterol (fī-to-ste'r-ol). A sterol, $C_{27}H_{46}O$, found in plant cells.

phytotoxin (fī-to-toks'in) [*φυτόν* plant + *τοξικόν* poison]. A toxin derived from a plant, such as abrin, ricin, croton, and robin.

phytotrichobezoar (fī'to-tri-ko-be'zo-ar) [*φυτόν* plant + *τριχ* hair + *bezoar*]. See *hair ball*.

phytovitelline (fī-to-vi-tel'in). Vitellin of vegetable origin.

phytoxylin (fī-toks'il-in) [*φυτόν* plant + *ξύλον* wood]. A substance resembling pyroxylin: used in preparing celloidin sections.

pia (pi'ah) [L. "tender"]. Same as *pia mater*.

pia-arachnitis (pi'ah-ar-ak-ni'tis). Inflammation of the pia and arachnoid; leptomeningitis.

pia-arachnoid (pi'ah-ar-ak'noid). The pia and the arachnoid considered as forming one organ; arachnopia.

pial (pi'al). Pertaining to the pia.

pialyn (pi'al-in) [*πῖαρ* fat + *λύνειν* to loosen]. See *lipase*.

pia mater (pi'ah ma'ter) [L. "tender mother"]. The innermost and most vascular of the three membranes of the brain (**cerebral p.**) and the spinal cord (**spinal p.**).

piamatral (pi-ah-ma'tral). Pertaining to the pia mater; pial.

pian (pe-ahn') [Fr.]. The yaws, or frambesia. **p. bois**, a disease similar to frambesia, seen in the forest region of Guiana. It is marked by circumscribed swellings on the skin of the legs, on which ulcers form. There are enlargement of the inguinal glands and pains in the legs.

piano players' cramp. See *professional cramp*, under *cramp*.

piantic (pe-an'tik) [*πιαντικός* fattened]. Fattened for slaughter; a term applied to bacteria which are descended from sensitized parents and are thus more than ordinarily subject to agglutination or lysis.

piantication (pe-an-tik-a'shun) [see *piantic*]. The process of making subcultures from a sensitized culture of a particular strain of bacteria. The bacteria of the subcultures are more than ordinarily sensitive.

piarachnitis (pi-ar-ak-ni'tis). Inflammation of the pia mater and arachnoid; leptomeningitis.

piarachnoid (pi-ar-ak'noid) [*pia* + *arachnoid*]. The pia and arachnoid considered together as one mass.

piarhemia, piarhaemia (pi-ar-he-me-ah) [*πῖαρ* fat + *αἷμα* blood]. The presence of fat in the blood; lipemia.

piblokto (pib-lok'to). An Eskimo name for an attack of hysteria among women in Greenland.

pica (pi'kah) [L.]. A craving for unnatural articles of food; a depraved appetite. It is seen in hysteria and chlorosis and in pregnancy.

Picchini's syndrome (pik-ke'nēz). See under *syndrome*.

piceus (pi'se-us) [L. *pi'ceus*]. Of the nature of pitch.

pichi (pe'tshe). A Chilean drug, the resinous twigs of *Fabiana imbricata*: used in cystitis and gonorrhea. Dose of extract, 5-10 grains (0.333-0.666 Gm.); of fluidextract, 15-150 minims (1-10 cc.).

Pick's disease (piks) [Filipp Josef Pick, German dermatologist, 1834-1910]. Erythromelia. **P.'s liniment**. See under *liniment*.

Pick's disease, syndrome (piks) [Friedel Pick, Prague physician, 1867-1926]. See under *disease* and *syndrome*.

picoline (pik'o-lin) [L. *pix* pitch + *oleum* oil]. A colorless liquid base, alpha methyl pyridine, $C_5H_4N.CH_3$, from coal tar, oil, etc.

picroconitine (pik-rak-on'it-in). An alkaloid, $C_{31}H_{45}NO_{10}$, from aconite.

picroadonidin (pik-rad-on'id-in). A bitter glucoside from *Adonis*: used like digitalis. Dose, $\frac{1}{10}$ - $\frac{1}{4}$ grain (0.006-0.015 Gm.).

picroamic acid (pik-ram'ik). See *acid*.

Picrasma. See *Quassia*.

picrate (pik'rāt). Any salt of picric acid.

picratol (pik'rat-ol). Silver trinitrophenolate, $CaH_2(NO_2)_3.OAg$: used externally.

picrocin acid (pik'r'ik). See *acid*.

picrin (pik'r'in) [*πικρός* bitter]. A bitter substance from *Digitalis purpurea*. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.016-0.033 Gm.).

picroadonidin (pik''ro-ad-on'id-in). A bitter, amorphous powder from *Adonis*: tonic and diuretic.

picrocarmine (pik-ro-kar'min). A stain prepared from picric acid and carmine and used in microscopy. It consists of a mixture of carmine (1 part), ammonia (5 parts), and distilled water (50 parts),

to which are added 50 parts of an aqueous solution of picric acid.

picroformal (pik-ro-for-mal). A saturated solution of picric acid in water, mixed with a 6 per cent aqueous solution of formaldehyde: used as a fixing agent.

picrol (pik'rol) [*πικρός* bitter]. Potassium diiodoresorcin monosulphonate, $(\text{OH})_2\text{C}_6\text{H}_2\text{SO}_3\text{OK}$, a colorless and odorless, bitter, antiseptic powder: used as a wound dressing like iodoform.

piconigrosin (pik'ro-ni-gro'sin). A solution of picric acid and nigrosin in alcohol: used as a stain.

picropodophyllin (pik'ro-pod-o-fil'in). A crystalline principle from *Podophyllum peltatum*: medicinally active. It is said to be obtainable from podophyllotoxin also.

picropyrine (pik-ro-pi'rin). A substance, in inflammable yellow needles, derived from picric acid and antipyrine.

Picrorrhiza (pik-ro-ri'zah) [*πικρός* bitter + *ρίζα* root]. A genus of herbs. The rhizome of *P. kuerba* is tonic and antiperiodic. Dose, 10-30 grains (0.6-2.0 Gm.).

picrosaccharometer (pi'kro-sak-a-rom'et-er). An instrument used in estimating diabetical sugar.

picrosclerotine (pik-ro-skle-ro'tin). A poisonous alkaloid occurring in ergot of rye.

picrotoxin (pik-ro-toks'in) [L. *picrotox'inum*, from *πικρός* bitter + *τοξικόν* poison]. A bitter, poisonous, crystalline principle, $\text{C}_{30}\text{H}_{34}\text{O}_{13}$, from *cocculus indicus*. It resembles strychnine in action. It is used in chorea, night sweats, etc., and in an ointment in pediculosis and tinea capitis. Dose, 120-80 grain (0.00054-0.0011 Gm.).

picrotoxinism (pik-ro-toks'in-izm). Poisoning by picrotoxin.

photograph (pik'to-graf). A chart of silhouette pictures used for testing the acuteness of vision of children.

pidan (pe'dan). Chinese preserved eggs; eggs which have been kept in an infusion of black tea, lime, salt, and wood ashes for about six months.

piebald skin (pi'bawld). A condition in which the pigment of the skin is divided up into patches, or in which it is lacking in certain areas. See *leukoderma* and *vittigo*.

piedra (pi-e'drah) [Sp.]. A disease of bacterial origin in which nodules form on the shafts of the hair. It is caused by the *Trichosporon giganteum*. **p. nos'tras**, *piedra* of the beard.

pier (pēr). Same as *abument*.

Piersol's point (pēr'solz) [George Arthur Piersol, Philadelphia anatomist, 1856-1924]. See under *point*.

piesesthesia (pi-e-zes-the'zhe-ah) [*πίεσις* pressure + *αἰσθησις* sensation]. Pressure sensibility; the sense by which pressure stimuli are felt.

piesimeter, piesometer, piezometer (pi-e-sim'et-er, pi-e-som'et-er, pi-e-zom'et-er) [*πίεσις* pressure + *μέτρον* measure]. An instrument for testing the sensitiveness of the skin to pressure. **Hales' p.**, a glass tube inserted into an artery for the purpose of ascertaining the blood pressure by the height to which the blood rises in the tube.

piezallochromy (pi-e-zal'o-kro-me) [*πίεσις* pressure + *αλλοχρωμίη*]. Change of color of a substance caused by crushing.

piezesthesia (pi'e-zes-the'zhe-ah). Piesesthesia.

piezochemistry (pi-e-zo-kem-is-tre) [*πίεσις* pressure + *χημική*]. That branch of chemistry which deals with the effect of pressure on chemical phenomena.

Piffard's paste (pi'fardz) [Henry G. Piffard, dermatologist in New York, 1842-1910]. See under *paste*.

pigeon breast (pij'un). See *breast*.

pigment (pig'ment) [L. *pigmentum* paint]. 1. Any dye or paint; a paintlike medicinal prepa-

ration to be applied to the skin. 2. Any normal or abnormal coloring matter of the body. **bile p.**, any one of the coloring matters of the bile; they are bilirubin, biliverdin, bilifuscin, biliprasin, choleprasin, bilihumin, and bilicyanin. **blood p.**, any one of the pigments derived from hemoglobin; they are hematin, hematoidin, hemosiderin, hematorporphyrin, methemoglobin, and hemofuscin. **extraneous p's**, those abnormal pigments which enter the body from without. **hematogenous p.**, any pigment derived from the blood or from the blood pigment. **hepatogenous p.**, bile pigment formed by disintegration of hemoglobin in the liver. **lipochrome p.** See *lipochrome*. **malarial p.**, a pigment formed by the malarial parasite from the pigment of the blood. **melanotic p.** See *melanin*. **metabolic p.**, any pigment produced by the metabolic actions of cells. **respiratory p's**, substances, such as hemoglobin, which take part in the oxidation processes of the animal body.

pigmentary (pig'men-ta-re). Pertaining to or of the nature of a pigment.

pigmentation (pig-men-ta'shun). The deposition of coloring matter; the coloration or discoloration of a part by a pigment. **extraneous p.**, pigmentation caused by coloring matter, introduced from outside of the body. **vagabonds' p.**, pigmentation of the skin due to lice.

pigmented (pig'men-ted). Stained by deposit of pigment.

pigmentolysine (pig-men-tol'is-in). A lysine causing destruction of pigment.

pigmentolysis (pig-men-tol'is-is) [*pigment* + *λύνω* destruction]. Destruction of pigment.

pigmentophagy (pig-men'to-fāj) [*pigment* + *φαγέω* to eat]. Any pigment devouring cell, especially such a cell of the hair. Called also *chromophagy*.

pigmentum nigrum (pig-men'tum ni'grum) [L. "black paint"]. The dark coloring matter which covers the internal surface of the choroid coat of the eye.

Pignet's formula (pin-yās'). See under *formula*.

pigritis (pi-gri'tis) [L. *piger* slow]. Sluggishness and inactivity of spirit from alcoholism.

piitis (pi-i'tis). Inflammation of the pia mater.

Pil., pil. An abbreviation of L. *pil'ula*, pill, or *pil'ulae*, pills.

pilar, pilary (pi'lar, pil'a-re) [L. *pila'ris*]. Pertaining to the hair.

pilaster (pil-as'ter). A superfluous ridge or fluting sometimes seen upon the femur.

pilation (pi-la'shun) [L. *pila'tio*]. A hairlike fracture, as of the skull.

Pilcz reflex, sign (pilts) [Alexander Pilcz, Austrian neurologist, born 1871]. See *attention reflex*, under *reflex*, and *sign*.

Pilcz-Westphal phenomenon (piltz-vest'fahl). See *Westphal-Pilcz phenomenon*, under *phenomenon*.

pile (pil) [L. *pila* pillar]. 1. An aggregation of similar elements for generating electricity. 2. An individual hemorrhoid. **muscular p.**, layers of muscular tissue so arranged as to generate an electric current. **prostatic p.**, enlarged prostate attended by hemorrhage. **sentinel p.**, a hemorrhoid-like formation at the lower end of a fissure of the anus. **thermo-electric p.**, a set of slender metallic bars which, on exposure to heat, generates a current of electricity that moves an index and is made to register delicate changes of temperature. **voltaic p.**, a battery for current electricity made up of a series of metallic disks.

pileous (pi'le-us). Hairly.

piles (pilz). See *hemorrhoid*.

pileum (pi'le-um) [L. a "hat"]. One of the cerebellar hemispheres.

pili annulati (pi'li an-u-la'ti) [L. "ringed hairs"]. Leukotrichia annularis.

piliganine (pi-lig'an-in) [*piligan*, a name of the plant which affords it]. A yellowish, amorphous, poisonous alkaloid, $C_{15}H_{24}N_2O$, from *Lycopodium saururus*, a South American plant: emetic, purgative and convulsant. Dose of hydrochlorate, $\frac{1}{8}$ – $\frac{1}{4}$ grain (0.011–0.022 Gm.).

pilijanine. Same as *piliganine*.

pilimictio, pilimiction (pi-li-mik'she-o, pi-li-mik'shun) [*L. pil'us* hair + *mict'io* micturition]. Passing of urine containing hair.

pilin (pi'lin). 1. A fabric resembling spongiopilin. 2. A cosmetic preparation of benzoated and aromatized alcohol.

pill (pil) [*L. pil'ula*]. A small globular or oval medicated mass to be swallowed. **A. B. S. p.**, a laxative pill, each one of which contains $\frac{1}{2}$ grain of aloin, $\frac{1}{2}$ grain of extract of belladonna, and $\frac{1}{10}$ grain of strychnine. **Addison's p.**, a pill of calomel, digitalis, and squills. **Aitken's p.**, a pill containing reduced iron, $\frac{3}{4}$ grain; quinine sulphate, 1 grain; strychnine and arsenic trioxide, $\frac{1}{10}$ grain each. **p. of aloes**, each pill contains 2 grains (0.13 Gm.) of aloes. Dose, 2 pills. **Anderson's p.**, the compound gamboge pill. **Asiatic p.**, one containing arsenous acid and black pepper. **Baillie's p.**, Guy's p. **Barker's postpartum p.**, a laxative pill containing colocynth, hyoscyamus, nux vomica, aloes, ipecac, and podophyllum. **Becquerel's p's**, quinine sulphate, 24 grains; extract of digitalis, 3 grains; colchicum seed, 8 grains; to make 10 pills. **Belloste's p.**, a pill containing mercury, white hony, aloes, black pepper, rhubarb, and scammony. **Blancard's p.**, a pill of iodide of iron. **Blaud's p.**, a pill of carbonate of iron. **blue p.**, a pill of mercury (blue mass). **Boisragon p's**, powdered scammony, 12 grains; mild mercurous chloride, 12 grains; compound extract of colocynth, 40 grains; aloes, 8 grains; oil of caraway, 4 minims; to make 14 pills. **chalybeate p.** See *Blaud's p.* **Chapman's p.**, mastic and purified aloes, each $1\frac{1}{2}$ grains; powdered ipecac, 1 grain; $\frac{1}{4}$ minim of oil of peppermint or fennel. **cochia p.**, an actively cathartic pill of various composition, often aloetic. **Cole's p.**, a pill containing $1\frac{1}{2}$ grains each of jalap, mass of mercury, and purified aloes, and $\frac{1}{10}$ grain of antimony and potassium tartrate. **compound cathartic p.**, a pill of colocynth, calomel, jalap, and gamboge. Dose, 2 pills. **Debout's p.**, a pill for migraine, made of extract of colchicum and quinine sulphate, $1\frac{1}{2}$ grains each, and powdered digitalis, $\frac{1}{2}$ grain. **dinner p.**, a pill to be taken with the meals. **enteric p.**, a pill coated with a substance, such as salol, which will not dissolve in the stomach. **p. of ferrous carbonate, ferruginous p.** See *Blaud's p.* **p. of ferrous iodide**, each pill contains $\frac{1}{2}$ grain of iron. **Fothergill's p.**, a pill of calomel, squill, and digitalis. **Francis' triplex p.**, the compound pill of aloes, mercury, and scammony. **Gross' p.**, quinine sulphate, 2 grains; strychnine, $\frac{1}{10}$ grain; morphine sulphate and arsenic trioxide, each $\frac{1}{10}$ grain; extract of aconite leaves, $\frac{1}{2}$ grain. **Guy's p.**, a pill composed of 1 grain each of digitalis, squill, extract of hyoscyamus, and blue mass. **Haën's p's**, pills composed of 10 grains aloes, 3 grains each of scammony and resin of jalap, 4 grains of powdered ginger, 10 grains of soap, made into 100 pills. **Hall's p.**, a pill containing 1 grain each of licorice extract, powdered soap, and molasses. **Heim's p's**, 1. Ipecac, $\frac{1}{2}$ grain; digitalis, $\frac{1}{2}$ grain; opium, $\frac{1}{2}$ grain, and extract helenium, q. s. 2. Pills of gamboge, digitalis, squill, antimony, and extract of Pimpinella. **Hooper's p's**, pills of aloes and myrrh. **Janeway's p.**, compound pill of aloes and podophyllum. **Keyser's p.**, antisyphilitic; protoacetate of mercury, 0.6 Gm.; manna, 0.12 Gm. Make into 72 pills. **Lady Webster's p.**, a dinner pill of aloes and mastic. **lapacetic p.**, a commercial pill containing aloin, strychnine, and belladonna. **Lartigue's p's**, pills containing 20 parts of compound extract of colchicum and 1 part

extract of digitalis: used in gout. **Meglin's p's**, pills for headache containing extract of hyoscyamus, extract of valerian, and zinc oxide. **Murichson's p.**, a pill for dropsy containing blue mass, 2 grains; digitalis, $\frac{1}{2}$ grain; and squill, $1\frac{1}{2}$ grains. **Niemeyer's p's**. 1. A pill of quinine, 1 grain; digitalis, $\frac{1}{2}$ grain; and opium, $\frac{1}{2}$ grain. 2. Same as *Addison's p.* **p. of phosphorus**, each pill contains 1 grain of phosphorus. **Plummer's p.**, a pill of antimony and calomel; pilulae antimoni compositae. **Rufus' p.**, a pill of aloes and myrrh. **sunshine p.**, a pill containing vitamin D made by exposing ergosterol from yeast to ultraviolet rays. **triplex p.**, a pill of aloes, 2 grains; mercurial mass, 1 grain, and resin of podophyllum, $\frac{1}{2}$ grain; purgative and cholagogue. **Twining's p.**, a pill of calomel, blue mass, and ipecac: used in the treatment of dysentery. **vegetable cathartic p.**, a pill of colocynth, jalap, hyoscyamus, leptandra, and resin of podophyllum.

pillar (pil'ar) [*L. pil'a*]. A supporting structure, mostly occurring in pairs, as the pillars of the abdominal ring, fauces, diaphragm, and fornix. **p's of the abdominal ring**, the columns on each side of the abdominal ring. **p. of the diaphragm**. Same as *crura of diaphragm*. **p's of the fauces**, the folds of mucous membrane on each side of the fauces. **p's of the fornix**, the anterior and posterior portions of the cerebral fornix behind and in front of the body. **Uskow's p's**, two folds of the embryo attached to the dorsolateral portion of the body wall. From these pillars and the septum transversum the diaphragm is formed.

pillet (pil'et). A little pill, or pellet.

pilleus, pileum (pil'e-us, pil'e-um) [*L. for caul*]. The membrane which sometimes covers a child's head at birth. **p. ventriculi**, the portion of the duodenum just beyond the pylorus; also called *pars superior duodeni, duodenal bulb, duodenal cap, pyloric cap, and bishop's cap*.

pillion (pil-yon'). A temporary artificial leg.

pilocarpidine (pi-lo-kar'pid-in). An isomer of pilocarpine formed by boiling pilocarpine in an alcoholic solution of soda.

pilocarpine (pi-lo-kar'pin). A powerfully sudorific alkaloid, $C_{11}H_{17}N_2O_2$, from jaborandi. It is a lactone derivative of methyl glyoxaline. Many of its salts have been medicinally employed. Dose of hydrochloride and of nitrate, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.001–0.033 Gm.).

Pilocarpus (pi-lo-kar'pus) [*πῖλος cap + καρπός fruit*]. A genus of rutaceous shrubs of tropical America. See *jaborandi*.

pilocerine (pi-lo-se'rin). A toxic alkaloid, $C_{30}H_{44}N_2O_4$, from the cactus, *Pilocereus*.

pilocystic (pi-lo-sis'tik) [*L. pil'us* hair + *cystic*]. Hollow, or cystlike, and containing hairs: used of certain dermoid tumors.

pilomotor (pi-lo-mo'tor) [*L. pil'us* hair + *mo'tor* mover]. Causing movements of the hair. **p. reflex**. See under *reflex*.

pilonidal (pi-lo-ni'dal) [*L. pil'us* hair + *ni'dus* nest]. Having hairs for a nidus.

pilose, pilous (pi'lōs, pi'lus) [*L. pilo'sus*]. Having long hairs.

pilosebaceous (pi'lō-se-ba'shus). Pertaining to the hair glands and sebaceous glands.

pilosine (pi'lō-sin). A crystalline alkaloid, $C_{16}H_{18}N_2O_3$, from pilocarpine mother liquors.

pilosus, pilosism (pi-lo'sis, pi-lo-sizm) [*L. pil'us* hair]. Excessive or abnormal growth of hair.

pilula (pil'u-lah), pl. *pil'ulae*. Latin for *pill*.

pilular (pil'u-lar). Resembling or pertaining to a pill.

pilule (pil'ul) [*L. pil'ula*]. A small pill, or pellet.

pilus (pi'lus), pl. *pi'l'i*. Latin for *hair*.

pimelitis (pim-el'i'tis) [*πῖμελις fat + -itis* inflammation]. Inflammation of the adipose tissue.

- pimeloma** (pim-el-o'mah) [*πιμελή* fat + *-ωμα* tumor]. A fatty tumor; lipoma.
- pimelopterygium** (pim'el-o-ter-ij'e-um) [*πιμελή* fat + *πτέρυξ* wing]. A fatty outgrowth upon the conjunctiva.
- pimelorrhoea** (pim'el-o-re'ah) [*πιμελή* fat + *ῥοία* flow]. Diarrhea with fat in the stools.
- pimelorthopnea** (pim'el-or-thop-ne'ah) [*πιμελή* fat + *orthopnea*]. Difficulty in breathing while lying down, due to excessive fatness.
- pimelosis** (pim-el-o'sis) [*πιμελή* fat]. 1. Conversion into fat. 2. Fatness, or obesity.
- pimeluria** (pim-el-u're-ah) [*πιμελή* fat + *οὐρον* urine]. The presence of fat in the urine.
- Pimenta** (pim-en'tah) [Spanish *pimen'ta* allspice; L. *pimentum* spice]. A genus of myrtaceous trees and shrubs of warm regions. The dried fruit of *P. officinalis* (*Eugenia pimen'ta*), a tree of tropical America, is allspice. It is employed as an aromatic, stimulant, and carminative. Dose, 5-30 grains (0.333-2 Gm.). See *aqua pimentae* and *oil of allspice*.
- Pimpinella** (pim-pin-el'ah) [L.]. A genus of umbelliferous plants. The roots of *P. mag'na* and *P. saxif'raga*, Burnet saxifrage, are tonic, diuretic, emmenagogue, and carminative. Dose of tincture, $\frac{1}{2}$ drachm (2 cc.). See also *anise*.
- pimpinellin** (pim-pin-el'in). A bitter, crystallizable principle, seen in colorless needles, from the root of *Pimpinella saxif'raga*.
- pimple** (pim'pl). A papule or pustule.
- pin** (pin). In dentistry, a peg or dowel by means of which an artificial crown is fixed to the root of a tooth.
- pinacolin** (pin-ak'o-lin). A clear, oily principle, dimethyl-butanone, $\text{CH}_3\text{CO.C}(\text{CH}_3)_3$, with the odor of peppermint, derivable from acetone.
- pinapin** (pin'ap-in). A preparation of pineapple juice, recommended for use in the treatment of gastric and nasal catarrh.
- Pinard's sign** (pe-närz') [Adolphe Pinard, French obstetrician, born 1844]. See *sign*.
- pince-ciseaux** (pans-se-zo') [Fr. "forceps-scissors"]. A cutting forceps used in iridotomy.
- pinement** (pans-maw') [Fr.]. The pinching of the flesh in massage.
- pincers** (pin'serz). 1. Forceps. 2. The median deciduous incisor teeth in the horse.
- pine** (pín) [L. *pi'nus*]. The name of many coniferous trees, chiefly of the genus *Pi'nus*. The pines afford turpentine, volatile oils, rosin, pitch, tar, etc. **prince's p.**, *Chimophila*. **white p.**, *Pinus strobus*. **p. tar**. See under *tar*.
- pineal** (pi'ne-al) [L. *pinea'lis*; *pi'nus* pine cone]. 1. Shaped like a pine cone. 2. Pertaining to the conarium or pineal gland. See under *gland*.
- pinealectomy** (pi'ne-al-ek'to-me) [*pinea'lis* gland + *ἐκτομή* excision]. Excision of the pineal gland.
- pinealism** (pi'ne-al-izm). Derangement of the secretion of the pineal body.
- pinealoma** (pi'ne-al-o'mah). A tumor of the pineal gland.
- Pinel's system** (pe-nelz') [Philippe Pinel, alienist in Paris, 1745-1826]. See under *system*.
- pinene** (pi'nēn). A terpene, $(\text{CH}_3)_2\text{C.C}_6\text{H}_7\text{CH}_3$, found in turpentine and many essential oils.
- pineoblastoma** (pi'ne-o-blas-to'mah). A tumor containing embryonic pineal gland cells.
- pineoline** (pi'ne-o-lin). Etheral extract of pine needles: for use in skin diseases.
- pinguecula, pinguicula** (pin-gwek'u-lah) [L. *pin'guis* fat]. [B N A] A triangular, yellowish patch on either side of the cornea in old age, due to irritation, which leads to a colloid infiltration.
- pinheroin** (pin-her'o-in). A proprietary combination of terpin hydrate and diacetylmorphine.
- piniform** (pin'if-orm) [L. *pi'nus* pine cone + *for'ma* form]. Conical or cone shaped.
- pink and senna** (pink). See *wormtea*.
- pink disease**. See *erythroedema*.
- pink-eye** (pink'i). An epidemic, contagious conjunctivitis due to the bacillus of conjunctivitis.
- pink-root**. See *Spigelia*.
- Pinkus' disease** (pin'koos) [Felix Pinkus, German dermatologist, born 1868]. Lichen nitidus.
- pinna** (pin'nah) [L. "wing"]. The projecting part of the ear lying outside of the head. See *ear*.
- pinnaglobin** (pin-ag-lo'bin). A respiratory pigment found in *Pinna squamosa* which contains manganese instead of iron.
- pinnal** (pin'al). Pertaining to the pinna.
- pinocytosis** (pi-no-si-to'sis) [*πίνειν* to drink + *κύτος* cell]. The absorption of liquids by cells.
- pinol** (pi'nol). 1. A substance isomeric with ordinary camphor, derivable from pinene. 2. A volatile oil from the leaves of *Pi'nus pumil'o*.
- pinoleum** (pin-o'le-um). A proprietary remedy for respiratory catarrh.
- pinotherapy** (pi-no-ther'ap-e). See *peinothérapie*.
- Pins' sign or syndrome**. See under *sign*.
- pins and needles**. A popular name for paresthesia marked by pricking and tingling sensations in a part.
- pint** (pint) [L. *octarius*]. A measure of quantity (symbol O); 16 fluidounces (wine measure) or 28.875 cubic inches (473.18 cc.). The imperial pint is equal to 20 fluidounces. See further under *weights and measures*.
- pinta, pinto** (pēn'tah, pēn'to) [Sp. "painted"]. Mal de los pintos, or spotted sickness; a contagious skin disease resembling psoriasis, occurring in Mexico and other tropical countries. It is probably parasitic, and due to various species of *Aspergillus*, *Penicillium*, *Monilia*, etc.
- Pinus** (pi'nus). See *pine*.
- pinus** (pi'nus) [L.]. The pineal gland.
- pinuseptol** (pi-nu-sep'tol). A proprietary pine oil emulsion: used as an antiseptic.
- pinworm** (pin'worm). Same as *Oxyuris*.
- pilo-epithelium** (pi'o-o-p-ith-e'le-um). Epithelium in which fatty matter is deposited.
- pionemia, pionaemia** (pi-o-ne'me-ah) [*πῖον* fat + *αἷμα* blood]. The presence of fat or oil in the blood; lipemia.
- Piophil'a ca'sei**. The fly whose larvae are the "cheese skippers" and a common cause of intestinal myiasis.
- Piorkowski's medium** (pe-or-kov'skēz) [Max Piorkowski, German bacteriologist, born 1859]. See under *medium*.
- piorthopnea, piorthopnoea** (pi-or-thop-ne'ah) [*πῖον* fat + *ὀρθός* upright + *πνοή* breath]. Dyspnea when lying down, due to the accumulation of fats.
- pioscope** (pi'o-skōp) [*πῖον* fat + *σκοπεῖν* to view]. An instrument for estimating the fat content of milk by comparing its color with the six shades painted on the instrument.
- Piotrowski's sign** (pe-o-trov'ske) [Alexander Piotrowski, neurologist in Berlin, born 1878]. See under *sign*.
- pip** (pip). A contagious disease of poultry affecting the eyes, nostrils, and tongue.
- pipe jaw** (pip jaw). A painful condition of the jaws from carrying a tobacco pipe in the teeth.
- Piper** (pi'per) [L. "pepper"]. 1. A genus of plants producing kava-kava, betel, cubeb, matico, and pepper. 2. See *pepper*. **P. angustifolium**, matico. **P. betle**, betel leaf. **P. nigrum**, black pepper.
- piperazin** (pi-per-a'zin). A crystalline base, diethylen diimine, $\text{NH}(\text{CH}_2)_4\text{NH}$, soluble in water,

and formed by the action of ammonia on ethylene bromide or chloride. It is a solvent of uric acid in the test tube; also an antisyphilitic and diuretic, and is used in gout, diabetes, and lithemia. Dose of hydrochlorate in 2 per cent solution, hypodermically, 5 grains (0.33 Gm.); by the mouth, 8 grains (0.5 Gm.).

piperidine (pi-per'id-in). A liquid base, pentamethylene imin, $\text{CH}_2(\text{CH}_2)_4\text{NH}$, derivable from piperine and from cadaverine. **p. bitartrate**, a crystalline compound recommended as a solvent for uric acid.

piperine (pip'er-in) [L. *piperi'num*]. A crystallizable, slightly soluble alkaloid, $\text{C}_8\text{H}_{16}\text{N}\cdot\text{CO}\cdot(\text{CH}_2)_2\text{CH}_2\text{C}_6\text{H}_5\cdot\text{O}_2\cdot\text{CH}_2$, from *Piper nigrum*: antiperiodic. Dose, 1-5 grains (0.06-0.33 Gm.).

piperism (pi'per-izm) [L. *pi'per* pepper]. Poisoning by pepper.

piperonal (pi-per'o-nal). See *heliotropin*.

piperovatine (pi-per-o'vat-in). An alkaloid, $\text{C}_{16}\text{H}_{21}\text{NO}_2$, from *Pi'per ova'tum*: it has spastic properties.

pipet, pipette (pe-pet') [Fr. *pipette*]. 1. A glass tube used in handling small quantities of liquid or gas. 2. To use the pipet.

pipitzahoac (pip-it't'zah-ho-ak') [Mex.]. The root and rhizome of *Pere'zia adna'ta*, *P. frutico'sa*, and other Mexican plants: cathartic.

pipsissewa (pip-sis'se-wah). See *Chimaphila*.

Piptadenia (pip-tad-e'ne-ah). See *niopo-snuff*.

pique (pe-koor') [Fr.]. Puncture, especially Claude Bernard's diabetic puncture.

piriform (pi'rif-orm) [L. *pi'rus* pear + *for'ma* shape]. Pear shaped.

piriformis (pir-if-or'mis). See *muscles, table of*.

Pirogoff's amputation, angle, operation (pi-ro-gofs') [Nicolai Ivanowitch Pirogoff, Russian surgeon, 1810-1881]. See *amputation, angle, and operation*.

Piroplasma (pi-ro-plaz'mah) [L. *pi'rum* pear + *plāssa* something formed]. A genus of sporozoans, parasitic in the blood corpuscles of dogs, horses, sheep, and oxen. **P. bigem'inum**. Same as *Babesia bigemina*. **P. bo'vis**, a species which causes the red-water or hemoglobinuric fever of cattle in Europe. **P. cabal'li**, a species causing biliary fever in horses in Russia and Siberia. **P. ca'nis**, a species found in dogs, causing a disease termed malignant jaundice or bilious fever. It is transmitted by a tick, *Rhipicephalus sanguineus*. **P. commune**, a species causing an epizootic of dogs at Columbus, Ohio. **P. diver'gens**, a species differing from *P. bigem'inum*, but causing a similar disease. **P. don-ovan'i**. See *Leishmania donovani*. **P. e'qui**. Same as *Nutallia equi*. **P. hom'inis**, the blood parasite, thought to cause Rocky Mountain spotted fever, transmitted to man by the bite of the tick, *Dermacentor venustus*. It is an ovoid body, showing amoeboid movement and occupying the edge of the red blood cells. See *Rickettsia*. **P. mu'tans**, a species of South Africa, smaller than *P. bigem'inum*. **P. o'vis**, a species causing a disease in sheep. It is transmitted by the tick, *Rhipicephalus bur'sa*. **P. par'va**, a species causing Rhodesian red-water fever of cattle. It is found also in India and in Japan. Called also *Theileria parva*.

Piroplasmae (pi-ro-plaz'mid-e). A provisional family belonging to the hemsporidia, the type of which is *Babesia bigem'inum* (Russell).

piroplasmosis (pi'ro-plaz-mo'sis). Infection with piroplasma: a condition marked by chronic irregular fever, enlargement of the spleen, bronchitis, edema of the feet, subcutaneous hemorrhage, and dysentery. **bovine p.** Same as *Texas fever*. See under *fever*. **equine p.** See *equine biliary fever, under fever*.

Pirquet's reaction (pēr'káz) [Clemens von Pir-

quet, Austrian pediatrician, 1874-1929]. See *cutaneous reaction, under reaction*.

Piscidia (pis-id'e-ah) [L. *pis'cis* fish + *cae'dere* to kill]. A genus of leguminous trees. The bark of *P. erythri'na*, Jamaica dogwood, is a mild anodyne. Dose of fluidextract, 15-60 minims (1-4 cc.).

piscidin (pis-i'din). A neutral principle from *Piscid'ia erythri'na*: used as an anodyne and antispasmodic.

piscina (pis-i'nah) [L.]. A bathtub.

pisco (pis'ko) [the name of a town in Peru]. A variety of brandy made in Peru.

pisiform (pi'sif-orm) [L. *pisifor'mis*; *pi'sum* pea + *for'ma* shape]. 1. Like a pea in shape and size. 2. The pealike bone at the ulnar side of the proximal row of the carpus.

Pistacia (pis-ta'she-ah). See *mastic*.

Pistia stratiotes (pis'te-ah stra-te-o'tēz) [L.]. A plant of Asia. Called *taká panna* in India: used there in measles.

pistil (pis'til). The female organ of a flower

pit (pit). 1. A hollow fovea or indentation. 2. A pockmark. 3. To indent, or to become indented, by pressure. **arm p.**, the axillary fossa. **auditory p.**, a depression on each side of the after-brain of the embryo, forming the labyrinth of the ear. **basilar p.**, a pit in the crown of an incisor tooth above its neck. **pterygoid p.**, a depression on the inner side of the neck of the condyloid process of the mandible for the attachment of the external pterygoid muscle. **p. of the stomach**, the epigastrium or scrobiculus cordis.

pitch (pitsh) [L. *pix*]. 1. A dark, lustrous, more or less viscous residue from the distillation of tar and other substances. 2. Natural asphalt of various kinds. 3. The height or acuteness of the voice. **black p.**, **naval p.**, an inflammable substance obtainable from the tar of various species of pine. **Burgundy p.** [L. *pix burgun'dica*], an aromatic, oily resin from *A'bies* (or *Picea*) *excel'sa*, the Norway spruce of Europe: much used in plasters. **Canada p.**, a resin from *Tsu'ga canadensis*, the hemlock tree; *pix canadensis*, useful in plasters, etc. **hard p.**, **soft p.**, bituminous substances produced in coal tar distillation. **Jew's p.**, **mineral p.**, bitumen. **liquid p.**, ordinary wood tar. **Trinidad p.**, asphalt from Trinidad, British West Indies.

pitchblende (pitsh'blend). A black mineral containing uranium oxide. From it are obtained radium and polonium.

pitglandin (pit-glan'din). A proprietary preparation of the anterior lobe of the pituitary body.

pith (pith). To pierce in the spinal cord or brain: a term used in vivisection.

pithecoïd (pit'hēk-oid) [πίθηκος ape + εἶδος form]. Apelike.

pithiatric (pith-e-at'ik). Pithiatric.

pithiatism (pith-i'at-izm) [πείθειν to persuade + *iāros* curable]. 1. A condition which is caused by suggestion and which renders the patient subject to persuasion; a term proposed by Babinski as the equivalent of hysteria. See *hysteria*. 2. The cure of nervous and mental disorders by persuasion.

pithiatric (pith-e-at'rik). Capable of being cured by persuasion and suggestion.

pithing (pit'hing). Destruction of the brain and spinal cord by thrusting a blunt needle into the spinal canal and cranium: done on animals to destroy sensibility preparatory to experimenting on their living tissues.

pithode (pit'hōd) [πίθος wine cask + εἶδος form]. The nuclear barrel figure formed in karyokinesis.

pitbulin (pit-ib'u-lin). A proprietary postpituitary extract.

pitnigan (pit'nig-an). A proprietary extract of the posterior portion of the hypophysis.

pitocin (pit-ō'sin). A proprietary name for the oxytocic principle of the posterior lobe of the pituitary gland. See *oxytocin*.

pitometer (pit-om'et-er). An instrument for measuring the flow of water in pipes.

pitralon (pit'ral-on). A proprietary preparation of pine tar and halogenated carbohydrates used in the treatment of trichophytoses.

Pitres' sections (pe-tres') [Albert Pitres, physician in Bordeaux, 1848-1928]. See *section*.

pitressin (pit-res'in). A proprietary name for a preparation of the pressor principle of the posterior lobe of the pituitary gland. See *vasopressin*.

pitting (pit'ing). The formation of a depression following pressure on a part, due to edema.

pittulen (pit-i'len). A condensation product of pine tar and formaldehyde; used in skin diseases.

pituglandol (pit-u-glan'dol). A proprietary extract from the infundibular portion of the pituitary body.

pituita (pit-u'it-ah) [L.]. A glutinous mucus or phlegm.

pituitarism (pit-u'it-ar-izm). Disorder of pituitary function.

pituitarium (pit-u-it-a're-um). The U. S. P. name for a powder prepared from the posterior lobe of the pituitary body of cattle; formerly called *hypophysis sicca*.

pituitary (pit-u'it-a-re). 1. Pertaining to or secreting a mucus or phlegm. 2. Pertaining to the pituitary body. **p. body**, **p. gland**. See under *body*.

pituitin (pit-u'it-in). An extract from the posterior lobe of the pituitary body.

pituitol (pit-u'it-ol). An extract of the posterior lobe of the pituitary body.

pituitotrope (pit-u'it-o-trōp). A person exhibiting pituitotropism.

pituitotropic (pit-u'it-o-trop'ik). Pertaining to or marked by pituitotropism.

pituitotropism (pit-u'it-o-tro'pizm) [*pituitary* + *trōpos* turning]. Pituitary constitution; a constitution in which the pituitary gland has an abnormally marked influence.

pituitous (pit-u'it-us) [L. *pituitō'sus*]. Pertaining to mucus or characterized by its secretion.

pituitrin (pit-u'it-rin). A proprietary preparation of the posterior lobe of the pituitary body: used to promote uterine contractions in inertia uteri, to stimulate peristalsis in intestinal atony, and for its tonic effect upon the bladder. Dose, 10-20 grains (0.6-1.2 cc.) hypodermically. **p. S.**, a proprietary pituitary extract for surgical use, twice the strength of pituitrin.

pituitarism (pit-u'it-rizm). Disorder of pituitary function.

piturine (pit'u-rin). An alkaloid, $C_{12}H_{16}N_2$, from *Duboisia hopwoodii*. It is the same as *nicotine*.

pityriasis (pit-ir-i-a'sik). Pertaining to or affected with pityriasis.

pityriasis (pit-ir-i'as-is) [*πυριον* bran]. The name of various skin diseases characterized by branny scales. **p. alba atrophicans**, a disease with branny desquamation, followed by atrophy of the skin. **p. capitis**. Same as *alopecia furfuracea*. **p. circinata**, **p. maculata et circinata**, **p. ro'sea**, a noncontagious skin disease with reddish, scaly patches, moderate fever, and usually with a short and favorable course. **p. circinata et marginata**, a variety of parasitic origin. **Gibert's p.**, pityriasis rosea. **p. gravida rum**, a skin discoloration peculiar to pregnancy. **Hebra's p.**, pityriasis rubra. **p. licheno'des**, maculopapular erythrodermia. **p. lin'guae**, geographical tongue. See under *tongue*. **p. nigra**, pityriasis with skin pigmentation. **p. nos'tras**, tinea nodosa. **p. pila'ris**. Same as *keratosis pilaris*. **p. ro'sea**, an inflammatory

disease of the skin, marked by rose-colored squamous macules and ring-shaped patches, chiefly upon the trunk; called also *p. maculata et circinata* and *herpes tonsurans maculosus*. **p. ru'bra**, an inflammatory disease of the entire skin, sometimes chronic and often fatal. The skin becomes deep red in color and is covered with white scales. **p. ru'bra pila'ris**, a form characterized by keratinization of the epidermis, which exfoliates in small shreds. **p. simplex**, the ordinary pityriasis; seborrhoea sicca. **p. steato'des**, a scurfy condition of the scalp of a moist or greasy form. **p. tabescens**, general seborrhoea with wasting of the body. **p. uteri num**, chloasma uterinum. **p. versicolor**. Same as *tinea versicolor*.

pityroid (pit'ir-oid) [*πυριον* bran + *είδος* form]. Furfuraceous or branny.

Pityrosporum (pit-e-ros'po-rum). A genus of fungi not yet cultivated. They are yeastlike and produce no mycelium. **P. ova'le**, may be the cause of pityriasis simplex and also of pityriasis alba.

piutinal (pi-u'tin-ol). A mixture of sulphur, pine oil, glycerin, and alcohol: used for preparing sulphur baths.

pix (piks), gen. *pi'cis* [L.]. See *pitch*. **p. burgundica**, Burgundy pitch. See *pitch*. **p. canadensis**, Canada pitch. **p. carbonis praepara'ta**, prepared coal tar. **p. liq'uida**, tar. **p. lithanthracis**, coal tar. **p. pi'ni**, the U. S. P. name for pine tar. See *tar*.

pixresol (piks-kres'ol). An antiseptic, disinfectant, and deodorant, $C_6H_5N.SO$.

pixine (piks'in). A proprietary antiseptic and detergent ointment: used in skin diseases and for wounds.

pixel (piks'ol). A disinfectant compound of soap, potassium hydroxide, and tar. It is used as a demulcent in skin diseases, and has been given in influenza.

P. L., p. l. Abbreviations for *light perception*.

place, **Kiesselbach's** (plas). A thin point in the nasal septum where perforation is especially liable to occur.

placebo (plas-e'bo) [L. "I will please"]. A medicine given to please or gratify the patient.

placenta (pla-sen'tah), pl. *placentas* or *placentae* [L. "a flat cake"]. 1. Any cakelike mass. 2. The round, flat organ within the uterus which establishes communication between the mother and child by means of the umbilical cord. The placenta is a circular mass, about seven inches in diameter, about one inch in thickness, and weighing about sixteen ounces. It consists of an internal, or fetal, portion, which is a smooth, shining membrane continuous with the sheath of the cord (*amnion*), and an external, or maternal, portion, which is of a dark-red hue, divided by deep sulci into lobes of irregular outline and extent (*the cotyledons*), which project into depressions in the mucous membrane of the uterus. Over the maternal surface of the placenta is stretched a delicate, grayish, transparent membrane. Around the periphery of the placenta is a large vein (*the circular vein*), which returns a part of the maternal blood from the organ, the remainder returning to the maternal circulation by means of the continuity between the cotyledons and the uterine sinuses. **accessory p.**, a portion of placenta tissue distinct from the placenta. **p. accrete'a**, a form of adherent placenta in which, owing to the absence of decidua at the placental site, the villi penetrate the uterine muscle and make separation impossible. **adherent p.**, one which adheres so closely to the uterine wall that it is impossible to find any line of cleavage for placental separation. **annular p.**, one which extends around the interior of the uterus like a ring or belt. **battle-dore p.**, one with a marginal attachment of the

ANOMALIES OF THE PLACENTA: 1, placenta with irregular lobes; 2, placenta in two unequal lobes; 3, irregular placenta; 4, small accessory placenta; 5, placenta succenturiata; 6, "battledore" placenta, oval; 7, placenta with velamentous attachment of cord; 8, placenta with two equal lobes.

cord. **bilobed p.**, **duplex p.**, one made up of two parts or lobes. **p. biparti'ta**, bilobed placenta. **p. circumvalla'ta**, a cup-shaped placenta. **cirsoid p.**, one the vessels of which appear to be varicose. **p. dimidia'ta**, placenta duplex. **duplex p.**, one made up of two parts or lobes. **p. febrilis**, the enlarged spleen seen in malaria. **p. fenestra'ta**, one which has spots where the placental tissue is lacking. **fetal p.**, that part of the placenta which comes next to the fetus. **fundal p.**, one which is attached to the fundus in the normal manner. **horseshoe p.**, a crescentic form of placenta sometimes occurring in twin pregnancy. **incarcerated p.**, a placenta retained by irregular uterine contractions. **p. margina'ta**, a placenta which is surrounded by an unusual margin of elevated placental tissue. **maternal p.**, that part of the placenta which comes next to the uterine wall; rarely adherent when the rest of the placenta is expelled. **p. membrana'cea**, an abnormally thin form of placenta. **multilobed p.**, a placenta having more than three lobes. **p. obsole'ta**, one of two opposed placentas which have no vascular anastomosis. **panduriform p.**, a placenta composed of two halves side by side, resembling a violin in shape. **p. prae'via**, a placenta which intervenes between the intra-uterine cavity and the inner orifice of the cervical canal. It may lead to fatal hemorrhage. **p. prae'via centra'lis**, placenta praevia in which the center of the placenta corresponds to the os uteri. **p. prae'via margina'lis**, placenta praevia in which the placenta comes up to, but does not cover, the os uteri. **p. prae'via partia'lis**, placenta praevia in which the os uteri is only partly obstructed. **p. reflex'a**, a placenta in which the margin is thickened so as to appear "turned up." **p. renifor'mis**, a kidney-shaped placenta. **retained p.**, a placenta usually either adherent or incarcerated by irregular uterine contractions, and which in consequence fails to be expelled after childbirth.

Varieties of placenta praevia (J. C. Hirst).

Schultze's p., a placenta which is expelled with the central part ahead of the periphery. **p. spu'ria**, a placental exclave which does not take part in the nourishment of the fetus. **stone p.**, a placenta which contains calcareous or sabulous deposits of greater or less extent. **students' p.**, a placenta retained in consequence of unskilful manipulation. **succenturiate p.**, an accessory or subsidiary placenta. **p. triparti'ta**, a triple or triply divided placenta. **p. truffée**, a placenta containing small, dark-red infarcts. **velamentous p.**, one in which the umbilical cord is attached at one edge. **zonary p.** Same as *annular p.*

placental (pla-sen'tal). Pertaining to the placenta.

placentapepton (pla-sen-tah-pep'tōn). A proprietary preparation of peptone derived from the placenta and used for Abderhalden's optical test for pregnancy.

placentation (pla-sen-ta'shun). The manner of formation and attachment of the placenta.

placentin (pla-sen'tin). An extract from the placenta used in Abderhalden's test.

placentitis (plas-en-ti'tis). Inflammation of the placenta.

placentocytotoxin (pla-sen'to-si-to-toks'in). Same as *placentolysin*.

placentolysin (pla-sen-tol'is-in) [*placenta* + *lysis* solution]. A lysin formed in the serum of an animal into which have been injected placenta cells from another animal. It is destructive to the placenta of animals of the species from which the cells were originally taken.

placentoma (pla-sen-to'mah). A neoplasm derived from a portion of the placenta retained after an abortion.

placentotherapy (pla-sen-to-ther'ap-e) [*placenta* + *θεραπεία* treatment]. The therapeutical use of preparations of the placenta.

placentotoxin (pla-sen-to-tox'in). A naturally occurring syncytotoxin which may cause some of the toxemias of pregnancy.

Placobdel'la catenig'era. A leech found in Europe that attacks man and various animals.

placode (plak'ōd). A thickened plate of ectoderm forming the anlage of an organ in the embryo, as the ear (**auditory p.**) or eye (**optic p.**).

placuntitis (pla''kun-ti'tis) [*πλakoύς* placenta]. Inflammation of the placenta.

placuntoma (pla-kun-to'mah) [*πλakoύς* placenta + *-ωμα* tumor]. Placenta.

pladaroma (plad-ar-o'mah). Pladarosis.

pladarosis (plad-ar-o'sis) [*πλαδαρός* soft]. A soft or flaccid tumor of the eyelid.

plagiocephalic (pla''je-o-sef-al'ik). Characterized by plagiocephaly.

plagiocephalism, plagiocephaly (pla''je-o-sef-al-izm, pla''je-o-sef-al-e) [*πλάγιος* oblique + *κεφαλή* head]. An unsymmetrical and twisted condition of the head. It is usually produced by closure of half of the coronal suture.

Plagiocephaly (Church and Peterson).

plague (plāg) [L. *plā'ga*, *pestis*; *πληγή* stroke]. 1. A pestilence or severe epidemic. 2. Malignant polyadenitis: known as *bubonic* or *oriental plague*; an acute febrile and exceedingly fatal epidemic disease produced by *Pasteurella pestis*. It begins with fever and chills, quickly followed by great prostration similar to that of the typhoid state, and later by swelling of the lymphatic glands, forming buboes in the femoral, inguinal, axillary, and cervical regions. It is frequently attended with delirium, headache, vomiting, and diarrhea. The plague attacks rats, reptiles, and various animals; but the herbivorous animals are little liable to it. The disease is almost always transmitted through the bites of fleas (*Xenopsylla cheopis*) which have become infected by feeding on plague diseased rats. **ambulant p.**, a form with slight fever; dangerous as a means of spreading the disease; the patient may die of a swift collapse. **ambulatory p.**, *pestis minor*; a relatively mild form of true or oriental plague. **blood p.** See *nambi-wu*. **bubonic p.** See *plague* (2d def.). **canine p.**, black tongue of dogs. **cattle p.**, a contagious disease of cattle, which sometimes affects sheep and goats, marked by fever and croupous diphtheritic lesions of the intestinal tract. The organism of the disease is unknown. Called also *rinderpest* and *contagious typhus of cattle*. **cellulocutaneous p.**, plague marked by inflammation and necrosis of the skin and subcutaneous tissues, and often associated with involvement of the lymph nodes. **defervescing**

p., a form which ends by a crisis. **fowl p.**, a disease of domestic fowls, differing from chicken cholera, and caused by some unknown organism. The disease occurs in northern Italy, Germany, and France. Called also *chickenpest*. **glandular p.** See *plague* (2d def.). **hog p.**, an infectious disease of swine: hog cholera. **lung p.** See *pleuropneumonia* (2d def.). **mild p.**, **larval p.**, **pestis minor**: a mild form with buboes, but with little constitutional disturbance. **Pahvant Valley p.** See *typhemia*. **pneumonic p.**, an extremely fatal form of plague in which the bacilli become lodged in the air cells of the lungs and produce inflammation. **premonitory p.**, a mild form which sometimes foreruns the typical endemic variety. **reindeer p.**, an epidemic disease among the reindeer of Lapland, which kills thousands of calves and young animals. The cadavers show emphysematous edema. **septicemic p.**, bubonic plague with little or no local manifestation, but with severe constitutional symptoms. **Siberian p.**, anthrax. **siderating p.**, a form often pneumatic and usually fatal, before buboes appear. **p. spot**, an ecchymosis seen in some cases of bubonic plague, probably due to the bite of vermin. **swine p.**, an infectious disease of swine occurring sporadically and caused by *Bacillus (Pasteurella) pestis*. The lesions resemble those of hog cholera, but show greater tendency to pleuritis and pneumonia. **tarabagan p.** See *tarabagan*. **white p.**, tuberculosis.

Planck's constant (plancks) [Max Planck, German physicist, born 1858]. See under *constant*.

plane (plān) [L. *plānus*]. A flat surface. **Addison's p's**, planes used as landmarks in the topography of the thorax and abdomen. **Aeby's p.**, a plane through the nasion and basion, perpendicular to the median plane of the cranium. **auriculo-infra-orbital p.**, a plane passing through the auricular points and the lowest points of the orbits. **axiobuccolingual p.**, a plane parallel with the bony axis of a tooth and passing through the buccal and lingual surfaces. **axiolabiolingual p.**, a plane parallel with the long axis of a tooth and cutting its labial and lingual surfaces. **axiomiesiodistal p.**, a plane parallel with the long axis of a tooth and cutting its mesial and distal surfaces. **Baer's p.**, a plane through the upper border of the zygomatic arches. **base p.**, an imaginary plane upon which is estimated the retention of an artificial denture. **Blumenbach's p.**, a plane parallel with the base of a skull from which the lower jaw has been removed. **datum p.**, a given horizontal plane from which craniometric measurements are made. **Daubenton's p.**, a plane in which are the opisthion and the lower edges of the orbits. **Hensen's p.**, a plane passing through the center of a series of sarcomeric elements of a muscle fibril. **Hodge's p.**, a plane passing through the second sacral vertebra and the upper border of the os pubis, and parallel to the plane of the pelvic inlet. **horizontal p.**, a plane passing through a tooth at right angles to its long axis. **labiolingual p.**, a plane parallel with the long axis of a tooth and passing through the labial and lingual surfaces. **Listing's p.**, a transverse vertical plane which is perpendicular to the anteroposterior axis of the eye, and which contains the center of motion of the eyes; in it also lie the transverse and vertical axes of voluntary ocular rotation. **Meckel's p.**, a plane passing through the auricular and alveolar points. **mesiodistal p.**, the plane of a tooth which passes through its mesial and distal surfaces. **Morton's p.**, a plane through the most projecting points of the parietal and occipital protuberances.

Planes of the inlet and outlet of pelvis with axes of pelvis (J. C. Hirst).

nuchal p., the outer surface of the occipital bone between the foramen magnum and the superior curved line. **occipital p.**, the outer surface of the occipital bone above the superior curved line. **orbital p.** 1. The orbital surface of the maxilla. 2. The plane that passes through the visual axis of each eye. **popliteal p.**, the popliteal space. **sagittal p.**, a plane running in an anteroposterior direction. **sternal p.**, the anterior surface of the sternum. **temporal p.**, the depressed area on the side of the skull below the inferior temporal line. **tensorial p.**, a straight line drawn through the tentorium. **tooth p.**, any imaginary plane made by section of a tooth, such as axial, horizontal, vertical. **visual p.** Same as *orbital p.* (2d def.).

planimeter (pla-nim'et-er) [L. *plānus* plane + *μέτρον* measure]. An instrument used in measuring the area of surfaces.

planithorax (plan-ith-o'rax). A diagram of the front and back of the chest.

plankton (plank'ton) [πλανκτός wandering]. A collective name for the minute free-floating organisms which live in practically all natural waters.

planocellular (pla-no-sel'u-lar). Made up of flat cells.

Planococcus (pla-no-kok'us) [πλάνη wandering + κόκκος coccus]. A genus of motile bacteria whose cells divide in two dimensions, as in *Micrococcus*, but which possess flagella.

planoconcave (pla-no-kon'kāv). Flat on one side and concave on the other. See *lens*.

planoconvex (pla-no-kon'veks). Flat on one side and convex on the other.

planocyte (pla'no-sit) [πλάνη wandering + κύτος cell]. A wandering cell.

Planorbis (plan-or'bis). A genus of snails. Several species act as intermediate hosts for *Schistosoma mansoni*. *P. boissys*, in Egypt. *P. guadelupensis*, in Venezuela. *P. olivaceus*, in Brazil.

Planosarcina (pla-no-sar'sin-ah) [πλάνη wandering + sarcina]. A genus of motile bacteria whose cells divide in three dimensions, as in *Sarcina*, but which have flagella.

planotopokinesia (plā'no-top'o-kin-e'ze-ah) [πλάνη wandering + τόπος place + κίνησις movement]. Disturbance of the power of geometrical orientation.

planta (plan'tah) [L.], pl. *plan'tae* [B N A]. The sole of the foot.

Plantago (plan-ta'go). A genus of herbs; plantain. The root and leaves of *P. major* are astringent, refrigerant, and diuretic. *P. psyllium* furnishes psyllium seed. See *psyllium*.

plantain (plan'tān). See *Plantago*.

plantar (plan'tar) [L. *planta'ris*]. Pertaining to the sole of the foot.

plantaris (plan-ta'ris) [L.]. See *muscles*, table of.

plantex (plan'tex). A proprietary cancer remedy.

plantose (plan'tōs). An albumin from rape seeds. It is nutritive.

planula (plan'u-lah). The embryo in the stage when it consists of the two primary germ layers (ectoderm and endoderm) only. **invaginate p.**, the gastrula.

planum (plā'num) [L.]. A plane; a flat surface. **p. nucha'le** [B N A], the nuchal plane. **p. occipita'le** [B N A], the occipital plane. **p. orbita'le**, the orbital plane. **p. poplite'um** [B N A], the popliteal space. **p. sterna'le** [B N A], the anterior surface of the sternum. **p. tempora'le** [B N A], temporal plane.

planuria (pla-nu're-ah) [πλανᾶσθαι to wander + οὔρον urine]. The voiding of urine from an abnormal place.

plaque (plahk) [Fr.]. 1. Any patch or flat area. 2. A blood platelet. **bacterial p.**, a deposit of

VARIOUS FORMS OF MALARIAL PARASITES (Thayer and Hewetson).

FIGS. 1 to 10, inclusive, tertian organisms; FIGS. 11 to 17, inclusive, quartan organisms; FIGS. 18 to 27, inclusive, estivo-autumnal organisms.

FIG. 1.—Young hyaline form; 2, hyaline form with beginning pigmentation; 3, pigmented form; 4, full-grown pigmented form; 5, 6, 7, 8, segmenting forms; 9, extracellular pigmented form; 10, flagellate form.

FIG. 11.—Young hyaline form; 12, 13, pigmented forms; 14, fully-developed pigmented form; 15, 16, segmenting forms; 17, flagellate form.

FIGS. 18, 19, 20.—Ring-like and cross-like hyaline forms; 21, 22, pigmented forms; 23, 24, segmenting forms; 25, 26, 27, crescents.

material upon the surface of a tooth which is supposed to act as a medium for the lodgment and growth of bacteria, causing dental caries. **blood p.** See *blood plates*, under *plate*. **gelatinoid p.**, a gelatinous mass, containing bacteria, occurring on the teeth. **mucous p.**, **p. muqueuse**, condyloma latum. **Redlich-Fishermiliary p's**, thickened, dark colored areas in the neuroglia reticulum of the brain, seen in cases of senile psychoses.

Plasencia's bacillus (plas-en'se-ahz) [L. *Plasencia*, pathologist in Havana, died 1923]. See *Bacillus influenza-motilis*.

plasm (plazm). See *plasma*. **germ p.** See *germ plasm*.

plasma (plaz'mah) [πλάσσειν to mold]. 1. The fluid portion of the blood, composed of the serum and fibrinogen. 2. The lymph deprived of its corpuscles or cells. 3. A glycerite of starch used in preparing ointments. 4. Cytoplasm or protoplasm. **albumose p.**, blood plasma extracted after the injection of albumoses. **citrate p.**, blood plasma treated with sodium citrate, which prevents clotting. **p. depletion**, plasmapheresis. **p. mari'num**, sea water diluted until it is isotonic with the blood plasma. It has been recommended for use in skin diseases, tuberculosis, etc., by intramuscular injection. **muscle p.**, a liquid expressible from muscular tissue. It is sometimes injected subcutaneously as a restorative and stimulant. **oxalate p.**, blood plasma to which 1 per cent of ammonium oxalate has been added. This prevents clotting. **peptone p.** Same as *albumose p.* **p. removal**. See *plasmapheresis*. **p. rhexis**. See *plasmatorrhesis*. **salt p.**, blood plasma to which a neutral salt has been added to prevent clotting. **true p.**, blood plasma drawn direct from the blood without any change in its gas content.

plasma activation (plaz'mah ak-tiv-a'shun). The stimulation of cellular metabolism produced by the successful application of nonspecific agents, such as the injection of foreign protein or of colloid metals. **omnicellular p.**, plasma activation affecting all the cells of the body.

plasma cell. See under *cell*.

plasmacule (plaz'mak-ül). Any one of a multitude of minute particles said to exist in the blood plasma.

plasmacyte (plaz'mah-sit) [*plasma* + κύτος cell]. Plasma cell.

plasmacytosis (plaz'mah-si-to'sis). The presence of plasma cells in the blood.

Plasmahaut (plaz'mah-howt) [Ger.]. The superficial layer of the protoplasm of a cell.

plasmal (plaz'mal). A substance occurring in blood plasma, milk, pus, and certain other body fluids.

plasmalogen (plaz-mal'o-jen). A substance in various body fluids which is converted into plasmal.

plasmameba (plaz-mam-e'bah). A sporozoan parasite found in the blood plasma in dengue and thought to cause that disease.

plasma membrane. See under *membrane*.

plasmapheresis, plasmaphaeresis (plaz-mah-fe're-sis) [*plasma* + ἀφαίρεσις removal]. Plasma removal; the removal of considerable quantity of blood, separating the corpuscles by centrifugalization, replacing the plasma by Locke's solution, and reinjecting this, together with the centrifugized cells, into the body (Abel).

plasmase (plas'mäs). Fibrin ferment. See under *ferment*.

plasmosome (plaz'mas-öm) [*plasma* + σωμα body]. A leukocyte granule.

plasmatic (plaz-mat'ik). Pertaining to or of the nature of the plasma.

plasmatogamy (plaz-mat-og'am-e) [*plasma* + γάμος marriage]. Union of cells in which the nucleus of each cell is preserved.

plasmatorrhesis (plaz'mat-o-reks'is) [πλάσμα anything formed + ῥήξις rupture]. The bursting of a cell due to the pressure exerted from within.

plasmatosis (plaz-mat-o'sis). The liquefaction of the substance of a cell.

plasmameba (plaz-me'bah). Plasmameba.

plasmic (plaz'mik). Rich in protoplasm.

plasmin (plaz'min). Any one of a series of cell fluids derived from cultures of various bacilli by trituration with quartz and intense pressure. They are stated to have valuable remedial and immunizing qualities. **Denis' p.**, a substance obtained by treating blood with sodium sulphate and then with sodium chloride.

plasmochin (plas'mo-kin). A synthetic preparation of quinoline for the treatment of malaria. Dose, $\frac{1}{2}$ grain (0.02 Gm.).

plasmocyte (plaz'mo-sit) [πλάσμα plasma + κύτος cell]. A celllike micro-organism of the blood plasma or blood cells.

plasmocytoma (plaz'mo-si-to'mah). Same as *plasmoma*, 2d def.

plasmodesma (plaz-mo-dez'mah) [πλάσμα plasma + δέσμος band]. The protoplasmic material which binds adjacent cells together (Stadnicka).

plasmodia (plaz-mo'de-ah). Plural of *plasmodium*.

plasmodial (plaz-mo'de-al). Pertaining to a plasmodium.

Plasmodidae (plaz-mo'did-e). A family of the Hemasporidia containing three genera; *Plasmodium*, *Hemo-proleus*, and *Proteosoma*.

Plasmodioph'ora bras'sicae. A rhizopod organism which causes a disease of cabbages and other cruciferous plants, called *fingers and toes* or *stump root*.

plasmoditrophoblast (plaz-mo'de-tro'fo-blast). The external layer of the trophoblast, representing the syncytium.

plasmodium (plaz-mo'de-um), pl. *plasmo'dia* [πλάσμα plasma + εἶδος form]. 1. A multinucleate continuous mass of protoplasm. 2. Same as *syncytium*. **placental p.** Same as *syncytium*, 2d. def.

Plasmodium (plaz-mo'de-um) [see *plasmodium*]. A genus of the Plasmodidae, the malarial parasites. **P. bo'vis**, a species found in cattle. **P. brasilia'num**, a species found in monkeys in South America. It is much like *P. malariae*. **P. ca'nis**, a species found in dogs in India. **P. cynomol'gi**, probably identical with *P. inui* except that Schueffner's dots are present. **P. danilew'skyi**, a species found in birds in Italy, India, and Africa. It is of interest because Ross first traced the development in the mosquito with this parasite. **P. e'qui**, a species found in the horse. **P. falcip'arum**, the species which causes estivo-autumnal malaria in man. It is characterized by the "signet-ring" forms of trophozoites and the "crescent" form of the gametes. **P. falcip'arum quotidianum**, the species which causes quotidian estivo-autumnal malaria in man. It produces very minute ring forms of the parasite. Called also *P. immaculatum*. **P. in'ui**, a species pathogenic for monkeys (*Macacus cymologus* and *M. nemestrinus*). **P. ko'chi**, a species pathogenic for chimpanzees and for monkeys. **P. kytolas'token**, Schiller's supposed protozoan parasite of cancer. **P. mala'riae**, the species which causes quartan malaria in man. It shows the "band-forms" of schizonts and the daisy or marguerite form of the merozoites. The parasite as seen in the blood of man is an irregular mass of protoplasm which may show ameboid activity. It passes part of its life cycle in the blood of man and part in the body of the mosquito. The cycle of development within the body of the mosquito (sporogony) is as follows: When the mosquito takes blood containing malarial parasites into its stomach the asexual forms (schizonts) are digested and

destroyed. The sexual forms (the macrogametes and the microgametes or crescents) undergo maturation processes and thus become macrogametes and microgametes (flagella). Fertilization is accomplished by the latter penetrating and fusing with the former, thus producing a zygote. This elongates and becomes a motile ookinete, penetrates the stomach wall, and encysts (oocyst) and grows into a sporont, which later subdivides into sporoblasts which escape into the body cavity as sporozoites, wander to the salivary glands, and wait for transfer to man. The cycle of development in man (schizogony) is as follows: A sporozoite, which is a long, slender, spindle-shaped organism, is introduced by the bite of a mosquito, attaches itself to a red blood corpuscle, changes its shape to a ring form, thus becoming a trophozoite, and grows rapidly. It develops at the expense of the corpuscle until at maturity as a schizont it nearly fills the corpuscle. It then divides into merozoites which escape into the plasma, enter other red cells, and repeat the cycle. Some merozoites which enter red cells develop into sexual forms which later become free in the blood stream as gametes and await transfer to a mosquito. **P. ovale**, probably the same as *P. vivax minima*. **P. pitheci**, a species found in the orang-utan and in chimpanzees. It resembles *P. vivax* except that man is not susceptible. **P. pleurodyniae**, a name given to certain inclusion bodies found in the red blood cells in cases of epidemic diaphragmatic pleurodynia. **P. praecox**, the parasite causing malaria of birds. **P. richenowii**, a species found in anthropoid apes. **P. tenue**, a species from cases of malaria in India distinguished by its tenuity and ameboid activity. **P. vasali**, a species found in the squirrel. **P. vivax**, the species which causes the tertian form of malaria in the patient and Schueffner's dots in a parasitized red blood cell. **P. vivax minima** differs from *P. vivax* in being smaller and in having only four to ten merozoites.

Plasmödromata (plaz-mo-dro'mat-ah). A class of protozoa distinguished by the nucleus not being divided into a vegetative and a reproductive portion.

plasmogamy (plaz-mog'am-e) [πλάσμα plasm + γάμος marriage]. Cytoplasmic fusion of cells.

plasmogen (plaz-mo-jen) [πλάσμα plasm + γενᾶν to produce]. The essential part of protoplasm; bioplasm.

plasmology (plaz-mol'o-je) [πλάσμα plasm + λόγος treatise]. The study of the most minute particles or ultimate corpuscles of living matter.

plasmolysis (plaz-mol'is-is) [πλάσμα plasm + λύσις solution]. Contraction or shrinking of the protoplasm of a cell due to the loss of water by osmotic action.

plasmolytic (plaz-mol-it'ik). Tending toward, pertaining to, or characterized by, plasmolysis.

plasmolyzability (plaz-mo-li-zab-il'it-e). The power of undergoing plasmolysis.

plasmolyzable (plaz-mo-li'zab-l). Capable of undergoing plasmolysis.

plasmolyze (plaz'mo-liz). To subject to plasmolysis.

plasmoma (plaz-mo'mah). 1. A mass of plasm cells resembling a tumor. 2. A myoma made up of plasma cells.

plasmon (plaz'mon). A flourlike food material made from skimmed milk, and consisting of the protein of milk. **p. butter**, a mixture of plasmon, butter, water, and salt.

plasmoptysis (plaz-mop'tis-is) [πλάσμα plasm + πύειν to spit]. Ejection of protoplasm from a cell through bursting of the cell wall.

plasmorrhesis (plaz-mor-eks'is) [πλάσμα plasm + ῥήξις splitting]. Same as *erythrocytorrhesis*.

plasmoschisis (plaz-mos'kis-is) [πλάσμα plasm + σχίσις fission]. The splitting up of cell plasm.

plasmosome (plaz'mo-söm) [πλάσμα something formed + ὄμα body]. 1. The true nucleolus of a cell (Ogata, 1883). 2. Same as *Altman's granules*. See under *granule*.

plasmosphere (plaz'mo-sfēr). Same as *perisphere*.

plasmotomy (plaz-mot'o-me) [πλάσμα plasm + τομή to cut]. Reproduction by the separation from the mother cell of smaller masses of protoplasm, each containing several nuclei.

plasmotropic (plaz-mo-trop'ik). Pertaining to or causing plasmotropism.

plasmotropism (plaz-mot'ro-pizm) [πλάσμα plasm + τρέπειν to turn]. Solution or destruction of erythrocytes in the liver, spleen, or marrow, as contrasted with their destruction in the circulation.

plasmozyme (plaz'mo-zim) [plasma + ζύμη leaven]. Same as *thrombogen*.

plasome (plaz'öm) [πλάσσειν to form]. The hypothetical unit of living protoplasm. See *micelle*.

plasson (plas'on) [πλάσσειν forming]. The protoplasm of a cytode, or nonnucleated cell.

-plast [πλαστός formed]. A suffix denoting any primitive living cell; as, *bioplast*.

plastein (plas'te-in). The protein synthesized by pepsin from the peptic digestion products of protein.

plaster (plas'ter) [L. *emplastrum*]. A tenacious preparation for spreading upon the surface of the body. The chief plasters are named from their principal ingredients; as, aconite plaster, ammoniac plaster, arnica plaster, belladonna plaster, capsicum plaster, iron plaster, soap plaster, etc. **adhesive p.** See *rosin p.* **antiseptic p.**, ordinary adhesive plaster dipped in a hot solution of carbolic acid. **p. bandage**, a bandage impregnated with plaster of paris. **belladonna p.**, a plaster made of extract of belladonna leaves 30 parts, and adhesive plaster 70 parts: used as an anodyne application. **blistering p.**, the cerate of cantharides. **cantharides p.**, emplastrum cantharidis; cantharides cerate spread upon rosin plaster. **capcine p.**, a proprietary capsicum plaster. **capsicum p.**, a rubefacient plaster made of oleoresin of capsicum and rubber plaster. **chalybeate p.**, iron plaster. **court-p.**, a plaster of isinglass on silk. **diachylon p.** Same as *lead p.* **Drouot's p.**, a mixture of cantharides, mezereum, and resin. **elastic p.** See *rubber p.* **iron p.**, a plaster made of ferric hydrate, olive oil, Burgundy pitch, and lead plaster. It is a gentle stimulant in affections of the muscles and joints. Called also *strengthening p.* **p. jacket**, a thoracic or trunk bandage stiffened with plaster of paris. **lead p.**, emplastrum plumbi; a plaster containing lead oxide, olive oil, lard, and water triturated and boiled. It is used for applying to slight wounds and bruises and in the preparation of other plasters. Called also *diachylon p.* **litharge p.** Same as *lead p.* **mercurial p.**, a plaster containing mercury, oleate of mercury, hydrous wool fat, and lead plaster: used in treating gumma. **p. mull**, a piece of mull or muslin treated with medicated gutta-percha: used in skin diseases. **mustard p.**, emplastrum sinapis; a mixture of powdered black mustard and a solution of rubber, spread on cotton cloth or other fabric. **opium p.**, a plaster containing extract of opium, water, and adhesive plaster: used as an anodyne application. **p. of paris**, calcined gypsum, or calcium sulphate: used in making stiff bandages or casts (*p. bandage*, *p. splints*, *p. jackets*) for deformities and fractures. **pitch p.**, a rubefacient plaster made of Burgundy pitch, frankincense, resin, yellow wax, oil of nutmeg, olive oil, and water. **porous p.**, a form of manufactured plaster spread upon muslin pierced with holes. **rosin p.**, a plaster containing rosin, 140 Gm.; lead plaster, 800 Gm.; yellow wax, 60 Gm.; called also *emplastrum resinae*, *rosin adhesive plaster*, and *adhesive plaster*. **rubber p.**,

emplastrum elasticum; a mixture of rubber, resins, and waxes with an absorbent powder, such as starch, spread on cotton cloth or other fabric. **soap p.**, a discutient plaster made of dried soap and lead plaster. **spice p.**, a plaster containing yellow wax, turpentine, suet, benzoin, oilbalm, and the oils of peppermint, nutmeg, and cloves: employed to allay abdominal pains in children. **strengthening p.** Same as *iron p.* **Vigo's p.**, a plaster containing lead plaster, rosin, yellow wax, oilbalm, ammoniac, myrrh, bedellium, saffron, mercury, turpentine, liquid storax, and oil of lavender. **warming p.**, plaster of pitch and cantharides. **Z. O. p.**, rubber plaster to which zinc oxide has been added.

plastic (plas'tik) [L. *plasticus*; πλαστικός]. Tending to build up tissues or to restore a lost part.

plasticity (plas-tis'it-e). The quality of being plastic.

plastics (plas'tiks). 1. Plastic surgery. 2. Plastic materials used in dentistry.

plastid (plas'tid) [πλαστός formed]. 1. Any elementary constructive unit, as a cell. 2. Any specialized organ of the cell other than the nucleus and centrosome, such as chloroplast or amyloplast. **red p.**, a nonnucleated mammalian adult red blood corpuscle.

plastidogenetic (plas-tid'-o-jen-et'ik). Producing plastids or cells.

plastidule (plas'tid-ül). The minutest unit of living protoplasm.

plastin (plas'tin). 1. Same as *linin*. 2. Same as *hyloplasm*.

plastosome (plas'te-o-söm). See *mitochondria*.

plastochondria (plas-to-kon'dre-ah). Mitochondria.

plastocont (plas'to-kont). Same as *chondriocont*.

plastocyte (plas'to-sit) [πλαστός formed + κύτος cell]. A blood plate.

plastocytopenia, plastocytopenaia (plas'to-si-to-pe-ne-ah) [plastocyte + πένια poverty]. Decrease in the number of blood plates below normal.

plastocytosis (plas'to-si-to'sis). Abnormal increase in the number of blood plates.

plastodynamia (plas'to-di-na-me-ah) [πλαστός formed + δύναμις power]. Power or ability to develop.

plastogamy (plas-to-g'am-e) [πλαστός formed matter + γάμος marriage]. Conjugation in protozoa, in which the protoplasm of two or more individuals undergoes amalgamation, the nuclei remaining separate. See *karyogamy* and *plasmalogamy*.

plastomere (plas'to-mër). Same as *cytomere*.

plastosome (plas'to-söm) [πλαστός formed + σώμα body]. One of the stainable granules or threads of the protoplasm. See *chondriosome*.

plastron (plas'tron). The sternum and costal cartilages.

plate (plät) [πλάτη]. 1. A flattened surface, especially of bone; any flat structure or layer; a lamina. 2. In dentistry, a thin piece of rubber, metal, or other substance for holding false teeth; an artificial denture. **alar p.** See *dorsolateral p.* **anal p.**, the membrane which closes the anus in the embryo. **approximation p.**, a disk of bone or other material used in intestinal surgery. **auditory p.**, the bony roof of the auditory meatus. **axial p.**, the primitive streak of the embryo. **basal p.** See *ventrolateral p.* **base p.**, the plate of an artificial denture which supports the teeth and rests on the mucosa of the mouth. **blood p's**, circular or oval disks, from two to three microns in diameter, forming one of the constituents of the blood. They are believed to assist in producing coagulation. Called also *hematoblasts*, *thrombocytes*, and *blood platelets*. **bone p.**, an approximation plate of bone. **cell p.** Same as *midbody*. **clinoid p.**, the portion

of the sphenoid bone behind the sella turcica. **collecting p.**, the electronegative element of a galvanic battery; the plate where the hydrogen and other decomposition products collect. **cribriform p.** See *lamina cribrosa*. **p. culture**, a bacterial culture in agar or gelatin on a glass plate. **cutis p.**, that part of the somite in which the dermatome develops. **deck p.**, that fetal structure which produces the pineal organ, the choroid plexus, and the tela choroidea. It is in the median line of the thalamencephalon. **dental p.**, a plate of hard rubber, metal, or other material, fitted to the shape of the roof of the mouth, and serving for the support of false teeth. **dorsal p.**, the dorsal longitudinal epithelial zone of the neural tube: called also *roof p.* and *Deckplatte*. **dorso-lateral p.**, either of the pair of dorsolateral longitudinal zones of the neural tube. From it are developed the dorsal gray columns of the spinal cord and the sensory centers of the brain. Called also *alar plate*, *wing plate*, *encephalic region*, and *Flügelplatte*. **end-p.**, the discoid terminal expansion of a motor nerve branch. **epithelial p.** See *lamina epithelialis*. **equatorial p.**, the platelike collection of chromosomes at the equator of the spindle in karyokinesis. **ethmoverine p.**, the central part of the ethmoid bone in the fetus. **floor p.**, the plate that forms the floor of the primitive neural canal of the embryo. See *ventral p.* **foot p.**, the flat portion of the stapes. **frontal p.**, a fetal plate of cartilage between the sides of the ethmoid cartilage and the sphenoid bone. **frontonasal p.**, a fetal plate whence the external nose is developed. **generating p.**, the electropositive element of a galvanic battery. **gray p.** Same as *lamina cinerea*. **Lane p's**, steel plates with holes for screws: used in fixing the fragments of a fractured bone. **lateral meso-blastic p.**, the thickened portion of either side of the mesoblast. **medullary p.**, **neural p.**, the plate of epiblast in the embryo that becomes developed into the neural canal. **mesial p.**, the thickening of the mesoblast along each side of the notochord, forming two layers. **motorial p.** Same as *end-p.* **neural p.**, the thickened plate of ectoderm in the embryo from which the neural tube develops. **notochordal p.** See *head process*, under *process*. **oral p.**, the area in the embryo which is later replaced by the opening between the mouth and the pharynx. **orbital p.** 1. See *lamina papyracea*. 2. The process of the frontal bone that forms the roof of the orbit. 3. The orbital process of the superior maxillary bone. **palate p.**, that part of the palate bone which forms a lateral half of the roof of the mouth. **parietal p.**, the outer layer of the mesial plate. **Petri p.**, a Petri dish containing a nutrient medium ready for inoculation with the organism. **polar p's**, **pole p's**, platelike bodies at the end of the spindle in certain forms of mitosis. **retaining p.**, an appliance used in orthodontia. **reticular p.**, a form of nerve ending in the ciliary body consisting of very fine reticulations of granular nerve fiber. **roof p.** See *dorsal p.* **segmental p.**, a plate of mesoblast on either side of the notochord at the posterior end of the embryo. From it the mesoblastic segments are formed. **spiral p.**, the lamina spiralis. **spring p.**, a dental plate held in place by the elasticity of the material which abuts against natural teeth. **streak p.**, a plate of some culture medium which has been poured, allowed to solidify, and then has had the infectious material smeared over its surface, usually in parallel streaks. **subgerminal p.**, a sheet of protoplasm forming the floor of the segmentation cavity of the ovum. **suction p.**, a dental plate held in place in the mouth by atmospheric pressure. **tarsal p.**, the quasicartilaginous substance which gives firmness to an eyelid. **terminal p.** See *lamina terminalis*. **trial p.**, in dentistry, a thin sheet of soft metal, wax, or other substance fitted to a model and used for the temporary support of artificial teeth while

they are being adjusted in the mouth. **tympanic p.**, a bony plate which forms the floor and sides of the meatus auditorius. **ventral p.**, the unpaired ventral longitudinal zone of the neural tube forming the floor of that tube. Called also *floor plate* and *Bodenplatte*. **ventrolateral p.**, either one of a pair of ventrolateral longitudinal zones of the neural tube. From them are developed the ventral gray column of the spinal cord and the motor centers of the brain. Called also *basal p.* and *hypencephalic region*. **visceral p.**, the inner layer of the mesial plate. **wing p.** See *dorsolateral p.*

plateau (plat-o'). An elevated and level area of land; any elevated area with a flat surface. **ventricular p.**, a level part of the intraventricular curve of blood pressure corresponding to the contraction of the ventricle.

platelet (plat'let). Same as *blood plate*. See under *plate*.

platiculture (plat'e-kul-chūr). Same as *plate culture*.

plating (pla'ting). 1. The act of applying bacterial culture mediums to glass plates; the cultivation of bacteria on plates. 2. The application of plates to fractured bones for the purpose of holding the fragments in place.

platinic (plat-in'ik). Containing platinum in its higher valency.

platinode (plat'in-ōd) [*platinum* + *ōdōs* way]. The collecting plate of an electric battery.

platinogold (plat'in-o-gold). Gold-plated platinum foil: used for dental fillings.

platinous (plat'in-us). Containing platinum in its lower valency.

platinum (plat'in-um) [L.]. A heavy, soft, whitish metal, resembling tin: symbol, Pt; atomic weight, 195.2; specific gravity, 21.5. It also occurs as a black powder (*p. black*) and as a spongy substance (*spongy p.*). Metallic platinum is insoluble except in nitrohydrochloric acid, and is fusible only at very high temperatures; it is therefore used in the manufacture of chemical apparatus. Platinum black and spongy platinum have a strong affinity for oxygen, and act as powerful oxidizing and catalytic agents. **p. chloride**, **platinic tetrachloride**, a poisonous substance, $\text{PtCl}_4 \cdot 5\text{H}_2\text{O}$: used as a chemical reagent and in syphilis. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.008-0.033 Gm.).

Platner's bile. See under *bile*.

platoscope (plat'o-skōp). An instrument for viewing plane pictures so as to secure a plastic appearance.

Plat'oum stercor'oum. See *Chlamydothryx*.

platy- [πλατύς broad]. A prefix signifying broad.

platycelous, **platycoelous** (plat-is-e'lus) [πλατύς wide + κοῖλος hollow]. Having vertebrae flat in front, or cephalad, and concave caudad.

platycephalic, **platycephalous** (plat-e-sef-al'ik, plat-e-sef'al-us) [πλατύς wide + κεφαλή head]. Wide headed; having a breadth-height index of less than 70.

platycephaly (plat-e-sef'al-e). The state of being platycephalic.

platycnemica, **platycnemism** (plat-ik-ne'me-ah, plat-ik-ne'mizm). Flatness laterally of the upper part of the tibia.

platycnemic (plat-ik-ne'mik) [πλατύς wide + κνήμη knee]. Having the upper part of the tibia flattened laterally.

platycoria (plat-ik-o're-ah) [πλατύς broad + κόρη pupil]. A dilated condition of the pupil.

platyocrania (plat-ik-ra'ne-ah) [πλατύς wide + κρανίον skull]. Artificial flattening of the skull.

platycyte (plat'is-it) [πλατύς broad + κύτος cell]. A variety of epithelioid cell found in tubercle nodules, intermediate between a leukocyte and a giant cell.

platyglossal (plat-e-glos'al) [πλατύς broad + γλῶσσα tongue]. Having a broad, flat tongue.

platyhelminth (plat-e-hel'minth). One of the platyhelminthes.

Platyhelminthes (plat'e-hel-min'thēz) [πλατύς flat + ἔλμινς worm]. The order of flatworms. It includes the Turbellaria, Nemertea, Trematoda, Cestodaria, and Cestoda.

platyhieric (plat'e-hi-er'ik) [πλατύς broad + ἱερόν sacrum]. Having a wide sacrum; having a sacral index exceeding 100.

platyknesia (plat-e-ne'me-ah). Having a tibia that is compressed laterally.

platymeria (plat-e-me're-ah) [see *platymeric*]. The condition of being platymeric.

platymeric (plat-im-e'rik) [πλατύς wide + μῆρος thigh]. Having a femur that is compressed laterally.

platymyoid (plat-im-i'oid) [πλατύς wide + μῦς muscle]. Applied to muscle cells in which the contractile stratum forms an even lamina.

platyopia (plat-e-o'pe-ah) [πλατύς broad + ὤψ face]. Broadness across the face.

platypellic (plat-e-pel'ik) [πλατύς wide + πῆλλα pelvis]. Having a wide pelvis, i. e., a pelvic index below 90.

platypodia (plat-e-po'de-ah) [πλατύς wide + πούς foot]. Abnormal flatness of the foot.

platyrrhine (plat'ir-in) [πλατύς wide + ῥίς nose]. Having a broad nose; having a nasal index exceeding 51.75.

platysma myoides (pla-tiz'mah mi-oi'dēz) [πλάτυσμα plate + μῦς muscle, + εἶδος form]. A superficial muscle of the neck, representing the panniculus carnosus of certain of the lower animals. See *muscles*, table of.

platysmal (pla-tiz'mal). Pertaining to the platysma myoides muscle.

platyspondylisis (plat'e-spon-dil'is-is) [πλατύς flat + σπόνδυλος vertebra]. Congenital flattening of the vertebral bodies.

platystaphyline (plat-e-staf'el-in) [πλατύς broad + σταφυλή palate]. Having a broad, flat palate.

platystencephalia, **platystencephalism**, **platystencephaly** (plat'is-ten-se-fa'le-ah, plat'is-ten-sef'al-ism, plat'is-ten-sef'al-e) [πλατυστός widest + ἐγκέφαλος brain]. A form of dolichocephalism in which the occiput is very wide and pentagonal, the jaws prognathic: observed among South Africans.

platystencephalic (plat'is-ten-sef-al'ik). Noting a form of skull observed chiefly in South Africa; dolichocephalus, but broadened toward the occiput, and with jaws of a prognathic type.

platytrope (plat'et-rōp) [πλατύς broad + τρέπειν to turn]. Either of two symmetrical parts on opposite sides of the body; a lateral homologue.

Plaut's angina or **ulcer** (plawts) [Hugo Karl Plaut, German physician, born 1858]. Vincent's angina. See under *angina*.

Playfair's treatment (pla'fārz) [William Smoult Playfair, British physician, 1836-1903]. See under *treatment*.

Plectrants (plek-tran'tus). See *palatarchus*.

Plectridium (plek-trid'e-um) [dim. of πλῆκτρον hammer]. A genus proposed by A. Fisher for the petrichious forms of motile bacilli.

plectron, **plektron** (plek'tron) [πλῆκτρον hammer]. The hammer form assumed by certain bacilli during sporulation.

plectrum (plek'trum) [L. from πλῆκτρον hammer]. 1. The uvula. 2. The malleus. 3. The styloid process of the temporal bone.

pledget (pled'jet). A small compress or tuft, as of wool or lint.

plegaphonia (pleg-af-o'ne-ah) [πληγή stroke + ἀφονία]. Auscultation of the chest during per-

cussion over the larynx or trachea in cases in which the patient cannot or is not allowed to speak. The vibrations produced by the percussion take the place of those of the vocal cords.

Plehn's granules (plānz) [Albert Plehn, German physician, born 1861]. See under *granule*.

pleiades (pli'ad-ēz) [A collection of stars in the constellation *Taurus*]. A mass of enlarged lymphatic nodes.

pleiapyrine (pli-ap-i'rin). A condensation product of benzamide and phenyl dimethylpyrazolon. An antipyretic and analgesic in doses of 15 grains (1 Gm.).

pleiochromia (pli-o-kro'me-ah) [πλέων more + χρώμα color]. Increased coloration; especially increased secretion of bile pigments.

plejapyrin (plej-ap-i'rin). A colorless, odorless powder, a condensation product of benzamide and antipyrene, used in migraine. Dose, 15 grains (1 Gm.).

pleocaryocyte (ple-o-kar'e-o-sit). See *pleokaryocyte*.

pleochroic (ple-o-kro'ik) [πλέων more + χρώα color]. Same as *pleochromatic*.

pleochroism (ple-ok'ro-izm). The condition of being pleochroic.

pleochromatic (ple'o-kro-mat'ik) [πλέων more + χρώμα color]. Exhibiting different colors under different circumstances.

pleochromatism (ple-o-kro'mat-izm) [πλέων more + χρώμα color]. The property possessed by some crystals of transmitting one color in one position and the complementary color in a position at right angles to the first.

pleocytosis (ple'o-si-to'sis). Increase of lymphocytes in the cerebrospinal fluid, as in syphilitic disease of the central nervous system.

pleokaryocyte (ple-o-kar'e-o-sit). A large nucleated cell found in cachectic disease such as cancer and tuberculosis.

pleomastia, pleomazia (ple-o-mas'te-ah, ple-o-ma'ze-ah) [πλέων more + μαστός or μασός breast]. The condition of having several breasts or nipples.

pleomastic (ple-o-mas'tik) [*pleomastia*]. Having several breasts.

pleomorphic, pleomorphous (ple-o-mor'fik, ple-o-mor'fus) [πλέων more + μορφή form]. Occurring in various distinct forms.

pleomorphism (ple-o-mor'fizm). The assumption of various distinct forms by a single organism or species; also the property of crystallizing in two or more forms.

pleonasm (ple'o-nazm) [πλεονασμός exaggeration]. An excess in the number of parts.

pleonectic (ple-o'nek-tik) [πλεονεξία greediness]. Taking up more than the average amount of oxygen: a term applied to blood which will take up more than 79 per cent of oxygen. Cf. *mesectic*.

pleonexia (ple-o-nek'se-ah) [πλέων more + ἔχειν to have]. Morbid desire for acquisition; morbid greediness.

pleonosteosis (ple'on-os-te-o'sis) [πλέων more + ὀστέον bone]. Abnormally increased ossification; premature and excessive ossification.

pleosoma (ple-o-so'mah). A proprietary preparation of the dried yolk of egg which has been irradiated with ultraviolet light: for use in rickets.

plerocercoid (ple-ro-ser'koid). The completed larval stage of the tapeworm attained in the muscles of a fish. When eaten it develops into the adult form.

Plesch's test. See under *tests*.

plesiomorphism (ple-se-o-mor'fizm). Similarity in form.

plesiomorphous (ple'se-o-mor'fus) [πλησιος near + μορφή form]. Of like or similar form.

plessesthesia (ples-es-the'ze-ah) [πλήσσειν to strike + αίσθησις feeling]. Palpatory percussion; percussion with one hand against a palpating finger of the other hand.

plessigraph (ples'ig-raf) [πλήσσειν to strike + γράφειν to write]. A form of pleximeter designed to enable the user to mark out the limits of an area.

plessimeter (ples-im'e-ter). Same as *pleximeter*.

plessimetric (ples-im-et'rik). Pertaining to or performed by a pleximeter.

plessor (ples'or). Same as *plexor*.

plethora (pleth'o-rah, pleth-or'rah) [L.; πληθώρα fullness]. A condition marked by vascular turgescence, excess of blood, and fullness of pulse. It is attended with a feeling of tension in the head, a florid complexion, and a liability to nose-bleed. **p. apocoptica**, plethora following amputation in which there is little loss of blood. **p. hydraemica**, increase in amount of blood due to increase in the watery element alone.

plethoric (pleth-or'ik, pleth-or-ik). Characterized by plethora.

plethysmogram (ple-thiz'mo-gram). A tracing made by the plethysmograph.

plethysmograph (ple-thiz'mo-graf) [πληθυσμός increase + γράφειν to record]. An instrument for recording variations in the size of parts and in the blood supply. **finger p.**, a plethysmograph which registers the change in volume taking place in a single finger. **Franck's p.**, a plethysmograph consisting of an upright glass jar into which the hand and wrist are inserted. **Mosso's p.**, a plethysmograph consisting of a glass tube filled with warm water into which the hand and forearm are placed. The changes in the water level, caused by the changes in volume of the limb, are graphically recorded.

plethysmography (pleth-iz-mog'raf-e). The recording of the changes in the size of a part as modified by the circulation of the blood in it.

pleura (plu'rah, pl. *pleu'rae* [πλευρά rib]. The serous membrane that invests the lungs (*pulmonary p.*, *visceral p.*), lines the thorax (*parietal p.*, *costal p.*), and is reflected upon the diaphragm (*diaphragmatic p.*). There are two pleurae, right and left, entirely shut off from each other. The pleura is moistened with a serous secretion which facilitates the movements of the lungs in the chest. **cervical p.**, the pleura that comes up into the root of the neck. **mediastinal p.**, a continuation of the costal pleura covering the side of the mediastinum. **pericardial p.**, that part of the pleura which is fused with the pericardium.

pleuracentesis (plu'rah-sen-te'sis). Same as *pleurocentesis*.

pleuracotomy (plu-rak-o'to-me) [pleura + τομή a cut]. Insertion of a drainage tube into the pleura through a thoracotomy incision.

pleural (plu'ral). Pertaining to the pleura.

pleuralgia (plu-ral'je-ah) [πλευρά rib + ἄλγος pain]. Pain in the pleura, or in the side.

pleuralgic (plu-ral'jik). Pertaining to or affected with pleuralgia.

pleurapophysis (plu-rap-of'is-is) [πλευρά rib + ἀρρῆσις]. A rib, or its homologue.

pleurectomy (plu-rek'to-me) [pleura + ἐκτομή excision]. Excision of a portion of the pleura. See *Fowler's operation*, under *operation*.

pleuripotent (plu-rip'o-tent). Capable of deviating from the developmental type in various ways.

pleurisy (plu'ris-e) [πλευρίτις]. A disease marked by inflammation of the pleura, with exudation into its cavity and upon its surface. It may occur as either an acute or a chronic process. In acute pleurisy the pleura first becomes reddened, and a soft, gray lymph exudes. This is the *dry stage*. The disease may stop here, or may progress to the second stage, in which a copious exudation of serum occurs (stage of *liquid*

effusion). The inflamed surfaces of the pleura tend to become united by adhesions, which are usually permanent. The symptoms are a stitch in the side, a chill, followed by fever and a dry cough. As effusion occurs there is an onset of dyspnea and a diminution of pain. The patient lies on the affected side. *Physical signs*: First stage, impaired chest movement, feeble respiration, and friction sound; second stage, dullness on percussion over the fluid, the area of dullness changing with changes of position; effacement of intercostal depressions. No sounds pass through the fluid to the ear when the patient coughs or speaks. Above the liquid increased percussion resonance and a friction sound are noticed. This disease is differentiated from pneumonia by the less marked dullness, the crepitant r  le, the blowing respiration, the thoracic voice, and increased vocal fremitus of the latter disease. *acute p.*, a form marked by sharp, stabbing pain, fever, friction fremitus, and to-and-fro friction sounds. *adhesive p.*, dry pleurisy. *blocked p.*, pleurisy in which the exudate is imprisoned in a pocket so that it cannot be aspirated. *chronic p.*, a dry serofibrinous, or purulent form, which is long continued. *chyliform p.*, a form in which the effused fluid has a milky appearance. *circumscribed p.*, pleurisy in which the inflammation is limited to a portion of the pleura. *costal p.*, inflammation of the pleura which lines the walls of the thorax. *diaphragmatic p.*, a variety limited to parts near the diaphragm. *diffuse p.*, pleurisy in which the inflammation involves the entire surface of the pleura. *double p.*, that form in which both pleurae are involved. *dry p.*, a variety with comparatively dry fibrinous exudate, usually chronic. *encysted p.*, a form with adhesions which circumscribe the effused material. *fibrinous p.*, the dry and plastic varieties. *hemorrhagic p.*, a variety in which there is a bloody exudate. *humid p.*, bronchitis. *ichorous p.*, empyema with a thin, offensive pus. *indurative p.*, pleurisy marked by thickening and hardening of the pleura. *interlobular p.*, a variety enclosed between the lobules of the lung. *latent p.*, a form attended with but little pain or inconvenience. *mediastinal p.*, a variety that affects the pleural folds about the mediastinum. *metapneumonic p.*, pleurisy characterized by a thick pus and the presence of the pneumonia diplococcus. *plastic p.*, a form characterized by the deposition of a soft, semisolid exudate in a layer. *primary p.*, a form not consequent upon pneumonia or any other disease; generally due to injury or exposure. *pulmonary p.*, inflammation of the pleura which covers the lungs. *pulsating p.*, a form in which the heart's action conveys a perceptible throbbing to the effused fluid. *purulent p.* Same as *empyema*. *secondary p.*, any pleurisy consequent upon an attack of some other disease. *serofibrinous p.*, one with a watery exudate which contains flocculi, some fibrin being also deposited. *serous p.*, a form characterized by free exudation of serum. *suppurative p.*, empyema. *typhoid p.*, pleurisy with symptoms of severe prostration. *visceral p.* Same as *pulmonary p.* *wet p.*, pleurisy with effusion. *p. with effusion*, pleurisy marked by serous exudation.

pleurisy root (plu'ris-e root). See *Asclepias*.

pleuritic (plu-rit'ik). Pertaining to or of the nature of pleurisy.

pleuritis (plu-ri'tis). Same as *pleurisy*.

pleuritogenous (plu-rit-oi'en-us). Causing pleurisy.

pleurobronchitis (plu'ro-brong-ki'tis). Pleurisy and bronchitis combined.

pleurocele (plu'ro-s  l) [πλευρά rib + κ  λη hernia]. Hernia of lung tissue or of pleura.

pleurocentesis (plu'ro-sen-te'sis) [πλευρά rib + κ  ντρσιs puncture]. Puncture of the pleura; paracentesis of the chest.

pleurocentrum (plu-ro-sen'trum) [πλευρά side + κ  ντρον center]. The lateral element of the vertebral column.

pleurocholecystitis (plu'ro-ko-le-sis-ti'tis) [πλευρά pleura + cholecystitis]. Inflammation of the pleura and the gallbladder.

pleuroclysis (plu-rok'lis-is) [πλευρά side + κλ  σιs washing]. Injection of fluids into the pleural cavity.

pleurocutaneous (plu'ro-ku-ta'ne-us). Pertaining to the pleura and the skin.

pleurodynia (plu-ro-din'e-ah) [πλευρά rib +   δυνη pain]. Paroxysmal pain in the intercostal muscles. It is a form of muscular rheumatism. **epidemic diaphragmatic p.**, an epidemic disease marked by a sudden attack of pain in the chest or epigastrium, fever of brief duration, and a tendency to recrudescence on the third day; called also *devil's grip*.

pleurogenic, pleurogenous (plu-ro-jen'ik, plu-roj'en-us) [πλευρά rib + γεν  ν to produce]. Originating in the pleura.

pleurohepatitis (plu'ro-hep-at-i'tis) [πλευρά side +   παρ liver + -ιτιs inflammation]. Hepatitis with inflammation of a portion of the pleura near the liver.

pleurolith (plu'ro-lith) [pleura + λ  θος stone]. A concretion found in the pleura.

pleurolysis (plu-ro-lis'is) [pleura + λ  σιs loosening]. Same as *pneumolysis*.

pleuroparietopexy (plu'ro-pa-ri-et-o-pek-se) [pleura + parietal + π  ξιs fixation]. The operation of fixing the visceral pleura to the parietal pleura, thus binding the lung to the chest wall.

pleuropericarditis (plu'ro-per-e-kar-di'tis). Combined pleuritis and pericarditis.

pleuroperitoneal (plu'ro-per-it-o-ne'al). Pertaining to both the pleura and the peritoneum.

pleuroperitoneum (plu'ro-per-it-o-ne'um). The pleura and peritoneum considered as one structure.

pleuropneumonia (plu'ro-nu-mo'ne-ah). 1. Pleurisy complicated with pneumonia. 2. A contagious or infectious pneumonia of cattle, combined with pleurisy, caused by a filtrable virus. Called also *pleuropneumonia contagiosa bovinum* and *lung plague*.

pleuropneumonolysis (plu'ro-nu'mo-nol'is-is) [πλευρά pleura + πνε  μων lung + λ  σιs destruction]. Removal of the ribs from one side in order to produce collapse of the affected lung for unilateral tuberculosis.

pleuropulmonary (plu-ro-pul'mo-na-re). Pertaining to the pleura and lungs.

pleurorrhea (plu-ro-re'ah) [πλευρά rib + ρ  ια flow]. A pleural or pleuritic effusion.

pleuroscopy (plu-ro'sko-pe) [πλευρά pleura + σκοπε  ν to examine]. Examination of the pleural cavity through an incision in the chest wall.

pleurosoma (plu-ro-so'mah). Pleurosomus.

pleurosomus (plu-ro-so'mus) [πλευρά side + σ  μα body]. A fetus with protrusion of the intestine and imperfect development of the arm of one side.

pleurothotonus (plu-ro-thot'o-nos) [πλευρο  θεν from the side + τ  νος tension]. Tetanic bending of the body to one side.

pleurotomy (plu-rot'o-me) [πλευρά rib + τ  μνειν to cut]. Surgical incision of the pleura.

pleurotyphoid (plu-ro-ti'foid). Acute pleurisy followed by and complicated with typhoid fever.

pleurovisceral (plu-ro-vis'er-al). Pertaining to the pleura and the viscera.

plevacol (plev'ak-ol). A combination of tricesol, formaldehyde, and aminobenzoyl eugenol: used for filling dental roots and capping amputated pulp.

plexal (pleks'al). Pertaining to a plexus.

plexalgia (pleks-al'je-ah) [πλ  ξιs stroke +   λγος pain]. A condition seen in troops after long

exposure. It is marked by pains in various parts of the body, fatigue, excitability, and insomnia.

plexiform (pleks'if-orm) [L. *plex'us* plait + *for'ma* form]. Resembling a plexus or network.

pleximeter (pleks-im'et-er) [πλῆξις stroke + μέτρον measure]. 1. A plate to be struck in mediate percussion. 2. A glass plate used to show the condition of the skin under pressure.

pleximetric (pleks-im-et'rik). Pertaining to or performed by a pleximeter.

pleximetry (pleks-im'et-re). The use of the pleximeter.

plexometer (pleks-om'et-er). Pleximeter.

plexor (pleks'or). A hammer used in performing percussion.

plexus (pleks'us) [L. "braid"]. A network or tangle, chiefly of veins or nerves. **accessory p.**, that part of the stroma plexus which lies immediately beneath the anterior limiting membrane of the cornea. **annular p.**, the nervous plexus that encircles the corneal margin. **p. anseri'nus, parotid p.**, a small plexus near the parotid gland. **p. anseri'nus ner'vi median'i**, bundles from the eighth nerve going to the median nerve. **aortic p.**, nerve plexuses—(1) on either side and in front of the abdominal and (2) around the thoracic aorta. **p. arte'riae cer'e'bri anterio'ris** [B N A], a sympathetic plexus from the internal carotid running along the anterior cerebral artery. **p. arte'riae cer'e'bri me'diae** [B N A], a sympathetic plexus from the internal carotid plexus running along the middle cerebral artery. **p. articula'ris**, a small venous plexus near the outer aspect of the temporomaxillary articulation. **Auerbach's p.**, a plexus of the sympathetic nerve between the coats of the intestine. **axillary p.**, a plexus of lymph nodes and lymph vessels in the axilla. **basilar p., p. basila'ris**, the transverse sinus. See under *sinus*. **biliary p.**, a network of bile ducts said to be sometimes observable in the liver. **brachial p.**, a great nerve plexus of the neck and axilla, formed by the union of the anterior branches of the lower four cervical and the first dorsal nerve. It supplies the whole upper extremity, and its chief branches are the posterior thoracic, suprascapular, subscapular, internal cutaneous, musculocutaneous, musculospiral, circumflex, median, and ulnar nerves. **cardiac p., anterior or superficial**, a nerve plexus under the arch of the aorta. **cardiac p., deep or great**, a plexus situated in front of the tracheal fork. **carotid p., external**, a nerve plexus around the external carotid artery. **carotid p., internal**, a nerve plexus on the outer side of the internal carotid. **cavernous p.** 1. A nerve plexus situated within the cavernous sinus. 2. A nerve plexus at the root of the penis or clitoris derived from the vesical plexus and supplying the corpora cavernosa. **celiac p.**, a nerve plexus on or near the celiac axis. **cervical p.**, a nerve plexus opposite the four upper vertebrae, supplying the skin of the neck, shoulder, chest, occiput, and auricle, and sending communicating branches to the facial, pneumogastric, hypoglossal, spinal accessory, and muscular branches to the sternomastoid, platysma, trapezius, scaleni, anterior and lateral recti, and the diaphragm. **cervical p., posterior**, a nerve plexus in the posterior cervical region. **p. cervicobrachia'lis**, the cervical and brachial plexuses together. **choroid p.**, a vascular, fringed fold of the pia in the third, fourth, and lateral ventricles. The choroid plexuses secrete the cerebrospinal fluid. **choroid p., inferior**, the choroid plexus of the fourth ventricle. **coccygeal p.**, a nerve plexus near the dorsal surface of the coccyx. **colic p.'s, ileo-, middle, and right**, parts of the superior mesenteric plexus. **colic p., left**, a part of the inferior mesenteric plexus. **coronary p., anterior**, a plexus beneath the arch of the aorta. **coronary p., gastric**. Same as *gastric p.* **coronary p.,**

posterior, a nerve plexus at the dorsum of the heart. **crural p.**, a nerve plexus about the upper part of the femoral artery. **Cruveilhier's p.** 1. A nerve plexus of the back of the neck, derived from the great occipital and the first and second cervical nerves. 2. A form of angioma made up of a knot of varicose veins. **cystic p.**, a nerve plexus near the gallbladder. **deferential p.**, a sympathetic nerve plexus on the vas deferens and seminal vesicles, derived from the hypogastric plexus. **dental p.**, a nerve plexus around the roots of teeth of lower jaw. **diaphragmatic p.**, a nerve plexus near the phrenic artery. **dorsal p., ulnar**, a plexus formed by veins from the little finger and from the third and fourth interdigital clefts. **epigastric p.** Same as *solar p.* **esophageal p.**, a nerve plexus around the esophagus. **Exner's p.**, a layer of nerve fibers near the surface of the cerebral cortex. **extraspinal p.**, a network of large veins extending the entire length of the vertebral column beneath the multifidus spinæ muscle. **facial p.**, one surrounding a part of the facial artery. **femoral p.**, a nerve plexus derived from the iliac plexus, surrounding the femoral artery. **fundamental p.**, the deep stroma plexus. **gangliform p.**, a plexus from the roots of origin of the inferior maxillary nerve. **gastric p.**, one of the coronary plexuses of the triplanchnic system. **gastrooduodenal p.**, a branch of the celiac plexus. **gastro-epiploic p.**, a portion of the celiac plexus. **gastro-epiploic p., left**, a nerve plexus near the convex border of the stomach. **p. gu'lae**, the esophageal plexus. **Haller's p.**, the laryngeal plexus. **Heiler's p.**, an arterial network in the submucosa of the intestine. **hemorrhoidal p.'s, inferior and superior**, plexuses situated near the rectum. **hemorrhoidal venous p.**, a network of veins surrounding the lower part of the rectum. **hepatic p.**, a sympathetic nerve plexus near and within the liver. **Hovius' p.**, a venous plexus in the ciliary region connected with Schlemm's canal. **hypogastric p.**, a nerve plexus before the promontory of the sacrum. **hypogastric p., inferior**. Same as *pelvic p.* **ileocolic p.** See *colic p.* **iliac p., p. ili'acus**, the extension of the abdominal aortic plexus along the common iliac artery. **inferior rectal p.**, a plexus of sympathetic nerves connected with the pelvic plexus on either side, near the lower part of the rectum. **infra-orbital p.**, a nerve plexus situated under the levator labii superioris. **inguinal p.**, a lymphatic plexus situated near the end of the long saphenous vein and along the femoral artery and vein in the iliopectineal fossa. **ischadic p.**, the upper part of the sacral plexus. **Jacobson's p.**, the tympanic plexus. **jugular p.**, a lymph plexus along the internal jugular vein. **laryngeal p.**, a nerve plexus on the outer surface of the inferior constrictor of the pharynx: made up of branches of the sympathetic and external laryngeal nerves. **lateral p.**, the choroid plexus of the lateral ventricles of the brain. **Leber's p.** Same as *Hovius' p.* **p. lien'al'is**. Same as *splenic p.* **lingual p.**, a nerve plexus around the lingual artery. **lumbar p.**, a nerve plexus in the psoas muscle. **lumbosacral p.**, the lumbar, sacral, and pudendal plexuses together. **p. mag'nus profund'us**, the deep celiac plexus. **mammmary p.**, a lymphatic plexus along the internal mammary artery. **maxillary p.**, two plexuses (internal and external) on the maxillary arteries, derived from the external carotid plexus. **Meissner's p.**, a flat layer of nervous masses and fibrils in the submucosa of the stomach and small intestine. **mesenteric p., inferior**, a plexus surrounding the inferior mesenteric artery. **mesenteric p., superior**, a plexus that surrounds the superior mesenteric artery. **molecular p.** Same as *Exner's p.* **myenteric p.** Same as *Auerbach's p.* **nasopalatine p.**, a nerve plexus near the incisor foramen. **nerve p.**, the inter-

mingling of two or more nerves. **nervoproto-plasmic p's**, three systems of nerve elements contained in the three principal cortical layers of the brain substance. **nervous p.**, an interlacing of various kinds of nerve fibers. **obturator p.**, a plexus that surrounds the obturator nerve. **occipital p.**, a nerve plexus around the occipital artery. **ophthalmic p.**, a nerve plexus around the ophthalmic artery and the optic nerve. **ovarian p.** 1. A nerve plexus with distribution to the ovaries and the uterine fundus. 2. A venous plexus near the ovary. **pampiniform p.**, a network of spermatic veins or of ovarian veins; the spermatic plexus. **pancreatic p.**, a plexus that supplies the pancreas. **pancreaticoduodenal p.**, a plexus that sends filaments to the pancreas and duodenum. **Panizza's p's**, two plexuses of the deeper lymph vessels in the lateral fossae of the frenum of the prepuce. **p. parotideus**. Same as *p. anserinus*. **patellar p.**, a nerve plexus that supplies the region in front of the knee. **pelvic p's**, right and left, plexuses which supply the viscera and other plexuses of the pelvis. **pharyngeal p.** 1. A nerve plexus which supplies the pharynx, etc. 2. A venous plexus at the side of the pharynx. **phrenic p.**, a nerve plexus which sends filaments to the diaphragm and the suprarenal capsules. **polymorphic p.**, the most deep seated of the four plexuses of the cerebral cortical substance. **popliteal p.**, a nerve plexus derived from the femoral plexus surrounding the popliteal artery. **primary p.**, the deep stroma plexus. **prostatic p.**, a nerve plexus that supplies the bladder. **prostaticovesical p.**, a plexus of veins around the prostate and neck of the bladder. **pterygoid p.**, a venous plexus near the internal maxillary vein. **pubudal p.** 1. A plexus formed by the ventral branches of the third and fourth sacral nerves. 2. A venous plexus behind the pubis and surrounding the urethra and neck of the bladder. **pudendocaudal p.**, the pudendal and coccygeal plexuses together. **pulmonary p., anterior**, a nerve plexus situated before or ventrad to and supplying the root and substance of the lungs, both below and anteriorly. **pulmonary p., posterior**, a nerve plexus situated dorsad of and supplying the root of the lungs and the lung substance. **pyloric p.**, a nerve plexus which supplies the region of the pylorus. **Ranvier's p.** See *accessory p.* **Remak's p.**, Meissner's plexus. **renal p.**, a plexus near the great renal artery. **p. reticularis**, a network of vessels situated below the fornix of the brain. **sacral p.**, a nerve plexus situated ventrad of the sacrum. **sacral lymphatic p.**, a fine network of lymphatic vessels in the hollow of the sacrum. **Santorini's p.** 1. The vesicoprostatic or pudendal venous plexus. 2. A nerve plexus made up of filaments from the inferior maxillary nerve at the foramen ovale. **Sappey's subareolar p.**, a lymphatic plexus situated beneath the areola of the nipple. **solar p.**, a great network of nerves and ganglia on the dorsal aspect of the stomach, formed by the greater and a portion of the lesser splanchnic nerves and the right pneumogastric nerve, and giving off nerves to all the abdominal viscera. It has sometimes been called the *abdominal brain*. **spermatic p.**, a network or plexus of nerves around the spermatic vessels: it supplies the testes. **sphenoid p.**, the upper portion of the internal carotid plexus. **splenic p.**, a nerve plexus derived from the celiac plexus and accompanying the splenic artery. **Stenson's p.**, the venous network around Stenson's duct. **stroma p.**, a network formed by ramifications of the nerve fibrils of the cornea within the substantia propria. **stroma p., deep**, the more deeply seated portion of the stroma plexus. **subclavian p.**, a nerve plexus from the cervical ganglion accompanying the subclavian artery. **submolecular p.**, a plexus of the cerebral cortex lying just within Exner's plexus. **submucous p.** Same as

Meissner's p. **subpleural mediastinal p.**, an arterial plexus beneath the mediastinal pleura. **subsartorial p.**, a nerve plexus at the posterior border of the sartorius muscle, formed by branches of the obturator, long saphenous, and internal cutaneous nerves. **subtrapezius p.**, a nerve plexus situated under the trapezius muscle. **suprarenal p's**, right and left, nerve plexuses surrounding the suprarenal capsules. **thyroid p's**, inferior and superior, nerve plexuses supplying the larynx, pharynx, and the thyroid region. **tonsillar p.**, a nerve plexus going to the fauces, tonsil, and the soft palate. **tympenic p.**, a nerve plexus which supplies the tympanum. **uterine p.** 1. A nerve plexus which supplies the cervix and lower part of the uterus. 2. A venous plexus between the layers of the broad ligament. **uterovaginal p.**, an extension of the pelvic plexus along the upper part of the vagina and the cervix uteri. **vaginal p.** 1. The nerve plexus that supplies the vaginal walls. 2. A venous plexus near the outlet of the vagina. **vascular p., p. vasculo'sus**, a network of blood vessels. **venous p., p. veno'sus**, a network of veins. **vertebral p.**, a plexus of nerves situated around the basilar and vertebral regions. **vesical p.**, a plexus that surrounds the vesical arteries. **vesicoprostatic p.**, a venous plexus of the male corresponding to the pudendal (2) plexus of the female. **vidian p.**, a plexus made up of filaments from the vidian nerve. **Walther's arteriosonervous p.**, the cavernous plexus. **plica** (pli'kah), pl. *pli'cae*. Latin for *plait* or *fold*. **pli'cae adiposae** [B N A], folds of fat in the pleura. **p. alares** [B N A], the alar ligaments. **p. ampullaris** [B N A], one of the folds of the mucous coat lining the ampulla of the fallopian tube. **p. aryepiglottica** [B N A], the aryepiglottic fold. **p. axillaris anterior**, the anterior axillary fold. **p. axillaris posterior**, the posterior axillary fold. **p. caecalis** [B N A], either of the two folds of peritoneum forming the ascending mesocolon. **p. choroidea**, the fetal fold whence the choroid plexus is derived. **p. ciliaris** [B N A], ciliary fold. See *fold*. **p. circularis** [kerkrin'gi] [B N A], the transverse folds in the mucous membrane of the intestine. **p. conniventes**. Same as *valvulae conniventes*. **p. duodenojejunalis** [B N A]. See *duodenojejunal fold*, under *fold*. **p. epigastrica** [B N A], a line in the inner surface of the anterior abdominal wall, marking the course of the epigastric artery. **p. fimbriata** [B N A], the lobulated fold running backward and outward from the anterior extremity of the frenulum of the tongue. **p. gastropancreat'ica** [B N A], the gastropancreatic fold. **p. glosso-epiglottica** [B N A]. See *glosso-epiglottic fold*, under *fold*. **p. hypogast'rica**, a line on the posterior surface of the anterior abdominal wall formed by the lateral ligament of the bladder. **p. interdigita'lis**, the free border of the web between the fingers. **p. i'ridis** [B N A], one of numerous minute folds on the posterior surface of the iris. **p. lacrima'lis** [B N A], Huschke's valve. See *valve*. **p. luna'ta**, a fold of conjunctiva at the outer edge of the caruncula lacrimalis. **p. neuropath'ica**, a curled state of the hair caused by nervous disorder. **p. palma'tae**, the folds of the arbor vitae uterinus. **p. polonica** [L. "Polish plait"], a matted state of the hair, which becomes covered with crusts and vermin. **p. rec'tae**, transverse folds in the rectal mucosa. **p. retro-uteri'na** [B N A], Douglas' fold. See *fold*. **p. salpingopalatine** [B N A], the salpingopalatine fold. **p. semiluna'ris** [B N A], a fold of mucous membrane at the outer canthus of the eye. **p. semiluna'ris coli**, one of Peyer's patches. **p. semiluna'ris conjunctivae**, a small doubling of the conjunctiva on the outer side of the caruncula lacrimalis. **p. sigmoi'dea**, one of the ridges on the inner surface of the colon. **p. sublingua'lis** [B N A], the fold on the under surface of the tongue produced by the underlying

secretory duct of the sublingual gland. **p. synovialis** [B N A], a synovial fold. **p. synovia/lis patella/ris** [B N A], a fold of synovial membrane in the knee joint from below the level of the articular surface of the patella to the intercondyloid notch; called also *ligamentum mucosum*. **p. transversa/lis rect/i** [B N A], the valves of Houston. **p. triangularis** [B N A], the triangular fold where the glossopalatine arch joins the lateral border of the tongue. **p. tuba/ria** [B N A], any one of the folds of the mucous lining of the fallopian tube. **p. umbilica/lis latera/lis** [B N A]. Same as *p. hypogastrica*. **p. umbilica/lis me/dia** [B N A]. Same as *p. urachi*. **p. ura/chi**, a line on the posterior surface of the anterior abdominal wall, marking the course of the urachus. **p. ureter/ica** [B N A], a fold of mucous membrane passing from the opening of the ureter to the median line of the bladder. **p. ventricula/ris** [B N A], the false vocal cord. **p. vesica/lis transver/sa** [B N A], a fold of the peritoneum extending over the bladder when empty. **p. vestib/uli**, a ridge on the nasal septum. **p. villo/sa** [B N A], one of the folds of the mucous membrane of the stomach in the pyloric region. **p. voca/lis** [B N A], the true vocal cord.

plicadentin (pli-kah-den'tin) [L. *pli'ca* fold + *dentin*]. A modification of the dentin in which the fibers diverge in many lines from the central pulp cavity of the tooth.

plicate (pli'kät) [L. *pli'cat'us*]. Plaited or folded.

plication (pli-kä'shun). A folding; also the operation of taking tucks in the walls of a hollow organ in order to reduce its size.

plicotomy (pli-kot'o-me) [L. *pli'ca* fold + *τέμνω* to cut]. Surgical division of the posterior fold of the tympanic membrane.

pliers (pli'erz). Small tong-jawed pincers for bending metals or holding small objects. Various forms are much used in dental work.

Plimmer's bodies, salt (plim'erz) [Henry George Plimmer, English zoologist, 1857-1918]. See under *body* and *salt*.

plint, plinth (plint). An apparatus used in therapeutical gymnastics for the patient to sit or lie on.

plocach (plo'kāk). Sheep cholera.

Plombière's douche (plaw-be-ärz') [a French spa]. See under *douche*.

plombierung (plom-be-ar'ung) [Ger. "plugging"]. The operation of plugging defects in bone, such as osteomyelitis, with preparations of iodoform.

Plotz's bacillus (plots) [Harry Plotz, New York physician, born 1890]. See *Pusiformis typhi-exanthematici*.

plug (plug). A lumpy mass. **Corner's p.**, a piece of omentum inserted into a duodenal perforation as a temporary measure in cases which cannot be operated on at the time. **Dittrich's p's**, whitish, brownish, or yellowish masses found in the sputum or in the bronchial tubes in septic bronchitis and in gangrene of the lungs. **Ecker's p.**, a plug of cells in the primitive mouth of the gastrula. **Imlach's fat p.**, a mass of fatty tissue sometimes found at the mesial angle of the external inguinal ring. **Traube's p's**. Same as *Dittrich's p's*.

plugger (plug'er). A dental instrument for condensing and compacting amalgam or other fillings into a tooth cavity.

plumbagin (plum-ba'jin). An irritant substance obtained from the root of *Plumbago zeylan'ica*: used as an abortifacient.

plumbago (plum-ba'go). See *graphite*.

plumbi acetas, and other terms beginning with **plumbi**. See under *lead*.

plumbic (plum'bik) [L. *plum'bicus* leaden]. Pertaining to or containing lead.

plumbism (plum'bizm). Lead poisoning.

plumboxan (plum-bok'san). A proprietary preparation which, on being treated with steam at a high temperature, gives off oxygen.

plumbum (plum'bum). Latin for *lead*.

Plummer's disease (plum'erz) [Henry S. Plummer, contemporary American physician]. The development of toxicity (hyperthyroidism) in simple adenoma of the thyroid.

Plummer's pills (plum'erz) [Andrew Plummer, Scottish physician, died 1756]. See *pill*.

plummet (plum'et). A bullet of lead or metallic antimony formerly swallowed for the relief of obstinate constipation.

plumose (plu'mōs) [L. *plumo'sus*, Fr. *plu'ma* feather]. Feathery; resembling a feather.

plumula (plum'u-lah). A set of delicate cross-furrows on the upper wall of the aqueduct of Sylvius.

pluri- [L. *plus* more]. A prefix meaning *more*.

pluriceptor (plu-ris-ep'tor) [L. *plus* more + *cap'ere* to take]. A receptor which has more than two complementophil groups.

pluricordonal (plu-rik-or'don-al). See under *cell*.

pluriglandular (plu-rig-lan'du-lar). Pertaining to, derived from, or affecting several glands.

plurigravida (plu-rig-rav'id-ah) [L. *plus* more + *grav'ida* pregnant]. A woman pregnant for the third time or more.

plurilocular (plu-ril-ok'u-lar). Same as *multilocular*.

plurinuclear (plu-rin-u'kle-ar) [L. *plus* more + *nucleus*]. Having several nuclei.

pluripara (plu-rip-ah'rah) [L. *plus* more + *par'ere* to bear]. A woman who has borne several children.

pluriparity (plu-rip-ar'it-e). The fact or condition of having borne several children.

pluripolar (plu-rip-o'lar). Having several poles, said of ganglion cells, etc.

plutomania (plu-to-ma'ne-ah) [πλούτος riches + *μανία* madness]. The insane belief of a patient that he is very rich.

P. M. B. Abbreviation for *polymorphonuclear basophil leukocytes*.

P. M. E. Abbreviation for *polymorphonuclear eosinophil leukocytes*.

P. M. N. Abbreviation for *polymorphonuclear neutrophil leukocytes*.

pnein (pne'in) [πνεῖν breath]. A hypothetical substance supposed to be present in the tissues and to act as an accelerator of the oxidizing activities of the tissues.

pneocardiac reflex (ne-o-kar'de-ak) [πνεῖν breath + *καρδία* heart]. See under *reflex*.

pneodynamics (ne'o-di-nam'iks) [πνεῖν to breathe + *dynamics*]. The dynamics of respiration.

pneogaster (ne'o-gas-ter) [πνεῖν to breathe + *γαστήρ* the belly]. The respiratory tract of the embryo.

pneograph (ne'o-graf) [πνεῖν to breathe + *γράφειν* to record]. A device for registering the respiratory movements: used for diagnostic purposes.

pneometer (ne-om'et-er) [πνεῖν to breathe + *μέτρον* measure]. A form of spirometer, or device for measuring the air inspired and expired.

pneophore (ne'o-för) [πνεῖν to breathe + *φορέειν* to carry]. An instrument to aid in effecting artificial respiration.

pneopneic reflex (ne-o-pne'ik) [πνεῖν to breathe]. See under *reflex*.

pneoscope (ne'o-skōp) [πνεῖν to breathe + *σκοπεῖν* to view]. See *pneumograph*.

pneumarthrosis (nu-mar-thro'sis) [πνεῦμα air + *ἄρθρος* joint]. 1. The presence of gas or air in a joint. 2. The inflation of a joint with oxygen for the purpose of aiding roentgenographical examination.

- pneumascopes** (nu'mas-kōp) [πνεῖν to breathe + σκοπεῖν to view]. An instrument for measuring the movements of the thorax in respiration.
- pneumascos** (nu-mas'kos) [πνεῦμα air + ἄσκος sac]. Pneumoperitoneum.
- pneumathemia** (nu-math-e'me-ah) [πνεῦμα air + αἷμα blood]. The presence of air or gas in the blood vessels.
- pneumatic** (nu-mat'ik) [L. *pneumaticus*; πνευματικός]. Of or pertaining to air or respiration.
- pneumatics** (nu-mat'iks). The science which deals with the physical properties of gases.
- pneumatins** (nu'mat-in-u're-ah). Same as *pneumaturia*.
- pneumatism** (nu'mat-izm) [πνεῦμα breath]. The doctrine of the Pneumatists.
- Pneumatists** (nu'mat-istz). A school or sect of ancient medicine, founded by Athenaeus of Attalia, who practised in Rome in the middle of the first century. Their system of medicine was based upon the action and constitution of the *pneuma* or vital air which passed from the lungs into the heart and arteries and was thence disseminated throughout the body. Other members of this school were Agathinus of Sparta, Archigenes of Apamea, Arataeus of Cappadocia, and Antylus.
- pneumatocardia** (nu'mat-o-kar'de-ah) [πνεῦμα air + καρδιά heart]. The presence of air in the heart.
- pneumatocoele** (nu-mat'o-sēl) [πνεῦμα air + κήλη hernia]. 1. Hernial protrusion of the lung tissue. 2. A tumor or sac containing gas; especially, a gaseous swelling of the scrotum.
- pneumatodyspnea, pneumatodyspnoea** (nu'ma-to-disp-ne'ah) [πνεῦμα air + δυσπnea]. Difficulty in breathing due to emphysema.
- pneumatogram** (nu-mat'o-gram) [πνεῦμα air + γράμμα writing]. The tracing or record made by a pneumatograph.
- pneumatograph** (nu-mat'o-graf) [πνεῦμα air + γράφω to record]. A device for registering the movements of the chest wall.
- pneumatology** (nu-mat-o'l-o-je) [πνεῦμα air + λόγος treatise]. The sum of what is known regarding gases and air and their therapeutical and other properties.
- pneumatometer** (nu-mat-om'et-er) [πνεῦμα air + μέτρον measure]. A form of spirometer, or instrument for measuring the air inspired and expired.
- pneumatometry** (nu-mat-om'et-re). The measurement of the air inspired and expired.
- pneumatophore** (nu-mat'o-for) [πνεῦμα air + φόρος bearing]. An apparatus consisting of a bag with a tube and mouthpiece, which may be attached to the body. The bag contains oxygen, to be breathed by the wearer in rescue work in mines, etc.
- pneumatiorachis** (nu-mat-or'ak-is) [πνεῦμα air + ράχis spine]. The presence of gas in the vertebral canal.
- pneumatoscope** (nu-mat'os-kōp) [πνεῦμα air + σκοπεῖν to see]. 1. A device for determining the absence or presence of pus in the air cells of the mastoid process of the temporal bone. It consists of a sound receiver placed in the patient's mouth and connected with his ears by tubes. A tuning-fork placed upon the mastoid will be heard longer over a healthy portion than over a diseased portion. 2. An instrument devised by Gabritschewsky for auscultating the percussion of the thorax from the mouth.
- pneumatosis** (nu-mat-o'sis) [πνευμάτωση]. The presence of air or gas in an abnormal situation in the body. **p. cystoides intestinalis**, the presence of gas containing cysts in the mucous membrane of the intestines.
- pneumatotherapy** (nu'mat-o-ther'ap-e) [πνεῦμα air + therapy]. The treatment of disease by rarefied or condensed air.
- pneumatothorax** (nu'mat-o-tho'raks). Same as *pneumothorax*.
- pneumaturia** (nu-mat-u're-ah) [πνεῦμα air + οὐρον urine]. Passage of urine charged with air or gas.
- pneumatype** (nu'mat-tp) [πνεῦμα air + τύπος type]. A breath picture; a deposition of moisture upon a glass surface from the exhaled air: used in the diagnosis of nasal obstructions.
- pneumectomy** (nu-mek'to-me) [πνεύμων lung + ἐκτομή excision]. The excision of lung tissue.
- pneumin** (nu'min). Methylene creosote: a tasteless yellowish powder: used in tuberculosis.
- pneumobacillin** (nu'mo-bas-il'in). A poisonous substance extracted from the pneumobacillus.
- pneumobacillus** (nu'mo-bas-il'us) [πνεύμων lung + bacillus]. The *Bacterium mucosum capsulatum*.
- pneumobacterin** (nu-mo-bak'ter-in). See *pneumococcus vaccine*, under *vaccine*.
- pneumobulbar, pneumobulbous** (nu-mo-bul'bar, nu-mo-bul'bus). Pertaining to the lungs and to the oblongata.
- pneumocoele** (nu'mo-sēl) [πνεύμων lung + κήλη tumor]. Hernial protrusion of lung tissue through the chest wall.
- pneumocentesis** (nu'mo-sen-te'sis) [πνεύμων lung + κέντησις puncture]. Surgical puncture of a lung for the purpose of evacuating a cavity.
- pneumocephalus** (nu-mo-sef'al-us) [πνεῦμα air + κεφαλή head]. Air within the cranial cavity.
- pneumochirurgia** (nu'mo-ki-rur'je-ah) [πνεύμων lung + χειρουργία surgery]. Surgery of the lungs.
- pneumochysis** (nu-mok'is-is). Pulmonary edema, or serous infiltration of the lung.
- pneumococcal** (nu-mo-kok'al). Pertaining to or caused by pneumococci.
- pneumococcemia** (nu'mo-kok-se'me-ah). The presence of pneumococci in the blood.
- pneumococcus** (nu-mo-kok'us) [πνεύμων lung + κόκκος berry]. The organism, *Diplococcus pneumoniae*, which causes lobar pneumonia. It is a small, slightly elongated coccus, one end of which is pointed or lance shaped, and commonly occurs in pairs. Four types or strains are recognized, based on immunity reactions, and distinguished as Types I, II, III, and IV. Types I and II cause about 60 per cent of all cases of lobar pneumonia. Type III, about 20 per cent. The immunity reactions of these three types are fairly constant. Type IV is composed of a number of strains differing from one another in serological reactions and rarely found in cases of pneumonia ending fatally. The pneumococcus is also called *Diplococcus pneumoniae*, *Micrococcus lanceolatus*, *Streptococcus pneumoniae*, and Fränkel's *pneumococcus*. **P. flavus**, **P. guttaceus**, **P. lichenoides**, lung bacilli found in the contagious pleuropneumonia of cattle.
- pneumocolon** (nu-mo-ko'lon) [πνεῦμα air + colon]. Inflation of the colon as an aid to diagnosis.
- pneumoconiosis** (nu'mo-ko-ne-o'sis) [πνεύμων lung + κόνις dust]. Same as *pneumonoconiosis*.
- pneumoderma** (nu-mo-der'mah) [πνεῦμα air + δέρμα skin]. Subcutaneous emphysema; air beneath the skin.
- pneumodograph** (nu-mod'o-graf) [πνεῦμα breath + ὁδός way + γράφω to write]. An apparatus for registering the degree of respiratory nasal efficiency.
- pneumodynamics** (nu'mo-di-nam'iks) [πνεῦμα breath + δύναμις force]. The dynamics of the respiratory process; the study of the forces exerted in the act of breathing.
- pneumo-empyema** (nu'mo-em-pi-e'mah). Empyema marked by the presence of gas.
- pneumo-encephalomyelography** (nu'mo-en-sef'al-o-mi-el-og'raf-e). Roentgen examination of the cerebrospinal spaces after the introduction of air into them.
- pneumo-enteritis** (nu'mo-en-ter-i'tis) [πνεύμων

lung + *ἐντερὸν* intestine]. Inflammation of the lung and intestine.

pneumo-erysipelas (nu''mo-er-is-ip'el-as). Erysipelas complicated with pneumonia.

pneumogalactocoele (nu''mo-gal-ak'to-sēl) [*πνεῦμα* air + *γάλα* milk + *κῆλη* tumor]. A tumor containing gas and milk.

pneumogastric (nu-mo-gas'trik) [*πνεύμων* lung + *γαστήρ* stomach]. Pertaining to the lungs and stomach. **p. nerve**. See *nerve*.

pneumogram (nu'mo-gram). The tracing or graphic record of respiratory movements.

pneumograph (nu'mo-graf) [*πνεύμων* lung + *γράφειν* to record]. An instrument for registering the respiratory movements.

pneumography (nu-mog'raf-e) [*πνεύμων* lung + *γράφειν* to write]. 1. An anatomical description of the lungs. 2. Graphic recording of the respiratory movements. 3. Roentgenological photography of a part after injection of oxygen; pneumoradiology. **cerebral p.**, radiological examination of the brain after the injection of oxygen or indigo carmine into the cerebral ventricles; pneumoventriculography.

pneumohemopericardium (nu''mo-he''mo-per-ekar'de-um) [*πνεῦμα* air + *αἷμα* blood + *περικάρδιον*]. The collection of air and blood in the pericardium.

pneumohemothorax (nu''mo-hem-o-tho'raks) [*πνεῦμα* air + *αἷμα* blood + *θώραξ* chest]. The presence of air or gas and blood in the pleural cavity.

pneumohydrometra (nu-mo-hi-dro-me'trah) [*πνεῦμα* air + *ὕδωρ* water + *μήτρα* uterus]. A collection of gas and fluid in the uterus.

pneumohydropericardium (nu''mo-hi''dro-per-ekar'de-um) [*πνεῦμα* air + *ὕδωρ* water + *περικάρδιον*]. A collection of air or gas and serum in the pericardium.

pneumohydrothorax (nu''mo-hi-dro-tho'raks) [*πνεῦμα* air + *ὕδωρ* water + *θώραξ* chest]. A collection of air or gas and a liquid in the thorax.

pneumohypoderma (nu''mo-hi-po-der'mah) [*πνεῦμα* air + *ὑπό* under + *δέρμα* skin]. Escape of air into the subcutaneous tissues.

pneumokidney (nu'mo-kid-ne) [*πνεῦμα* air + kidney]. See *pneumopyelography*.

pneumokoniosis (nu''mo-ko-ne-o'is). See *pneumomocniosis*.

pneumolith (nu'mo-lith) [*πνεύμων* lung + *λίθος* stone]. A pulmonary calculus or concretion.

pneumolithiasis (nu''mo-lith-i'as-is). The presence of concretions in the lungs.

pneumology (nu-mol'o-je) [*πνεύμων* lung + *λόγος* treatise]. The study of disease of the air passages.

pneumolysis (nu-mol'is-is) [*πνεύμων* lung + *λῑσις* loosening]. The operation of stripping the pleura from the fascia of the thoracic wall in order to allow the lung to collapse; called also *extra-pleural p.* and *pleurolysis*. In *intrapleural p.* the lung is freed by separating the parietal from the visceral pleura.

pneumomalacia (nu''mo-mal-a'se-ah) [*πνεύμων* lung + *μαλακία* softness]. Morbid softness of lung tissue.

pneumomassage (nu''mo-mas-ahzh') [*πνεῦμα* air + *μάσσειν*]. Air massage of the tympanum.

pneumomelanosus (nu''mo-mel-an-o'is) [*πνεύμων* lung + *μελάνος*]. The blackening of the lung tissue by inhaled coal dust.

pneumometer (nu-mom'et-er). Same as *pneumatometer*.

pneumomycosis (nu''mo-mi-ko'sis) [*πνεύμων* lung + *μυκῑσις*]. Any lung disease due to schizomycetes.

pneumomyelography (nu''mo-mi-el-og'raf-e) [*πνεῦμα* air + *μῑελος* marrow + *γράφειν* to record]. The roentgen-ray examination after the injection of gas (oxygen) into the spinal canal.

pneumonectasia, pneumonectasis (nu''mon-ek-ta'ze-ah, nu-mon-ek'tas-is) [*πνεύμων* lung + *ἐκτασις* extension]. Emphysema of the lungs.

pneumonectomy (nu-mo-nek'to-me). Same as *pneumectomy*.

pneumonedema (nu''mo-ne-de'mah) [*πνεύμων* lung + *ἕδεμα*]. Edema of the lungs.

pneumonemia (nu-mo-ne'me-ah) [*πνεύμων* lung + *αἷμα* blood]. Congestion of the lungs.

pneumonia (nu-mo'ne-ah) [*πνευμονία*]. Inflammation of the lungs; especially the disease known as croupous or lobar pneumonia. See *lobar p.* **abortive p.**, a form with a short and favorable course. **acute p.**, lobar pneumonia. **alcoholic p.**, the lobar pneumonia of drunkards. **anthrax p.**, anthrax of the lung. **apex p.**, **apical p.**, croupous pneumonia limited to the apex of the lung. **aspiration p.**, pneumonia due to the inhalation of dust, food, or other foreign material. **bilious p.**, lobar pneumonia attended with jaundice. **bronchial p.** Same as *catarrhal p.* **Buhl's desquamative p.**, caseous pneumonia in which the exudate is composed chiefly of desquamated alveolar epithelium. **caseous p.** Same as *cheesy p.* **catarrhal p.**, a variety in which the bronchioles become clogged with a mucopurulent exudate, forming consolidated patches in single lobes, which may extend to large areas. It occurs especially in children. Called also *bronchial p.*, *lobular p.*, and *bronchopneumonia*. **central p.**, lobar pneumonia beginning in the interior of a lobe of the lung. **cerebral p.**, a pneumonia usually apical and having severe head symptoms. **cheesy p.**, a pneumonia in which the alveoli become filled with necrosed cells and the cut surface looks like cheese. **chronic p.**, a long-continuing form, usually fibrous. **contusion p.**, a pneumonia following an injury. **core p.** Same as *central p.* **croupous p.** Same as *lobar p.* **deglutition p.**, pneumonia from the entrance of food into the lungs. **Desnos' p.**, massive pneumonia; splenopneumonia. **desquamative p.**, chronic lobar pneumonia with hardening of the fibrous exudate and proliferation of the interstitial tissue and epithelium of the lung. Called also *parenchymatous p.* and *primary indurative p.* **double p.**, that which affects both lungs. **embolic p.**, pneumonia due to embolism of a blood vessel or vessels of the lungs. **ephemeral p.**, that in which the signs of pneumonia disappear after two days. Called also *congestion of the lungs*. **ether p.**, pneumonia occurring after anesthesia by ether. **fibrous p.** Same as *lobar p.* **fibrous p.**, a form characterized by an increase of the interstitial and stomatic elements. See *interstitial p.* **Friedländer's bacillus p.**, lobar pneumonia caused by Friedländer's bacillus, *Bacterium mucosum capsulatum*. **gangrenous p.**, gangrene of the lung. **hypostatic p.**, a pneumonia due to dorsal decubitus in weak or aged persons. **indurative p.** See *desquamative p.* **inhalation p.**, pneumonia caused by the inhalation of foreign matter, as dust, food, etc. **interstitial p.**, chronic fibrous pneumonia: a chronic form of pneumonia with increase of the interstitial tissue and decrease of the proper lung tissue, with induration. Called also *cirrhosis of the lung* and *fibroid phthisis*. **larval p.**, an attack presenting the initial symptoms of the disease only. **lobar p.**, an acute febrile disease produced by the *Diplococcus pneumoniae*, and marked by inflammation of one or more lobes of the lung, together with consolidation. It is attended with chill, followed by sudden elevation of temperature, dyspnea, rapid breathing, pain in the side, and cough, with blood-stained expectoration. The symptoms abate after a week. It usually begins in the lower lobe, the lung being at first intensely congested (*stage of congestion or engorgement*), and afterward becoming red and solid from accumulation of exudate and blood cells in the alveoli (*red hepatization*), and later gray (*gray hepatization*), from degeneration of the

- exudates, which are finally absorbed. Called also *croupous p.*, *fibrinous p.*, *lung fever*, and *pneumonic fever*. **lobular p.**, catarrhal pneumonia. **massive p.**, lobar pneumonia with solidification of the air cells, bronchi, or even an entire lung. **metastatic p.**, suppurative pneumonia due to metastasis in pyemia. **migratory p.**, pneumonia gradually involving one lobe of the lung after another. **parenchymatous p.** Same as *desquamative p.* **plague p.** Same as *pneumonic p.* See *plague*. **pleuritic p.** Same as *pleuropneumonia*. **pleurogenic p.**, **pleurogenetic p.**, that which is secondary to pleural disease. **pseudopleuritic p.** See *Desnos' p.* **purulent p.**, a form characterized by the formation of pus. **secondary p.**, inflammation of the lungs coming on as a complication of an infectious disease. **septic p.**, a form due to septic poison, and often lobular. **stable p.**, epizootic pleuropneumonia in horses. **Stoll's p.**, pneumonia with gastrohepatic complications. **streptococcus p.**, an epidemic type of pneumonia caused by the *Streptococcus haemolyticus*. **stripe p.**, a type in which the affected part takes the form of an upright stripe. **superficial p.**, a form which affects only the parts near the pleura. **suppurative p.**, pneumonia with formation of abscesses in the lungs. **terminal p.**, lobar pneumonia developing during some other disease and hastening a fatal termination. **toxic p.**, infection of the system with pneumococci without marked lung involvement. **traumatic p.**, inflammation of the lung following a wound of the lung or chest. **typhoid p.**, an asthenic form of pneumonia with typhoid symptoms. **vagus p.**, pneumonia due to injury of the pneumogastric nerve. **wandering p.** See *migratory p.* **white p.**, indurative syphilitic pneumonia of the new-born; infantile syphilitic pneumonia with a white, fatty degeneration of the lung. **wool-sorters' p.**, anthrax pneumonia.
- pneumonic** (nu-mon'ik) [πνευμονικός]. Pertaining to the lung or to pneumonia.
- pneumonitis** (nu-mo-ni'tis). Same as *pneumonia*.
- pneumonocele** (nu-mon'o-sēl). Same as *pneumocoele*.
- pneumonocentesis** (nu-mo'no-sen-te'sis). Pneumocentesis.
- pneumono-chirurgia** (nu-mo'no-ki-rur'je-ah). Surgery of the lung.
- pneumono-cirrhosis** (nu'mo-no-sir-o'sis) [πνεύμων lung + cirrhosis]. Cirrhosis, or hardening, of a lung.
- pneumono-coccus** (nu-mo-no-kok'us). Same as *pneumococcus*.
- pneumono-coniosis, pneumonokoniosis** (nu-mo'no-ko-ne-o'sis) [πνεύμων lung + κόνις dust]. Lung disease due to the inhalation of minute particles. It is attended by fibroid induration and pigmentation. See *aluminosis, anthracosis, asbestosis, byssinosis, chalicosis, pilosis, siderosis, silicosis, and tabacosis*. **p. siderot'ica**. Same as *siderosis*.
- pneumono-enteritis** (nu-mo'no-en-ter-i'tis). Pneumo-enteritis.
- pneumono-erysipelas** (nu-mo'no-er-is-ip'e-las). Pneumo-erysipelas.
- pneumono-lysis** (nu-mo-nol'is-is). Same as *pneumolysis*.
- pneumono-melanosis** (nu-mo'no-mel-an-o'sis) [πνεύμων lung + μέλας black]. Melanosis of the lung tissue.
- pneumono-meter** (nu-mon-om'et-er) [πνεύμων lung + μέτρον measure]. A form of spirometer.
- pneumono-mycosis** (nu-mo'no-mi-ko'sis). Same as *pneumomycosis*.
- pneumono-paludism** (nu-mo'no-pal'u-dizm). Pneumopaludism.
- pneumono-paresis** (nu-mo'no-par'es-is). Pneumoparesis.
- pneumonopathy** (nu-mo-nop'ath-e) [πνεύμων lung + πάθος disease]. Any lung disease.
- pneumono-pexy** (nu-mo'no-peks-e). Same as *pneumopexy*.
- pneumono-phthisis** (nu-mon-of-thi'sis). Pulmonary tuberculosis.
- pneumono-pleuritis** (nu-mo'no-plu-ri'tis). Pneumopleuritis.
- pneumono-rrhagia** (nu-mo-no-ra'je-ah). Pneumorrhagia.
- pneumono-rrhaphy** (nu-mo-nor'af-e) [πνεύμων lung + ράφη suture]. Suture of the lung.
- pneumonosis** (nu-mo-no'sis) [πνεύμων lung + νόσος disease]. Any lung disease.
- pneumono-therapy** (nu-mo-no-ther'ap-e). Pneumotherapy.
- pneumono-tomy** (nu-mo-not'o-me) [πνεύμων lung + τέμνειν to cut]. Surgical incision of the lung.
- pneumonyssus** (nu-mo-ni'sus). A mite found in the lungs of monkeys.
- pneumo-oxygenator** (nu'mo-ok'se-jen-a-tor). An apparatus for administering long inhalations of large quantities of oxygen.
- pneumopaludism** (nu-mo-pal'u-dizm) [πνεύμων lung + L. palus swamp]. Disease of the lungs of malarial origin. One form, known as *de Bruns' disease*, consists of solidification of the upper part of one or both lungs. It is attended with cough and attacks of fever.
- pneumoparesis** (nu-mo-par'es-is) [πνεύμων lung + paresis]. A lung disease marked by progressive congestion and infiltration of the vesicles of the lung.
- pneumopericardium** (nu'mo-per-ik-ar'de-um) [πνεύμα air + περικάρδιον pericardium]. The presence of air or gas in the pericardium. It is marked by tympanitic resonance over the precordia and metallic heart sounds.
- pneumoperitoneal** (nu'mo-per-it-o-ne'al). Marked by air in the peritoneum: a term applied to roentgen-ray examination in which the peritoneal cavity is inflated with air or gas injected through a puncture in the abdomen.
- pneumoperitoneum** (nu'mo-per-it-o-ne'um) [πνεύμα air + περιτонеύμ]. 1. The presence of gas or air in the peritoneal cavity. 2. Injection of oxygen or other gas into the peritoneal cavity for radiographic purposes.
- pneumoperitonitis** (nu'mo-per-it-o-ni'tis) [πνεύμα air + περιτονίτις]. Peritonitis with the accumulation of air or gas in the peritoneal cavity.
- pneumopexy** (nu'mo-peks-e) [πνεύμων lung + πήξις fixation]. Surgical fixation of the lung to the thoracic wall.
- pneumopleuritis** (nu'mo-plu-ri'tis). Inflammation of the lungs and pleura.
- pneumopleuroparietopexy** (nu'mo-plu'ro-pa-ri-et-o-peks-e) [πνεύμων lung + πλευρά + parietal + πήξις fixation]. The operation of suturing the lung with its parietal pleura to the margin of a thoracic wound.
- pneumoprotein** (nu-mo-pro'te-in). A principle derived from the pneumococcus by the action of glycerin and water.
- pneumopyelography** (nu'mo-pi-el-og-raf-e) [πνεύμα air + πύελος pelvis + γράφειν to write]. Pyelography in which oxygen, instead of an opaque solution, is injected into the kidney pelvis.
- pneumopypericardium** (nu'mo-pi'o-per-ik-ar'de-um) [πνεύμα air + πύον pus + περικάρδιον pericardium]. The presence of air or gas and pus in the pericardium.
- pneumopyothorax** (nu'mo-pi-o-tho'raks) [πνεύμα air + πύον pus + θώραξ thorax]. The presence of air and pus in the pleural cavity.
- pneumorachis** (nu-mo-ra'kis) [πνεύμα air + ράχis spine]. 1. The presence of a gaseous collection in the spinal cord. 2. The injection of gas into the

spinal canal for the facilitation of roentgenological examination.

pneumoradiography (nu''mo-ra-de-og'raf-e) [*πνεῦμα* air + *radiography*]. Radiography of a part following the injection of oxygen, as in pneumoperitoneum.

pneumorrhagia (nu-mor-a'je-ah) [*πνεῦμον* lung + *ῥηγνῖναι* to burst forth]. 1. Hemorrhage from the lungs. 2. Pulmonary apoplexy.

pneumosan (nu''mo-san). A proprietary preparation for use by injection in tuberculosis. It is said to be amylthiotrimethylamine chloride.

pneumoscope (nu''mo-skōp) [*πνεῦμα* air + *σκοπεῖν* to see]. An instrument for showing the respiratory power.

pneumosepticemia (nu''mo-sep-tis-e'me-ah). Influenzal pneumonia of an extreme and fatal form.

pneumoserosa (nu-mo-se-ro'sah). Injection of air into a joint cavity for roentgenoscopy.

pneumoserorhax (nu''mo-se-ro-tho'raks) [*πνεῦμα* air + *serum* + *θώραξ* thorax]. The presence of gas and serum in the thoracic cavity.

pneumotherapy (nu-mo-ther'ap-e). 1. Same as *pneumatotherapy*. 2. The treatment of diseases of the lungs.

pneumothermomassage (nu''mo-ther''mo-mas-ahzh') [*πνεῦμα* air + *θερμῆ* heat + *μάσση* massage]. The application to the body of hot condensed air that has been medicated.

pneumothorax (nu-mo-tho'raks) [*πνεῦμα* air + *θώραξ* thorax]. An accumulation of air or gas in the pleural cavity. The air enters either by an external wound, a lung perforation, from burrowing abscesses, or from the rupture of a superficial lung cavity. Pneumothorax is apt to be of sudden onset, and to be announced by collapse. It is attended with sudden and severe pain and rapidly increasing dyspnea. Percussion shows a wide diffusion of the tympanitic sound over the dilated side. There are no râles, but dullness is present as fluid forms, and fluctuation or succussion, and a metallic echo on strong percussion over the air. When a communication exists with the bronchi, metallic respiration or tinkling is heard. **artificial p.**, pneumothorax induced intentionally by artificial means, as by the injection of nitrogen gas; employed in the treatment of pulmonary tuberculosis. Cf. *Forlanini treatment*, under *treatment*. **valvular p.**, that which is characterized by an aperture through the pleura which has a slit with a valvelike action.

pneumotomy (nu-mot'o-me). Same as *pneumotomy*.

pneumotoxin (nu-mo-toks'in). A toxin produced by the bacteria of pneumonia, and thought to be the cause of the symptoms of lobar pneumonia.

pneumotropic (nu-mo-trop'ik). Having a selective affinity for pneumococci.

pneumotyphoid (nu-mo-ti'foid). Typhoid with unusual localization of the lesions in the lungs.

pneumotyphus (nu-mo-ti'fus). Pneumonia concurrent with typhoid fever.

pneumouria (nu-mo'u-re-ah). Same as *pneumaturia*.

pneumoventricle (nu-mo-ven'trik-l). Pneumoventriculi.

pneumoventriculi (nu''mo-ven-trik'u-li) [*πνεῦμα* air + *ventriculus* ventricle]. Presence of air in the cerebral ventricles.

pneumoventriculography (nu''mo-ven-trik-u-log'raf-e). Radiography of the cerebral ventricles

which have been injected with oxygen after withdrawing a corresponding amount of cerebrospinal fluid.

pneusis (nu'sis) [Gr.]. 1. Respiration. 2. Anhelation.

pneusometer (nu-som'et-er) [*πνεῦσις* blowing + *μέτρον* measure]. A spirometer.

pnigophobia (ni-go-fō-be-ah) [*πνίγος* choking + *φόβος* fear]. Abnormal dread of choking.

Pocill. Abbreviation for *L. pocillum*, a small cup.

pock (pok). A pustule, especially of smallpox. **p.-marked**, scarred or pitted as a result of smallpox.

pocket (pok'et). A sac-shaped cavity. In dentistry, an abnormal space formed between a tooth root and the gum. **accessory p.**, an extension on the roentgenographic shadow of the stomach caused by the extension of a perforated gastric ulcer into adjacent tissue. **oral p.**, **Rathke's p.** Same as *Rathke's pouch*. See under *pouch*. **Seesal's p.**, a depression in the pharyngeal membrane of the embryo.

podeking (pok'et-ing). The enclosure of the pedicle in ovariotomy within the edges of the external wound.

Pocul. Abbreviation for *L. poculum*, cup.

poculum (pok'u-lum). Latin for *cup*. **p. Diogenis**, Diogenes' cup; the hollowed palm of the hand.

podagra (pod-ag'rah, pod-ag-rah) [L.; *ποδάγρα*; *ποῦς* foot + *ἄγρα* seizure]. Gout, more especially gout in the feet.

podagral (pod-ag'ral). Affected with gout.

podagric (pod-ag'rik) [L. *podagricus*; *ποδαγρικός*]. Gouty.

podagrous (pod-ag-rus) [L. *podagrosus*]. Gouty.

podalgia (pod-al'je-ah) [*ποῦς* foot + *ἄλγος* pain]. Pain in the foot, as from gout or rheumatism.

podalic (pod-al'ik) [*ποῦς* foot]. Accomplished by means of the feet; footling.

podarthritis (pod-ar-thri'tis) [*ποῦς* foot + *arthritiis*]. Inflammation of the joints of the feet.

podasteroid (pod-as'ter-oid) [*ποῦς* foot + *ἄσθηρ* star + *εἶδος* form]. Having a stellate foot or pedicle.

podelkoma (pod-el-ko'mah) [*ποῦς* foot + *ἔλκωμα* ulcer]. Mycetoma; actinomycosis of the foot.

podencephalus (pod-en-sef'al-us) [*ποῦς* foot + *ἐγκέφαλος* brain]. A monster fetus the brain of which, without cranium, hangs by a pedicle.

podiatrist (pod-i'at-ris). One who practises podiatry; a chiropodist.

podiatry (pod-i'at-re) [*ποῦς* foot + *ιατρεία* healing]. That branch of medicine which has to do with the care of the human foot in health and disease; chiropody.

podobromidrosis (pod''o-brom-id-ro'sis) [*ποῦς* foot + *βρῶσις* stench + *ἰδρῶς* sweat]. Fetid perspiration of the feet.

pododerm (pod'o-derm) [*ποῦς* foot + *δέρμα* skin]. That portion of the skin which is continued downward within the horn capsule of the hoof of an animal.

pododynamometer (pod''o-di-nam-om'et-er). A device for determining the strength of the leg muscles.

pododynia (pod-o-din'e-ah) [*ποῦς* foot + *δύνη* pain]. Neuralgic pain of the heel and sole; burning pain without redness in the sole of the foot; seen in tailors.

podogram (pod'o-gram) [*ποῦς* foot + *γράμμα* mark]. A print of, or an outline tracing of, the sole of the foot.

podograph (pod'o-graf) [*ποῦς* foot + *γράφειν* to write]. An instrument for making a podogram.

podology (po-dol'o-je) [*ποῦς* foot + *λόγος* treatise]. The study of the feet.

podophyllin (pod-o-fil'in) [L. *resina podophylli*]. The purgative yellow resin of *Podophyllum peltatum*. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.008–0.033 Gm.).

podophylloquercitin (pod'ô-fil'ô-kwer-si'tin). A crystallizable principle from podophyllum: said to have no remedial value.

podophyllotoxin (pod'ô-fil-o-toks'in). A poisonous cathartic resin, $C_{20}H_{16}O_6(OC_2H_5)_3 + 13H_2O$, from *Podophyllum peltatum*. Dose, $\frac{1}{10}$ – $\frac{1}{5}$ grain (0.001–0.006 Gm.).

podophyllous (pod-ôfil-us) [πούς foot + φύλλον leaf]. A term applied to the tissues forming the sensitive wall of the hoofs of animals.

Podophyllum (pod-o-fil'um) [πούς foot + φύλλον leaf]. A genus of berberidaceous plants. The rhizome and roots of *P. peltatum*, May-apple, or mandrake, contain a resin, *podophyllin*, and a constituent, *podophyllotoxin*. It is a cholagogue, laxative, and cathartic, and is used in chronic constipation, torpor of the liver, etc. Dose, 5–20 grains (0.33–1.33 Gm.); of abstract, $\frac{1}{4}$ –1 grain (0.016–0.066 Gm.); of extract, $\frac{1}{4}$ – $1\frac{1}{2}$ grains (0.033–0.1 Gm.); of fluidextract, 5–30 minims (0.33–2 cc.); of tincture, 15–60 minims (1–4 cc.).

podotrochilitis (pod'ô-tro-kil-i'tis) [πούς foot + τροχίλευς pulley + -itis inflammation]. Inflammation of the navicular bone of the horse's foot.

poe-. For words thus beginning, see those beginning *pe-*.

poecilocyte (pe'sil-o-sit). See *poikilocyte*.

Poehl's test (pelz) [Alexander Vasilyevich von Poehl, Russian chemist, born 1850]. See under *tests*.

pogoniasis (po-go-ni'as-is) [πώγων bearded]. 1. Excessive growth of a beard. 2. The growth of a beard upon a woman.

pogonion (po-go'ne-on) [πώγων bearded]. The most anterior point of the chin in the middle line.

Pogostemon (po-go-ste'mon). See *patchouli*.

poikilionia (poi-kil-i-o'ne-ah) [ποικίλος varied + ion]. Variation in the ionic concentration (inorganic content) of the blood.

poikiloblast (poi'kil-o-blast) [ποικίλος speckled, varied + βλαστός germ]. A large nucleated red blood cell of irregular form.

poikilocyte (poi'kil-o-sit) [ποικίλος varied + κύτος cell]. A malformed and oversized non-nucleated red blood corpuscle: seen in the blood of pernicious and other anemias. See *blood*.

poikilocythemia (poi-kil'ô-si-the'me-ah). Poikilocytosis.

poikilocytosis (poi'kil-o-si-to'sis). A condition characterized by the presence of poikilocytes in the blood.

poikiloderma atrophicans vasculare. A rare skin disorder of early adult life marked by mild pruritus, telangiectosis, pigmentation, and later capillary hemorrhages and atrophy.

poikilonymy (poi-kil-on'im-e) [ποικίλος varied + ὄνομα name]. The mingling of names or terms from different systems of nomenclature.

poikilopieria (poi-kil-o-pik're-ah) ποικίλος varied + πικρός bitter. Variation in the concentrations of the anions of the blood.

poikiloplastocyte (poi-kil-o-plas'to-sit) [ποικίλος varied + πλαστική]. An irregularly shaped blood plate.

poikilothermal, poikilothermic (poi'kil-ô-ther'mal, poi'kil-ô-ther'mik) [ποικίλος varied + θερμή heat]. 1. Having a variable body temperature or one which corresponds to the environment. 2. Capable of enduring marked variations of cold and heat.

poikilothermism (poi'kil-ô-ther'mizm). The ability of bacteria, plants, and cold-blooded animals to adapt themselves to the temperature of their environment.

point (point) [L. *punctum*]. 1. A small area or spot; the sharp end of an object. 2. To approach the surface, like the pus of an abscess, at a definite spot or place. **p. of an abscess**, the place at which the pus comes nearest to the surface. **alveolar p.**, the central point of the lower edge of the upper alveolar arch. **apophysiary p.** 1. The midpoint of the lower border of the anterior nares. Called also *spinal p.* and *subnasal p.* 2. See *Trousseau's apophysiary p's*. **auricular p.**, the center of the opening of the external auditory meatus. **Barker's p.**, a point one and one-fourth inches above and one and one-fourth inches behind the middle external auditory meatus. It is the proper spot to apply the trephine in abscess of the temporo-sphenoid lobe. **Boas' p.**, a tender area to the left of the twelfth thoracic vertebra in patients with gastric ulcer. **boiling p.**, the temperature or point on the thermometer at which a liquid will boil. Water boils at 100 C., or 212 F. **Brewer's p.**, the point of the costovertebral angle, tenderness over which points to kidney infection. **Broca's p.**, the auricular point. **Capuron's p's**, the iliopectineal eminences and the sacro-iliac joints. **cardinal p.** 1. Any one of a set of six points of reference in the eye, or of four in the pelvic inlet. They are—(a) the anterior focus, or *anterior focal point*, whose rays, coming from the retina and parallel to the axis of the eye, are brought to a focus; (b) the posterior focus, or *posterior focal point*, on the retina, at which rays converge parallel to the axis, and coming from the front of the eye; (c) and d) the *principal points*, in the anterior chamber, behind the cornea and on the optic axis; (e) and f) the *nodal points*, near the posterior surface of the lens. 2. *Cardinal p's of Capuron*, four points within the pelvic inlet—the two sacro-iliac articulations and the two iliopectineal eminences. **Clado's p.**, a point of special tenderness in appendicitis, situated at the intersection of the right semilunar line by the interspersal line at the external border of the rectus abdominis muscle. **cold p.**, any point on the surface at which hot bodies are not felt to be hot. **cold rigor p.**, that point of cold temperature at which the activity of a cell ceases. **conjugate p's**, conjugate foci. See under *foci*. **contact p.**, the point on the proximate surface of a tooth which touches an adjoining tooth. **p. of convergence**, the conjugate focus to which the light converges. **corresponding p's**, points upon the two retinæ whose impressions unite to produce a single perception. **craniometric p.**, any one of a numerous set of points of reference assumed for use in craniometry. **critical p.** 1. The temperature at or above which a gas can no longer be liquefied by pressure alone. 2. The temperature above which a substance can no longer be retained in liquid form by pressure. **deaf p.**, one of certain points near the ear where a vibrating tuning-fork cannot be heard. **de Mussy's p.**, a point, exceedingly painful on pressure on the line of the left border of the sternum, at the level of the end of the tenth rib: it is a symptom of diaphragmatic pleurisy. **Desjardins' p.**, a point on the abdomen 5 to 7 cm. from the navel, on a line to the right axilla: it lies over the head of the pancreas. **dew p.**, the temperature at which dew begins to be deposited. **disparate p's**, points on the retina which are not paired exactly. **p. of dispersion**, in optics, the virtual focus. **p. of divergence**, the conjugate focus from which the light proceeds. **dorsal p.**, a point, tender on pressure, situated between the spinous processes of the vertebrae at the border of the right scapula at the level of the fourth and fifth intercostal spaces at a distance of about 2 or 3 centimeters from the middle line. It is found in hepatic colic. Called also *Pauly's p.* **p. of election**, that point at which any particular surgical operation is done by preference. **Erb's p.**, a point two or three centimeters above the clavicle

and without the posterior border of the sternomastoid, at the level of the transverse process of the sixth cervical vertebra; stimulation here contracts various arm muscles. **eye p.** 1. An eye spot or ocellus. 2. The bright circle seen at the crossing point or nearest the approximation of the rays above the microscopical ocular. **far p.**, the remotest point at which an object is clearly seen when the eye is at rest. **fixation p.**, that point on the visual axis at which an object is most clearly seen. **focal p.** See *focus* and under *cardinal p.* **freezing p.**, the temperature at which a liquid begins to freeze; that of water is 0°C ., or 32°F . **fusing p.** Same as *melting p.* **glenoid p.**, the center of the glenoid cavity of the maxilla. **Guéneau de Mussy's p.** See *de Mussy's p.* **Halle's p.**, a point on the surface of the abdomen corresponding to the point where the ureter crosses the pelvic brim. It is the point of intersection between a horizontal line connecting the anterior superior iliac spines and a vertical line projected upward from the pubic spine. **hot p.**, any point on the surface at which cold bodies are not felt to be cold. **hyetero-epileptogenous p.**, **hysterogenic p.**, a point on which, if pressure be made, a hysterical or hyetero-epileptic attack may be produced. **identical p's**, the corresponding points on the retinae of the two eyes. **p. of incidence.** See *refraction.* **iso-electric p.**, in colloid chemistry, the hydrogen ion concentration at which minimum dissociation occurs. **itchy p's**, a condition in which there are points of itching on the skin. Called also *puncta pruritis*. **jugal p.**, the point of the angle formed by the masseteric and maxillary edges of the malar bone. **jugomaxillary p.**, the point at the antero-inferior angle of the malar bone. **lacrimal p's**, the puncta lacrimalia; the outlets of the lacrimal canaliculi. **Lanz's p.**, a point which indicates the position of the vermiform appendix. It is situated on a line connecting the two anterior superior iliac spines one third of the distance from the right spine. **leak p.**, the point of sugar concentration in the blood (180 mg. per 100 cc. in the normal) at which the kidney will secrete sugar. **Lian's p.**, a point at the junction of the outer and middle thirds of a line joining the umbilicus and the left anterior superior iliac spine, the point of election for paracentesis of the abdomen. See *Munro's p.* **malar p.**, a point on the external tubercle of the malar bone. **marginal p's**, *anaplasma marginale*. **maximum occipital p.**, the point in the occipital bone furthest from the glabella. **McBurney's p.**, the point of special tenderness in acute appendicitis, situated about 2 inches from the right anterior superior spine of the ilium, on a line between the latter and the umbilicus. It corresponds with the normal position of the appendix. **Méglin's p.**, the point where the palatine nerve emerges from the great palatine foramen. **melting p.**, the temperature in degrees at which a solid becomes liquefied by heat. **mental p.**, the pogonion. **metopic p.**, the metopion. **Morris' p.**, a point of special tenderness in chronic appendicitis, situated about 2 inches from the navel in a line running thence to the anterior superior iliac spine. **motor p.** 1. The point at which a motor nerve enters a muscle. 2. The point where, if galvanic stimulation be applied, it will cause contraction of a corresponding muscle. **Munro's p.**, a point midway between the umbilicus and the left anterior iliac spine: usually selected as the point for performing abdominal puncture. See *Lian's p.* **Mussy's p.** See *de Mussy's p.* **nasal p.** Same as *nasion*. **near p.**, the nearest point at which the eye can distinctly perceive an object; the nearest point of clear vision. **near p.**, **absolute**, the near point for either eye alone with accommodation relaxed. **near p.**, **relative**, the near point for both eyes with the employment of accommodation. **nodal p's**, two points situated on the optic axis of a di-

optic system: so related that every incident ray which is directed toward the first point is represented after refraction by a ray coming from the second point, and which has a direction parallel to the incident ray. **occipital p.** 1. The posterior point on the occipital bone. 2. The pointed posterior end of the occipital lobe of the brain. **ossification p.**, the center of ossification in bone. **Pagniello's p.**, a point painful on light pressure when a finger is drawn over the ninth left costal interspace in malarial subjects. **painful p.** See *Valleix's p's*. **Pauly's p.** See *dorsal p.* **Piersol's p.**, a point indicating the location of the vesical orifice. **preauricular p.**, a point on the zygoma just in front of the upper end of the tongue. **pressure p.**, a point of extreme sensibility to pressure. **pressure-arresting p.**, a point at which pressure arrests spasm. **pressure-exciting p.**, a point at which pressure produces spasm. **principal p's**, two points on the optic axis of the anterior chamber of the eye; lines drawn from these to corresponding points on the object and its image are parallel. **reflection p.**, the point from which a ray of light is reflected. **refraction p.**, the point at which a ray of light is refracted. **retromandibular tender p.**, a point behind the superior extremity of the inferior maxilla below the lobule of the ear and in front of the mastoid process. Pressure on this point elicits extreme pain in meningitis. **Robson's p.**, the point of greatest tenderness in gallbladder inflammation, situated opposite the junction of the middle and lower third of a line drawn from the right nipple to the umbilicus. **Rolando's p's**, the points at the upper and lower ends of the fissure of Rolando. **spinal p.** Same as *subnasal p.* **stereo-identical p's**, points in space outside of the region within which fusion of double images occurs. **subnasal p.**, the central point of the root of the anterior nasal spine. **subtemporal p.**, the point where the sphenotemporal suture and infratemporal crest intersect. **p. of Suedeck**, the portion of the rectum between the last sigmoid artery and the bifurcation of the superior hemorrhoidal artery. Ligation of the latter below this point will lead to gangrene of the rectum. **supra-auricular p.**, a point at the root of the zygoma directly above the auricular point. **supraclavicular p.**, a point above the clavicle and outside of the sternomastoid where the application of a stimulus causes contraction of the biceps, deltoid, brachialis anticus, and supinator longus muscles. **supranasal p.**, the middle point of the transverse supra-orbital line. **supra-orbital p.**, in neuralgia, a tender spot just above the supra-orbital notch. **sylvian p.**, a point on the surface of the skull from 29 to 32 millimeters behind the external angular process. **Trousseau's apophysiary p's**, points sensitive to pressure along the dorsal and lumbar vertebrae in certain cases of neuralgia. **vaccine p.**, a piece of bone or quill, one end of which is coated with vaccine lymph. **Valleix's p's**, *pointes douloureuses*: tender points on the course of certain nerves in neuralgia. **vital p.**, a point in the medulla oblongata, at the respiratory center, puncture of which causes immediate death. **Vogt's p.**, a point of the intersection of a horizontal line, two fingerbreadths above the zygoma, with a vertical line a thumbbreadth behind the ascending sphenofrontal process; here trephination may be performed in traumatic meningeal hemorrhage. Called also *Vogt-Hueter p.* **Vogt-Hueter p.** See *Vogt's p.* **Voillemier's p.**, a point on the linea alba $6\frac{1}{2}$ cm. below the line which joins the anterior superior iliac spinous processes; here the bladder may be punctured in obese or edematous patients. **Ziemssen's motor p's**, the places of entrance of motor nerves into muscles: they are points of election in the therapeutical application of electricity to muscles.

pointes douloureux (pwahnt doo-loo-ruh'). See *Valleix's points*, under *point*.

pointillage (pwahn-te-yahzh') [Fr.]. Massage with the points of the fingers.

Poirier's line (pwah-re-äz') [Paul Poirier, surgeon in Paris, 1853-1907]. See *line*.

Poiseuille's law, space (pwah-zuhiz') [Jean Marie Poiseuille, physiologist in Paris, 1797-1869]. See *law* and *space*.

poison (poi'zn) [L. *po'isio* draft; *tox'icum*; *τοξικόν*]. Any substance applied to the body, ingested, inhaled, or developed within the body, which causes or may cause damage or disturbance of function. **acid p.**, **irritant p.**, one which produces irritation or inflammation, as the mineral acids, oxalic acid, the caustic alkalis, antimony, arsenic, barium, the salts of copper, some of the compounds of lead, silver nitrate, the salts of zinc, iodine, cantharides, phosphorus, etc. **acronarcotic p.**, **acrosedative p.**, poisons which produce sometimes irritation, sometimes narcotism (or sedation) or both together. They are chiefly derived from the vegetable kingdom. Stramonium and belladonna are examples of the acronarcotic and aconite an example of the acrosedative poisons. **arrow p.**, a poisonous substance used by savages on their arrows. **crowd p.**, excrementitious matters contained in respired air in crowded places. **fatigue p.**. See *fatigue toxin*, under *toxin*. **fugu p.**. See *fugoloxin*. **hemotropic p.**, a poison which has an especial affinity for the red blood corpuscles. **microbial p.**, a toxin. **morbid p.**, the poison of a specific disease. **muscle p.** 1. A poison that impairs muscular action or function. 2. A toxic albumin formed during muscular action. **narcotic p's**, such as produce stupor or delirium, as opium, hyoscyamus, etc. **ordeal p.**. See *ordeal bark*. **protein p.**, a highly active poison derived from protein and believed to be a constituent of every true protein. **sedative p's**, those which directly reduce the vital powers, as hydrocyanic acid, potassium cyanide, hydrogen sulphide, and other of the poisonous gases. **vascular p.**, a poison which acts by raising or lowering the blood pressure.

poisoning (poi'zun-ing). The morbid condition produced by a poison. **blood p.**. See *septicemia*. **crowd p.**, poisoning by crowd poisons. See under *poison*. **food p.**. See *sitotoxism*; also *allantiasis*, *botulism*, and *meat poisoning*. **forage p.**, a disease produced in animals, especially horses, as a result of eating moldy or fermented food. Called also *cerebrospinal meningitis*. **garage p.**, poisoning by carbon monoxide, which accumulates in the air of closed garages when the engine in run. Called also *petromortis*. **lead p.**. See *plumbism*. **loco p.**. See *locoism*. **meat p.**, acute, often severe gastro-enteritis, caused by *Bacterium enteritidis* or some similar organism. **sausage p.**. See *allantiasis* and *botulism*. **shoe-dye p.**, poisoning by the dye used in coloring tan shoes: marked by general cyanosis, weakness, headache, and vomiting. **tetrachlorethane p.**, a form of poisoning in minution workers from inhalation of the fumes of tetrachlorethane, characterized by toxic jaundice, headache, anorexia, and gastro-intestinal disturbance. **T. N. T. p.**, **trinitrotoluene p.**. See *trinitrotoluene*.

poison ivy. See *Rhus toxicodendron*.

poison nut. *Nux vomica*.

poison oak. See *Rhus toxicodendron*.

poison sumac. See *Rhus venenata*.

Poisson-Pearson formula (pwah-son'për'son). See under *formula*.

poitrinaire (pwah-tre-när') [Fr.]. A patient with a chronic disease of the chest.

poke (pök). See *Phytolacca*.

poker back. *Spondylitis deformans*.

polar (po'lar) [L. *pola'ris*; *po'lus*, *pólos* axis]. Of, or pertaining to, a pole.

polarimeter (po-lar-im'et-er) [*polar* + *μέτρον* measure]. A device for measuring the rotation of polarized light; a polariscope.

polarimetry (po-lar-im'et-re). Measurement of the rotation of polarized light.

polariscope (po-lar'is-köp) [*polar* + *σκοπεῖν* to view]. An instrument for the measurement of polarized light.

polariscopic (po-lar-is-kop'ik). Pertaining to the polariscope or to polariscopy.

polariscopy (po-lar-is'ko-pe). The science of polarized light and the use of the polariscope.

polaristrobometer (po-lar'is-trob-om'et-er). A form of polarimeter used for delicate analyses.

polarity (po-lar'it-e). 1. The fact or condition of having poles. 2. The exhibition of opposite effects at the two extremities. 3. The exhibition by a nerve, of both anelectrotonus and catelectrotonus. **dynamic p.**, the specialization of a nerve cell with reference to the flow of impulses.

polarization (po'lar-iz-a'shun). 1. The production of that condition in light by virtue of which its vibrations take place all in one plane or else in circles and ellipses. 2. The accumulation of bubbles of hydrogen gas on the negative plate of a galvanic battery, so that the generation of electricity is impeded. **circular p.**, that polarization which causes the vibrations all to take place in circles. **elliptical p.**, that which causes the vibrations to move in ellipses. **plane p.**, the production of such a polarization that the light vibrations are all in one plane. **rotatory p.**, that which rotates the plane in which the vibrations take place.

polarize (po-lar-iz). 1. To endue with polarity. 2. To put into a state of polarization.

polarizer (po-lar-i-zer). An appliance for polarizing light.

pole (pōl) [L. *po'lus*; *pólos*]. 1. Either extremity of any axis, as of the fetal ellipse or eye lens. 2. Either one of two points which have opposite physical qualities (electric or other). **animal p.**, the point on the surface of an ovum which contains the most active part of the protoplasm, as contrasted with the *vegetative p.* **anterior p.**, the front or facial end of the anteroposterior axis of the eye lens. **antigerminal p.**, the pole of an ovum opposite the germinal pole, at which is located the food yolk. **cephalic p.**, the end of the fetal ellipse at which the head of the fetus is situated. **frontal p.**, the most prominent part of the anterior end of each hemisphere of the brain. **germinla p.**, that pole of an egg at which development begins. **lower p.**, the antigerminal pole. **negative p.**, that electrode (cathode) and the associated apparatus of a galvanic battery which are connected with its electro-positive element. **north p.**, that point of a magnetic needle which, when it is freely suspended, will point toward the north. **nutritive p.**, the antigerminal pole. **occipital p.**, the posterior end of the occipital lobe of the brain. **pelvic p.**, the end of the fetal ellipse at which the breech of the fetus is situated. **placental p.**, the pole of the chorion at which a dome-shaped placenta is located. **positive p.**, that electrode (anode) and the other conducting apparatus of a galvanic battery which are connected with its electronegative element. **posterior p.**, the point on the retina where the optic axis passes; it is usually between the macula lutea and the optic papilla. **south p.**, that point of a freely suspended magnetic needle which points south. **temporal p.**, the prominent anterior end of the temporal lobe of the brain. **twin p.**, that part of a spiral-fibered nerve cell from which both the straight and spiral fibers spring. **upper p.**, the germinal pole. **vegetative p.**, that pole at the end of an ovum which contains the food yolk. **vitelline p.**, the antigerminal pole.

Polemonium (pol-e-mo'ne-um). A genus of herbs; Greek valerian. Some species are said to have the medicinal properties, expectorant and diaphoretic.

polemonophthalmia (pol-em-of-thal'me-ah) [πόλεμνος war + ὀφθαλμός eye]. Military ophthalmia; ophthalmia affecting soldiers.

poleozone (po-le-o'zōn). An agent prepared from potassium chlorate by the action of sulphuric acid: a bactericide and oxidizer.

polewort (pōl'wert). Eupatorium urticaefolium.

police (pō'les). In medicine, an organization entrusted with matters affecting the public health; called also *sanitary police*.

policeman (po-les'man). A glass rod with a piece of rubber tubing on one end, used as a stirring rod in chemical analysis.

policeman's disease (po-lēs'manz). Tarsalgia.

policlinic (pol-e-klīn'ik) [πόλις city + κλίνη bed]. A city hospital, infirmary, or clinic. Cf. *polyclinic*.

polienccephalitis (pol'e-en-sef-al-i'tis) [πολιός gray + encephalitis]. Inflammatory disease of the gray substance of the brain. **p. acutū infan'tum**, an acute variety seen in children under six years of age, and marked by fever, vomiting, and convulsions. It is usually followed by permanent paralysis of the limbs which were affected with convulsions. **inferior p.**, bulbar paralysis. **posterior p.**, inflammation of the gray matter of the posterior part of the fourth ventricle. **superior p.**, a hemorrhagic inflammation occurring near the third and fourth ventricles and in the gray matter of the upper part of the spinal cord.

polienccephalitis (pol'e-o-en-sef-al-i'tis). Same as *polienccephalitis*.

polienccephalomeningomyelitis (pol'e-o-en-sef'al-o-men-ing'go-mi-el-i'tis). Inflammation of the gray matter of the brain and spinal cord and of the meninges covering it.

polienccephalomyelitis (pol'e-o-en-sef'al-o-mi-el-i'tis). Inflammatory disease of the gray matter of the brain and spinal cord.

polienccephalopathy (pol'e-o-en-sef-al-op'ath-e) [πολιός gray + ἐγκέφαλος brain + πάθος disease]. Disease of the gray matter of the brain.

poliomyelencephalitis (pol'e-o-mi-el-en'sef-al-i'tis) [πολιός gray + μυελός marrow + ἐγκέφαλος brain]. Poliomyelitis combined with polienccephalitis.

poliomyelitis (pol'e-o-mi-el-i'tis) [πολιός gray + μυελός marrow]. Inflammation of the gray substance of the spinal cord. **acute anterior p.**, an acute infectious disease affecting children, usually about the period of the first dentition. It comes on suddenly, often with fever, and is attended with motor paralysis and atrophy of groups of muscles, ending in contraction and permanent deformity. It is caused by a filtrable virus, but the mode of transmission of the organism has not yet been definitely determined. Called also *infantile paralysis*, *epidemic infantile paralysis*, *acute wasting paralysis*, *essential paralysis of children*, *Heine-Medin disease*, and *acute atrophic paralysis*. **p. anterior**, inflammation of the anterior horns of the gray substance of the spinal cord. **ascending p.**, a paralytic affection which is first manifested in the legs and rapidly ascends cephalad. The patient may recover with damaged muscles, but involvement of the muscles of respiration and deglutition may prove fatal. **chronic p.**, progressive muscular atrophy. **chronic anterior p.**, muscular atrophy of neck and upper extremities with periods of improvement. **metallic p.**, paralysis and muscular atrophy due to metallic poisoning.

poliomyelencephalitis (pol'e-o-mi'el-o-en-sef-al-i'tis) [πολιός gray + μυελός marrow + ἐγκέφαλος brain + -itis inflammation]. Inflammation of the gray matter of brain and spinal cord, causing infantile cerebrospinal paralysis.

poliomyelopathy (pol'e-o-mi-el-op'ath-e) [πολιός gray + μυελός marrow + πάθος disease]. Any disease primarily affecting the gray matter of the spinal cord.

poliencneuromere (pol'e-o-nū'tro-mēr) [πολιός gray + νεύρον nerve + μέρος part]. One of the primitive segments of the gray matter of the spinal cord.

polioplasm (pol'e-o-plazm) [πολιός gray + πλάσμα plasm]. The internal, granular protoplasm proper of a cell.

poliosis (pol-e-o'sis) [πολιός gray]. Premature grayness of the hair.

Polish plait (pō'lish). See *plica polonica*.

Politzer's bag, cone, speculum, test, etc. (pōl'itz-er) [Adam Politzer, Austrian otologist, 1835-1920]. See under the nouns.

politzerization (pō'lit-zer-iz-a'shun) [Adam Politzer, an Austrian otologist]. The inflation of the middle ear by means of a Politzer bag. See under *bag*. **negative p.**, suction of secretion from a cavity by means of a Politzer bag.

poll (pōl). The back part of the head, especially such part of an animal. **p. evil**, an abscess behind the ears of a horse.

pollaccine (pol-ak'sin). A solution of the protein (toxin) of a pollen; used for testing the cutaneous reaction as an indication of sensitiveness to that pollen.

pollakiuria (pōl'ak-e-u're-ah) [πολλάκος often + ούρον urine]. Unduly frequent passage of the urine.

pollantin (pol-an'tin). An antitoxin derived from the blood of horses by inoculating them with the toxin of the pollen of certain plants: used in hay-fever (Dunbar and Weichardt, 1903).

pollen (pō'len). The mass of microspores (male fertilizing elements) of flowering plants.

pollenogenic (pō'len-o-jen'ik) [pollen + γεννᾶν to produce]. Caused by the pollen of plants.

pollenosis (pō'len-o'sis). Hay-fever.

pollex (pō'leks), pl. *pol'lices*. Latin for *thumb*. **p. extensus**, backward deviation of the thumb. **p. flexus**, permanent flexion of the thumb. **p. pedis**, the great toe; hallux. **p. valgus**, deviation of the thumb toward the ulnar side. **p. varus**, deviation of the thumb toward the radial side.

pollinosis (pō'lin-o'sis). The allergic reaction in the body to the air-borne pollen of plants, resulting in the seasonal type of hay-fever or rose cold. See *hay-fever*, under *fever*.

pollodic (pō'lō'dik) [πολλοί many + ὁδός way]. Same as *panthodic*.

pollopas (pō'lō-pas). A glass which is more penetrable than flint glass to ultraviolet and ultrared rays.

pollution (pō'l-u'shun) [L. *pollu'tio*]. 1. The act of defiling or making impure. 2. The discharge of semen without coition. **nocturnal p.**, the discharge of semen during sleep. **self-p.**, voluntary pollution; masturbation.

polocyte (pō'lō-sīt) [πόλος pole + κύτος cell]. See *polar body*, under *body*.

polonium (pō'lō-ne-um) [L. *Polo'nia* Poland]. A rare metal resembling bismuth, discovered in 1898 in pitchblende. It has radiant properties like those of radium, but is less active.

poltophagy (pōl-tof'aj-e) [πόλος porridge + φαγείν to eat]. Thorough chewing of the food so that it becomes reduced to a porridge-like mass.

polus (pō'lus) [L. a "pole"]. **p. anterior len'tis**. See *anterior pole*, under *pole*. **p. posterior len'tis**. See *posterior pole*, under *pole*.

poly (pō'le). A polymorphonuclear leukocyte.

poly- [πολύς many]. A prefix meaning *many*.

polyacoustic (pōl-e-ak-oos'tik) [πολύς much + ἀκουστικός relating to hearing]. Increasing or intensifying sound.

- polyadenia** (pol'e-ad-e-ne-ah) [πολύς many + ἀδὴν gland]. Same as *pseudoleukemia*.
- polyadenitis** (pol'e-ad-en-i'tis) [πολύς many + ἀδὴν gland]. Inflammation of several or many glands. **malignant p.**, the bubonic plague.
- polyadenoma** (pol'e-ad-en-o'mah). Adenoma of many glands.
- polyadenomatosis** (pol'e-ad-en-o-mat-o'sis). Multiple adenomas in a part.
- polyadenosis** (pol'e-ad-en-o'sis). Disorder of several glands, particularly of several endocrine glands.
- polyadenous** (pol-e-ad'en-us) [πολύς many + ἀδὴν gland]. Having or affecting many glands.
- polyaemia** (pol-e-e'me-ah). See *polyemia*.
- polyaesthesia** (pol-e-es-the'ze-ah). See *polyesthesia*.
- polyalcoholism** (pol-e-al'ko-hol-izm). Intoxication or poisoning by a mixture of different alcohols.
- polyalgia** (pol-e-al-je'se-ah) [πολύς many + ἀλγῆσις sense of pain]. A condition in which a single pin-prick feels as if several had been made.
- polyarteritis** (pol'e-ar-ter-i'tis) [πολύς many + ἀρτηρία artery + -ιτις inflammation]. Inflammation of several arteries at the same time. **p. nodo'sa**, a disease marked by the development of nodules in the smaller arteries.
- polyarthric** (pol-e-ar'thrik) [πολύς many + ἄρθρον joint]. Pertaining to or affecting many joints.
- polyarthritis** (pol'e-ar-thri'tis) [πολύς many + ἄρθρον joint + -ιτις inflammation]. An inflammation of several joints together. **chronic villous p.**, chronic inflammation of the synovial membrane of several joints. **p. des'truens**, proliferative arthritis. **tuberculous p.**, pulmonary osteo-arthritis. **vertebral p.**, disease of the intervertebral substance without caries of the bodies of the vertebrae.
- polyarticular** (pol'e-ar-tik'u-lar) [πολύς many + L. *articulus* joint]. Affecting many joints.
- polyatomic** (pol'e-at-om'ik) [πολύς many + ἄτομον atom]. 1. Composed of several atoms. 2. Having more than two hydroxyl groups.
- polyavitaminosis** (pol'e-av-i-tam-in-o'sis) [πολύς many + *avitaminosis*]. A deficiency disease in which more than one vitamin is lacking in the diet.
- polyaxon** (pol-e-aks'on) [πολύς many + ἄξων axis]. A nerve cell from the horizontal dendrites of which four or more axons or branches are given off.
- polyaxonic** (pol-e-ak-son'ik). Having several axons.
- polyazin** (pol-e-az'in). An organic chemical compound whose molecules contain atoms two or more of which are nitrogen.
- polybacterium** (pol'e-bak-te're-um). A small oval bacillus thought by some to be the cause of whooping cough. The ends of the bacillus stain more deeply than the center. See *Hemophilus pertussis*.
- polybasic** (pol-e-ba'sik) [πολύς many + βάσις base]. 1. Noting any acid which has several hydrogen atoms replaceable by a base. 2. Noting any salt of a polybasic acid formed by replacing some or all of its hydrogen atoms by a base.
- polyblast** (pol'e-blast) [πολύς many + βλαστός germ]. Maximow's name for a large mononuclear phagocytic cell with a deeply staining nucleus of irregular form originating from wandering cells of the tissues. Cf. *endotheliocyte*.
- polyblennia** (pol-e-blen'e-ah) [πολύς much + βλέννα mucus]. The secretion of an excessive quantity of mucus.
- polycardia** (pol-e-ka'r-de-ah) [πολύς many + καρδία heart]. Same as *tachycardia*.
- polycentric** (pol-e-sen'trik). Having many centers.
- polycceptor** (pol-e-sep'tor) [πολύς many + *ceptor*]. An amboceptor which is capable of binding a number of different complements.
- polychaemia** (pol-e-ki're-ah) [πολύς many + χεῖρ hand]. The condition of having a supernumerary hand.
- polychloral** (pol-e-klo'ral). See *hydronal*.
- polycholia** (pol-e-ko'le-ah) [πολύς many + χολή bile]. Excessive flow or secretion of bile.
- polychrest** (pol'e-krest) [πολύς many + χρηστός useful]. 1. Useful in many conditions. 2. A remedy useful in many diseases.
- polychromasia** (pol-e-kro-ma'ze-ah). Same as *polychromatophilia*.
- polychromate** (pol-e-kro-mat'). A person who can distinguish many colors.
- polychromatia** (pol'e-kro-ma'she-ah). Polychromatophilia.
- polychromatic** (pol'e-kro-mat'ik) [πολύς many + χρώμα color]. Exhibiting many colors.
- polychromatophil** (pol'e-kro-mat-o'fil) [πολύς many + χρώμα color + φιλεῖν to love]. 1. Stainable with many kinds of colors or stains. 2. A cell or other element that is stainable with various stains or colors.
- polychromatophilia** (pol-e-kro'mat-o'fil'e-ah). 1. The quality of being stainable with various stains or tints; affinity for all sorts of stains—a condition seen in the diseased red blood corpuscle, its normal affinity being for acid stains only. It is characterized by a dirty blue to brownish color of the stained cells. 2. An accumulation of polychromatophils.
- polychromatophilic** (pol-e-kro'mat-o'fil'ik) [πολύς many + χρώμα color + φιλεῖν to love]. Stainable with various colors or stains.
- polychromatosis** (pol'e-kro-mat-o'sis). Same as *polychromatophilia* (2d def.).
- polychromemia** (pol-e-kro-me'me-ah) [πολύς many + χρώμα color + αἷμα blood]. Increase in the coloring matter of the blood.
- polychromia** (pol-ik-ro'me-ah) [πολύς many + χρώμα color]. Increased or abnormal pigment formation.
- polychromic** (pol-e-kro'mik). Exhibiting several colors.
- polychromophil** (pol-e-kro'mo'fil). Polychromatophil.
- polychromophilia** (pol'e-kro-mo'fil'e-ah). Polychromatophilia.
- polychyly** (pol-e-ki'le-ah) [πολύς much + κύλος chyle]. Excessive production of chyle.
- polyclinic** (pol-e-klin'ik) [πολύς many + κλινῆ bed]. 1. Not limited in the range of diseases treated. Cf. *polyclimic*. 2. A hospital and school where diseases and injuries of all kinds are studied and treated clinically.
- polyclonia** (pol-ik-lo'ne-ah) [πολύς many + κλόνος clonus]. A disease marked by many clonic spasms, resembling tic and chorea, but distinct from either.
- polycoria** (pol-e-ko're-ah) [πολύς many + κόρη pupil]. The existence of more than one pupil in an eye.
- polycrotic** (pol-e-krot'ik) [πολύς many + κρότος stroke]. Having several secondary waves to each pulse beat.
- polycrotism** (pol-ik'ro-tizm). The fact or quality of being polycrotic.
- polycyesis** (pol'e-si-e'sis) [πολύς many + κύσις pregnancy]. Multiple pregnancy.
- polycystic** (pol-e-sis'tik) [πολύς many + κύστις cyst]. Containing or made up of many cysts.
- polycythemia, polycythaemia** (pol'e-si-the'me-ah) [πολύς many + κύτος cell + αἷμα blood]. Excess in the number of red corpuscles in the blood. **chronic splenomegalic p.**, a condition marked by the general redness or cyanosis of the

skin, polycythemia, high blood pressure, and enlargement of the spleen. The disease extends over many years, and gradually asthenia, edema, cardiac dilatation, and albuminuria appear. See *erythemia*. **p. hypertonica**, a condition marked by polycythemia without enlargement of the spleen, but with hypertrophy of the heart and heightened blood pressure. Called also *Geisbock's disease*. **myelopathic p.** See *erythemia*. **relative p.**, relative excess in the number of red blood corpuscles resulting from loss of the fluid parts of the blood. **p. rubra**, erythemia. **p. vera**. See *erythemia*.

polycytosis (pol-e-si-to'sis) [πολύς many + κύτος cell]. Abnormal increase in the cells of the blood, both erythrocytes and leukocytes, the plasma being reduced in volume.

polydactylism (pol-e-dak'til-izm) [πολύς many + δάκτυλος finger]. The occurrence of more than the usual number of fingers or toes.

polydipsia (pol-e-dip'se-ah) [πολύς much + δίψα thirst]. Excessive thirst. **p. ebria**, a craving for intoxicant liquors.

polydispersoid (pol-e-dis-per'soid). A colloid in which the disperse consists of particles having different degrees of dispersion.

polyembryony (pol-e-em-bri'o-ne) [πολύς much + embryo]. The production of more than one individual from a single fertilized egg.

polyemia, polyemia (pol-e-e'me-ah) [πολύς much + αἷμα blood]. Excess in the quantity or amount of blood in the body. **p. aquosa**, excess in the volume of the blood due to the drinking of much water. **p. hyperalbuminosa**, an excess of albumin in the blood plasma. **p. polycythaemica**, that which is characterized by an absolute increase in the number of red corpuscles in the blood. **p. serosa**, a condition in which the amount of blood serum is increased, sometimes due to the injection of serum into the blood vessels.

polyerg (pol'e-erg) [see *polyergic*]. A monogenic antiserum which reacts with heterologous antigens.

polyergic (pol-e-er'jik) [πολύς many + ἔργον work]. Able to act in several different ways.

polyesthesia, polyaesthesia (pol'e-es-the'ze-ah) [πολύς many + αἰσθησις sensation]. A condition in which a single object seems to be felt in several different places.

polyesthetic (pol'e-es-thet'ik). Pertaining to or affecting several senses or sensations.

polyformin, insoluble (pol-e-for'min). A brown-yellow amorphous compound of resorcinol and formaldehyde: a bactericide. Besides this, other insoluble polyformins can be formed **soluble p.**, a compound of resorcinol and methenamine, $(\text{CH}_2)_6\text{N}_4$ + $2\text{C}_6\text{H}_4(\text{OH})_2$, in white crystals: used in skin diseases, and internally as a diuretic and antiseptic.

Polygala (pol-ig'al-ah) [πολύς many + γάλα milk]. A genus of plants (milkwoods) of many species. See *Senega*.

polygalactia (pol'e-gal-ak'she-ah) [πολύς much + γάλα milk]. An excessive secretion of milk.

polygalin (pol-ig'al-in). 1. A bitter substance, one of the active principles of senega (*Polygala senega*). Called also polygalic acid. Dose, $\frac{1}{4}$ -1 grain (0.016-0.066 Gm.).

polyganglionic (pol'e-gang-le-on'ik) [πολύς many + γάγγλιον ganglion]. 1. Having or pertaining to several or many ganglia. 2. Affecting several lymphatic glands.

polygastric (pol-e-gas'tre-ah) [πολύς much + γαστήρ stomach]. Excessive secretion of gastric juice.

polygen (pol'e-jen). 1. An element which is able to combine in two or more proportions. 2. An antiserum which has been produced by the use of more than one antigen.

polyglandin (pol-e-glan'din). A proprietary pluriglandular extract of thyroid, pituitary, ovary, and testis.

polyglandular (pol-e-glan'du-lar). Affecting many glands. **p. syndrome**. See under *syndrome*.

polyglobulia (pol'e-glo-bu'le-ah). Polyglobulism.

polyglobulism (pol-e-glob'u-lizm) [πολύς much + globule]. Abnormal increase of the red corpuscles of the blood.

polyglobuly (pol-e-glob'u-le). Polyglobulism.

polygnathus (pol-ig'na-thus) [πολύς many + γνάθος jaw]. A double monster fetus united at the jaws.

Polygonatum (pol-ig-o-na'tum) [πολύς many + γόνυ knee]. A genus of liliaceous plants called Solomon's seal. Several of the species are tonic, vulnerary, diuretic, and purgative: in a considerable dose they are cardiac poisons. Dose of fluidextract of *P. biflorum*, 10-30 minims (0.66-2 cc.).

Polygonum (po-lig'on-um) [L.; πολύς many + γωνία angle]. A genus of plants of many species: many of them are astringent, diuretic, and stimulant. **P. cuspidatum**, a wild plant of Japan and China possessing purgative properties. **P. hydropiper**, waterpepper, or smartweed, is valued in domestic practice. Dose of fluidextract, 10-60 minims (0.666-4 cc.).

polygram (pol'e-gram). A tracing made by a polygraph.

polygraph (pol'e-graf) [πολύς many + γράφειν to record]. Mackenzie's instrument for making simultaneous tracings on the same recording surface of any two of the following: the arterial pulse, the jugular pulse, the apex beat, and the respiratory movements.

polygyria (pol-e-jir'e-ah) [πολύς many + γύρος gyrus]. A condition in which there is more than the normal number of convolutions in the brain.

polyhaemia (pol-e-he'me-ah). Same as *polyemia*.

polyhedral (pol-e-he'dral) [πολύς many + ἔδρα seat, base]. Having many faces or sides.

polyhidrosis, polyidrosis (pol'e-hid-ro'sis, pol'e-id-ro'sis) [πολύς much + ἰδρῶς sweat]. 1. Excess in the secretion of sweat. 2. Miliary fever, or sweating sickness.

polyhybrid (pol-e-hi'brid). A hybrid whose parents differ from each other in more than three characters.

polyhydramnios (pol'e-hi-dram'ne-os) [πολύς much + ὕδωρ water + ἄμιον amnion]. Excess in the amount of the liquor amnii in pregnancy.

polyhydruria (pol'i-hi-dru're-ah) [πολύς many + ὕδωρ water + οὖρον urine]. Abnormal dilution of the urine.

polyidrosis (pol-e-id-ro'sis). Polyhidrosis.

polyinfection (pol-e-in-fek'shun) [πολύς many + infection]. Infection with more than one organism.

polykaryocyte (pol-e-kar'e-o-sit) [πολύς many + κάρυον nucleus + κύτος cell]. A giant cell containing several nuclei. These cells are now called *osteoclasts*.

polylaktol (pol-e-lak'tol). A proprietary mixture of iron somatose with carbohydrates, maltose, and galactose: claimed to be a lactagogue.

polyleptic (pol-e-lep'tik) [πολύς many + λαμβάνειν to seize]. Having many remissions and exacerbations.

polymastia (pol-e-mas'te-ah) [πολύς many + μαστός breast]. The presence of more than two mammae, or breasts: incorrectly used as a synonym of *polythelia*.

Polymastigina (pol-e-mas-tig-i'nah). An order of the Flagellata the members of which possess three to eight flagella. It includes the trichomonads and Giardia.

polymastigote (pol-e-mas'tig-öt) [πολύς many + μάστιξ lash]. Having several flagella.

- polymazia** (pol-e-ma'ze-ah). Same as *polymastia*.
- polymelia** (pol-e-me'le-ah) [πολύς many + μέλος limb]. The monstrosity or variety of teratism exhibited by a polymelus; the presence of supernumerary parts.
- polymelus** (pol-im'el-us) [πολύς many + μέλος limb]. A monster fetus with more than the normal number of limbs.
- polymenorrhea** (pol-e-men-o-re'ah) [πολύς many + *menorrhea*]. Menstruation in which the flow occurs too soon.
- polymer** (pol'im-er) [πολύς many + μέρος part]. Any member of a series of polymeric substances.
- polymeria** (pol-e-me're-ah) [πολύς many + μέρος part]. The presence of supernumerary parts or organs of the body.
- polymeric** (pol-e-mer'ik). 1. Characterized by polymerism. 2. Concerned with, derived from, or pertaining to, several pigments.
- polymerid** (pol-im'er-id). A substance characterized by polymerism; a polymer.
- polymerism** (pol-im'er-izm) [πολύς many + μέρος part]. 1. Isomerism in which the molecular weights of members of the series are in numbers which are multiples of each other. 2. Same as *polymeria*.
- polymerization** (pol-e-mer-iz-a'shun). Chemical union of two or more molecules of a substance to form a new compound without the elimination of a secondary compound.
- polymerize** (pol-im'er-iz). To change or to become changed into a polymeric form.
- polymicrobial, polymicrobic** (pol'e-mi-kro'be-al, pol'e-mi-kro'bik) [πολύς many + μικρός]. Characterized by the presence of various species of microbes.
- polymicrolipomatosis** (pol-e-mi'kro-lip-o-mat-o'-sis) [πολύς many + μικρός small + λίπος fat]. The presence in the subcutaneous tissue of numerous small fatty tumors.
- polymicrotome** (pol-e-mi'kro-tōm) [πολύς many + μικροτομή]. A microtome which cuts several sections at once.
- polymitus** (pol-im'it-us) [πολύς many + μίτος thread]. An animal micro-organism, or stage, of various forms, provided with threadlike filaments or with buds, or both. Forms of polymitus have been observed within the Gymnosporidia, the blood parasites of birds, and of human malaria. The nature and functions are undetermined.
- Polymnia** (po-lim'ne-ah) [Gr.; one of the Muses]. A genus of composite-flowered plants. *P. uvecta-lia*, leafcup or bearsfoot, is anthelminthic, alterative, and antispasmodic. Dose of fluidextract, 5-10 minims (0.333-0.666 cc.).
- polymorph** (pol'im-orf). A polymorphonuclear leukocyte.
- polymorphic, polymorphous** (pol-e-mor'fik, pol-e-mor'fus) [πολύς many + μορφή form]. Occurring in several or many forms.
- polymorphism** (pol-e-mor'fizm) [πολύς many + μορφή form]. The quality or character of being, polymorphous; occurrence in various forms.
- polymorphocellular** (pol'e-mor-fo-sel'u-lar) [πολύς many + μορφή form + L. *cellula* cell]. Having cells of many forms.
- polymorphocyte** (pol-e-mor'fo-sit). Same as *myelocyte*.
- polymorphonuclear** (pol'e-mor-fo-nu'kle-ar) [πολύς many + μορφή form + nucleus]. Having nuclei of many forms, as certain leukocytes.
- polymorphous** (pol-e-mor'fus). Polymorphic.
- polymyerial** (pol-e-mi-e're-al). A type of arrangement of the muscular system in the Nematoda. The muscle cells or plates are numerous, irregular, and penetrate into the parenchyma.
- polymyoclonus** (pol'e-mi-ok'lo-nus) [πολύς many + μύς muscle + κλονος clonus]. 1. A fine or minute muscular tremor. 2. Polyclonia.
- polymyositis** (pol'e-mi-o-si'tis) [πολύς many + μύς muscle]. Inflammation of several or many muscles at once. It is attended by pain, tension, edema, deformity, insomnia, and sweats. **p. haemorrhagica**, inflammation of muscles associated with edema, dermatitis, and the presence of hemorrhages into and between the muscles.
- polynesic** (pol-e-ne'sik) [πολύς many + νῆσος island]. Multiple and insular; occurring in many foci.
- polyneur** (pol-e-nu'ral) [πολύς many + νῆρον nerve]. Pertaining to or supplied by several nerves.
- polynneuramin** (pol-e-nu'ram-in). Vitamin B₁ or F.
- polyneuric** (pol-e-nu'rik). Having many neurons.
- polyneuritic** (pol-e-nu-rit'ik). Pertaining to or affected with polyneuritis.
- polyneuritis** (pol'e-nu-ri'tis) [πολύς many + νῆρον nerve]. Inflammation of many nerves at once; multiple neuritis. **acute infectious p.**, a disease beginning with febrile symptoms and followed by suddenly developing widespread bilateral paralysis of the face, trunk, and proximal segments of the limbs. **p. gallinarum**, a form of polyneuritis seen in fowls after feeding with peeled grain. **p. potato'rum**, a chronic neuritis resulting from the excessive use of alcoholic stimulants. Called also *alcoholic neuritis* and *pseudotabes*.
- polynuclear** (pol-e-nu'kle-ar). 1. Having several nuclei. 2. A leukocyte having several nuclei.
- polynucleated** (pol-e-nu'kle-a-ted). Same as *polynuclear*.
- polynucleolar** (pol-e-nu-kle'o-lar). Having several nucleoli.
- polynucleosis** (pol'e-nu-kle-o'sis). The presence of a large number of polynuclear cells in the blood or in an exudate.
- polynucleotide** (pol-e-nu'kle-o-tid). A nucleotide made up of four mononucleotides (q. v.). It is a nucleic acid.
- polyodontia** (pol'e-o-don'she-ah) [πολύς many + ὀδὸς tooth]. The presence of supernumerary teeth.
- polonychia** (pol'e-o-nik'e-ah) [πολύς many + ὄνυξ nail]. The occurrence of supernumerary nails.
- polyopia, polyopsia** (pol-e-o'pe-ah, pol-e-op'se-ah) [πολύς many + ὄψις vision]. The condition in which one object appears as two or more objects. **p. monophthalmica**, a condition in which an object looked at by one eye appears double.
- polyopy** (pol'e-o-pe). Polyopia.
- polyorchidism** (pol-e-or'kid-izm). The presence of more than two testes.
- polyorchis** (pol-e-or'kis) [πολύς many + ὄρχις testis]. A person with more than two testes.
- polyorchism** (pol-e-or'kizm). Polyorchidism.
- polyorrhomeningitis** (pol-e-or'o-men-in-jit'is). Same as *polyorrhomenitis*.
- polyorrhomenitis** (pol-e-or'o-men-i'tis) [πολύς many + ὀρρός serum + ὑμῆν membrane]. Malignant inflammation of serous membranes; Concato's disease.
- polyorrhomenosis** (pol-e-or-o-men-o'sis). Polyorrhomenitis.
- polyotia** (pol-e-o'she-ah) [πολύς many + οὖς ear]. The presence of more than one ear on one or both sides of the head.
- polyp** (pol'ip). Same as *polypus*.
- polypapilloma** (pol'e-pap-il-o'mah) [πολύς many + papilloma]. Yaws.
- polyparasitism** (pol-e-par'is-i-tizm). Infestation by more than one variety of parasite.
- polyparesis** (pol-e-par'es-is) [πολύς much + πάρεσις feebleness]. General paresis.
- polypathia** (pol-e-path'e-ah) [πολύς many + πάθος disease]. The presence of several diseases at once.

polypeptide (pol-e-pep'tid). See *peptide*.

polypeptidemia (pol-e-pep-tid'e-me-ah) [*polyper-* + *αἷμα* blood]. The presence of polypeptides in the blood.

periosteitis hyperesthetica. A chronic disease of the periosteum attended by extreme hyperesthesia of the skin and soft parts.

polyhagia (pol-e-fa'je-ah) [πολύς much + φαγεῖν to eat]. 1. Excessive or voracious eating. Cf. *bulimia*. 2. Omnivorousness; craving for all kinds of food.

polyphalangism (pol-e-fal-an'jizm) [πολύς many + φάλαγγ phalanx]. Excessive number of phalanges in a finger or toe.

polypharmaceutic (pol'e-far-mas-u'tik) [see *polypharmacy*]. The term is used as a synonym of "shotgun" when speaking of certain irrational complicated mixtures.

polypharmacy (pol-e-far'mas-e) [πολύς many + φάρμακον drug]. The administration of many drugs together, or of too much medicine.

polyphase (pol'if-az) [πολύς many + *phase*]. Having several phases; containing colloids of several types.

polyphenoloxidase (pol-e-fe'nol-oks'id-ās). An oxidizing enzyme which oxidizes phenols and their amino compounds, but not tyrosine.

polyphobia (pol-e-fō'be-ah) [πολύς many + φόβος fear]. Morbid dread or fear of many things.

polyphrasia (pol-e-fra'ze-ah) [πολύς much + φράσις speech]. Morbid or insane volubility or loquacity; verberation.

polyphyletic (pol'e-fi-let'ik) [πολύς much + φύλη tribe]. Having several lines of descent. **p. theory**. See under *theory*.

polyphyletism (pol-e-fi'let-izm). See *polyphylectic theory*, under *theory*.

polyphyodont (pol-if-i'o-dont) [πολύς many + φύνει to produce + ὄδους tooth]. Developing several sets of teeth successively throughout life.

polypiform (pol'ip-if-orm). Resembling a polyp.

polyplasmia (pol-e-plaz'me-ah) [πολύς much + plasma]. Excessive fluidity of, or excess of, plasma in the blood.

polyplast, polyplastic (pol'e-plast, pol-e-plas'tik) [πολύς many + πλαστός molded]. 1. Containing many structural or constituent elements. 2. Undergoing many changes of form.

polyplastocytosis (pol-e-plas'to-si-to'sis) [πολύς many + πλαστοκύτταλο]. An increase in the number of blood plates above normal.

Polyplax (pol'e-plax). A sucking louse of rats and mice. *P. miacan'thus*, a form found but seldom on rats; *P. serra'tus*, a mouse louse, and *P. spinulo'sa*, the common louse of rats.

polyplegia (pol-ip-le'je-ah) [πολύς many + πληγή stroke]. Simultaneous paralysis of several muscles.

polypleurodiaphragmatotomy (pol-e-plu'ro-di-a-f-ram-o'to-me) [πολύς many + πλευρά rib + διάφραγμα + τομή cutting]. The operation of resecting several ribs and cutting through the diaphragm for access to the convex aspect of the liver.

polyploid (pol'ip-loid). A condition found in some species in which the number of chromosomes in the somatic cells is some multiple (greater than two) of the haploid number. Species may be triploid, tetraploid, pentaploid, hexaploid, heptaploid, or octaploid.

polypnea, polypnoea (pol-ip-ne'ah) [πολύς many + πνοή respiration]. A rapid or panting respiration.

polypodia (pol-ip-o-de-ah) [πολύς many + πούς foot]. The presence of supernumerary feet.

Polypodium (pol-ip-o-de-um). See *φενίαναρ γαμβί*.

polypoid (pol'ip-oid) [*polyrhus* + εἶδος form]. Resembling a polypus.

polyporous (pol-ip'o-rus) [πολύς many + πόρος pore]. Having many pores.

Polyporus (pol-ip'o-rus) [πολύς many + πόρος pore]. A genus of mushrooms, or fungi, of many species. See *agaric*.

polyposis (pol-ip-o'sis). The development of multiple polypi on a part. **p. gas'trica**, the presence of multiple polypi on the gastric mucosa. **p. intestinalis**, a condition in which polypi occur in the intestine and rectum.

polypotome (pol-ip'o-tōm) [*polyrhus* + τέμνω to cut]. A cutting instrument for removing polypi.

polypotrite (pol-ip'o-trit) [*polyrhus* + *L. terere* to crush]. An instrument for crushing polypi.

polypous (pol'ip-us). Of the nature of a polypus.

polypus (pol'ip-us), pl. *pol'yri* [*L.*; πολύς many + πούς foot]. A smooth and pedunculated growth from a mucous surface, as of the nose, bladder, rectum, etc. Polypi are either the result of hypertrophy of mucous membrane or else are true tumors. **bleeding p.**, an angioma of the nasal mucosa. **blood p.** Same as *placental p.* **bronchial p.**, a polypus in the bronchial tubes. **p. carnosus**, a sarcoma. **cellular p.**, a mucous polypus. **p. cysticus**, **p. hydatidous**, an elongated mucous or polypoid cyst. **fibrinous p.**, an intra-uterine polypus made up of fibrin from retained blood. It may grow from portions of an ovum or from a thrombus at the placental site.

fibrous p., a polypus made up mainly of fibrous tissue. **fleshy p.**, a submucous myoma protruding into the uterine cavity. **gelatinous p.** Same as *myxoma*. **Hoffmann's p.**, a papillary hypertrophy of the nasal mucosa having something of the appearance of a papilloma. **hydatid p.**, polypus cysticus. **lipomatous p.**, a pedunculate lipoma. **malignant p.**, a carcinoma or sarcoma. **mucous p.** 1. A soft polypus due to local inflammatory hyperplasia of the mucous membrane. 2. A true myxoma. **nasal p.**, a polypus developing in the nasal canal. **osseous p.**, a polypus containing bony tissue. **placental p.**, one derived from a piece of retained placenta. **raspberry cellular p.**, a polypus of the ear made up of berry-like masses with a central pedicle. **round-cell p.** Same as *mucous p.* **spongy p.** Same as *mucous p.* **tooth p.**, a polypus growing from the pulp of a carious tooth. **vascular p.**, a polypoid angioma.

Mucous polypus hanging from cervical canal (J. C. Hirst).

polyradiotherapy (pol'e-ra-de-o-ther'ap-e). Treatment with several forms of radiant energy.

polyrrhea, polyrrhoea (pol-ir-e'ah) [πολύς much + ῥοή flow]. A copious fluid discharge.

polysaccharides (pol-e-sak'ar-idz). A group of carbohydrates which contain more than three molecules of simple carbohydrates combined with each other. They comprise the dextrins, starches, and glycogen; also cellulose, gums, inulin, and pectose.

polysaccharoses (pol-e-sak'ar-o-ses). Polysaccharides.

polysarcia (pol-e-sar'se-ah) [πολύς much + σάρξ flesh]. Corpulence or obesity. **p. cor'dis**, cor adiposum.

polysarcous (pol-e-sar'kus). Corpulent; obese; affected with polysarcia.

polyscelia (pol-e-se'le-ah) [πολύς many + σκέλος leg]. The presence of more than two legs.

polyscelus (pol-is-el-us) [πολύς many + σκέλος leg]. A monster with superfluous legs.

polyscope (pol'e-skōp) [πολύς many + σκοπεῖν to view]. Same as *diaphanoscope*.

polyserositis (pol'is-se-ro-si'tis). General inflammation of the serous membranes.

polysinusitis, polysinuitis (pol'-e-si-nus-i'tis, pol'-e-sin-u-i'tis) [πολύς many + sinusitis]. Inflammation of several sinuses at once.

polysolevol (pol-e-sol've-ol). Sodium or ammonium sulphocate; a clear, yellow liquid which dissolves large proportions of menthol, phenol, and many other substances.

polysonia (pol-e-so'me-ah) [πολύς many + σῶμα body]. A double or triple condition of the body of a monster fetus.

polysonus (pol-e-so'mus) [πολύς many + σῶμα body]. A double or triple monstrosity.

polysonmia, polyspermism (pol-e-sper'me-ah, pol-e-sper'mizm) [πολύς many + σπέρμα seed]. 1. Excessive secretion of semen. 2. The entrance of more than one spermatozoon into the ovum.

polysonmy (pol-e-sper'me). Polyspermia.

polystat (pol'e-stat) [πολύς many + σταί]. An instrument by which the ordinary street current can be transformed so as to furnish galvanic, faradic, and sinusoidal currents.

polystichia (pol-e-stik'e-ah) [πολύς many + στίχος row]. The presence of two or more rows of eyelashes upon a lid.

polysuspensoid (pol-e-sus-pen'soid). A suspensoid in which the particles are of different degrees of dispersion.

polysyphilide (pol-e-sif'il-id). Characterized by many syphilitic lesions.

polythelia (pol-e-the'le-ah) [πολύς many + θήλη nipple]. The occurrence of more than one nipple on a mamma.

polythelism (pol-e-the'lizm). Polythelia.

polytocous (pol-it'o-kus) [πολύς many + τόκος birth]. Giving birth to several offspring at one time.

polytrichia (pol-e-trik'e-ah) [πολύς many + θρίξ hair]. Excessive growth or development of the hair.

polytrichosis (pol'e-trik-o'sis). Same as *polytrichia*.

Polytrichum (pol-it'rik-um) [πολύς many + θρίξ hair]. A genus of mosses. *P. juniperinum*, hair-cap, or juniper moss, is diuretic. Dose of fluid-extract, 2-4 fluidrachms (8-16 cc.).

polytrophia (pol-it-ro'fe-ah) [πολύς many + τροφή nourishment]. Excessive nutrition.

polytrophic (pol-e-trof'ik). Producing more than one kind of fermentation.

polytroph (pol-it-ro-fe). Polytrophia.

polytropic (pol-e-trop'ik). Affecting more than one variety of tissue: said of certain poisons.

polyuria (pol-e-u're-ah) [πολύς much + οὔρον urine]. Excessive secretion and discharge of urine containing increased amounts of solid constituents. **p. test.** See *Albarran's test*, under *tests*.

polyvalent (pol-iv'al-ent). Same as *multivalent*.

pomade (po-mād') [Fr. *pommade*]. Same as *pomatum*.

pomatum (po-ma'tum) [L. from *po'mum* apple]. An ointment, especially one for the hair.

pombe (pom'be). A kind of beer made in Africa from millet seed.

pomegranate (pum-gran'et) [L. *po'mum grana'tum* grained apple]. The punicaceous tree, *Punica grana'tum*, and its fruit. The root bark (*grana'tum*, or *cortex grana'ta radi'cis*) and the bark of the tree contain pelletierin, isopelletierin, and punicotannic acid, and are useful tannicacids, especially for tapeworm. Dose of decoction, 4 fl.oz. (120 cc.). The rind of the fruit (*grana'ti fruc'tus cortex*) is actively astringent, and is used in diarrhea, leukorrhea, hemorrhage, and relaxation of the pharynx. See under *grana'tum*.

pomphoid (pom'foid) [πομφός a wheal + εἶδος form]. Wheal-like.

pompholyx (pom'fo-lyks) [πομφόλυξ bubble]. 1.

Any skin disease characterized by bullae. 2. Same as *cheiropompholyx*.

pomphus (pom'fus) [L.; πομφός]. A wheal or blister.

pomum adami (po'mum ad-a'mi) [L. "Adam's apple"]. The prominence on the throat caused by the thyroid cartilage.

ponceau B. Bichrich scarlet. **p. 3 B.** scarlet red.

Poncet's disease, operation (pahw-sāz') [Antonin Poncet, French surgeon, 1849-1913]. See *disease* and *operation*.

Pond. Abbreviation for L. *pondere*, by weight.

ponderable (pon'der-ah-bl) [L. *ponderabilis*; *pondus* weight]. Having weight.

pond lily. See *Nuphar*.

Ponfick's shadows (pon'fiks) [Emil Ponfick, German pathologist, 1844-1913]. Phantom corpuscles. See under *corpuscle*.

Pongamia (pon-ga'me-ah) [Malay *pongam*]. A genus of leguminous East Indian trees. *P. gla'bra* affords a fixed oil (*kurung oil*, *punga oil*, *pongam oil*): used in skin diseases and in rheumatism.

Ponndorf's method, vaccine (pon'dorfs) [W. Ponndorf, contemporary German (Weimar) physician]. See under *method* and *vaccine*.

ponogen (pon'o-jen) [πόνος pain + γεννᾶν to produce]. Products of body katabolism formed in certain abnormal mental states, under great emotional stress, or in disease.

ponograph (pon'o-graf) [πόνος pain + γράφειν to record]. An instrument for estimating and recording sensitiveness to pain.

ponopalmsism (pon'o-pal-mo'sis) [πόνος pain + πάλλω palpitation]. Palpitation on effort; Sir Clifford Allbutt's term for soldier's heart or neuro-circulatory asthenia.

ponophobia (pon-o-fō-be-ah) [πόνος pain, fatigue + φόβος fear]. 1. Abnormal dread of pain. 2. Dread of work; morbid laziness.

ponos (pon'nos) [πόνος pain]. See *infantile kala-azar*, under *kala-azar*.

pons (ponz) [L. for "bridge"]. 1. Any slip of tissue connecting two parts of an organ. 2. Same as *pons varolii*. **p. cerebelli**. Same as *p. varolii*. **p. hep'atis**, a projection, not always present, partially bridging the longitudinal fissure of the liver. **p. tari'ni**, the floor of the posterior perforated space. **p. varo'lii**, the organ which connects the cerebrum, cerebellum, and oblongata. It is a broad, transverse band of white fibers arching across the upper part of the medulla oblongata, and on each side contracting to a cord, to enter the cerebellum as the crus cerebelli. A groove along its middle lodges the basilar artery. Resting against it, near its posterior border, is the sixth pair of nerves. The upper surface of the pons forms a part of the floor of the fourth ventricle. It is made up of *longitudinal fibers* from the internal capsule; of *longitudinal fibers* of the tegmentum; of *transverse fibers* connecting the two cerebellar hemispheres, and masses of gray matter, the *ponsine nuclei*, including the nuclei of the facial, abducens, and trigeminal nerves and the superior olivary nucleus.

pons-oblongata (ponz-ob-lon-ga'tah). The pons varolii and medulla oblongata considered together.

pontibrachium (pon-tib-ra'ke-um). Same as *brachium pontis*.

pontic (pon'tik) [L. *pons*, *pon'tis* bridge]. A substitute for a natural tooth.

ponticular (pon-tik'u-lar). Pertaining to the ponticulus or propens.

ponticulus (pon-tik'u-lus) [dim. of L. *pons* bridge]. Same as *propens*. **p. auric'ulae**, a point on the eminentia cochleae where the retrahens aurem is attached. **p. hep'atis**, the isthmus which joins the spigelian lobe to the right lobe of the liver. **p. promonto'rii**, the ridge on the median wall

of the tympanum connecting the promontory with the pyramid.

pontile, pontine (pon'til, pon'tin). Pertaining to the pons varolii.

pontimeter (pon-tim'et-er) [L. *pons*, *pontis* bridge + *μέτρον* measure]. An instrument for measuring the bony bridge in mastoid operations.

pontoon (pon-toon') [Fr. *ponton*; L. *pon'to* boat]. A loop or knuckle of the small intestine.

pool (pool). A collection of blood in any part of the body due to retardation of the venous circulation.

abdominal p., the blood within the abdomen, much increased in shock.

Pool's phenomenon [Eugene Hillhouse *Pool*, contemporary surgeon in New York]. See under *phenomenon*.

pooled serum (pool'd). See under *serum*.

poplar (pop'lar). See *Populus*.

poples (pop'lez). The posterior surface of the knee.

popliteus (pop-lit'e-us) [L., from *pop'les* ham]. See *muscles*, table of.

popliteal (pop-lit'e-al) [L. *poplitae'us*; *pop'les* ham]. Pertaining to the posterior surface of the knee.

popliteus (pop-lit'e-us). See *muscles*, table of.

poppy (pop'pē). The plant *Papaver somniferum*, whose unripe capsules furnish opium and are used like it. The seeds of poppy furnish a fixed oil, which is used like linseed oil. Dose of extract (*extractum papaveris*), 2-5 grains (0.13-0.3 Gm.); of syrup, 1 fluidrachm (4 cc.).

populi gemmae (pop'u-li jem'e). Balm of Gilead buds, the winter leaf; buds of *Populus nigra* or *P. balsamea*.

populin (pop'u-lin) [L. *pop'ulus* poplar]. Benzosalicin, $C_{10}H_{12}O_8$; a principle from poplar bark.

Populus (pop'u-lus) [L.]. A genus of salicaceous trees; the poplars, aspens, and cottonwoods. The bark is tonic, containing populin and salicin, and the leaf buds of some species, as *P. canadensis* or *P. balsamifera*, called balm of Gilead, afford a variety of tannin. These buds are stimulant, tonic, and vulnerary. Dose of fluidextract, 15-30 minims (1-2 cc.). The bark of *P. tremuloides* and other species is tonic and febrifugal. Dose of fluidextract, 60-120 minims (4-8 cc.).

poradenitis (pōr-ad-en'i-tis) [Gr. *poros* pore + *ἀδὴν* gland + *-itis* inflammation]. A disease of the iliac glands characterized by the formation of small abscesses.

porcidin (por'sid-in). A serum for use in swine plague.

porcosan (por-ko'san). A proprietary preparation of erysipelas bacterin.

porcupine disease (por'ku-pin). Ichthyosis.

pore (pōr) [L. *porus*; Gr. *πόρος*]. Any minute orifice upon a free surface, as the opening of a sweat gland. **birth p.** See *metraderm*. **Galen's p.**, the inguinal canal.

porencephalia, porencephalus (po'ren-sef-a'le-ah, po-ren-sef-a-lus) [Gr. *poros* pore + *ἐγκέφαλος* brain]. The presence of cysts or cavities in the brain cortex communicating with the arachnoid spaces and penetrating deeply into the brain, due to arrest of development or to congenital disease that produces atrophy of the brain matter (Heschl, 1859).

porencephalic (po'ren-sef-al'ik). Porencephalous.

porencephalitis (po'ren-sef-al-i'tis). Porencephalia associated with an inflammatory process, such as polioencephalitis.

porencephalous (po-ren-sef'al-us). Affected with porencephalia.

porencephaly (po-ren-sef'al-e). Porencephalia.

poriomania (po're-o-ma'ne-ah) [Gr. *πορεία* walking + *μανία* madness]. Same as *ambulatory automatism*.

porion (po're-on) [Gr. *πόρος* pore]. The median point on the posterior edge of the incisive canal.

pork. The flesh of swine. **measly p.**, pork which contains the larval form (*Cysticercus cellulosae*) of *Tenia solium*, which may infect man if eaten inadequately cooked.

pornography (por-nog'raf-e) [Gr. *πόρνη* prostitute + *γράφειν* to write]. 1. The literature or bibliography of prostitution. 2. Obscene writing.

pornolagnia (por-no-lag'ne-ah) [Gr. *πόρνη* prostitute + *λαγνεία* lust]. A perverted sexual interest in prostitutes.

porocoele (po'ro-sēl) [Gr. *πόρος* callus + *κῆλη* hernia]. Scrotal hernia with thickening and hardening of the coverings.

porocephalitis (po'ro-sef-al-i'as-is). Infection with *Porocephalus*.

porocephalosis (po'ro-sef-al-o'sis). Porocephalitis.

Porocephalus (po-ro-sef'al-us) [Gr. *πόρος* pore + *κεφαλή* head]. A genus of wormlike arthropods of the order Linguatula, which are parasitic in man and animals. **P. armilla'tus**, the adult is found in the lungs and trachea of the python (*P. sebae* and *P. regius*); the larval forms are found in the organs of monkeys, lions, and occasionally in man. **P. clava'tus** is parasitic in man. **P. constrictus**, a larval form infesting the mesentery. **P. denticula'tus**, the larva of *Linguatula rhinaria*.

porokeratosis (po'ro-ker-at-o'sis) [Gr. *πόρος* callus + *keratosis*]. A skin disease characterized by hypertrophy of the stratum corneum, followed by its centrifugal and progressive atrophy. Called also *p. excen'trica*.

poroma (po-ro'mah) [Gr. *πόρωμα* callus]. An inflammatory induration.

poropathy (po-ro'p'ath-e). A quack system of healing in which medicines are applied to the diseased organs through the pores of the skin.

poroplastic (po-ro-plas'tik). Both porous and plastic. **p. felt**, a porous felt which is easily molded into splints and jackets for surgical use.

porosis (po-ro'sis) [Gr. *πόρωσις*]. 1. Same as *poroma*. 2. The formation of the callus in the repair of a fractured bone.

porosity (po-ro'sit-e). 1. The condition of being porous. 2. A spore.

porotic (po-rot'ik). Favoring the growth of connective tissue.

porotomy (po-rot'o-me) [Gr. *πόρος* pore + *τέμνειν* to cut]. Same as *meatotomy*.

porous (po'rus). Penetrated by pores and open spaces.

porphyria (por-fi're-ah). The presence of porphyrin in the tissues. See *hematoporphyrin*.

porphyrin (por-fi-rin). An iron-free derivative from hematin. Cf. *hematoporphyrin* and *mesoporphyrin*.

porphyrine (por-fi-rin). An alkaloid, $C_{21}H_{25}N_3O_2$, from the bark of *Alstonia constricta*.

porphyrinuria (por'fir-in-u're-ah). The presence of porphyrin in the urine.

porphyrization (por'fir-i-z'ashun). Pulverization; reduction to a powder: so called because sometimes performed on a porphyry tablet.

porphyrine (por-fi-ro-sin). An alkaloid from *Alstonia constricta*.

porphyruria (por-fi-rin-u're-ah) [Gr. *πορφύρα* purple + *ουρὴν* urine]. The presence of purpurin (uroerythrin) in the urine.

porrigo (por-i'go) [L.]. Ringworm or other diseases of the scalp. **p. decal'vans**. Same as *alopecia areata*. **p. favo'sa**. Same as *favus*. **p. fur'furans**, tinea tonsurans. **p. larva'lis**, eczema with impetigo of the scalp. **p. lupino'sa**, favus. **p. porrigho'ya**, favus. **p. scutula'ta**, favus.

Porro's operation (por'ōz) [Eduardo Porro, physician in Milan, 1842-1902]. See *operation*.

porta (por'tah) [L. "gate"]. 1. The hilum at which the vessels and nerves enter a gland. 2. The foramen interventriculare. **p. hep'atis** [B N A], the transverse fissure on the under surface of the liver, lodging the portal vein, hepatic artery, hepatic ducts, etc. **p. labyrin'thi**, the fenestra rotunda. **p. lie'nis**, the hilum of the spleen. **p. omen'ti**, the foramen of Winslow. **p. pul-mo'nis**, the hilum of the lung. **p. re'nis**, hilum of the kidney.

portacid (port-as'id). A dropper for the local application of an acid.

portagion (por-ta'jun). A transmissible disease germ.

portal (por'tal). Pertaining to a porta, especially to that of the liver. **p. circulation, system, vein**. See *circulation, system, vein*.

portcaustic (pört-kaws'tik) [Fr. *porte-caustique*]. A handle for holding a caustic substance.

porte-acid (port-as'id). Portacid.

porte-aiguille (pört-a-gél') [Fr.]. A surgeon's needle holder

porte-caustique (port-ko-sték'). Portcaustic.

porte-ligature (port-lig'at-ür). Portligature.

portemeche (pört-mesh') [Fr.]. A probe or director with a fork at one end for pushing a tent into a wound or fistula.

portenoeud (pört-ned') [Fr. "knot-carrier"]. An instrument for applying a ligature to the pedicle of a tumor.

porter (pör'ter). A dark, bitter malt liquor.

Porter's sign, test (pör'terz) [William Henry Porter, New York physician, born 1853]. See under *sign and tests*.

portio (pör'she-o). Latin for *part*. **p. du'ra** ("hard part") [obsolete], the seventh, or facial, nerve, formerly regarded as forming one nerve with the auditory or portio mollis. **p. in'ter du'ram et mollem, p. interne'dia**, a fasciculus which frequently connects the facial and acoustic nerves, but properly belongs to the facial. **p. ma'ior** [B N A], the large sensory root of the trigeminal nerve. **p. mi'nor** [B N A], the small motor root of the trigeminal nerve. **p. mol'lis** ("soft part"), the auditory, or eighth, nerve: so called because formerly regarded as a part of the facial nerve. **p. supravagina'lis** [cer'vici] [B N A], the part of the cervix uteri immediately above the vagina. **p. vagina'lis** [B N A], that part of the cervix uteri which protrudes into the vagina.

portiplex, portiplexus (pör'tip-leks, pör'tip-leks'-us). The plexus which joins the two lateral choroid plexuses, passing through the foramen of Monro.

portligature (pört-lig'at-ür). An instrument for applying a ligature to a deeply situated part.

porus (po'rus) [πόρος passage]. Latin for *pore* or *meatus*. **p. acus'ticus exter'nus** [B N A], the outer end of the external auditory meatus in the tympanic portion of the temporal bone. **p. acus'ticus inter'nus** [B N A], the opening of the internal auditory canal into the cranial cavity. **p. gale'ni**, the inguinal canal. **p. opti'cus**, the opening in the lamina cribrosa of the sclera for the central retinal artery.

Posada'sia spherifor'me. A protozoan organism discovered in Argentina by A. Posadas, claimed as the cause of generalized infectious psorospermiosis (1900) and found in appendicitis.

posed (pösd). Placed. A dental term applied to the position of a tooth. *Malposed* means not in its normal position. **normally p., regularly p.**, in normal position; said of a tooth.

posiomania (po'se-o-ma'ne-ah) [πόσιος drinking + μανία madness]. Dipomania.

position (po-zish'un) [L. *posi'tio*]. 1. The attitude or posture of a patient. 2. The situation of the fetus with respect to the mother at delivery. **Adams' p.**, patient stands with heels together,

well stretched, bends body forward from hips; head and arms hanging forward. **anatomical p.**, the position of the body standing erect with the palms of the hands turned outward. **Bonner's p.**, flexion, abduction, and outward rotation of the thigh in coxitis. **Bozeman's p.**, the patient is strapped to supports in the knee-elbow position. **bread-crumbling p.**, a position of the hands as if holding a pencil: seen in certain spinal diseases. **Casselberry's p.**, a prone position of the patient employed after intubation so that the patient may swallow without danger of fluid entering the tube. **Depage's p.**, a prone position with the pelvis elevated to form the apex of an inverted V, while the trunk and lower limbs form the branches of the V. **dorsal p.**, the posture of a person lying on his back. Called also *supine p.* **dorsal elevated p.**, position of patient lying on the back, with shoulders and head elevated: employed in digital examination of genitals. **dorsal recumbent p.**, position of patient on back, with lower limbs flexed and rotated outward: used in vaginal examination, application of obstetrical forceps, etc. **dorsosacral p.** Same as *lithotomy p.* **Duncan's p.**, the position of the placenta, with its margin presenting at the os for delivery. **Edebohls' p.**, a dorsal position, the right knee and thigh drawn up, legs flexed on the thighs, and thighs flexed on the belly, the hips raised, and the thighs adducted. Called also *Simon's p.* **Elliot's p.**, position of a patient on the operating table with lower chest elevated by placing a support under the small of the back: used in operations on the gallbladder. **English p.**, the patient on the left side, the right thigh and knee drawn up. Called also *left lateral recumbent p.* and *obstetrical p.* **first p.**, in vertex presentation, the occiput pointing to the left foramen ovale. Called also *left occipitocotyloid p.* **fourth p.**, the occiput pointing to the left sacroiliac synchondrosis. Called also *left occipitosacroiliac p.* **Fowler's p.**, the position in which the head of the patient's bed is raised 18 or 20 inches above the level. **genucubital p., knee-elbow p.**, the patient on his knees and elbows, the head on his hands. **genupectoral p., knee-chest p.**, the patient resting on his knees and chest, the arms crossed above the head. **jackknife p.**, position of patient on back, with the shoulders elevated, legs flexed on thighs, and thighs at right angles to the abdomen: used in passing the urethral sound. **Jones' p.**, acute flexion of the forearm for the treatment of fracture of the internal condyle of the humerus. **knee-chest p.** See *genupectoral p.* **knee-elbow p.** See *genucubital p.* **lateral recumbent p.** See *English p.* **leapfrog p.**, a position that may be assumed by the patient in rectal examinations by the finger. **lithotomy p.**, the patient on the back, legs flexed on the thighs, thighs flexed on the belly, and abducted. Called also *dorsosacral p.* **mento-anterior p.**, position of the fetus in labor with its chin pointing anteriorly in relation to the mother's body. **mento-iliac p.**, position of the fetus in labor with its chin pointing to one or other of the iliac fossae of the mother. **mentoposterior p.**, position of the fetus in labor with its chin pointing posteriorly. **Mercurio's p.**, a position very much like Walcher's position. **obstetrical p.** See *English p.* **occipito iliac p.**, the position of the fetus in labor in which its occiput is toward the groin of the mother. **occipitoposterior p.**, the position of the fetus in labor with its occiput pointing to the sacrum of the mother. **Péan's p.**, a position for operating in which the operator sits between the patient's legs, which rest in hollow supports or hang down over the operator's thighs. The operator sits in a high chair and the patient lies on a low table, so that he can bend over the abdomen and look into the peritoneal cavity. **Robson's p.**, position of patient for operation on gallbladder or bile ducts: lying on the back with a sand bag under the

Sims' position, anterior view.

Sims' position, posterior view.

Dorsal recumbent position.

Dorsosacral position, with leg-holder applied.

Knee-chest, or genupectoral, position.

Trendelenburg position (Ashton).

Fowler's position (Macfarlane).

Walcher position (Hirst).

Edebohl's dorsal position.

- hollow of the back. **Rose's p.**, the head dependent, as in certain operations on the air passages.
- Samuel's p.**, the position with the patient lying on her back with thighs flexed and knees flexed, the legs being grasped by the patient's hands. This position is said to widen the pelvic outlet and to render labor pains less intense: it is recommended for difficult labor after the head has reached the floor of the pelvis.
- Schultze's p.**, the position of the placenta when its center presents for delivery.
- Scultetus' p.**, patient lying on an inclined plane with head downward.
- second p.**, the occiput pointing to the right foramen ovale. Called also *right occipitocotyloid p.*
- semi-prone p.** See *Sims' p.*
- shoe-and-stocking p.**, a position in which the limb of one side is crossed upon the other.
- Simon's p.** Same as *Edebohls' p.*
- Sims' p.**, patient on the left side and the chest, the right knee and thigh drawn up, the left arm along the back. Called also *semiprone p.*
- Stern's p.**, position of the patient supine with the head lowered over the end of the table. In it the murmur of tricuspid insufficiency is heard more distinctly.
- third p.**, in vertex presentation, that in which the occiput presents at the right sacro-iliac synchondrosis. Called also *right sacro-iliac p.*
- Trendelenburg's p.**, the patient on the back on a plane inclined 45 degrees, the legs and feet hanging over the end of the table.
- Valentine's p.**, position with the patient supine and the hips flexed by means of a double inclined plane: used in irrigating the urethra.
- Walcher's p.**, the patient on the back, with the hips at the edge of the table and the legs hanging down.
- Wolfenden's p.**, position of the patient with the head hanging over the side of the bed.
- positive** (poz'it-iv) [L. *positivus*]. Not negative; greater than zero; to be added.
- posologic** (po-so-loj'ik). Pertaining to doses.
- posology** (po-sol'o-je) [πῶσος how much + λόγος treatise]. The science of dosage, or a system of dosage.
- post-** (pōst-) [L. *post* after]. A prefix signifying after or behind.
- postabortal** (post-ab-or'tal). Occurring after abortion.
- postaccussal** (pōst-ak-sesh'u-al). Occurring after a paroxysm.
- postacetabular** (pōst''as-et-ab'u-lar). Behind the acetabulum.
- postanal** (pōst-a'nal). Situated or occurring behind the anus.
- postanesthetic** (pōst-an-es-thet'ik). After anesthesia.
- postapoplectic** (pōst''ap-o-plek'tik). Occurring after an attack of apoplexy.
- postaxial** (pōst-aks'e-al). Situated or occurring behind an axis.
- postbrachial** (pōst-bra'ke-al). On the posterior part of the upper arm.
- postbrachium** (pōst-bra'ke-um). The posterior brachium of the corpus quadrigeminum.
- postbuccal** (pōst-buk'al). Behind the buccal region.
- postbulbar** (pōst-bul'bar). Behind the medulla oblongata.
- postcava** (pōst-ka'vah). The ascending vena cava.
- postcaval** (pōst-ka'val). Pertaining to the postcava.
- postcecal** (pōst-se'kal). Behind the cecum.
- postcentral** (pōst-sen'tral). Situated or occurring behind a center.
- postcentralis** (pōst-sen-tra'lis). The postcentral fissure. See *fissure*.
- postcerebellar** (pōst-ser-e-bel'ar). In the posterior part of the cerebellum.
- postcerebral** (pōst-ser'e-bral). Behind the cerebrum.
- postcesarean** (pōst-se-za're-an). Following cesarean operation.
- postcibal** (pōst-si'bal) [L. *post* after + *cibum* food]. Occurring after the taking of food.
- postcisterna** (pōst-sis-ter'nah). The cisterna magna.
- postclavicular** (pōst-klav-ik'u-lar) [L. *post* after + *clavicle*]. Situated or occurring behind the clavicle.
- postcommissure** (pōst-kom'is-ūr). The posterior commissure of the brain.
- postcondylar** (pōst-kon'dil-ar). Behind or back of a condyle.
- postconnubial** (pōst-kon-u-be-al) [L. *post* after + *connubium* marriage]. Occurring or happening after marriage.
- postconvulsive** (pōst-kon-vul'siv). Following after a convulsion.
- postcordial** (pōst-kor'de-al). Back of the heart.
- postcornu** (pōst-kor'nu). The posterior horn of the lateral ventricle.
- posteribrum** (pōst-kri'brum). The posterior perforated space.
- postcubital** (pōst-ku'bit-al). On the dorsal side of the forearm.
- postdevelopmental** (pōst-de-vel-up-men'tal). Occurring after the period of development.
- postdiastolic** (pōst''di-as-to'l'ik). Occurring after or following the diastole.
- postdicrotic** (pōst-di-krot'ik). Occurring after the dicrotic elevation of the sphygmogram.
- postdigestive** (pōst-di-jes'tiv). After digestion.
- postdiphtheric, postdiphtheritic** (pōst-dif-ther'ik, pōst''dif-ther-it'ik). Occurring after a diphtheric attack.
- postdural** (pōst-du'ral). Behind the dura mater.
- postembryonic** (pōst''em-bre-on'ik) [L. *post* after + *ἐμβρυον* embryo]. Occurring after the embryonic stage.
- postepileptic** (pōst''ep-il-ep'tik). Occurring after or following an epileptic attack.
- posterio-occlusion** (pos-te're-o-ok-lu'zhun). Same as *distocclusion*.
- posterior** (pos-te're-or) [L. neut. *posteriorius*]. Situated behind or toward the rear.
- posteroocclusion** (pos''ter-ok-lu'zhun). Same as *distocclusion*.
- postero-external** (pos''te-ro-eks-ter'nal) [L. *posteriorus* behind + *exter-nus* outer]. Situated on the outer side of a posterior aspect.
- postero-inferior** (pos''ter-o-in-fe're-or). Posterior and inferior.
- postero-internal** (pos''te-ro-in-ter'nal) [L. *posteriorus* behind + *inter-nus* inner]. Situated within and to the rear.
- posterolateral** (pos''te-ro-lat'er-al) [L. *posteriorus* behind + *lateralis* lateral]. Situated behind and to one side.
- posteromedian** (pos''te-ro-me'de-an) [L. *posteriorus* behind + *medius* middle]. Situated on the middle of a posterior aspect.
- posteroparietal** (pos''te-ro-par-i-et'al) [L. *posteriorus* behind + *paries* wall]. Situated at the back part of the parietal bone.
- posterosuperior** (pos''te-ro-su-pe're-or) [L. *posteriorus* behind + *superior* upper]. Situated behind and above.
- posterotemporal** (pos''te-ro-tem'po-ral) [L. *posteriorus* behind + *templum* temple]. Situated at the back part of the temporal bone.
- posterula** (pos-ter'u-lah) [L.]. The space between the turbinal bones and the posterior nares.
- postesophageal** (pōst''e-sof-a'je-al). Situated behind the esophagus.
- postethmoid** (pōst-eth'moid). Behind the ethmoid bone.
- postexed** (pōs-text'). Bent backward.

postexion (pōs-tex'yun). Posterior flexion.

postfebrile (pōst-feb'rīl) [L. *post* after + *febris* febrile]. Occurring as the result of a fever.

postfovea (pōst-fō've-ah). The fovea posterior.

postganglionic (pōst'gang-le-on'ik). Posterior to a ganglion.

postgeminum (pōst-jem'in-um) [L. *post* after + *geminus* twin]. The posterior corpora quadrigemina.

postgeniculatum, postgeniculum (pōst'je-nik-u-la'tum, pōst-je-nik'u-lum). The internal geniculate body.

postglenoid (pōst-gle'noid). Situated behind the glenoid fossa.

postgracile (pōst-gras'il). Behind the slender lobe of the cerebellum.

postgrippal (pōst-grip'al). Occurring after grip or influenza.

posthemiplegic (pōst'hem-e-ple'jik). Following an attack of hemiplegia.

posthemorrhage (pōst-hem'or-āj). Secondary hemorrhage.

posthemorrhagic (pōst-hem-o-raj'ik). Occurring after hemorrhage.

posthepatic (pōst-he-pat'ik). Behind the liver.

posthetyomy (pos-thet'o-me) [*πρόσθη* prepuce + *τέμνειν* to cut]. Circumcision.

posthioplasty (pos'the-o-plas-te) [*πρόσθη* foreskin + *πλαστός* formed]. Plastic surgery of the prepuce.

posthippocampal (pōst-hip-o-kam'pal). Behind the hippocampus.

posthitis (pos-thi'tis) [*πρόσθη* foreskin + *-itis* inflammation]. Inflammation of the prepuce.

postholith (pos'tho-lith) [*πρόσθη* foreskin + *λίθος* stone]. A preputial concretion or calculus.

posthumous (pos'tu-mus) [L. *postumus* coming after]. Occurring after death; born after the father's death.

posthyoid (pōst-hi'oid). Situated or occurring behind the hyoid bone.

posthypnotic (pōst-hip-not'ik). Succeeding the hypnotic state.

posthypophysis (pōst-hi-pof'is-is). The posterior part of the hypophysis or pituitary body.

posticus (pos-ti'kus) [L.]. Posterior.

postinfluenzal (pōst-in-flu-en'zal). Occurring after influenza.

postinsula (pōst-in'su-lah). The posterior part of the insula.

postischial (pōst-is'ke-al). Situated behind the ischium.

postmalarial (post-mal-a're-al). Occurring after malaria.

postmastoid (pōst-mas'toid). Situated behind the mastoid.

postmaximal (pōst-maks'im-al). After a maximum.

postmeal (pōst-me-a'tal). Behind a meal.

postmedian (pōst-me-de-an) [L. *post* after + *medius* middle]. Situated or occurring behind a median line or plane.

postmediastinal (pōst'me-de-as'tin-al). Behind the mediastinum; pertaining to the posterior mediastinum.

postmediastinum (pōst'me-de-as-ti'nium). The posterior mediastinum.

postmeiotic (pōst-mi-ot'ik) [L. *post* after + *μειν* to decrease]. A term applied to the stage following the reduction of the chromosomes in the mitotic cycle.

postmesenteric (pōst-mes-en-ter'ik). Behind or in the posterior part of the mesentery.

postmortal (pōst-mor'tal). After death.

postmortem (pōst-mor'tem). Latin for *after death*.

postnaris (pōst-na're-al). Pertaining to the posterior nares.

postnaris (pōst-na'ris). The posterior naris.

postnasal (pōst-na'zal) [L. *post* behind + *nasus* nose]. Situated or occurring behind the nose.

postnatal (pōst-na'tal). Occurring after birth.

postnecrotic (pōst-nek-rot'ik). After death of a part.

postneuritic (pōst-nu-rit'ik). Occurring after neuritis.

postnodular (pōst-nod'u-lar). Behind the nodulus.

postoblongata (pōst'ob-lon-ga'tah). The part of the oblongata below the pons.

postocular (pōst-ok'u-lar) [L. *post* behind + *oculus* eye]. Situated or occurring behind the eye.

postolivary (pōst-ol'iv-a-re). Behind the olivary body.

postoperative (pōst-op'er-a-tiv). Occurring after a surgical operation.

postoperculum (pōst-ō-per'ku-lum). That portion of the operculum formed by the supertemporal convolution.

postopticus (pōst-op'tik-us) [L. *post* after + *opticus* optic]. Either one of the posterior optic lobes (corpora quadrigemina).

postoral (pōst-o'ral) [L. *post* behind + *os* mouth]. Behind the mouth.

postorbital (pōst-or'bit-al). Behind the orbit.

postpalatine (pōst-pal'at-in). Behind the palate or palate bone.

postpallium (pōst-pal'e-um). The portion of the cortex of the cerebrum posterior to the fissure of Rolando.

postpaludal (pōst-pal'u-dal). Postmalarial.

postparalytic (pōst'par-al-it'ik). Following an attack of paralysis.

postpartum (pōst-par'tum) [L.]. Occurring after delivery or childbirth.

postpeduncle (pōst-pe'dung-kl). The posterior peduncle of the cerebellum.

postperforatum (pōst'per-for-a'tum). The posterior perforated space.

postpharyngeal (pōst-far-in'je-al). Situated or occurring behind the pharynx.

postpneumonic (pōst-nu-mon'ik). Following pneumonia.

postponent (pōst-po'nent) [L. *post* after + *ponere* to place]. Having a more or less delayed recurrence.

postpontile (pōst-pon'til) [L. *post* after + *pons* bridge]. Situated or occurring behind the pons varolii.

postprandial (pōst-pran'de-al). Occurring after dinner, or after a meal.

postpubertal (pōst-pu'ber-tal). After puberty.

postpubescent (pōst-pu-bes'ent). After puberty.

postpycnotic (pōst-pik-not'ik). Occurring after the stage of pyknosis of a red blood cell.

postpyramidal (pōst-pir-am'id-al). Situated or occurring behind the pyramidal tract.

postpyramids (pōst-pir'am-idz). The posterior pyramids of the cerebellum; also the funiculus gracilis of the oblongata.

postramus (pōst-ra'mus) [L. *post* behind + *ramus* branch]. The horizontal branch of the stem of the arbor vitae of the cerebellum.

postrolandic (pōst-ro-lan'dik). Situated behind the fissure of Rolando.

postsacral (pōst-sa'kral). Behind or below the sacrum.

postscalenus (pōst-ska-le'nus). The posterior scalenus muscle.

postscapular (pōst-skap'u-lar). Behind the scapula.

postscapularis (pōst'skap-u-la'ris). The infraspinatus muscle.

postscarlatinal (pōst-skar-lat-i'nal). Following scarlatina.

Post sing. sed. liq. Abbreviation for *L. post sin' gulas se des liq' uidas*, after every loose stool.

postphenoid (pōst-sfe'noid). The basisphenoid, pterygoid, and alisphenoid bones together. In infancy they are separate bones, but usually become attached to the sphenoid.

postsplenic (pōst-splen'ik). Behind the spleen.

poststertorous (pōst-ster'tor-us). Occurring after stertor has begun in anesthesia.

postsylvian (pōst-sil've-an). Situated behind the sylvian fissure.

postsyphilitic (pōst-sif-il-it'ik). Following an attack of syphilis.

posttarsal (pōst-tar'sal). Situated behind the tarsus.

posttibial (pōst-tib'e-al). Behind the tibia.

posttraumatic (pōst-traw-mat'ik). Occurring after or in consequence of a wound.

posttussis (pōst-tus'is). Latin for "after coughing."

posttyphoid (pōst-ti'foid). Occurring after typhoid.

postulate (post'u-lāt) [*L. postula'tum* demanded]. Anything assumed or taken for granted. **Ehrlich's p.** See *Ehrlich's side-chain theory*, under *theory*. **Koch's p's.** See *Koch's law*, under *law*.

postural (pos'tu-ral). Pertaining to posture or position.

posture (pos'tūr) [*L. postu'ra*]. Attitude or position. See under *position*.

postuterine (pōst-u'ter-in). Situated or occurring behind the uterus.

postvaccinal (pōst-vak'sin-al). After vaccination.

postvermis (pōst-ver'mis). The vermis inferior of the cerebellum.

postvital (pōst-vi'tal). After vital; a term applied to staining of a tissue that occurs after death of the tissue which has been previously stained by vital methods.

Pot. Abbreviation for *potion* and *potassa*.

potable (po'tah-bl) [*L. potab'ilis*]. Fit to drink; drinkable.

Potain's apparatus, disease, sign, solution, syndrome (po-tānz') [Pierre Carl Edouard Potain, French physician, 1825-1901]. See the nouns.

potamophobia (pot'am-o-fō-be'ah) [*ποταμός* river + *φόβος* fear]. A morbid dread of rivers or of streams and lakes.

potash (po'tash). 1. Potassium hydroxide. 2. Potassium carbonate. 3. Sometimes used by the laity for potassium chlorate, as for instance "potash tablets." **caustic p.**, potassium hydroxide. **sulphureted p.** See *potassa sulphurata*.

potassa (po-tas'ah) [*L.*]. See *potash* (1). **p. cum cal'ce**, potash with lime, or Vienna paste, a mixture of potassa and lime in equal parts; used as a caustic. **p. sulphurata**, sulphureted potassa. Called also *hepar sulphuris*, or liver of sulphur: antacid, alterative, and used in throat diseases. Dose, $\frac{1}{2}$ -10 grains (0.033-0.66 Gm.).

potassic (po-tas'ik). Containing potash.

potassiocupric (po-tas'e-o-ku'prik). Containing potassium and copper.

potassiomeric (po-tas'e-o-mer-ku'rik). Containing potassium and mercury. **p. iodide**. See *potassium mercuric oxide*.

potassium (po-tas'e-um) [*L.*]. A metallic element of the alkali group, many of whose salts are used in medicine. It is a soft, silver-white metal, melting at 58 F.; atomic weight, 39.1; specific gravity, 0.865; symbol, K (kalium). **p. acetate**, a compound, CH_3COOK . It is diuretic and purgative, and is used in dropsy, rheumatism, and skin diseases. Dose, 5-60 grains (0.33-4 Gm.). **p. amylate**. See *maculonanin*. **p. arsenate**, K_2HASO_4 , a stable salt of ortho-arsenic

acid: used therapeutically. **p. arsenite**, a compound whose solution (*Fowler's solution*, *li' quor potas'sii arseni'tis*) is one of the most convenient forms for the administration of arsenic. Dose, 2-10 minims (0.133-0.666 cc.). **p. aurobromide**, a double salt of potassium and gold bromides; an antiseptic agent, $\text{AuBr}_3\text{KBr} \cdot \text{H}_2\text{O}$, in purplish crystals. Hypodermic dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.008-0.012 Gm.). **p. aurocyanide**, an agent in colorless crystals, $\text{KAu}(\text{CN})_2$. **p. bicarbonate**, a transparent, crystalline salt, KHCO_3 ; used as an antacid and diuretic. Dose, 5-30 grains (0.333-2 Gm.). **p. bichromate**, **p. dichromate**, an orange-red, crystalline salt, $\text{K}_2\text{Cr}_2\text{O}_7$. It is a caustic poison, and is used as a preservative for tissues. **p. bismuth tartrate**, a basic bismuth salt. It is used in the treatment of syphilis by injections in doses of $1\frac{1}{2}$ -3 grains (0.1-0.2 Gm.). **p. bisulphate**, KHSO_4 ; laxative and refrigerant. Dose, 1-2 drachms (4-8 Gm.). **p. bitartrate**, cream of tartar, $\text{COOH}(\text{C.OH})_2\text{COOK}$, a white, crystalline salt; diuretic, cathartic, and refrigerant. Dose, 1-8 drachms (4-32 Gm.). **p. bromide**, a colorless, crystalline body, KBr ; sedative and antispasmodic; much employed in epilepsy and in nervous diseases. Dose, 5-60 grains (0.333-4 Gm.). **p. bromsalicylate**, white crystals of potassium bromortho-oxybenzoate, $\text{OH} \cdot \text{BrC}_6\text{H}_4\text{COOK}$; used as an antirheumatic in 5-10 grain doses (0.32-0.65 Gm.). **p. cantharidate**, a white, crystalline salt, $\text{C}_{10}\text{H}_{14}\text{K}_2\text{O}_8 + 2\text{H}_2\text{O}$; used in hypodermic injections for tuberculosis. **p. carbonate** (*potas'sii carbo' nas*), a white, crystalline or granular salt, K_2CO_3 . It is used as an antacid, counterirritant, and diuretic. Dose, 2-20 grains (0.133-1.333 Gm.). **p. chlorate** (*potas'sii chlor' as*), an explosive, white, crystalline salt, KClO_3 ; used in diseases of the mouth and throat, as pharyngitis, diphtheria, stomatitis; also for hemorrhoids and proctitis. In large doses it causes destruction of red blood corpuscles and nephritis. Dose, 2-20 grains (0.133-1.333 Gm.). The lozenges (*trochis' ci potas'sii chlor' as*) contain 5 grains each. **p. citrate**, a white, granular powder, $\text{K}_3\text{C}_6\text{H}_5\text{O}_7 + \text{H}_2\text{O}$; used as a diuretic and refrigerant in rheumatism, fevers, bronchitis, etc. Dose, 15-60 grains (1-4 Gm.); of solution (*li' quor potas'sii citra'tis*), 2-4 fluidrachms (8-16 cc.); of mixture (*mis'tura potas'sii citra'tis*), $\frac{1}{2}$ -1 fl.oz. (16-32 cc.); of *potas'sii cit' ras efferves' cens*, the effervescent potassium citrate, 30-90 grains (2-6 Gm.). **p. citrate, effervescent**, a dry granular mixture of potassium citrate (20 per cent), sodium bicarbonate, tartaric acid, and citric acid which effervesces in water. **p. cobaltionitrite**, a salt, $\text{K}_6\text{Co}_2(\text{NO}_2)_{12} + 2\text{H}_2\text{O}$, in small yellow crystals. **p. cyanide**, a white solid or powder, KCN, extremely poisonous: used like hydrocyanic acid. Dose, $\frac{1}{16}$ - $\frac{1}{8}$ grain (0.004-0.008 Gm.). **p. dithiocarbonate**, a reddish salt, K_2COS_2 , serviceable in skin diseases. **p. ferricyanide**, beautiful deep red crystals, $\text{K}_3\text{Fe}(\text{CN})_6$, a delicate test for ferrous salts. **p. ferrocyanide**, a substance, $\text{K}_4\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$, in large yellow tablets or crystals. It is sedative, diaphoretic, and astringent: used in the night sweats of phthisis. Dose, 5-10 grains (0.333-0.666 Gm.). It is also much used as a chemical reagent. **p. glycerophosphate**, a white, vitreous substance, $\text{CH}_2\text{OH} \cdot \text{CHOH} \cdot \text{CH}_2\text{O} \cdot \text{PO}(\text{OK})_2$; used in nervous diseases, phosphaturia, and locomotor ataxia. Dose, 3-4 $\frac{1}{2}$ grains (0.2-0.3 Gm.). **p. guaiaacolsulphonate**, a white or pinkish, crystalline powder, potassium ortho-guaiaacolsulphonate, $\text{CH}_3\text{O} \cdot \text{C}_6\text{H}_3(\text{OH}) \cdot \text{SO}_3\text{OK}$, soluble in water and containing about 60 per cent of guaiaacol. It is used as a substitute for guaiaacol in tuberculosis, catarrhs, and chronic coughs. Introduced as *thiocol*. Dose, 5-20 grains (0.33-1.333 Gm.). **p. hydrate**, **p. hydroxide**, a caustic potash, or potassa. It is a white, crystalline compound, KOH, with powerful alkaline and caustic properties. It is used externally as a caustic for chancres, callus, or fungous growths, poisoned wounds, etc.,

and internally as an antacid in acidity of the stomach, gonorrhea, lithemia, scrofula, etc. Dose of *li'quor potas'sae*, 10-20 minims (0.66-1.33 cc.). **p. hypophosphite**, a white, crystalline salt, KH_2PO_2 ; used in the treatment of tuberculosis. Dose, 5-10 grains (0.333-0.666 Gm.). **p. iodate**, a salt, KIO_3 , employed as an alternative, especially in diseases of the mucous surfaces: used like potassium chlorate. Dose, 4-8 grains (0.25-0.52 Gm.). **p. iodide**, a colorless, transparent body, KI ; much used in syphilis and in a wide range of chronic diseases as an absorbent and eliminating agent. Besides in syphilis, potassium iodide is used in chronic poisoning by arsenic or mercury, rheumatism, dropsy, meningitis, locomotor ataxia, brain tumors, neuralgia, asthma, bronchitis, and aneurysm. Dose, 2-15 grains (0.133-1 Gm.). Externally it is used in the form of an ointment. **p. mercuric iodide**, a complex, K_2HgI_4 , containing about 25.5 per cent of mercury. It is used the same as mercuric iodide (over which it has some advantages due to solubility) in dilutions of 1 : 100 to 1 : 1000 as a germicide. **p. nitrate**, a white, crystalline salt, KNO_3 ; used as a diaphoretic, diuretic, and antiseptic. Dose, 5-15 grains (0.333-1 Gm.). **p. nitrite**, a compound, KNO_2 ; used in angina pectoris, gastralgia, epilepsy, etc. Dose, 3-5 grains (0.2-0.33 Gm.). **p. osmate**, a red, crystalline powder: employed in the treatment of epilepsy, goiter, and neuralgia. Dose, $\frac{1}{4}$ grain (0.001 Gm.). **p. permanganate**, a dark purple, crystalline salt, KMnO_4 . It is an oxidizing agent, antiseptic and disinfectant, and is used for ozena, foul ulcers, diphtheria, scarlet fever, and internally in amenorrhea and dyspepsia. Dose, $\frac{1}{2}$ -2 grains (0.333-0.133 Gm.). **p. phenol-sulphonate**, a salt, $\text{C}_6\text{H}_5\text{O}_3\text{SO}_2\text{OK} + \text{H}_2\text{O}$, in shining white crystals: antiseptic. **p. phosphate**, a salt, K_2HPO_4 ; used in tuberculosis. Dose, 10-30 grains (0.66-2 Gm.). **p. salicylate**, a yellow powder, $\text{C}_6\text{H}_7\text{OH.COOK}$, used as an antirheumatic in 3-15 grain doses (0.2-1 Gm.). **p. silicate**, soluble glass, K_2SiO_3 ; used like plaster of paris in making rigid dressings. **p. silicofluoride**, an agent recommended for use in ear diseases as an antiseptic. **p. and sodium tartrate**, a saline cathartic, $\text{COONa(CHOH)}_2\text{COOK}$. Dose, 2.5 drachms (10 Gm.). **p. soso-iodolate**, a colorless crystalline powder, potassium diiodoparaphenol sulphonate, $\text{OH.C}_6\text{H}_3\text{I}_2\text{SO}_2\text{OK}$; used as an external antiseptic in rhinitis, otitis, gonorrhea, and skin diseases. **p. succinate**, a compound with hemostatic properties. **p. sulphate**, a compound, K_2SO_4 ; a harsh cathartic: used chiefly in pharmacy. Dose, 15-120 grains (1-8 Gm.). **p. sulphide**, KS ; little used at present. Dose, 1-10 grains (0.066-0.666 Gm.). **p. sulphite**, a white, crystalline salt, $\text{K}_2\text{SO}_3 + 2\text{H}_2\text{O}$. It is an antiseptic, and is used externally and internally for checking fermentation. Dose, 3-10 grains (0.2-0.666 Gm.). **p. sulphocarbolate**. Same as *p. phenolsulphonate*. **p. sulphocyanate**, KCNS , is found in the saliva; it has also been employed in the treatment of hypertension. Cf. *sodium sulphocyanate*. **p. tartrate**, a compound, $\text{K}_2\text{C}_4\text{H}_4\text{O}_6 + \text{H}_2\text{O}$, or *neutral potassium tartrate*: it is diuretic, diaphoretic, and cathartic. There are also a *bitartrate*, a *borated tartrate*, and a *potassium and sodium tartrate*, all having properties like the neutral tartrate. Dose, as diuretic and diaphoretic, 1-2 drachms (4-8 Gm.); as cathartic, $\frac{1}{2}$ -1 oz. (15-30 Gm.). **p. tellurate**, a salt in white crystals, K_2TeO : serviceable in the night sweats of tuberculosis. **p. thiocyanate**. Same as *p. sulphocyanate*.

potato culture (po-ta'to kul'chūr). A bacterial culture made on potato. See *potato culture medium*, under *culture medium*.

potency (po'ten-se) [L. *poten'tia* power]. The power of a medicine; especially the power of a medicine as developed by homeopathic attenuation; also a homeopathically attenuated medicine.

potentia coeundi (po-ten'she-ah ko-e-un'di) [L. "power of coming together"]. The ability to perform the sexual act. **p. generandi**, the ability to procreate.

potential (po-ten'shal) [L. *poten'tia* power]. 1. Existing and ready for action, but not yet active. 2. Electric tension or pressure, as measured by the capacity of producing electric effects in bodies of a different state of electrization. When bodies of different potentials are brought into communication, a current is set up between them; if they are of the same potential, no current passes between them.

potentialization, potentiation (po-ten-she-al-iz-a'shun, po-ten-she-a'shun). The preparation of the various homeopathic potencies.

potentiometer (po-ten-she-om'et-er). An instrument for the accurate measuring of voltage.

potentize (po'ten-tiz). To make potent; to prepare the various homeopathic potencies.

potentor (po-ten'tor). A device for the mechanical treatment of male impotence, especially that which is due to lack of penile erection.

potio (po'she-o) [L.]. See *potion*.

potion (po'shun) [L. *po'tio* draft]. A draft; a large dose of liquid medicine. **Rivière's p.**, an effervescent drink produced by combining a solution of citric acid with one of sodium or potassium bicarbonate. **Todd's p.**, tincture of canella, 5; brandy, 40; syrup, 30, and water, 75.

potocytosis (po'to-si-to'sis) [*πότος* drinking + *κύτος* cell]. The hypothetical action of cells passing fluids through themselves from one place to another.

potomania (po-to-ma'ne-ah) [*πότος* drinking + *μανία* madness]. Delirium tremens.

Pott's aneurysm, disease, etc. (pots) [Percival Pott, English surgeon, 1713-1788]. See *aneurysm, disease*, etc.

Pottenger's sign (pot'en-erz) [F. M. Pottenger, contemporary American physician]. See under *sign*.

potus (po'tus) [L. "drink"]. A potion. **p. imperialis**, imperial drink, a solution of $\frac{1}{2}$ oz. of cream of tartar in 3 pts. of water, sweetened, and flavored with lemon peel.

pouch (powch). Any pocket-like space, cavity, or cecal sac. **abdominovesical p.**, the pouch-like reflection of the peritoneum from the anterior abdominal wall to the distended bladder. **Broca's p.**, a pear-shaped sac in the labium majus, having its large extremity directed downward and backward, and its smaller one upward, forward, and outward toward the opening of the inguinal canal. It is composed of elastic fibers, and contains connective tissue and fat. Called also *puddendal sac* and *sac dartoïque de la femme*. **Douglas' p.**, a sac of the peritoneum which dips down below the posterior surface of the uterus. Called also *Douglas' culdesac*. **enterocelic p.**, a diverticulum of the enteron of the embryo. **hair p.**, the depression in the skin from which the hair grows. **Hartmann's p.**, a pouch at the exit of the gallbladder into the cystic duct. **ileo-cecal p.**, the folds of peritoneum at the end of the ileum. **laryngeal p.**, a membranous sac between the superior vocal cord and the thyroid cartilage. Called also *sacculus laryngis*. **Morison's p.**, a pouch of peritoneum below the liver and to the right of the right kidney. **ob-turator p.** See *paravesical p.* **paracystic p.**, the lateral part of the uterovesical pouch. **pararectal p.**, the lateral part of Douglas' pouch. **paravesical p.**, the lateral part of the utero-abdominal pouch of the side of the bladder, where the entrance is to the obturator canal: called also *obturator p.* **Physick's p's**, inflammation of the sacculations between the rectal valves with mucous discharge. **Rathke's p.**, a diverticulum from the embryonic buccal cavity

whence the anterior lobe of the pituitary body is developed. **recto-uterine p.** Same as *Douglas' p. rectovaginal p.* Same as *Douglas' p. rectovesical p.*, the fold of peritoneum that is reflected on the bladder. **Seessel's p.**, an embryonic pouch behind the top of the rudimentary hypophysis. **utero-abdominal p.**, the anterior of the two compartments into which the pelvic cavity is divided by the uterus and broad ligaments. **utero-vesical p.**, **vesico-uterine p.**, the fold of peritoneum between the bladder and the uterus. **Willis' p.**, the lesser omentum.

Poulet's disease (poo-lāz') [Alfred Poulet, French physician, 1848-1888]. Rheumatic osteoperiosis.

poultice (pōl'tis) [L. *puls* pap; *cataplas'ma*]. Any soft and moist pulaceous mass applied hot to the surface of a part for the purpose of supplying heat and moisture.

poultogen (pōl'to-jen). A proprietary poultice resembling bismuth.

pounce (powns). Powdered sandarach.

pound (pownd) [L. *pon'dus* weight; *li'bra* pound]. A weight of 12 ounces in troy or apothecaries' weight; also 16 ounces in avoirdupois weight. The ordinary pound (avoirdupois) contains 7000 grains or 453.60 Gm.; the apothecaries' or troy pound contains 5760 grains or 372.96 Gm. See *weights and measures, table of*.

Poupart's ligament (poo-parts') [François Poupart, French anatomist, 1661-1709]. See *ligament*.

poverty (pov'er-te). The state of being poor; the absence or scarcity of requisite substance or elements. **emotional p.**, diminution in the normal emotional qualities of the mind, such as love, sympathy, honor, etc. **p. of movement**, the relative immobility and stationariness of position seen in subjects of shaking palsy; akinesia.

powder (pow'der). An aggregation of small particles obtained by the grinding or trituration of a solid drug. See *pulvis*. **antimonial p.**, antimony oxide, 1 part; calcium phosphate, 2 parts. See also *Tyson's antimonial p.* **aromatic p.**, a powder containing Saigon cinnamon, Jamaica ginger, cardamom seed, and myristica. **bleaching p.**, chlorinated lime. **borosalicylic p.**, a dusting powder consisting of 4 parts of boric acid and 1 part of salicylic acid: used as a wound dressing. **Castillon's p's**, 8 parts each of tragacanth, powdered sago, and powdered salep, 2 parts prepared oyster shell, and 1 part cochineal. One dram is boiled in a pint of milk and used in diarrhea and dysentery. **composition p.**, compound powder of bayberry; a carminative powder containing bark of bayberry root, 60; ginger, 30, and capsicum and clove, each 30 parts. Dose, 10-20 grains (0.6-1.2 Gm.). **compound chalk p.**, a powder containing prepared chalk, acacia, and sugar. **compound p. of glycyrrhiza** contains senna, glycyrrhiza, sulphur, oil of fennel, and sugar. Dose, 1 drachm (4 Gm.). **compound p. of jalap** contains jalap and potassium bitartrate. Dose, 30 grains (2 Gm.). **compound p. of rhubarb**. See *Gregory's p.* **Dalmation insect p.** See under *Pyrethrum*. **Dover's p.**, *pulvis ipecacuanhae et opii*. See *opium*. **effervescent p.**, a powder to which has been added sodium bicarbonate and tartaric or citric acid. **Faynard's p.**, a hemostatic powder, said to be pulverized beech-charcoal. **gray p.**, mercury with chalk. **Gregory's p.**, *pulvis rhei compositus*, compound powder of rhubarb; contains rhubarb, magnesium oxide, and Jamaica ginger. Dose, 30 grains (2 Gm.). **Hufeland's p.**, magnesium carbonate, 50; rhubarb, 15; sugar with oil of fennel seed, 35. **impalpable p.**, a powder so fine that its particles cannot be felt as distinct bodies. **insect p.**, any powder destructive to insects. **James' p.** Same as *Pulvis antimonialis*. See *antimony*. **Jesuit's p.**, powdered cinchona. **N. C. I. p.**, a powder compounded of 96 per cent naphthalene, 2 per cent

creosote, and 2 per cent iodoform: for use in delousing troops and as a general insecticide. **Patterson's p.**, a mixture of magnesia and bismuth subnitrate. **Persian insect p.** See under *pyrethrum*. **seidlitz p.**, *pulvis effervescens compositus*, a cathartic preparation consisting of a white paper containing 35 grains of tartaric acid and a blue paper containing 40 grains of sodium bicarbonate and 120 grains of sodium and potassium tartrate. The contents of the two papers are mixed in water and drunk while effervescing. **serum p.**, a powder of zinc oxide charged with a freshly prepared serum and then dried and sterilized: used as an antiseptic dressing powder. **styptic p.**, a powder containing alum, acacia, gum, colophony, and sometimes tragacanth and argil. **sympathetic p.**, a powder formerly applied to a weapon, from the belief that its application would head a wound caused by that weapon. **talcum p.**, powdered soapstone: used as an opacification to inflamed surfaces. **Tully's p.**, *pulvis morphinae compositus*. See *morphine*. **tutty p.**, powdered stannic acid: used for polishing teeth. **Tyson's antimonial p.**, a mixture of 20 grains of antimony oxide with 180 grains of calcium phosphate. Dose, 5-10 grains (0.333-0.666 Gm.). **Vienna p.**, potassa with lime. **Vigo's p.**, red oxide of mercury. **Vincent's p.**, 9 parts of boric acid and 1 part of calcium hypochlorite.

pox (poks). Any eruptive disease: used as a vulgar name for syphilis. **camel p.**, a disease of camels not unlike smallpox. **chickenpox**. See *varicella*. **cowpox**. See *vaccinia*. **glass p.** See *amaas*. **horse p.**, an infectious pustular disease of the horse; equine variola. **Kaffir p.**, *milk p.* See *amaas*. **Samoa p.**, *amaas*. **sheep p.** See *ovinia*. **smallpox**. See *variola*. **swine p.**, a contagious disease of swine resembling smallpox. **white p.**, *amaas*.

Pozzi's operation, syndrome (pod'zēz) [Samuel Jean Pozzi, gynecologist in Paris, 1846-1918]. See under *operation* and *syndrome*.

P. p. Abbreviation for L. *punctum proximum*, near point.

P. p. a. Abbreviation for L. *phiala prius agitata*, the bottle having first been shaken.

Ppt. Abbreviation for *precipitate* and *prepared*.

P. r. Abbreviation for L. *punctum remotum*, far point.

Pr. Abbreviation for *presbyopia* and *prism*; symbol for *praseodymium*.

practice (prak'tis) [πρακτική]. The practice of medicine; the branch of medicine treating of the practical recognition and treatment of disease. **contract p.**, the treatment of the members of a lodge, organization, or society for a lump sum, or at so much per head. **group p.** See *group medicine*, under *medicine*.

pratique (prak-tēk'). A certificate which releases an incoming vessel from quarantine. It is given by the quarantine officer to the master, and when presented to the collector of the port admits the boat to entry.

practitioner (prak-tish'un-er). One who has complied with the requirements and who is engaged in the practice of medicine.

prae-. For words thus beginning, see those beginning *pre-*.

praecribrum (pre-kri'brum). The anterior perforated space of the brain.

praeconeus (pre-ku'ne-us). The quadrate lobule of the cerebrum.

praeogeniculatum (pre''jen-ik-u-la'tum). The external geniculate body.

praeoperculum (pre-o-per'ku-lum). The frontal operculum of the brain.

praeperforatum (pre-per-fo-ra'tum). The anterior perforated space.

praeputium (pre-pu'she-um). See *prepuce*.

praevermis (pre-ver'mis). The anterior and superior portions of the vermis of the cerebellum.

pragmatagnosia (prag'mat-ag-no'ze-ah) [*πρᾶγμα* object + *ἀγνοσία* absence of recognition]. Inability to recognize objects.

pragmatamnesia (preg'mat-am-ne'ze-ah) [*πρᾶγμα* object + *ἀμνησία* forgetfulness]. Loss of power of remembering the appearance of objects.

Prague maneuver (prahg). See under *maneuver*.

prairie dock. See *Parthenium*.

prairie itch (pra're). See *itch*.

Prana apparatus (prah'nah). See under *ap-paratus*.

praseodymium (pra-se-o-dim'e-um). An element having an atomic weight of 140.9 and the symbol Pr.

prasoid (pra'soid). A solution of globularin and globularetin: for use in acute rheumatism and gout. Dose, 15-20 minims (1-1.33 cc.).

P. rat. aetat. Abbreviation for L. *pro ratio'ne aeta'tis*, in proportion to age.

Prat's symptom. See under *symptom*.

pratique (prat'ik or prat-ék'). Permission given a ship, after a clean bill of health has been issued, to hold intercourse with the port of arrival.

Pravaz's syringe (prah-vahz') [Charles Gabriel Pravaz, French physician in Lyons, 1791-1853]. See *syringe*.

Praxagoras (praks-ag'o-ras). A Greek physician of Cos, who lived about 300 B. C. He seems to have been the first to recognize the difference between arteries and veins.

praxiology (prak-se-ol'o-je) [*πράξις* action + *λόγος* treatise]. The study of conduct.

praxinoscope (praks-in'o-sköp) [*πράξις* exercise + *σκοπεῖν* to view]. An instrument for studying the larynx.

pre- [L. *prae* before]. A prefix signifying *before*.

preadult (pre-ad'ult). Prior to adult life.

preagonal, preagonic (pre-ag'o-nal, -ag-on'ik). Preceding the death agony.

prealbuminuric (pre'al-bu-min-u'rik). Occurring before albuminuria sets in.

preanal (pre-a'nal). Situated in front of the anus.

preantiseptic (pre'an-tis-ep'tik). Pertaining to the time before the discovery of antiseptis.

preaortic (pre-a-or'tik). In front of the aorta.

preaseptic (pre-as-ep'tik). Pertaining to the time before aseptic surgery was practised.

preataxic (pre-at-aks'ik). Occurring before the advent of ataxia.

preauricular (pre-aw-rik'u-lar). Situated before an auricle or an auricular structure.

preaxial (pre-aks'e-al). In front of the transverse axis of the body.

prebacillary (pre-bas'il-a-re). Occurring before the entrance of bacilli into the system, or before they become discoverable.

prebacteriological (pre-bak-te-re-o-loj'ik-al). Before the development of bacteriology.

prebase (pre'bäs). That part of the dorsum of the tongue lying in front of the base.

prebasophilic (pre-ba-so-fil'ik). See under *pre-myelocyte*.

prebrachium (pre-bra'ke-um). One of the two upper brachia of the corpora quadrigemina.

precancerous (pre-kan'ser-us). Occurring before the development of a cancer.

precapillary (pre-kap'il-a-re). A venule or arteriole.

precarcinomatous (pre-kar-sin-om'at-us). Preceding the development of carcinoma.

precardiac (pre-kar'de-ak). Situated ventrad from the heart.

precartilage (pre-kar'til-aj). Embryonic cartilaginous tissue.

precava (pre-ka'vah). The vena cava descendens.

precenral (pre-sen'tral). Situated in front of a center.

prechordal (pre-kor'dal). Situated in front of the notochord.

precipitable (pre-sip'it-a-bl). Capable of being precipitated.

precipitant (pre-sip'it-ant). A substance which causes a chemical or mechanical precipitation.

precipitate (pre-sip'it-ät) [L. *praecipita're* to cast down]. 1. To cause a substance in solution to settle down in solid particles. 2. [L. *praecipita'tum*]. A deposit made or substance thrown down by precipitation. 3. Hasty; headlong; as precipitate labor. **red p.**, red mercuric oxide, HgO. **sweet p.**, calomel (mild mercurous chloride). **white p.**, ammoniated mercury, NH₂HgCl. **yellow p.**, yellow mercuric oxide, HgO.

precipitation (pre'sip-it-a'shun) [L. *praecipita'tio*]. The act or process of precipitating. **group p.**, precipitation of more than one organism by a precipitin.

precipitin (pre-sip'it-in). An antibody which is found in the blood of an animal which has been injected with bacterial culture fluids, blood serum, or any other foreign protein. The blood serum of such an animal will produce a precipitate when added to the antigen which has been used in its production. **heat p.** See *cocloprecipitin*.

precipitinogen (pre-sip-it-in'o-jen). Any substance which on injection will cause the development of a specific precipitin.

precipitinoid (pre-sip'it-in-oid). A precipitin in which the zymophore group has been weakened or lost so that it cannot cause precipitation, although it still retains its affinity for the antigen.

precipitinophoric (pre-sip'it-in-o-for'ik). Denoting the active precipitating element or group in a precipitin.

precipitogen (pre-sip'it-o-jen). Same as *precipitinogen*.

precipitogenoid (pre-sip-it-oj'en-oid). A precipitogen which has lost its power of causing precipitation.

precipitoid (pre-sip'it-oid). A precipitin in which the active precipitating group has been destroyed by heat.

precipitophore (pre-sip'it-o-för). The group in a precipitin which causes the actual precipitation.

precipitum (pre-sip'it-um). The precipitate resulting from the action of a precipitin.

preclival (pre-kliv'al). In front of the clivus of the cerebellum.

precommissure (pre-kom'ish-ür). The anterior cornu of the lateral ventricle.

preconscious (pre-kon'shus). In Freudian terminology, the preconscious includes all mental process which are "out of mind" at the time, but can be recalled with little or no effort.

preconvulsant (pre-kon-vul'sant). Pertaining to that stage of disease which precedes the occurrence of convulsions.

preconvulsive (pre-kon-vul'siv). Preceding a convulsion: said of a stage in epilepsy.

precordia (pre-kor'de-ah) [L. *praecor'dia*]. The region over the heart or stomach; the epigastrium and lower part of the thorax.

precordial (pre-kor'de-al). Pertaining to the precordia.

precordialgia (pre'kor-de-al'je-ah) [*precordia* + *ἄλγος* pain]. Pain in the precordia.

precordium (pre-kor'de-um). Same as *precordia*.

precornu (pre-kor'nu). The anterior cornu of the lateral ventricle.

precostal (pre-kos'tal). In front of the ribs.

precranial (pre-kra'ne-al). In the anterior part of the cranium.

precricbrum (pre-kri'brum). The anterior perforated space.

precritical (pre-krit'ik-al). Previous to the occurrence of the crisis.

precuneal (pre-ku'ne-al). Situated in front of the cuneus.

precuneate (pre-ku'ne-ät). Pertaining to the precuneus.

precuneus (pre-ku'ne-us) [L. *prae* before + *cu'neus* wedge]. The quadrate lobule of the cerebellum.

prediastole (pre-di-as'to-le). The interval immediately preceding the diastole in the cardiac rhythm.

prediastolic (pre''di-as-tol'ik). 1. Pertaining to the beginning of the diastole. 2. Occurring just before the diastole.

predicrotic (pre-di-krot'ik). Occurring before the dicrotic wave of the sphygmogram.

predigestion (pre-di-jes'tshun). The partial artificial digestion of food before its ingestion.

predisposing (pre-dis-po'zing). Conferring a tendency to disease.

predisposition (pre''dis-po-zish'un) [L. *prae* before + *dispo'nere* to dispose]. A diathesis or special tendency toward some particular disease.

predormitium (pre-dor-mish'e-um) [L.]. The light slumber occurring before sound sleep begins.

pre eclampsia (pre-ek-lamp'se-ah). Threatened eclampsia.

pre-eosinic (pre'e-o-sin'ik). See under *premyelocyle*.

preepiglottic (pre''ep-ig-lot'ik). Situated or occurring in front of the epiglottis.

preeruptive (pre-e-rup'tiv). Preceding eruption.

preflagellate (pre-flaj'el-ät). Preceding the flagellate state: said of protozoa.

preformation (pre-for-ma'shun). See *evolution* (3).

prefrontal (pre-fron'tal). 1. Situated in the anterior part of the frontal lobe or region. 2. The central part of the ethmoid bone.

preganglionic (pre'gang-le-on'ik). Situated anterior to a ganglion.

pregeminal (pre-jem'in-al). Pertaining to the pregeminum.

pregeminum (pre-jem'in-um). An anterior optic lobe or geminal body.

pregeniculum (pre''jen-ik-u-la'tum). The external geniculate body.

pregeniculum (pre-jen-ik'u-lum). Same as *pregeniculum*.

Pregl's solution, test (pra'glz) [Fritz Pregl, chemist in Prague]. See under *solution* and *tests*.

preglobulin (pre-glob'u-lin). A protein derivable from cytoglobulin by decomposition with acids. It is insoluble in water, but soluble in dilute alkaline solutions.

pregnancy (preg'nan-se) [L. *prægnans* with child]. The condition of being with child; gestation. In woman the duration of pregnancy is about 280 days, nine calendar or ten lunar months. Pregnancy is marked by cessation of the menses; nausea arising in the morning (morning sickness); enlargement of the breasts and pigmentation of the nipples; progressive enlargement of the abdomen. The absolute signs of pregnancy are bal-

lottement, fetal movements, and sounds of the fetal heart. Called also *cyesis*, *gestation*, *gravidity*, and "*being with child*." **abdominal p.**, lodgment of the ovum within the abdominal cavity. **afetal p.**, false pregnancy. **ampullar p.**, pregnancy in which the ovum has been arrested in the ampulla of the oviduct. **bigeminal p.**, twin pregnancy. **broad ligament p.**, pregnancy taking place within the broad ligament. **cervical p.**, the development of the ovum within the cervical canal. **cornual p.**, pregnancy in one of the horns of a bicornate uterus. **ectopic p.** Same as *extra-uterine p.* **entopic p.**, normal uterine pregnancy. **exochorial p.** See *graviditas exochorialis*. **extra-uterine p.**, development of the ovum outside of the cavity of the uterus. **fallopian p.** Same as *tubal p.* **false p.**, apparent, but not real, pregnancy.

Extra-uterine pregnancy: 1. Cornual or interstitial; 2, isthmian; 3, tubal; 4 and 5, ampullar. (Gilliam.)

fatty p., false pregnancy with the accumulation of fat in the abdominal wall. **gemellary p.** Same as *twin p.* **heterotopic p.**, a double pregnancy, one intra-uterine and the other extra-uterine. **hydatid p.**, that which is accompanied with the formation of a hydatid mole. **hysteric p.**, symptoms of pregnancy in hysterical women who are not really pregnant. **interstitial p.**, gestation in that part of the oviduct which is within the wall of the uterus. **intraligamentary p.**, a pregnancy within the broad ligament. **intramural p.** Same as *interstitial p.* **intrapertitoneal p.**, pregnancy within the peritoneal cavity. **membranous p.**, pregnancy in which the fetus has broken through its membranous envelop and lies in contact with the uterine walls. **mesenteric p.** Same as *tuboligamentary p.* **mesometric p.**, a kind of tubal pregnancy in which the tube has ruptured and the embryo occupies a sac formed partly by the expanded tube and partly by the layers of the peritoneum forming the mesometrium. **molar p.**, conversion of the ovum into a mole. **multiple p.**, the presence of more than one ovum in the uterus at the same time. **mural p.** Same as *interstitial p.* **nervous p.** Same as *hysteric p.* **ovarian p.**, pregnancy occurring within an ovary. **ovario-abdominal p.**, a pregnancy which begins ovarian, but afterward becomes abdominal. **parietal p.** Same as *interstitial p.* **phantom p.**, an abdominal enlargement in hysterical women simulating pregnancy. **plural p.**, pregnancy with more than one fetus. **pseudo-intraligamentary p.**, an extra-uterine pregnancy in which a sac has been formed in such a way as to simulate an intraligamentary pregnancy. **sarcocfetal p.**, pregnancy with both a fetus and a mole. **sarcocystic p.**, false pregnancy due to a mole. **spurious p.** Same as *false p.* **stump p.**, pregnancy at the stump remaining after a pelvic operation. **tubal p.**, pregnancy within an oviduct. **tubo-abdominal p.**, one occurring partly in the fimbriated end of the oviduct and partly in the abdominal cavity. **tuboligamentary p.**, a pregnancy partly in the tube and partly in the broad ligament. **tubo-ovarian p.**, one occurring partly in the ovary and partly in the oviduct. **tubo-uterine p.**, gestation partly within the uterus and partly in an oviduct. **twin p.**, gestation with twins. **unconscious p.**, pregnancy of which the woman is unaware. **utero-abdom-**

Pregnancy: Contour of body at full term (J. C. Hirst).

TABLE FOR CALCULATING THE DURATION OF PREGNANCY.

EXPLANATION.—Find in top line the date of menstruation; the figure below will indicate the date when confinement may be expected—*i. e.*, if date of menstruation is June 1, confinement may be expected on March 8, or one day earlier if leap year (DR. ELY).

January	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	NOVEMBER.

inal p., pregnancy with one fetus in the uterus and another in the abdominal cavity. **utero-ovarian p.**, pregnancy with one fetus in the uterus and another in the ovary. **uterotubal p.** Same as *tubo-uterine p.*

pregnant (preg'nant) [L. *preg'nans*]. With child; gravid.

pregonium (pre-go'ne-um). Recess on lower edge of body of the mandible in advance of the angle.

pregracile (pre-gras'il). Anterior to the gracile lobe of the cerebellum.

pregranular (pre-gran'u-lar). Occurring before the granular stage.

prehallux (pre-hal'ux). A supernumerary bone of the foot sometimes found growing from the inner border of the scaphoid.

prehemiplegic (pre'hem-ip-lej'jik). Forerunning an attack of hemipia.

prehensile (pre-hen'sil) [L. *prehendere* to lay hold of]. Adapted for grasping or seizing.

prehension (pre-hen'shun) [L. *prehensio*]. The act of seizing or grasping.

prehepaticus (pre-he-pat'ik-us) [L. *prae* before + *hepar* liver]. A mass of vascular and connective tissue in the embryo which develops into the interstitial tissue of the liver.

prehyoid (pre-hi'oid). In front of the hyoid bone.

prehypophysis (pre-hi-pof'is-is). The anterior lobe of the hypophysis.

pre-immunization (pre-im-u-niz-a'shun). Artificial immunization produced in very young infants.

preinduction (pre-in-duk'shun). An environmental influence on the germ cells of an individual which does not produce a modification until the third generation of his descendants, *i. e.*, in the grandchildren.

preinsula (pre-in'su-lah). The cephalic portion of the insula.

preiotation (pre'i-o-ta'shun) [*pre* + *iōta* letter *i*]. The conversion of the initial sound of *i* into *y*.

Preiser's disease (pri'zerz). Traumatic osteoporosis of the carpal scaphoid bone.

prelacrima (pre-lak'rim-al). In front of the lacrima.

prelaryngeal (pre-lar-in'je-al). In front of the larynx.

prelimbic (pre-lim'bik). Situated before a limbus.

prelipoid (pre-li'poid). Preceding the lipid state.

prelocomotion (pre'lo-ko-mo'shun). The movements of a child made with the intention of moving from place to place before motor coordination is sufficiently developed to enable it to walk.

prelum (pre'lum). Latin for *press.* **p. abdominal**, the squeezing of the abdominal viscera between the diaphragm and the abdominal wall, as in defecation.

premalignant (pre-mal-ig'nant). Occurring before the development of malignant characters.

premaniacal (pre-ma-ni'ak-al). Preceding an attack of mania.

premature (pre-mat-ūr') [L. *praematurus* early ripe]. 1. Occurring before the proper time. 2. An infant born before its proper time, but viable.

premaxilla (pre-maks-il'ah). The intermaxillary bone.

premaxillary (pre-maks'il-a-re). 1. Situated in front of the maxilla proper. 2. The intermaxillary bone.

premenstrual (pre-men'stru-al). Occurring before menstruation.

premolar (pre-mo'lar) [L. *prae* before + *mola*'ris molar]. 1. Situated in front of the molar teeth. 2. One of the two teeth immediately in front of the molar teeth; a bicuspid tooth. The term is sometimes used erroneously to designate a deciduous molar tooth.

premonitory (pre-mon'it-o-re) [L. *praemonitōrius*]. Serving as a warning.

premonocyte (pre-mon'o-sit). A cell transitional in development between the myeloblast and the monocyte.

premortal (pre-mor'tal). Just before death.

premunition (pre-mu-nish'un). Immunity by preventive vaccination.

- premunitive** (pre-mu'nit-iv). Pertaining to or produced by preventive vaccination.
- premycotic** (pre-mi-ko'sik). Pertaining to a mycotic disease at a stage prior to the maturity of its fungal element.
- premyelocyte** (pre-mi'el-o-sit) [L. *prae* before + *myelocyte*]. A cell intermediate in development between a myeloblast and a myelocyte, resembling the myeloblast, but showing a few granules. When the granules are minute and evenly distributed it is called *preneutrophilic*; when large and evenly distributed *pre-eosinic*, and when large and irregular in size and distribution *prebasophilic*.
- prenarcotic** (pre-nar-kot'ik). Previous to the occurrence of narcosis.
- prenares** (pre-na'réz). The nostrils.
- prenatal** (pre-na'tal) [L. *prae* before + *nata'lis* natal]. Existing or occurring before birth. **p. influence**, the effect upon the offspring of any condition or activity of the mother during the period of pregnancy.
- preneutrophilic** (pre-nu-tro-fil'ik). See under *premyelocyte*.
- preoblongata, praeoblongata** (pre'ob-lon-ga'tah). That part of the oblongata which lies between the fourth ventricle and the pons.
- preoperative** (pre-op'er-a-tiv). Preceding an operation.
- preoperculum** (pre-o-per'ku-lum). The frontal operculum of the brain.
- preoptic** (pre-op'tik). Situated anterior to the optic lobes.
- preopticus** (pre-op'tik-us) [L. *prae* before + *op'ticus* optical]. Either of the two anterior optic lobes (corpora quadrigemina).
- preoral** (pre-o'ral) [L. *prae* before + *os* mouth]. Situated in front of the mouth.
- prepalatal** (pre-pal'at-al). Situated in front of the palate.
- prepalium** (pre-pal'e-um). The portion of the cerebral cortex anterior to the foramen of Rolando.
- preparation** (prep-ar-a'shun) [L. *praeparatio*]. 1. The act or process of making ready. 2. A medicine made ready for use. 3. An anatomical or pathologic specimen made ready and preserved for study. **corrosion p.**, an anatomical preparation made by injecting the parts to be retained and eating away the rest of the tissues with some corrosive substance. **Ehrlich-Hata p.**, arsphenamine. **Hata p.**, arsphenamine. **heart-lung p.**, an animal prepared for the study of the action of the heart muscle. The perfused fluid flows through an unaltered pulmonic circle.
- preparative** (pre-par'at-iv). See *amboceptor*.
- preparator** (prep-ar-a-tor). Amboceptor.
- prepartal** (pre-par'tal) [L. *prae* before + *par'tus* labor]. Occurring before, or just previous to, labor.
- prepatellar** (pre-pat-el'ar). Situated in front of the patella.
- prepeduncle** (pre-pe'dung-kl). The anterior peduncle of the cerebellum.
- preperforative** (pre-per'fo-ra-tiv). Before the occurrence of perforation.
- preperforatum** (pre'per-fo-ra'tum). The anterior perforated space.
- prephthisis** (pre-thi'sis). The initial stages of pulmonary phthisis.
- preplacental** (pre-plas-en'tal). Previous to the formation of the placenta.
- prepontile** (pre-pon'til). In front of the pons.
- prepotency** (pre-po'ten-se) [L. *praepoten'tia*]. Power superior to that of the other parent in transmitting inheritable characters to the offspring.
- prepotent** (pre-po'tent) [L. *prae'potens*]. Having superior force; having greater power than the other parent in transmitting inheritable characters to the offspring.
- prepubescent** (pre-pu-bes'ent). Before puberty.
- prepuce** (pre'pūs) [L. *praepu'tium*]. The fold of skin covering the glans penis; the foreskin. **p. of the clitoris**, a fold formed by the labia minora covering the clitoris.
- preputial** (pre-pu'shal). Pertaining to the prepuce.
- prepyloric** (pre-pi-lor'ik). In front of the pylorus.
- prepyramidal** (pre-pi-ram'id-al). Situated in front of the pyramid.
- preramus** (pre-ra'mus). The vertical branch of the stem of the arbor vitae of the cerebellum.
- prerectal** (pre-rek'tal). Situated in front of the rectum.
- prerenal** (pre-re'nal). Situated in front of the kidney.
- preproductive** (pre're-pro-duk'tiv). Pertaining to childhood, or the stage preceding puberty.
- presbyacusia** (pres'be-ak-u'se-ah). Presbycusis.
- presbyatry** (pres'be-at-re) [πρέσβυς old + *iatrya* treatment]. The treatment of diseases of old age.
- presbycusis** (pres-be-ku'sis) [πρέσβυς old + *akousis* hearing]. That lessening of the acuteness of hearing which characterizes old age.
- presbyope** (pres'be-ōp) [πρέσβυς old + *ōps* eye]. One who is presbyopic.
- presbyophrenia** (pres'be-o-fre'ne-ah) [πρέσβυς old + *phrēnē* mind]. A mental condition often seen in old age, consisting of defective memory, loss of sense of location, and confabulation. Called also *Wernicke's syndrome*.
- presbyopia** (pres-be-o'pe-ah) [πρέσβυς old + *ōps* eye]. Long sight and impairment of vision due to advancing years or to old age. It is dependent on diminution of the power of accommodation from loss of elasticity of the crystalline lens, causing the near point of distinct vision to be removed farther from the eye.
- presbyopic** (pres-be-op'ik). Pertaining to presbyopia.
- presbysphacelus** (pres-bis-fas'el-us) [πρέσβυς old + *σφακελος* gangrene]. Senile gangrene.
- presbytia** (pres-bish'e-ah). Same as *presbyopia*.
- presbytiatrics** (pres'be-te-at'riks). Presbyatry.
- presbytism** (pres'bit-izm). Same as *presbyopia*.
- presclerosis** (pre-skle-ro'sis). A state of arterial hypertension preceding arteriosclerosis.
- presclerotic** (pre-skle-rot'ik). Occurring before sclerosis takes place.
- prescribe** (pre-scrib') [L. *praescribere* to write before]. To designate in writing a remedy for administration.
- prescription** (pre-scrip'shun) [L. *praescriptio*]. A written direction for the preparation and administration of a remedy. A prescription consists of the heading or *superscription*—that is, the symbol R, or the word Recipe, meaning "take"; the *inscription*, which contains the names and quantities of the ingredients; the *subscription*, or directions for compounding; and the *signature*, usually introduced by the sign S. for *sig'na*, "mark," which gives the directions for the patient which are to be marked on the receptacle. **shotgun p.**, an irrational prescription that contains a number of ingredients given with the idea that one or more of them may be effective.
- presecretin** (pre-se-kre'tin). A substance existing in the mucous membrane of the duodenum from which, by the action of hydrochloric acid, secretin is split off.
- presegmenter** (pre-seg-men'ter). A full-grown malarial parasite in the stage in which the pigment is accumulated into masses just previous to segmentation.
- presenile** (pre-se'nil). Pertaining to a condition resembling senility, but occurring in early or middle life.

presenility (pre-sen-il'it-e). Premature old age.

presenium (pre-se'ne-um). The period immediately preceding old age.

present (pre-zent') [L. *praesentare* to show]. To appear first at the os uteri: said of various parts of the fetus.

presentation (pre-zen-ta'shun) [L. *praesentatio*]. 1. The appearance in labor of some particular part of the fetal body at the os uteri. 2. That part of the fetal body which first shows itself at the os in labor. **arm p.**, prolapse of the arms of the fetus: generally seen in shoulder presentation. **breast p.**, the presentation of the anterior part of the chest in labor. **breech p.**, the presentation of the fetal buttock in labor. **brow p.**, the presentation of the brow in labor. **cephalic p.**, the presentation of any part of the head, including the vertex presentation and face presentation. **face p.**, the presentation of the face of the fetus in childbirth. **foot p.**, **footling p.**, the presentation of the feet in labor. **funis p.**, the presentation of the umbilical cord in labor. **head p.**, the presentation of some part of the fetal head in labor. **longitudinal p.**, **polar p.**, the presentation of either the cephalic or the pelvic end of the fetal ellipse. **pelvic p.**, presentation of the lower end of the fetus, including breech presentation and foot presentation. **placental p.** Same as *placenta praevia*. **polar p.**, presentation of either pole, cephalic or breech. **transverse p.**, **trunk p.**, presentation in which the axis of the fetal trunk lies crosswise or transversely; cross-birth. **vertex p.**, the presentation of the upper and back part of the fetal head in labor.

presoid (pre-so'iod). A proprietary brand of Pregl's solution.

presphenoid (pre-sfe'noid). The anterior portion of the body of the sphenoid bone.

presphygmie (pre-sfig'mik). Occurring before the pulse wave.

prespinal (pre-spi'nal). Situated in front of the spine.

press juice. See under *juice*.

pressinervoscopy (pres'e-ner-vos'ko-pe). Diagnosis of thoracic and abdominal disease by pressure upon the pneumogastric and sympathetic nerves (A. Pinel).

pressor (pres'or). Anything that increases the activity of a function, as a pressor base, a pressor nerve. **p. nerve**, an afferent nerve whose stimulation increases the activity of a motor center, or causes vasoconstriction.

pressure (presh'ur) [L. *pressura*]. Stress or strain, whether by compression, pull, thrust, or shear. **after p.**, a sense of pressure which lasts for a short period after removal of the actual pressure. **arterial p.**, the pressure of the blood within the arteries. **atmospheric p.**, the pressure exerted by the atmosphere. It is about 15 pounds to the square inch at the level of the sea. **blood p.**, the tension in the walls of the blood vessels derived from the blood current. **brain p.**, the capillary venous pressure in the brain. **capillary p.**, the blood pressure in the capillaries. **diastolic p.**, arterial pressure during diastole. **Donders' p.**, increase of manometric pressure with the instrument placed on the trachea on opening the chest of a dead body: due to collapse of the lung. **p. effect**, the sum of the changes in any tissue due to abnormal pressure. **endocardial p.**, pressure of blood within the heart. **intra-abdominal p.**, the pressure of the viscera within the abdomen. **intracranial p.**, the pressure in the space between the skull and the brain, *i. e.*, the pressure in the subarachnoid fluid. **intra-ocular p.**, the pressure or tension of the contents of the eyeball. **intrapulmonic p.**, the air pressure within the lungs. **intrathecal p.**, pressure within a sheath; par-

ticularly the pressure of the cerebrospinal fluid within the subarachnoid membrane. **intra-thoracic p.**, the pressure within the thorax, that is, the pressure in the pleural cavity and mediastinal spaces. **intraventricular p.**, the pressure within the ventricles of the heart. **negative p.**, a pressure less than that of the atmosphere. **osmotic p.**, the pressure which brings about diffusion between solutions of different concentration or between a solute and the fluid in which it is dissolved. **p. palsy**, palsy due to a continuous pressure upon a nerve. **partial p.**, the pressure exerted by each of the constituents of a mixture of gases. **pulse p.**, the difference between the systolic and diastolic pressures. **p. sense**, that sense by which is perceived and estimated the amount of pressure exerted on a part of the body. **solution p.**, the force which tends to bring into solution the molecules of a solid contained in the solvent. **systolic p.**, the arterial pressure at the time of systole. **venous p.**, the blood pressure in the veins.

pressurebolometer (presh'ür-bo-lom'et-er). Pressure sphygmobolometer.

pressuresphygmobolometer (presh'ür-sfig-mo-bo-lom'et-er). An apparatus for measuring the work of the pulse.

presternum (pre-ster'nüm). Same as *manubrium*.

presubiculum (pre-sub-ik'u-lum). The portion of the hippocampal gyrus between the principal olfactory portion and the subiculum.

presuppurative (pre-sup'u-ra-tiv). Occurring before suppuration.

presylvian (pre-sil've-an). Pertaining to the anterior or ascending branch of the sylvian fissure.

presystole (pre-sis'to-le). The interval of time just preceding the systole.

presystolic (pre-sis-tol'ik) [L. *prae* before + *systole*]. 1. Pertaining to the beginning of the systole. 2. Occurring just before the systole.

pretarsal (pre-tar'sal). Situated in front of the tarsus.

prethyroid, **prethyroideal**, **prethyroidean** (pre-thi'roid, -thi-ro'i-de-al, -roi-de'an). Situated in front of the thyroid gland or thyroid cartilage.

pretibial (pre-tib'e-al). Situated in front of the tibia.

pretracheal (pre-tra'ke-al). In front of the trachea.

pretuberculosis (pre'tu-ber-ku-lo'sis). Tuberculosis in an incipient and occult stage before any symptoms of the disease have appeared.

pretuberculous (pre-tu-ber'ku-lus). Preceding the development of tubercle.

pretympanic (pre-tim-pan'ik). Situated in front of the tympanum.

preurethritis (pre'u-re-thri'tis). Inflammation of a part of the vulvar follicles before the urethral orifice.

prevalidin (pre-val'id-in). A proprietary camphor ointment used by inunction in phthisis (W. Koch).

preventive (pre-ven'tiv). Same as *prophylactic*.

preventologist (pre-ven-tol'o-jist). See *prophylactodontist*.

preventology (pre-ven-tol'o-je). Preventive dentistry; prophylactodontia.

preventorium (pre-ven-to're-um). An institution for the purpose of checking the spread of disease.

preventriculosis (pre'ven-trik-u-lo'sis) [L. *prae* in front of + *ventriculus* stomach]. Closing of the cardiac opening of the stomach due to the action of the esophageal muscular fibers or of the periesophageal diaphragmatic structures. The term is said to be more accurate than the term "cardiospasm." Called also *preventricular stenosis*.

prevermis (pre-ver'mis). The superior vermiform process of the cerebellum.

prevertebral (pre-ver'te-bral). Situated ventrad of a vertebra.

- prevertiginous** (pre-ver-tij'in-us). Having the sense of being pushed from behind.
- prevesical** (pre-ves'ik-al) [L. *prae* before + *vesi*ca bladder]. Situated in front of the bladder.
- Prevost's sign** (pra-vōz') [Jean Louis Prevost, Swiss physician, 1838-1927]. See *sign*.
- prezone** (pre'zōn). Same as *prozone*.
- prezymogen** (pre-zi'mo-jen). A substance existing in the cell which becomes converted into zymogen.
- priapism** (pri'ap-izm) [L. *priapis*'mus; *πριαπισμός*]. Persistent abnormal erection of the penis, usually without sexual desire. It is seen in diseases and injuries of the spinal cord, and may be caused by vesical calculus and certain injuries to the penis.
- priapitis** (pri-ap-i'tis). Inflammation of the penis.
- priapus** (pri'ap-us). The penis.
- Price-Jones curve** or **method**. See under *curve*.
- prickle cell** (prik'l). See *cell*.
- prickly ash**. See *Xanthoxylum*.
- prickly heat** (prik'le hēt). See *miliaria* and *lichen tropicus*.
- prickly pear**. See *Opuntia*.
- Priessnitz bandage** or **compress** (prēs'nits) [Vincent Priessnitz, a Silesian farmer, 1799-1852]. A cold wet compress.
- Priestley's mass** (prēs'tlēz) [Joseph Priestley, English naturalist, the discoverer of oxygen, 1733-1804]. See under *mass*.
- primae viae** (pri'me vi'e) [L. "the first passages"]. The alimentary canal.
- primal** (pri'mal). A hair dye consisting of a solution of *para*-toluylene-di-amine with neutral sulphites.
- primary** (pri'ma-re) [L. *primarius* principal; *pri'mus* first]. First in order; principal.
- primate** (pri'māt). An individual belonging to the order Primates.
- Primates** (pri'mātēz) [L. *pri'mus* first]. The first or highest order of mammals, including man, apes, monkeys, and lemurs.
- primerite** (pri'mer-it) [L. *pri'mus* first + *μέρος* part]. The anterior part of a cephalont. Cf. *deulomerite*.
- primigravida** (prim-ig-rav'id-ah) [L. *pri'ma* first + *grāvīda* pregnant]. A woman who is pregnant for the first time.
- primipara** (pri-mip'ah-rah) [L. *pri'ma* first + *παρ'ερε* to bear]. A woman who has given birth or is giving birth to her first child.
- primiparity** (pri-mip-ar'it-e). The condition or fact of being a primipara.
- primiparous** (pri-mip'ar-us). Bearing or having borne but one child.
- primite** (pri'mit). Same as *protomerite*.
- primitive** (prim'it-iv) [L. *primiti'vus*]. First in point of time; original.
- primordial** (pri-mor'de-al) [L. *primordia'lis*]. Original or primitive; of the simplest and most undeveloped character.
- primordium** (pri-mor'de-um) [L. "the beginning"]. Same as *anlage*.
- primulin** (prim'u-lin) [L. *prim'ulus* primrose]. 1. A crystalline principle from cowslip root. 2. A primrose-colored azo-dye of wide usefulness in color printing fabrics by a quasiphotographic method.
- princeps** (prin'seps) [L. "chief"]. A name of certain arteries. See *arteries*, *table of*.
- principle** (prin'sip-l) [L. *princip'ium*]. 1. A chemical component. 2. A substance on which certain of the properties of a drug depend. **active p.**, any constituent of a drug which helps to confer upon it a medicinal property. **immediate p.**, **organic p.**, **proximate p.**, any one of the more or less complex substances of definite chemical constitution into which a heterogeneous substance can be readily resolved. **ultimate p.**, a chemical element.
- Prinos** (pri'nos) [πρίνος oak]. A genus or subgenus of aquifoliaceous shrubs, commonly assigned to the genus *Ilex* (holly). *P. verticilla'tus*, the black alder, or winterberry, of North America, has a tonic and astringent bark. Dose of fluidextract, 10-30 minims (0.666-2 cc.).
- prism** (prizm) [πρίσμα]. A solid with a triangular or polygonal cross section. A triangular prism splits up a ray of light into its constituent colors and turns or deflects light rays toward its base. Prisms are used to correct deviations of the eyes, since they alter the apparent situation of objects. **p. diopter**, a unit for measuring the angle of deviation. It is a prism which will deflect a ray of light 1 cm. at a plane 1 meter distant. It is only slightly greater than a centrad. **enamel p.**, any one of the microscopical prisms or columns which make up the enamel of the teeth. **Maddox p.**, two prisms with their bases together: used in testing for torsion of the eyeball. **Nicol p.**, two slabs of Iceland spar cemented together and deflecting a ray of light in such a way that it is split in two, one part (the ordinary ray) being totally reflected and the other (polarized ray) passing through. **Risley's p.**, a prism which rotates in a metal frame marked with a scale: used in testing ocular muscles for imbalance.
- prisma adamantinum** [B N A]. Enamel prism. See *prism*.
- prismatic** (priz-mat'ik). Shaped like a prism; produced by a prism.
- prismoid** (priz'moid). Resembling a prism.
- prismoptometer** (priz-mop-tom'et-er) [*prism* + *optometer*]. An instrument for testing the eye by means of a revolving prism.
- prismosphere** (priz'mo-sfēr) [*prism* + *sphere*]. A prism combined with a globular lens.
- prisoptometer** (priz-op-tom'et-er). Same as *prismoptometer*.
- privates** (pri'vets). The external genitalia.
- privy** (priv'e). A small outhouse where excreta may be voided.
- p. r. n.** An abbreviation for Latin *pro re na'ta*, according as circumstances may require.
- pro-** [L. *pro*; *πρό* before]. A prefix signifying before.
- proagglutinoide** (pro-ag-lu'tin-oid). An agglutinoide that has a stronger affinity for the agglutinoide than has the agglutinin. **p. zone**. See under *zone*.
- proal** (pro'al) [πρό before]. Characterized by forward movement.
- proamnyon** (pro-am'ne-on). That part of the embryonic area at the front and side of the head which remains without the mesoderm for some time; the primitive amnyon.
- pro-antithrombin** (pro-an-te-throm'bin). A substance present in blood plasma and blood serum which is converted into antithrombin by a reaction with heparin.
- proatlas** (pro-at'las). A rudimentary vertebra which in some animals lies in front of the atlas: sometimes seen as an anomaly in man.
- probang** (pro'bang). A flexible rod with a ball, tuft, or sponge at the end: used in diseases of the esophagus or larynx. **ball p.**, a probang with a ball or bulb at the end. **bristle p.**, **horse hair p.**, one with an expansible tuft of bristles or horse hairs at the end. **sponge p.**, one which is tufted with sponge at the end.
- probe** (prōb) [L. *pro'ba*; *proba're* to rest]. A slender, flexible instrument designed for introduction into a wound or cavity for purposes of exploration. **Amussat's p.**, a probe used in lithotripsy. **Anel's p.**, a delicate probe for the lacrimal puncta and canals. **blunt p.**, a probe with a blunt end. **Bowman's p.**, one of a set of probes for use on the nasal ducts. **bullet p.**, one used for detecting

the presence or determining the locality of a bullet. **drum p.**, a probe with an attachment which emits a sound when it comes in contact with a foreign body. **electric p.**, one which on contact with a foreign body completes an electric circuit, so that a sound is made. **eyed p.**, one with a slit for a ligature or tape near one end. **Fluhrers' p.**, an aluminum probe for examining gunshot wounds of the brain. **Girdner's p.**, electric probe. **lacrimal p.**, one designed for use on the tear passages. **Lente's p.**, a silver probe having a bulb coated with silver nitrate. **Lillenthal's p.**, an apparatus for probing for bullets. It consists of a probe composed of two or four pieces of metal attached to two insulated copper wires which run to a mouth piece composed of two plates, one of copper and one of zinc. These plates are applied to the side of the tongue and the probe inserted in the wound. If the probe touches a bullet, a distinct metallic taste is perceived. **Lucae's p.**, a probe in a hollow handle and operated by a spring, to apply massage in treating catarrhal otitis media. **meerschau p.**, a probe with a meerschau tip, which on contact with a leaden bulb becomes darkened. **Nélaton's p.**, a bullet probe with an unglazed porcelain head. **scissors p.**, a long, delicate pair of scissors that can be used as a probe. **telephonic p.** Same as *electric p.* **uterine p.**, a probe for uterine exploration. **vertebrated p.**, a flexible probe made up of jointed links. **wire p.**, a probe of steel wire.

probin (pro-bi'lin). A proprietary preparation of salicylic acid with oleic acid salts, phenolphthalein, and menthol: used in infection of the biliary passages.

procaine (pro'ka-in). The base of procaine hydrochloride. **p. hydrochloride**, a crystalline compound, $\text{NH}_2\text{C}_6\text{H}_4\text{CO}_2(\text{CH}_2)_2\text{N}(\text{C}_2\text{H}_5)_2\text{HCl}$, or para-aminobenzoyl-diethylamino-ethanol hydrochloride, introduced under the proprietary brand name of novocaine. It is a local anesthetic much less toxic than cocaine salts. Epinephrine is commonly added to solutions that are intended for subcutaneous injection. It is relatively ineffective to intact mucous membranes. **p. nitrate**, the nitrate of para-amino-benzoyl-diethylamino-ethane, $\text{NH}_2\text{C}_6\text{H}_4\text{CO}_2\text{O}(\text{CH}_2)_2\text{N}(\text{C}_2\text{H}_5)_2\cdot\text{NHO}_3$: used like procaine.

procatartetic (pro-kat-ark'tik). Predisposing: said of a cause of disease.

procatarxis (pro-kat-arks'is) [Gr.]. 1. A predisposing cause. 2. Predisposition; also the production of a disease partially as a result of predisposition.

procelous, procoelous (pro-se'lus) [*πρό* before + *κοῖλος* hollow]. Concave anteriorly.

procephalic (pro-sef-al'ik) [*πρό* before + *κεφαλή* head]. Pertaining to the anterior part of the head.

proceroid (pro-ser'koid). One of the larval stages of fish tapeworms.

procerus (pro-se'r-us). The pyramidalis muscle.

process (pros'es) [L. *proces'sus*]. A slender projecting point. **A. B. C. p.** See *A. B. C. method*, under *method*. **acromion p.** Same as *acromion*. **alar p's**, the small winglike processes of the crista galli around the foramen caecum. **alveolar p.**, the ridge projecting from the lower surface of the body of the maxilla containing the alveoli of sockets of the upper teeth; the term is also applied to the upper border of the body of the mandible containing the alveoli of the lower teeth. **angular p's**, **internal** and **external**, the two processes which terminate the supra-orbital arch of the frontal bone. **apex p.**, **apical p.**, a large process from the apex of the cells of the cerebral cortex. **articular p.**, one of the small processes from the upper and lower surfaces of the vertebrae, by means of which the vertebrae articulate with each other. **auditory p.**, the bony tube of the auditory meatus. **axis-cylinder p.**, a nerve cell process continuous with the axis-cylinder; a neu-

raxon. See *nerve cell*. **basilar p.**, the projection of the occipital bone in front of the foramen magnum articulating with the sphenoid. **Beccari p.**, a method of garbage disposal by reduction by bacterial fermentation in closed cells. **belemnoid p.** See *styloid p.* **Blumenbach's p.**, the uncinate process. **capitular p.**, the articular process on a vertebra for the head of a rib. **caudate p.**, that portion of the liver which connects the right lobe and the caudate lobe. **ciliary p's**, the fringing processes that encircle the margin of the eye lens. **Civinini's p.** See *Civinini's spine*, under *spine*. **clavate p.**, a point on the posterior pyramid of the oblongata, near the apex of the fourth ventricle. **clinoid p.**, **anterior**, the inner extremity of the anterior border of the lesser wing of the sphenoid. **clinoid p's**, **middle**, two small eminences of the sphenoid bone, one on either side of the pituitary fossa. **clinoid p's**, **posterior**, two tubercles of the sphenoid, one at each superior angle of the dorsum epiphyii. **cochleariform p.**, the bony plate which divides the canal of the eustachian tube from that of the tensor tympani. **condyloid p.**, the condyle of the lower jaw with its neck. **conoid p.**, the tuberosity of the clavicle. **coracoid p.**, a projection from the anterior and upper edge of the scapula. **coronoid p.** 1. A wide eminence at the proximal end of the ulna before the olecranon. 2. A conical prominence ascending from the upper anterior part of the ramus of the lower jawbone. 3. The coracoid process. **costal p.**, the anterior root of the transverse process of a cervical vertebra. **Deiters' p.**, a neuraxon, or axis-cylinder process. See *nerve cell*. **dendritic p.**, any branched process of a nerve cell. **dental p.** Same as *alveolar p.* **ensiform p.**, the xiphoid process. **epiphysial p.** Same as *epiphysis*. **ethmoid p.**, a projection from the upper border of the inferior turbinated bone. **falciform p.** 1. The upper and outer border of the saphenous opening. 2. The falx cerebri. **floccular p.**, the flocculus. **folian p.**, **p. of Folius**, the long process, or processus gracilis, of the malleus. **frontal p.** Same as *frontosphenoidal process*. **frontonasal p.**, a process of bone in the fetus which develops into the forehead and bridge of the nose. **frontosphenoidal p.**, the ascending process of the malar bone uniting with the external angular process of the frontal bone. **funicular p.**, that portion of the tunica vaginalis which surrounds the spermatic cord. **globular p.**, an eminence at either angle of the nose (in the embryo). **Gottstein's basal p.**, any attenuated basal process connecting the basilar membrane of the organ of Corti with an outer hair cell. **Gowers' intermediate p.**, the lateral horn of gray substance of the spinal cord. **hamular p.** 1. A hooklike process on the lower extremity of the internal pterygoid plate. 2. A hooklike point of the lacrimal bone which unites with the lacrimal tubercle of the upper maxillary bone. **head p.**, an axial strand of cells in the embryo extending forward from the primitive knot; called also *notochordal plate*. **infundibular p.**, the neural portion of the hypophysis cerebri. **Ingrassias' p's**, the lesser wings of the sphenoid bone. **intra-jugular p.**, a small process from the middle of the jugal notch of both the occipital and temporal bones. **jugular p.**, a process of the occipital bone touching the jugular foramen. **lacrimal p.**, a process of the inferior turbinated bone which joins with the lacrimal bone. **lenticular p.**, one of the processes of the malleus; the orbicular bone. **long p.** 1. A process which connects the orbicular to the incus proper. 2. The long, slender process projecting from the anterior surface of the malleus. **MacLachlan's p.** See *MacLachlan's method*, under *method*. **malar p.**, the eminence by which the superior maxilla articulates with the malar bone. **mammillary p.**, a tubercle on each superior articular process of the lumbar vertebrae. **mastoid p.**, the conical projection at the base of the

mastoid portion of the temporal bone. **maxillary p.**, the bony plate which descends from the ethmoid process of the inferior turbinate bone. **mental p.** See *mental protuberance*, under *protuberance*. **nasal p.**, a part of the lateral wall of the upper jawbone. **odontoid p.**, a toothlike point of the axis which ascends and unites with the atlas. **olecranon p.** Same as *olecranon*. **olivary p.**, a small oval point behind the optic groove of the sphenoid bone. **orbital p.** 1. A process of the palate bone which passes upward and outward. 2. A process which goes inward from the inner surface of the upper jawbone, forming part of the floor of the nostril and the roof of the mouth. 3. The end of the long process of the incus. **palate p.**, one of the processes of the superior maxillary bone. **papillary p.**, the rounded left lower angle of the caudate lobe of the liver. **paramastoid p.**, a process which in man is represented by a tubercle on the under surface of the jugular process. **paroccipital p.**, paramastoid process. **postglenoid p.**, a tubercle which separates the glenoid fossa from the auditory process. **progressive p.**, a bodily process which continues after it has ceased to be of use to the body. **protoplasmic p.**, any process of a nerve cell not continued as an axis-cylinder. See *nerve cell*. **pterygoid p.** 1. A process of the palate bone, on its posterior edge articulating with the sphenoid bone. 2. A process on either side of the sphenoid bone, descending from the points of junction of the greater wings with the body of the bone. **pterygospinous p.** Same as *Civinini's spine*. See *spine*. **pyramidal p.**, the pterygoid process of the palate bone. **Rau's p.**, **ravian p.**, the long process of the malleus. **Riedel's p.**, a strap-shaped process of the liver sometimes developed over the gallbladder in cholelithiasis. **short p.**, one of the processes of the malleus; also one of the incus. **sphenoid p.**, one of the processes of the palate bone going upward and inward. **spinous p.** 1. That part of a vertebra which projects backward from the arch, giving attachment to muscles. 2. A backward prolongation from the lower angle of the great wing of the sphenoid bone. 3. Any one of the four spines of the ilium. **styloid p.** 1. The conical eminence behind the head of the fibula. 2. A projection on the outer part of the distal end of the radius. 3. A long spine extending downward from the lower surface of the temporal bone. 4. An eminence on the inner side of the distal end of the ulna. **subgerminal p.**, outgrowths from the inner surface of the epiblast. **superior veriform p.**, upper part of median lobe of cerebellum. **temporal p.**, the posterior angle by which the malar bone articulates with the zygomatic process of the temporal bone. **Tomes' p.**, a process from an enamel cell, around which calcification occurs. **transverse p.**, a process on either side of a vertebra. **trochlear p.**, a bony spine projecting from the outer side of the os calcis and forming the attachment for the external annular ligament. Called also *peroneal spine*. **unciform p.**, **uncinate p.** 1. A hooked projection from the ethmoid and one from the unciform bone; also, a hook at the anterior end of the gyrus of the hippocampus. 2. The lesser pancreas. **vaginal p.** 1. A ridge on the lower surface of the temporal bone partly enclosing the styloid process. 2. A process on the inferior surface of the body of the sphenoid, running inward from the base of the pterygoid process. 3. A slip of the peritoneum taken down by the descending testis into the scrotum, where it becomes the tunica vaginalis. **vermiform p.** 1. Same as *vermis cerebelli*. 2. The appendix vermiformis. **vocal p.**, the process of the arytenoid cartilage to which the vocal cord is attached. **xiphoid p.**, the pointed process of cartilage, supported by a core of bone, connected with the lower end of the body of the sternum; called also *ensiform cartilage* or *process*. **zygomatic p.**, a process of the temporal bone

forming a thin, narrow projection, bounding the squamous portion of the temporal bone below; also a long, serrated portion of the malar bone which connects with the foregoing, forming the zygomatic arch, or zygoma.

processus (pro-*ses'*us). Latin for *process* or *processes*. **p. accessorius (vertebrae-rum lum-ba-lium)** [B N A], a small nodule which projects backward from the posterior surface of the transverse process of a lumbar vertebra. It is situated lateral to and below the mammillary process and varies in size. **p. ala'ris os'sis ethmoida'lis** [B N A], a small lateral projection from the lower portion of the anterior border of the crista galli which articulates with the frontal bone and helps to form the foramen caecum. **p. alveola'ris maxil'lae** [B N A], a thick parabolically curved ridge which projects downward and forms the free lower border of the maxilla. It is in front of and lateral to the palatine process and it bears the teeth. **p. ante'rior mal'lei (fo'lii)** [B N A], a slender process which arises from the anterior aspect of the neck of the malleus, passes forward and downward to the petrotympanic fissure, and is attached to the petrous portion of the temporal bone by ligamentous fibers. **p. articula'res infe'rio-res vertebra-rum** [B N A], two strong processes which arise from the inferior surfaces of the arches of a vertebra just back of the roots. Each one bears an articular surface which looks forward as well as downward and which articulates with the vertebra below. **p. articula'ris supe'rior os'sis sa'cri** [B N A], a process projecting upward from the upper end of the crista sacralis articularis which bears an articular facet for articulation with the inferior articular process of the fifth lumbar vertebra. **p. articula'res superio'res vertebra-rum** [B N A], two large processes which spring from the upper surfaces of the arches of a vertebra just back of the roots. Each one bears an articular surface which looks backward as well as upward and which articulates with the vertebra above. **p. bre'vis**, the short process (p. lateralis) of the malleus; also the short process of the incus. **p. cauda'tus hep'atis** [B N A], a ridge of liver tissue which separates the fossa vesicae felleae from the fossa venae caeve and connects the caudate lobe to the right lobe. **p. cilia'res** [B N A], seventy to eighty meridional folds on the inner surface of the ciliary muscle which help to form the corona ciliaris. **p. clinoi'-deus** [B N A], the clinoid process. **p. cochlearifor'mis** [B N A], a small spoon-shaped plate of bone at the end of the semicanalis tubae auditivae and just above the fenestra vestibuli. **p. coraco'i-deus mandib'ulae** [B N A], the anterior part of the upper end of the ramus of the mandible to which the temporal muscle is attached. **p. coraco'i-deus scap'ulae** [B N A], a strong curved process which arises from the upper part of the neck of the scapula and overhangs the shoulder joint. **p. e cerebel'lo ad medul'lam**, the restiform bodies. **p. e cerebel'lo ad pon'tem**, the middle peduncles of the cerebellum. **p. e cerebel'lo ad tes'tes**, the superior peduncles of the cerebellum. **p. ethmoida'lis con'chae nasa'lis infe'rio'ris** [B N A], a process at the middle of the superior margin of the inferior nasal concha which points upward and joins the processus uncinatus ossis ethmoidalis. **p. ferrei'ni**, pyramid of Ferrein. **p. fron-ta'lis maxil'lae** [B N A], a large strong irregular process of bone which projects upward from the front of the body of the maxilla. It articulates above with the pars nasalis, ossis frontalis, in front with the nasal bone, and its medial surface forms part of the lateral wall of the nasal cavity. **p. frontosphenoida'lis os'sis zygomatici** [B N A], the strong upward projecting triangular process of the zygomatic bone which lies behind the malar surface and between the orbital and temporal surfaces. It unites above with the zygomatic process of the frontal bone and behind

with the great wing of the sphenoid bone. **p. gracilis**, *p. anterior mallei*. **p. of Ingrassias**, the lesser wing of the sphenoid bone. **p. intra-jugula'ris os'sis occipita'lis** [B N A], a small pointed process which projects lateralward from the incisura jugularis just above the hypoglossal canal and helps to divide the jugular foramen into two parts. **p. intrajugula'ris os'sis tempora'lis** [B N A], a small process which projects downward from the lower margin of the posterior surface of the petrous portion of the temporal bone just in front of the incisura jugularis and which helps to divide the jugular foramen into two parts. **p. latera'lis mallei** [B N A], a small tapered process which projects lateralward from the base of the manubrium mallei and pressing against the tympanic membrane produces the prominentia malleolaris. **p. latera'lis tali** [B N A], a large low process on the lateral surface of the talus which articulates with the malleolaris lateralis. **p. latera'lis tuberis calca'nei** [B N A], a rough process which projects downward from the lower lateral portion of the tuber calcanei. **p. lenticula'ris** [B N A], a small oval knob on the medial side of the tip of the long limb of the incus which articulates with or is ossified to the capitulum stapedis. **p. margina'lis os'sis zygoma'tici** [B N A], the anterior and medial angle of the zygomatic bone which forms the lateral part of the margo infra-orbitalis. **p. masoi'deus** [B N A], the mastoid process. **p. maxilla'ris con'chae nasa'lis inferioris** [B N A], a broad, flat process which projects downward and lateralward from the upper margin of the inferior nasal concha and helps to close the hiatus maxillaris. **p. media'lis tu'beris calca'nei** [B N A], a rough process which projects downward from the lower medial portion of the tuber calcanei. **p. muscula'ris cartila'ginis aryaetnoi'deae** [B N A], the lateral and posterior lower projecting angle of the arytoid cartilage to which the cricoarytenoid muscles are attached. **p. palati'nus maxil'lae** [B N A], a horizontally arched plate of bone which helps to form the lower part of the maxilla and with its fellow of the opposite side the anterior two thirds of the hard palate. **p. poste'rior tali** [B N A], a projection backward from the posterior portion of the talus. It is divided into two unequal parts by the sulcus musculi flexoris hallucis longi. **p. pyramida'lis os'sis palati'ni** [B N A], a strong process which projects downward, backward, and lateralward from the lateral part of the posterior margin of the palatine bone and helps to form the pterygoid fossa. **p. reticula'ris**, formatio reticularis. **p. retromandibula'ris glan'dulae paroti'dis** [B N A], the irregularly wedge-shaped portion of the parotid gland which passes medialward behind the ramus mandibulae almost to the wall of the pharynx. **p. sphenoida'lis** [B N A], an irregular mass of bone which projects upward and medialward from the posterior portion of the superior margin of the perpendicular portion of the palatine bone. It articulates with the body of the sphenoid bone and with the ala vomeris. **p. sphenoida'lis septi cartilagin'e'i** [B N A], a narrow, flat strip of cartilage which extends backward and upward along the groove on the upper margin of the vomer and below the lamina perpendicularis of the ethmoid bone from the cartilago septi nearly to the sphenoid bone. **p. supra-condyloi'deus hu'meri** [B N A], a small inconstant process just proximal to the medial epicondyle of the humerus. **p. vagina'lis peritonea'le**, the canal of Nuck; a small diverticulum of peritoneum accompanying the round ligament of the uterus through the abdominal wall. **p. vermifo'r'mis** [B N A], the vermiform appendix. See under *appendix*. **p. voca'lis** [B N A], the vocal process. **p. xiphoi'deus** [B N A], the xiphoid process. **p. zygoma'ticus maxil'lae** [B N A], the rough triangular eminence which articulates with the zygomatic bone and marks

the separation of the facies anterior, infratemporalis, and orbitalis. **p. zygoma'ticus os'sis fronta'lis** [B N A], a thick, strong process situated at the lateral end of the margo supra-orbitalis of the frontal bone which articulates with the zygomatic bone and from which the linea temporalis starts. **p. zygoma'ticus os'sis tempora'lis** [B N A], a long, strong process which arises from the lower part of the squama of the temporal bone and passes forward from just above the porus acusticus externus to join the zygomatic bone and thus form the zygomatic arch.

prochondral (pro-kon'dral). Occurring previous to the formation of cartilage.

prochordal (pro-kor'dal). In front of the notochord.

prochoresis (pro-ko-re'sis) [προχώρησις advancement]. The propulsion of food through the pylorus or along the alimentary canal.

prochorion (pro-ko're-on). 1. The thin zona pellucida of the fertilized ovum when it reaches the uterus. 2. The coating of albuminous matter which the ovum receives as it passes along the oviduct.

Prochownick's diet (pro-kov'niks) [Ludwig Prochownick, German obstetrician, born 1851]. See under *diet*.

prochromatin (pro-kro'mat-in). The substance composing the true nucleoli; paranuclein.

prochromosome (pro-kro'mo-sōm). Chromosome-like bodies in resting nuclei.

prochymosin (pro-ki'mo-sin). Same as *renninogen*.

procidencia (pro-sid-en'she-ah) [L.]. A prolapse, or falling down.

procoelia (pro-se'le-ah) [πρό before + κοιλία hollow]. The lateral ventricle of the brain.

procoelous (pro-se'lus) [πρό before + κοίλος hollow]. Concave on the anterior surface.

procreation (pro-kre-a'shun) [L. *procrea'tio*]. The act of begetting.

procreative (pro'kre-a-tiv). Concerned in procreation; able to beget.

proctagra (prok'tag-rah, prok-ta'grah) [πρωκτός anus + ἀγρα seizure]. Pain in and around the anus.

proctalgia (prok-tal'je-ah) [πρωκτός anus + ἄλγος pain]. Neuralgia of the lower rectum.

proctatresia (prok-tat-re'ze-ah) [πρωκτός anus + α priv. + τρήσις perforation]. Imperforation of the anus.

proctectasia (prok-tek-ta'ze-ah) [πρωκτός anus + ἐκτασις dilatation]. Dilatation of the rectum or of the anus.

proctectomy (prok-tek'to-me) [πρωκτός anus + ἐκτομή excision]. Surgical removal of the rectum.

proctencleisis (prok-ten-kl'i'sis) [πρωκτός anus + ἐγκλείω to shut in]. Constriction, or stenosis, of the lower rectum.

procteuryster (prok'tu-rin-ter) [πρωκτός anus + εὐρύναι to widen]. A baglike device used in dilating the rectum.

procteurysis (prok'tu-ris-is). Dilatation of the rectum by means of a procteuryster.

proctitis (prok-ti'tis). Inflammation of the rectum. **epidemic gangrenous p.**, a disease of the northern part of South America and the Fiji and other islands of the South Pacific Ocean, marked by rapidly spreading ulceration of the anus and lower bowel, with bloody discharges, fever, and great prostration.

proctocoele (prok'to-sēl) [πρωκτός anus + κήλη hernia]. Hernial protrusion of a part of the rectum; rectocoele.

proctoclysis (prok-tok'lis-is) [πρωκτός rectum + κλύω a drenching]. The slow injection of large quantities of liquid into the rectum. Called also *Murphy drip*. See *Murphy's method* (2d def.), under *method*.

- proctococcypexy** (prok-to-kok'se-pek-se) [πρωκτός anus + κόκκυς coccyx + πηγνύναι to fix]. The fastening of the rectum to the coccyx by sutures.
- proctocolitis** (prok-to-ko-li'tis). Inflammation of the rectum and colon.
- proctocolonoscopy** (prok''to-ko-lon-os'ko-pe). Inspection of the interior of the rectum and lower colon.
- proctocystoplasty** (prok-to-sis'to-plas-te) [πρωκτός anus + κύστις bladder + πλάσσειν to form]. A plastic operation on the rectum and bladder.
- proctocystotomy** (prok''to-sis-tot'o-me) [πρωκτός anus + κύστις bladder + τομή cut]. See rectovesical operation for stone in the bladder.
- proctodeum, proctodaeum** (prok-to-de'um) [πρωκτός anus + δαίειν to divide]. A fold or invagination of the epiblast of the embryo at the point where later the anus is formed.
- proctodynia** (prok-to-din'e-ah) [πρωκτός anus + δόνην pain]. Pain in or about the anus.
- procto-elytropy** (prok''to-el'it-ro-plas-te) [πρωκτός anus + ἐλτρον vagina + πλάσσειν to form]. A plastic operation on the rectum and vagina.
- proctologic** (prok-to-loj'ik). Pertaining to proctology.
- proctologist** (prok-to-lo'jist). A practitioner skilled in proctology.
- proctology** (prok-to-lo'je) [πρωκτός anus + λόγος discourse]. The branch of medicine treating of the rectum and its diseases.
- proctoparalysis** (prok''to-par-al'is-is) [πρωκτός anus + paralysis]. Paralysis of the muscles of the anus and rectum.
- proctopexy** (prok'to-peks-e) [πρωκτός anus + πηγνύναι to fix]. The fixation of the rectum to some other part by suture.
- proctophobia** (prok-to-fo'be-ah) [πρωκτός anus + φόβος fear]. The mental state of apprehension common in persons with rectal disease.
- proctoplasty** (prok'to-plas-te) [πρωκτός anus + πλάσσειν to form]. Plastic surgery of the rectum and anus.
- proctoplegia** (prok-to-ple'je-ah) [πρωκτός anus + πληγή stroke]. Same as *proctoparalysis*.
- proctopolypus** (prok-to-pol'ip-us) [πρωκτός anus + πολύς]. Polypus of the rectum.
- proctoptoma** (prok-top-to'mah). Proctoptosis.
- proctoptosis** (prok-top-to'sis) [πρωκτός anus + πτώσις fall]. Prolapse of the anus.
- proctorrhaphy** (prok-tor'af-e) [πρωκτός rectum + ραφή seam]. The stitching, or suture, of the rectum.
- proctorrhea, proctorrhoea** (prok-tor-e'ah) [πρωκτός anus + ροή flow]. A mucous discharge from the anus.
- proctoscope** (prok'to-skóp) [πρωκτός anus + σκοπεῖν to inspect]. A speculum for inspecting the rectum. **Tuttle's p.**, a rectal speculum with an electric light at its extremity and an arrangement for inflating the rectal ampulla.
- proctoscopy** (prok-tos'ko-pe) [πρωκτός rectum + σκοπεῖν to view]. Inspection of the rectum.
- proctosigmoidectomy** (prok''to-sig-moi-dek'to-me) [πρωκτός anus + sigmoid + ἐκτομή excision]. Excision of the anus and sigmoid flexure.
- proctosigmoiditis** (prok''to-sig-moi-di'tis). Inflammation of the rectum and sigmoid.
- proctospasm** (prok'to-spazm) [πρωκτός rectum + σπασμ]. Spasm of the rectum.
- proctostasis** (prok-tos'tas-is) [πρωκτός rectum + στάσις stoppage]. Constipation due to anesthesia of the rectum to the stimulus of defecation.
- proctostenosis** (prok''to-sten-o'sis) [πρωκτός rectum + στένωσις narrowing]. Stricture of the rectum or anus.
- proctostomy** (prok-tos'to-me) [πρωκτός anus + στόμα mouth]. The creation of a permanent opening into the rectum.
- proctotome** (prok'to-tóm) [πρωκτός anus + τέμνειν to cut]. A knife for proctotomy.
- proctotomy** (prok-tot'o-me) [πρωκτός anus + τέμνειν to cut]. The cutting of an anal or rectal stricture; the opening of an imperforate anus. **external p.**, that done on or near the sphincter. **internal p.**, an incision of the rectum from within above the sphincter.
- proctotoreusis** (prok''to-to-ru'sis) [πρωκτός anus + τóρευσις boring]. The making of an artificial anus.
- proctotresia** (prok-to-tre'se-ah). Proctotoreusis.
- proctoalvotomy** (prok''to-val-vot'o-me). The operation of cutting the rectal valves.
- procumbent** (pro-kum'bent). Lying on the face.
- procursive** (pro-kur'siv) [L. *procursivus*]. Characterized by a tendency to run forward.
- procurvation** (pro-kur-va'shun) [L. *procurvare* to bend forward]. A bending forward, as of the body.
- prodigiosin** (pro-dij-e-o'sin). The red pigment formed by cultures of *Erythrobacillus prodigiosus*.
- prodigiosus toxin** (pro-dij-e-o'sus). See *toxin*.
- prodromal** (pro-dro'mal). Premonitory; indicating the approach of a disease.
- prodrome** (pro-dróm) [L. *prodromus*; πρόδρομος forerunning]. A premonitory symptom or precursor; a symptom indicating the onset of a disease.
- prodromic, prodromous** (pro-dro'mik, prod'romus). Prodromal.
- product** (prod'ukt). Something produced. **anaphylactic reaction p.** See *anaphylaxis*. **substitution p.**, a chemical product obtained by substituting for one element in a molecule an atom or radical of another substance. **Vaughan's split p's**, a protein which has been split up into a poisonous and a nonpoisonous part, the former soluble in the menstruum, the latter not. The former is called the "poison"; the latter, the "residue."
- productive** (pro-duk'tiv). Producing or forming, especially producing new tissue.
- proemial** (pro-e-me-al) [pro'em a prelude]. Introductory; serving as an introduction or indication; prodromal; potentially dangerous, as proemial breast.
- proencephalon** (pro-en-sef'al-on). Same as *proencephalon*.
- proencephalus** (pro-en-sef'al-us) [πρό before + ἐγκέφαλος brain]. A monster with a part of the brain protruding from a frontal fissure.
- proenzyme** (pro-en'zim). Same as *zymogen*.
- proeotia** (pre-o'she-ah). Incorrect form of *proiotia*.
- proerythroblast** (pro-er-ith'ro-blast) [πρό before + ἐρυθρόβλαστ]. An immature nucleated red blood cell.
- proerythrocyte** (pro-er-ith'ro-sit) [πρό before + ἐρυθρόκυτ]. Same as *hematoblast*.
- proestrum, prooestrum** (pro-es'trum) [πρό before + οἰστρῆμα]. The period just before the occurrence of the estrum in animals.
- proferment** (pro-fer'ment). Same as *zymogen*.
- profferin** (pro-fer'in). Iron nucleoprotein, a brownish powder containing 10 per cent of organic iron. Dose, 5-10 grains (0.333-0.666 Gm.).
- professional** (pro-fesh'un-al). Pertaining to one's profession or occupation.
- Profeta's law** (pro-fa'tahz) [Guiseppe Profeta, Italian physician]. See *law*.
- Profichet's syndrome** (pro-fe-shāz') [Georges Charles Profichet, French physician, born 1873]. See *syndrome*.
- profilograph** (pro'fil-o-graf) [profile + γράφειν to draw]. A device for recording the profile of the face.

profilometer (pro-fi-lom'et-er). An apparatus for securing the profile and outlining it on paper.

Proflagellata (pro-flag-el-a'tah). Doflein's name for a proposed group to embrace organisms supposed to be transitional from bacteria to flagellates, i. e., the spirochetes.

proflavine (pro-fla'vin). 3-6, di-aminoacridinium monohydrogen sulphate, $\text{CH}(\text{NH}_2.\text{C}_6\text{H}_4)_2\text{NH}_2.\text{H}_2\text{SO}_4$, a reddish-brown crystalline powder; used like acriflavine hydrochloride in the treatment of infected wounds.

profundometer (pro-fon-dom'et-er). An apparatus for locating a foreign body by the fluoroscope by obtaining three lines of sight which intersect at the foreign body.

profunda cervicis (pro-fun'dah), **p. fem'oris**. See *arteries, table of*.

progamous (prog'am-us) [*πρό* before + *γάμος* marriage]. Previous to fertilization of the ovum.

proganol (pro'ga-nol). A brand of strong silver-protein.

progaster (pro'gas-ter) [*πρό* before + *γαστήρ* stomach]. The antenteron.

progastrin (pro-gas'trin). Gastrin that has not been activated.

progenital (pro-jen'it-al). On the external surface of the genitals.

progeria (pro-je're-ah) [*πρό* before + *γήρας* old age]. Premature old age; specifically a form of infantilism marked by small stature, absence of facial and pubic hair, wrinkled skin, gray hair, and the facial appearance, attitude, and manner of old age (Gifford).

proGLOSSIS (pro-glos'is) [*προγλωσσίς*]. The tip of the tongue.

proglottid (pro-glot'id). Proglottis.

proglottis (pro-glot'is), pl. *proglottides* [*pro-* + *glottis*]. Any one of the joints of a tapeworm.

prognathism (prog'nath-izm). The condition of being prognathous; marked projection of the jaw.

prognathometer (prog-nath-om'et-er) [*prognathism* + *μέτρον* measure]. An instrument for measuring the form and degree of prognathism.

prognathous (prog'nath-us) [*πρό* before + *γνάθος* jaw]. Having projecting jaws.

prognose (prog-nōs'). To forecast the course and outcome of a disease.

prognosis (prog-no'sis) [*πρόγνωσις* foreknowledge]. A forecast as to the probable result of an attack of disease: the prospect as to recovery from a disease afforded by the nature and symptoms of the case.

prognostic (prog-nos'tik). 1. Affording an indication as to prognosis. 2. A symptom or sign on which a prognosis may be based.

prognosticate (prog-nos'tik-āt). To state or determine the probable outcome of an attack of disease.

prognostician (prog-nos-tish'an). One who is skilled in prognosis.

progonoma (pro-gon-o'mah) [*πρό* before + *γόνος* sperm + *-ωμα* tumor]. A tumor due to misplacement of tissue as the result of fetal atavism to a stage which does not occur in the life history of the species, but which does occur in ancestral forms of the species.

progression (pro-gresh'un). The act of moving or walking forward. **backward p.**, walking backward: an act seen in certain nervous diseases. **cross-legged p.**, a walk in which the toes are turned in and the foot is placed in front of its fellow. **metadromic p.**, one of the sequelae of epidemic encephalitis, consisting in the fact that a person who is barely able to walk may have no difficulty in running.

progressive (pro-gres'iv). Advancing; going forward; of a disease, going from bad to worse.

proiodine (pro-i'o-din). A proprietary compound of iodine and milk albumin: used in syphilis, scrofula, etc.

proiotia (pro-e-o'she-ah) [*πρωί* early]. Sexual or genital precocity.

projection (pro-jek'shun) [L. *pro* forward + *ja'cer* to throw]. 1. A throwing forward, especially the act of referring impressions made on the sense organs to their proper source, so as to locate correctly the objects producing them. 2. The act of extending or jutting out; also a part that juts out, **erroneous p.**, a misjudging of the position of an object, due to weakness of the eye muscles.

projectoscope (pro-jek'to-skōp). An apparatus for throwing pictures on a screen by reflected light.

projodin (pro-i'o-din). An iodine-casein compound, a yellowish powder: called also *lactojod*.

prolabium (pro-la'be-um) [L. *pro* before + *la'bium* lip]. The exposed red part of the lip.

prolamine (pro-lam'in). Any one of a group of proteins found in cereals. They are soluble in alcohol (70-80 per cent), but insoluble in water and absolute alcohol. They are also called *alcohol-soluble proteins*.

prolapse (pro'laps) [L. *prolap'sus*; *pro* before + *la'bi* to fall]. The falling down, or sinking, of a part or viscus; proidentia. **p. of the cord**, premature expulsion of the umbilical cord in labor. **p. of the iris**, protrusion of the iris through a wound in the cornea. **Morgagni's p.**, chronic inflammatory hyperplasia of the mucosa and submucosa of the sacculus laryngis.

proleptic (pro-lep'tik). Occurring ahead of the usual time: said of a periodic disease whose paroxysms return at successively shorter intervals.

proleucemia (pro-lu-se'me-ah). Leukanemia.

proleukemia (pro-lu-ke'me-ah). Leukanemia.

proleukocyte (pro-lu'ko-sīt). Same as *leukoblast*.

proliferate (pro-lif'er-āt). To grow by the reproduction of similar cells.

proliferating (pro-lif'er-a-ting). Reproducing or multiplying in similar forms; applied to certain cells and morbid cysts.

proliferation (pro-lif'er-a'shun) [L. *pro'les* offspring + *fer're* to bear]. The reproduction or multiplication of similar forms, especially of cells and morbid cysts.

proliferative, proliferous (pro-lif'er-a-tiv, pro-lif'er-ous). Characterized by proliferation.

prolific (pro-lif'ik) [L. *prolif'icus*]. Fruitful; productive.

proligerous (pro-lij'er-us) [L. *pro'les* offspring + *fer're* to bear]. Producing an ovum.

proline (pro'lin). Alpha-pyrrolidin carboxylic acid, $\text{C}_4\text{H}_7(\text{NH})\text{COOH}$; one of the cleavage products (amino-acids) from the protein molecule (Emil Fischer, 1901).

promegaloblast (pro-meg'al-o-blast). A cell developing from a lymphoidocyte and developing into a megaloblast.

prominence (prom'in-ens) [L. *prominen'tia*]. A projection. **laryngeal p.** See *prominentia laryngea*. **malleolar p.**, a small projection at the upper extremity of the stria malleolaris, formed by the lateral process of the malleus. **spiral p.**, a portion of the spiral ligament projecting into the scala media along the lower edge of the stria vascularis. **styloid p.**, an eminence on the posterior wall of the tympanic cavity.

prominentia (prom-in-en'she-ah) [L.]. A prominence. **p. cana'lis facia'lis** [BNA], an elongated elevation on the medial wall of the tympanic cavity. It is just below the prominence of the lateral semicircular canal and above and behind the fenestra vestibuli. **p. cana'lis semicircularis latera'lis** [BNA], a large rounded prominence on the upper portion of the medial wall of the tympanic cavity caused by the presence

- of the semicircular canal. It is between the fenestra vestibuli and the antrum tympanicum. **p. laryngea** [B N A], a subcutaneous prominence on the front of the neck caused by the thyroid cartilage of the larynx. **p. malleolaris** [B N A], a malleolar prominence. **p. spiralis** [B N A], spiral prominence. **p. styloidea** [B N A], an irregular nodule on the posterior portion of the floor of the tympanic cavity which corresponds to the base of the styloid process.
- promitosis** (pro-mit-o'sis). A simple form of cell division seen in tumor cells, in which the nucleolus or karyosome divides as in mitosis, the rest of the division simulating amitosis.
- promontorium** (prom-on-to're-um) [B N A]. See *promontory*.
- promontory** (prom'on-to-re) [L. *promontorium*]. A projecting eminence or process. **double p.**, a sacrum in which the second segment is bent backward, forming an angle with the first segment; the second segment is called **false p.** **p. of the sacrum**, the upper and projecting part of the sacrum. **p. of the tympanum**, the prominence on the inner wall of the tympanum formed by the first turn of the cochlea.
- promyelocyte** (pro-mi'el-o-sit) [cell before + *myelocyte*]. A large uninuclear cell of myeloid origin seen in the blood in certain forms of leukemia. Called also *granular leukoblast*.
- pronation** (pro-na'shun) [L. *prona'tio*]. The act of turning the palm of the hand downward.
- pronatoflexor** (pro-na-to-flek'sor). Both pronator and flexor.
- pronator** (pro-na'tor) [L.]. See under *muscles*, *table of*.
- pronaus** (pro'na-us) [πρό before + νᾱος temple]. The vestibule of the vagina.
- prone** (prōn) [L. *pro'nus*]. Lying with the face downward; of the hand, having the palm turned downward.
- pronephron, pronephros** (pro-nef'ron, pro-nef'-ros) [πρό before + νεφρός kidney]. The primordial kidney; a structure developing in the embryo before the wolffian body. It forms the anterior section of the wolffian body and opens into the cloaca by the müllerian duct.
- prong** (prong). The conical root of a tooth.
- pronograde** (pro'no-grād) [L. *pro'nus* bent downward + *grādi* to walk]. Carrying the body in a horizontal position, as distinguished from *orthograde*: said of quadrupeds.
- pronometer** (pr-onom'et-er). An instrument for measuring the amount of pronation or supination of the forearm.
- pronucleus** (pro-nu'kle-us). The nucleus of the egg element (*female p.*) or of the sperm element (*male p.*) during fertilization of the ovum by the spermatozoon.
- prooestrus**. See *proestrus*.
- prootic** (pro-ot'ik) [πρό before + οὖς ear]. Situated in front of the ear.
- propaesin** (pro-pa'e-sin). Paraminobenzoic acid propyl ester, $\text{NH}_2\text{C}_6\text{H}_4\text{COOC}_3\text{H}_7$, a colorless, crystalline compound: used as a local anesthetic in dermatology and in gastro-intestinal disorders.
- propagation** (prop-ag-a'shun). Reproduction.
- propagative** (prop-ag-a-tiv). Pertaining to or concerned in propagation.
- propalinal** (pro-pal'in-al) [πρό before + πάλιν back]. Having a backward and forward direction or motion.
- propane** (pro'pān). A volatile liquid or gaseous hydrocarbon, C_3H_8 , from petroleum.
- prop cells** (prop selz). See *supporting cells*, under *cell*.
- propedeutic, propaedeutic** (pro-pe-du'tik) [πρό before + παιδεύειν to teach]. Pertaining to preliminary instruction.
- propedeutics, propaedeutics** (pro-pe-du'tiks). Preliminary instruction.
- propene** (pro'pēn). Propylene.
- propenyl** (pro-pē'n'il). Same as *glyceryl*.
- propepsin** (pro-pep'sin). Same as *pepsinogen*.
- propeptone** (pro-pep'tōn). Same as *hemialbumose*.
- propeptonuria** (pro-pep-to-nu're-ah). Same as *hemialbumosuria*.
- properitoneal** (pro'per-it-o-ne'al). Situated between the parietal peritoneum and the abdominal wall. See under *hernia*.
- prophase** (pro'fāz). The first stage in mitosis, including all the processes up to the metaphase or longitudinal splitting of the chromosomes. See *mitosis*.
- propylactic** (pro-fil-ak'tik) [προφυλακτικός]. Tending to ward off disease; also a remedy so acting. **Haffkine's p.** See *Haffkine's vaccine*, under *vaccine*. **typhoid p.** See *typhoid vaccine*, under *vaccine*.
- prophylactodontia** (pro-fil-ak'to-don'she-ah). Preventive dentistry; the branch of dentistry which specializes in preventing dental and oral disease and malformations.
- prophylactodontist** (pro-fil-ak-to-don'tist). A specialist in prophylactodontia.
- prophylaxis** (pro-fil-aks'is) [προφυλάσσειν to guard]. The prevention of disease; preventive treatment. **dental p.**, prophylactodontia. **oral p.**, the prevention of disease of the mouth and teeth. **serum p.**, prevention of disease by the use of immune serums.
- propion** (pro'pē-on). Diethyl ketone; a mobile fluid, $\text{C}_2\text{H}_5\text{CO}_2\text{C}_2\text{H}_5$: sedative and hypnotic. Dose, 8-45 minims (0.5-3 cc.).
- propionic acid** (pro-pe-on'ik). See under *acid*.
- propionitril** (pro-pi-o-ni'tril). Ethyl cyanide.
- propionylphenetidin** (pro-pi'o-nil-fen-et'id-in). Same as *triphenin*.
- proplex, proplexus** (pro'pleks, pro-pleks'us). The choroid plexus of the lateral ventricle of the brain.
- propol** (pro'pol). A proprietary disinfectant for wounds and instruments.
- propolism** (pro-pol'is-in). A reddish-brown liquid prepared from beeswax; a vulnerary, antiseptic, and disinfectant.
- proponal** (pro'po-nal). A colorless, crystalline substance, dipropylmalonylurea, $(\text{C}_2\text{H}_5)_2\text{C}(\text{CO}_2\text{NH}_2)_2$: used as a hypnotic like veronal. Dose, 3-8 grains (0.2-0.53 gm.).
- propons** (pro'pons) [L. *pro* before + *pons* bridge]. The delicate plates (*al'ae pon'tis*) of white substance which pass transversely across the anterior end of the pyramid and just below the pons varolii; the ponticulus.
- proposote** (pro'po-sōt). Creosote phenylpropionate: used in affections of the lung. Dose, 10-20 minims (0.6-1.3 cc.).
- proprietary** (pro-pri'e-ta-re). A proprietary medicine.
- proprioceptive** (pro'pre-o-sep'tiv). Receiving stimulations within the tissues of the body.
- proprioceptor** (pro'pre-o-sep'tor). The apparatus which receives stimulations within the tissues of the body, which are due to the processes within the organism itself. See *receptor* (2d def.).
- propriospinal** (pro-pre-o-spi'nal). Pertaining wholly to the spinal cord.
- proptometer** (prop-tom'et-er) [πρόπτωσις protrusion + μέτρον measure]. An instrument for measuring protrusion; especially, a scale for measuring the amount of exophthalmos.
- proptosis** (pro-to'sis) [πρόπτωσις]. A forward displacement; a projecting. **ocular p.**, bulging of the eyeball; exophthalmos.
- propulsion** (pro-pul'shun) [L. *pro* forward + *pel-*

lere to thrust]. Tendency to fall forward in walking; also festination.

propyl (pro'pil). The univalent chemical radical, C_3H_7 or $CH_3 \cdot CH_2 \cdot CH_2 \cdot$.

propylamine (pro-pil-am'in). A liquid amine or base, $CH_3 \cdot CH_2 \cdot CH_2 \cdot NH_2$, derivable from narcotine, etc. It occurs in two forms, normal propylamine and isopropylamine. The former is a colorless liquid, of strong ammoniacal odor, soluble in water, derived from cultures of bacteria of the feces. It has been used as an antirheumatic, sedative, and antispasmodic in chorea, hysteria, etc. Dose, 1-5 minims (0.066-0.333 cc.).

propylene (pro'il-ēn). A gaseous hydrocarbon, $CH_3 \cdot CH \cdot CH_2$, of the olefin series. It has anesthetic properties.

propyrin (pro-pi'rin). Sodium thymbenzoate.

pro re nata (pro re na'tah). Latin for *according to circumstances*.

prorennin (pro-ren'in). Same as *renninogen*.

prorrhaphy (pro'raf-e) [prō forward + ῥάφη suture]. Same as *advancement*.

prorsad (pror'sad) [L. *pror'sum* forward]. In a forward direction.

proscoplex (pro-sko'leks), pl. *proscoplexes* [prō before + σκόληξ worm]. The embryonic form of a cestode worm just after leaving the egg.

prosecretin (pro-se-kre'tin). The supposed precursor of secretin, thought to be contained in epithelial cells and to be converted into secretion on hydrolysis with acids.

prosector (pro-sek'tor) [L.]. One who dissects anatomical subjects for demonstration.

prosencephalon (pros-en-sef'al-on) [prōs before + ἐγκέφαλος brain]. The forebrain; the anterior part of the anterior cerebral vesicle of the embryo which develops into the cerebral hemispheres, the corpora striata, and the olfactory lobes.

proserozym, proserozyme (pro-se'ro-zim). See under *serozyme*.

proso (pro'so). A Russian variety of millet recommended as a table cereal.

prosocele, prosococele (pros'o-sēl) [prōs before + κοίλη a hollow]. The foremost cavity of the brain; the ventricular cavity of the prosencephalon.

prosodemic (pros-o-dem'ik) [prōsō forward + δῆμος people]. Passing from one person to another instead of reaching a large number at once, through some means such as water supply: said of a disease progressing in that way.

prosgaster (pros'o-gas-ter) [prōs before + γαστήρ stomach]. Same as *foregut*.

prosopagus (pro-sop'ag-us) [prōsōpon face + πηγύναι to fasten]. A monster fetus with a twin in the form of a tumor-like mass attached to the face.

prosopalgia (pros-o-pal'je-ah) [prōsōpon face + ἄλγος pain]. Neuralgia of the trifacial nerve; tic douloureux.

prosopalgic (pros-o-pal'jik). Pertaining to or affected with facial neuralgia.

prosopantritis (pros'o-pan-tri'tis) [prōsōpon face + ἄντρον cavity + -itis inflammation]. Inflammation of the frontal sinuses.

prosopectasia (pros'o-pek-ta'zhe-ah) [prōsōpon face + ἔκτασις expansion]. Oversize of the face.

prosoplasia (pros-o-pla'se-ah) [prōsō forward + πλάσσειν to form]. 1. Abnormal differentiation of tissue. 2. Development into a higher state of organization or functioning.

prosopodiaschisis (pros'o-po-di-as'kis-is) [prōsōpon face + δια apart + σχίζειν to split]. An operation for opening all of the paranasal sinuses, involving preliminary tracheotomy and hermetic tamponade of the pharynx; a median incision from the root of the nose to the upper lip; bilateral dissection and reflection of the facial flaps; removal of the anterior and internal walls of the

antrum, of the anterior and inferior walls of the frontal sinus, of the frontal process, and of the ethmoid.

prosopodiplegia (pros'o-pod-i-ple'je-ah) [prōsōpon face + ποὺς foot + πλῆγη stroke]. Paralysis of the face and one lower extremity.

prosopoplepsy (pros'o-po-lep-se) [prōsōpon face + λαμβάνειν to take]. The reading of character from the features.

prosoponeuralgia (pros'o-po-nu-ral'je-ah) [prōsōpon face + neuralgia]. Pain in the nerves of the face.

prosopoplegia (pros'op-o-ple'je-ah) [prōsōpon face + πλῆγη stroke]. Facial paralysis.

prosopoplegic (pros'o-po-ple'jik). Pertaining to or affected with facial paralysis.

prosoposchisis (pros-o-pos'kis-is) [prōsōpon face + σχίσαι cleft]. Congenital fissure of the face.

prosopospasm (pros'o-po-spazm) [prōsōpon face + spasm]. Spasm of the muscles of the face.

prosoposternodymia (pros'o-po-ster-no-dim'e-ah) [prōsōpon face + στέρνον sternum + δίδυμος twin]. A double monster fetus with face joined to face and sternum to sternum.

prosopothoracopagus (pros'o-po-tho-rak-op'ag-us) [prōsōpon face + θώραξ chest + πάγος fixed]. Twin fetuses joined at the faces, necks, and chests.

prosopotocia (pros'o-po-to'se-ah) [prōsōpon face + τόκος birth]. Face presentation in labor.

prostaden (pros'tad-en) [προστάτης prostate + ἀδήν gland]. A preparation of the prostate glands of bullocks: used in prostatic and other gland hypertrophies.

prostata (pros-ta'tah). A proprietary, dry therapeutic extract of the prostate glands of animals.

prostatalgia (pros-tat-al'je-ah) [prostate + ἄλγος pain]. Pain in the prostate gland.

prostatauze (pros-tat-awk'se) [προστάτης prostate + αὐξή increase]. Enlargement of the prostate.

prostate (pros'tāt) [προστάτης prostate; πρό before + ἵσταναι to stand]. A gland which in the male surrounds the neck of the bladder and the urethra. It consists of a median lobe and two lateral lobes, and is made up partly of glandular matter, the ducts from which empty into the prostatic portion of the urethra, and partly of muscular fibers which encircle the urethra.

prostatectomy (pros-tat-ek'to-me) [προστάτης prostate + ἐκτομή excision]. Surgical removal of the prostate or of a part of it.

prostatelcosis (pros'tat-el-ko'sis) [prostate + ἔλκος ulceration]. Ulceration of the prostate.

prostatertia (pros-ta-te're-ah). The abnormal mental and emotional attitude seen in prostatic disease; prostatism.

prostatic (pros-tat'ik). Pertaining to the prostate gland.

prostaticovesical (pros-tat'ik-o-ves'ik-al). Pertaining to the prostate and the bladder.

prostatism (pros-ta-tizm). A morbid state of mind and body due to prostatic disease, especially the condition which results from obstruction to urination due to prostatic hypertrophy. **vesical p.**, a condition of retention of the urine resembling that of prostatic disease, but existing in the absence of any affection of the prostate.

prostatitic (pros-tat-it'ik). Pertaining to prostatitis.

Prosopothoracopagus
(Gould and Pyle).

prostatitis (pros-ta-ti'tis). Inflammation of the prostate gland.

prostatocystitis (pros'ta-to-sis-ti'tis) [*prostate* + *cýstis* bladder + *-itis* inflammation]. Inflammation of the neck of the bladder (prostatic urethra) and the bladder cavity.

prostatocystotomy (pros-ta'to-sis-tot'-o-me) [*προστάτης* prostate + *cýstis* bladder + *τέμνειν* to cut]. Surgical incision of the bladder and prostate.

prostatodynia (pros'tat-o-din'e-ah) [*prostate* + *δύσνη* pain]. Pain in the prostate gland.

prostatography (pros-ta-tog'raf-e). Roentgen-ray photography of the prostate.

prostatomegaly (pros'ta-to-meg'a-le) [*prostate* + *μεγάλη* great]. Hypertrophy of the prostate.

prostatometer (pros-ta-tom'et-er) [*prostate* + *μέτρον* measure]. An instrument for measuring the prostate.

prostatomy (pros-ta'to-me) [*prostate* + *τέμνειν* to cut]. The operation of cutting into the prostate.

prostatomyectomy (pros-ta'to-mi-o-mek'to-me) [*prostate* + *myomeclomy*]. The surgical removal of a prostatic myoma.

prostatorrhea, prostatorrhoea (pros'ta-tor-re'-ah) [*prostate* + *ῥοία* flow]. A gleet or catarrhal discharge from the prostate.

prostatotomy (pros-ta-tot'-o-me) [*προστάτης* prostate + *τέμνειν* to cut]. Surgical cutting of the prostate.

prostatotoxin (pros'tat-o-tok'sin). A toxin formed on injection of an extract of the prostate gland; it is destructive to prostatic cells.

prostatovesiculectomy (pros'tat-o-ves-ik-u-lek'-to-me). Excision of the prostate and seminal vesicles.

prostatovesiculitis (pros'ta-to-ves-ik-u-li'tis). Inflammation of the prostate and seminal vesicles.

prostaxia (pro-stax'e-ah). A stabilized condition of protein dispersion in the body.

prostermation (pro-ster-na'shun). See *camplocormy*.

prostheon (pros'the-on) [*προσθέν* running forward]. The alveolar point.

prosthesis (pros'the-sis) [*πρός* to + *thesis* a putting]. 1. The replacement of an absent part by an artificial one. 2. An artificial part, such as an eye, leg, or denture. **dental p.**, the art of supplying missing teeth or parts of teeth by artificial substitutes. **maxillofacial p.**, the treatment and repair of injuries to the face and jaws including the artificial replacements of those parts. **paraffin p.**, subcutaneous injection of melted paraffin in order to restore the natural contour of a part. **Sauerbruch's p.**, an artificial limb in which the tissues of the stump are used to secure motion. **Vanghetti's p.**, an artificial limb with a mechanism similar to Sauerbruch's prosthesis.

prosthetic (pros-thet'ik). Pertaining to prosthesis.

prosthethics (pros-the'iks). A branch of surgery pertaining to artificial organs and parts.

prosthetist (pros'the-tist). A maker of artificial parts; especially a maker of artificial dentures.

prosthion (pros'the-on) [*πρόσθεν* before]. The alveolar point.

prosthodontia (pros-tho-don'she-ah) [*prosthetic* + *ὀδούς* tooth]. Prosthetic dentistry; the art of making dental appliances and substitutes, such as crowns, bridges, artificial dentures, etc.

prosthodontist (pros-tho-don'tist). A dentist who specializes in prosthodontia.

prostitution (pros-te-tu'shun). Habitual or professional fornication; promiscuous sexual intercourse for hire.

prostration (pros-tra'shun) [L. *prostratio*]. Extreme exhaustion or powerlessness. **electric p.**,

a condition due to prolonged exposure to electric light, marked by pains in the face, photophobia, and pigmentation of the skin. **heat p.** See *heat exhaustion*, under *exhaustion*. **nervous p.** Same as *neurasthenia*.

protagon (pro'tag-on) [*πρωτος* first + *ἀγων* to lead]. A crystalline mass, $C_{108}H_{360}N_6PO_{35}$, which separates from an alcoholic extract of brain substance on cooling. It may be a mixture.

protagulin (pro-tag'u-lin). A proprietary preparation of prothrombin for arresting hemorrhage.

protal (pro'tal) [*πρωτος* first]. Congenital: dating from the origin of life.

protalbumose (pro-tal'bu-mōs). See *proloprotease*.

protamine (pro-tam'in) [*πρωτος* first + *amine*]. 1. Any one of a series of basic proteins of the most simple composition, occurring in the spermatozoa of fish. They are strongly basic and yield large amounts of diamino-acids. 2. An amine or base, $C_{16}H_{32}N_6O_2$, from spermatozoa and from fish spawn.

protan (pro'tan). A brand of albumin tannate.

protanomalopia (pro'tan-om-al-o'pe-ah) [*πρωτος* first + *ἀνωμαλος* irregular + *ὤψ* eye]. A relative green vision in which more than the normal proportion of green is required to equate red to a homogeneous yellow.

protanope (pro'tan-ōp). A person affected with protanopia.

protanopia (pro-tan-o'pe-ah) [*πρωτος* first + *anopia*]. Von Kries' term for red blindness, as indicating a defect in the first constituent necessary for color vision. Cf. *deutanopia* and *tritanopia*.

protargentum (pro-tar-jen'tum). A compound formed from gelatin and silver; a brand of strong silver-protein.

protargin (pro-tar'jin). The name originally adopted by the Council on Pharmacy and Chemistry of the American Medical Association for such proprietary preparations as protargol, proganol, and protargentum. It is now superseded by the U. S. P. designation, strong silver-protein.

protargol (pro-tar'gol). A brand of strong silver-protein.

Protea (pro'te-ah) [L.]. A genus of trees of many species from various wet and warm regions; several species are medicinal. **p. juice**, a pectoral or bechic honey derived from the flowers of various species of *Protea*, as *P. mellifera*.

proteal (pro'te-al). A proprietary vegetable protein for hypodermic use.

protean (pro'te-an). 1. Assuming different shapes; changeable in form. 2. An insoluble derivative of protein, being the first product of the action of water, dilute acids, or enzymes.

proteantigen (pro-te-an'tij-en). A protein used by injection as an antigen; a proteogen.

protease (pro'te-ās). An enzyme or ferment that digests proteins.

protectin (pro-tek'tin). 1. Noguchi's term for a substance which develops in blood serum on standing, and having the effect of protecting the blood corpuscles against hemolytic action. 2. Thin paper coated on one side with an adhesive caoutchouc plaster: used in surgery.

protective (pro-tek'tiv) [L. *protegere* to protect]. 1. Affording defense, immunity, or protection. 2. An oiled silk used in surgery for its waterproof qualities.

proteid (pro'te-id) [*πρωτος* first]. Same as *protein*. **bacterial p.** See under *protein*.

proteidic (pro-te-id'ik). Pertaining to a proteid or proteids.

proteidin (pro'te-id-in). An immunizing bacteriolytic substance developed in the organism by a combination between a bacteriolytic enzyme and

any albuminous material. **pyocyanase p.**, the proteid of *Bacillus pyocyanus*: used for protective inoculation against diphtheria.

proteidogenous (pro-te-id-oj'en-us). Giving rise to or producing proteins.

protein (pro'te-in) [πρωτος first]. Any one of a group of nitrogenized, noncrystallizable compounds, similar to each other, widely distributed in the animal and vegetable kingdoms, and forming the characteristic constituents of the tissues and fluids of the animal body. They are essentially combinations of α -amino acids and their derivatives. They are formed by plants, the animal organism receiving them in food, assimilating and metamorphosing them. They all contain carbon, hydrogen, nitrogen, oxygen, and sulphur. Most proteins are coagulable by heat and mineral acids, and are insoluble in ether and alcohol: their solutions are levorotatory. The following classification has been recommended: 1. *Simple proteins*, or those that yield only α -amino acids or their derivatives on hydrolysis. They are albumins, globulins, glutelins, alcohol-soluble proteins, albuminoids (scleroproteins), histons, and protamines. 2. *Conjugated proteins*, or those that contain the protein molecule united to some other molecule or molecules otherwise than as a salt. They are nucleoproteins, glycoproteins, phosphoproteins, hemoglobins (chromoproteins), lecithoproteins, lipoproteins. 3. *Derived proteins*, or derivatives of the protein molecule formed by hydrolytic changes. They are proteins, metaproteins, coagulated proteins, proteoses, peptones, and peptides. The most important members of this group are albumin, casein, legumin, fibrin, vegetable fibrin, myosin, syntonin, gluten. **alcohol-soluble p.**, prolamine. **bacterial p.**, a protein formed by the action of bacteria upon tissue; a toxalbumin. **bacterial cellular p.**, a protein that forms part of the substance of a bacterium. **Bence-Jones p.**, a peculiar albuminous substance, found in the urine, frequently, but not exclusively, in cases of multiple myeloma. It coagulates when heated to 60 C. and redissolves on boiling. Formerly called *Bence-Jones albumose*. **coagulated p.**, a protein coagulated by boiling or by chemical agents. **compound p.**, a protein which on hydrolysis yields a simple protein and a nonprotein matter. **conjugated p.** See under *protein*. **defensive p.** (Hankin), any protein formed within the body and serving as a protection against disease; any alexin, phylaxin, or sozin. **derived p.** See under *protein*. **floating p.**, a protein which does not constitute part of the tissues, but simply circulates in the body and is then excreted. **halogen p.**, one of a group of protein derivatives produced by the action of free halogen on protein solutions. **Hektoen, Kretschmer, and Welker p.**, a protein found in urine which resembles Bence-Jones protein in solubility, but differs in its crystalline form, in its behavior toward heat, and in its precipitin reactions. **immune p's**, proteins formed by the combinations of albuminous matters of the body with the enzymes of pathogenic bacteria. **insoluble p.**, a substance left behind after the other proteins have been extracted from a cell. **iodized p.**, a protein treated with iodine. **native p.**, unchanged animal or vegetable proteins, especially as they occur in foods. **nucleoprotein**. See *nucleoprotein*. **phosphoprotein**. See *phosphoprotein*. **protective p.** Same as *defensive p.* **pyocyanic p.**, a substance prepared by treating the *Pseudomonas pyocyanus* with potassa: used in suppuration. **pyogenic p.**, the protein portion of a bacterium which is the suppuration-producing element of the bacterium. **racemized p.**, protein so changed by chemical or other agents that it loses more or less of its specific characteristics. **scleroprotein**. Same as *albuminoid* (3d def.). **serum p.**, any protein found in the serum of the blood. **silver-p., mild**. See under *silver*. **silver-p., strong**. See under *silver*. **simple p.** See under *protein*. **p.-sparing**, preventing the

loss of tissue protein, a power possessed by carbohydrate food. **split p.** See *Vaughan's split product*, under *product*. **synthetic p.**, highly complex polypeptides made in the laboratory. They show most of the characteristics of native proteins. **whole p.**, protein which has not been split.

proteinic (pro-te-in'ik). Pertaining to protein.

proteinochrome (pro-te-in'o-krôm) [*protein* + χρώμα color]. Any one of a series of coloring matters formed by the action of bromine or chlorine on tryptophane.

proteinochromogen (pro'te-in-o-kro'mo-jen). Same as *tryptophane*.

proteinogenous (pro-te-in-oj'en-us). Formed by or from a protein.

proteinol (pro-te-in'ol). A proprietary tonic and stimulant food preparation.

proteinotherapy (pro-te'in-o-ther'ap-e). Treatment by the injection of foreign protein on the theory that the protein acts as a nonspecific antigen.

proteinphobia (pro'te-in-fo-be-ah) [*protein* + φόβος fear]. Morbid aversion to protein foods.

proteinum pyocyanum (pro-te-i'num pi-o-si-a'-ne-um). A derivative from cultures of *Pseudomonas pyocyanus*: used as an application to ulcers.

proteinuria (pro'te-in-u're-ah) [*protein* + ούρον urine]. The presence of protein in the urine. **Bence-Jones p.**, the presence in the urine of Bence-Jones protein. See under *protein*.

protektin (pro-tek'tin). Adhesive silk paper impregnated with India rubber: used in surgery, etc.

proteoclastic (pro'te-o-klas'tik) [*protein* + κλάσις breakage]. Splitting up proteins or the protein molecule.

proteogens (pro'te-o-jens). Preparations claimed to contain or to have been made from plant acids, nonspecific proteins, enzymes, and chlorophylls.

proteol (pro'te-ol). An antiseptic dressing powder prepared by treating casein with formic acid.

proteolipin (pro'te-o-li'pin). A compound lipin containing a protein radical.

proteolysin (pro-te-o-lis'in). A specific substance causing proteolysis.

proteolysis (pro-te-ol'is-is) [*protein* + λύσις solution]. The conversion of proteins into peptones by the action of ferments.

proteolytic (pro'te-o-lit'ik). 1. Effecting the digestion of proteins. 2. Any solvent of the proteins.

proteometabolic (pro'te-o-met-ab-ol'ik). Pertaining to proteometabolism.

proteometabolism (pro'te-o-met-ab'o-lism). The metabolism of protein.

proteomorphic theory (pro-te-o-mor'fik). See under *theory*.

proteopeptic (pro'te-o-pek'tik). Proteopeptic.

proteopepsis (pro'te-o-pek'sis) [*protein* + πέψις digestion]. The digestion of protein.

proteopeptic (pro'te-o-pek'tik). Digesting protein; pertaining to the digestion of protein.

proteopepic (pro'te-o-pek'sik). Fixing protein within the organism.

proteopexy (pro'te-o-pek-se) [*protein* + πήξις fixation]. The fixation of proteins within the organism.

proteose (pro'te-ös) [*protein* + -ose]. A secondary protein derivative, formed by a hydrolytic cleavage of the protein molecule more complete than that which occurs with the primary protein derivatives, but not so complete as that which forms amino-acids. The proteoses are soluble in water and are not coagulated by heat. The *primary* proteoses are precipitated by half saturation with ammonium sulphate, the *secondary*, by full saturation.

Proteosoma (pro'te-o-so'mah) [*Πρωτεός* a many-formed deity + *σώμα* body]. A genus of parasite (microzoön) from the blood of birds; probably concerned in the causation of malarial fever in birds.

proteosomal (pro'te-o-so'mal). Pertaining to or caused by proteosoma.

proteosotherapy (pro'te-o-so-ther'ap-e). Treatment by the injection of foreign proteose in the theory that the proteose acts as a nonspecific antigen in stimulating the development of antibodies in the organism.

proteosuria (pro-te-o-su're-ah) [*proteose* + *ούρον* urine]. The presence of proteose in the urine; albumosuria.

proteotherapy (pro'te-o-ther'ap-e). Proteinotherapy.

proteotoxin (pro'te-o-toks'in). Same as *anaphylatoxin*.

proteuria (pro-te-u're-ah) [*protein* + *ούρον* urine]. The presence of a protein in the urine.

proteuric (pro-te-u'rik). Pertaining to proteuria.

Proteus (pro'te-us) [L.; *Πρωτεός* a many-formed diety]. A genus of Bacteriaceae. They are highly pleomorphic, gram-negative, motile rods which produce ameboid colonies on moist mediums. They decompose proteins and carbohydrates rapidly. **P. ammoniae**. Same as *Salmonella ammoniae*. **P. fluorescens**, Jäger's p., the proteus of acute infectious jaundice. **P. hominis**, a species in nonmotile rods of various size and shape; the specific cause of rag-sorters' disease. **P. mirabilis**, a pathogenic species in motile rods from putrefying substances and from water; it causes a fatal septic poisoning. **P. septicus**, a pathogenic species from a septic gangrene of the colon; in flexile and mobile bacilli, somewhat curved. **P. sulfureus**, a species from water, in long or short motile rods, often forming long filaments or chains; it produces hydrogen sulphide. **P. vulgaris**, a pathogenic species from the tissues in certain cases of putrid infection; also from putrefying animal matter, water, meconium, etc.; in highly motile rods, often interlaced and twisted. Called also *Bacillus proteus*. **P. X19**, an aerobic gram-negative bacillus regarded as possibly the causative organism of typhus fever. **P. zenkeri**, a pathogenic species from putrefying animal substances in motile rods of various length.

prothaemin (pro-the'min). A proprietary preparation containing organically combined iron and phosphorus; used in anemia, chlorosis, and general debility.

prothesis (proth'es-is) [*πρό* before + *θέσις* a placing]. Same as *prosthesis*.

prothetic (pro-thet'ik). Same as *prosthetic*.

prothrombase (pro-throm'bās). Thrombogen.

prothrombin (pro-throm'bin) [*πρό* before + *θρόμβος* clot]. Same as *thrombogen*.

prothyl (pro'thil). Protyl.

prothymia (pro-thim'e-ah) [*πρό* before + *θυμός* mind]. Forwardness or alertness of mind and will.

protide (pro'tid). Same as *protein*.

protidtemns (pro'tid-temz). A collective name for the products produced by the digestion of proteins, namely, proteoses, peptones, peptides, and amino-acids.

protiode (pro'ti-ōd). Iodoethylglycin, contains about 52 per cent of iodine. It is used as an iodide.

protiodide (pro'ti-ō-did). That one of the series of iodides of the same base which contains the smallest amount of iodine.

Protista (pro-tis'tah) [*πρωϊστα* the very first, from *πρῶτος* first]. Haeckel's name for a proposed kingdom of organisms including the lowest (unicellular) forms of animals and plants.

protistologist (pro-tis-tol'o-jist). A microbiologist.

protistology (pro-tis-tol'o-je) [*Protista* + *λόγος* treatise]. The science of protista or animal and plant micro-organisms; microbiology.

proto- [*πρῶτος* first]. A prefix signifying first.

proto-actinium (pro'to-ak-tin'e-um). A chemical element, the parent of actinium. It is one of the radioactive series; atomic weight, 230; atomic number, 91. Called also *actantanium*.

proto-albumose (pro-to-al'bu-mōs). Same as *protalbumose*.

protobe (pro'tōb). Same as *protobios*.

protobiology (pro'to-bi-ol'o-je) [*πρῶτος* first + *βίος* life + *λόγος* treatise]. The science which deals with the forms of life more minute than bacteria, such as the ultraviruses and bacteriophages.

protobios (pro-to-bi'os) [*πρῶτος* first + *βίος* life]. A name proposed by d'Herelle for the ultraviruses which he regards as the most simple of living beings, consisting of a single protein micelle.

protoblast (pro'to-blast) [*πρῶτος* first + *βλαστός* germ]. 1. A cell with no cell wall; an embryonic cell. 2. The nucleus of an ovum. 3. A blastomere from which a particular organ or part develops.

protoblastic (pro-to-blas'tik). Pertaining to a protoblast.

protobrochal (pro-to-bro'kal) [*πρότος* first + *βρόχος* mesh]. Term applied to the first stage in the development of an ovary.

protocaryon (pro-to-kar'e-on) [*πρότος* first + *κάρυον* nucleus]. A cell nucleus formed of a single karyosome in a network of linin.

protochloride (pro-to-klo'rid). That one of a series of chlorides of the same element which contains the least chlorine.

protochlorophyl (pro-to-klo'ro-fil). A substance in plant tissue which is changed by the action of light into chlorophyl.

protochrome (pro'to-krōm). A substance derived from proteins giving reactions identical with uochrome.

protocol (pro'to-kol). A written statement of the history and treatment of any particular case, especially one made for a medicolegal purpose.

protocurarine (pro'to-ku-rar'in). The most poisonous of the curare alkaloids.

protocurine (pro-to-ku'r'in). A crystalline curare alkaloid, C₂₀H₂₃NO₃, from *Strychnos castelnaei*.

proto-elastose (pro'to-e-las'tōs). Hemielastin, a product of the digestion of elastin.

proto-erythrocyte (pro-to-er-ith-ro-sit). An erythroblast with deeply staining nucleus.

protogala (pro-tog'al-ah) [*πρῶτος* first + *γάλα* milk]. Colostrum.

protogaster (pro'to-gas-ter) [*πρῶτος* first + *γαστήρ* stomach]. Same as *foregut*.

protogen (pro'to-jen). 1. Any albuminoid substance whose aqueous solution does not coagulate when heated. 2. A food and therapeutical agent derived by the action of formaldehyde upon egg albumin or serum albumin.

protoglobulose (pro-to-glob'u-lōs). Any albumose produced in the digestion of globulin.

protogonocyte (pro-to-go'no-sit). [*πρῶτος* first + *γονοκύττε*]. One of the two cells resulting from division of the impregnated ovum.

protogonoplasm (pro-to-go'no-plazm) [*πρῶτος* first + *γωνή* seed + *πλάσμα* plasm]. That part of the extranuclear chromatin of a cell that is concerned in the reproductive energies of the cell. This substance is also called *idiochromidia*.

protohematoblast (pro-to-hem'at-o-blast) [*πρῶτος* first + *hematoblast*]. A cell derived from a bone marrow cell which develops into a red blood corpuscle.

protoiodide (pro-to-i'ō-did). Same as *protiodide*.

protolac (pro'to-lak). A proprietary brand of calcium caseinate.

protoleukocyte (pro-to-lu'ko-sit) [*πρωτος* first + *leukocyte*]. A small lymphoid cell seen in red bone marrow and the spleen.

protomedicus (pro-to-med'ik-us). A medieval term for physician in chief.

protomere (pro'to-mēr). Same as *micelle*.

protomerite (pro-to-me'rit) [*πρωτος* first + *μέρος* portion]. The anterior portion of certain gregarine protozoa; called also *primitie*. Cf. *deutomerite*.

protometer (pro-tom'et-er) [L. *pro* forward + *μέτρον* measure]. An instrument for measuring the forward protrusion of the eyeball.

protomeroctyte (pro-to-me'tro-sit) [*πρωτος* first + *metrocyte*]. The mother cell of the leukocyte and erythrocyte series of cells.

Protomonadina (pro''to-mon-ad'in-ah). An order of Flagellata the members of which have less than three flagella. It includes the trypanosomes and Leishmania.

protomyosinose (pro''to-mi-o'sin-ös). One of the two albumos formed in the digestion of myosin.

proton (pro'ton) [*πρωτος* first]. 1. The primitive rudiment of a part; an anlage. 2. A peptide-like body formed by the hydrolysis of a protamine; a tripeptide. 3. The unit of positive electricity being equivalent to the electron in charge and to the hydrogen ion in mass.

protonephron, **protonephros** (pro-to-nef'ron, pro-to-nef'ros) [*πρωτος* first + *νεφρός* kidney]. The primitive excretory organ of the embryo; the pronephros, metanephros, and mesonephros together.

protoneuron (pro-to-nu'ron) [*πρωτος* first + *νεῦρον* nerve]. A neuron of the first order or one which connects a sense organ with the central nervous system. See *peripheral sensory neuron*, under *neuron*.

protonic (pro-ton'ik). Pertaining to a proton or anlage.

protonitrate (pro-to-ni'trät). That one of several nitrates of the same base which contains the least nitric acid.

protonuclein (pro-to-nu'kle-in). A proprietary preparation of lymphoid tissues of animals for use in stabilizing metabolism.

protopathic (pro-to-path'ik) [*πρωτος* first + *πάθος* disease]. Primary; idiopathic. **p. sensibility**. See under *sensibility*.

protopecten (pro-to-pek'ten). Same as *pectose*.

Protophormia terraenovae. The common scavenger fly of Alaska. It resembles *Lucilia* in appearance and habit and is found also in Greenland and northern Europe.

protophyllin (pro-to-fil'in). Chlorophyll hydride, a colorless substance which is changed into chlorophyll by the action of air or carbon dioxide.

Protophyta (pro-tof'it-ah) [*protophyte*]. A group of the vegetable kingdom, including the lowest and simplest plants, such as the bacteria.

protophyte (pro'to-fit) [*πρωτος* first + *φυτόν* plant]. Any unicellular plant or vegetable organism.

protopine (pro'to-pin). An alkaloid, $C_{20}H_{19}NO_5$, from *Eschscholtzia californica*; anodyne and hypnotic. Dose, 40-100 grains (2.5-7 Gm.).

protoplasm (pro'to-plazm) [*πρωτος* first + *πλάσμα* plasm]. The only known form of matter in which life is manifested. It is a viscid, translucent polyphasic colloid with water as the continuous phase, and it makes up the essential material of all plant and animal cells (Purkinje, 1839). It is composed mainly of proteins, and under the microscope is seen to consist of a network (spongoplasm) containing a fluid matter (hyaloplasm) in the meshes. **functional p.** See *kinoplasm*.

protoplasmatic (pro'to-plaz-mat'ik). Same as *protoplasmic*.

protoplasmic (pro-to-plaz'mik). Pertaining to or consisting of protoplasm.

protoplast (pro'to-plast) [*πρωτος* first + *πλαστός* formed]. 1. The type or model of some organic being. 2. A cell (Hanstein, 1880).

protoproteose (pro-to-pro'te-ös). A primary proteose. See under *proteose*.

protopsis (pro-top'sis). Protrusion of the eye.

protosal (pro'to-sal). A colorless oily fluid, the salicylic glycerin formal ester, $CH_2O.OOC.C_6H_4(OH).CHO.CH_2O.CH_2$: used as an antirheumatic.

protosalt (pro'to-sawlt). That one of a series of salts of the same base which contains the smallest amount of the substance combining with the base.

proteose (pro'tös). A proprietary food preparation of vegetable origin.

protopspasm (pro'to-spazm) [*πρωτος* first + *σπasmus* spasm]. A spasm which begins in a limited area and extends to other parts; the earlier and minor spasm of jacksonian epilepsy.

protostoma (pro-to-sto'mah). See *blastopore*.

protosulphate (pro-to-sul'fat). That one of several sulphates of the same base which contains the least amount of sulphuric acid.

protosyphilis (pro-to-sif'il-is). Primary syphilis.

prototoxin (pro-to-toks'in) [*πρωτος* first + *toxin*]. That portion or constituent of a toxin which has the greatest combining capacity for the antitoxin. See *deuterotoxin*, *hematotoxin*, *tritotoxin*.

prototoxoid (pro-to-tok'soid). Protoxoid.

prototrophic (pro-to-trof'ik) [*πρωτος* first + *τροφή* nutrition]. Deriving food from inorganic substances. Cf. *metatrophic* and *paratrophic*.

prototype (pro'to-tip) [*πρωτος* first + *τύπος* type]. The original type or form after which others are developed.

protovertebra (pro-to-ver'te-brah). Same as *somite*.

protoxeoid (pro-toks'e-oid). Protoxoid.

protoxide (pro-toks'id). That one of a series of oxides of the same metal which contains the smallest amount of oxygen.

protoxoid (pro-toks'oid). Any toxoid which has a greater affinity for the antitoxin than has the toxin. See *toxoid*.

Protozoa (pro-to-zo'ah), pl. of *protozoön* [*πρωτος* first + *ζῶον* animal]. The lowest division of

Types of protozoa: A, Sarcodina, represented by *Entamoeba histolytica* of amebic dysentery. B, Mastigophora, represented by *Trypanosoma gambiense* of African sleeping sickness. C, Infusoria, represented by *Balantidium coli*, causative organism of a certain oriental dysentery (redrawn after Leuckart). D, Sporozoa, represented by (a) *Coccidium oviforme* from liver of rabbit, (b) *Plasmodium vivax*, of malaria, shown in a red blood corpuscle (all greatly enlarged). (Hermes.)

the animal kingdom including the unicellular organisms. Protozoa are usually separated into four classes: Sarcodina, having pseudopodia; Mastigophora, having flagella; Sporozoa, having no locomotor organs in the adult stages and repro-

- ducing by sporulation; Infusoria, having cilia. **coprozoic p.** See under *coprozoic*.
- protozoacide** (pro-to-zo'as-id). Destructive to protozoa; also any agent destructive to protozoa.
- protozo-agglutinin** (pro'to-zo-ag-lu'tin-in). An agglutinin formed in the blood in protozoal infections which has the power of agglutinating the infecting protozoa.
- protozoal** (pro-to-zo'al). Pertaining to or caused by protozoa.
- protozoan** (pro-to-zo'an). Any species or organism of the protozoa; used also adjectively. **p. test.** See under *tests*.
- protozoiasis** (pro'to-zo-i'as-is). Infection of the body with protozoa.
- protozoology** (pro'to-zu-ol'o-je). The study of protozoa.
- protozoon** (pro-to-zu'on), pl. *protozoa*. A primitive organism consisting of a single cell; a protozoan; a unicellular organism.
- protozophag, protozophage** (pro-to-zo'o-fag, -faj) [*protozoa* + *phagēin* to eat]. A cell which has a phagocytic action on protozoa.
- protozootherapy** (pro-to-zo-o-ther'ap-e). The treatment of diseases caused by protozoa, particularly the chemotherapy of such diseases.
- protraction** (pro-trak'shun). The state in which the jaw stands more forward than normal as measured from the orbital plane.
- protractor** (pro-trak'tor) [*L. pro* forward + *trahere* to draw]. An instrument for drawing bullets or bits of bone from wounds.
- protrypsin** (pro-trip'sin). A substance convertible into trypsin and believed by some to be a product of the spleen.
- protuberance** (pro-tu'ber-ans) [*L. pro* forth + *tu'ber* bulge]. A projecting part; an apophysis, process, or swelling. **external occipital p.**, a prominence at the center of the outer surface of the squamous portion of the occipital bone which gives attachment to the ligamentum nuchae. **internal occipital p.**, a projection at the center of the inner surface of the occipital bone. **laryngeal p.**, the Adam's apple. **mental p.**, mental process; a more or less distinct and triangular prominence on the anterior surface of the body of the mandible and on or near the median line.
- protuberantia** (pro-tu-ber-an'she-ah) [*L.* Protuberance].
- protyl, protyle** (pro'til) [*πρωτος* first + *ἔλη* principle]. A theoretical substance from which all the chemical elements were formerly supposed to be derived.
- protylin** (pro'til-in). A white, tasteless powder, insoluble in water, and containing 2.7 per cent of phosphorus combined with natural albumin; it is used in goiter, Graves' disease, rickets, osteomalacia, etc.
- proud flesh** (prowd). An exuberant mass of fungous granulations.
- provertebra** (pro-ver'te-brah). Same as *somite*.
- proving** (proo'ving). A homeopathic test of the effects of a drug.
- provisional** (pro-vizh'un-al). Formed or performed for temporary purposes; temporary; as, *provisional* callus, *provisional* canthoplasty.
- provitamin** (pro-vi'tam-in). A hypothetical precursor of vitamin. Ergosterol has been spoken of as provitamin D.
- provocative** (pro-vok'at-iv). Stimulating the appearance of a sign, reflex, reaction, or therapeutical effect; as *provocative* Wassermann test.
- Prowazek's bodies** (pro-vat'sek) [Stanislas Josef Mathias von Prowazek, zoologist in Hamburg, 1876-1915]. See *trachoma bodies*, under *body*.
- Prowazek-Greef body** (pro-vat'sek-gräf) [*Prowazek*; Carl Richard Greef, German ophthalmologist, born 1862]. Trachoma body.
- Prowazekella** (pro-wah-ze-kel'ah). Prowazekia.
- Prowazekia** (pro-wa-zek'e-ah). A genus of flagellate organisms having two nuclei and two flagella. They are found in the feces and urine of man, but are not known to be pathogenic.
- prowazekiasis** (pro-wah-zek-i'as-is). Infection with Prowazekia.
- proximal** (prok'sim-ad). Toward the proximal end or in a proximal direction; the reverse of *distal*.
- proximal** (prok'sim-al) [*L. proximus* next]. Nearer to or on the side toward the body; opposed to *distal*.
- proximate** (prok'sim-āt) [*L. proxima'tus* drawn near]. Immediate or nearest.
- proximo-ataxia** (proks'im-o-at-ak'se-ah). Ataxia affecting the proximal part of an extremity, as the arm, forearm, thigh, or leg. Cf. *acro-ataxia*.
- proximobuccal** (prok'sim-o-buk'al). Pertaining to the proximal and buccal surfaces of a tooth.
- proximolabial** (prok'sim-o-la-be'al). Pertaining to the proximal and labial surfaces of a tooth.
- proximolingual** (prok'sim-o-lin'gw'al). Pertaining to the proximal and lingual surfaces of a tooth.
- proxonal** (pro'zo-nal) [*pro-* + *zone*]. Situated before a sclerozone.
- prozone** (pro'zo-nē). The more concentrated dilution of serum in which agglutination does not take place.
- prozygosis** (pro-zi-go'sis). Same as *syncephaly*.
- prozymogen** (pro-zi'mo-jen). Same as *prezymogen*.
- prual** (pru'al). A very violent poison from the root of *Coptosapel'ta flaves'cens*.
- pruinat** (proo'in-āt) [*L. pru'na* hoarfrost]. Having the appearance of being covered with hoarfrost.
- prune** (prün) [*L. pru'num*]. The dried fruit of various varieties of *Pru'nus domes'tica*, or plum.
- prune juice expectoration or sputum** (prün jüs). See under *sputum*.
- Prunella** (pru-nel'ah). A genus of labiate plants. *P. vulga'ris*, heal-all, is astringent and tonic.
- prunin** (pru'nin). A concentration prepared from *Pru'nus sero'tina*; used in thoracic and nervous diseases. Dose, 2-3 grains (0.132-0.195 Gm.).
- prunoids** (pru'noids). Proprietary laxative tablets, containing prunes, phenolphthalein, and cascara sagrada.
- prunol** (pru'nol). A preparation of ammonium chloride, senega, and heroin: used for coughs.
- prunum** (pru'num). Latin for *prune*.
- Prunus** (pru'nus) [*L. "plum-tree"*]. A genus of rosaceous trees and shrubs, including the plums, cherries, and sloes. **P. america'na**, plum. **P. amygdala**. See *almond*. **P. domes'tica**, plum. **P. lauro-cer'asus**. See *cherry laurel*, under *cherry*. **P. serot'ina**, wild cherry. **P. spino'sa**, a species of plum and its homeopathic preparation: the sloe, or blackthorn. **P. virginia'na**. 1. The choke-cherry of North America; its bark has sedative qualities and its fruit is highly astringent. 2. The pharmaceutical name of the bark of *Pru'nus serot'ina*, or wild cherry. It is used as a nervous sedative and expectorant in gastric weakness, general irritability, and coughs. Dose, $\frac{1}{2}$ -1 drachm (1.95-3.8 Gm.); of fluidextract, 30-60 minims (2-4 cc.); of syrup, 1-4 fluidrachms (4-16 cc.).
- pruriginous** (pru-rij'in-us). Of the nature of prurigo.
- prurigo** (pru-ri'go) [*L.*]. A chronic skin disease marked by the development of small, pale papules and intense itching. The papules are deep seated, and the disease begins in childhood and lasts through life, being usually incurable. **p. aestiva'lis**, summer prurigo; a severe relapsing, bullous eruption, occurring in warm weather only. **p. a'grica**, an extremely severe form of prurigo.

diathetic p., any prurigo which is so completely established as to constitute a diathesis. **p. fe'rox**, a form characterized by intense itching, large papules, and swollen lymph glands: an incurable and mainly congenital form. **Hebra's p.**, true or typical prurigo. **Hutchinson's p.**, the prurigo of dentition. **p. mi'tis**, prurigo of a mild type. **p. nodula'ris**, a condition marked by the formation on the skin of multiple tumors, accompanied by intense itching. **p. sim'plex**, a relatively mild form characterized by crops of papules having a tendency to cyclic recurrence.

pruritic (pru-fit'ik). Pertaining to pruritus.

pruritus (pru-ri'tus) [L. from *pruri're* to itch]. Intense itching. It is a symptom of various skin diseases and may occur idiopathically as a neurosis. **p. a'ni**, intense itching at the anus. **bath p.** See *bath itch*, under *itch*. **Duhring's p.**, pruritus hiemalis. **essential p.**, pruritus which cannot be attributed to any skin disease. **p. hiema'lis**, winter itch: a skin disease peculiar to cold weather. It is unconnected with structural lesions. **p. sen'il'is**, a neurotic itching in the aged, due to degeneration of the skin. **symptomatic p.**, itching which is symptomatic of some other general disease. **p. vul'vae**, a disease consisting of intense itching of the external genitals of the female.

Prussak's fibers, space (proos'ahks) [Alexander, Prussak, Russian otologist, 1839-1897]. See *fiber, space*.

Prussian blue (prush'un-blu). Ferric ferrocyanide, $\text{Fe}_4(\text{FeCy}_6)_3 = \text{Fe}_{13}\text{Fe}(\text{CN})_{36}$.

prussiate (proo'she-ät). Same as *cyanide*.

prussic acid (proo'sik). See *hydrocyanic acid*, under *acid*.

psalis (sa'lis) [*ψαλῖς* arch]. The fornix of the cerebrum.

psalterial (sal-te're-al). Pertaining to the psalterium.

psalterium (sal-te're-um) [L.; *ψαλτήριον* harp]. Same as *lyra*.

psammocarcinoma (sam'o-kar-sin-o'mah) [*ψάμμος* sand + *carcinoma*]. Carcinoma containing calcareous matter.

psammoma (sam'o'mah) [*ψάμμος* sand]. A small, hard, fibrous tumor of the brain tissue, especially of the dura mater and choroid plexus, containing calcareous matter or brain sand. Sometimes called *Virchow's p.*

psammosarcoma (sam'o-sar-ko'mah) [*ψάμμος* sand + *sarcoma*]. A sarcoma containing a sandy deposit.

psammotherapy (sam-o-ther'ap-e) [*ψάμμος* sand + *θεραπεία* treatment]. Same as *ammothrapy*.

psammous (sam'us) [*ψάμμος* sand]. Sandy.

pselaphesia, pselaphesis (sel-af-e'ze-ah, sel-af-e'sis) [*ψηλάφησις* touching]. The tactile sense.

psellism (sel'izm) [*ψέλλισμα* stammer]. Stammering or stuttering.

pseudaconitine (su-dak-on'it-in) [*ψευδής* false + *aconitine*]. A crystalline alkaloid, $\text{C}_{36}\text{H}_{48}\text{NO}_{12}$, from *Aconitum ferox*.

pseudacousis (su-dak-oo'sis) [*ψευδής* false + *ακουσις* hearing]. Same as *pseudacusma*.

pseudacusma (su-dak-ooz'mah) [*ψευδής* false + *ακουσμά* thing heard]. A subjective sensation as if sounds were altered in pitch and quality.

pseudacromegaly (su-dak-ro-meg'al-e). Enlargement of the features and extremities without disease of the pituitary body.

pseudactinomycosis (su-dak'tin-o-mi-ko'sis). Pseudo-actinomycosis.

pseudagraphia (su-dag-ra'fe-ah). Pseudo-agraphia.

pseudalbuminuria (su'dal-bu-min-u're-ah). Pseudo-albuminuria.

pseudangina (su-dan'jin-ah). See *pseudo-angina*.

pseudankylosis (su'dang-kil-o'sis). A false ankylosis.

pseudaphia (su-da'fe-ah) [*ψευδής* false + *ἄψη* touch]. Defect in the power of perceiving touch.

pseudarrhenia (su-dar-e'ne-ah). Female pseudo-hermaphroditism.

pseudarthrititis (su-dar-thri'tis) [*ψευδής* false + *ἄρθριτις* gout]. A hysterical affection of the joints.

pseudarthrosis (su-dar-thro'sis) [*ψευδής* false + *ἄρθρωσις* joint]. A false joint, as that sometimes seen following a fracture.

pseudelmint (su-del'minth) [*ψευδής* false + *ἔλμινς* worm]. A structure or object that resembles an endoparasitic worm.

pseudencephalus (su-den-sef'al-us) [*ψευδής* false + *ἐγκέφαλος* brain]. A monster fetus with a vascular tumor in place of the brain.

pseudesthesia, pseudæsthesia (su-des-the'ze-ah) [*ψευδής* false + *αἰσθησις* sensation]. Any imaginary sensation; a sensation which is felt without any external stimulus, or a sensation which does not correspond to the stimulus that causes it.

pseudinoma (su-din-o'mah) [*ψευδής* false + *-ωμα* tumor]. A spurious or phantom tumor.

pseudiphtheritic (su'dif-the-rit'ik). Stimulating diphtheria.

pseudo- [*ψευδής* false]. A prefix signifying false or spurious.

pseudo-aconitine (su'do-ak-on'it-in). Pseudaconitine.

pseudo-acromegaly (su'do-ak-ro-meg'al-e). A condition resembling acromegaly: probably a result of syringomyelia or of syphilitic poisoning.

pseudo-actinomycosis (su'do-ak'tin-o-mi-ko'sis) [*ψευδής* false + *actinomycosis*]. A variety of pulmonary phthisis in which the sputum contains crystalline bodies that resemble the grains of actinomycosis; nocardiosis.

pseudo-agraphia (su'do-ag-ra'fe-ah). A condition in which the patient can copy writing, but cannot write except in a meaningless and illegible manner.

pseudo-albuminuria (su'do-al-bu-min-u're-ah). Cyclic albuminuria. See *albuminuria*.

pseudo-alveolar (su'do-al-ve-o-lar). Simulating an alveolar structure.

pseudo-anaphylactic (su'do-an-af-il-ak'tik). Pertaining to pseudo-anaphylaxis.

pseudo-anaphylaxis (su'do-an-af-il-ak'sis) [*ψευδής* false + *anaphylaxis*]. A condition produced in animals by the injection of serum which has been acted on by agar, kaolin, inulin, starch, and other substances. The symptoms produced by such injections resemble those of anaphylaxis.

pseudo-anemia (su'do-an-e'me-ah) [*ψευδής* false + *anemia*]. Marked pallor with no clinical or other evidence of anemia.

pseudo-angina (su-do-an'jin-ah) [*ψευδής* false + *angina*]. False angina; a nervous disorder that simulates angina. See *angina pectoris vasomotoria*.

pseudo-ankylosis (su'do-ang-kil-o'sis). A false ankylosis.

pseudo-anorexia (su'do-an-o-reks'e-ah) [*ψευδής* false + *anorexia*]. The rejection of food on account of the distress it causes.

pseudo-apoplexy (su-do-ap'o-pleks-e) [*ψευδής* false + *αποπληξία*]. A condition resembling apoplexy, but without cerebral hemorrhage.

pseudo-appendicitis (su'do-ap-en-dis-i'tis). A condition with symptoms simulating appendicitis, sometimes hysterical and sometimes of syphilitic origin, but without affection of the appendix. **p. zooparasit'ica**, a condition in which parasites are present in the vermiform appendix.

pseudo-apraxia (su'do-ap-raks'e-ah) [*ψευδής* false + *apraxia*]. A condition of complete general incoherence in which the patient uses everything wrongly.

- pseudo-arthritis** (su''do-ar-thro'sis). Same as *pseudarthrosis*.
- pseudo-asthma** (su-do-as'mah). Dyspnea.
- pseudo-ataxia** (su''do-at-aks'e-ah) [*ψευδής* false + *ataxia*]. A condition of complete general incoordination in which the patient exhibits incoordination and ataxic symptoms. See *pseudotabes*.
- pseudobacillus** (su''do-bas-il'us). An exceedingly small, rodlike poikilocyte, resembling a micro-organism.
- pseudobacterium** (su''do-bak-te're-um) [*ψευδής* false + *βακτήριον* stick]. A cell that resembles a bacterium: a pseudobacillus.
- pseudobasedow** (su-do-bas'e-dow). See *basedoid*.
- pseudoblepharitis** (su-do-blep'sis) [*ψευδής* false + *βλέφαρος* sight]. A condition in which objects appear different from what they really are.
- pseudobulbar** (su-do-bul'bar). Apparently, but not really, due to a bulbar lesion.
- pseudocartilaginous** (su''do-kar-til-aj'in-us). Composed of a substance resembling cartilage, morbid or otherwise.
- pseudocast** (su-do-kast). A false cast: a form of urinary sediment resembling true casts, but being accidental formations, taking the shape of casts by adherence to mucous threads, cotton fibers, etc.
- pseudocoele, pseudocoele** (su'do-sēl) [*ψευδής* false + *κοιλία* hollow]. The *cavum septi pellucidi*.
- pseudocephalocoele** (su-do-sef'al-o-sēl). A hernia of the brain not congenital, but due to disease or injury of the skull.
- pseudocerebrin** (su-do-ser'e-brin). A compound, $C_{44}H_{82}NO_8$, formed by the action of baryta on protagan.
- pseudochalazion** (su''do-kal-a'ze-on) [*ψευδής* false + *chalazion*]. An eye lesion resembling a chalazion: it may be sarcomatous or syphilitic.
- pseudochancere** (su-do-shang'ker). An indurated sore resembling or simulating chancre.
- pseudochorea** (su''do-ko-re'ah) [*ψευδής* false + *chorea*]. A condition of complete general incoordination with symptoms like those of chorea.
- pseudochromatin** (su''do-kro'mat-in). Paraneuclein.
- pseudochromesthesia** (su''do-kro-mes-the'ze-ah) [*ψευδής* false + *χρῶμα* color + *αἴσθησις* sensation]. A condition in which sounds induce a sensation as of color; color hearing.
- pseudochromidrosis** (su''do-kro-mid-ro'sis) [*ψευδής* false + *chromidrosis*]. Sweating with the presence on the skin of pigment due to the action of bacteria.
- pseudochromosome** (su-do-kro'mo-sōm). Rod-like Golgi bodies of the spermatocytes.
- pseudochylous** (su-do-ki'lus). Resembling chyle, but containing no fat.
- pseudocirrhosis** (su''do-sir-o'sis) [*ψευδής* false + *cirrhosis*]. Apparent cirrhosis of the liver, often due to pericarditis. **pericarditic p.** See *Pick's syndrome, under syndrome*.
- pseudocodeine** (su-do-ko'de-in). A hypnotic agent, $C_{18}H_{21}NO_3$, resembling codeine, but less effective.
- pseudocoele** (su'do-sēl). See *pseudocoele*.
- pseudocolloid** (su-do-kol'oid). A mucoid sometimes found in ovarian cysts.
- pseudocoloboma** (su''do-kol-o-bo'mah). A line or scar on the iris giving the appearance of a coloboma.
- pseudoconjugation** (su-do-kon-ju-ga'shun). A stage in certain forms of protozoan development in which the two gametocytes instead of actually undergoing conjugation become enclosed together within one common cyst wall.
- pseudocoxalgia** (su''do-kok-sal'je-ah). Same as *osteochondritis deformans juvenilis*.
- pseudocrisis** (su-dok'ris-is) [*ψευδής* false + *κρίσις* crisis]. A false crisis; a sudden but temporary abatement of febrile symptoms.
- pseudocroup** (su''do-kroop'). Laryngismus stridulus; also thymic asthma.
- pseudocyesis** (su''do-si-e'sis) [*ψευδής* false + *κύσις* pregnancy]. Spurious or false pregnancy.
- pseudocylindroid** (su''do-sil-in'droid) [*ψευδής* false + *cylindroid*]. A shred of mucin in the urine resembling a cylindroid; sometimes of spermatogenic origin.
- pseudocyst** (su'do-sist) [*ψευδής* false + *cyst*]. An abnormal or dilated space resembling a cyst.
- pseudodementia** (su''do-de-men'she-ah) [*ψευδής* false + *dementia*]. An extreme condition of general apathy simulating dementia, but with no actual defect of intelligence.
- pseudodextrocardia** (su''do-deks-tro-kar'de-ah). A condition in which the heart is displaced to the right, but is not transposed to the right side of the body.
- pseudodiastolic** (su''do-di-as-tol'ik). Apparently but not truly diastolic.
- pseudodiphtheria** (su''do-dif-the're-ah) [*ψευδής* false + *diphtheria*]. A sort of diphtheria in which there is developed a false membrane not due to the Klebs-Löffler bacillus.
- pseudodysentery** (su-do-dis'en-ter-e). A condition marked by the symptoms of dysentery, but due to some local irritation and not to the organisms of dysentery.
- pseudo-edema, pseudo-oedema** (su''do-e-de-mah). A puffy state resembling edema.
- pseudo-embryonic** (su''do-em-bre-on'ik). Apparently, but not truly, embryonic.
- pseudo-emphysema** (su''do-em-fiz-e'mah). A condition resembling emphysema, but due to temporary blocking of the bronchial tubes.
- pseudo-encephalitis** (su''do-en-sef-al-i'tis). A state resembling encephalitis, but due to colliquative diarrhea.
- pseudo-endometritis** (su''do-en-domet-ri'tis). A condition simulating endometritis, in which there are changes in the blood vessels, hyperplasia of the stroma and glands, and atrophy.
- pseudo-ephedrine** (su-do-ef'ed-rin or -e'fid-rin). A mydriatic alkaloid, $C_{10}H_{15}NO$; an optically active isomer of ephedrine.
- pseudo-erysipelas** (su''do-er-is-ip'el-as). An inflammatory subcutaneous disease resembling erysipelas.
- pseudo-esthesia** (su''do-es-the'ze-ah). Same as *pseudesthesia*.
- pseudo-exophoria** (su''do-eks-o-fo're-ah). An outward tendency of the visual axis excited by diminishing the activity of the accommodative centers.
- pseudo-exposure** (su-do-ex-po'zhur). A condition in which dental caries has progressed so far as nearly, but not quite, to expose the pulp.
- pseudofarcy** (su'do-far-se). See *lymphangitis epizootica*.
- pseudofever** (su-do-fe'ver). A condition of bodily temperature above normal without any discoverable cause.
- pseudofibrin** (su-do-fī'brin). Parafibrinogen.
- pseudoflagellata** (su''do-flaj-el-a'tah). The tertiary parasites in one of their stages; probably gametes.
- pseudofluctuation** (su''do-fluk-chu-a'shun). A tremor resembling fluctuation, such as is sometimes seen on tapping lipomas.
- pseudofracture** (su-do-frakt'ūr). A spontaneous fracture. See *fracture*.
- pseudoganglion** (su-do-gan'gle-on) [*ψευδής* false + *γάγγλιον* ganglion]. A thickening of a nerve simulating a ganglion. **Bochdalek's p.** See

Bochdalek's ganglion, under *ganglion*. **Cloquet's p.** Same as *Cloquet's ganglion*. **Valentin's p.** See *Valentin's ganglion*, under *ganglion*.

pseudogeosthesia, **pseudogeosaesthesia** (su''do-ju-se-the'-ah) [*ψευδής* false + *γεῖσις* taste + *αἰσθησις* feeling]. A condition in which sensations of taste are accompanied by sensations of color.

pseudogeusia (su-do-ju'-se-ah) [*ψευδής* false + *γεῖσις* taste]. A sensation of taste without external stimulus to produce it.

pseudoglanders (su-do-glan'derz). See *lymphangitis ulcerosa*.

pseudoglioma (su-do-gli-o'mah) [*ψευδής* false + *glioma*]. An exudate in the vitreous simulating glioma of the retina. It is caused by iridochoroiditis.

pseudoglobulin (su-do-glob'u-lin). One of the two proteins (the other being euglobulin) of which globulin consists. It is characterized by not being precipitated by dialysis.

pseudoglottis (su-do-glot'is) [*ψευδής* false + *glottis*]. The aperture between the false vocal cords.

pseudoglucosazone (su''do-glu-ko-sa'zōn). A crystalline substance sometimes developed in normal urine in testing for sugar.

pseudogonococcus (su''do-gen-o-kok'us). A name given to certain microbes capable of producing urethral irritation.

pseudogonorrhea (su''do-gon-or-e'-ah) [*ψευδής* false + *gonorrhea*]. Nonspecific urethritis.

pseudohallucination (su''do-hal-oo-sin-a'shun). A hallucination brought about by the exercise of memory and imagination.

pseudohemoglobin (su-do-hem-o-glo'bin). A compound of hemoglobin once thought to exist.

pseudohemophilia (su''do-hem-o-fil'e-ah). See *hemogenia*.

pseudohemoptysis (su''do-he-mop'tis-is). Spitting of blood which comes from some other source than the lungs or bronchial tubes.

pseudohermaphroditism (su''do-her-maf'rod-it-izm). Spurious hermaphroditism.

pseudohernia (su-do-her'ne-ah). An inflamed sac or gland simulating strangulated hernia.

pseudoheteropia (su''do-het-er-o-to-pe-ah). Displacement of gray or white matter of the brain or cord, produced by unskilful manipulation in the autopsy.

pseudohydronephrosis (su''do-hi''dro-nef-ro'sis). A paranephritic cyst.

pseudohydrophobia (su''do-hi-dro-fo-be-ah). See *Aufesky's disease*, under *disease*.

pseudohyoscyamine (su''do-hi-ho-si'am-in). An alkaloid, $C_{17}H_{23}NO_8$, from *Duboisia myoporoides*: antispasmodic and sedative. Hypodermic dose, $\frac{1}{10}$ to $\frac{1}{5}$ grain (0.0005-0.006 Gm.).

pseudohypertrophic (su''do-hi-per-trof'ik). Characterized by apparent, but not real, hypertrophy.

pseudohypertrophy (su''do-hi-per'tro-fe). False hypertrophy; increase of size without true hypertrophy. **muscular p.**, pseudohypertrophic paralysis. See *paralysis*.

pseudo-icterus (su-do-ik'ter-us). Pseudojaundice.

pseudo-ileus (su-do-il'e-us). An attack resembling ileus, but due to paralysis of the bowels.

pseudo-influenza (su''do-in-flu-en'zah). An affection resembling influenza, and due to a bacillus resembling, but not identical with, that of true influenza. The name is also given to epidemic grip.

pseudo-ion (su-do-i'on). One of the electrically charged particles of a colloidal solution.

pseudo-isochromatic (su''do-i-so-kro-mat'ik). Seemingly of the same color throughout: applied to solutions for testing color blindness, containing

two pigments which will be distinguished by the normal eye, but not by the color blind. Cf. *anisochromatic*.

pseudojaundice (su-do-jawn'dis). Skin discoloration caused by blood changes and not due to liver disease.

pseudoleprosy (su-do-lep'ro-se). See *punodis*.

pseudoleukemia, **pseudoleukaemia** (su''do-lu-ke-me-ah). A term used for a group of conditions resembling one another in showing enlargement of the lymph glands and in characteristics which resemble the conditions present in leukemia, but without leukemic blood findings. The term includes aleukemic lymphadenosis, aleukemic myelosis, Hodgkin's disease, Kdrundrat's lymphosarcoma, multiple myeloma, and tuberculosis and syphilis of the lymph glands. **p. cutis**, pseudo-leukemia with the development of skin lesions. **infantile p.**, anemia in young children, usually without much leukocytosis, and due to rachitic tendencies. Called also *von Jaksch's disease*. **p. lymphatica**, nonsplenic leukemia, a state associated with Hodgkin's disease and also with lymphomatous tumors of the kidneys and intestines in children. **myelogenous p.**, myelomatosis.

pseudoleukocythemia (su''do-lu-ko-si-the'-me-ah). Same as *pseudoleukemia*.

Pseudolimax (su-do-li'max). See *Iodamoeba buetschlii*.

pseudolipoma (su''do-lip-o'mah). Localized edema simulating lipoma. It occurs in hysteria and certain lesions of the nervous system. Called also *neuropathic edema*.

pseudologia, **pseudology** (su-do-lo'je-ah, su-do-lo-je) [*ψευδής* false + *λόγος* discourse]. The writing of anonymous letters to people of prominence, to one's self, etc.

pseudolupus (su-do-lu'pus). A disease which closely simulates lupus: believed to be due to the presence of an oidium.

pseudoluxation (su-do-luk-sa'shun). Partial dislocation of a bone.

pseudolymphocyte (su''do-lim'fo-sit). A leukocyte resembling a small lymphocyte, and having a nucleus that stains deeply and is enclosed by a layer of protoplasm which contains neutrophil granules.

pseudolyssa (su-do-lis'ah). Lyssophobia.

pseudomalaria (su''do-mal-a're-ah). A disease resembling malaria in its symptoms, but due to toxic metabolites or ptomaines.

pseudomamma (su-do-mam'ah). A structure resembling a nipple, or even a complete mamma, sometimes found in ovarian dermoids.

pseudomania (su-do-ma'ne-ah) [*ψευδής* false + *μανία* madness]. 1. False or pretended madness. 2. Pathologic lying.

pseudomasturbation (su''do-mas-tur-ba'shun). See *peotillomania*.

pseudomegacolon (su''do-meg'ah-ko-lon). Dilation of the colon in adults. Cf. *megacolon*.

pseudomelanosis (su''do-mel-an-o'sis) [*ψευδής* false + *melanosis*]. A staining of the tissue after death with pigments from the blood.

pseudomelia paraesthetica. False sensations in various portions of the body.

pseudomembrane (su-do-mem'brān). A false membrane. See *membrane*.

pseudomembranous (su-do-mem'bra-nus). Marked by or pertaining to false membrane.

pseudo-Ménière's disease. A middle ear disease with vertigo.

pseudomeningitis (su''do-men-in-jit'is). Pial inflammation with symptoms resembling meningitis.

pseudometaplasia (su''do-met-a-h-pla'se-ah) [*ψευδής* false + *metaplasia*]. Histologic accommodation.

pseudomnesia (su-dom-ne'zhe-ah) [*ψευδής* false + *μνήσις* memory]. A condition in which the patient seems to remember things which have never occurred.

Pseudomonadaceae (su-do-mo-nad-a'se-e). A systematic family under the order Eubacteriales. The members are short, rod-shaped organisms usually motile by means of polar flagella. They form no spores and are usually gram-negative.

Pseudomonas (su-dom-o'-nas) [*ψευδής* false + *μονάς* monad]. 1. A genus of bacteria having cells with polar flagella. 2. A genus of the Bacteriaceae. They are saprophytic and produce a green, blue, or yellowish-green water-soluble pigment which diffuses throughout the medium. **P. aeruginosa**, *Bacillus pyocyaneus* the organism which produces green pus. **P. aquatilis**, a nonpathogenic form from water. **P. cyanogenes**, the "bacillus of blue milk"; actively motile rods that produce a blue pigment. Called also *Bacillus lactis-cyanogenes*. **P. fluorescens**, a nonpathogenic organism that produces a soluble pigment. Several varieties have been named according to the pigment produced: *P. fluorescens longus* produces a yellow pigment; *nitidus*, a green pigment; *nonliquefaciens*, a greenish, fluorescent pigment; *putidus*, a yellow pigment, and *lenuis*, a greenish-yellow pigment. **P. plicata**, a species from water which is often grouped in twos, fours, eights, etc. **P. protea-fluorescens**, a multiform species from the viscera of diseased fowls. **P. pyocyanea**, a small, gram-negative, motile organism found in green pus. It produces a green pigment, soluble in chloroform, called pyocyanine. Called *Bacillus pyocyaneus* and *bacillus of blue pus*. **P. synxantha**, the "bacillus of yellow milk"; a form that produces a lemon-yellow pigment.

pseudomorphine (su-do-mor'fin). See *dehydromorphine*.

pseudomotor (su-do-mo'tor). Producing movements which are not normal.

pseudomucin (su-do-mu'sin). A variety of mucin found in ovarian cysts.

pseudomycosis sarcinica (su'do-mi-ko'sis sar-sin'e-kah). A disease of the lungs believed to be caused by *Sarcina virchowii*.

pseudomyopia (su'do-mi-o'-pe-ah). Defective vision, not myopia, which causes the patient to hold objects nearer than normal to the eyes, thus simulating myopia.

pseudomyxoma (su'do-miks-o'mah). A colloid growth developed upon the peritoneum, often secondary to an ovarian dermoid cyst. **p. peritonaei**, the presence in the peritoneal cavity of colloid matter from a ruptured ovarian cyst or a ruptured mucocele of the appendix.

pseudonarcotic (su'do-nar-kot'ik). Sedative and apparently, but not directly, narcotic.

pseudonarcotism (su-do-nar'kot-izm). A hysterical condition simulating narcotism.

pseudonavicella (su'do-nav-is-el'ah) [*ψευδής* false + *L. navicella* boat]. A form of spore or stage of growth seen in certain protozoa.

pseudoneoplasm (su-do-ne'o-plasm) [*ψευδής* false + *neoplasm*]. 1. A temporary formation resembling a tumor. 2. A phantom tumor.

pseudoneuroma (su'do-nu-ro'mah) [*ψευδής* false + *neuroma*]. A tumor on a nerve simulating a neuroma; false neuroma.

pseudonuclein (su-do-nu'kle-in). Same as *paranuclein*.

pseudonucleolus (su'do-nu-kle'o-lus) [*ψευδής* false + *nucleolus*]. A node formed by the intersection of chromatin threads.

pseudonucleus (su-do-nu'kle-us). A net-knot.

pseudonystagmus (su'do-nis-tag'mus). Nystagmus occurring as symptomatic of other diseases.

pseudo-ochronosis (su'do-ok-ron'o-sis). Ochronosis produced artificially.

pseudo-optogram (su-do-op'to-gram). An optogram in which the rods strip off from the illuminated spot and only the cones remain.

pseudo-osteomalacia (su'do-os-te-o-mal-a'she-ah). Rachitic contraction of the pelvis, giving the pelvis the appearance of osteomalacia.

pseudoparalysis (su'do-par-al'is-is). False paralysis: apparent loss of muscular power, without true paralysis, marked by defective coordination of movements or by repression of movement on account of pain. **p. agitans**, paralysis agitans. **arthritic general p.**, a condition resembling general paralysis, dependent on intracranial atheroma in arthritic persons. **congenital atonic p.**, amyotonia congenita. **Parrot's p.**, pseudoparalysis of one or more of the extremities in infants caused by osteochondritis of the epiphysis. **syphilitic p.**, syphilitic inflammation of the epiphyses of the bones, producing impairment of motion.

pseudoparaphrasia (su'do-par-ah-fra'zhe-ah) [*ψευδής* false + *paraphrasia*]. Complete general incoherence in which the patient calls everything by a wrong name.

pseudoparaplegia (su'do-par-ap-le'je-ah). Paralysis of the lower limbs in which the reflexes are normal.

pseudoparasite (su-do-par-as-it) [*ψευδής* false + *parasite*]. A facultative parasite; also anything resembling a parasite.

pseudoparesis (su-do-par-es-is). A hysterical or other condition simulating paresis.

pseudopelade (su-do-pe'lād). A variety of alopecia resulting in the formation of small white cicatrices.

pseudopelletierine (su'do-pel-e-ti'er-in) [*ψευδής* false + *pelletierine*]. An alkaloid, $\text{CH}_3\text{C}_6\text{H}_5\text{N}(\text{CH}_2)_2\text{CO}$, from the root bark of *Punicia grandum*, or pomegranate.

pseudopepsin (su-do-pep'sin). A proteolytic enzyme secreted by certain glands of the stomach. It can act in a feebly alkaline as well as in acid media.

pseudopeptone (su-do-pep'ton). Same as *osmucoid*.

pseudopericardial (su'do-per-e-kar'de-al). Seeming to arise from the pericardium, but not really doing so.

pseudoperitonitis (su'do-per-it-o-ni'tis). Peritonism.

pseudophlegmon (su-do-fleg'mon) [*ψευδής* false + *phlegmon*]. A swollen and reddened state of the skin which follows irritative lesions of the nerves. **Hamilton's p.**, a circumscribed swelling which may become red and indurated, but never suppurates.

pseudophotesthesia (su'do-fo-tes-the'ze-ah). The perception of light on receipt of an abnormal stimulus, such as irritation of the schneiderian membrane.

pseudophthisis (su-dof'this-is) [*ψευδής* false + *phthisis*]. A wasting disease not of the nature of tuberculosis.

pseudoplasm (su'do-plazm). A new growth which disappears spontaneously.

pseudoplegia (su-do-ple'je-ah) [*ψευδής* false + *πληγή* stroke]. Hysterical paralysis or pseudoparalysis.

pseudopolymelia paraesthetica. Illusory sensations of motion in various portions of the body.

pseudopneumococcus (su'do-nu-mo-kok'us). A coccus from acute lobar pneumonia much larger than the pneumococcus, and otherwise distinguishable from it.

pseudopneumonia (su'do-nu-mo'ne-ah). A condition marked by the symptoms of pneumonia, but without any lesions in the lungs.

pseudopod (su'do-pod). Same as *pseudopodium*.

pseudopodiospore (su-do-po'de-o-spōr) [*pseudo-* + *podium* + *spore*]. A spore having pseudopodia like an ameba. Called also *amebula*.

pseudopodium (su-do-po'de-um) [*ψευδής* false + *πούς* foot]. A temporary protrusion of the ectosarc of an ameba, serving for purposes of locomotion.

pseudoporencephaly (su'do-po-ren-sef'al-e). A condition resembling porencephaly, but without idiocy or even impairment of the intellect.

pseudoprotein (su'do-pro'te-in). A protein which is lacking in one or more of the essential amino-acids, for example, gelatin.

pseudopsia (su-dop'se-ah) [*ψευδής* false + *ὄψις* vision]. False or depraved vision; pseudoblepsia.

pseudopterygium (su'do-ter-ij'e-um) [*ψευδής* false + *pterygium*]. A kind of pterygium encroaching upon the conjunctiva from any direction, following injuries of the margin of the cornea.

pseudoptosis (su-do-to'sis) [*ψευδής* false + *πτῶσις* fall]. A condition simulating a ptosis.

pseudopunicin (su-do-pu'nis-in). Pseudopelletierine.

pseudorabies (su-do-ra'be-ēz) [*ψευδής* false + *rabies*]. Hydrophobophobia or lyssophobia.

pseudoreaction (su'do-re-ak'shun). A clumping or other bacterial reaction not due to the presence of the typhoid bacillus.

pseudoreduction (su'do-re-duk'shun). The apparent halving of the chromosome number by synapsis.

pseudoreminiscence (su'do-rem-in-is'ens). Same as *confabulation*.

pseudorheumatism (su-do-ru'mat-izm). A condition resembling rheumatism, due to some non-rheumatic disease, as gonorrhea.

pseudoscarlatina (su'do-skar-lat-i'nah). A febrile condition with an eruption like that of scarlet fever, but due to septic poisoning.

pseudosclerosis (su'do-skle-ro'sis) [*ψευδής* false + *σκληρωσις* hardening]. A condition with the symptoms, but without the lesions of disseminated sclerosis. **Westphal's p.** See *Westphal's neurosis*, under *neurosis*.

pseudosmallpox (su'do-smal'pox). *Amaas*.

pseudosmia (su-doz'me-ah) [*ψευδής* false + *ὀσμή* odor]. A delusion as to smell.

pseudosolution (su'do-so-lu'shun). Solutions which do not act according to the usual physical laws of solutions. The term is sometimes applied to colloidal solutions.

pseudostoma (su-dos'to-mah) [*ψευδής* false + *στόμα* mouth]. An apparent communication between stained epithelial cells.

pseudostrophanthin (su'do-stro-fan'thin). A poisonous glucoside, $C_{40}H_{60}O_{16}$. H_2O , from *Strophanthus hispidus*. Its action is upon the heart.

pseudostrecture (su-do-struck'tshur) [*ψευδής* false]. Reticular substance. See under *substance*.

pseudosyphilis (su-do-sif'il-is). A condition marked by ulcers and eruption resembling those of syphilis, but yielding to nonspecific treatment.

pseudotabes (su-do-ta'bēz) [*ψευδής* false + *L. tabes* wasting]. A condition marked by the symptoms of tabes dorsalis, but distinguished from it by its tendency to become completely cured, by tenderness on pressure of muscles, and by absence of Argyll Robertson pupil. Called also *pseudo-ataxia*, *neurotabes*, and *peripheral tabes*. **diabetic p.** See *tabes diabetica*, **p. mesenterica**, an hysterical pseudotabes, chiefly of young women.

pseudotetanus (su-do-tet'an-us). Persistent muscular contractions resembling tetanus, but not associated with the presence of *Clostridium tetani*.

pseudotextoma (su'do-tex-to'mah) [*pseudo-* + *textoma*]. A neoplasm composed of partially differentiated tissue cells. Cf. *textoma*.

pseudothrill (su'do-thril). A symptom that simulates a true thrill.

pseudotoxin (su-do-tok'sin). A poisonous extract from belladonna leaves.

pseudotrachoma (su'do-trak-o'mah). A disease of the eye and limb resembling trachoma.

pseudotrichiniasis (su'do-trik-in-i'as-is). Pseudotrichinosis.

pseudotrichinosis (su'do-trik-in-o'sis) [*ψευδής* false + *trichinosis*]. A term for acute disseminated myositis, from the resemblance of the appearances to those of trichinosis; dermatomyositis.

pseudotropin (su-dot'ro-pin). A dark-brown, syrupy, liquid base: a decomposition product of tropine.

pseudotubercle (su-do-tu'ber-kl). A tubercle resembling that of tuberculosis, but not due to the tubercle bacillus.

pseudotuberculoma (su'do-tu-ber-ku-lo'mah). A tumor resembling in structure a tuberculoma. **p. silico'ticum**, a pseudotuberculoma due to the presence in the tissue of silica.

pseudotuberculosis (su'do-tu-ber-ku-lo'sis). The term applied to a number of diseases occurring in man, sheep, cattle, horses, rabbits, and other rodents all of which are probably nocardial infections. See *nocardiosis*. **p. hom'inis streptoth'rica**, a disease of man closely resembling tuberculosis, but due to a streptothrix.

pseudotumor (su-do-tu'mor). See *phantom tumor*, under *tumor*.

pseudotyphoid (su-do-ti'foid) [*ψευδής* false + *typhoid*]. Spurious typhoid fever; a disease showing the symptoms of typhoid fever, but without the characteristic lesions of that disease and without typhoid bacilli.

pseudovacuole (su-do-vak'u-ōl). A round space within certain red blood corpuscles containing an animal micro-organism.

pseudovariola (su-do-var-i'o-lah). A condition marked by an eruption resembling that of smallpox. See *amaas*.

pseudoventricle (su-do-ven'trik-l). The fifth ventricle of the encephalon.

pseudovermicule, **pseudovermiculus** (su-dov'er'mik-ūl, su'do-ver'mik'u-lus). A state in the development of the plasmodium of pernicious malaria. It is a gragarine-like body developing in the intestine of the mosquito. See *Plasmodium malariae*.

pseudovomiting (su-do-vom'it-ing). Regurgitation of matter from the stomach.

pseudoxanthine (su-do-zan'thin). 1. A leuko-main, $C_8H_8N_2O$, from muscular tissue; also an isomer of xanthine from uric acid. 2. A compound, $C_8H_4N_2O_2$, from uric acid.

pseudoxanthoma (su'do-zan-tho'mah). A disease resembling xanthoma. **p. elasticum**, a rare skin disease marked by small papules, individual or confluent, or massed into plaques, thickening of the skin where the lesions exist, and exaggeration of the normal creases and folds of the skin. The histologic features are masses of swollen and degenerated elastic fibers with degeneration of the collagen fibers in the lower and middle layers of the dermis. Called also *elastoma* and *naevus elasticus*.

pseudozooglea (su'do-zo-og-le'ah). A clump of bacteria not disintegrating readily in water, arising from imperfect separation or more or less fusion of the components, but not having the degree of compactness and gelatinization seen in zooglea.

psicaine (si'ka-in). A preparation claimed to be synthetic cocaine tartrate, $C_{17}H_{21}O_4N.C_4H_8O_6$. It is claimed to be more active and less toxic than cocaine; used as a local anesthetic in solution of from 0.2 to 20 per cent.

psiconal (si'ko-nal). A proprietary combination of psicaine and epinephrine in physiologic salt solution; used as a local anesthetic in $\frac{1}{2}$ per cent solution.

psilosis (si-lo'sis) [*ψίλωσις* a stripping]. 1. Falling out of the hair. 2. See *sprew*.

psilothin (sil-o'thin) [*ψιλωθρον* depilatory]. An improved dropax or depilatory plaster.

psilothron (sil-o'thron). A depilatory.

psilotic (sil-o'tik). Pertaining to psilosis.

psittacosis (sit-ak-o'sis) [L. *psittacus*; *ψιττακός* parrot]. A contagious influenza of parrots communicable to man, and marked by pulmonary disorder and high fever. It is caused by *Bacterium psittacosis*.

psosas (so'as) [*ψόα* loin]. The name of the loin muscles. See *muscles*, table of.

psodymus (sod'im-us) [*ψόα* loin + *δίδυμος* twin]. A monster with two heads and bodies, but single at and below the loins.

psoitis (so-i'tis) [*ψόα* loin muscle]. Inflammation of a psosas muscle or of its sheath.

psomophagia (so-mo-fa'je-ah) [*ψωμός* morsel + *φαγείν* to eat]. Thorough chewing of the food.

psomophagy (so-mof'aj-e). Psomophagia.

psora (so'rah) [*ψώρα*]. 1. Scabies or the itch. 2. Psoriasis.

psorelcosis (so-rel-ko'sis) [*ψώρα* itch + *ἔλκος* ulceration]. Ulceration due to scabies.

psorenteria (so-ren-te're-ah). Abnormal prominence of the closed follicles of the intestine.

psorenteritis (so'ren-ter-i'tis) [*psora* + *enteritis*]. A condition of the bowels peculiar to Asiatic cholera.

psoriasic (so-re-as'ik). Same as *psoriatic*.

psoriasiform (so-re-as'if-orm). Resembling psoriasis.

psoriasis (so-ri-as'is) [*ψωρίασις*]. A skin disease of many varieties, characterized by the formation of scaly red patches on the extensor surfaces of the body. **p. annula'ris**, psoriasis in ring-shaped patches. Called also **p. circinata**. **p. bucca'lis**. See *leukoplakia buccalis*. **p. circina'ta**. See *p. annularis*. **p. diffu'sa**, a form in which there is more or less coalescence of large contiguous lesions. Bakers' itch, grocers' itch, and bricklayers' itch belong to this variety. **p. gut-ta'ta**, a form occurring in small, distinct, and irregular patches. **p. gyra'ta**, a form with patches having a serpentine arrangement. **p. invetera'ta**, a form with confluent lesions and with thickening and hardening of the skin. **p. lin'guae**. Same as *leukoplakia buccalis*. **p. nummula'ris**, psoriasis in circular patches which resemble small coins. **p. ostea'cea**, psoriasis complicated by joint affections. **p. palma'ris**, a syphiloderm of the palms or soles. **p. puncta'ta**, a variety in which the lesions consist of minute, red, pinhead-shaped papules, often surmounted with pearly scales. **p. rupioi'des**, psoriasis with rupia-like crusts. **p. universa'lis**, a form with lesions over the whole body.

psoriatic (so-re-at'ik). 1. Pertaining to, affected with, or of the nature of, psoriasis. 2. A person affected with psoriasis.

psoric (so'rik). Pertaining to or affected with scabies.

psorinum (so-ri'num). A homeopathic preparation of itch pus.

psorocomium (so-ro-ko'me-um) [*ψώρα* itch + *κομείν* to care for]. A hospital for psoriasis.

psoroid (so'roid). Resembling scabies.

Psorophora (so-rof'o-rah). A genus of mosquitos, the larvae of which prey on the larvae of other kinds of mosquitos.

psorophthalmia (so-rof-thal'me-ah) [*ψωροφθαλμία*]. A form of ulcerative marginal blepharitis.

Psoroptes (so-rop'tēz). A genus of itch mites. **P. commu'nis** causes sheep scab, Texas itch of cattle, and mange in horses, dogs, and other animals. **P. cunic'uli** causes otocariasis in rabbits.

psorosperm (so-ro-sperm) [*ψωρός* rough, scabby + *σπέρμα* seed]. Any parasitic myxosporidian animal micro-organism.

psorospermia (so-ro-sper'me-ah), pl. *psorosper'miae*. The spore of a psorospermic organism; Rainey's corpuscle.

psorospermial, psorospermic (so-ro-sper'me-al, so-ro-sper'mik). Of the nature of a psorosperm.

psorospermiasis (so'ro-sper-mi'as-is). Psorospermiosis.

psorospermiosis (so'ro-sper-mo'sis). A morbid state due to the presence of psorosperms.

psorous (so'rus) [*ψωρός*]. Affected with psora, or itch.

P. S. P. Abbreviation for *phenolsulphonephthalein test*.

psychalgia (si-kal-ga'le-ah). Same as *algot-psychalia*.

psychalgia (si-kal'je-ah) [*ψυχή* soul + *ἄλγος* pain]. 1. A pain of mental or hysterical origin, such as neurasthenic headache, clonus hystericus, etc. 2. Pain attending or resulting from a mental operation: called also *mind pain* or *soul pain*.

psychalia (si-ka'le-ah) [*ψυχή* soul]. A morbid state of mind in which voices seem to be heard and images to be seen. Called also *mentalia*.

psychanalysis (si-kan-al'is-is). See *psychoanalysis*.

psychanopsia (si-kan-op'se-ah) [*ψυχή* soul + *αν* not + *ὄψις* vision]. Psychic blindness. See under *blindness*.

psychasthenia (si-kas-the'ne-ah) [*ψυχή* soul + *ασθενία*]. A functional neurosis marked by stages of pathologic fear or anxiety, obsessions, fixed ideas, tics, feelings of inadequacy, self-accusation, and peculiar feelings of strangeness, unreality, and dispersonalization (Janet).

psychataxia (si-kat-aks'e-ah) [*ψυχή* soul + *ataxia*]. Disordered mental condition marked by inability to fix the attention, agitation, etc.

psyche (si'ke) [*ψυχή* soul]. 1. The mind. 2. The cerebrospinal nervous system.

psychoclampsia (si-kek-lamp'se-ah) [*ψυχή* mind + *ἐκλάμπτει* a flashing]. Acute mania.

psycheism (si'ke-izm) [*ψυχή* soul]. Hypnotism.

psychiater (si-ker-a'ter). Same as *psychiatrist*.

psychiatric (si-ke-at'rik). Pertaining to psychiatry.

psychiatrics, psychiatry (si-ke-at'riks, si'ke-at-re) [*ψυχή* mind + *ιατρεια* healing]. The recognition and treatment of mental disorders.

psychiatrist (sik-i'at-ris't). An expert in psychiatry.

psychic, psychical (si'kik, si'kik-al) [*ψυχικός*]. Pertaining to the mind.

psychics (si'kiks). Psychology.

psychinosis (si-kin-o'sis) [*ψυχή* soul + *νόσος* disease]. A functional nervous disease.

psychism (si'kizm). The theory that there is a fluid diffused through all living beings, animating all alike.

psychlampsia (si-klamp'se-ah) [*ψυχή* soul + *λάμπει* a shining]. Mania considered as a discharging phenomenon of perverted brain activity.

psychoalgalia (si'ko-al-ga'le-ah). See *algopsy-chalia*.

psychoanalysis (si'ko-an-al'is-is) [*ψυχή* soul + *ανάλυσις*]. The method of eliciting from nervous patients an idea of their past emotional experiences and the facts of their mental life, in order to discover the mechanism by which a pathologic mental state has been produced, and to furnish hints for psychotherapeutic procedures.

psycho-asthenics (si'ko-as-then'iks) [*ψυχή* soul + *α* not + *αθένος* strength]. The study of the feeble-minded.

psycho-auditory (si-ko-aw'dit-o-re). Pertaining to the consciousness and intelligent perception of sound.

psychobiology (si'ko-bi-ol'o-je). That branch of biology which considers the interactions between body and mind.

psychocatharsis (si'ko-kath-ar'sis) [*ψυχή* soul + *κάθαρσις* purging]. See *catharsis*, 2d def.

psychochrome (si'ko-krōm) [*ψυχή* mind + *χρώμα* color]. A subjective mental association between any bodily sensation and some particular color.

psychochromesthesia (si-ko-krōm-es-the'ze-ah) [*ψυχή* mind + *χρώμα* color + *αἴσθησις* sensation]. The condition in which auditory stimuli produce sensations or associated sensations of color.

psychocoma (si-ko-kō'mah) [*ψυχή* mind + *coma*]. Melancholic stupor.

psychocortical (si-ko-kor'tik-al). Pertaining to the mind and to the cortex of the brain.

Psychodidae (si-ko'did-e). The moth midges; a family of small flies without ocelli and with the body densely covered with coarse hairs.

psychodometry (si-ko-dom'et-re) [*ψυχή* mind + *ὁδός* way + *μέτρον* measure]. The measurement of the rate of mental action.

psychodynamics (si'ko-di-nam'iks) [*ψυχή* mind + *δυναμὶς* power]. The science of mental action.

psycho-epilepsy (si'ko-ep-il-ep'se). A functional neurosis with symptoms closely resembling those of true epilepsy.

psychogalvanic reflex (si'ko-gal-van'ik). See under *reflex*.

psychogenesis (si-ko-jen'es-is) [*ψυχή* mind + *γένεσις* origin]. The development of the mind.

psychogenia (si-ko-je'ne-ah). A disease due to faulty psychic activity.

psychogenic (si-ko-jen'ik). Originating in the mind; psychic.

psychogenous (si-koj'en-us). Psychogenic.

psychognosis (si-kog-no'sis) [*ψυχή* soul + *γνώσις* knowledge]. Sidis' term for the study which will enable the examiner to gain a complete knowledge of the patient's soul, chiefly by means of hypnosis or hypnoidal states.

psychognostic (si-kog-nos'tik). Pertaining to psychognosis.

psychogram (si'ko-gram) [*ψυχή* mind + *γράμμα* a writing]. A visual sensation associated with a mental idea as of a certain number which appears visualized when it is thought of.

psychograph (si'ko-graf) [*ψυχή* soul + *γράφειν* to write]. An instrument for recording unconscious movements of the hand.

psychokinesia (si'ko-kin-e'ze-ah) [*ψυχή* soul + *κίνησις* motion]. Explosive cerebral action, due to defective inhibition.

psychokym (si'ko-kim). A psychic process conceived physiologically; that something which flows through the central nervous system and which is at the basis of psychic processes.

psycholagny (si'ko-lag-ne) [*ψυχή* mind + *λαγνεία* lust]. Sexual enjoyment produced by mental and imaginary sexual acts.

psycholepsy (si-ko-lep'se) [*ψυχή* mind + *λαμβάνειν* to seize upon]. A condition in which the mental or psychological attention is lowered.

psychology (si-kol'o-je) [*ψυχή* mind + *λόγος* discourse]. That branch of science which treats of the mind and mental operations, especially as they are shown in behavior. **abnormal p.**, the study of derangements or deviations of mental functions. **analytical p.**, psychology by introspective methods, as opposed to experimental psychology. **animal p.**, the study of the mental activity of animals. **child p.**, the study of the development of the mind of the child. **comparative p.**, the study of the mental action of animals. **criminal p.**, the study of the mental action of criminals. **experimental p.**, the study of the mind and mental operations by the employment of experimental methods. **genetic p.**, that branch of

psychology which deals with the development of mind in the individual and with its evolution in the race. **Gestalt p.** See *gestaltism*. **physiologic p.**, that branch of psychology which applies the facts taught in neurology to show the relation between the mental and the neural. **social p.**, that branch of psychology which treats of the social aspects of mental life.

psychometer (si-kom'et-er). An instrument used in psychometry.

psychometry (si-kom'et-re) [*ψυχή* mind + *μέτρον* measure]. Measurement of the time consumed in mental operations.

psychomotor (si-ko-mo'tor) [*ψυχή* mind + *L. mo'tor* mover]. Pertaining to or causing voluntary movements.

psychoneurosis (si'ko-nu-ro'sis) [*ψυχή* mind + *νεῦρον* nerve]. Any one of a group of borderland disorders of the mind which are not true insanities. The term includes hysteria, neurasthenia, and psychasthenia. **defense p.**, a psychosis or neurosis whose symptoms are due to the attempt to repress a painful idea. The idea is excluded from the mind, but remains in subconsciousness, where it acts as a cause of disturbance. The term includes hysteria as well as various neuroses and psychoses. **p. maid'ica**, pellagra.

psychonomy (si-kon-o'me) [*ψυχή* soul + *νόμος* law]. The science of the laws of mental activity.

psychonosema (si'ko-no-se'mah) [*ψυχή* soul + *νόσσημα* illness]. Any mental disorder.

psychonosis (si-ko-no'sis) [*ψυχή* soul + *νόσος* disease]. Any disease or affection caused by mental or moral agents.

psychoparesis (si-ko-par'es-is) [*ψυχή* mind + *πάρεσις* weakness]. Weakness of mind.

psychopath (si-ko-path). A person affected with a psychoneurosis; a person under the influence of some abnormal instinct.

psychopathia (si-ko-pa'the-ah). Same as *psychopathia*. **p. sexua'lis**, mental disease marked by perversion of the sexual feelings.

psychopathic (si-ko-path'ik). Pertaining to mental disease.

psychopathist (si-kop'ath-ist). An alienist.

psychopathology (si'ko-path-ol'o-je) [*ψυχή* mind + *παθολογία*]. The pathology of mental disorders; the science of the pathologic working of the mind.

psychopathosis (si-ko-path-o'sis). Southard's term for any mental disease of the psychopathic group.

psychopathy (si-kop'ath-e) [*ψυχή* mind + *πάθος* affection]. Any disease of the mind; insanity.

psychopharmacology (si'ko-far-mak-ol'o-je). The study of the action of drugs on the psychological functions.

psychophysical (si-ko-fiz'ik-al). Pertaining to the mind and its relation to physical manifestations.

psychophysics (si-ko-fiz'iks) [*ψυχή* mind + *φυσικός* natural]. The science of the relations of mental processes to their causation and manifestations; experimental psychology.

psychophysiology (si'ko-fiz-e-ol'o-je) [*ψυχή* mind + *φύσιολογία*]. The physiology of the mental organs or apparatus.

psychoplasm (si'ko-plazm). Same as *protol*.

psychoplegia (si-ko-ple'je-ah) [*psychoplegia*]. A sudden attack of mental weakness.

psychoplegic (si-ko-ple'jik) [*ψυχή* mind + *πληγή* stroke]. An agent that lessens cerebral activity or excitability.

psychopneumatology (si'ko-nu'-mat-ol'o-je) [*ψυχή* mind + *πνεῦμα* breath + *λόγος* treatise]. The study of the interactions of mind, body, and soul.

psychoreaction (si'ko-re-ak'shun) [*ψυχή* soul + *reaction*]. See *Mach's reaction*, under *reaction*.

psychorhythmia (si-ko-rith'me-ah) [$\psi\upsilon\chi\acute{\eta}$ mind + $\rho\acute{\upsilon}\theta\mu\acute{o}\varsigma$ rhythm]. A condition in which there is involuntary repetition of the various mental actions.

psychorrhagia (si-kor-a'je-ah) [Gr.]. The death struggle.

psychorrhea (si-ko-re'ah) [$\psi\upsilon\chi\acute{\eta}$ mind + $\rho\acute{o}\iota\acute{\alpha}$ flow]. A mental condition characterized by an overabundance of theories and ideas with vitiation of instinct, reason, and common sense, resulting in an incoherent stream of thought.

psychosensorial (si'ko-sen-so're-al). Psychosensory.

psychosensory (si-ko-sen'so-re). Pertaining to the conscious perception of sensory impulses to the mind and to sensation.

psychosin (si-ko'sin). A galactoside, $C_{25}H_{42}N_7O$, resulting from the decomposition of phtenosin. On hydrolysis it yields galactose and sphingosine.

psychosis (si-ko'sis) [$\psi\upsilon\chi\acute{\eta}$ soul]. 1. Any disease or disorder of the mind; any disorder characterized by mental aberration. 2. Any thought process.

anxiety p., a functional disorder of the mind characterized by anxiety and depression.

Cheyne-Stokes p., a condition resembling cardiac asthma, with intense motor agitation, sometimes seen along with the onset of Cheyne-Stokes respiration in chronic heart disease.

exhaustion p., mental disorder due to some exhausting or depressing occurrence, as an operation.

febrile p., infection exhaustion psychosis.

infection exhaustion p., confusional insanity. See *insanity*.

involuntional p., mental disorder coming on in the aged.

Korsakoff's p., a psychosis, usually based on chronic alcoholism, marked by disturbance of orientation, susceptibility to external stimulation and suggestion, falsification of memory, and hallucinations. The signs of polyneuritis (wrist drop, etc.) are usually present. Called also *polyneuritic psychosis*, *cerebropathia psychica toxæmica*, and *chronic alcoholic delirium*.

manic-depressive p., manic-depressive insanity.

p. polyneurit'ica. Same as *Korsakoff's p.*

senile p., mental disorder in old persons.

situation p., a transitory mental disorder caused by an unbearable situation over which the patient has no control.

toxic p., mental disorder due to toxemia.

zoophil p., a psychosis marked by insane affection for or interest in animals.

psychosomatic (si'ko-so-mat'ik) [$\psi\upsilon\chi\acute{\eta}$ mind + $\sigma\acute{\omega}\mu\alpha$ body]. Pertaining to the mind-body relationship; having bodily symptoms of a psychic or mental origin.

psychotechnics (si-ko-tek'niks) [$\psi\upsilon\chi\acute{\eta}$ soul + $\tau\acute{\epsilon}\chi\eta$ art]. The employment of psychological methods in studying sociological and other problems.

psychotherapeutics, psychotherapy (si'ko-ther-ap-u'tiks, si-ko-ther'ap-e) [$\psi\upsilon\chi\acute{\eta}$ soul + $\theta\epsilon\rho\alpha\pi\epsilon\iota\alpha$]. 1. Psychiatry. 2. Mental therapeutics, mind cure, or cure by making mental impressions or suggestions.

psychotic (si-kot'ik). Pertaining to or caused by psychosis.

psychotrine (si'ko-trin). An alkaloid; $C_{28}H_{36}N_2O_4 \cdot 4H_2O$, of ipecac.

psychro-algia (si-kro-al'je-ah) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\acute{\alpha}\lambda\gamma\acute{o}\varsigma$ pain]. Painful psycho-esthesia.

psychro-esthesia (si'kro-es-the'ze-ah) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\acute{\alpha}\lambda\theta\eta\sigma\iota\varsigma$ feeling]. A state in which a part of the body, though warm, seems cold.

psychrometer (si-krom'et-er) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\mu\acute{\epsilon}\tau\rho\nu$ measure]. An apparatus for measuring atmospheric moisture by the difference in reading of two thermometers, one with a dry bulb and one with a wet bulb.

sling p., a convenient and reliable instrument in which the thermometers are swung through the air to facilitate evaporation from the wet bulb.

psychrophilic (si-kro-fil'ik) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\phi\iota\lambda\epsilon\iota\nu$ to love]. Fond of cold: said of bacteria which

develop best between 15 and 20 C. See also *mesophilic* and *thermophilic*.

psychrophobia (si-kro-f'o-be-ah) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\phi\acute{o}\beta\acute{o}\varsigma$ fear]. Insane or morbid dread of cold.

psychrophore (si'kro-för) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\phi\acute{\epsilon}\rho\epsilon\iota\nu$ to bear]. A double catheter for applying cold to the urethra.

psychrotherapy (si-kro-ther'ap-e) [$\psi\upsilon\chi\rho\acute{o}\varsigma$ cold + $\theta\epsilon\rho\alpha\pi\epsilon\iota\alpha$ treatment]. The treatment of disease by the application of cold.

psycetic (sik'tik) [$\psi\upsilon\chi\epsilon\iota\nu$ to cool]. Cooling.

psydriacium (si-dra'se-um) [$\psi\upsilon\delta\rho\acute{\alpha}\kappa\iota\omicron\nu$ blister]. An old name for a prurast skin disease.

psylla (sil'ah). A proprietary preparation of psyllium.

psyllium (sil'e-um). The plant *Plantago psyllium* whose seed is used as a mild laxative. Dose, 1-4 drachms (4-15 Gm.).

Pt., pt. Abbreviation for *pint* and symbol for *platinum*.

ptarmic (tar'mik). Same as *sternutatory*.

ptarmus (tar'mus). Spasmodic sneezing.

Ptelea trifolia'ta (te'le-ah) [L.]. A shrub of North America, hop trefoil: used homeopathically.

ptelein (te'le-in). An extract from the root bark of *Ptelea trifolia'ta*: a stimulant and tonic.

Pteridophyta (ter-id-of'it-ah) [$\pi\tau\epsilon\rho\iota\varsigma$ wing + $\phi\upsilon\tau\acute{o}\nu$ plant]. A division of the plant kingdom including the ferns.

pteridophyte (ter'id-o-fit). One of the *Pteridophyta*.

pteron (te're-on) [$\pi\tau\epsilon\rho\acute{o}\nu$ wing]. A point at the junction of the frontal, parietal, temporal, and great wing of the sphenoid bones; about $1\frac{1}{2}$ inches (3 cm.) behind the external angular process of the orbit.

pternalgia (ter-nal'je-ah) [$\pi\tau\epsilon\rho\nu$ heel + $\acute{\alpha}\lambda\gamma\acute{o}\varsigma$ pain]. Pain in the heel.

Pterococcus aphyll'la (te-ro-kok'us) [$\pi\tau\epsilon\rho\acute{o}\nu$ wing + $\kappa\acute{o}\kappa\kappa\acute{o}\varsigma$ berry]. A polygonaceous plant of Siberia: its fruit is edible; the root affords a good tragacanth, which is eaten.

pterygium (te-rij'e-um) [$\pi\tau\epsilon\rho\acute{\upsilon}\gamma\iota\omicron\nu$ wing]. A patch of thickened conjunctiva extending over a part of the cornea.

The membrane is usually fan shaped, with the apex toward the pupil and the base toward the inner canthus.

Unless checked, it tends to spread over the eyeball.

congenital p. See *epitarsus*.

pterygoid (ter'ig-oid) [$\pi\tau\epsilon\rho\acute{\upsilon}\xi$ wing + $\epsilon\iota\delta\acute{o}\varsigma$ form]. Shaped like a wing.

pterygomaxillary (ter'ig-o-maks'il-a-re). Pertaining to a pterygoid process and the upper jaw.

pterygopalatine (ter'ig-o-pal'at-in). Pertaining to a pterygoid process and to the palate bone.

ptilosis (ti-lo'sis) [$\pi\tau\iota\lambda\omicron\sigma\iota\varsigma$]. 1. A falling out or loss of the eyelashes. 2. A form of pneumoconiosis caused by inhaling the dust from ostrich feathers.

ptisan (tiz'an) [L. *ptis'ana*; $\pi\tau\iota\sigma\acute{\alpha}\nu\epsilon$]. Sweetened barley water, or other similar preparation: a decoction or medicinal tea.

P. T. O. Abbreviation for Ger. *Perlsucht tuberculini* original, or Klemperer's tuberculin.

ptomaine (to'ma-in) [$\pi\tau\acute{\omega}\mu\alpha$ carcass]. Any one of a class of bases formed under the action of bacteria or of metabolism by the splitting of carbon dioxide from an amino-acid. The ptomaines are amines; some are toxic and some have a powerful effect on blood pressure. Called also *animal alkaloid*, *putrefactive alkaloid*, and *cadaveric alkaloid*.

ptomainemia, ptomainaemia (to'ma-in-e'me-

Pterygium (Wolf).

- ah) [*ptomaine* + *αἷμα* blood]. The presence of ptomaines in the blood.
- ptomainotoxism** (to-'ma-in-o-tok-'sizm). Poisoning by a ptomaine.
- ptomatine** (to-'mat-in). Same as *ptomaine*.
- ptomatopsia** (to-mat-op-'se-ah) [*πτῶμα* corpse + *ὄψις* vision]. Inspection of dead body; autopsy.
- ptomatopy** (to-mat-'op-e). Ptomatopsia.
- ptomatopine** (to-mat-ro-'pin) [*ptomaine* + *atropine*]. A ptomaine from putrid sausages and the viscera of corpses of those dead from typhoid fever. It has effects somewhat like those of atropine.
- ptosed** (töst). Affected with ptosis; prolapsed.
- ptosis** (to-'sis) [*πτῶσις* fall]. 1. A paralytic drooping of the eyelid. 2. The prolapse of an organ or part. **abdominal p.** Same as *splanchnoptosis*. **p. adipo'sa, false p.**, an apparent ptosis caused by a fold of skin and fat hanging down below the border of the eyelid. **Horner's p.**, moderate ptosis of an eye, with retraction of the eyeball, miosis, and flushing of the affected side of the face, due to lesions of the cervical sympathetic. **p. lipomato'sis**, ptosis produced by lipoma of the eyelid. **morning p.** See *waking p.* **p. sympath'ica**, ptosis associated with miosis, vasomotor facial paralysis, and diseases of the cervical sympathetic system. **visceral p.**, splanchnoptosis. **waking p.**, temporary paralysis of the upper lid on awakening from sleep.
- ptotic** (to-'tik). Pertaining to or affected with ptosis.
- P. T. R.** Abbreviation for Ger. *Perlsucht Tuberculin Rest*, a tuberculin prepared from bovine bacilli in the same manner as Koch's new tuberculin.
- ptyalagogue** (ti-al-'ag-og) [*πτύαλον* spittle + *ἀγωγός* leading]. Same as *sialogogue*.
- ptyallectasis** (ti-al-ek-'tas-is) [*πτύαλον* saliva + *ἐκτασις* distention]. Dilatation of one of the ducts of the salivary glands.
- ptyalin** (ti-'al-in) [*πτύαλον* spittle]. An enzyme occurring in the saliva which converts starch into maltose and dextrose.
- ptyallogen** (ti-al-in-'o-jen) [*ptyalin* + *γεννάν* to produce]. A hypothetical substance which is supposed to exist in the cells of the salivary glands, and to be intermediary in the formation of ptyalin.
- ptyalism** (ti-'al-izm) [*πτυαλισμός*]. Excessive secretion of saliva; salivation. **mercurial p.** See *salivation*.
- ptyalith** (ti-'al-ith) [*πτύαλον* spittle + *λίθος* stone]. A salivary calculus.
- ptyalize** (ti-'al-iz). To increase or stimulate the secretion of saliva.
- ptyalocoele** (ti-al-'o-sēl) [*πτύαλον* spittle + *κήλη* tumor]. A cystic tumor containing saliva. **sublingual p.** See *ramula*.
- ptyalogenic** (ti-'al-o-jen-'ik) [*πτύαλον* saliva + *γεννάν* to produce]. Formed from or by the action of saliva; as, *ptyalogenic* calculus.
- ptyalogogue** (ti-al-'o-gog). Sialogogue.
- ptyalolith** (ti-'al-o-lith). Ptyalith.
- ptyalolithiasis** (ti-'al-o-lith-i'as-is). The presence of salivary calculi.
- ptyalorrhea** (ti-al-o-re-'ah) [*πτύαλον* saliva + *ροία* flows]. An abnormally copious flow of saliva.
- ptyalose** (ti-'al-ös). Maltose produced by the action of ptyalin on starch.
- ptyocrinous** (ti-ok-'tin-us) [*πτύον* fan + *κρίνειν* to separate]. Elaborating secretion in the form of granules which are eventually extruded: said of unicellular glands, as goblet cells, which secrete in this way. Cf. *diacrinous*.
- ptyophagon** (ti-o-fa-'gon) [*πτύαλον* saliva + *φαγεῖν* to eat]. A proprietary sputum disinfectant.
- puberal** (pu-'ber-al) [L. *pu'ber* of marriageable age]. Pertaining to puberty.
- pubertas** (pu-'ber-tas). Latin for *puberty*. **p. prae'cox**, pathologically early sexual maturity.
- puberty** (pu-'ber-te) [L. *pu'ber'us*]. The age at which the reproductive organs become functionally operative. It occurs between twelve and seventeen years of age, and is indicated in the male by change of voice and seminal discharge, and in the female by the occurrence of menstruation.
- pubes** (pu-'bēz) [L.]. 1. The hair on the external genitalia, or the region covered by it. 2. The pubic bone.
- pubescence** (pu-bes-'ens). 1. Puberty. 2. Downiness; lanugo.
- pubescent** (pu-bes-'ent) [L. *pubes'cens* becoming hairy]. 1. Covered with down or lanugo. 2. Arriving at the age of puberty.
- pubetrotomy** (pu-be-trot-'o-me) [*pubes* + *etrotomy*]. Section of the os pubic and of the lower abdominal wall.
- pubic** (pu-'bik). Pertaining to the pubes or os pubis.
- pubiotomy** (pu-be-ot-'o-me) [*pubis* + *τέμνειν* to cut]. The operation of cutting through the pubic bone lateral to the median line. Called also *hebotomy* and *heboosteotomy*.
- pubis** (pu-'bis) [L.]. The pubic bone; os pubis, or pubes.
- pubofemoral** (pu-bo-fem-'or-al). Pertaining to the os pubis and femur.
- puboprostatic** (pu-'bo-pros-tat-'ik). Pertaining to the os pubis and prostate gland.
- pubotibial** (pu-bo-tib-'e-al). Pertaining to the pubes and tibia.
- pubovesical** (pu-bo-ves-'ik-al). Pertaining to the pubes and bladder.
- puccin** (pu-'sin). A principle from *Sanguina'ria canadensis*.
- puces** (pu-'sēz). Scabies.
- pu'denda** (pu-den-'dah), pl. of *pu'den'dum* [L.]. The external genital organs.
- pu'dendal** (pu-den-'dal). Pertaining to the pudenda.
- pu'dendum** (pu-den-'dum), pl. *pu'den'da* [L. *pu'de're* to be ashamed]. The external genital parts, especially of the female. **p. mulie'bre** [B N A], the vulva.
- pu'dic** (pu-'dik) [L. *pu'dicus*]. Pertaining to the pudenda.
- puericulture** (pu-er-'ik-ult-'ur) [L. *pu'er* boy + *cultu'ra* culture]. The art of rearing and training children.
- puericulturist** (pu-'er-ik-ult-'ur-ist). A specialist in the training of children.
- puerile** (pu-'er-il) [L. *puer'i'lis*; *pu'er* boy]. Pertaining to childhood or to children; childish.
- puerilism** (pu-'er-il-izm) [L. *pu'er* boy]. A condition in which the patient's mind seems to return to its state when a child.
- puerpera** (pu-er-'per-ah) [L. *pu'er* boy + *par'ere* to bear]. A woman in childbirth.
- puerperal** (pu-er-'per-al) [L. *puerpera'lis*]. Pertaining to childbirth.
- puerperalism** (pu-er-'per-al-izm). A disease condition incident to childbirth.
- puerperant** (pu-er-'per-ant). A puerperal woman.
- puerperium** (pu-er-pe-'te-um) [L.]. The period or state of confinement; childbirth.
- puff** (pu'f). A short, blowing, auscultation sound.
- veiled p.**, a faint, muffled pulmonary murmur.
- puffball** (pu'f'awl). See *Lycoperdon*.
- pugil, pugillus** (pu-'jil, pu-'jil'us) [L. *pugil'us*]. A handful.
- pujos blancos** (poo'hös blahnk'ös) [Sp. "white straining"]. A Chilian dysentery with white discharges.
- pukateine** (pu-kat-'e-in). A crystalline alkaloid, C₁₇H₁₇NO₃, from *Laurelia novae-zelandiae*.
- pukeweed**. Lobelia.
- pulegone** (pu-'leg-ön). A volatile oil, a menthene, CH₃C₆H₇O:C(CH₃)₂, from pennyroyal oil.

Pulex (pu'leks), pl. *pu'lices* [L. "flea"]. A genus of fleas which are parasitic on man and on dogs, cats, and badgers. **P. cheo'pis**. See *Xenopsylla cheo'pis*. **P. dugo'si**, a flea found in Mexico which much resembles *P. irritans*, but has a longer rostrum. **P. irritans**, the common flea of Europe, is parasitic in the skin of man, its bite producing itching. **P. penetrans**, the chigo or jigger-flea. See *chigger*. **P. serrat'iceps**. See *Clenocephalus canis*.

pulicide, **pulicide** (pu-lis'id-is, pu-lis'id) [L. *pu'lex* flea + *caedere* to kill]. Anything which will destroy fleas.

Pulicidae (pu-lis'id-ee). A family of the Hemiptera which includes most of the fleas. Four genera are important to man: *Pulex*, *Ceratophyllus*, *Clenocephalus*, and *Xenopsylla*.

pullorin (pul'or-in). A dissociation product obtained by washing eighteen-hour agar cultures of the organism of bacillary white diarrhea occurring in chickens four times in sterile salt solution and centrifugating out most of the cells. The fourth washing when sterilized by heat contains a fine white precipitate which is pullorin.

pullulate (pul'u-lat). To germinate.

pullulation (pul-u-la'shun) [L. *pullula're* to sprout]. The act or process of budding or of sprouting; germination.

Pulm. Abbreviation for L. *pulmen'tum*, gruel.

pulmo (pul'mo), gen. *pulmo'nis*, pl. *pulmo'nes*. Latin for lung.

pulmo-aortic (pul'mo-a-or'tik). Pertaining to the lungs and the aorta.

pulmoform (pul'mo-form). Guaiaform.

pulmometer (pul-mom'et-er) [L. *pul'mo* lung + *metrum* measure]. A form of spirometer for measuring the capacity of the lungs for air.

pulmometry (pul-mom'et-re). The measurement of the lung capacity.

pulmonal (pul'mo-nal). Pulmonary.

pulmonary (pul'mo-na-re) [L. *pulmona'rius*]. Pertaining to the lungs.

pulmonectomy (pul-mo-nek'to-me). Same as *pneumonectomy*.

pulmonic (pul-mon'ik). 1. Pertaining to the lungs; pulmonary. 2. Pertaining to the pulmonary artery.

pulmonin (pul'mo-nin). A dry therapeutical extract of calves' lungs: used in pulmonary diseases.

pulmonitis (pul-mo-ni'tis). Inflammation of the lungs; pneumonia.

pulmotor (pul'mo-tor) [L. *pul'mo* lung + *mo'tor* mover]. An apparatus for producing artificial respiration by forcing oxygen into the lungs, and, when they are distended, sucking out the air.

pulmozym (pul'mo-zim). A therapeutical preparation of lung tissue.

pulpation (pul-pa'shun). The process or state of reduction to a pulp.

pulp (pulp) [L. *pul'pa*]. Any soft, juicy animal or vegetable tissue. -In dentistry, the dental pulp. **p. canal**, that part of the pulp cavity which is within the root of a tooth. **p. cavity**, the space within a tooth containing the dental pulp. **p. chamber**, that portion of the pulp cavity which is contained within the crown portion of a tooth. **dead p.**, nonvital pulp. **dental p.**, **dental pulp**, the soft, vascular tissue occupying the pulp chamber and the root canals of a tooth, composed of nerves, blood vessels, and connective tissue. **devital p.**, **devitalized p.**, nonvital pulp. **digital p.**, the soft cushion on the palmar or plantar surface of the distal phalanx of a finger or toe. **exposed p.**, the condition in which the denture covering the dental pulp is absent. **mummified p.**, dental pulp affected with dry gangrene. **nonvital p.**, dental pulp which is dead. **punctured p.**, exposed pulp. **splenic p.**, the dark, reddish-brown substance which fills up the inter-

spaces of the trabeculae of the spleen. **p. stone**. See *nodule*, *pulp*. **tooth p.**, dental pulp. **vac-cine p.**, the semisolid material of smallpox vaccine as it is taken from the calf before it has been ground with glycerin. **vertebral p.**, the soft central portion of an intervertebral disk. **vital p.**, dental pulp which is alive.

pulpa (pul'pah) [L. "flesh"]. Pulp. **p. den'tis** [B N A], dental pulp.

pulpal (pul'pal). Pertaining to the pulp.

pulpalgia (pul-pal'je-ah) [*pulp* + *algos* pain]. Pain in the dental pulp; pulpitis.

pulpation (pul-pa'shun). Pulpelaction.

pulpectomy (pul-pek'to-me) [*pulp* + *εκτομή* excision]. Removal of the dental pulp from a tooth.

pulpelaction (pul-pe-fak'shun) [L. *pul'pa* pulp + *facere* to make]. Conversion into pulp.

pulpiform (pul-pif-orm). Resembling pulp.

pulpitis (pul-pi'tis). Inflammation of the dental pulp.

pulpiess (pulp'les). Having the pulp removed: said of teeth.

pulpotomy (pul-pot'o-me) [*pulp* + *τομή* a cut]. Incision into the pulp of a tooth.

pulpy (pul'pe). Soft or pultaceous.

pulque (pul'ke). A fermented drink made in Mexico and Central America from the juice of agave or maguey.

pulsate (pul'sat). To beat rhythmically, as the heart.

pulsatile (pul'sa-til). Characterized by a rhythmical pulsation.

pulsatilla (pul-sat-il'ah). The ranunculaceous flowering herb *Anem'one pulsatil'la*; also *A. prat'en'sis*. It contains anemonin and anemonic acid. It is alterative, depressant, and useful in inflammations, as orchitis, epididymitis, otitis media, dysmenor-rhea, asthma, bronchitis, etc. Dose of tincture or fluidextract, 1-5 minims (0.066-0.333 cc.); in substance, 2-3 grains (0.133-0.18 Gm.). **American p.**, *Anem'one ludovic'iana*. **European p.**, *A. prat'en'se*.

pulsation (pul-sa'shun) [L. *pulsa'tio*]. A throb or rhythmical beat, as of the heart. **suprasternal p.**, arterial pulsation in the region of the supra-sternal notch, due to dilatation of the aortic arch or to aneurysm.

pulse (puls) [L. *pul'sus* stroke]. The expansion and contraction of an artery which may be felt with the finger. The pulse is usually felt on the radial artery at the wrist, though it may be felt over the temporal, carotid, ulnar, brachial, femoral, and other arteries. The *pulse rate* or number of pulsations of an artery a minute in the adult is varied from 67 to 72. **abdominal p.**, the pulse seen in emaciated persons over the abdominal aorta. **abrupt p.**, a pulse which strikes the finger rapidly; a quick pulse. **allorhythmic p.**, a pulse marked by irregularities in rhythm. **anacrotic p.**, one with two or more expansions to a beat. **anadicrotic p.**, a pulse in which the ascending limb of the tracing has two notches. **angry p.** Same as *wiry p.* **arachnoid p.**, a threadlike pulse: a small, feeble, tremulous pulse. **ardent p.**, a pulse which appears to strike the finger at a single point. **p. area**, the surface above the wrist joint at which the radial pulse is commonly felt. **auriculovenous p.**, jugular pulsation in which the wave due to the auricle precedes the ventricular contraction. Called also *normal venous p.* and *negative venous p.* **Bam-berger's bulbar p.**, a pulsation observable in the bulbus of the jugular vein and synchronous with the systole. It occurs in tricuspid inadequacy. **bigeminal p.**, a pulse in which two beats follow each other in rapid succession, each group of two being separated from the following by a longer interval. **bisferious p.** See *pulsus bis-furiens*. **bulbar p.**, Bamberger's pulse. **can-**

non ball p., Corrigan's pulse. **capillary p.**, an intermittent filling and emptying of the skin capillaries. **caprizant p.** See *goat leap p.* **catacrotic p.**, one which makes a break in the line of descent of the sphygmogram. **cata-dicrotic p.**, one with a primary and secondary expansion in the line of descent of the sphygmogram. **catatricrotic p.**, one which produces three breaks in the line of descent of the sphygmogram. **centripetal venous p.**, a venus pulse caused by an impulse passed from the arteries through the capillaries and venules into the larger veins. **p. clock**, an old device for determining the pulse rate. **collapsing p.** Same as *Corrigan's p.* **convulsive p.**, a pulse which is unequal in force and rhythm. **cordy p.**, a tense, firm pulse. **Corrigan's p.**, a jerky pulse with a full expansion, followed by a sudden collapse. It occurs in aortic regurgitation. Called also *water-hammer p.* **coupled p.**, bigeminal pulse. **p. curve**. Same as *sphygmogram*. **decurtate p.**, a pulse which gradually tapers away in strength like the tail of a mouse. Called also *mouse tail p.* and *myurous p.* **deficient p.**, a pulse marked by an occasional lack of a beat, due to failure of the heart to contract. **dicrotic p.**, one having two marked expansions in one beat of the artery. It is seen in cases of lowered arterial tension. **dropped-beat p.**, intermittent pulse. **elastic p.**, a full pulse which gives an elastic feeling to the finger. **entoptic p.**, the subjective sensation of seeing in the dark a flash of light at each heart beat. **epigastric p.** Same as *abdominal p.* **febrile p.**, a pulse characteristic of fever. With the onset of fever it is full and bounding, but becomes weak and feeble as the fever subsides. **filiform p.** Same as *thready p.* **formicant p.**, a small, nearly imperceptible pulse. **frequent p.**, one which is faster in rate than normal. **full p.**, one with a copious volume of blood. **funic p.**, the arterial tide in the umbilical cord. **gaseous p.**, a very soft, full pulse. **goat leap p.**, an irregular and bounding pulse. **guttural p.**, a pulse felt in the throat. **hard p.**, one which is characterized by very high tension. **high-tension p.**, one characterized by a gradual impulse, long duration, slow subsidence, and a firm, cordy state of the artery between the beats. **hyper-dicrotic p.**, one whose sphygmogram shows an aortic notch below the base line: a sign of extreme exhaustion. **infrequent p.**, one which is abnormally slow in rate or in the count to a minute. **intermittent p.**, one in which various beats are dropped. **irregular p.**, one in which the beats occur at irregular intervals. **jerky p.**, a pulse in which the artery is suddenly and markedly distended. **jugular p.**, a pulsation of the jugular vein. **Kussmaul's p.** See *paradoxical p.* **locomotive p.** Same as *Corrigan's p.* **long p.**, one in which the stroke is markedly prolonged. **low-tension p.**, a pulse with a sudden onset, short duration, and quick decline, and which is easily obliterated by pressure. **mitralized p.**, the irregularity of the pulse often seen in mitral disease. **Monneret's p.**, a full, slow, and soft pulse characteristic of jaundice. **monocrotic p.**, a pulse without dicrotism. **mouse tail p.** See *decurtate p.* **myurous p.** See *decurtate p.* **nail p.**, the circulation and pulsation of blood under the nails; it is usually determined by the onychograph. **negative p.**, normal venous p., auriculo-venous pulse. **paradoxical p.**, one that is weaker during inspiration, as in some cases of adherent pericardium. Called also *Kussmaul's p.* **pathologic p.**, positive venous p., ventricular venous pulse. **pistol-shot p.**, a form in which the arteries are subject to sudden distention and collapse. **polycrotic p.**, one with several secondary pulse waves. **pulmonary p.**, the second sound of the heart as heard over the pulmonary valve. **quadrigeminal p.**, one with a pause after every fourth beat. **quick p.**, one which strikes the finger smartly and leaves it

quickly; a frequent pulse is also termed quick. Called also *short p.* **Quincke's p.**, a perceptible nail pulse; alternate flushing and blanching of the nails, due to aortic insufficiency. **radial p.**, that which is taken at the radial artery. **p. rate**. See under *rate*. **respiratory p.** 1. A pulsation observed even in health in the superficial cervical veins after rapid exercise. 2. Same as *paradoxical p.* **retrosternal p.**, a venous pulse perceptible just above the suprasternal notch. **Riegel's p.**, a pulse which is diminished in size during expiration. **running p.**, a pulse with but small excursions, and those being irregular. **shabby p.**, a peculiar feeble and ill-defined pulse due to a weak heart and relaxed vascular tension. **sharp p.** Same as *jerky p.* **short p.** See *quick p.* **sixty-six p.**, a pulse rate of sixty-six per minute; such a pulse is regarded by some as indicative of vagotonia. **slow p.** Same as *infrequent p.*; also one of a prolonged systole and diastole. **soft p.**, a pulse of low tension. **strong p.**, one that is hard or wiry. **tense p.**, a pulse that is hard and full, but without wide excursions. **thready p.**, one that is very fine and scarcely perceptible. **trembling p.**, tremulous p. Same as *running p.* **tricrotic p.**, one that is marked by three abnormally distinct sphygmographic waves to the pulse beat. **trigeminal p.**, one with a pause after every third beat. **trip-hammer p.**, Corrigan's pulse. **undulating p.**, a pulse giving the sensation of successive waves. **unequal p.**, a pulse in which some of the beats are strong and others weak. **vaginal p.**, arterial pulsation sometimes perceptible in the vagina in pregnancy or inflammatory disease. **venous p.**, the pulsation which occurs in a vein. It is usually taken at the right jugular vein just above the sternoclavicular junction. **ventricular venous p.**, jugular pulsation in which the auricular wave disappears or coincides with the period of ventricular systole. Called also *positive venous p.* or *pathologic venous p.* **vermicular p.**, a small rapid pulse giving to the finger a sensation of wormlike movement. **vibrating p.** Same as *jerky p.* **water-hammer p.** Same as *Corrigan's p.* **wiry p.**, a small, tense pulse.

pulse deficit. The difference between the heart rate and the pulse rate.

pulse rate. See under *rate*.

pulsellum (pul-sel'um) [L.]. A posterior propelling flagellum.

pulsiloge (pul'sil-ōj). An obsolete form of pulse clock.

pulsilogram (pul-sil'o-gram). An obsolete instrument for ascertaining the pulse rate.

pulsimeter (pul-sim'et-er) [L. *pul'sus* pulse + *metrum* measure]. An apparatus for measuring the force of the pulse.

pulsometer (pul-som'et-er) [L. *pul'sus* pulse + *metron* measure]. An apparatus for measuring the rate of flow of the blood.

pulsus (pul'sus). Latin for *pulse*. **p. abdomina-lis**, a soft pulse often felt in abdominal diseases. **p. alternans**, a pulse in which there is regular alternation of weak and strong beats. It is a variety of cardiac arrhythmia indicating lesion of the myocardium. **p. bigeminus**. Same as *bigeminal pulse*. **p. bisferiens**, **p. biferiens**, a dicrotic pulse in which the waves are of nearly equal height. **p. caprisans**, goat leap pulse. **p. celer**, a swift, abrupt pulse. **p. celerimus**, a water-hammer pulse. **p. cor'dis**, the apex beat of the heart. **p. deb'ilis**, a weak pulse. **p. defic'iens**, a pulse showing occasional intermittence from failure of the ventricle to contract. **p. deletus**, absence of pulse, seen in aortic aneurysm. **p. duplex**, dicrotic pulse. **p. formicans**, formicant pulse. **p. hetero-chronicus**, an arrhythmic pulse. **p. inter-cidens**, **p. intercurrens**, a pulse in which there is an extra beat. **p. mag'nus**, a large,

full pulse. **p. monocrotus**, monocrotic pulse. **p. oppres'sus**, a pulse which appears to be pushing its way through a contracted artery. **p. paradox'us**, a paradoxical pulse (q. v. under *pulse*). **p. par'vus**, a small pulse. **p. pseudo-intermit'tens**, a pulse showing an occasional intermittence, owing to a feeble contraction of the ventricle. **p. ra'rus**, a slow pulse due to prolongation of the heart's pause. **p. tar'dus**, an abnormally slow pulse due to a prolongation of the systole or diastole. **p. trigem'inus**, trigeminal pulse. **p. undulo'sus**, a pulse characterized by a series of waves. **p. vac'uus**, an extremely weak pulse. **p. veno'sus**, venous pulse.

pultaceous (pul-ta'shus) [L. *pul'ta'ceus*]. Like a pulp or poultice.

pulv. An abbreviation for *L. pul'vis* powder.

pulverflator (pul'ver-fla-tor). A proprietary apparatus for blowing powders.

pulverin (pul'ver-in). See *barilla*.

pulverization (pul'ver-i-za'shun) [L. *pul'vis* powder]. The reduction of any substance to powder.

pulverulent (pul'ver'u-lent) [L. *pulverulen'tus*]. Powdery; dustlike.

pulvinar (pul-vi'nar) [L. "cushion"]. The medial portion of the posterior end of the thalamus. It is prominent and cushion-like and partly overhangs the colliculus superior. **p. epiglot'tidis**. See *cushion of the epiglottis*.

pulvinate (pul'vin-ät) [L. *pulvi'nus* cushion]. Shaped like a cushion.

pulvis (pul'vis), pl. *pul'veres*. Latin for *powder*. **p. aeroph'orus**, **p. aeroph'orus anglicus**. See *effervescent powder*. **p. aeroph'orus lax'ans**, **p. efferves'cens compos'itus**. See *seidlitz powder*. **p. antimonial'is**. See *James' powder*. See also under *powder*. **p. cine'reus**, hydrargyrum cum creta. **p. cutico'lor** [L. "skin-colored powder"], oxide of zinc (2 Gm.), magnesium carbonate (3 Gm.), white bole (3 Gm.), red bole (2 Gm.), rice starch (10 Gm.): used in skin diseases. **p. gummo'sus**, a powder made of licorice, gum arabic, and sugar: used as an excipient.

pulvola (pul-vo'lah). A proprietary epipastic or dusting powder: said to be a powdered oil.

pulvule (pul'vül). A proprietary capsule containing a dose of a powdered drug.

pumex (pu'meks) [L. "foam"]. See *pumice*.

pumice (pum'is) [L. *pumex*]. Spongy volcanic lava: used as a polishing material, especially in powdered form. Called also *rotten stone*.

pump (pump). An apparatus for drawing or forcing fluids or gases. **air p.**, a pump for exhausting or forcing in air. **Alvegniat's p.**, a mercurial air pump: used in measuring the free gaseous constituents of the blood. **breast p.**, a pump for abstracting milk from the breast. **dental p.**, an apparatus for removing saliva from the mouth in dental operations. **stomach p.**, a pump for removing poisons from the stomach.

pumpkin (pump'kin). See *pepo*.

puna (poo'nah). Mountain sickness.

Puna'ria ascochingae. A plant of Sierra Chiga (Argentina), regarded as a specific in asthma and mountain sickness.

punch drunk. A condition of cerebral concussion seen in prize fighters.

punched-out edges. The characteristic feature of the deep ulcers of subcutaneous syphilitic gummas.

puncta (punk'tah). Plural of Latin *punc'tum* point. See *punctum*.

punctate (punk'tät). 1. [L. *punc'tum* point]. Resembling or marked with points or dots. 2. The fluid obtained by an exploratory puncture.

punctiform (punk'tif-orm) [L. *punc'tum* point + *for'ma* shape]. Like a point; located in a point. In bacteriology, said of very minute colonies.

punctograph (punk'to-graf) [L. *punc'tum* point + *γράφειν* to write]. An instrument for the radiographic localization of foreign bodies in the tissues.

punctum (punk'tum), pl. *punc'ta*. Latin for *point*. **p. cae'cum**. Same as *blind spot*. **p. coxale**, the highest point of the crest of the ilium. **punc'ta doloro'sa**, painful points in the course of nerves affected with neuralgia. Called also *Valleix's points*. **p. ischid'icum**, the lower part of the crest of the ilium. **punc'ta lacrima'lia** [B N A], the outlets of the lacrimal canaliculi in the edges of the eyelids near the inner canthi. **p. lu'teum**, the macula lutea. **p. nasa'le infe'rius**, the rhinion. **p. proxim'um**. Same as *near point*. **punc'ta prurit'ica**. See *itchy points*, under *point*. **p. remo'tum**. See *far point*. **p. sa'liens**, the vascular expansion in the embryo forming the primitive heart. **punc'ta vasculo'sa**, minute red spots which mark the cut surface of the white substance of the brain. They are caused by blood from divided vessels.

punctumeter (punk-tum'te'er) [L. *punc'tum* point + *μέτρον* measure]. An instrument for measuring the range of accommodation.

punctura (punk-tu'rah) [L.]. Puncture. **p. explorato'ria**, exploratory puncture.

puncturatio (punk-tu-ra'she-o). The act of puncturing.

puncture (punk-tür) [L. *punc'tura*]. 1. An act of piercing. 2. A wound made by a pointed instrument. **Bernard's p.**, puncture on a definite point of the floor of the fourth ventricle causing artificial diabetes. **cistern p.**, puncture of the cisterna magna through the occipito-atlantoid ligament. **Corning's p.** Same as *Quincke's p.* **diabetic p.** Same as *Bernard's p.* **epigastric p.** See *Marfan's method*, under *method*. **exploratory p.**, the piercing of a cavity or tumor and the removal of some portion of the contents for the purpose of examination. **heat p.**, elevation of the temperature of the animal body produced by puncturing the base of the brain. **intracisternal p.**, cistern puncture. **Kronecker's p.**, puncture of the inhibitory nerve center of the heart by means of a long fine needle. **lumbar p.** See *Quincke's p.* **Marfan's epigastric p.** See *Marfan's method*, under *method*. **Quincke's p.**, the tapping of the spinal membranes in the lumbar region, chiefly for the purpose of obtaining cerebrospinal fluid for examination. **spinal p.** Same as *Quincke's p.* **ventricular p.**, puncture of a cerebral ventricle for the purpose of withdrawing fluid.

punctured (punk'türd). 1. Pierced. 2. Caused by a prick or thrust.

pungent (pun'jent) [L. *pun'gens* pricking]. Sharp or biting; somewhat acrid.

punica (pu'nik-ah). See *pomegranate*.

punicine (pu'nis-in). Same as *pelletierine*.

punktograph (punk'to-graf). Same as *punctograph*. **punudos** (pu'nu-dos). Pseudoleprosy; a disease of Guatemala resembling leprosy but without the presence of the leprosy bacillus.

P. U. O. Abbreviation for "Pyrexia of unknown origin"; an English designation for *trench fever* (q. v.).

pupa (pu'pah) [L. "a doll"]. The second stage in the development of an insect, between the larva and the imago.

pupil (pu'pil) [L. *pupilla* girl]. The opening at the center of the iris of the eye for the transmission of light. **Argyll Robertson p.**, one which is miotic and which responds to accommodation effort, but not to light. **artificial p.**, one made by iridectomy. **bounding p.**, a pupil which shows alternating dilatation and contraction. **Bumke's p.**, dilatation of the pupil following a psychic stimulus. It does not occur in dementia praecox. **cat's-eye p.**, one with a narrow vertical aperture. **Hutchin-**

son's p., one dilated upon one side. **keyhole p.**, a pupil with a coloboma on one side of the margin. **Okew's p's**, a condition in which one of the visual axes is deviated upward and the other downward. **pin-hole p.**, one which is extremely contracted. **skew p's**, a condition in which one of the ocular axes deviates upward and the other downward. **stiff p.**, Argyll Robertson pupil.

pupillary (pu'pil-a-re). Pertaining to the pupil.

pupillometer (pu-pil-om'et-er) [L. *pupilla* pupil + *metrum* measure]. An instrument for measuring the width or diameter of the pupil.

pupillomotor (pu-pil-o-mo'tor). Pertaining to the movement of the pupil.

pupilloscope (pu-pil-o-skop). Von Hess instrument for measuring reactions of the pupil.

pupilloscopy (pu-pil-os'ko-pe) [L. *pupilla* pupil + *σκοπεῖν* to inspect]. Same as *skiascopy*.

pupillostatometer (pu-pil'o-stat-om'et-er) [L. *pupilla* pupil + *στατός* placed + *μέτρον* measure]. An instrument for measuring the distance between the pupils.

pural (pu'ral). Powdered wood charcoal saturated with menthol and with carbolic and benzoic acids. It is burned as a disinfectant and for the relief of whooping cough.

Purdy's solution (per'dez) [Charles Wesley Purdy, American physician, 1846-1901]. See *solution*.

pure (pūr) [L. *purus*]. Free from mixture of other matters. A reagent is *chemically pure* when it contains no other chemicals that might interfere with its action.

purgacion (poor-gah-se-on') [Sp.]. A Peruvian term for gonorrhea.

purgatine (pur'ga-tin). The diacetyl ester of anthrapurpurine, $C_6H_4(CO)_2.C_6H(O.CO.CH_3)_2.OH$, a yellowish-brown powder, insoluble in cold water and dilute acids, but somewhat soluble in hot water, alcohol, and ether. It is the purgative principle of nearly all vegetable cathartics, and is used as a laxative. Dose, 24 grains (1.5 Gm.). Called also *purgatol*.

purgation (pur'ga-shun) [L. *purga'tio*]. Catharsis; purging effected by a cathartic medicine.

purgative (pur'gat-iv) [L. *purgati'vus*]. 1. Cathartic; causing evacuations from the bowels. 2. A cathartic medicine. Purgatives are divided, chiefly according to the severity of their action, into several classes—*drastic*, *simple*, *saline*, *hydrogogue*, *cholagogue*, and *laxative*. Among the *drastic* purgatives are colocynth, croton oil, jalap, scammony, and gamboge. The *simple* purgatives are aloes, castor oil, rhubarb, senna, etc. Under the head *saline* are magnesium sulphate, sodium sulphate, potassium citrate, potassium tartrate, and sodium phosphate. *Hydrogogues* include potassium bitartrate, elaterium, and gamboge. *Cholagogues* comprise calomel, blue pill, iridin, podophyllin, etc.

purgatol (pur'gat-ol). Purgatin.

purge (purj) [L. *purga're*]. 1. To relieve of fecal matter. 2. A purgative remedy or dose.

purgen (pur'jen). A name for phenolphthalein.

purgerine (pur'jer-in). A proprietary aromatic syrup of senna: laxative.

purging nut (purj'ing). See *Curcas*.

puriform (pu'rif-orm) [L. *pus* pus + *for'ma* form]. Resembling pus. The term is applied to the contents of cold abscesses which resemble pus.

purinase (pu'rín-ás). An enzyme which brings about changes, such as oxidation and diamination, in purines.

purine (pu'rin) [L. *pus*]. An organic compound, $C_5H_4N_4$, the fundamental form of the purine bases (q. v.) which are derived from it by substitution. *Methyl purines*, alkaloids formed from purine by substituting methyl groups, usually in

positions 1, 3, or 7. The principal ones are caffeine, which is 1, 3, 7-trimethyl purine and the dimethyl purines, theobromine (1, 3), and theophylline (3, 7). *Purine bases* or *purine bodies* are modified forms of purine found in the urine. Some of the oxypurines and amino-purines are constituents of or derived from nucleic acid, for example, 6-amino-purine is adenine, 6-oxy-purine is hypoxanthine, 2-amino 6-oxy-purine is guanine, 2, 6-dioxy-purine is xanthine and 2, 6, 8-trioxy-purine is uric acid. The purine bases are sometimes called *alloxur bases* or *bases*. **amino-p.**, a purine in which one or more amino groups have been substituted. **p. nuclease**, an enzyme which causes the hydrolysis of purine nucleotides so as to liberate the purine base. It has been found in the pancreas.

purinemia (pu-rin-e-me-ah) [*purine* + *αἷμα* blood]. The presence of purine bases in the blood.

purinemic (pu-rin-e-mik). Pertaining to or affected with purinemia.

purinometer (pu-rin-om'et-er) [*purine* + *μέτρον* measure]. An apparatus for estimating the quantity of purine bodies in the urine.

puritas (pu'rit-as). An antiseptic preparation of sodium borate, carbolic acid, eucalyptus, etc.

Purkinje's cells (pur-kin'jez) [Johannes Evangelista Purkinje, Hungarian physiologist, 1787-1850]. See *cell*. **P's fibers**, reticulated moniliform fibers in the subendocardial tissue. **P's figures**, sets of dark lines on a yellowish background, seen by candle light in the eye and produced by the retinal vessels. **P's vesicle**. See *vesicle*.

Purkinje-Sanson's images (pur-kin'je-san'sonz). See *image*.

puro (pu'ro). The expressed, concentrated, and sterilized juice of beef.

puroform (pu'ro-form). A proprietary antiseptic and disinfectant preparation.

purohepatitis (pu'ro-hep-at-i'tis) [*pus* + *hepatitis*]. Suppurative inflammation of the liver.

puromucous (pu-ro-mu'kus). Consisting of or containing pus and mucus; mucopurulent.

puron (pu'ron). A compound, $C_6H_5N_4O_2$, obtained by electrolysis of uric acid.

purolal (pu'ro-nal). A proprietary compound of acetanilid (97.6 per cent) and bismuth oxyiodide (2.4 per cent): antiseptic.

purple, visual (pur'pl). Same as *rhodopsin*. **Stewart's p.**, 1 grain of iodine in 1 oz. of petrolatum.

purpura (pur'pu-rah) [L. "purple"]. A disease characterized by the formation of purple patches on the skin and mucous membranes, due to subcutaneous extravasation of blood. **p. abdominalis**, Henoch's purpura. **p. angioneurotica**, a disorder marked by cutaneous hemorrhages, hyperesthesia, angioneurotic edema, and gastric crisis. **p. annularis telangiectodes**, a skin affection of young males marked by an eruption of the lower limbs below the knees, which is at first telangiectatic, then purpuric, and finally atrophic. The appearance of the eruption is preceded by rheumatic pains. **p. bullosa**, pemphigus haemorrhagicus. **p. fulminans**, a form of purpura marked by rapid development and great prostration, often resulting in death within twenty-four hours. **p. haemorrhagica**, a severe form of purpura with copious hemorrhages from the mucous membranes, marked diminution of the number of blood platelets, and severe constitutional symptoms. Called also *thrombocytopenic p.*, *morbis maculosus werlhofii*, *land scarry*, and *Werlhof's disease*. **Henoch's p.**, an obscure disease seen chiefly in children, marked by a purpuric eruption complicated with intestinal disturbances, such as pain, diarrhea, and vomiting, rheumatism and swelling of the joints, hemorrhages from mucous membranes, and often by splenomegaly. Called also *p. nervosa*. **p. iodica**, a purpuric eruption usually on the lower extremities, sometimes ac-

- companying the use of iodides. **Landouzy's p.**, a form with grave systemic disturbances. **p. maculo'sa**. Same as *acne scorbiculica*. **malig-nant p.**, cerebrospinal fever. **p. nervo'sa**. Same as *Henock's p.* **p. pulico'sa**, the formation of purplish spots, or *taches bleuâtres*, due to the bites of insects. **p. rheumatica**, purpura with severe pains and fever. Called also *peliosis rheumatica*. **p. seni'lis**, a purpuric eruption on the legs of old or debilitated persons. **p. simplex**, purpura with slight or trifling symptoms. **p. symptomat'ica**, a purpuric eruption seen in eruptive fevers. **thrombocytolytic p.** See *p. haemorrhagica*. **thrombocytopenic p.** See *p. haemorrhagica*. **p. ur'ticans**, purpura associated with the formation of wheals and with itching. **p. variolo'sa**, a form of purpura seen in smallpox. **vesical p.**, a hemorrhagic eruption on the mucous membrane of the bladder, occurring in Werlhof's disease.
- purpurate** (pur'pu-rāt). A salt of purpuric acid.
- purpuric** (pur-pu'rik). Of the nature of, pertaining to, or affected with, purpura.
- purpuriferous** (pur-pu-rif'er-us) [L. *purpura* purple + *fer're* to bear]. Producing a purple pigment
- purpurin** (pur'pu-rin). 1. Same as *uroerythrin*. 2. An acid dye, $C_6H_4(CO)_2.C_6H(OH)_3$: used as a nuclear stain.
- purpurinuria** (pur'pu-rin-u're-ah). The presence of uroerythrin in the urine; porphyrinuria.
- purpuriparous** (pur-pu-rip'ar-us) [L. *pur'pura* purple + *par'ere* to produce]. Same as *purpu-riferous*.
- purpurogenous** (pur-pu-roj'en-us) [L. *pur'pura* purple + *γεννᾶν* to produce]. Producing the visual purple.
- purring** (pur'ing). Having a tremulous quality, like the purr of a cat.
- pursianin** (pur-si'an-in). A brown, oily liquid glucoside from *Rham'nus purshia'na*: laxative.
- puru** (poo'roo). The native name in the Malay States for frambesia.
- purulence, purulency** (pu'ru-lens, pu'ru-len-se) [L. *purulen'tia*]. The condition or fact of being purulent.
- purulent** (pu'ru-lent) [L. *purulen'tus*]. Consisting of or containing pus: associated with the formation of or caused by pus.
- puruloid** (pu'ru-loid). Resembling pus; puriform.
- purupuru** (poo-roo-poo-roo'). A contagious skin disease endemic in parts of Brazil in which the skin gradually becomes whitened. It is believed to be of microbic origin.
- pus** (pus), pl. *pu'ra* [L. gen. *pu'ris*]. A liquid inflammation product made up of cells (leukocytes) and a thin fluid called liquor puris. **an-chovy sauce p.**, the brownish pus seen in amebic abscess of the liver. **blue p.**, pus with a bluish tint, produced by *Bacil'lus pyocyaneus*. **p. bo-num et laudab'ile**. See *laudable p.* **cheesy p.**, thick, nearly solid pus. **curdy p.**, pus mixed with cheesy flakes. **green p.**, pus having a greenish tint. **ichorous p.**, a thin, acid pus, often having an ill smell, secreted by unhealthy surfaces. **itch p.** See *psorinum*. **laudable p.**, **p. laudan'dum**, a creamy yellow, inodorous pus, secreted by a healthy granulating surface, and regarded as indicative of less danger than other varieties. **p. organisms**, micro-organisms chiefly found in the pus of furuncles; generally, *Staphylococ'cus pyog'enes-au'reus*. **p. pan**, a receptacle for escaping pus. **p. poultice**, a mass of pus formerly allowed to remain on a sore, with the idea that it was the natural dressing of such a lesion. **sanious p.**, bloody pus, often ichorous and ill smelling. **p. tube**. Same as *pyosalpinx*.
- Pusey's emulsion** (pu'zēz) [William Allen Pusey, American dermatologist, born 1865]. See under *emulsion*.
- pustula** (pus'tu-lah). Latin for *pus'tule*. **p. ma-lig'na**, anthrax.
- pustulant** (pus'tu-lant). 1. An agent that causes pustulation. 2. Causing pustulation.
- pustular** (pus'tu-lar). Pertaining to or of the nature of a pustule; consisting of pustules.
- pustulation** (pus-tu-la'shun). The formation of pustules.
- pustule** (pus'tūl) [L. *pus'tula*]. A small elevation of the cuticle filled with pus or lymph. **com-pound p.**, one that is made up of more than one chamber. **malignant p.**, true anthrax. **postmortem p.**, a pustule resulting from infection in handling a cadaver. **primary p.**, one formed without any previous lesion. **second-ary p.**, one which is preceded by a vesicle or papule. **simple p.**, one which consists of a single cavity.
- pustuliform** (pus'tu-lif-orm) [L. *pus'tula* pustule + *for'ma* shape]. Resembling a pustule.
- pustulocrustaceous** (pus'tu-lo-krus-ta'shus). Pustular and having a crust or scab.
- pustulo-ulcerating** (pus'tu-lo-ul'ser-a-ting). Pus-tular and ulcerating.
- putamen** (pu-ta'men) [L. "shell"]. [B N A] The outer and darker part of the lentiform (lenticular) nucleus.
- Putnam type** (put'nam) [James Jackson Putnam, Boston neurologist, born 1846]. See under *type*.
- putrefaction** (pu-tre-fak'shun) [L. *putrefac'tio*]. The decomposition of animal or vegetable mat-ters effected largely by the agency of micro-or-ganisms, and resulting in the production of var-ious solid, liquid, and gaseous matters, some of which have a foul odor. Among the products of putrefaction are amido-acids, fatty acids, pto-maines, the final decomposition of which results in the formation of ammonia and ammonium com-pounds, hydrogen, sulphureted hydrogen, merkap-tans, nitrogen, carbon dioxide, methane, and water.
- putrefactive** (pu-tre-fak'tiv). Pertaining to or of the nature of putrefaction.
- putrescence** (pu-tres'ens). Putridity; partial or complete rottenness.
- putrescent** (pu-tres'ent) [L. *putres'cens* decaying]. Rotting; undergoing putrefaction.
- putrescine** (pu-tres'in). A liquid, poisonous, and ill-smelling ptomaine, $NH_2(CH_2)_4NH_2$, or tetra-methylene-diamine, from decaying animal tissues and from cultures of the comma bacillus and the bacteria of the feces. It is produced from the amino-acid, ornithin, by the loss of CO_2 . It is thought to be one of the causes of the symptoms of cholera.
- putrid** (pu'trid) [L. *pu'tridus*]. Characterized by putrefaction; rotten or corrupt.
- putrilage** (pu'tril-āj) [L. *putrila'go*]. Putrescent or putrid matter.
- putromaine** (pu-tro-ma'in). Any poison produced by the decomposition of food within the living body.
- putty, Horsley's** (put'e). A compound of wax, petrolatum, and phenol: used in controlling hemor-rhage from the diploe.
- Puzos' method** (pu-zōz') [Nicholas Puzos, accouch-eur in Paris, 1686-1753]. See under *method*.
- pyaemia** (pi-e'me-ah). See *pyemia*.
- pyarthrosis** (pi-ar-thro'sis) [πύον pus + ἄρθρον joint]. Suppuration within a joint cavity.
- pyathea** (pi-ath'e-ah). See *penjavar yambi*.
- Pycnanthemum** (pik-nan'the-mum) [πυκνός dense + ἄνθεμον bloom]. A genus of labiate American plants, called *basil* and *mountain mint*: aromatic and carminative; resembling penny-royal and spearmint in taste and smell.

pynemia (pik-ne'me-ah). See *pyknemia*.

pycno-. For words thus beginning, see under *pykno-*.

pyecchysis (pi-ek'kis-is) [πύον pus + ἐκ out + χεῖν to pour]. The effusion of purulent matter.

pyelettasia (pi-el-ek-ta'se-ah). Pyelettasia.

pyelettasis (pi-el-ek'tas-is) [πύελος pelvis + ἔκτασις distention]. Dilatation of the renal pelvis.

pyelic (pi-el'ik). Pertaining to the pelvis of the kidney.

pyelitic (pi-e-lit'ik). Pertaining to or affected with pyelitis.

pyelitis (pi-el-i'tis) [πύελος pelvis]. Inflammation of the pelvis of the kidney. It may be due to renal calculus, to extension of inflammation from the bladder, or to stagnation of the urine. It is attended by pain and tenderness in the loins, irritability of the bladder, remittent fever, bloody or purulent urine, diarrhea, vomiting, and a peculiar pain on flexion of the thigh. **calculus p.**, that which is caused by calculi. **hemorrhagic p.**, that which is attended with hemorrhage. **suppurative p.**, a form with development of pus which causes abscess of the kidney, or pyonephrosis.

pyelocystitis (pi'el-o-sis-ti'tis) [πύελος pelvis + κύστις bladder + -itis inflammation]. Inflammation of the renal pelvis and of the bladder.

pyelocystostomosis (pi'el-o-sis'to-sto-mó'sis) [πύελος pelvis + κύστις bladder + στόμα mouth]. The surgical formation of a communication between the renal pelvis and the bladder.

pyelogram (pi'el-o-gram) [πύελος pelvis + γράμμα mark]. Pyelograph.

pyelograph (pi'el-o-graf). A roentgenogram of the kidney and ureter.

pyelography (pi-el-og'raf-e) [πύελος pelvis + γράφειν to draw]. Roentgenography of the kidney and ureter after the structures have been filled with a solution of silver salt.

pyelolithotomy (pi'el-o-lith-ot'o-me) [πύελος pelvis + λίθος stone + τομή cutting]. The operation of excising a renal calculus from the pelvis of the kidney.

pyelometer (pi-el-om'et-er) [πύελος pelvis + μέτρον measure]. Same as *pelvimeter*.

pyelometry (pi-el-om'et-re) [πύελος pelvis + μέτρον measure]. 1. Measurement of the renal pelvis. 2. Pelvimetry.

pyelon (pi'el-on) [πύελος pelvis]. A colloidal silver iodide preparation used as a contrast medium in pyelography.

pyelonephritis (pi'el-o-nef-ti'tis) [πύελος pelvis + νεφρός kidney + -itis inflammation]. Inflammation of the kidney and its pelvis. **p. bacillo'sa bo'vum**, an inflammatory purulent or diphtheritic inflammation of the renal pelvis in cows, usually occurring shortly after parturition. It is caused by a bacillus.

pyelonephrosis (pi'el-o-nef-ro'sis) [πύελος pelvis + νεφρός kidney]. Any disease of the kidney and its pelvis.

pyeloplasty (pi'el-o-plas-te) [πύελος pelvis + πλάσσειν to form]. A plastic operation on the pelvis of the kidney.

pyeloplication (pi'el-o-pli-ka'shun) [πύελος pelvis + L. *pli'ca* fold]. Reduction in size of a dilated renal pelvis by infolding its walls by Lembert sutures.

pyeloscopy (pi-el-os'ko-pe) [πύελος pelvis + σκοπεῖν to view]. Roentgen-ray examination of the pelvis of the kidney.

pyelotomy (pi-el-ot'o-me) [πύελος pelvis + τομή cutting]. Incision of the pelvis of the kidney.

pyelovenous back flow (pi'el-o-ve'nus). The phenomenon of drainage from the pelvis of the kidney into the venous system under certain conditions of back pressure.

pyemesis (pi-em'es-is) [πύον pus + ἔμεσις vomit-ing]. Vomiting of purulent matter.

pyemia, pyaemia (pi-e'me-ah) [πύον pus + αἷμα blood]. A general septicemia in which secondary foci of suppuration occur and multiple abscesses are formed. The condition is marked by fever, chills, sweating, jaundice, and abscess in various parts of the body. Called also *metastatic infection*. **arterial p.**, a form due to the dissemination of emboli from cardiac thrombosis. **cryptogenic p.**, that in which the source of infection is in a deep tissue. **otogenous p.**, that which originates in disease of the ear. **portal p.**, suppurative pyelephlebitis.

pyemic (pi-e'mik). Pertaining to or marked by pyemia.

pyemid (pi-e'mid). Any metastatic skin affection developing in the course of pyemia.

pyencephalus (pi-en-sef'al-us) [πύον pus + ἐγκέφαλος brain]. Abscess of the brain.

pyenin (pi'en-in). Paraneuclein.

pyesis (pi-e'sis). Same as *pyosis*.

pygal (pi'gal) [πυγή rump]. Pertaining to the buttocks.

pygalgia (pi-gal'je-ah) [πυγή rump + ἄλγος pain]. Pain in the buttocks.

Pygiopsylla aha'lae. The common rat flea of China and Japan.

pygodidymus (pi-go-did'im-us) [πυγή rump + δίδυμος twin]. A monster fetus with double hips and pelvis.

pygomelus (pi-gom'el-us) [πυγή rump + μέλος limb]. A monster fetus with a supernumerary limb or limbs attached to or near the buttock.

pygopagus (pi-go'p-ag-us) [πυγή rump + πηγ-νύσαι to fix]. A twin fetal monster joined at the buttocks.

pyic (pi'ik). Of or pertaining to pus.

pyin (pi'in) [πύον pus]. An albuminoid mucus-like substance found in pus, and separated from it by adding sodium chloride and filtering.

pyknemia (pik-ne'me-ah) [πυκνός thick + αἷμα blood]. Thickening of the blood.

pyknic (pik'nik) [πυκνός thick]. Having a short, thick, stocky build.

pyknocardia (pik-no-kar'de-ah) [πυκνός frequent + καρδιά heart]. Same as *tachycardia*.

pykno-epilepsy (pik-no-ep'il-ep-se). Pyknolepsy.

pyknohemia (pik-no-he'me-ah). Pyknemia.

pyknolepsy (pik-no-lep-se) [πυκνός frequent + ἐpilepsy]. Recurring epileptiform attacks in children, resembling petit mal, but not of an epileptic nature.

pyknometer (pik-nom'et-er) [πυκνός thick + μέτρον measure]. 1. An instrument for measuring the thickness of parts of objects. 2. An instrument for determining the specific gravity of the urine.

pyknomorphic, pyknomorphous (pik-no-mor'fik, pik-no-mor'fus) [πυκνός compact + μορφή form]. Having the stainable elements compactly arranged; a term applied to certain nerve cells.

pyknophrasia (pik-no-fra'ze-ah) [πυκνός thick + φράσις speech]. Thickness of speech.

pyknosis (pik-no'sis) [πύκνωσις condensation]. A thickening; especially degeneration of a cell in which the protoplasmic substance becomes more dense and the size of the cell smaller.

pyknosphygmia (pik-no-sfig'me-ah) [πυκνός frequent + σφυγμός pulse]. Same as *tachycardia*.

pyknotic (pik-not'ik) [πυκνωτικός]. 1. Serving to close the pores. 2. Pertaining to pyknosis.

pyla (pi'lah) [πύλη gate]. The passage from the third ventricle to the sylvian aqueduct.

pylar (pi'lar). Pertaining to the pyla.

pylemphraxis (pi-lem-fraks'is) [πύλη gate + ἔμφραξις stoppage]. Obstruction of the portal vein.

pylephlebotasis (pi'le-fle-bek'tas-is) [πύλη gate + φλέψ vein + ἔκτασις dilatation]. Dilatation of the portal vein.

pylephlebitis (pi'le-fle-bi'tis) [πύλη gate + φλέψ vein + -itis inflammation]. Inflammation of the portal vein. It usually results from intestinal disease. Suppurative pylephlebitis is marked by symptoms of pyemia. **adhesive p.**, inflammation of the portal vein producing thrombosis; pylethrombosis.

pylethrombophlebitis (pi-le-throm'bo-fleb-i'tis) [πύλη gate + θρόμβωσις thrombosis + φλέψ vein + -itis inflammation]. Thrombosis and inflammation of the portal vein.

pylethrombosis (pi'le-throm-bo'sis) [πύλη gate + thrombosis]. Thrombosis of the portal vein.

pylic (pi'lik) [πύλη gate]. Pertaining to the portal vein.

pylometer (pi-lom'et-er) [πύλη gate + μέτρον measure]. An instrument for measuring obstruction at the entrance of the bladder.

pylon (pi'lon). A temporary artificial leg.

pyloralgia (pi-lo-ral'je-ah) [πυλωρός pylorus + ἄλγος pain]. Pain in the region of the pylorus.

pylorectomy (pi-lo-rek'to-me) [πυλωρός pylorus + ἐκτομή excision]. Excision of the pylorus.

pyloric (pi-lor'ik). Pertaining to the pylorus.

pyloristhenosis (pi-lor'is-ten-o'sis) [πυλωρός pylorus + στένωσις narrowing]. Stenosis, or narrowing, of the caliber of the pylorus.

pyloritis (pi-lo-ri'tis). Inflammation of the pylorus.

pylorodilator (pi-lo'ro-di-la-tor). An instrument for dilating the pylorus for pylorospasm or stricture.

pylorodiosis (pi-lo'ro-di-o'sis) [πυλωρός pylorus + δίωσις pushing asunder]. The operation of dilating a stricture of the pylorus by the fingers, which are either inserted through a gastrotomy incision (*Loreta's method*) or invaginated in the anterior stomach wall and thrust through the pyloric canal (*Hahn's method*).

pyloroduodenitis (pi-lor'o-du-o-den-i'tis). Inflammation of the pyloric and duodenal mucosa.

pylorogastrectomy (pi-lor'o-gas-trek'to-me). Excision of the pyloric pocket in cases of bilocular stomach; excision of the pyloric portion of the stomach.

pyloromyotomy (pi-lor'o-mi-o'to-me). Longitudinal incision and suture of the pyloric sphincter for pylorospasm.

pyloroplasty (pi-lo-ro-plas-te) [πυλωρός pylorus + πλασσειν to form]. A plastic operation for the repair of a lesion of the pylorus; especially the operation of enlarging the caliber of a strictured pylorus by dividing the strictured portion longitudinally, stretching the pylorus so that the longitudinal cut becomes a horizontal one, and stitching the edges of the wound in its new position.

pyloroptosis (pi'lor-op-to'sis) [πυλωρός pylorus + πτώσις falling]. Displacement of the pyloric end of the stomach.

pyloroscopy (pi-lor-os'ko-pe) [πυλωρός pylorus + σκοπεῖν to view]. Inspection of the pylorus.

pylorospasm (pi-lo-ro-spazm) [πυλωρός pylorus + σπασμός spasm]. Spasm of the pylorus or of the pyloric portion of the stomach.

pylorostenosis. Same as *pyloristhenosis*.

pylorostomy (pi-lor-os-to-me) [πυλωρός pylorus + στόμα mouth]. The formation of an opening through the abdominal wall into the pyloric end of the stomach for alimentary purposes.

pylorotomy (pi-lor-o'to-me) [πυλωρός pylorus + τομή cut]. Rammstedt's operation of incising the submucosa of the pylorus for hypertrophic stenosis.

pylorus (pi-lo'rus) [πυλωρός; πύλη gate + οἶρος guard]. The distal or duodenal aperture of the stomach; the aperture by which the stomach

contents enter into the duodenum. It is surrounded by a fold of mucous membrane which contains circular muscular fibers.

pyo- [πύον pus]. A prefix signifying relation to pus.

pyocoele (pi'o-sēl) [πύον pus + κήλη hernia]. Distention of a cavity or tube with pus due to retention; as an accumulation of pus in the scrotum.

pyocelia (pi-o-se'le-ah) [πύον pus + κοιλία cavity]. Pus in the abdominal cavity.

pyocephalus (pi-o-sef'al-us) [πύον pus + κεφαλή head]. The presence of purulent fluid in the cerebral ventricles.

pyochezia (pi-o-ke'ze-ah) [πύον pus + χέζειν to defecate]. Presence of pus in the stools.

pyococcic (pi-o-kok'sik). Produced by pus-forming cocci.

pyococcus (pi-o-kok'us). Any pus-forming coccus.

pyocolpocoele (pi-o-kol'po-sēl) [πύον pus + κόλπος vagina + κήλη tumor]. A tumor of the vagina containing pus.

pyocolpos (pi-o-kol'pos) [πύον pus + κόλπος vagina]. A collection of pus within the vagina.

pyoctanin (pi-ok'tan-in). See *pyoektanin*.

pyoculture (pi'o-kul-tür) [πύον pus + culture]. A method of making comparative bacteriological tests of pus from a suppurating lesion. Pus is collected from the wound in a pipet and part of it is plated on peptonized bouillon, the remainder being left in the pipet; both are placed in the incubator and examined after twenty-four hours. If there is more abundant development of bacteria in the pus than in the culture the pyoculture is *positive*, and indicates a struggle between the body and the invading bacteria which needs therapeutical aid from without.

pyocyanease (pi-o-si'an-ās). Any enzyme derived from cultures of *Pseudomonas pyocyaneus*. It is destructive to *Pseudomonas pyocyaneus*, and the bacilli of anthrax, diphtheria, typhoid, and plague. Its injection is said to confer immunity against anthrax.

pyocyanic (pi-o-si-an'ik) [πύον pus + κύανος blue]. Pertaining to blue pus or to the *Pseudomonas pyocyaneus*.

pyocyanine (pi-o-si'an-in) [πύον pus + κύανος blue]. A ptomaine, $C_{14}H_{14}NO_6$, the coloring matter of blue pus, produced by the *Pseudomonas pyocyaneus*.

pyocyanobacterin (pi-o-si'an-o-bak'ter-in). See *bacterial vaccine*, under *vaccine*.

pyocyanogenic (pi'o-si-an-o-jen'ik). Producing pyocyanine.

pyocyanolysine (pi'o-si-an-ol'is-in). A lysine from cultures of *Bacillus pyocyaneus*.

pyocyst (pi'o-sist) [πύον pus + cyst]. A cyst containing pus.

pyocyte (pi'o-sit) [πύον pus + κύτος cell]. A pus corpuscle. It is regarded as a leukocyte.

pyodermatitis (pi'o-der-mat-i'tis). Dermatitis from pyogenic infection.

pyodermatosis (pi'o-der-mat-o'sis) [πύον pus + dermatosis]. Any skin disease of pyogenic origin.

pyoderma (pi-o-der'me-ah). Any purulent skin disease due to a staphylococcus or streptococcus. **p. circumscrip'ta**, an infected scratch of the skin.

pyodermatitis (pi'o-der-mi'tis). Any pustular skin inflammation; a pyoderma. **p. vegetans**. Same as *dermatitis vegetans*.

pyofecia (pi-o-fe'se-ah) [πύον pus + feces]. Pus in the feces.

pyogenesis (pi-o-jen'es-is) [πύον pus + γένεσις production]. The formation of pus.

pyogenic (pi-o-gen'ik). Producing pus.

pyogenin (pi-oj'en-in). A compound, $C_{63}H_{128}N_2O_{19}$, derived from the body of pus cells.

pyogenic (pi-ôj'en-us). Caused by pus.

pyohemia, pyohaemia (pi-o-he'me-ah). Same as *pyemia*.

pyohemothorax (pi'ô-hem-o-tho'raks) [πύον pus + αἷμα blood + θώραξ chest]. A collection of pus and blood in the pleural cavity.

pyoid (pi'oid) [πύον pus + εἶδος form]. 1. Resembling pus. 2. A puslike substance from raw or granulating surfaces, but free from bacteria and nontoxic.

pyoktanin (pi-ok'tan-in) [πύον pus + κτείνω to kill]. A trade name for methyl violet. It is an indicator with a pH range of from 0.1 to 3.2, being blue or green at 0.1 and violet at 3.2. It is used as a stain in microscopy. It is employed as a germicide in suppuration of the conjunctiva, lacrimal apparatus, nose, throat, and ear; also in cystitis, gonorrhea, diphtheria, etc.; in 1 : 1000 solution. Called also *blue p*. Dose, 7½–15 grains (0.5–1 Gm.). **ethyl p.**, a pyoktanin said to be a far more active antiseptic than either of the other varieties. **yellow p.**, auramine.

pyolabyrinthitis (pi'ô-lab-ir-in-thi'tis) [πύον pus + labyrinth]. Suppuration in the labyrinth of the ear.

pyoluene (pi-o-lu'ën). Oxymethylallylsulphocarbamide: used as a bactericide.

pyometra (pi-o-me'trah) [πύον pus + μήτρα womb]. An accumulation of pus within the uterus.

pyometritis (pi'ô-met-ri'tis) [see *pyometra*]. Suppurative inflammation of the uterus.

pyometrium (pi-o-me'tre-um). Same as *pyometra*.

pyonephritis (pi'ô-nef-ri'tis) [πύον pus + nephritis]. Purulent inflammation of the kidney.

pyonephrolithiasis (pi'ô-nef-ro-lith-i'as-is) [πύον pus + νεφρός kidney + λίθος stone]. The presence of stones and pus in the kidney.

pyonephrosis (pi'ô-nef-ro'sis) [πύον pus + νεφρός kidney]. The presence of pus in the pelvis of the kidney.

pyo-ovarium (pi'ô-o-va're-um). Abscess of an ovary.

pyopericarditis (pi'ô-per-ik-ar-di'tis). Purulent inflammation of the pericardium.

pyopericardium (pi'ô-per-ik-ar-de-um) [πύον pus + pericardium]. The presence of pus in the pericardium.

pyoperitoneum (pi'ô-per-it-o-ne'um) [πύον pus + περιτόνιον]. Pus in the peritoneal cavity.

pyoperitonitis (pi'ô-per-it-o-ni'tis). Suppurative inflammation of the peritoneum.

pyophagia (pi-o-fa'je-ah) [πύον pus + φαγείν to eat]. The swallowing of pus.

pyophthalmia, pyophthalmitis (pi-of-thal'me-ah, pi'of-thal-mi'tis) [πύον pus + οφθαλμίτις]. Purulent inflammation of the eye.

pyophylactic (pi'ô-fi-lak'tik) [πύον pus + φυλακτικός guarding]. Serving as a defense against purulent infection. See *membrane*.

pyophysometra (pi'ô-fi-so-me'trah) [πύον pus + φύσα air + μήτρα womb]. A collection of pus and gas in the uterus.

pyoplania (pi-o-pla'ne-ah) [πύον pus + πλάνος wandering]. Wandering of pus from one part to another.

pyopneumocholecystitis (pi'ô-nu'mo-ko-le-sis-ti'tis) [πύον pus + πνεύμα air + cholecyst]. Distention of the gallbladder with pus and gas.

pyopneumocyst (pi-o-nu'mo-sist) [πύον pus + πνεύμα air + cyst]. A cyst containing pus and gas.

pyopneumopericardium (pi'ô-nu'mo-per-e-ka'r-de-um) [πύον pus + πνεύμα air + pericardium]. The presence of pus and gas in the pericardium.

pyopneumoperitoneum (pi'ô-nu'mo-per-it-o-ne'um). The presence of pus and gas in the peritoneal cavity.

pyopneumoperitonitis (pi'ô-nu'mo-per-e-to-ni'tis) [πύον pus + πνεύμα air + peritonitis]. Peritonitis with the presence of pus and gas in the peritoneal cavity.

pyopneumothorax (pi'ô-nu-mo-tho'raks) [πύον pus + πνεύμα air + θώραξ chest]. A collection of pus and air or gas in the pleural cavity.

pyopoesis (pi'ô-poi-e'sis) [πύον pus + ποιέω to make]. The formation of pus.

pyopoietic (pi-o-poi-et'ik). Producing pus.

pyoptysis (pi-op'tis-is) [πύον pus + πτύσις spitting]. Spitting of purulent matter.

pyopyelectasis (pi'ô-pi-el-ek'tas-is) [πύον pus + πύελος pelvis + έκτασις dilatation]. Dilatation of the renal pelvis with purulent fluid.

pyorrhea, pyorrhoea (pi-or-e'ah) [πύον pus + ῥοία flow]. A discharge of pus. **p. alveolaris**, a purulent inflammation of the dental periosteum, with progressive necrosis of the alveoli and looseness of the teeth (Fauchard, 1746). Called also *Riggs' disease*, *gingivitis expulsiua*, *cementoepiostitis*, and *gingivoparacementitis*.

pyorrheal (pi-o-re'al). Pertaining to pyorrhea, especially pyorrhea alveolaris.

pyorrhocide (pi-or'o-sid). A proprietary preparation for the treatment of pyorrhea alveolaris.

pyorubin (pi-o-ru'bin). A bright-red, water-soluble, nonfluorescent pigment produced by *Pseudomonas* (Bacillus) pyocyaneus.

pyosalpingitis (pi'ô-sal-pin-j'i'tis) [πύον pus + σάλπιγξ tube]. Purulent salpingitis.

pyosalpingo-oophoritis (pi'ô-sal-pin'go-o'of-ori'tis). Inflammation of the ovary and oviduct, with the formation and accumulation of pus.

pyosalpingo-oothecitis (pi'ô-sal-pin'go-o'oth-e-si'tis). Pyosalpingo-oophoritis.

pyosalpinx (pi-o-sal'pinks) [πύον pus + σάλπιγξ tube]. A collection of pus in an oviduct.

pyosapremia, pyosapraemia (pi'ô-sap-re'me-ah) [πύον pus + σαπρός rotten + αἷμα blood]. Infection of the blood with purulent matter.

pyoseptemia, pyosepthaemia (pi'ô-sep-the'me-ah). Same as *pyosepticemia* or *septicopyemia*.

pyosepticemia, pyosepticæmia (pi'ô-sep-tis-e'me-ah). Pyemia combined with septicemia.

pyoserculture (pi-o-se'ro-kul-tur). A culture made by implanting pus into blood serum.

pyosin (pi'o-sin). A compound, C₂₇H₁₁₀N₂O₁₅, derived from the plasma of pus cells.

pyosis (pi-o'sis) [πύον pus]. Suppuration. **Corlett's p.**, impetigo contagiosa bullosa. **Man-son's p.**, pemphigus contagiosus. **p. palma'ris**, a disease of children in the East Indies marked by the formation on the palms of numerous pustules. **p. trop'ica**, a disease occurring in Ceylon characterized by yellow or blackish lesions on the body, covered with a crust, which on removal leave a granulating ulcer. Called also *Kurumegala ulcer*.

pyospermia (pi-o-sper'me-ah) [πύον pus + σπέρμα seed]. Presence of pus in the semen.

pyostatic (pi-o-stat'ik) [πύον pus + στατικός halting]. 1. Arresting suppuration. 2. An agent that arrests the formation of pus.

pyotherapy (pi-o-ther'ap-e) [πύον pus + θεραπεία treatment]. Treatment with pus.

pyothorax (pi-o-tho'raks) [πύον pus + θώραξ chest]. Empyema; an accumulation of pus in the thorax.

pyotoxinemia (pi-o-tok-sin-e'me-ah) [πύον pus + toxín + αἷμα blood]. Presence in the blood of the toxins of pus-forming organisms.

pyoureter (pi'ô-u-re'ter) [πύον pus + ureter]. An accumulation of pus in a ureter.

pyovesiculosis (pi'ô-ves-ik-u-lo'sis). A closed accumulation of pus in the seminal vesicles.

pyoxanthine (pi-o-zan'thin) [πύον pus + ξανθός

- yellow]. A brownish-red pigment derivable by oxidation from pyocyanine.
- pyoxanthose** (pi-o-zan'thōs) [πύον pus + ξανθός yellow]. A yellow pigment produced by the oxidation of pyocyanine in blue pus exposed to air.
- pyracetosalyl** (pi-ras''e-to-sal'il). A preparation of antipyrine and acetylsalicylic acid: antineuralgic. Dose, 8 grains (0.5 Gm.).
- pyraconitine** (pi-rak-on'it-in). A compound derived from aconitine, resembling the latter in physiologic action.
- pyraloxin** (pir-al-oks'in). Pyrogallol oxide; a brown-black powder: used in ointments in various skin diseases. Internal dose, $7\frac{1}{2}$ -15 grains (0.5-1 Gm.).
- pyramid** (pi'ram-id) [πυραμῖς]. 1. Any cone-shaped eminence upon an organ. 2. The petrous bone. 3. An eminence on the ventral surface of the medulla oblongata produced by the pyramidal tract. **anterior p's.** See *p's of the medulla oblongata*. **p. of the cerebellum**, a conical projection, the central portion of the inferior vermiciform process. **p. of Ferrein**, any one of the intracortical prolongations of the malpighian pyramids. **Lalouette's p.**, the third lobe of the thyroid body; an occasional prolongation of the upper portion of the thyroid gland, usually on the left of the median line. **p. of light**, a triangular reflection seen upon the membrana tympani. **Malacarné's p.**, the posterior end of the pyramid of the cerebellum. **p. of Malpighi**. See *renal p.* **p's of the medulla oblongata**, the two *anterior* and two *posterior* columns within the medulla oblongata: the posterior ones are the gracile fasciculi. **posterior p's.** See *p's of the medulla oblongata*. **renal p.**, the conical masses which make up the medullary substance of the kidney. They contain the secreting apparatus and the tubules: called also *malpighian p.* **p. of the thyroid**, the third lobe of the thyroid body; Lalouette's pyramid. **p. of the tympanum**, the hollow elevation in the inner wall of the middle ear which contains the stapedius. **p. of vermis**, the largest prominence of the inferior vermis, situated between the tuber behind and the uvula in front. **p. of the vestibule**, the anterior end of the crista vestibuli. **Wistar's p's**, the sphenoid cornua, or sphenoturbinial bones.
- pyramidal** (pi-ram'id-al) [L. *pyramida*lis]. Shaped like a pyramid.
- pyramidale, os pyramidale** (pi'r'am-id-a'le). The pyramidal bone; the cuneiform bone of the carpus.
- pyramidalis** (pi'r'am-id-a'lis). See *muscles, table of*.
- pyramidon** (pi-r'am'id-on). A proprietary brand of amidopyrine. **p. bicamphorate** is used in doses of 1-5 grains (0.06-0.3 Gm.). **p. test.** See under *tests*.
- pyramis** (pi'ram-is) [L.]. A pyramid. See *pyramid*.
- pyran** (pi'ran). An antineuralgic and antirheumatic preparation of benzoic acid, salicylic acid, and thymol.
- pyrantin** (pi-ran'tin). An antipyretic agent, ethoxyphenylsuccinimid, $(\text{CH}_2\text{CO})_2\text{N} \cdot \text{C}_6\text{H}_4 \cdot \text{O} \cdot \text{C}_2\text{H}_5$, in colorless, shining prisms. Daily dose, 15-45 grains (1-3 Gm.).
- pyranum** (pi'r'an-um). Pyrenol.
- pyrazin** (pi'ra-zin). A volatile compound, $\text{N}(\text{CH}_3\text{CH}_2)_2\text{N}$, with the odor of heliotrope.
- pyrazol** (pi'ra-zol). A crystalline basic substance, $\text{C}_3\text{H}_4\text{N}_2$; its derivatives are paralyzants of the central nervous system. See *phenylmethylpyrazol*.
- pyrazolon** (pi-raz'o-lon). An antipyretic substance, $\text{CO} \cdot \text{CH}_2 \cdot \text{CH} \cdot \text{N} \cdot \text{NH}$, resembling antipyrine, but less effective.
- pyrexia** (pi-re'me-ah) [πῦρ fire + αἷμα blood]. The presence of a normal amount of carbonaceous matter in the blood.
- pyrenemia, pyrenaemia** (pi-re-ne'me-ah) [πυρήν fruit stone + αἷμα blood]. The presence of nucleated red corpuscles in the blood.
- pyrenin** (pi'ren-in) [πυρήν fruit stone]. Same as *paranuclein*.
- pyrenoid** (pi'ren-oid) [πυρήν fruit stone + εἶδος form]. One of the refringent bodies seen in the chromatophores of certain protozoa; amyloplast.
- pyrenol** (pi're-nol). A white powder, sodium thymol-benzoyl-oxylbenzoate, used in respiratory diseases and in rheumatism. Dose, 10-20 grains (0.65-1.32 Gm.).
- pyrenolysis** (pi-re-nol'is-is) [πυρήν fruit stone + λύσις solution]. The breaking down of the nucleolus of a cell.
- pyrethrapy** (pi-re-ther'ap-e) [πῦρ fever + therapē]. See *pyrethotherapy*.
- pyrethrine** (pi-re'thrin). A principle isolated from Pyrethrum and claimed to have anthelmintic powers.
- pyrethron** (pi'reth-ron). A neutral ester from Pyrethrum.
- Pyrethrum** (pi-re'thrum) [πύρεθρον]. A genus of composite-flowered plants. The root of *Anacyclus pyrethrum*, or pellitory, is sedative and sialogogue, and is used in neuralgia, toothache, and headache. The powdered flowers (*pyrethri flores*) of *P. carneum* and *P. roseum* furnish Persian insect powder; those of *Chrysanthemum cinerariifolium* furnish Dalmatian insect powder. *P. parthenium*, or feverfew, is a bitter tonic, and is used like camomile. Dose, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.).
- pyretic** (pi-ret'ik) [πυρετός fever]. Pertaining to or of the nature of fever.
- pyreticosis** (pi'ret-ik-o'sis). Any febrile affection.
- pyretin** (pi-ret-in). A proprietary analgesic and antipyretic compound, $\text{C}_{17}\text{H}_{18}\text{NaBrN}_2$. Dose, 3-8 grains (0.194-0.518 Gm.).
- pyretogen** (pi-ret'o-jen). A substance which excites fever.
- pyretogenesis** (pi'ret-o-jen'es-is) [πυρετός fever + γένεσις production]. The origin and causation of fever.
- pyretogenetic, pyretogenic** (pi'ret-o-jen-et'ik, pi'ret-o-jen'ik). Same as *pyretogenous*.
- pyretogenin** (pi-re-toj'en-in) [πυρετός fever + γεννᾶν to generate]. A base, derivable from certain bacterial cultures: said to produce fever in animals when injected into them.
- pyretogenous** (pi-ret'o-jen-us). Producing or causing fever.
- pyretography** (pi-ret-og'ra-fe) [πυρετός fever + γράφειν to write]. A description of fever.
- pyretology** (pi-ret-ol'o-je) [πυρετός fever + λόγος discourse]. The sum of what is known regarding fevers; the science of fevers.
- pyretolysis** (pi-ret-ol'is-is) [πυρετός fever + λύσις loosing]. 1. Reduction of fever. 2. Lysis which is hastened by fever.
- Pyretophorus** (pi-re-tof'o-rus). A genus of mosquitoes. *P. costalis* transmits malaria and filariasis in Africa.
- pyrethotherapy** (pi're-to-ther'ap-e) [πυρετός fever + θεραπεία treatment]. Treatment of a disease by raising the patient's temperature, especially by means of injecting fever producing vaccines.
- pyretotyphosis** (pi'ret-o-ti-to'sis) [πυρετός fever + τύφος delirium]. The delirium of fever.
- pyrexia** (pi-reks'e-ah), pl. *pyrex'iae* [πυρέσσειν to be feverish]. A fever, or a febrile condition; abnormal elevation of the body temperature. **Pel-Ebstein p.** See *Pel-Ebstein symptom*, under *symptom*.
- pyrexial, pyrexie** (pi-reks'e-al, pi-reks'ik). Pertaining to pyrexia; febrile.
- pyrexia** (pi'reks-e). Pyrexia.

pyricit (pir'is-ĭt). A grayish powder, a mixture of sodium bisulphate and borofluoride, used as a sterilizing mixture for apparatus, vessels, etc.

pyridina (pir-id-i'nah). Pyridine.

pyridine (pir'id-in). 1. A colorless, liquid, basic coal tar derivative, $(\text{CH}_5)_3\text{N}$: derived also from tobacco and various organic matters. It is an antispasmodic, cardiac stimulant, and antiseptic, and has been used in asthma by inhalation, in diphtheria, and in gonorrhea. Dose, 2-10 minims (0.133-0.666 cc.). 2. Any one of a large group of substances homologous with normal pyridine. **p. tannate** is used as an intestinal astringent and uric acid solvent.

pyridium (pi-rid'e-um). A proprietary urinary antiseptic.

pyridizin (pi-rid'iz-in). An isomeric variety of pyrimidin.

pyriform (pir'if-orm) [L. *pyriformis*; *pyrus* pear + *for'ma* shape]. Pear shaped.

pyriformis (pir-if-or'mis) [L. "pear-shaped"]. The pyramidalis muscle. See *muscles*, table of.

pyrimidin (pi-rim'id-in). An organic compound, a metadiazin, $\text{C}_4\text{H}_4\text{N}_2$, which is the fundamental form of the pyrimidin bases. These are mostly oxy or amino derivatives, for example, 2, 6-dioxy-pyrimidin is uracil, 2-oxy, 6-aminopyrimidin is cytosin and 2, 6-dioxy, 5 methyl pyrimidin is thymine. Some of these are constituents of nucleic acid.

pyro- [*πῦρ* fire]. A prefix meaning fire or heat; in chemistry, produced by heating.

pyro-arsenic acid (pi'r'o-ar-sen'ik). See *acid*.

pyrobetulin (pi-ro-bet'u-lin). A patented preparation of the bark of white birch (*Bet'ula al'ba*), to be burned in disinfectant pastils.

pyroborate (pi-ro-bo'rāt). Any salt of pyroboric acid.

pyroboric acid (pi-ro-bor'ik). See *acid*.

pyrocain (pi'r'o-ka-in). Guaiacol benzylic ester, $\text{C}_6\text{H}_4(\text{O}.\text{CH}_3).\text{OCH}_2.\text{C}_6\text{H}_5$, a colorless, crystalline substance: used by cataphoresis to produce local anesthesia.

pyrocatechin (pi-ro-kat'ek-in) [*πῦρ* fire + *catechu*]. Oxyphecol; a crystallizable substance, $\text{C}_6\text{H}_4(\text{OH})_2$, obtained by distilling catechu, etc. and sometimes found in the urine. It is an antipyretic, and is used like resorcinol. Dose, 1-2 grains (0.066-0.13 Gm.). Called also *catechol*.

pyrocatechinuria (pi-ro-kat'ek-in-u-re'ah) [*pyrocatechin* + *ούρυν* urine]. The occurrence of pyrocatechin in the urine. Called also *brenscatechinuria*.

pyroextrin (pi-ro-deks'trin). A brown, tasteless substance produced by the action of heat upon starch.

pyrodine (pir'o-din) [*πῦρ* fire]. A crystalline, poisonous compound, acetyl phenylhydrazine, $\text{C}_6\text{H}_5.\text{NH}.\text{NH}.\text{CO}.\text{CH}_3$: used as an antipyretic and like chrysarobin in skin diseases. Dose, $\frac{1}{2}$ -3 grains (0.033-0.2 Gm.). See also *hydracelin*.

pyroferin (pi-ro-fer'in). A tonic preparation of iron pyrophosphate, phosphoric acid, and strychnine.

pyrofistine (pi-ro-fis'tin). A proprietary antiseptic dressing paste.

pyroform (pi'r'o-form). A compound of bismuth oxyiodide and pyrogallol: used in skin diseases.

pyrogallic acid (pi-ro-gal'ik). See *pyrogallol*.

pyrogallol (pi-ro-gal'ol). Pyrogallic acid, $\text{C}_6\text{H}_3(\text{OH})_3$, or trioxybenzene, a poisonous solid product of the dry distillation of gallic acid, acting by causing destruction of the blood corpuscles. It is used as a reducing agent and in skin diseases.

pyrogen (pi'r'o-jen) [*πῦρ* fire + *γεν-* to produce]. A fever-producing substance; a hypothetical substance believed to exist in bacteria and to cause fever when present in the body.

pyrogenetic (pi'r'o-jen-et'ik). Pyrogenic.

pyrogenic (pi-ro-jen'ik) [*πῦρ* fire + *γεννᾶν* to produce]. Inducing fever; also caused by or due to fever.

pyrogenous (pi-roj'en-us) [see *pyrogenic*]. Producing fever.

pyrojapconitine (pi'r'o-jap-ak-on'it-in). An alkaloid, $\text{C}_{32}\text{H}_{48}\text{NO}_2$, formed by heating japconitine.

pyrolagnia (pi-ro-lag'ne-ah) [*πῦρ* fire + *λαγνεία* dust]. Pyromania associated with sexual gratification.

pyroigneous (pi-ro-lig'ne-us) [*πῦρ* fire + *L. lignum* wood]. Pertaining to the destructive distillation of wood. **p. acid**, wood vinegar.

pyrolin (pi'r'o-lin). A disinfectant preparation of magnesium acetate.

pyrolysis (pi-rol'is-is) [*πῦρ* fire + *λύσις* solution]. Decomposition of organic substances under the influence of a rise in temperature.

pyromania (pi-ro-ma'ne-ah) [*πῦρ* fire + *μανία* madness]. An insane propensity for incendiarism; also an insane desire to visit fires.

pyrometer (pi-rom'et-er) [*πῦρ* fire + *μέτρον* measure]. An instrument for measuring the intensity of heat too great for the use of a thermometer.

pyrone (pi'rōn). A principle, $\text{CO}(\text{CH})_4\text{O}$, found in opium, from which several other constituents are derived by substitution.

pyronine (pi'r'o-nin). A dye used in histology. The pyronines are methylated diamine xanthines. **p. B**, a basic dye, the tetra-ethyl-pyronine chloride, $(\text{C}_2\text{H}_5)_4\text{N}.\text{C}_6\text{H}_3(\text{O})\text{CH}.\text{C}_6\text{H}_3.\text{N}(\text{C}_2\text{H}_5)_2\text{Cl}$. **p. G**, a basic dye, the tetra-methyl-pyronine chloride, $(\text{CH}_3)_4\text{N}.\text{C}_6\text{H}_3(\text{O})\text{CH}.\text{C}_6\text{H}_3.\text{N}(\text{CH}_3)_2\text{Cl}$.

pyronixis (pi-ro-niks'is) [*πῦρ* fire + *νύξις* piercing]. Same as *igni-puncture*.

pyrophobia (pi-ro-fō'be-ah) [*πῦρ* fire + *φόβος* fear]. Insane dread of fire.

pyrophosphate (pi-ro-fos'fāt). Any salt of pyrophosphoric acid.

pyrophosphoric acid (pi'r'o-fos-for'ik). See under *acid*.

Pyroplasma (pi-ro-plaz'mah). Piroplasma.

pyropuncture (pi'r'o-punk-chūr) [*πῦρ* fire + *puncture*]. Puncture with hot needles.

pyrosal (pi'r'o-sal). Antipyrine acetyl salicylate, $\text{C}_9\text{H}_9\text{O}_5.\text{C}_{11}\text{H}_{12}\text{N}_2\text{O}$, a substance in leaflets or needles: used in polyarthritides, influenza, pleuritis, and hemicrania. Dose, $\frac{1}{2}$ grains (0.5 Gm.).

pyrosis (pi-ro'sis) [*πύρωσις* burning]. Heartburn; a burning sensation in the esophagus and stomach, with sour eructation, due to acid dyspepsia.

Pyrosoma (pi-ro-so'mah) [*πῦρ* fire + *σῶμα* body]. Same as *Piroplasma*.

pyrothen (pi'r'o-then). A proprietary disinfectant containing 60 parts of 60 per cent sulphuric acid and 15 parts of fuming sulphuric acid.

pyrotic (pi-rot'ik) [*πυρωτικός*]. Caustic; burning.

pyrotoxin (pi-ro-tok'sin) [*πῦρ* fire + *τοξικόν* poison]. 1. A toxin developed during a fever. 2. An exceedingly poisonous liquid obtained from the interstitial fluids of many bacteria, even if ordinarily nonpathogenic: injected, it causes fever and wasting.

pyroxilin (pi-roks-il'in) [L. *pyroxylinum*; *πῦρ* fire + *ξύλον* wood]. Guncotton; cotton treated with nitric and sulphuric acids, so as to be converted into various nitrocompounds of cellulose probably mostly the hexanitrate, $\text{C}_{12}\text{H}_{14}(\text{O}.\text{NO}_2)_6\text{O}_4$. Pyroxilin U. S. P. is soluble guncotton, or collodion cotton, made up chiefly of the tetranitrate and the pentanitrate of cellulose, which, dissolved in ether or in glacial acetic ether, forms collodion.

pyrozole (pi'r'o-zōl). A proprietary antiseptic coal tar derivative.

pyrozone (pi-ro-zōn). A proprietary preparation of hydrogen dioxide: used in 3 to 5 per cent solution as an antiseptic and hemostatic. **caustic p.**, a 25 per cent solution of pyrozone.

pyrrole (pir'ol). A liquid, basic, cyclic substance, $(CH)_4NH$, obtained in the destructive distillation of various animal substances. **p. tetra-iodide**. Same as *iodol*.

pyrrolidin (pir-rol'id-in). A simple base, tetramethylene imin, $(CH_2)_4NH$, which may be obtained from tobacco or prepared from pyrrole.

pyrrolin (pir'o-lin). An oily liquid, C_4H_5NH , formed by the action of acetic acid and zinc dust on pyrrole.

Pyrus (pi'rus). See *apple*.

Pythagoras (pi-thag'o-ras). A famous Greek philosopher, born in Samos about 532 B. C., who exercised an early and lasting influence upon medicine.

pythogenesis (pi-tho-jen'es-is) [*πύθω* to rot + *γένεσις* origin]. 1. The origination of a process of decay or decomposition. 2. Generation from filth.

pythogenic, pythogenous (pi-tho-jen'ik, pi-thoj'en-us) [*πύθω* to rot + *γενῶν* to produce]. Caused by putrefaction or filth.

pyuria (pi-u're-ah) [*πύον* pus + *ούρον* urine]. The presence of pus in the urine. **miliary p.**, the presence in the urine of miliary bodies consisting of pus cells, blood cells, and epithelium.

pyxol (pix'ol). An antiseptic preparation of soft soap and a cresol resembling compound solution of cresol.

Q

Q. Abbreviation for *electric quantity*.

qcepo (ksa'po). The tubercle type of dermal leishmaniasis.

Q. d. Abbreviation for L. *qua'ter in di'e*, four times a day.

Q. h. Abbreviation for L. *qua'que ho'ra*, every hour.

Q. l. Abbreviation for L. *quan'tum li'bet*, as much as you please.

Q. P. Abbreviation for *quanti-Pirquet reaction*. See under *reaction*.

Q. p. Abbreviation for L. *quan'tum pla'ceat*, at will.

Q. Q. H. Abbreviation for L. *qua'que quar'ta ho'ra*, every fourth hour.

Qq. hor. Abbreviation for L. *qua'que ho'ra*, every hour.

Q. R. S. group. See under *group* and *electrocardiogram*.

Q. s. Abbreviation for L. *quan'tum suf'ficit*, as much as will suffice.

Qt., qt. Abbreviation for *quart*.

quack (kwak). A charlatan; an ignorant or fraudulent empiric.

quackery (kwak'er-e). The practice and methods of a quack; charlatanry.

quader (kwa'der) [Ger. "square"]. The precuneus, or quadrate lobule.

quadrangular (kwod-rang'u-lar) [L. *quadri-* four + *angulus* angle]. Having four angles.

quadrant (kwod-rant) [L. *qua'drans* quarter]. 1. One quarter of a circle; that portion of the circumference of a circle that subtends an angle of 90 degrees. 2. Any one of four corresponding parts or quarters, as of the abdominal surface. **Wilder's q.**, an area on the ventral surface of the cerebral crus of a cat.

quadrantanopsia (kwad-ran-tan-op'se-ah) [*quad-rant* + *anopsia*]. Blindness in one quarter of the visual field.

quadrate (kwod'rāt) [L. *quadra'tus* squared]. Square or squared; four sided.

quadratipronator (kwod-ra'te-pro-na'tor). The pronator quadratus muscle.

quadratus lumborum (kwod-ra'tus). See *muscles*, table of.

quadri- [L. *quat'tour* four; in combination, *quadri-*]. A prefix signifying four, or fourfold.

quadribasic (kwod-rib-a'sik). Having four replaceable atoms of hydrogen.

quadriceps (kwod'ris-eps) [L. *quadri-* four + *caput* head]. Four headed. See *muscles*, table of. **q. su'rae** [L. "four-headed muscle of the calf"], the gastrocnemius, soleus, and plantaris considered as one muscular body.

quadriceptor (kwod-ris-ep'tor) [L. *quadri-* four + *ceptor*]. An intermediary body having four combining groups.

quadracuspid (kwod-re-kus'pid) [L. *quadri-* four + *cus'pis* point]. Having four cusps; a tooth with four cusps.

quadrigeminal (kwod-re-jem'in-al) [L. *quadrigem'inus*]. Fourfold, or in four parts; forming a group of four. See *corpora quadrigemina*.

quadrigenimum (kwod-re-jem'in-um), pl. *quadrigemina* [L. "fourfold?"] Same as *corpus quadrigeminum*.

quadrilateral (kwod-ril-at'er-al) [L. *quadri-* four + *la'tus* side]. Having four sides.

quadripara (kwod-rip'ah-rah) [L. *quadri-* four + *parere* to bear]. A woman who has borne four children.

quadrparity (kwod-rip-ar'it-e). The condition of having borne four children.

quadriparous (kwod-rip-ar-us). Having borne four children.

quadrilegia (quad-rip-le'je-ah). Paralysis of all four limbs.

quadrupolar (kwod-rip-o'lar). Having four poles, as a cell.

quadriseect (kwod'ris-ekt) [L. *quadri-* four + *seca're* to cut]. To cut into four parts.

quadrisection (kwod-ris-ek'shun) [L. *quadri-* four + *sec'tio* cut]. Division into four parts.

quadrītubercular (kwod'ri-tu-ber'ku-lar). Having four tubercles or cusps.

quadrīurate (kwod-re-u'rāt) [L. *quadri-* four + *urate*]. Any hyperacid urate, like those of the human urine.

quadrivalent (kwod-riv'al-ent) [L. *quadri-* four + *vale're* to be worth]. Having a chemical valence or combining power of four.

quadroon (kwod-roon') [Sp. *cuarteron*]. The offspring of a white person and a mulatto.

quadruped (kwod'ru-ped) [L. *quadri-* four + *pes* foot]. Four footed; a four-footed animal.

quadrupl. Abbreviation for L. *quadruplica'to*, four times as much.

quadruplet (kwod'ru-plet) [L. *quadri'pulus* fourfold]. Any one of four children born at one birth.

quale (kwa'le). The quality of a thing; especially the quality of a sensation or other conscious process.

qualimeter (kwol-im'et-er) [L. *qua'lis* of what sort + *μέτρον* measure]. An instrument for measuring the hardness of roentgen rays.

qualitative, qualitative (kwol'it-a-tiv, kwol'it-iv) [L. *qualitati'vus*]. Pertaining to quality.

quantimeter (kwon-tim'et-er) [L. *quan'tus* how

much + *μέτρον* measure]. An apparatus for measuring the quantity of roentgen rays generated by a tube.

quanti-Pirquet reaction. See under *reaction*.

quantitative, quantitative (kwon'tit-a-tiv, kwon'tit-iv) [L. *quantitati-vus*]. Pertaining to quantity.

quantivalence (kwon-tiv'al-ens) [L. *quan'tus* how much + *valere* to be worth]. Chemical valence; the atomic or combining power of an element or radical expressed in the number of atoms of hydrogen with which it can combine.

quantivalent (kwan-tiv'al-ent). Pertaining to or possessing quantivalence.

quantum (kwan'tum) [L. "as much as"]. The elemental unit of radiant energy according to the quantum theory, q. v. under *theory*. **q. of light**, a quantity of light (radiant energy) equivalent to the frequency of the light times 6.55×10^{-27} erg. sec.

quantum libet (kwon'tum li'bet). Latin for *as much as you please*.

quantum sufficit (kwon'tum suf'fis-it). Latin for *as much as suffices*.

quarantine (kwor'an-tēn) [Ital. *quaranti'na*]. 1. A period (usually of forty days' duration) of detention of ships or persons coming from infected or suspected ports. 2. The place where persons are detained for inspection. 3. To detain or isolate on account of suspected contagion. 4. Restrictions placed on the entrance to and exit from the place or premises where a case of communicable disease exists. **land q.**, quarantine against persons approaching by land from an infected region. **shot-gun q.**, forcible quarantine not legally authorized.

quart (kwort) [L. *quar'tus* fourth]. The fourth part of a gallon (946 cc.). See *weights and measures, table of*.

quartan (kwor'tan) [L. *quarta'nus*, pertaining to the fourth]. 1. Recurring every third (fourth) day. 2. A variety of intermittent fever of which the paroxysms recur on every third day. See *malaria*. **double q.**, a quartan fever of which the recurrences are alternately severe and relatively mild. **triple q.**, a fever in which the paroxysms occur every day because of infection with three different groups of quartan parasites.

quartein (kwar'te-in) [L. *quar'tus* fourth]. A name proposed for vitamins because they form a fourth group of foodstuffs necessary to animal life (the other groups being carbohydrates, proteins, and fats).

quarter (kwor'ter). The part of a horse's hoof lying between the heel and the toe. **false q.**, a cleft in the quarter of a horse's hoof from the top to the bottom. **fifth q.**, the fat, hide, and other less valuable parts of a slaughtered animal.

quarter cast (kwor'ter kast). Cut in the quarter of the hoof.

quarter crack (kwor'ter krak). See *sand crack*.

quarter evil (kwor'ter e-vil). Blackleg, or symptomatic anthrax. See under *anthrax*.

quartile (kwar'til) [L. *quar'tus* one fourth]. The middle term of each half of a series of variables.

quartipara (kwor-tip'ah-rah) [L. *quar'tus* fourth + *par'ere* to produce]. A woman who has borne four children.

quartiparous (kwor-tip'ar-us). Having given birth to four children.

quartisternal (kwor-tis-ter'nal) [L. *quar'tus* fourth + *ster'nium* sternum]. Pertaining to the fourth sternebra, or bony segment of the sternum opposite the fourth intercostal space.

quartanol (kwor'to-nol). A proprietary preparation of sodium, calcium, and quinine and strychnine glycerophosphates.

quartz lamp. See under *lamp*.

quassain (kwos'sah-in). A preparation of soap and quassia: a strong insecticide,

quassation (kwas-sa'shun) [L. *quassa'tio*]. The crushing of drugs, or their reduction to small pieces.

Quassia (kwosh'e-ah) [after *Quassi*, a negro who used it as a remedy]. A genus of simarubaceous tropical plants. *Q. amara*, of South America, affords the true and original quassia wood. The wood of *Q. (picras'ma) excel'sa*, a tree of tropical America, contains quassin, and is a tonic and stomachic. It is used in dyspepsia, atonic diarrhea, and as an enema in the irritation caused by pinworms. Dose of extract, 1-3 grains (0.066-2 Gm.); of fluidextract, 5-10 minims (0.33-0.66 cc.); of tincture, 30-60 minims (2-4 cc.). **Jamaica q.**, *Picrasma excelsa*. **Surinam q.**, *Quassia amara*.

quassin, quassini (kwos'sin, kwos'se-in). A bitter tonic principle, $C_{22}H_{32}O_8$, from quassia wood. Dose, $\frac{3}{16}$ - $\frac{1}{2}$ grain (0.0022-0.022 Gm.).

Quat., quat. Abbreviation for L. *quat'tuor*, four.

quaternary (kwat'er'nar-e) [L. *quater'na-rius*, from *quat'tuor* four]. Fourth in order; also containing four elements.

Quatrefores' angle (katr'fazhs) [Jean Louis *Quatrefores* de Bréau, French naturalist, 1810-1892]. See *angle*.

quebrabunda (kweb-rah-boon'dah). A tropical disease of horses and swine not unlike beriberi. Called also *straddling disease*.

quebrachamin (kwe-brah'tsham-in). A base, or amine, from quebracho bark.

quebrachin (kwe-bra'tshin). An alkaloid, $C_{21}H_{29}N_2O_3$, from quebracho bark; the same as yohimbine. Its hydrochloride is employed in dyspnea. Dose, $\frac{3}{8}$ - $1\frac{1}{2}$ grains (0.05-0.1 Gm.).

quebracho (kwe-brah'tsho) [Sp. and Port. "ax-breaker"; L. *aspidosper'ma*]. The bark of *Aspidosper'ma quebr'cho-blan'co*, a South American tree; also known as *white q.* It is an antiperiodic, astringent, tonic, and antasthmatic, and is used in asthma and heart disease. Dose of extract, 2-8 grains (0.133-0.533 Gm.); of fluidextract, 5-60 minims (0.333-4 cc.); of tincture, 1-4 fluidrachms (4-16 cc.); of wine (*vinum aspidospermatis*), 1-4 fluidrachms (4-16 cc.).

quebrachiform (kwe-brah'tsho-form). A compound like tannoforn, made from quebracho bark.

Queckenstedt's sign. See under *sign*.

queen-of-the-meadows (kwēn). See *Eupatorium*.

queen's delight, queen's root (kwēnz de-lit', kwēnz root). See *Sillington*.

quenuthoracoplasty (kwe-nu-tho'rak-o-plas-te) [*Quēnu*, a surgeon in Paris + *thoracoplasty*]. Quēnu's operation of dividing the ribs to promote retraction of the chest wall in emphysema.

querciform (kwer'sif-orm). Tannoforn made with oak tannin.

quercin (kwer'sin) [L. *quer'cus* oak]. A bitter, crystallizable carbohydrate, $C_{42}H_{64}O_{16}$, from oak bark and acorns.

quercitannoforn (kwer-sit-an'o-form). A variety of tannoforn prepared with quercitannic, instead of gallotannic acid.

quercite (kwer'sit). A kind of sugar, $CH_2(CHOH \cdot CHOH)_2CHOH$, from acorns.

quercitrin (kwer-sit'rin) [L. *quer'cus* oak + *citri-nus* yellow]. A glucoside and yellow pigment, $C_{28}H_{38}O_{20}$, from the bark of *Quer'cus tinctoria*: astringent and tonic.

Quercus (kwer'kus) [L. "oak"]. See *oak*.

quercynol (kwer'sin-ol). A proprietary medicine composed of extract of white oak bark, with cyanol and extract of hyoscyamus: used in vaginal wafers.

querulent (kwer'ul-ent) [L. *queror* to complain]. A person with inadequacy marked by abnormal fretfulness, and suspiciousness, a feeling of being misunderstood, or slighted or ill treated, opposition to every suggestion, and dissatisfaction with things as they are.

Quevenne's iron (ke-venz') [Théodore Auguste Quevenne, French physician, 1805-1855]. Reduced iron. See under *iron*.

quick (kwik). Pregnant and able to feel the fetal movements.

quickening (kwik'en-ing). The first recognizable movements of the fetus in utero.

quicklime (kwik'lim). Calcic oxide; caustic or unslaked lime.

quicksilver (kwik'sil-ver). Mercury or hydrargyrum.

quietol (kwi'et-ol). A proprietary nerve tonic an sedative, stated to be propylvaleryldimethyl amino-isobutyl hydrobromide. Dose, 7 grains (0.5 Gm.).

quigila (kwij'il-ah). An infectious disease resembling leprosy, occurring in Brazil; perhaps ainhum.

Quillaia, Quillaja (kwil-a'yah) [Chilian *quillai*]. A genus of rosaceous trees. The bark of *Q. saponaria*, or soap bark, is sternutatory, detergent, diuretic, and febrifugal. It is used for coryza, bronchitis, dropsy, and for making emulsions. Dose, $\frac{1}{2}$ - $\frac{3}{4}$ fluidrachm (0.97-1.94 cc.); of tincture, 1 fluidrachm (4 cc.).

quina, quinaquina (ke'nah, ken-ah-ke'nah) [Sp. and Peruv.]. Cinchona bark.

quinacetin sulphate (kwin-as-e'tin). An anodyne and antipyretic salt, $(C_{17}H_{11}NO_2)_2H_2SO_4 \cdot H_2O$.

quinacol (kwin'ak-ol). A chemical combination of quinine with guaiacol: used in the treatment of tuberculosis and other respiratory troubles.

quinaldine (kwin-al'din). A liquid antiperiodic derivative, alpha-methyl-quinoline, $C_9H_9N(CH_3)$, of aniline and paraldehyde.

quinagen (kwin-al'jen). Same as *analgen*.

quinamicine (kwin-am'is-in). An artificial alkaloid, $C_{19}H_{21}N_2O_2$, from quinine.

quinamidine (kwin-am'id-in). An artificial alkaloid isomeric with quinamicine, prepared from quinine.

quinamine (kwin-am'in). A crystallizable alkaloid, $C_{19}H_{21}N_2O_2$, from various cinchona barks.

quinaphthol (kwin-af'thol). Same as *chinaphthol*.

quinaseptol (kwin-as-ep'tol). Same as *diaphtol*.

quinat (kwi'nat). Any salt of quinic acid.

quinbi, quinby (kwin'be). A proprietary brand of quinine bismuth iodide.

quince (kwins) [L. *cydonius*]. A rosaceous tree or shrub, *Pyrus cydonia*, and its fruit. The seed (*cydo'nium*) affords a mucilage which is used as a demulcent.

Quincke's capillary pulse, puncture (kwink'-ēz) [Heinrich Irenaeus Quincke, physician in Kiel, 1842-1922]. See *pulse* and *puncture*.

quinetum (kwi-ne'tum). A mixture of the sulphates of the cinchona alkaloids: a cheap substitute for quinine sulphate.

quinhydrone (kwin'id-rōn). A combination of quinone and hydroquinone, $C_6H_4O_2 \cdot C_6H_4O_2$.

quinia (kwin'e-ah). Same as *quinine*.

quinic acid (kwin'ik). See under *acid*.

quinicine (kwin'is-in). A bitter oily alkaloid, isomeric with quinine, which may be obtained from cinchona or which may be prepared from quinine or from quinidine by heating them.

quinidamine (kwin-id-am'in). An alkaloid, $C_{19}H_{21}N_2O_2$, from cinchona.

quinidine (kwin'id-in). Conquinine, beta-quinine, an alkaloid, $C_{20}H_{24}N_2O_2 + 2H_2O$, from cinchona. It is isomeric with, and its taste, appearance, uses, and dose are the same as those of quinine, although its effect on the cardiac muscle is more pronounced, depressing excitability and conduction in the auricular muscle. It is used in the treatment of auricular fibrillation and other cardiac arrhythmias in the form of the sulphate or bisulphate. **q. sulphate**, $(C_{20}H_{24}O_2N_2)_2H_2SO_4 +$

$2H_2O$, is used like quinine. Dose, 3-6 grains (0.2-0.4 Gm.) three times a day. **q. tannate**, a yellowish-white powder, given in nephritis, diarrhea and dyspepsia. Dose, 1-12 grains (0.1-0.8 Gm.).

quinimel (kwin'im-el). A preparation for disguising the taste of bitter medicines.

quinindiglycol sulphate. See *insipine*.

quinine (kwin'in, kwin-ēn', or kwi'nin) [L. *quini'na*]. The most important of the many alkaloids of cinchona bark, $C_{20}H_{24}N_2O_2 + 3H_2O$, a white minutely crystalline or amorphous powder, odorless, and having a bitter taste. It is soluble in 750 parts of cold water, but is freely soluble in ether, alcohol, and chloroform. Quinine is a stimulant to the nervous system, causing congestion of the brain, vertigo, tinnitus, and deafness. It is a cardiac and circulatory depressant, and increases the number of the leukocytes, at the same time arresting their migration. In large doses it depresses the respiration, decreases the reflex excitability of the spinal cord, and lowers the temperature in fever. It has marked antiseptic properties. In overdoses it causes destruction of the blood corpuscles and fever (*quinine fever*), with erythematous eruption on the skin, deafness, dizziness, and temporary blindness, ending in death from failure of respiration. Quinine is used in malarial fever and all forms of malarial poisoning; as an antipyretic in typhoid fever, pneumonia, and other fevers; as a tonic in conditions of debility and exhaustion, anemia, and convalescence; as a stimulant to uterine contraction in labor; locally in the form of spray in rhinitis, whooping cough, and hay-fever. Dose, 1-30 grains (0.065-2 Gm.). **q. acetylsalicylate**. A compound said to unite the action of quinine and salicylic acid; used in influenza, neuralgia, etc. **q. amblyopia**, paralysis of the retina from the action of quinine on the retinal blood vessels. **q. and urea hydrochloride**. See *q. hydrochlorocarbamide*. **q. arsenite**, a white, crystalline powder, $C_{20}H_{24}N_2O_2 \cdot H_3AsO_3 + 2H_2O$: antiperiodic. Dose, $\frac{1}{12}$ - $\frac{1}{2}$ grain (0.005-0.03 Gm.).

q. bismuth iodide, a compound of quinine and bismuth iodide used in the treatment of syphilis.

q. bisulphate, a colorless, crystalline cinchona salt, $C_{20}H_{24}O_2N_2 \cdot H_2SO_4 + 7H_2O$. It is much more soluble than the ordinary sulphate. **q. borate**, an amorphous or crystalline antiseptic and antipyretic. Dose, $\frac{7}{8}$ -15 grains (0.5-1 Gm.). **q. chlorocarbonic ester**, an antipyretic in colorless crystals, $CO.Cl.C_{20}H_{23}N_2O_2$; patented. **q. chocolate**, a pastel containing quinine hydrochloride and chocolate, in which the taste of the quinine is nearly concealed. **q. dihydrochloride**, a crystalline substance, $C_{20}H_{24}N_2O_2 \cdot 2HCl$, in white needles: used hypodermically for whooping cough.

q. dihydrochloride carbonate, a double salt in colorless crystals, $(C_{20}H_{24}N_2O_2) \cdot HCl + (CONH_2)_2HCl$.

q. eosolate, a salt, $C_6H_7S_3O_{12} \cdot (C_{20}H_{24}N_2O_2)_3$: used as an antimalarial, antiseptic, and antipyretic. Dose, 5-10 grains (0.3-0.6 Gm.).

q. ethylcarbonate, a white crystalline compound, $C_2H_5 \cdot CO \cdot CO \cdot C_{20}H_{23}N_2O$, formed by the action of ethyl chlorocarbonate on quinine: used like quinine. Dose, 15-30 grains (1-2 Gm.). Introduced as *euchinin*.

q. ferrichloride, an agent in brown scales or powder; hemostatic.

q. glycerophosphate, a salt, $CH_2OH \cdot CHOH \cdot CH_2O \cdot PO \cdot (OH)_2 \cdot C_{20}H_{24}O_2N_2 + 4H_2O$, in colorless needles and soluble in water and alcohol. It is used as a nerve in neurasthenia, malnutrition, and neuralgia of malarial origin. Dose, $\frac{1}{12}$ grains (0.1 Gm.).

q. hydriodide, a nervous sedative and antineuralgic, $C_{20}H_{24}N_2O_2 \cdot HI$. Dose, 1- $\frac{1}{2}$ grains (0.06-0.1 Gm.).

q. hydrobromide, a salt, $C_{20}H_{24}O_2N_2 \cdot HBr + H_2O$, esteemed for hypodermic administration.

q. hydrochloride, a white salt, $C_{20}H_{24}O_2N_2 \cdot HCl + 2H_2O$, resembling the sulphate in taste, uses, and dosage.

q. hydrochlorocarbamide, quinine and urea hydrochloride, $C_{20}H_{24}O_2N_2 \cdot HCl \cdot CONH_2 \cdot HCl + 5H_2O$, a crystalline compound soluble in water: used

in a 1 per cent solution subcutaneously as a local anesthetic; has also been used hypodermically in cholera. Dose, 10-15 grains (0.65-1.0 Gm.). Called also *urea-quinine*. **q. hydrochlorosulphate**, a salt in colorless crystals: suitable for hypodermic use. **q. hydroiodate**, a nervous sedative and antineuralgic agent, $C_{20}H_{24}N_2O_3 \cdot HIO_{30}$. Dose, 1-1½ grains (0.06-0.1 Gm.). **q. hydroquinone hydrochloride**, an agent in delicate needles: antipruritic. **q. iodohydroiodate**, a brown powder, $C_{20}H_{24}N_2O_3 \cdot I \cdot HCl$: antisyphilitic. **q. lactate**, a white powder: suitable for hypodermic use. **q. lygosinate**, a yellow powder, insoluble in water, formed by the combination of quinine and lygosin: used as a dusting powder. **q. nucleinate**, a preparation used by intramuscular injection in syphilis. **q. phosphohydrochloride**, a crystalline substance, $C_{20}H_{24}N_2O_3 \cdot HCl \cdot 2H_3PO_4 \cdot 3H_2O$: antiperiodic, and used for the relief of nervous headaches. **q. salicylate**, a salt, $C_{20}H_{24}N_2O_3 \cdot C_7H_6O_3 + H_2O$, in slender white needles: antipruritic and antirheumatic. Dose, 1½-8 grains (0.1-0.5 Gm.). **q. silicofluoride**, a crystalline antiseptic and antipruritic. **q. sulphate** [*L. quini'nae sul'phas*], a white crystalline salt, $(C_{20}H_{24}N_2O_3)_2 \cdot H_2SO_4 + 7H_2O$, more largely used as a remedy than any other of the cinchona alkaloidal salts. It is soluble in 740 parts of cold and 30 parts of boiling water, and in 3 parts of boiling alcohol. Dose, 1-30 grains (0.066-2 Gm.). **q. tannate**, a yellowish powder: used in whooping cough and diarrhea. Dose, 3-8 grains (0.2-0.5 Gm.). **q. urethane**, a combination of quinine hydrochloride and urethane: antiperiodic, and suited for subcutaneous use. **q. valerianate**, a nervous stimulant and antispasmodic. Dose, 1-3 grains (0.066-0.104 Gm.).

quininephytine (kwin-in-ef'it-in). A yellow crystalline tonic and antiperiodic, quinine anhydro-oxy-methylenediphosphate. Dose, 5-8 grains (0.3-0.5 Gm.).

quininism (kwin'in-izm). Same as *cinchonism*.

quininurethane (kwin-in-u'reth-ān). A compound of quinine hydrochloride and urethane: used subcutaneously like quinine.

quinobismuth (kwin'e-o-biz'muth). A brand of quinine bismuth iodide.

quiniretin (kwin-ir-e'tin). A yellowish, flocculent substance isomeric with quinine and derived from it, but not an alkaloid.

quinisal (kwin'is-al). A proprietary quinine bisalicylosalicylate for the treatment of coryza and influenza.

Quinlan's test (kwin'lanz). See under *tests*.

quinochloral (kwin-o-klo'ral). A product of the treatment of quinine with chloral: a bitter, oily liquid, neutral to test paper, and said to be a safe antiseptic. Dose, 1-15 minims (0.066-1 cc.).

quinoform (kwin'o-form). A compound of formaldehyde and quinine.

quinoidine (kwin-o'i'din). Same as *chimoidine*.

quinol (kwin'ol). Hydroquinone.

quinoline (kwin'o-lin). Chinoline; a tertiary amine or alkaloid, $C_6H_4(CH_3)_2N$, derivable from quinine, coal tar, and various other sources. It is a yellowish, aromatic liquid: antiseptic, antipruritic, and antiperiodic. **q. rhodanate**, a antipruritic, and antiperiodic. **q. salicylate**, a white powder, $C_6H_7NC_7H_6O_3$: antiseptic and antifebrile. Dose, 8-15 grains (0.5-1 Gm.). **q. sulphosalicylate**, a white, crystalline substance, used as an antiseptic. **q. tartrate**, an antiseptic and antifebrile agent, $C_6H_7NC_7H_6O_3$; a white powder. Dose, 8-15 grains (0.5-1 Gm.). **q. thiocyanate**. Same as *q. sulphocyanate*.

quinoliv (kwin'o-liv). A proprietary preparation of quinine sulphate and olive oil.

quinology (kwin-ol'o-je). The sum of knowledge concerning trees of the genus *Cincho'na* and other

quinine-producing plants, their culture, products, and derivatives, and the uses of the same.

quinone (kwin'on). 1. A substance, $CO(CH_3)_2 \cdot CO$, in golden-yellow crystals, obtained by oxidizing quinic acid. 2. Any benzene derivative in which two hydrogen atoms are replaced by two oxygen atoms.

quinopropylene (kwin-o-pro'pil-in). An antiperiodic substance homologous with quinine.

quinopyrine (kwin-o-pi'rin). See *chimoxyprine*.

quinoral (kwin-o'ral). See *chimoral*.

quinosol (kwin'o-sol). 1. Same as *chinosol*. 2. Same as *cresochine*.

quinotoxin (kwin-o-tok'sin). Quinidine.

quinotropin (kwin-o-tro'pin). A proprietary uric-acid solvent, a compound of quinine and methenamine.

quinovatine (kwin-o'vat-in). Aricine.

quinovine (kwin-o'vin). A bitter glucoside, $C_{30}H_{48}O_8$, from cinchona.

quinoxin (kwin-ok'sin). Nitrosophenol, $C_6H_4(NO)OH$; a colorless, crystalline substance prepared from the phenols by the action of nitrous acids.

Quinq. Abbreviation for *L. quin'que*, five.

Quinquaud's disease, sign (kang-kōz') [Eugene Quinquaud, French physician, 1841-1894]. See *disease, sign*.

quinquecuspid (kwin-kwe-kus'pid) [*L. quin'que* five + *cus'pis* point]. Having five cusps; a tooth having five cusps.

quinquetubercular (kwin'kwe-tu-ber'ku-lar). Having five tubercles or cusps.

quinquina (kin-ke'nah). Same as *cinchona*.

quinquivalent (kwin-kwi'val-ent) [*L. quin'que* five + *val'ens* able]. Capable of combining with five atoms of hydrogen: more generally termed *pentavalent*.

quinsy (kwin'ze) [*L. cym'an'che* sore throat]. Acute suppurative tonsillitis: See *tonsillitis*. **lingual q.**, suppurative inflammation of the lingual tonsil.

Quint. Abbreviation for *L. quin'tus*, fifth.

quintan (kwin'tan) [*L. quin'tus* of the fifth]. Recurring every fourth (fifth) day.

quintessence (kwin-tes'ens) [*L. quin'tus* fifth + *essen'tia* essence]. The highly concentrated extract of any substance.

Quintin serum, treatment (kan-tan') [René Quintin, contemporary French physician]. See *serum and treatment*.

quintipara (kwin-tip'ar-ah) [*L. quin'tus* fifth + *par'ere* to produce]. A woman who has borne five children.

quintisternal (kwin-tis-ter'nal) [*L. quin'tus* fifth + *sternum*]. Noting the fifth bony portion of the sternum, or the part above the ensiform cartilage and adjacent to the fifth intercostal space.

quintuplet (kwin'tu-plet) [*L. quin'tuplex* fivefold]. Any one of five born at one birth.

quinuclidine (kwin-u'klid-in). The bridged piperidine ring, $CH(CH_2)_6N$, found in the cinchona alkaloids.

quionine (kwi'o-nin). A tasteless quinine preparation; a mixture of various cinchona alkaloids, mainly cinchonidine: used like quinine.

Quisqua'lis in dica. An Asiatic plant whose fruit (called shih chun tze) is used in China as an anthelmintic.

quitenidine (kwi-ten'id-in). An alkaloid, $C_{19}H_{22}N_2O_4$, formed by oxidizing quinidine.

quitter, quittor (kwi'tor). A fistulous sore on the quarters or the coronet of a horse's foot. **simple q.**, local inflammation resulting in a slough, with formation of pus immediately above the hoof. **skin q.**, a very painful ulcer of the skin above the hoof. **subhorny q.**, inflammation beginning at the coronary band and extending beneath the

hoof and producing pus formation in the sensitive tissue. **tendinous q.**, a condition in which the inflammation of quitter has extended into the tendons of the leg and the ligaments of the joint.

quiz (kwiz). 1. Informal instruction by questions and answers. 2. To instruct by questions and answers.

quiz master. See *quizzer*.

quizzer (kwiz'er). One who holds and conducts a quiz. Called also *quiz master*.

quoad vitam (kwo'ad vi'tam). Latin for "so far as life is concerned." A term used with reference to prognosis.

Quotid. Abbreviation for *L. quotid'ie*, daily.

quotidian (kwo-tid'e-an) [*L. quotidia'nus* daily].

1. Recurring every day. 2. A form of intermittent fever with daily recurrent paroxysms. **double q.**, a fever having two daily paroxysms.

quotient (kwo'shent). A number obtained as the result of division. **albumin q.**, the amount of albumin in the blood divided by the amount of

albumin present. **blood q.**, the number obtained by dividing the amount of hemoglobin in a specimen of the blood by the number of erythrocytes contained in it: it indicates the percentage of hemoglobin in the erythrocytes. **caloric q.**, the quotient obtained by dividing the heat evolved (expressed in calories) by the oxygen consumed (expressed in milligrams) in a metabolic process. **D q.**, the ratio of glucose to nitrogen in the urine. **growth q.**, that portion of the entire food energy which is utilized for the purpose of growth. **intelligence q.**, the measure of intelligence obtained by dividing the patient's mental age, as ascertained by the Binet-Simon scale, by his actual age. **protein q.**, the number obtained by dividing the quantity of globulin of the blood plasma by the quantity of albumin. **respiratory q.**, the ratio between the volume of carbon dioxide expired and the volume of oxygen inspired in a given time.

q. v. Abbreviation for *L. quantum vis*, as much as you like, and for *quod vi'de*, which see.

R

R. An abbreviation for *Réaumur*, *roentgen*, *remotum* (far point), *respiration*, *right*, and *Behnken's unit*.

R. A symbol for *L. rec'ipe*, take.

r. Symbol for roentgen. See *roentgen*.

Ra. The chemical symbol of *radium*.

Raabe's test (rah'bez) [Gustav Raabe, German physician, born 1875]. See under *tests*.

rabelaisin (rab-el-a'is-in). A poisonous glucoside from *Rabelais'ia philippinen'sis*, a plant of the Philippine Isles: a heart stimulant.

rabetting (rab'et-ing). Interlocking of the denticulated broken surfaces of a fractured bone.

rabiate (ra'be-ät). Affected with rabies.

rabiator (ra'be-a-tor). A person or animal affected with rabies.

rabic (ra'bik). Pertaining to rabies.

rabicidal (ra-bis-i'dal). Destructive to the infective agent which causes rabies.

rabid (rab'id) [*L. rab'idus*]. Affected with rabies, or hydrophobia.

rabies (ra'be-ëz) [*L. ra'bere* to rage]. A specific infectious disease of certain animals, especially dogs and wolves, communicated to man by direct inoculation, as by a bite of an infected animal, and believed to be due to a micro-organism which is as yet undiscovered. After an incubation period of from one to six months, the disease begins with malaise, depression of spirits, and swelling of the lymphatics in the region of the wound. There are choking and spasmodic catching of the breath, succeeded by increasing tetanic spasms, especially of the muscles of respiration and deglutition, which are increased by attempts to drink water or even by the sight of water. There are usually also fever, mental derangement, vomiting, profuse secretion of a sticky saliva, and albuminuria. The disease is generally fatal, death occurring in from two to five days. Called also *hydrophobia* and *lyssa*.

r. canina, canine madness; the rabies of dogs. **dumb r.**, rabies in which paralysis is an early symptom. **r. feli'na**, the rabies of cats. **furious r.**, a form in which there is very pronounced excitement. **paralytic r.**, rabies in which paralysis is a marked symptom—usually an ascending spinal paralysis. **sullen r.**, dumb rabies. **tanacetic r.**, a condition like rabies produced in rabbits by the intravenous injection of the oil of tansy.

rabietic (ra-be-et'ik). Pertaining to or affected with rabies.

RaBr₂. Radium bromide.

race (räs). 1. An ethnic stock, or division of mankind; in a narrower sense, a national or tribal stock; in a still narrower sense, a genealogic line of descent; a class of persons of a common lineage. 2. A class or breed of animals; a group of individuals having certain characters in common, due to a common inheritance. 3. [*L. ra'dix* root]. A root or rhizome; especially one of ginger.

racemation (ra-se-ma'shun). Racemization.

raceme (ra-sēm') [*L. race'mus* a bunch of grapes].

1. A form of inflorescence in which the individual flowers are borne on stalks which spring from a long central stem. 2. An optically inactive form of a compound consisting of equal amounts of dextrorotatory and levorotatory forms of optical isomers.

racemic form (ra-se'mic). Same as *raceme*, 2d def.

racemization (ra-se-mi-za'shun). The making of an optically active substance inactive by changing it into a racemic form. This is usually done by heating.

racemose (ras'e-mōs) [*L. racemo'sus*]. Resembling a bunch of grapes on its stalk.

rachial (ra'ke-al). Rachidial.

rachialbuminimeter (ra'ke-al-bu-min-im'et-er) [*ῥάχis* spine + *albuminimeter*]. An apparatus for measuring the albumin in a specimen of the cerebrospinal fluid.

rachialbuminimetry (ra'ke-al-bu-min-im'et-er). The measurement of the amount of albumin in the spinal fluid.

rachialgia (ra-ke-al'je-ah) [*ῥάχis* spine + *ἄλγος* pain]. Pain in the vertebral column.

rachianalgesia (ra'ke-an-al-je'ze-ah) [*ῥάχis* spine + *αν* negative + *ἄλγος* pain]. Rachianesthesia.

rachianesthesia (ra'ke-an-es-the'ze-ah) [*ῥάχis* spine + *anesthesia*]. Spinal anesthesia; anesthesia produced by the injection of the anesthetic into the spinal canal.

rachicentesis (ra'kis-en-te'sis) [*ῥάχis* spine + *κέντησις* puncture]. Puncture into the spinal canal.

rachidial (ra-kid'e-al). Pertaining to the spine.

rachidian (ra-kid'e-an) [*ῥάχis* spine]. Pertaining to the spine.

rachigraph (ra'kig-raf) [*ῥάχis* spine + *γράφειν* to write]. An instrument for recording the outlines of the spine and back.

rachilysis (ra-kil'is-is) [*ῥάχis* spine + *λύνσις* loosening]. Mechanical treatment of a curved

vertebral column by combined traction and pressure.

rachiocampsis (ra'ke-o-kamp'sis) [ράχις spine + κάμψις curve]. Curvature of the spinal column.

rachicentesis (ra'ke-o-sen-te'sis) [ράχις spine + κέντησις puncture]. Spinal puncture.

rachiochysis (ra-ke-ok'is-is) [ράχις spine + χύσις a pouring]. The effusion of a fluid within the vertebral canal.

rachiococainization (ra'ke-o-ko-ka-in-iz-a'shun) [ράχις spine + coccinization]. Spinal cocainization.

rachiocephosis (ra'ke-o-si-fo'sis). Same as *kyphosis*.

rachiodynia (ra'ke-o-din'e-ah) [ράχις spine + δόνην pain]. Pain in the spinal column.

rachiohypophosis (ra'ke-o-ki-fo'sis). Same as *kyphosis*.

rachiometer (ra-ke-om'et-er) [ράχις spine + μέτρον measure]. An instrument for measuring curvatures of the vertebral column.

rachiomylitis (ra'ke-o-mi-el-i'tis) [ράχις spine + μυελός marrow + -ιτις inflammation]. Inflammation of the spinal cord.

rachio paralysis (ra'ke-o-par-al'is-is) [ράχις spine + paralysis]. Paralysis of spinal muscles.

rachiooplegia (ra'ke-o-pie'je-ah) [ράχις spine + πληγή stroke]. Spinal paralysis.

rachioscoliosis (ra'ke-o-sko-le-o'sis) [ράχις spine + scoliosis]. Lateral curvature of the spine.

rachiotome (ra'ke-o-tōm) [ράχις spine + τέμνειν to cut]. An instrument for cutting the vertebrae.

rachiotomy (ra-ke-ot'o-me) [ράχις spine + τομή cut]. The cutting of the vertebral column in surgery or in obstetrics.

rachiotropococainization (ra'ke-o-tro-pa-ko'-ka-in-i-za'shun). Spinal cocainization with tropococaine.

rachipagus (ra-kip'ag-us) [ράχις spine + πάγος fixed]. A double fetal monster joined at the vertebral column.

rachis (ra'kis) [ράχις spine]. The vertebral column.

rachischisis (ra-kis'kis-is) [ράχις spine + σχισίς cleft]. Congenital fissure of the spinal column.

r. partia'lis, fissure of the spinal column of limited extent; merorachischisis. **r. poste'rior**, spina bifida. **r. tota'lis**, fissure of the spinal column throughout its entire length; holorachischisis.

rachistovainization (ra-kis-to-va'in-iz-a'shun). Injection of stovaine into the spinal canal for the production of local anesthesia.

rachitamin (ra-kit'am-in). Vitamin D.

rachitasterol (ra-kit-a-ste'rol). Vitamin D.

rachitic (ra-kit'ik). Pertaining to or affected with rickets.

rachitis (ra-ki'tis) [ραχίτις]. 1. Formerly, inflammatory disease of the vertebral column. 2. In modern use, the same as *rickets*. **r. foeta'lis annula'ris**, the formation before birth of annular thickenings on the long bones. **r. foeta'lis micromel'ica**, a deficient lengthwise growth of the bones of the fetus.

rachitism (rak'it-izm). A tendency to rickets.

rachitome (rak'it-ōm) [ράχις spine + τέμνειν to cut]. A cutting instrument used in opening the spinal canal.

Rachischisis (Babcock).

rachiotomy (rak-it'o-me) [ράχις spine + τέμνειν to cut]. The surgical or anatomical opening of the vertebral canal.

racial (ra'shal). Pertaining to a particular race of mankind.

raclage, raclement (rahk-klahzh', rahkl-mah') [Fr.]. Destruction or removal by rubbing.

Rad., rad. Abbreviation for *L. ra'dix*, root.

radal (ra'dal). A 20 per cent solution of protargol: used as a prophylactic for gonorrhea.

radectomy (rad-ek'to-me) [L. ra'dix root + εκτομή excision]. Excision of a portion of the root of a tooth.

radesyge (rah-de-se'geh) [Dan. "scab-sickness"]. An ulcerative skin disease formerly prevalent in Scandinavia.

radia (ra'de-ah). The second stage of a distoma, when it ceases to be a sporocyst and has not yet become a cercaria.

radiability (ra-de-ab-il'i'te). The property of being readily penetrated by the roentgen ray.

radiable (ra'de-ab-l). Capable of being examined by the roentgen ray.

radiad (ra'de-ad). Toward the radial side.

radial (ra'de-al) [L. *radia'lis*]. 1. Pertaining to the radius or to a radius. 2. Radiating; spreading outward from a common center. **goose neck r.**, a radial artery which feels like a goose neck owing to calcification.

radian (ra'de-an). In ophthalmometry, an arc whose length equals the radius of its curvature. It is an arc of 57.295 degrees.

radiant (ra'de-ant) [L. *ra'dians*]. 1. Diverging from a common center. 2. Any radioactive substance.

r. matter, matter in a condition of extreme tenuity or ultragaseous state; gas exhausted to about one millionth of its original density, so that it has lost its original properties and has acquired new, particularly luminous, ones.

radiate (ra'de-at) [L. *radio're*, *radia'tus*]. 1. To diverge or spread from a common point. 2. Arranged in a radiating manner.

radiatio (ra-de-a'she-o). Latin for *radiation*. **r. cor'poris callo'si** [B N A], the radiation of the fibers of the corpus callosum in the medullary center of each cerebral hemisphere. **r. cor'poris stria'ti** [B N A], the extension of fibers from the thalamus and hypothalamus to the cerebral cortex. **r. occipitothalam'ica** [B N A], fibers from the lower visual centers which pass backward through the occipital portion of the internal capsule to the cortex of the occipital lobe. **r. pyramida'lis** [B N A], pyramidal radiation. **r. striothalam'ica**. See *striothalamic radiation*, under *radiation*.

radiation (ra-de-a'shun) [L. *radia'tio*]. 1. Divergence from a common center. 2. A structure made up of divergent elements. 3. Treatment with radium or other radioactive matter. 4. A French military term for the honorable discharge of soldiers and their return to civil life on account of infirmity or disease. 5. Giving off electromagnetic waves such as those of light or particulate rays, such as the alpha or beta rays: also the rays thus given off. **acoustic r.**, **auditory r.**, a bundle of fibers in the posterior part of the internal capsule, being the final neurons in the auditory path. **electromagnetic r.** See *electromagnetic waves*, under *wave*. **r. of Gratiolet**. Same as *optic r.* **Huldschinsky's r.**, a formula for a course of three months' treatment with ultraviolet rays from the quartz-mercury vapor lamp. **irritative r.**, radiation with ultraviolet rays to the point of erythema. **occipitothalamic r.** Same as *optic r.* **optic r.**, a strand of fibers continuous with those of the corona radiata, and derived mainly from the pulvinar, geniculate bodies, and optic tract. **pyramidal r.**, the fibers extending from the pyramidal tract to the cortex. **Kollier's r.**, a formula for exposure of the body gradually to increasing doses of the ultraviolet rays of the sun.

TABLE OF THE RADIOACTIVE ELEMENTS

Atomic weight.	Uranium-radium series.	Actinium series.	Thorium series.	Atomic number.	Rays emitted.
238.17	Uranium I....			92	<i>a</i>
234	Uranium X ₁			90	<i>β</i>
234	Uranium X ₂			91	<i>β, γ</i>
234	Uranium Z....			91	<i>β</i>
234	Uranium II....			92	<i>a</i>
232.15			Thorium....	90	<i>a</i>
230	Uranium Y....			90	<i>β</i>
230	Ionium....			90	<i>a, β, γ</i>
230		Protoactinium		91	<i>a</i>
228			Mesothorium 1.	88	<i>β</i>
228			Mesothorium 2.	89	<i>β, γ</i>
228			Radiothorium....	90	<i>a, γ</i>
228				88	<i>a, γ</i>
225.95	Radium....			89	<i>β</i>
226		Actinium....		90	<i>a, γ</i>

210	Radium D....	Actinium B....		82	<i>β, γ</i>
210	Radium E....			83	<i>β, γ</i>
210		Actinium C....		83	<i>a, β</i>
210	Radium F....	Actinium C'....		84	<i>a, γ</i>
208			Thorium C''....	81	<i>β, γ</i>
208			Thorium D (lead)....	82	
206		Actinium C''....		81	<i>β, γ</i>
206	Radium G (lead)....	Actinium D (lead)....		82	

sensory r's, the thalamocortical tracts. **striothalamic r.**, a fiber system which joins the thalamus to the hypothalamic region. **tegmental r.**, fibers radiating from the posterior part of the internal capsule and going to the cerebral cortex. **thalamic r.**, a tract of fibers from the optic thalamus radiating into the hemisphere. **thalamotemporal r.** Same as *acoustic r.*

radical (rad'ik-al) [L. *radica'lis*]. 1. Directed to the cause; going to, the root or source of a morbid process. 2. A group of atoms which enters into and goes out of chemical combination without change, and which forms one of the fundamental constituents of a molecule. **acid r.** 1. The electronegative element which combines with hydrogen to form an acid. 2. All of the acid except the hydroxyl group. **alcohol r.**, all of the alcohol molecule except the hydroxyl group (—OH). **color r.** See *chromophore*.

radiciform (rad-is'if-orm) [L. *ra'dix* root + *for'ma* shape]. Shaped like a root; shaped like the root of a tooth.

radicle (rad'ik-l) [L. *radic'ula*]. 1. Any one of the smallest branches of a vessel or nerve. 2. Same as *radical* (2d def.).

radicotomy (rad-ik-ot'o-me) [L. *ra'dix* root + *τομή* a cutting]. Division of nerve roots.

radicula (rad-ik'u-lah). Latin for *radicle*.

radiculalgia (rad-ik-u-lal'je-ah) [L. *radic'ula* a little root + *ἄλγος* pain]. Neuralgia of the nerve roots.

radicular (rad-ik'u-lar). Of or pertaining to a radical or root.

radicectomy (rad-ik-u-lek'to-me) [L. *radic'ula* rootlet + *ἐκτομή* excision]. Excision of a rootlet; especially, resection of spinal nerve roots.

radiculitis (rad-ik-u-li'tis) [L. *radic'ula* a little root + *-itis* inflammation]. Inflammation of the root of a spinal nerve, especially of that portion of the root which lies between the spinal cord and the intervertebral canal.

radicectomy (ra-de-ek'to-me) [L. *ra'dix* root + *ἐκτομή* excision]. Excision of the root of a tooth.

radio-actinium (ra''di-o-ak-tin'e-um). A substance formed by the disintegration of actinium. It gives off alpha rays and disintegrates into actinium x.

radio-action (ra''de-o-ak'shun). Same as *radio-activity*.

radioactive (ra''de-o-ak'tiv). Giving off chemically active rays: having the property of radioactivity. See *radioactive elements, table of*.

radioactivity (ra''de-o-ak-tiv'it-e). Spontaneous decomposition of an atom accompanied by the emission of alpha, beta, or gamma rays. **induced r.**, temporary radioactivity in a substance from being in the field of influence of a radioactive substance.

radioactor (ra''de-o-ak'tor). An apparatus for preparing radium emanation.

radio-anaphylaxis (ra''de-o-an''af-il-ak'sis). Anaphylactic sensitization to the roentgen ray or other form of radiant energy.

radiobe (ra'de-öb) [L. *ra'dius* ray + *βίος* life]. One of the peculiar microscopical condensations of sterilized bouillon produced by radium, discovered by J. B. Burke, which, by their appearance and the way in which they divide, have suggested the similar phenomena of bacteria.

radiobicipital (ra''de-o-bi-sip'it-al). Pertaining to the radius and the biceps muscle of the arm.

radiocarpal (ra''de-o-kar'pal). Pertaining to the radius and carpus.

radiochemistry (ra''de-o-kem'is-tre). The branch of chemistry which treats of radioactive phenomena.

radiochroism (ra''de-o-kro'izm) [*radiant* + *χρῶμα* color]. The capacity of a substance to absorb certain radioactive and roentgen rays.

radiochrometer (ra''de-o-krom'et-er) [L. *ra'dius* ray + *χρῶμα* color + *μέτρον* measure]. An instrument for measuring the penetrating power of roentgen rays according to the Benoist scale.

radiocinematograph (ra''de-o-sin-e-mat'o-graf). An apparatus combining the moving picture camera and the roentgen ray machine, making possible moving pictures of the internal organs.

radiode (ra'de-öd). An instrument for the therapeutical application of radium.

radiodermatitis (ra''de-o-der-mat-i'tis) [L. *ra'dius* ray + *dermatitis*]. Dermatitis caused by exposure to roentgen rays.

radiodiagnosis (ra''de-o-di-ag-no'sis). Diagnosis by means of roentgen rays and roentgenograms.

radiodiaphane (ra''de-o-di'af-än). An instrument for performing transillumination by means of radium.

radiodigital (ra''de-o-dij'it-al) [L. *ra'dius* radius + *δигίτис* finger]. Pertaining to the radius and to the fingers.

radiodontia (ra''de-o-don'she-ah) [L. *ra'dius* ray + *δόντις* tooth]. That department of dentistry which deals with the making and interpretation of roentgenograms of the teeth and surrounding structures.

radiodontist (ra''de-o-don'tist) [L. *ra'dius* ray + *δόντις* tooth]. A specialist in dental roentgenography.

radio-element (ra''de-o-el'e-ment). Any chemical element having radioactive properties.

radiogenol (ra''de-o-je-nol). An emulsion of insoluble radioactive minerals, intended for injection into tumors, etc.

radiogram (ra'de-o-gram). Same as *roentgenogram*.

radiograph (ra'de-o-graf) [L. *ra'dius* ray + *γράφειν* to record]. Same as *roentgenogram*.

radiography (ra-de-og'raf-e). Roentgenography; photography with the roentgen rays.

radiohumeral (ra'de-o-hu'mer-al). Pertaining to the radius and humerus.

radiolead (ra'de-o-led'). Radium G.

radiology (ra-de-o'lo-je). That branch of medical science which deals with the use of radiant energy in the diagnosis and treatment of disease (Amer. Col. of Radiology).

radiolucency (ra'de-o-lu'sen-se). The property of being pervious to the roentgen ray, but yet offering some resistance.

radiolucent (ra-de-o-lu'sent) [L. *ra'dius* ray + *lucere* to shine]. Permitting the passage of radiant energy, yet offering some resistance to it; nearly, but not entirely, transparent to the roentgen ray.

radiolus (ra-de-o-lus) [L. dim. of *ra'dius* ray]. A probe, staff, or sound.

radiometer (ra-de-om'et-er). An apparatus for measuring the penetrating power of the roentgen rays.

radiomicrometer (ra'de-o-mi-krom'et-er) [*ra'dius* ray + *μικρος* small + *μέτρον* measure]. An instrument for detecting minute changes of radiant energy.

radiomuscular (ra'de-o-mus'ku-lar). Going from the radial artery or nerve to the muscles.

radion (ra'de-on). One of the radiant particles thrown off by a radioactive substance.

radionecrosis (ra'de-o-nek-ro'sis). Destruction of tissue by radiant energy.

radioneuritis (ra'de-o-nu-ri'tis). A form of neuritis seen in operators after long-continued working with roentgen rays.

radio-opacity, radiopacity (ra'de-o-pas'it-e, ra'de-o-pas'it-e). The property of being radiopaque.

radiopalmar (ra'de-o-pal'mar). Derived from the radial artery and supplying the palm.

radiopaque (ra-de-o-pāk'). Opaque to the roentgen ray; not permitting the passage of radiant energy.

radioparency (ra'de-o-par'en-se). The property of being radioparent.

radioparent (ra'de-o-par'ent). Permitting the passage of roentgen rays; transparent to the roentgen ray.

radiopelvimetry (ra'de-o-pel-vim'et-re). Measurement of the pelvis by roentgen-ray examination.

radiophylaxis (ra'de-o-fi-lax'is). The modifying effect of a small dose of radiation on the reaction to a large subsequent radiation.

radioplastic (ra-de-o-plas'tik). A term used to designate a method of making a plaster image of an organ, such as the heart, from roentgenoscopic measurements.

radiopraxis (ra'de-o-praks'is) [L. *ra'dius* ray + *πράξις* practice]. Use of rays of light, electricity etc., in treatment of disease.

radioreceptor (ra'de-o-re-sep'tor). A receptor for the stimuli which are excited by radiant energy, such as light, heat, and cold.

radio-rem (ra'de-o-rem). An apparatus designed for the production of radioactive drinking water by impregnating the water with radium emanation emitted from radium sulphate which is contained in fired porous clay.

radioscope (ra'de-o-skōp) [L. *ra'dius* ray + *σκοπεῖν* to view]. An instrument for detecting or studying roentgen rays or other forms of radioactivity.

radioscopy (ra-de-os'ko-pe) [L. *ra'dius* ray + *σκοπεῖν* to examine]. The examination of the deep structures of the body by means of roentgen rays.

radiosensitivity (ra'de-o-sen-sib-il'it-e). Sensibility to irradiation.

radiosensitive (ra'de-o-sen'sit-iv). Sensitive to, or destroyable by, radiant energy, as radium, roentgen ray, or other electric radiations.

radiostereoscopy (ra'de-o-ster-e-os'ko-pe) [L. *ra'dius* ray + *σtereός* solid + *σκοπεῖν* to view]. The inspection of the interior organs by means of the roentgen rays.

radiostol (ra'de-o-stol). A proprietary preparation of irradiated ergosterol.

radiosurgery (ra'de-o-sur'jir-e). Surgical treatment by the use of radium.

radiotellurium (ra'de-o-tel-u're-um). Same as *polonium*.

radiotherapeutics (ra'de-o-ther-ap-u'tiks). Radiotherapy.

radiotherapeutist, radiotherapist (ra'de-o-ther-ap-u'tist, ra-de-o-ther'ap-ist). A specialist skilled in the use of radiotherapy.

radiotherapy (ra'de-o-ther'ap-ē) [L. *ra'dius* ray + *θεραπεία* cure]. The treatment of disease by roentgen rays, radium rays, polonium rays, etc.

radiothermy (ra-de-o-ther'me) [L. *ra'dius* ray + *θερμῆ* heat]. Therapeutical use of radiant heat.

radiothorium (ra'de-o-tho're-um). A body found in pitchblende from Colorado. It is a disintegration product of thorium and resembles the latter in properties. It gives off a disintegration product known as *thorium X*.

radiotorium (ra'de-o-to're-um). A hermetically sealed room in which patients, for therapeutical purposes, breathe the gases arising from the disintegration of radium.

radiotoxemia (ra'de-o-toks-e'me-ah). Toxemia produced by a radioactive substance, or resulting from radioactive treatment.

radio-ulnar (ra'de-o-ul'nar). Pertaining to the radius and ulna.

radium (ra'di-um) [so called from its radiant quality]. A rare metal, discovered in 1899 in pitchblende. Metallic radium is unstable in air, the chloride, bromide, sulphate, and carbonate being the salts used. It is a spontaneous source of radiation, and maintains a temperature of from 2 to 5 F. above the surrounding atmosphere. Its atomic weight is 226, symbol, Ra. Radium salts emit, besides heat and light, three distinct kinds of radiation, which are distinguished as α -, β -, and γ -rays, and also a radioactive gas called *radium emanation*. The γ -rays are similar to roentgen rays, passing through many substances opaque to light. The β -rays are similar to cathode rays, and have less penetrating power than γ -rays. The α -rays have very slight penetrating power. Radium rays have been used in the treatment of lupus and other skin diseases, as well as in sarcoma and carcinoma. See *radioactive elements, table of*, p. 1026.

r. emanation. See *emanation*.

radiumization (ra'de-um-iz-a'shun). Application of radium rays to a part.

radiumologist (ra-de-um-ol'o-jist). A practitioner who specializes in treatment by radium.

radius (ra'de-us) [L. "spoke"]. 1. A line radiating from a center. 2. The bone on the outer or thumb side of the forearm. **r. carvūs.** See *Madelung's deformity, under deformity*. **r. fix'us**, a straight line from the hornion to the inion.

radix (ra'diks), pl. *radices*. Latin for *root*. **r. anterior nervo'rum spinalium** [B N A], the nerve trunk which is formed by union of the fila radicularia anteriores and which joins the posterior root just beyond the spinal ganglion. **r. arcus vertebræ** [B N A], one of the ends of a vertebral arch by which it is attached to the body of the bone. It is limited above and below by the inferior and the superior vertebral notches. **r. bre'vis ganglii cilia'ris** [B N A], a short, thick nerve thread which passes from the inferior branch of the oculomotor nerve to the posterior inferior por-

tion of the ciliary ganglion. **r. cochlea'ris ner'vi acus'tici** [B N A], the lateral portion of the acoustic nerve which passes around back of the restiform body to enter the brain. **r. den'tis** [B N A], the portion of a tooth which is fixed in an alveolus. It is covered with substantia ossea and it extends from the collum dentis to the apex radialis dentis. **r. descen'dens ner'vi trigem'ini** [B N A], a band of fibers which arise from the cells of the nucleus radialis descendens nervi trigemini, follow this nucleus downward, and at the motor nucleus join the portio minor of the trigeminal nerve. **r. descen'dens (mesen-cephalica) ner'vi trigem'ini** [B N A], the upper and beginning part of the descending root of the trigeminal nerve. It begins nearly as high up as the posterior commissure and extends to below the inferior colliculus. **r. latera'lis trac'tus op'tici** [B N A], the lateral root of the optic tract. It is at the posterolateral end of the tract and enters the corpus geniculatum laterale. **r. lin'guae** [B N A], the portion of the tongue posterior to the sulcus terminalis. It is directed backward as well as upward and it is attached below to the hyoid bone. **r. lon'ga gan'glii cilia'ris** [B N A], a slender branch of the nasociliary nerve which passes forward to the ciliary ganglion and enters its posterosuperior portion. **r. media'lis trac'tus op'tici** [B N A], the medial root of the optic tract. It is at the postero-lateral end of the tract and it enters the corpus geniculatum mediale. **r. mesente'rii** [B N A], the line of attachment of the mesentery to the posterior abdominal wall. It extends from the duodenojejunal flexure at the left side of the second lumbar vertebra downward diagonally to the upper end of the right sacroiliac articulation. **r. mol'lis gan'glii cilia'ris** [B N A], the soft root of the ciliary ganglion. **r. na'si** [B N A], the upper end of the nose which is attached to the frontal bone. **r. ner'vi facia'lis** [B N A], the portion of the facial nerve before it emerges from the brain. It consists of a pars prima and a pars secunda. **rad'ices parietales ve'nae inferio'res** [B N A], the parietal tributaries of the inferior vena cava. They are the venae lumbales and vena phrenica inferior and one might include the vena sacralis media and the vena iliaca communis. **r. pe'nis** [B N A], the posterior attached portion of the penis. It consists of the diverging crura of the corpora cavernosa and the bulb. **r. pi'li** [B N A], the portion of a hair which is embedded in the skin. **r. poste'rior nervo-rum spina'lium** [B N A], the portion of a spinal nerve which extends from the spinal ganglion to the spinal cord. **r. pulmo'nis** [B N A], the place at which the pulmonary vessels and bronchi enter a lung. It is a little above the center of the medial surface. **rad'ices sympath'ici gan'glii cilia'ris** [B N A], filaments from the cavernous plexus which pass through the superior orbital fissure to the ciliary ganglion. **r. sympath'ica gan'glii submaxilla'ris** [B N A], filaments from the external maxillary plexus which pass to the submaxillary ganglion. **r. un'guis** [B N A], the proximal portion of a nail which is situated under the vallum unguis. **r. vestibula'ris ner'vi acus'tici** [B N A], the medial portion of the acoustic nerve which enters the brain just lateral to the intermediate nerve and in front of the restiform body. **rad'ices viscera'les ve'nae ca'vae inferio'ris** [B N A], branches of the vena cava from the viscera of the abdominal and pelvic cavities. They are venae hepaticae, renales, and suprarenales and the vena spermatica.

radon (ra'don). The correct name for radium emanation.

radzyge (rad'zi-ge). See *radesyge*.

raffinase (raf'in-äs). An enzyme which splits up raffinose.

raffinose (raf'in-ös). Same as *meltiose*.

rafie (rah'fi). An eruptive disease of cattle in northern France.

rag-pickers' disease. See *rag-sorters' disease*, under *disease*.

ragweed (rag'wëd). See *Ambrosia*.

ragwort (rag'wert). See *Senecio*.

Rallie'tia au'ris. A mite which lives in the ears of cattle.

railway spine (rāl'wa). See *spine*.

Raimistes' sign. See under *sign*.

rain-boil. An endemic ulcer prevalent in India in the rainy season; Scinde boil.

Rainey's corpuscles (ra'nëz) [George Rainey, English anatomist, 1801-1884]. See *corpuscle*.

raisins (ra'zns) [L. *pas'sulae*; *u'vae pas'sae*]. Dried grapes. **Corinthian r.**, true currants.

râle (rahl) [Fr. "rattle?"]. Any abnormal respiratory sound heard in auscultation, and indicating some pathologic condition. Râles are distinguished as *dry* or *moist*, according to the absence or presence of fluid in the air passages, and are classified according to their location as *bronchial*, *cavernous*, *laryngeal*, *pleural*, *tracheal*, and *vesicular*. **am-phoric r.**, a large, musical, and tinkling râle produced by the splashing of fluid in a cavity connected with a bronchus. **atelectatic r.**, a nonpathologic râle which is dissipated by deep breathing or coughing. Such râles are frequently heard in those who breathe feebly and superficially, when on deep inspiration the moist walls of the unexpanded alveoli are suddenly forced apart by the entering air; after a few deep inspirations such râles become lost. These râles are best observed at the margins or borders of the lung and are sometimes known as *marginal* or *border* râles. **border r.** See *atelectatic r.* **bubbling r.**, a moist râle, finer than a subcrepitant râle, heard in bronchitis, in the resolving stage of croupous pneumonia, and over small cavities. **cavernous r.**, a hollow and metallic râle caused by the alternate expansion and contraction of a pulmonary cavity during respiration. It is heard in the third stage of pulmonary tuberculosis. **clicking r.**, a small, sticky sound heard in inspiration, and caused by the passage of air through softening matter in the smaller bronchi. It occurs in the early stages of pulmonary tuberculosis. **collapse r.**, a fine crepitant râle heard over collapsed lung tissue; also at the base of the healthy lung of a bedridden patient: due to incomplete expansion of the air vesicles. **con-sonating r.**, a clear, ringing sound produced in bronchial tubes that are surrounded by consolidation tissues: heard in tuberculous pneumonia. **crackling r.** Same as *subcrepitant r.* **crepitant r.**, a very fine râle, resembling the sound produced by rubbing a lock of hair between the fingers or by particles of salt thrown on fire. It is heard at the end of inspiration in the early stages of croupous pneumonia. **dry r.**, a râle produced by the presence of viscid secretion in the bronchial tubes or by thickening of the walls of the tubes. It has a whistling, musical, or squeaking quality. Dry râles are heard in asthma and bronchitis. **extrathoracic r.**, a râle produced in the larynx or trachea. **gur'gling r.**, a very coarse râle resembling the bursting of large bubbles. They are heard over large cavities that contain fluid, and in the trachea in the death rattle. **guttural r.**, a râle produced in the throat. **Hirtz's r.**, a moist, subcrepitant, metallic râle indicative of tuberculous softening. **r. in'dux**, a crepitant râle heard in the stage of beginning consolidation in pneumonia. **laryngeal r.**, a râle produced in the larynx. **marginal r.** See *atelectatic r.* **metallic r.** Same as *consonating r.* **moist r.**, a râle produced by the presence of liquid in the bronchial tubes. **mucous r.** (*r. muqueux*), a modified subcrepitant râle resembling the sound produced by blowing through a pipe into soapy water. It is caused by the bursting of viscid bubbles in the bronchial tubes: heard in emphysema of lungs. **pleural r.**, a pleural friction sound.

r. re'dux, r. de retour, an unequal crackling sound produced by air passing through fluid in a bronchial tube: heard in the resolution stage of pneumonia. **sibilant r.**, a hissing sound resembling that produced by suddenly separating two oiled surfaces. It is produced by the presence of a viscid secretion in the bronchial tubes or by thickening of the walls of the tubes: heard in asthma, bronchitis, and in the beginning of tuberculosis of the lungs. **Skoda's r.**, a bronchial râle heard through consolidated tissue in pneumonia. **sonorous r.**, a small, moist sound resembling the cooing of a dove, produced by the passage of air through mucus in the capillary bronchial tubes: heard in capillary bronchitis and asthma. **subcrepitant r.**, a fine, moist râle heard in conditions that are associated with liquid in the smaller tubes, as in bronchitis, pulmonary edema, and phthisis in the early stages. Called also *crackling r.* **tracheal r.**, a râle produced in the trachea. **vesicular r.**, a crepitant râle. **whistling r.**, a sibilant râle.

Ralfe's test (ralifs) [Charles Henry Ralfe, English physician, 1842-1896]. See under *tests*.

ramal (ra'mal). Pertaining to a ramus; branching. **ramaninjana** (ram'an-in-jah'nah). A form of palmar, or jumping disease, prevailing in Madagascar.

Rambotham's hook (ram'both-amz). A hook with a concave cutting edge, used for decapitating a fetus.

R. A. M. C. Abbreviation for *Royal Army Medical Corps*.

Ramdohr's suture (rahm'dörz) [Caesar A. von Ramdohr, American surgeon, 1855-1912]. See under *suture*.

ramex (ra'meks) [L.]. 1. A hernia. 2. Varicocele.

rami (ra'mi). Plural of *ramus*. **r. communican'tes**, bundles of nerve fibers connecting the spinal cord with the sympathetic ganglia.

ramification (ram'if-ik-a'shun) [L. *ra'mus* branch + *fa'cere* to make]. 1. Distribution in branches. 2. A branch or set of branches. 3. The manner of branching.

ramify (ram'if-i) [L. *ra'mus* branch + *fa'cere* to make]. 1. To branch; to diverge in various directions. 2. To traverse in branches.

ramisection (ram-is-ek'shun) [L. *ra'mus* + *sec'tio* a cutting]. The operation of cutting the rami communicantes of the sympathetic (*sympathetic ramisection*): done for the relief of spastic paralysis.

ramisectomy (ram-is-ek'to-me). Ramisection.

Rammstedt operation (rahm'stet). See under *operation*.

ramogen (ram'o-jen). A proprietary sterile modified milk preparation.

ramollissement (rah-mol-ēs-maw'). French for *softening*.

Ramón y Cajal's cells, stain (rah-mōn e ka-hal') [S. R. Ramón y Cajal, Spanish histologist, born 1852]. See *Cajal's cell*, under *cell*, and *stains*, table of.

ramose, ramous (ra'mōs, ra'mus) [L. *ra'mus* branch]. Branching; having many branches.

rampart, maxillary (ram'part). A ridge or mound of epithelial cells seen in that portion of the jaw of the embryo which is to become the alveolar border.

Ramsden's ocular (rams'denz) [Jesse Ramsden, English optician, 1735-1800]. See under *ocular*.

ramulus (ram'u-lus). A small branch or terminal division.

ramus (ra'mus), pl. *ra'mi* [L.]. 1. A branch, as of an artery, bone, nerve, or vein. 2. Any constant branch of a fissure or sulcus of the brain. In the BNA terminology the term *ramus* is given to a primary division of a nerve or blood vessel. **r. anastomot'icus**, nerve fibers running from one nerve to another, and frequently carrying sensory

fibers to a motor nerve, or *vice versa*. **r. anastomot'icus peronae'us** [BNA], the communicans peronaei nerve, a branch of the common peroneal nerve arising in the popliteal space, running over outer head of gastrocnemius to middle third of leg where it joins the cutaneous surae medialis nerve to form the sural nerve. **r. auricula'ris va'gi** [BNA], a branch from the jugular ganglion of the vagus nerve distributed to the back of the auricle and external auditory meatus. **r. commun'icans**, a branch connecting a spinal nerve with a sympathetic ganglion. **r. exter'nus ner'vi accessor'ii**, a fetal branch of the spinal accessory nerve. **r. interfunicula'ris**, one of the branches which connect the two chains of the sympathetic nervous system. **r. internodia'lis**, one of the branches which connect the ganglia of the sympathetic nervous system. **ischio-pubic r.**, the descending ramus of the pubic bone together with the ramus of the ischium. **r. of the ischium**, the narrower projecting part of the bone. **r. of the jaw**, the ascending branch at each end of the lower jawbone. **r. mandib'uli**, the ramus of the jaw. **r. meninge'us va'gi** [BNA], the meningeal branch of the vagus. **r. of the pubis**, one of the parts of the pubis forming the boundary of the obturator foramen.

rancid (ran'sid) [L. *ran'idus*]. Having a musty, rank taste or smell. The term is applied to fats that have undergone decomposition, with the development of fatty acids.

rancidity (ran-sid'it-e). The quality of being rancid.

Randia (ran'de-ah) [after Isaac Rand]. A genus of tropical rutaceous trees and shrubs. The fruit of *R. dumetorum*, of Africa and India (emetic nut), is a powerful emetic. Dose of tincture, 15-60 minims (1-4 cc.).

Randolph's test (ran'dolfs) [Nathaniel Archer Randolph, American physician, 1858-1887]. See under *tests*.

range of accommodation (rānj). The alteration in the refractive state of the eye produced by accommodation. It is the difference in diopters between the refraction by the eye adjusted for its far point and that when adjusted for its near point. Called also *amplitude of accommodation and breadth of accommodation*.

Ranglelia vital'ii. A blood parasite causing the disease nambi-vuvu in dogs.

ranine (ra'nin) [L. *rani'nus*; *ra'na* frog]. Pertaining to a frog, to a ranula, or to the lower surface of the tongue.

Ranke's angle (rahn'kez) [Hans Rudolph Ranke, Dutch anatomist, 1849-1887]. See *angle*.

Ranke's formula (rahn'kez) [Karl Ranke, contemporary German chemist]. See *formula*.

Ransohoff's operation (ran'so-hofs) [Joseph Ransohoff, surgeon in Cincinnati, 1853-1921]. See under *operation*.

ranula (ran'u-lah) [L. dim. of *ra'na* frog]. A cystic tumor beneath the tongue, due to obstruction and dilatation of the sublingual or submaxillary gland or of a mucous gland. **pancreatic r.**, a retention cyst of the pancreatic duct.

ranular (ran'u-lar). Pertaining to or of the nature of ranula.

Ranunculus (ra-nung'ku-lus). A genus of plants, certain species of which are poisonous.

Ranvier's nerve, node, etc. (rahn-ve-āz') [Louis Antoine Ranvier, French pathologist, 1835-1922]. See *nerve*, *node*, etc.

Raoult's law (rah-ōlz') [François Marie Raoult, French physicist, 1830-1899]. See under *law*.

rape (rāp) [L. *rap'tus*]. Coitus without the consent of the woman or against her will.

raphania (raf-a'ne-ah) [L. *raph'anus*; *ράφανος* radish]. A chronic poisoning ascribed to the seeds of wild radish and resembling ergotism (Linnaeus). It is attended with spasms of the limbs.

raphe (ra'fe) [*ρᾱφή* seam]. A ridge or furrow that marks the line of union of the halves of various symmetrical parts. **r. anococcy'gea**, a fibrous septum extending from the anus to the coccyx. **r. cor'poris callo'si**, a linear furrow along the median line of the upper side of the callosum, and a similar ridge on the lower side. **r. medu'llae oblonga'tae** [B N A], the line of union of the two halves of the medulla oblongata. **r. pal'ati** [B N A], a narrow sagittal whitish streak along the center of the palate which may have the form of a ridge in front and that of a groove behind. It begins in front at the papilla incisiva and ends behind at the tip of the uvula. **r. palpebra'lis** [B N A], a thin horizontal band of connective tissue which extends from the external angle of the rima palpebralis to the lateral margin of the orbit. **r. pe'nis** [B N A], a narrow dark streak or ridge which extends forward in the midline from the raphe scroti along the under side of the penis for a variable distance. In the newborn it may extend to the tip of the glans. **r. perine'i** [B N A], a ridge along the median line of the perineum. It is continuous in front with the raphe scroti and it ends behind at the anus. **r. pharyng'is** [B N A], a more or less distinct band of connective tissue which extends downward from the base of the skull along the posterior wall of the pharynx in the median plane to which the constrictor muscles of the pharynx are attached. **r. pterygomandibula'ris** [B N A], the pterygomandibular ligament. **r. pon'tis** [B N A], the portion of the medial plane of the pons in which the decussatio lemniscorum takes place. **r. scro'ti** [B N A], a ridge along the surface of the scrotum in the median line which divides it into nearly equal lateral parts. It is continuous in front with the raphe penis and behind with the raphe perine'i. **Stilling's r.**, the fibers uniting the pyramids on the anterior surface of the oblongata.

raphidiopore (ra-fid'e-o-spör). See *exotopore*.

rap'tus melanchol'icus. An attack of frenzy or agitation occurring in a patient with melancholia.

rarefaction (rar-e-fak'shun) [L. *rarefactio*]. The condition of being or becoming less dense; diminution in density and weight, but not in volume.

rarefying osteitis (rar'e-fi-ing). See *osteitis*.

Ras. Abbreviation for *Rasur'rae*, shavings.

Rasa'hus bigutta'tus. A bug found in Cuba, Panama, and South America, which sometimes bites man.

rasceta (ras'e'tah). Transverse markings across the skin of the wrists, on the palmar surface.

Rasch's sign (rahshs) [Hermann Rasch, German obstetrician, born 1873]. See under *sign*.

rash (rash). A temporary eruption on the skin, as in urticaria and strophulus; an exanthem. **aniline r.**, a skin inflammation due to aniline poisoning. **antitoxin r.**, a skin eruption frequently following the administration of diphtheria antitoxin. **astacoid r.**, a reddish eruption in smallpox resembling in color the shell of a boiled lobster. **black currant r.**, the peculiar appearance of the skin in xeroderma pigmentosum. **canker r.**, a popular name for scarlatina. **caterpillar r.**, a local eruption attributed to poisoning by the hairs of caterpillars. **crystal r.**, sudamina. **drug r.**, a rash due to medication. Called also *medicinal r.* **flannel r.**, a reddish eruption caused by the irritation of flannel underclothing. **gum r.** See *strophulus*. **heat r.**, miliaria rubra. **hydatid r.**, an urticarial eruption which sometimes follows tapping or rupture of a hydatid cyst. **medicinal r.** See *drug r.* **mulberry r.**, a peculiar eruption of typhus, looking like that of measles. **nettle r.** Same as *urticaria*. **nickle r.**, a rash sometimes occurring in refiners of nickle. **rose r.** Same as *roseola*. **serum r.**, the rash that sometimes follows the injection of antitoxic serums. **tonsil-lotomy r.**, an eruption on the neck and body

after tonsillectomy. **tooth r.** Same as *strophulus*. **wildfire r.** Same as *strophulus volaticus*.

rasion (ra'zhun) [L. *ra'sio*]. The rasping of drugs with a file.

rasmosin (ras'mo-sin). A resin-like derivative from the root of *Cimicif'uga racem'o'sa*: tonic, antispasmodic, and antirheumatic. Dose, 1-5 grains (0.06-0.3 Gm.).

Rasmussen's aneurysm [Fritz Waldemar Rasmussen, Danish physician, 1834-1881]. See *aneurysm*.

raspatory (ras'pat-o-re) [L. *raspato'rium*]. A file or rasp for surgeon's use; a xyster.

rasberry (raz'ber-e). See under *Rubus*.

rasura (rah-su'rah). Latin for *scrapings* or *filings*.

rat (rat). A rodent commonly found about human habitations. Rats not only cause great economic loss, but their bite causes rat-bite fever; they harbor at least eleven different species of intestinal parasites that may be transmitted to man, such as tapeworms, round worms, and trichinae; they assist in the transmission of plague, dysentery and Weil's disease to man; and they help to keep alive bedbugs and fleas when the latter have no access to human blood. **albino r.** See *white r.* **black r.**, *Mus (Rattus) rattus*, the English black rat and the one most responsible for transmitting plague to man by means of its flea (*Xenopsylla cheopis*). It is smaller than the brown rat, has longer ears and tail, and is glossy black in color. **brown r.**, *Mus (Rattus) norvegicus*; also called the barn rat, gray rat, Norway rat, sewer rat, and wharf rat. It is larger than the black rat, has a brownish-gray color, and short ears and tail. **Egyptian or roof r.**, *Mus alexandrinus*. **white r.**, an albino form of *Mus rattus* or of *Mus norvegicus* which is much used as a laboratory animal. **wood r.**, a rat of the genus *Neotoma*. They are hosts of *Lamius protracta*.

rat-bite fever. See under *fever*.

rat-tails (rat'tälz). A swollen condition of the hair papillae over the flexor tendons of a horse's leg, due to lichen.

ratanhia, **ratany** (rat-an'e-ah, rat'an-e) [Pg. *raton'hia*]. Same as *krameria*.

ratanhin (rat'an-in). Same as *surinamin*.

rate (rát). The measure of a thing by its ratio or relation to some standard. **basal metabolic r.** See *basal metabolism*, under *metabolism*. **birth r.**, the relation of the number of births during a year to the population of that year. This is the *crude birth rate*. The *refined birth rate* is the ratio of births to the female population; the *true birth rate* is the ratio of births to the female population of child-bearing age, *i. e.*, between fifteen and forty-five years of age. **case r.** Same as *morbidity r.* **case fatality r.**, the percentage of cases of sickness which terminate fatally. **death r.**, the ratio of the total number of deaths in a community to the population, generally figured in terms of number of deaths per 1000, 10,000, or 100,000 of population. **fatality r.**, the number of deaths per 100 cases of a specific disease. Called also *lethality r.* **heart r.**, the rate of the contractions of the ventricles of the heart. It usually corresponds to the pulse rate, but occasionally some of the ventricular contractions fail to produce peripheral pulse waves; so that the pulse at the wrist is less in rate than that of the heart. This difference is called *pulse deficit*. **lethality r.** See *case fatality r.* **morbidity r.**, the proportion of cases of a given disease occurring during the year per 1000, 10,000, or 100,000 of population. **pulse r.**, the rate of the pulse beat. The normal rate is 72 for men and 80 for women. **sickness r.** Same as *morbidity r.* **stillbirth r.** See *natimortality*.

Rathke's pocket or pouch (raht'kēz) [Martin H. Rathke, German anatomist, 1793-1860]. See under *pouch*.

raticide (rat'is-id). A substance that will kill rats; a rat poison.

ratin (rat'in). A preparation of living bacteria of the paratyphoid enteritidis group, pathogenic to rats: used as a rat exterminator.

ratio (ra'she-o). Latin for *proportion*. **absorption r.**, the ratio between the coefficient of extinction of a solution and the amount of light-absorbing matter in that solution. **birth-death r.** See *vital index*, under *index*. **cell color r.**, the result obtained by dividing the percentage of red cells by the percentage of hemoglobin. **curative r.**, the fraction of the minimal lethal dose of a drug that is therapeutically effective; called also *therapeutical r.* **D:N r.**, the ratio between the dextrose and the nitrogen of the urine. **hand r.**, the ratio of the length of the hand to its width. **karyoplasmic r.**, nucleoplasmic ratio. **ketogenic-antiketogenic r.**, the proportion between substances that form glucose in the body and those that form fatty acids. **mendelian r.**, a ratio of 1 to 3 seen in the grandchildren of a cross between two races differing by some one characteristic. **nucleocytoplasmic r.**, **nucleoplasmic r.**, the ratio of nuclear to cytoplasmic volume. **nutritive r.**, the ratio between the digestible protein and the digestible fats and carbohydrates in a ration in stock feeding. **therapeutical r.** See *curative r.*

ration (ra'shun) [L. *ratio* proportion]. A fixed daily allowance of food or drink.

rational (rash'un-al) [L. *rationalis* reasonable]. Accordant with reason; based upon reasoning and not upon simple experience.

rationale (rash-o-na'le). A rational exposition of principles; the logical basis of a procedure.

ratsbane (rats'ban). White arsenic; arsenous anhydride, As_2O_3 .

rattlesnake (rat'l-snäk). Same as *Crotalus*.

Rattus (rat'us). A genus of small rodents; the rats. See *rat*.

Rau, process of (row) [Johann J. Rau (Ravius), Dutch anatomist, 1658-1710]. See *process*.

Rauber's layer (row'berz) [August Rauber, German anatomist, born 1845]. See *layer*.

raucedo (raw-se'do). Latin for *hoarseness*.

Rauchfuss' triangle (rowsh'foos) [Charles Andreyevich Rauchfuss, physician in St. Petersburg, 1835-1916]. Same as *Grocco's sign*. See *sign*.

Rausch (rowsh) [Ger. "intoxication"]. Light general anesthesia with ether only to the point where, if questioned sharply, the patient will not reply. Called also *ether rausch*.

Rauschbrand (rowsh'brahnt) [Ger.]. Symptomatic anthrax. See under *anthrax*.

Rauvolfia (raw-vol'fe-ah). See *ophioxilin*.

Ravius' process (ra've-us). See *Rau, process of*.

ray (rä) [L. *radius* spoke]. A line of light or of heat. A ray is a more or less distinct or isolated portion of radiant energy, while the word rays is a very general term for any form of radiant energy, whether vibratory or particulate. **actinic r.**, a light ray which produces chemical changes. In general, light rays become more actinic as one passes from the red through the spectrum to the violet and even into the ultraviolet. **alpha r's**, **α r's**, helium nuclei which have been ejected from radioactive substances. Owing to their high velocity (one tenth that of light) their kinetic energy is so great that a single alpha particle produces a microscopical flash of light when it hits a spinthariscopes; when it hits another atom (as of nitrogen) it may cause it to disintegrate. **anoder's**. Same as *positive r's*. **astral r.**, one of the rays of an astrophere. **Becquerel r's**, rays emitted from uranium discovered by Becquerel in 1896. **beta r's**, **β r's**, electrons ejected from radioactive substances with velocities which may be as high as 0.08 of the velocity of light. **Blondlot r's**.

See *n r's*. **border r's**. Same as *Grenz r's*. **Bucky's r's**. Same as *Grenz r's*. **caloric r.**, radiant energy which produces convective heat. **canal r's**, positive rays in a vacuum tube; so called from having been first obtained by allowing the discharge from the anode to pass through a perforated (canalized) cathode. **cathode r's**, negative particles of electricity streaming out in a vacuum tube at right angles to the surface of the cathode and away from it irrespective of the position of the anode. They move in a straight line unless deflected by a magnet. By striking on solids they generate roentgen rays. **characteristic r.**, when a metallic surface is exposed to roentgen rays a secondary radiation, called its characteristic ray, is emitted which is nearly homogeneous as to wavelength and is approximately proportional to the reciprocal of the square of the atomic weight of the metal. **chemical r.** Same as *actinic r.* **convergent r.**, a ray which is approaching a focus. It may be produced by passage through a convex lens or by reflection from a concave mirror. **cosmic r's**. See *Millikan r's*. **delta r's**, **δ r's**, secondary beta rays produced in a gas by the passage of alpha particles. **direct r.**, primary ray. **divergent r's**, rays coming from a source nearer than infinity. **Dorno r's**, the active biological ultraviolet rays, *i. e.*, those between 32 and 2890 Å. **Finsen r's**. See *Finsen light*, under *light*. **r. fungus**. Same as *actinomycetes*. **gamma r's**, **γ r's**, electromagnetic waves of great penetrative power which are emitted from radioactive substances. They are similar to roentgen rays, but of much shorter wavelength, even as short as 0.01 of an Angstrom unit, and are usually associated with beta rays. **glass r's**, the rays formed in a roentgen-ray tube by the cathode rays striking the glass wall of the tube, so called to distinguish them from the roentgen rays originating at the anticathode. **Goldstein's r's**, rays formed when roentgen rays pass through some transparent medium. Called also *s r's*. **Grenz r's**, infra-roentgen rays; electromagnetic vibrations of wavelength about 2 Å. U. They lie between the roentgen rays and ultraviolet rays. **hard r's**, roentgen rays of short wavelength and great penetrative power. **heat r's**. See *radiant heat*, under *heat*. **hertzian r's**, electromagnetic waves similar to a light wave, but having a greater wavelength. They are the waves used in wireless transmission of signals, speech, etc. **i r's**, an alleged form of radiant emanations allied to n rays, and given off from the brain during certain psychic processes. **incident r.** See *refraction*. **indirect r's**, rays formed at the surface of the glass of the tube. **infra-roentgen r's**. See *Grenz r's*. **intermediate r's**, wavelengths between the ultraviolet and the roentgen rays. **Lenard r's**, cathode rays after they have issued from a Crookes tube through a window of platinum foil. **luminous r's**, the visible rays of the spectrum. **medullary r.**, any cortical extension of a bundle of tubules from a malpighian pyramid of the kidney. **Millikan r's**, electromagnetic waves which reach the earth from unknown cosmic sources. They are similar to the gamma rays of radium, but their wavelength (0.0007 to 0.0004 of an Angstrom unit) is one fiftieth as long and their penetrating power (6 feet of lead) is correspondingly greater. **minin r's**, rays generated by passing incandescent light through dark-blue glass. **n r's**, an alleged form of radiation, the identity of which is not well established. Called also *Blondlot r's*. A variety of n rays (called *n' rays*) differs from n rays in diminishing the luminosity of light and of faintly luminous surfaces. **Nieuenglowski's r's**, luminous rays given out by substances which have been exposed to the sun. **paracathodic r's**, rays formed by the impaction of cathode rays against a body (the anticathode) in their path. **parallel r's**, rays which come from a source at an infinite distance. Divergent rays may be made parallel by means of a convex lens or a concave

- mirror. **polar r.** Same as *astral r.* **positive r's**, positively charged atoms emitted from a (heated) anode and given a high velocity in a vacuum by the electric field. If they are then passed through a magnetic field or a combination of magnetic and electric fields they are deflected from their course and their mass can in this way be determined. **primary r.**, a ray given off directly from a radioactive substance. **refracted r.** See *refraction*. **s r's.** See *Goldstein's r's.* **roentgen r's**, electromagnetic vibrations or waves set in motion when electrons, moving at high velocity, impinge on certain substances, especially the heavy metals. They are able to penetrate most substances, to affect a photographic plate, to bring about chemical reactions, and to produce changes in living matter. They are generated by passing a current of high potential through a highly exhausted vacuum tube (Coolidge tube) and are used in taking photographs, called roentgenograms, of various parts of the body. They thus reveal foreign bodies therein, calculi, bullets, etc., or the condition of the invisible parts, such as fractures, as well as the function of such organs as the heart, stomach, intestines, etc. They are also used in treating various disease conditions, such as lupus, cancer, eczema. Called also *x-rays*. **Sagnac r's**, secondary beta rays formed when gamma rays are reflected from a metal surface. **secondary r.**, a ray formed when a primary ray strikes against matter. **soft r's**, roentgen rays of long wavelength and little penetrative power. **titanium r.**, the radiation produced between metallic electrodes which consist of a tungsten alloy containing titanium. **transition r's.** Same as *Grenz r's.* **ultra-violet r's**, those invisible rays of the spectrum which are beyond the violet rays. They vary in wavelength from 4000 to 200 Angstrom units. **ultra x-r.** Same as *Millikan's r's.* **U. V. r's**, ultraviolet rays. **vital r's**, ultraviolet rays, between 2900 and 3200 A. U., which are the rays that act on the body therapeutically. **W r's.** Same as *intermediate r's.* **x-r's**, the name given by Roentgen to the rays now known as roentgen rays.
- rayage** (ra'ej). The dosage of any form of radiant energy.
- Rayer's disease** (ra-yāz') [Pierre François Rayer, French physician, 1793-1867]. Xanthoma.
- Raygat's test** (ra'gats). See under *tests*.
- raying** (ra'ing). Exposure to the action of roentgen rays or any other kind of radioactivity.
- Raymond type of apoplexy** (ra-mon') [Fulgence Raymond, French neurologist, born 1844]. See under *type*.
- Raynaud's disease** (ra-nōz') [Maurice Raynaud, French physician, 1834-1881]. See under *disease*.
- Rb.** A symbol of *rubidium*.
- R. C. P.** Abbreviation for *Royal College of Physicians*.
- R. C. S.** Abbreviation for *Royal College of Surgeons*.
- R. D.** Abbreviation for *reaction of degeneration*.
- R. D. A.** The *right dorso-anterior position* of the fetus at delivery.
- R. D. P.** The *right dorso-posterior position* of the fetus.
- R. E.** Abbreviation for *radium emanation and right eye*.
- re-** [L.]. A prefix signifying *back, again, contrary, etc.*
- react** (re-akt'). 1. To respond to a stimulus. 2. To enter into chemical action with.
- reactance** (re-akt'ans). The weakening of an alternating electric current caused by passage through a coil of wire: called also *inductive resistance*.
- reactant** (re-akt'ant). The original substance entering into a chemical reaction.
- reaction** (re-ak'shun) [L. *re* again + *agere* to act]. 1. Opposite action, or counteraction; the response of a part to stimulation. 2. The phenomena caused by the action of chemical agents; a chemical process in which one substance is transformed into another substance or substances. [Specially named reactions not defined here will be found under *tests*.] **Abderhalden's r.**, a serum reaction based upon the hypothesis that when a foreign protein gets into the blood the body reacts by elaborating a ferment which causes disintegration of the protein. Such a ferment is called a *protective ferment* (*Abwehrfermente*) and is specific for the particular protein which caused its formation. This reaction was first applied to the diagnosis of pregnancy on the principle that in the blood of pregnant women there is present a proteolytic ferment which will cause cleavage of placental albumin and placental peptone. The same principle is applied to the diagnosis of cancer because the blood of cancer patients contains a ferment which digests coagulated cancer protein. Similarly, in dementia praecox, the brain becomes degenerated and furnishes to the blood substances which excite the formation of a ferment capable of decomposing proteins of human brain. This is the *Abderhalden-Fauser reaction*. The same principle has also been applied to the diagnosis of syphilis, tuberculosis, and the acute infections. **Abderhalden-Fauser r.** See under *Abderhalden's r.* **Abelen's r.**, a reaction for ascertaining the presence of arspenamine in the urine. From 7 to 8 cc. of urine are acidulated with 2 or 3 drops of 0.1 per cent solution of hydrochloric acid; 3 or 4 drops of 10 per cent sodium nitrite solution are added, and then 2 or 3 drops of a 10 per cent alkaline resorcin solution, and, finally, an excess of sodium hydroxide. **abortion r.** See *abortion test*, under *tests*. **accelerated r.**, when a biological reaction such as serum sickness appears in a shorter time than usual it is said to be accelerated. **acetic acid r.** See *Rivalta's r.* **acetonitril r.** See *acetonitril test*, under *tests*. **acid r.**, the turning of blue litmus paper red: a test for the presence of acids. **Acree-Rosenheim r.** See under *tests*. **Adamkiewicz's r.** See *Adamkiewicz test*, under *tests*. **agglutination r.** See *agglutination and Widal's test*, under *tests*. **alkaline r.**, when the *pH* value of the solution is greater than 7; for rough approximation, when the solution turns red litmus paper blue: an indication of the presence of an alkali. **allergic r.** See *cutaneous r.* (2d def.). **alpha-naphthol r.** See *Molisch's test*, under *tests*. **amphicrotic r.**, **amphoteric r.**, a combination of acid and alkaline properties in the same substance. **amphigenous r.** Same as *amphoteric r.* **anaphylactic r.**, the reaction which occurs in anaphylactic shock. **anaphylactoid r.**, pseudo-anaphylaxis. **anatoxin r.**, an intradermic reaction in which anatoxin is used. **antalgic r.**, a bodily reaction or response having the purpose of avoiding pain. **antigen r.** of Debré and Paraf, a complement fixation reaction for the diagnosis of urinary tuberculosis, using for antigen the patient's urine, for antibody known tuberculosis serum, and testing the complement against a hemolytic serum of sheep's corpuscles and antiserum. **antigen-antibody r.**, the little understood reaction which occurs when antigen encounters its specific antibody. See *immuno-reaction*. **antitryptic r.**, the reaction produced by the blood upon mixtures of trypsin and casein solutions. Such reaction is modified by various disease conditions, such as cancer, tuberculosis; also by the pregnant condition. **Ascoli's r.** Same as *miostagmin r.* **associative r.**, a reaction in which the response is withheld until the idea presented has suggested an associated idea. **Austrian's r.**, an ophthalmic reaction for typhoid fever by the use of an antigen prepared from a mixed culture of a large number of different strains of typhoid bacilli. **axon r.** See *chroma-*

tolysis. **bacteriolytic r.**, the reaction which brings about specific bacteriolysis. **Bareggi's r.**, the formation in a test tube of an unretreated clot, with but little serum, from the blood of typhoid fever; but if the blood be taken from a patient with tuberculosis, the clot retracts with the separation of much serum. **Bechterew's r.**, in cases of tetany the minimum of electric current needed to arouse muscular contraction needs to be diminished at every interruption or change of density in order to prevent tetanic contraction. **Bence-Jones r.**, the precipitation of albumose by nitric acid, followed by its redissolving on boiling and being precipitated again on cooling. **Beyerinck's r.** Same as **cholera r.** **Bittorf's r.**, in renal colic the pain produced by squeezing the testicle or pressing the ovary radiates to the kidney. **biuret r.** See **biuret test**, under **tests**. **Brieger's cachexia r.** See **cachexia r.** **cachexia r.**, increase in the antitryptic power of the blood serum seen in malignant disease and other diseases characterized by cachexia. **cadaveric r.**, total loss of electrical response in the affected muscles in family periodic paralysis. **Calmette's r.** See **ophthalmic r.** **Cambridge's r.** See **pancreatic r.** **Cannizzaro's r.**, the reaction which aldehydes undergo when brought in contact with animal tissue; one molecule of the aldehyde is reduced to the corresponding alcohol and another molecule is simultaneously oxidized to the corresponding acid. **carbamino r.**, alpha-amino-acids unite with CO_2 in the presence of alkalis or alkaline earths to form salts of carbamino-carboxylic acids. This reaction is used in studying the course of protein digestion. See **formol titration**, under **method**. **Chante-messe's r.**, the ophthalmic reaction for typhoid fever. See **ophthalmic r.** **cholera r.**, **cholera red r.**, a red color developing on the addition of concentrated sulphuric acid to a culture of cholera vibrio. **coagulation r.** See **Hirschfeld-Klinger r.** **coagulo r.**, a test for syphilis based on the fact that syphilitic serums inhibit the coagulation of the blood by interference with thrombin production more than do normal serums; called also **Hirschfeld-Klinger r.** **complement fixation r.** See **fixation of complement**. **conplotic r.** Same as **Wassermann r.** **conglutination r.**, a characteristic clumping reaction obtained by a mixture of conglutinin, bacteria, fresh complement, and a specific immune serum from which the agglutinins have been removed by absorption. See **conglutinin**. **conjunctival r.** See **ophthalmic r.** **consensual r.**, a reaction that takes place independently of the will. **coupled r.**, a series of linked reactions. **Cushing's thermic r.**, 1 to 2 cc. of an extract of the anterior lobe of the pituitary of an ox is injected subcutaneously; a rise of temperature of one or more degrees indicates hypopituitarism. **cutaneous r.**, **cutireaction r.** An inflammatory or irritative reaction on the skin, occurring in certain infectious diseases, on the application to or injection into the skin of a preparation of the organism causing the disease. Such reactions occur in tuberculosis, glands, typhoid fever, leprosy, syphilis, diphtheria, and tinea. See the following reactions or tests: **Deehan's r.**, **Lauter's test**, **Lignière's test**, **Moro's r.**, **Noguchi's welin r.**, **palldin r.**, **Pirquet's r.**, **Schick's test**, **typhoidin test**. 2. A reaction produced by applying to an abrasion or by injecting into the skin a solution of a protein or a pollen to which the patient is sensitive. **Deehan's typhoid r.**, a cutaneous test for typhoid fever in which the reagent is 4,000,000,000 typhoid bacilli in 1 cc. of physiologic salt solution. **r. of degeneration**, the reaction to electric stimulation of muscles whose nerves have degenerated. It consists of a loss of response to a faradic stimulus in a muscle, and to galvanic and faradic stimulus in a nerve. Galvanic irritability of the muscle is increased. **r. of degeneration**, **franklinic**, a form of reaction elicited by static electricity and similar to the re-

action produced by the faradic current. **depot r.**, a red reaction of the skin around the point of entrance of the needle in the subcutaneous tuberculin test. **dermotuberculin r.** Same as **Pirquet's r.** **desmoid r.** (for gastric secretion and motility), a bag of rubber tissue containing methylene blue and iodoform, and tied with a string of soft catgut, is administered to the patient; normal gastric juice will digest the string and liberate the stain, which will appear in the urine after five or six hours. **Detre's r.**, a differential reaction between infection with bovine and human tuberculosis, made by simultaneous cutaneous inoculation with a filtrate of human and one of bovine bacilli. Called also **differential cutireaction**. **diazotization r.** See **Ehrlich's r.** **Dochez and Avery's r.** See **precipitin r.** **egg yellow r.**, a yellow foam appearing in Ehrlich's reaction before the addition of ammonia; believed to indicate acute pneumonia. **Ehrlich's diazo r.**, a reaction of a pure pink or red color resulting from the action of diazobenzenesulphonic acid and ammonia upon certain aromatic substances found in the urine in some conditions. This reaction has diagnostic value in typhoid fever and measles and prognostic value in tuberculosis. **electric r.**, a reaction, such as muscular contraction, caused by the application of electricity to the body. **electronic r.**, a flushing on some part of the body produced by stimulation of the depressor nerve between the third and fourth dorsal spines: used as a splanchno-diagnostic test in cancer, syphilis, tuberculosis, etc. (Abrams). **endothermal r.**, **endothermic r.**, a chemical reaction which is accompanied by the absorption of heat. **epiphany r.**, a reaction for the determination of antibodies in the blood serum, especially in the serodiagnosis of syphilis. The technic depends on a change of reaction to phenolphthalein in a neutralized solution. A mixture of the suspected solution and of an extract from a syphilitic organ are made as follows: 0.1 cc. of a 10 per cent solution of the serum in physiologic salt solution is mixed with 0.1 cc. of an alcoholic extract of a syphilitic fetal liver. To this is slowly added 1 cc. of decinormal sulphuric acid and 1 cc. of an exactly equivalent solution of barium hydroxide. On the addition of a drop of phenolphthalein solution the fluid turns red if the serum is from a syphilitic, while there is no change in tint with the serum of a nonsyphilitic person. **erythrocyte sedimentation r.**, when fresh citrated blood is allowed to stand in a column, the erythrocytes settle down, leaving a clear plasma above. The extent and velocity of this sedimentation vary widely under various physiologic and pathologic conditions. **r. of exhaustion**, reaction to electric stimulation seen in conditions of exhaustion. In it the reaction normally produced by a certain current can only be reproduced by an increase in the current. **exothermal r.**, **exothermic r.**, a chemical reaction during which heat is evolved. **fatigue r.**, rise of temperature on muscular effort: seen in persons with active tuberculosis. **Fausser r.** See **Aberhalden-Fausser r.** **Felix-Weil r.** See **Weil-Felix r.** **Ficker's r.**, the clumping of dead typhoid bacilli by the blood serum of persons affected with typhoid fever. **fixation r.**, fixation of the complement. **flaginac r.**, an indication of the presence of *Bacillus coli* in water, consisting of fl or fluorescence in glucose neutral broth, ag or acid and gas with lactose, in or indol in broth, ac or acid and clot in milk. **flocculation r.** See **Sachs-Georgi test**, under **tests**. **Flora's r.** Same as **Flora's sign**. See **sign**. **Florence's r.** See **Florence's test**, under **tests**. **focal r.**, the reaction that occurs at or about the site of an infection or the point of an injection. It may be induced by the injection of a specific agent, such as tuberculin, mallein, or a bacterial vaccine, or by the use of non-specific agents. **formol r.** See **formalin test**, under **tests**. **Fornet's r.**, a reaction for syphilis. The serum of the patient is treated with the re-

serum taken from a paretic. If syphilis is present, a flocculent ring will appear at the line of contact of the two serums. **Freund's r.**, the serum of noncancerous persons destroys cancer cells, while that of cancer patients has no lytic effect. **Freund-Kaminer r.**, Freund's reaction. **fuchsinophil r.**, certain substances when stained in fuchsin retain the stain on being treated with picric acid alcohol. **furfurol r.**, a red color produced when furfural is brought in contact with aniline. **Gangi's r.**; 3 or 4 cc. of hydrochloric acid is poured into a test tube and to this is added 4 or 5 cc. of the liquid to be tested. If the liquid is an exudate, a white caseous disk forms at the line of contact with the acid, and this gradually extends into the serous fluid as a thick, shiny, white or greenish mass. If the liquid is a transudate only a thin disk forms. **Gerhardt's r.** See *Gerhardt's test*, under *tests*. **Ghilarducci's r.**, contraction of the muscles of a limb when the active electrode is placed on a part somewhat removed from them. **Gmelin's r.** See *Gmelin's test*, under *tests*. **Goetsch's skin r.** (for hyperthyroidism): In this test 8 minims of a 1 : 1000 solution of epinephrine are diluted with an equal quantity of sterile water and injected hypodermically into the arm. There is formed at once an area of blanching around the point of infection, and about the margin of this usually a red areola, gradually shading off into the surrounding tissue. In about half an hour the center of the white area becomes bluish-gray to lavender, and at the end of about a half hour to two hours the red areola takes on the bluish or lavender color, while that in the center disappears. This lavender areola remains for about four hours from the time of injection and is the most characteristic part of the test. Accompanying the local reaction there may be an increase in pulse rate, with palpitation of the heart and an exaggeration of the tremor and nervous symptoms in general. **gold r.** See *Lange's test*, under *tests*. **group r.** See *group agglutination*, under *agglutination*. **Gruber's r.**, **Gruber-Widal r.** (for typhoid fever): Dilutions of the patient's serum 1 : 20, 1 : 40, and higher, if desired, are made. To each dilution is added an equal volume of a twenty-four-hour bouillon culture of *Bacterium typhosum*. In the *macroscopical method* these mixtures are made in test tubes, are incubated in a water bath at 55 C. for two hours, and then read. The flocculation and precipitation can be seen with the unaided eye or with a hand lens. In the *microscopical method* a small drop of each mixture is mounted as a hanging drop and observed under the microscope. **Gubler's r.**, the formation of a brown color on gradually adding nitrosoutronic acid to urine; seen in hemaphic jaundice. **Hecht-Weinberg-Gradwohl modification of the Wassermann r.**, the natural antishcep amboceptor and the natural hemolytic complement found in the patient's fresh serum are utilized instead of the antishcep-rabbit amboceptor and guinea-pig complement of the regular test. **hemiopic pupillary r.**, reaction in certain cases of hemianopia in which the stimulus of light thrown upon one side of the retina causes the iris to contract, while light thrown on the other side arouses no response. Called also *Wernicke's r.* **Henle's r.**, the medullary cells of the adrenals stain dark brown on treatment with chromium salts. **Hermann-Perutz r.** Same as *Perutz r.* **Herxheimer's r.**, an inflammatory reaction produced in syphilitic tissues following the ingestion of arsphenamine, mercury, or other specific treatment. **Hirschberg's r.**, an infectious disease resembling typhoid fever, but not due to organisms of the typhoid group. **Hirschfeld-Klinger r.** See *coaguloreaction*. **immunity r.**, any reaction or response on the part of a patient or an animal organism to bacterial and other infections; such, for instance, is the Widal test, the Noguchi reaction, etc. **indophenol r.** See *indophenol test*, under *tests*. **intracutaneous r.**, a reaction

following an injection into the substance of the skin; the most common form is the reaction following such an injection of tuberculin. **Jarisch-Herxheimer r.**, increase of syphilitic symptoms sometimes following the initial dose of an arsphenamine. **Jolly's r.**, failure of response to faradic stimulation in a muscle, the power of voluntary contraction as well as the response to galvanic stimulation being retained. **Kiutsi-Malone r.**, a modification of the Abderhalden test made without the use of dialyzing thimbles, and with the employment of a secret preparation, "ninserin." **Klausner's r.**, the formation of a flocculent precipitate when distilled water is added to fresh blood serum in certain stages of syphilis and other infectious diseases. **Koch's r.**, tuberculin reaction. **Koler r.** Same as *Adamkiewicz's test*. **Kottmann's r.** See *Kottmann's test*, under *tests*. **Krauss's precipitin r.**, an agglutination test for typhoid fever by the use of a mixture of extract of typhoid bacilli and typhoid serum. **Landau's r.** See *Landau's test*, under *tests*. **Lange's r.** See *Lange's test*, under *tests*. **leukemic r.**, a blood picture resembling that of leukemia but not caused by the same type of change in the formative tissues. **Lieben's r.** See *Lieben's test*, under *tests*. **Lignières' r.** See *Lignières' test*, under *tests*. **lignin r.**, a color reaction given by wood cellulose, consisting of a yellow color with aniline salts and a red color with a solution of phloroglucinol in concentrated hydrochloric acid. **local r.**, a reaction similar to a focal reaction occurring at the point of injection. **Loewi r.**, dilatation of the pupil following the instillation into the eyes of a solution of epinephrine: said to occur in diabetics. **Löwenthal's r.**, the agglutinative reaction in relapsing fever. **luetin r.** See *Noguchi's luetin r.* **lymphatic r.**, glandular fever. **Malmjeide r.** See *Malmjeide's test*, under *tests*. **Malone-Kiutsi r.** See *Kiutsi-Malone r.* **Mandelbaum's r.** (for the detection of typhoid carriers and the differentiation of recent and old cases): A drop of blood is transferred to a suitable medium, which is slightly inoculated with typhoid bacilli. If it is a recent case of typhoid, the bacilli arrange themselves in chains or threads or else in clusters, and are all immovable, due to the agglutinating power of the serum. If the blood is that of a person who has had typhoid years before, there is a tendency to the formation of chains, but some of the bacilli will remain isolated and movable. Called also *jadenreaction*. **Manoiloff's r.**, a blood reaction comparing the blood of the parents and their alleged child for the determination of the paternity (sex) of children. **Marchi's r.**, failure of the myelin sheath of a nerve to become discolored when treated with osmic acid. **Millon's r.** See *Millon's test*, under *tests*. **miostagmin, miostagminic r.**, a blood serum test to confirm the diagnosis of malignant tumors, syphilis, typhoid, etc., based on the fact that when the antibodies of a disease and its corresponding antigens are brought together, there is a lowering of the surface tension of the mixture. This surface tension is measured by counting the number of droplets which fall in a minute from a special pipet called a *stalagmometer*. Taking distilled water as a standard, the greater the number of drops a minute, the lower is the surface tension. If the diluted blood serum of a cancer or typhoid patient is exposed to the action of the corresponding antigen, the surface tension of the mixture will be lowered. **Moeller's r.** See *rhinoreaction*. **Molisch's r.** See *Molisch's test*, under *tests*. **Morelli's r.**, to a test tube filled with a saturated aqueous solution of corrosive mercuric chloride three or four drops of pleural fluid are added. If a yellowish dense clot forms which adheres to the side of the tube or falls to the bottom in a mass, the fluid is an exudate. If the clot breaks up into flakes, the fluid is a transudate. **Moritz-Weiss r.** See *Moritz-Weiss test*, under *tests*. **Moro's r.**, an eruption of pale or

red papules on a cutaneous area after the application of an ointment of 5 cc. of old tuberculin and 5 Gm. of anhydrous wool fat. **mouse tail r.**, stiffening of the tail in rats and mice following the administration of a small dose of morphine. **Much's r.**, **Much-Holzmann r.**, inhibition of the hemolytic action of cobra venom on the red blood corpuscles seen in dementia praecox and manic-depressive insanity. Called also *psychoreaction*. **myasthenic r.**, decrease in faradic excitability of muscle, as in periodic paralysis. **myotonic r.**, an increase in faradic excitability, as in congenital myotonia. **Neisser's r.**, a general reaction sometimes following an initial dose of arsphenamine, characterized by transitory increase of headache in cerebral syphilis and of the lightning pains in tabes. **neurotonic r.**, muscular contraction persisting after the stimulus which produced it has ceased. **neutral r.**, a reaction that indicates the absence of both alkaline and acid properties. Accurate neutrality is expressed as $p_H = 7.0$. **ninhydrin r.**, a reaction for the detection of peptone or amino-acid in a test for pregnancy as follows: About 1 Gm. of coagulated placental tissue, which on boiling with water yields no compounds which react with ninhydrin, is placed in a diffusion cell and covered with from 2 to 3 cc. blood serum and the mixture dialyzed in 20 cc. distilled water. The contents of the cell and the outer fluid are covered with a layer of toluol. Dialysis is continued from twelve to sixteen hours at a temperature of 37 C. in the incubator. To 10 cc. of the dialysate 2 cc. of a 1 per cent aqueous solution of ninhydrin (triketo hydrindene hydrate) is added. The mixture is heated and kept at the boiling point for just one minute. If the serum is derived from a pregnant woman, a blue coloration of the dialysate occurs. This coloration is absent if the serum is from a person who is not pregnant. **nitritoid r.**, nitritoid crisis. See under *crisis*. **Noguchi's r.** 1. A modification of the Wassermann reaction. This latter Noguchi modifies as follows: "(1) He prepares the antigen by extracting a lipid substance from the liver and heart of dogs and cows. (2) Instead of using sheep's corpuscles in the hemolytic series, he employs human corpuscles, owing to the fact that a certain percentage of human serums tested produced hemolysis of the sheep's corpuscles. (3) In his test, therefore, he obtains the hemolytic amboceptor by immunizing rabbits with washed normal human corpuscles. (4) Another important improvement in the technique is the preservation of the specific antigen and the hemolytic amboceptor, which rapidly lose their strength in solution, in a dried form by soaking measured strips of filter paper (0.5 mm. square) with each. His test is carried out as follows: A strip of antigen filter paper is brought in contact with a definite quantity of the human serum to be tested, and fresh guinea-pig's serum added, the whole being suspended in isotonic salt solution. This is allowed to stand at incubator temperature, and then the hemolytic series added by taking a strip of the hemolytic amboceptor paper and a definite quantity of washed normal human blood corpuscles." 2. A reaction seen in general paralysis and tabes. To 1 cc. of the cerebrospinal fluid is added 0.5 cc. of a solution of 10 per cent butyric acid in normal salt solution. This is heated, and then there is added 0.1 cc. of a 4 per cent sodium hydroxide solution. This is again heated. In about three hours the tube is examined. In tabes and general paralysis a characteristic flocculent precipitate forms, which gradually settles so that after twenty-four hours there is a bulky precipitate at the bottom of the tube, the supernatant fluid being clear. The test indicates an increased amount of globulin in the cerebrospinal fluid. **Noguchi's luetin r.** (1909), a cutaneous reaction for syphilis. A drop of luetin is injected into the skin of the arm. No reaction occurs in a nonsyphilitic person, but in one affected with syphilis there forms, in from six

to twenty-four hours, a distinct papule surrounded by a bluish-red halo. See *luetin*. **Nonne-Apel't r.**, 2 cc. of cerebrospinal fluid are mixed with an equal quantity of a neutral saturated solution of ammonium sulphate and compared after three minutes with another tube containing spinal fluid only; if there is no difference or only a faint opalescence the reaction is said to be *negative*. If there is an opalescence or turbidity the reaction is said to be *positive phase 1*, which indicates an excess of globulin in the fluid and points to nervous disorder. A normal fluid treated with heat and acetic acid only becomes turbid and is called *positive phase 2*. **nuclear r.**, upon the addition of fuchsin-sulphonic acid to any solution containing aldehydes, a bluish-red color is produced. **ophthalmic r.**, local reaction of the conjunctiva following instillation into the eye of toxins of typhoid fever and tuberculosis. The reaction is much more severe in persons affected with these diseases than in the healthy or those affected with some other disease. Called also *Cammette's ophthalmoreaction*. **oxydase r.**, the formation of dark-blue granulations in myeloid cells when treated with alpha-naphthol and dimethyl-para-phenylenediamine. **Pagano's r.**, a tuberculin reaction following application of the tuberculin to the urinary meatus. **pain r.**, dilatation of the pupil on a feeling of pain. **pallidin r.**, a cutaneous reaction for syphilis made by applying pallidin, which is an extract of lung affected with infantile syphilitic pneumonia, to the skin. A positive reaction consists of the development of a slightly raised inflammatory papule surrounded by a zone of erythema. **pancreatic r.** (for ascertaining the presence of pancreatitis or malignant disease of the pancreas), two specimens of urine, one of which is treated with mercuric chloride, are boiled with hydrochloric acid for ten minutes, and after the excess of acid has been neutralized with lead carbonate, are examined by the phenylhydrazine test. The difference in the amount of deposit yielded by the two specimens indicates the presence of pancreatic disease. Called also *Cammette's r.* **paraserum r.**, paragglutination; agglutination of strains of typhoid and dysentery bacilli with those of paratyphoid, *Bacillus coli*, mutable cholera, and other infections. **percutaneous r.** Same as *Moro's r.* **r. period, r. time**, the time that elapses between stimulation and the consequent reaction. **peroxidase r.** See *Goodpasture's stain*, under *stain*. **Perutz r.**, a reaction for the serodiagnosis of syphilis: the patient's blood serum is inactivated and 0.4 cc. of it is drawn off with a pipet. To this is added 0.2 cc. of each of the two following solutions: (1) sodium glycocholate, 2.0; cholesterolin, 0.4; 95 per cent alcohol, 50; or, this solution being diluted with water, 1 : 20 parts, (2) a 2 per cent aqueous solution of sodium glycocholate. The whole is shaken vigorously. If syphilis is present, fine flakes appear in the fluid. **Petzetaki's r.** See *Petzetaki's test*, under *tests*. **Pfaundler's r.** Same as *Mandelbaum's r.* **Pfeiffer's r.**, a mixture of a culture of cholera spirillum with diluted agglutinating cholera serum is injected into the peritoneal cavity of an animal; if, after twenty-five minutes, some of the mixture is withdrawn, the spirilla will be found to have been killed. **phrenic r.**, lesion of the diaphragm as a result of streptococcal and gonorrheal infection. **Pietrowski's r.** Same as *biuret r.* **Pirquet's r.**, a local inflammatory reaction of the skin following inoculation with tuberculosis toxins. It is more marked in tuberculous subjects than in normal ones. Called also *scarification test*. **Porges-Hermann-Perutz r.** Same as *Perutz r.* **Porges-Meier r.** See *Porges-Meier test*, under *tests*. **psychogalvanic r.**, variations in the electric current passed through the body when the subject undergoes emotional disturbance of any kind. **precipitin r.**, equal volumes of clear urine are mixed with antipeumococcus serums of Types 1,

II, and III, and incubated for an hour. A cloudy to heavy flocculent precipitate indicates a positive reaction. Called also *Lochez and Avery's r.* **puncture r.**, swelling and redness at the point where tuberculin is injected subcutaneously: diagnostic of tuberculosis. **quanti-Pirquet r.**, the Pirquet reaction applied with a view of the amount or activity of the tuberculous infection. **recurrent r.** See *revivescence*. **reversible r.**, a chemical reaction which occurs in either direction; a reaction in which the products react to reform the factors of the reaction. **Rickenberg's r.**, the absorption of blood platelets by trypanosomes in immune serum. **Rivalta's r.**, a reaction for distinguishing fluids of transudation and exudation. The technic is as follows: 50 cc. of distilled water is put in a test tube and one drop of a 50 per cent solution of acetic acid is added. To this one drop of the fluid, removed by puncture or otherwise, is added. The latter slowly drops to the bottom, and when coming in contact with the acidulated water, assumes the form of a bluish-white ring which broadens out and becomes honeycombed. This ring may become striated by numerous bluish-white lines. These opalescent and lactescent stripes occur only when the fluid has an inflammatory origin; in other words, when it is an exudate. The precipitate dissolves in an excess of acetic acid, which differentiates it from mucin. **Roger's r.**, the existence of albumin in the sputum, indicating tuberculosis. **Rosenbach's r.**, the formation of a deep-red color when concentrated nitric acid containing a small amount of nitrous acid is gradually added to boiling urine. It points to an increase in the putrefactive processes of the intestine. **Rumpf's traumatic r.** See *Rumpf's sign* (1st def.), under *sign*. **Russo r.**, a reaction of the urine of typhoid patients on adding 4 drops of a solution of methylene blue to 15 cc. of urine. In the first stage of typhoid the urine becomes light green; at the height of the disease, an emerald color; and during the decline, a bluish color. **Sachs-Georgi r.** See under *tests*. **r. of Salomon and Saxl.** See *sulphur r.* **Schardinger's r.**, a reaction of oxidation or reduction made possible by a simultaneous and compensating reaction of reduction or oxidation. Cf. *Cannizzaro's reaction*. This reaction is used to distinguish between fresh milk and milk which has been heated. The milk is treated with aldehyde and methylene blue or indigo blue; if the milk is fresh the dye is reduced to a colorless compound. **Schick r.** See *Schick test*, under *tests*. **Schönbein's r.**, iodine is set free when potassium iodide and sulphate of iron are added to a solution of hydrogen peroxide. **Schultz-Charlton r.**, when blood serum from a normal person is subcutaneously injected into a scarlet fever patient, a blanching of the skin at the site of the injection occurs. Serum from scarlet fever patients does not produce this reaction. **sedimentation r.** See *erythrocyte sedimentation r.* **Seifert's r.** Same as *epiphanin r.* **sero-anaphylactic r.**, an anaphylactic reaction produced by the use of blood serum. **sero-enzyme r.**, Abderhalden's reaction. **serum r.**, seroreaction. **Sgambati's r.**, a reaction of the urine seen in peritonitis. The test tube is filled to one third with urine, and then, as it is held very slanting, 2 or 3 cc. of nitric acid is poured down the wall, a drop at a time, so that, without mixing with the urine, it settles to the bottom of the tube. In about a minute, the zone of contact between the acid and the urine shows—above the orange-yellow halo visible in normal urine—another, a grayish-blue halo that spreads upward. The light must fall on the tube against a light background. After chloroform has been added and the tube has been agitated, it is set aside for the chloroform to settle. The grayish-blue tint gradually changes to a ruby red, which is permanent. **Sigma r.**, a flocculation reaction for the diagnosis of syphilis. **skin r.** See

cutaneous r. **small-drop r.** See *miotagmin r.* **Smith's r.**, anaphylaxis. **Stammer's r.**, cancer serum when added to a tumor extract clears up the opalescence normal to the extract: normal serums fail to act in this manner. **Strauss' r.**, when material containing virulent glanders bacilli is inoculated into the peritoneal cavity of male guinea-pigs, scrotal lesions develop. **sulphur r.**, a reaction in the urine of cancer patients: 150 cc. of albumin-free urine is diluted with 100 cc. of water and mixed with 150 cc. of Salkowsky's mixture of barium salts. The mixture is filtered, and to 300 cc. of the filtrate is added 30 cc. of hydrochloric acid, specific gravity 1.12, and the mixture boiled on an asbestos mat for fifteen minutes and then left on the water bath until the precipitate settles clear, being kept always covered with a small funnel. It is then very carefully filtered and 200 cc. of the filtrate is heated on the asbestos mat for fifteen minutes with 3 cc. of perhydrol and poured into a conical glass. After from four to seven hours a positive reaction will be indicated by the precipitate of barium sulphate contaminated with coloring matter which settles to the bottom. Called also *r. of Salomon and Saxl*. **Targowla r.**, a reaction for the presence of syphilis based on the fact that a mixture of normal cerebrospinal fluid with elixir paregoric produces a colloidal suspension, while if the spinal fluid is syphilitic a precipitate is formed. **thread r.** See *Mandelbaum's r.* **toxin-antitoxin r.** See *immunoreaction*. **traumatic r.**, a muscular reaction seen in traumatic neuroses, in which after the cessation of a vigorous faradic stimulation, the muscle will exhibit a characteristic fluctuating movement (myokymia). **tryptophan r.**, the appearance of a violet color on the addition of bromine water to filtered gastric contents: said to indicate the presence of gastric cancer. **tuberculin r.**, febrile symptoms appearing in a tuberculous person in response to injections of tuberculin. See *tuberculin test*, under *tests*. **tubing r.**, a reaction following the injection of arspenamine through new rubber tubing. **urochromogen r.** Same as *Moritz-Weisz test*. See under *tests*. **Voges-Proskauer r.**, a reaction to detect the presence of acetyl-methyl-carbinol and thus to distinguish between the colon group and the aerogenes group of bacteria. One cc. of a 50 per cent solution of potassium hydroxide is added to a twenty-four-hour dextrose broth culture of the organism in question and allowed to stand for twenty-four hours at room temperature. An eosin pink color at the top of the tube shows the presence of acetyl-methyl-carbinol. A yellow color may be produced by the sugar only. The reaction can be hastened by heating and shaking. **von Pirquet's r.** See *Pirquet's r.* **Wassermann r.**, a test for syphilis based on the fixation of complement, q v., under *fixation*. The antibody is the unknown sought in the patient's serum; many things may be used as antigen; and there are numerous modifications of the original test. See *fixation of complement*. **Wassermann r., provocative**, a Wassermann reaction preceded by the administration of arspenamine. This procedure may result in a positive reaction in a patient who had previously given negative results. **Weil-Felix r.**, agglutination in the blood serum of typhus patients of a bacillus (Weil-Felix bacillus) of the proteus group from the urine and feces. **Weisz's r.** See *Moritz-Weisz test*, under *tests*. **Wernicke's r.** See *hemipic pupillary r.* **Widal's r.**, the clumping of bacilli. See *Gruber-Widal reaction*. **Wildbolz r.**, a few drops of the patient's own urine are injected intradermally, when a local reaction follows if the patient is tuberculous. **Wolff-Calmette r.** See *ophthalmic r.* **Wolf-Eisner r.**, ophthalmic reaction. **xanthoproteic r.** See *Mulder's test*, under *tests*.

reactivate (re-ak'tiv-ät). To make active again; especially the restoring of the activity to immune serum that has had its activity destroyed.

reactivation (re-ak-tiv-a'shun). The restoration of the activity to an inactivated serum by the addition of complement.

reactivity (re-ak-tiv'it-e). The process or property of reacting.

Reading bacillus (red'ing). See under *bacillus*.

reagent (re-a'jent) [L. *re* again + *ag'ere* to act].

Any substance employed to produce a chemical reaction. **acid molybdate r.** See *Folin's acid molybdate reagent*. **Acree-Rosenheim r.**, solution of formaldehyde, 1 part; water, 6000 parts. **Almén's r.**, to 5 grains of tannic acid in 240 cc. of 50 per cent alcohol add 10 cc. of 25 per cent acetic acid. **amino-acid r.**, a 0.5 per cent solution of the sodium salt of beta-naphthaquinone sulphonate acid freshly prepared. **Barfoed's r.** See *Barfoed's test*, under *tests*. **Benedict-Hopkins-Cole r.**, 250 cc. of a saturated solution of oxalic acid is added slowly to 10 Gm. of powdered magnesium kept cool. Filter, acidify with acetic acid, and make up to 1 liter. **Bertrand's r.** A. Copper solution: Copper sulphate, 40 Gm., to 1 liter of water. B. Alkaline solution: Rochelle salt, 200 Gm., sodium hydroxide, 150 Gm., to 1 liter of water. C. Iron solution: Ferric sulphate, 50 Gm., sulphuric acid, 200 Gm., to 1 liter of water. D. Permanganate solution: Potassium permanganate, 5 Gm., to 1 liter of water. By heating the alkaline copper solution (made from Solutions A and B) with dextrose, cuprous oxide is formed. This is treated with the ferric sulphate solution, and the ferrous sulphate so formed is titrated with the solution of potassium permanganate. **Bial's r.**, orcinol 1.5 Gm., fuming hydrochloric acid 500 Gm., ferric chloride (10 per cent) 20-30 drops. **biuret r.** See *Gies' biuret r.* **Black's r.**, 5 Gm. of ferric chloride and 0.4 Gm. of ferrous chloride dissolved in 100 cc. of water. **Blum's r.** See *Blum's test*, under *tests*. **Boas' r.** See *Boas' test*, under *tests*. **Brucke's r.**, 50 Gm. of KI, 120 Gm. of HgI₂, water up to 1000 cc.; a modification of Meyer's reagent. **Cross and Bevan's r.**, two parts of concentrated hydrochloric acid and 1 part of zinc chloride by weight: used for dissolving cellulose. **dialzo r.**, a reagent consisting of two solutions which are mixed just prior to the test in the proportion of 25 cc. of A to 0.75 cc. of B. Solution A: sulphanic acid, 1 Gm.; distilled water, 1000 cc. Solution B: sodium nitrite, 0.5 Gm.; distilled water, 100 cc. **dinitrosalicylic acid r.** See *Sumner's reagent*. **Edlefson's r.**, an alkaline permanganate solution for testing for sugar in the urine. **Ehrlich's diazo r.** Solution A: Dissolve 5 Gm. of sodium nitrite in 1 liter of distilled water. Solution B: Dissolve 5 Gm. of sulphanic acid and 50 cc. of HCl in 1 liter of distilled water. For use mix 1 part of A with 50 to 100 parts of B. **Erdman's r.**, a reagent for testing for alkaloids, consisting of nitric and sulphuric acids. **Esbach's r.**, a mixture of a 1 per cent aqueous solution of picric acid and a 2 per cent solution of citric acid; used in quantitative estimation of albumin in urine. **Exton's r.**, dissolve 200 Gm. of Na₂SO₄·10H₂O in 800 cc. of water. Cool and add 50 Gm. sulphosalicylic acid. Make up to 1 liter. **Folin's r.**, boil 100 Gm. of sodium tungstate and 80 cc. of 85 per cent orthophosphoric acid in 750 cc. of water for two hours. Cool and dilute 1 liter. **Folin's acidmolybdate r.**, dissolve 150 Gm. of sodium molybdate in 300 cc. of water. Filter and add 2 to 3 drops of bromine and shake. Later add 225 cc. of 85 per cent phosphoric acid and 150 cc. of 25 per cent sulphuric acid. Aerate off the bromine, add 75 cc. of 90 per cent acetic acid, and dilute to 1 liter. **Folin's alkaline copper tartrate r.**, dissolve 12 Gm. of sodium tartrate (or 15 Gm. of Rochelle salt), 7 Gm. of anhydrous sodium carbonate, and 20 Gm. of sodium bicarbonate in 600 cc. of water. Dissolve 5 Gm. of copper sulphate in 200 cc. of water. Mix the solutions and dilute to 1 liter. **Folin's sugar r.**

Solution A: Dissolve 5 Gm. copper sulphate in 100 cc. of hot water, cool, and add 60 to 70 cc. of glycerin. **Solution B:** Dissolve 125 Gm. of anhydrous potassium carbonate in 400 cc. of water. Mix 1 part of Solution A and 2 parts of Solution B just before using. **Folin-McElroy r.**, dissolve 100 Gm. of sodium pyrophosphate, 30 Gm. of disodium phosphate, and 50 Gm. of dry sodium carbonate in 1 liter of water. Dissolve 13 Gm. of copper sulphate in 200 cc. of water and pour into the first solution. **Fröhde's r.** See *Fröhde's test*, under *tests*. **Frohn's r.** See *Frohn's test*, under *tests*. **general r.**, a reagent that indicates the general class of bodies to which a substance belongs. **Gies' biuret r.**, add 25 cc. of a 3 per cent solution of copper sulphate to each liter of 10 per cent potassium hydroxide. **Hager's r.**, a reagent for detecting sugar in the urine, consisting of iron ferrocyanide and caustic potash. **Haine's r.**, copper sulphate, 2; potassium hydroxide, 7.5; glycerin, 15; distilled water, 150. **Ilosvay's r.**, a reagent used as a test for nitrites. It is prepared by treating a mixture of 0.5 Gm. of sulphanic acid and 150 cc. of dilute acetic acid with 0.1 Gm. of naphthylamine, and then with 20 cc. of boiling water. The sediment produced by this reaction is dissolved in 150 cc. of dilute acetic acid. The suspected substance is heated with this reagent to 80 C., when a red color is formed if nitrites are present. **Lloyd's r.**, a specially fine preparation of fullers' earth obtained by elutriation: used to absorb alkaloids from solutions. **Mayer's r.** See *Mayer's test*, under *tests*. **Meyer's r.**, phenolphthalein, 0.032; decinormal sodium hydroxide, 21, with enough water to make 100 parts: used in testing for blood, which even in minute quantities gives the solution a purple color. **Millon's r.** (1849). See *Millon's test*, under *tests*. **Nessler's r.**, an aqueous solution of 5 per cent of potassium iodide, 2.5 per cent of mercuric chloride, and 16 per cent of potassium hydroxide: used as a test for ammonia. **Nylander's r.** See *Nylander's test*, under *tests*. **Obermayer's r.**, a solution of 2 Gm. of ferric chloride in 1 liter of hydrochloric acid. **Penzoldt's r.** See *Penzoldt's test*, under *tests*. **percutaneous r.** See *Moro's r.* **Porges-Meier r.** See under *tests*. **Sahli's r.**, mix equal parts of a 48 per cent solution of potassium iodide and an 8 per cent solution of potassium iodate. **Scheibler's r.**, a reagent made by boiling sodium tungstate with half as much phosphoric acid and water, precipitating with barium chloride, dissolving in hot dilute hydrochloric acid, treating with sulphuric acid, and evaporating. **Schiff's r.**, a reagent for testing for the presence of aldehydes, prepared by dissolving 0.25 Gm. of fuchsin in 1000 cc. of water and decolorizing by passing sulphur dioxide into it. In the presence of aldehyde the blue color is restored. **Schweitzer's r.**, a solution of copper hydroxide in ammonia water: used as a solvent for cellulose. **Soldaini's r.** See *Soldaini's test*, under *tests*. **special r.**, one which determines the presence of some particular substance. **Spiegler's r.** See *Spiegler's test*, under *tests*. **splenic r.**, any drug or stimulus which causes the spleen to contract. **Stokes' r.**, a solution containing 2 per cent of ferrous sulphate and 3 per cent of tartaric acid. For use add ammonium hydroxide to a small portion until the precipitate redissolves, thus forming ammonium ferrotartrate. **Sumner's r.**, to 10 Gm. crystallized phenol add 22 cc. of 10 per cent NaOH and dilute to 100 cc. To 6.9 Gm. of sodium bisulphite add 69 cc. of the alkaline phenol solution. To this add a solution containing 300 cc. of 4.5 per cent NaOH, 255 Gm. NaKC₄H₄O₆·4H₂O, and 880 cc. of 1 per cent dinitrosalicylic acid. **Tanret's r.**, for albumin in urine, etc.: mercuric chloride, 1.35 Gm.; potassium iodide, 3.32 Gm. acetic acid, 20 cc.; distilled water, to make 80 cc.; it gives a white precipitate with albumin. **trichophytin r.** See *trichophytin test*, under *tests*. **Uffelmann's r.** See *Uffelmann's test*, under *tests*. **Weichardt's**

r. Same as *epiphanin r.* **Weiss's r.** See *Moritz-Weiss test*, under *tests*. **Zed r.**, a reaction which appears in infants in cases of partial or complete starvation after the starvation is relieved: it consists of a slight gain in weight, elevation of temperature, and the appearance of watery stools containing a large number of cells.

reagin (re'aj-in). A complement-fixing antibody. See *antibody*.

real focus, image, etc. See *focus, image*, etc.

realgar (re-al-gar') [Arabic *rahi al-ghar* powder of the mine]. Arsenic disulphide, As_2S_3 : a pigment.

reamer (re'mer). A dental instrument for enlarging holes.

reamputation (re'am-pu-ta'shun). The repeated performance of an amputation.

reapers' keratitis (re'perz). See *keratitis*.

reargon (re-ar-gon). A combination of silver and glucosides.

reattachment (re-at-tatsh'ment). 1. The replacing of a dental crown or bridge. 2. The reattachment to the alveolus of a tooth that has been loosened or replanted.

Réaumur's thermometer (re-o-merz') [René Antoine Ferschault Réaumur, French natural philosopher, 1683-1757]. See *thermometer*.

rebasing (re-ba'sing). The repairing or altering of the base of an artificial denture.

rebaudin (re-bawd'in). A very sweet principle found in *Eupatorium rebaudianum*.

rebreathing (re-bre'thing). The breathing of fresh oxygen by the patient during the administration of an anesthetic for the purpose of securing rapid elimination of the anesthetic from the system.

recalcification (re-kal'si'ik-a'shun). The restoration of lime salts to the bodily tissues.

Recamier's operation (ra-kam-e-az') [Joseph Claude Anselme Recamier, French gynecologist, 1774-1852]. Uterine curettage.

receiver (re-se'ver). 1. A vessel for collecting a gas or a distillate. 2. A woman's menstrual napkin, or pad.

receptaculum chyli (re-sep-tak'u-lum ki'li) [L. "receptacle of the chyle"]. An expansion at the lower end of the thoracic duct at the point where it passes in front of the body of the second lumbar vertebra; Pecquet's cistern.

receptor (re-sep'tor). 1. A supposed group of atoms of the cell molecule which has the power of combining with and anchoring the haptophore groups of toxins, of amboceptors, or of cells. Receptors may remain attached to the cell or may be cast off into the serum. In either case they retain their combining powers. See *Ehrlich's side-chain theory*, under *theory*. 2. Sherrington's name for the peripheral apparatus which receives a stimulation. See *exteroceptive, interoceptive*, and *proprioceptive*. **contact r.**, a sense organ adapted to respond to impressions from objects in contact with the body. **distance r.**, a sense organ which responds to impressions from objects remote from the body, as the ears and eyes. **dominant r.**, an unknown substance or substances located at the site of action of a drug which by combining with the drug enable it to exert its physiologic action. **r. of the first order**, a receptor which possesses a haptophore group only, and therefore serves only as a connecting link between the toxin and the tissues. This order of receptors includes only the antitoxins. **gustatory r.**, the receptors for the sense of taste; the taste buds. **pressure r.**, a receptor for stimuli of pressure or touch; a touch corpuscle. **r. of the second order**, a receptor which possesses both a haptophore group for anchoring or holding the foreign toxin, and a zymophore group for its digestion. This group includes the agglutinins, the precipitins, and the opsonins. **secondary r's**, unknown substances, other than the dominant re-

ceptor, located at points other than the site of action which combine with a drug and so lessen its combination with the dominant receptor and its physiologic activity. **sessile r.**, a receptor which cannot be given off to form an antibody. **r. of the third order**, a receptor which possesses two combining groups only, a haptophore group for combining with the foreign toxin, and a complementophile group which combines with the complement that carries the zymotoxic element. This group includes the lysines.

recess (re-ses') [L. *reces'sus*]. A small empty space or cavity. **Arlt's r.**, a small sinus occasionally present in the lower part of the lacrimal sac. **cochlear r.**, a depression on the inner wall of the vestibule of the labyrinth between the two limbs of the crista vestibuli. **duodenojejunal r.**, a recess between the duodenojejunal and duodenomucosolic folds at the left side of the spinal column. **elliptical r.** Same as *fossa hemielliptica*. **epitympanic r.**, the upper part of the tympanic cavity which lodges the head of the malleus and the body of the incus. Called also *tympanic attic* and *aditus ad antrum*. **Hyrtl's r.** *aditus ad antrum*. **infundibular r.**, the cavity of the infundibulum. **lateral r.**, the widest part of the fourth ventricle under the cerebellum. **optic r.**, a recess in the floor of the third ventricle in front of the infundibulum. **paracolic r.**, any one of the pockets that frequently exist at the left edge of the descending mesocolon. **pharyngeal r.**, Rosenmüller's fossa. **pineal r.**, the cavity in the third ventricle separating the habenula into two parts. **piriform r.**, the sinus piriformis. **Rosenmüller's r.**, Rosenmüller's fossa. See *fossa*. **spheno-ethmoid r.**, the recess below the roof of the nasal fossa and between the cribriform plate of the ethmoid bone and the body of the sphenoid. **spherical r.** Same as *fossa hemisphaerica*. **suprapineal r.**, a recess in the posterior part of the third ventricle above the pineal recess. **supratonsillar r.**, the space above and in front of the tonsils and between the pillars of the fauces. **triangular r.**, the recess of the third ventricle. **utricular r.**, the utricle.

recession (re-sesh'un). The act of drawing away. In dentistry the retraction of the gum margin and underlying tissue away from the neck of a tooth, resulting in exposure of the cementum.

recessive characteristics (re-ses'iv). See *Mendel's law*, under *law*.

recessus (re-ses'us). Latin for *cavity* or *recess*. **r. anterior fos'sae interpeduncularis** (Tarin') [B N A], the portion of the fossa in peduncularis which passes under the corpora mamillaria. **r. cochlearis vestibuli** [B N A], a small depressed area on the medial wall of the vestibule. It is situated just below the posterior end of the crista vestibuli and it is perforated with foramina through which nerve fibers pass to the posterior portion of the ductus cochlearis. **r. ellipticus vestibuli** [B N A], an oval depressed area in the roof and medial wall of the vestibule of the middle ear. It is situated above and behind the crista and is pierced by 25 to 30 small foramina through which nerves come from the meatus acusticus internus to the utricle which occupies the depression. **r. epitympanicus** [B N A], the upper portion of the tympanic cavity. It is above the level of the tendon of the tensor tympani muscle, it contains the head of the malleus and the body of the incus and it is continuous posteriorly with the aditus ad antrum mastoideum. **r. ileocaecalis inferior** [B N A], a peritoneal pocket situated behind the plica iliocaecalis, above the vermiform process, below the ileum and medial to the caecum. **r. ileocaecalis superior** [B N A], a peritoneal pocket situated behind and below an unnamed fold of peritoneum, above the ileum and medial to the lower end of the colon ascendens. **r. inferior omentalis** [B N A],

the lower portion of the bursa omentalis, including its extension down into the great omentum. It is bounded in front by the posterior wall of the stomach, and behind by the pancreas, the transverse colon and its mesocolon, the left suprarenal gland and part of the left kidney. **r. infundibuli** [B N A], a funnel-shaped depression in the anterior part of the floor of the third ventricle of the brain which leads down to the infundibulum of the hypophysis. **r. liena'lis** [B N A], an extension of the omental bursa to the left behind the gastrolial ligament almost to the spleen. **r. membranae tympani anterior** [B N A], a pocket in the tympanic cavity which ends blindly above and is situated between the plica malleolaris anterior and the upper front part of the tympanic membrane. **r. membranae tympani posterior** [B N A], a pocket in the tympanic cavity which ends blindly above and is situated between the plica malleolaris posterior and the upper back part of the tympanic membrane. **r. membranae tympani superior** [B N A], a small funnel-shaped pocket in the tympanic cavity which is limited laterally by the pars flaccida of the tympanic membrane, medially by the head, neck, and lateral ligaments of the malleus and the body of the incus and which may open below or medialward. **r. opticus** [B N A], a depression in the floor of the third ventricle between the chiasma behind and the lamina terminalis in front. **r. paracolic** [B N A], small shallow and variable peritoneal pockets situated lateral to the descending colon. **r. pharyngeus (rosenmüller)** [B N A], a variable depression on the wall of the pharynx behind the torus tubarius. **r. phrenicohepatic** [B N A], an elongated pouch on the lower surface of the diaphragm due to the peculiar attachment of the fibrous appendix of the liver and the left lateral ligament of the liver to the diaphragm. **r. posterior fossae interpeduncularis (Tarni)** [B N A], the portion of the interpeduncular fossa which slightly undermines the anterior margin of the pons. **r. retrocaecal** [B N A], a pocket which extends upward behind the cecum and sometimes behind the colon. **r. saccifor-mis articulatio'nis cubiti** [B N A], the distal bulging of the articular capsule of the elbow joint. It is between the incisura radialis ulnae and circumferentia articularis radii. **r. saccifor-mis articulatio'nis radio-ulna'ris distalis** [B N A], a blind saclike bulging of the articular capsule of the distal radio-ulnar articulation. It extends proximalward between the circumferentia articularis of the capitulum ulnae and the incisura ulnaris radii. **r. sphaericus vestibuli** [B N A], a circular depressed area in the antero-inferior portion of the medial wall of the vestibule of the middle ear. It is pierced by 12 to 15 small foramina through which nerves come from the meatus acusticus internus to the sacculle which occupies the depression. **r. spheno-ethmoidalis** [B N A], a small pocket in the superior meatus of the nasal fossa above the superior turbinated bone. **r. superior omentalis** [B N A], a rather long narrow peritoneal pocket leading from the vestibule upward toward the liver. It has the inferior vena cava on its right, the esophagus on its left, the gastrohepatic ligament in front, and the diaphragm behind. **r. suprapinea** [B N A], suprapineal recess. **r. triangularis** [B N A], a small triangular recess on the anterior wall of the third ventricle. It has its base below on the anterior commissure and its sides are formed by the converging columns of the fornix.

recidivation (re-sid-iv-a'shun). The relapse of a disease.

recipe (res'ip-e) [L.]. 1. The Latin for *take*: used at the head of a physician's prescription, and usually indicated by the symbol $\mathcal{R}$. 2. A prescription or formula.

recipient (re-sip'e-ent). The person who receives the blood in transfusion. **universal r.**, a person

who can receive blood of any "type" without precipitation or agglutination of the cells.

recipiomotor (re-sip''e-o-mo'tor) [L. *recip'ere* to receive + *motor* mover]. Pertaining to the reception of motor impressions.

reciprocal proportions, law of (re-sip'ro-kal). See *Wallon's law*, under *law*.

Recklinghausen's canals, disease (rek'ling-how-zenz) [Friedrich Daniel von *Recklinghausen*, German pathologist, 1833-1910]. See *canal, disease*.

reclination (rek-lin-a'shun) [L. *reclina'tio*]. One of the operations for cataract: a turning of the lens over on its back.

Reclus' disease (ra-klez') [Paul *Reclus*, French surgeon, 1847-1914]. See *disease*.

recoil atom (re-koil' at-om). See under *atom*.

recompressoin (re-kom-presh'on). See *caisson disease*, under *disease*.

recrement (rek're-ment) [L. *recremen'tum*]. The saliva or other material which, after secretion, is reabsorbed into the blood.

recrementitious (rek're-men-tish'us). Of the nature of a recrement.

recresal (rek're-sal). A proprietary form of sodium biphosphate (sodium acid phosphate).

recrudescence (re-kru-des'ens) [L. *recrudes'cere* to become sore again]. The recurrence of symptoms after a temporary abatement.

recrudescent (re-kru-des'ent) [L. *recrudes'cens*]. Breaking out afresh.

Rect. Abbreviation for *L. rectifica'tus*, rectified.

rectal (rek'tal). Pertaining to the rectum.

rectalgia (rek-tal'je-ah) [*rectum* + *άλγος* pain]. Same as *proctalgia*.

rectectomy (rek-tek'to-me) [*rectum* + *ἐκτομή* excision]. Excision of the rectum.

rectification (rek'tif-ik-a'shun) [L. *rectifica'tio*]. 1. The act of making straight, pure, or correct. 2. Redistillation of a liquid to purify it.

rectified (rek'tif-id). Refined; made straight.

rectischia (rek-tis'ke-ak). Pertaining to the rectum and the ischium.

rectitis (rek-ti'tis). Inflammation of the rectum; proctitis. **epidemic gangrenous r.**, a fatal disease endemic among the natives of the damp regions of the northern part of South America. Called also *bicho* and *caribi*.

recto-abdominal (rek'to-ab-dom'in-al). Pertaining to the rectum and abdomen. **r.-a. examination**, bimanual examination with one hand in the rectum and the other on the abdomen.

rectocele (rek'to-säl). Same as *proctocele*.

rectocolysis (rek-tok'lis-is). Same as *proctocolysis*.

rectococcygeal (rek'to-kok-sij'e-al). Pertaining to the rectum and the coccyx.

rectococcypey (rek-to-kok'se-peks-e). Same as *proctococcypey*.

rectocolitis (rek'to-ko-li'tis). Same as *colorectitis*.

rectocystotomy (rek'to-sis-tot'o-me). Same as *proctocystotomy*.

rectone (rek'tón). A proprietary nutrient suppository.

rectopey (rek'to-peks-e). Same as *proctopey*.

rectophobia (rek-to-fo-be'ah) [*rectum* + *φόβος* fear]. A morbid foreboding peculiar to patients with rectal disease.

rectoplasty (rek'to-plas-te). Proctoplasty.

rectoromanoscopy (rek'to-ro-man'o-sköp). A speculum for examining the sigmoid flexure through the rectum.

rectoromanoscopy (rek'to-ro-man-os'ko-pe) [*rectum* + *s-romanum* sigmoid + *σκοπεῖν* to see].

- Infection of the rectum and sigmoid; proctosigmoidoscopy.
- rectorrhaphy** (rek-tor'af-e) [*rectum* + *ῥαφή* suture]. Same as *proctorrhaphy*.
- rectosanol** (rek-to-sa'nol). A proprietary suppository of eucaine, stovaine, and epinephrine for hemorrhoids.
- rectoscope** (rek'to-sköp). Same as *proctoscope*.
- rectostomy** (rek-tos-ko-pe). Same as *proctostomy*.
- rectosigmoid** (rek-to-sig'moid). The portion of the intestinal tract made up of the terminal 2 inches of the sigmoid and the proximal 1.5 of the rectum.
- rectostenosis** (rek'to-sten-o'sis) [L. *rectum* + *stenosis*]. Stenosis, or stricture, of the rectum.
- rectostomy** (rek-tos'to-me) [*rectum* + *στομα* mouth]. The operation of forming a permanent opening into the rectum for the relief of stricture of the rectum.
- rectotome** (rek'to-töm). Same as *proctotome*.
- rectotomy** (rek-tot'o-me). Same as *proctomy*.
- recto-urethral** (rek'to-u-re'thral). Pertaining to the rectum and urethra.
- recto-uterine** (rek-to-u'ter-in). Pertaining to the rectum and uterus.
- rectovaginal** (rek-to-vaj'in-al). Pertaining to the rectum and vagina. See *fistula*.
- rectovesical** (rek-to-ves'ik-al). Pertaining to the rectum and bladder.
- rectum** (rek'tum) [L. "straight"]. The lower, or distal, part of the large intestine, extending from the sigmoid flexure of the colon (opposite the left sacro-iliac symphysis) to the anus, being from six to eight inches long. Its mucous membrane is gathered into transverse folds which serve to support the feces. **encysted r.**, saciform disease of the anus; a rectum whose mucous membrane forms pouches.
- rectus** (rek'tus) [L. "straight"]. See *muscles*, table of. **lateral r.**, a rare muscle consisting of a few fibers running from the lower ribs to the ilium, and supracostally over the thorax.
- recumbent** (re-kum'bent). Lying down.
- recuperation** (re'ku-per-a'shun) [L. *recupera'tio*]. The recovery of health and strength.
- recurrence** (re-ku'r'ens) [L. *re-* again + *currere* to run]. The return of symptoms after a remission.
- recurrent** (re-ku'r'ent) [L. *recur'rens* returning]. 1. Running back, or toward the source. 2. Returning after intermissions.
- recurvation** (re-ku-r'va'shun) [L. *recurva'tio*]. A backward bending or curvature.
- red.** A red dye or stain. **alizarin r. S**, **alizarin water-soluble r.**, a dye used as a stain. It is sodium alizarin sulphate, $C_6H_4(CO_2C_6H_4(OH)_2)_2SO_3Na$. **aniline r.** Same as *basic fuchsin*. **bordeaux r.**, cerasin. **bromphenol r.**, an indicator, dibromphenol-sulphon-phthalein, $(C_6H_2Br_2OH)_2C_6H_4SO_3Na$. **Caesar r.** Same as *bluish eosin*. **cerasin r.**, sudan III. **chlorphenol r.**, an indicator, dichlorphenol-sulphon-phthalein, $(C_6H_2Cl_2OH)_2C_6H_4SO_3Na$: used in the determination of hydrogen ion concentration. **cholera r.** See *cholera red test*, under *tests*. **Congo r.** See *Congo r.* **corallin r.**, the pararosaniline salt of pararosanolic acid. **cotton r.**, Congo red. **cotton r. 4 B**, benzopurpurine 4 B. **cresol r.**, an indicator, ortho-cresol-sulphon-phthalein, $(CH_3C_6H_3(OH)_2C_6H_4SO_3Na$: used in the determination of the hydrogen ion concentration. It has a *pH* range of 7.2 to 8.8, being yellow at 7.2 and red at 8.8. **dianil r. 4 C.**, **dianil r. 4 B**, benzopurpurine 4 B. **direct r.**, Congo red. **direct r. 4 B**, benzopurpurine 4 B. **fast r.**, amaranth. **fast r. B or P**, cerasin. **magdala r.**, a basic dye used for staining connective tissue. It is a mixture of monamino- and diamino-naphthosafranins. The diamino com-
- pound is $NH_2C_{10}H_5.N_2Cl(C_{10}H_7).C_{10}H_5.NH_2$. **methyl r.** See under *methyl*. **naphthalene r.**, magdala red. **naphthol r.**, amaranth. **neutral r.**, a dye, dimethyl-diamino-toluphenazine-hydrochloride, $(CH_3)_2N.C_6H_3.N_2C_6H_2(CH_3).NH_2HCl$. As an indicator it has a *pH* range of 6.8 to 8, being red at 6.8 and yellow at 8. **oil r.**, sudan III. **oil r. IV**, scarlet red. **orange r.**, the red oxide of lead, Pb_2O_3 : used as a pigment. **phenol r.**, phenol-sulphonphthalein. **scarlet r.**, a red, fat-soluble azo dye, toluyl-azo-toluy-azobeta-naphthol, $CH_3C_6H_4.N:N.C_6H_4(CH_3).N:N.C_{10}H_6.OH$. It was a marked power of stimulating the proliferation of epithelial cells and so is used in a 4-8 per cent ointment in treating burns and ulcers. **scarlet r. sulphionate**, the sodium salt of azo-benzene-disulphonic acid azobeta-naphthol, $C_6H_4(SO_3ONa)_2.N_2C_6H_3(SO_3ONa)_2.C_{10}H_6.OH$. It is used the same as scarlet red. **senitol r.**, a dye, $C_2H_5.NC_6H_4(CH_3).C_6H_4N(I).C_2H_5$, with a highly selective germicidal action on staphylococci. It is also used to sensitize photographic plates to red rays of light. **sudan r.**, magdala red. **toluylene r.**, the base, the hydrochloride of which is neutral red. **tony r.**, sudan III. **trypan r.** See *trypanroth*. **vital r.**, a dye, disodium disulphonaphthol azotetramethyl triphenyl methane. It is introduced directly into the circulation by venipuncture for the purpose of estimating the volume of the blood in the body by determining the concentration of the dye in the blood plasma. **wool r.**, amaranth.
- red fever.** See *swine erysipelas*, under *erysipelas*.
- red mite.** See *bête rouge*.
- red puccoon.** Sanguinaria.
- red spider.** See *Bryobia praetiosa*.
- Red. in pulv.** Abbreviation for *L. reduc'tus in pul'verem*, reduced to powder.
- redecussate** (re-dek-us'ät). To form a secondary decussation.
- redia** (re'de-ah) [named after F. Redi, Italian naturalist, 1626-1698]. The second larval stage of certain trematode worms.
- Redig. in pulv.** Abbreviation for *L. rediga'tur in pul'verem*, let it be reduced to powder.
- redintegration** (red-in-te-gra'shun) [L. *redinte-gra'tio*]. 1. The restoration or repair of a lost or damaged part. 2. That type of psychic process in which a part of a complex stimulus provokes the complete reaction that was previously made to the complex stimulus as a whole (Hollingworth).
- redintol** (red'in-tol). A proprietary paraffin preparation: used as a surgical film for burns.
- redislocation** (re-dis-lo-ka'shun). Dislocation recurring after reduction.
- redressment** (re-dres'ment) [Fr. *redressement*]. 1. A second or repeated dressing. 2. Replacement of a part or correction of a deformity. **r. forcé**, forcible correction of a deformity; especially a procedure for the immediate correction of knock knee.
- reduce** (re-düs') [L. *re-* again + *ducere* to lead]. 1. To restore to the normal place or relation of parts, as, to reduce a fracture. 2. In chemistry, submit to reduction.
- reduced** (re-düst'). 1. Returned to the proper place or position, as, a reduced fracture. 2. Restored to a metallic form, as, reduced iron.
- reducible** (re-du'sib-l). Permitting of reduction.
- reducine** (re-du'sin). A leukomaine, $C_{12}H_{24}N_6O_3$, from urochrome.
- reductase** (re-duk'täs). An enzyme that has a reducing action on chemical compounds. **Shar-dinger's r.**, a reductase in milk which reduces methylene blue, especially in the presence of formaldehyde.
- reduction** (re-duk'shun) [L. *reduc'tio*]. 1. The correction of a fracture, luxation, or hernia. 2. In chemistry, the subtraction of oxygen from or the addition of hydrogen to a substance, or more

generally, the loss of positive charges or the gain of negative charges. **r. of chromosomes**, meiosis; joining of the chromosomes in pairs so that their number is reduced to one half—a process that occurs in the fertilized cell. **r. en masse**, reduction of a strangulated hernia included in its sac, so that the strangulation is not relieved.

reduction division. See *reduction of chromosomes*.

reduction phase. See under *phase*.

redundant (re-dun'dant). More than necessary.

reduplication (re-du-plik-a'shun) [*L. reduplicatio*]. 1. A doubling back. 2. The recurrence of paroxysms of a double type.

Reduviidae (re-du-vi'd-e). A family of winged hemipterous insects called assassin bugs because they prey on other insects. It includes *Arilus*, *Conorhinus* (*Lamius*), and *Riduvius*.

Reed's bacillus, operation [Charles A. L. Reed, gynecologist in Cincinnati, 1856-1928]. See *bacillus and operation*.

Rees' test (rez') [George Owen Rees, English physician, 1813-1889]. See under *tests*.

reflect (re-fekt'). To induce reflexion.

refection (re-fek'shun). Spontaneous disappearance of the symptoms of vitamin B deficiency in rats which have been fed on a diet deficient in vitamin B. It is thought that the phenomenon may be due to the production of vitamin B in the intestine by the growth of a virus which also seems to be conditioned on the presence in the intestine of unbroken starch grains.

reflexious (re-fek'shus). Agencies capable of causing reflexion.

refine (re-fin'). To purify or free from foreign matter.

reflected (re-flek'ted). Caused by nervous transmission to a center, and thence by a motor nerve to the periphery.

reflection (re-flek'shun) [*L. reflexio*]. 1. A turning or bending back; a bending back upon its course. 2. In physics, the turning back of a ray of light, sound, or heat when it strikes against a surface that it does not penetrate. The ray before reflection is known as the *incident ray*; after reflection it is the *reflected ray*.

reflector (re-flek'tor). A device for reflecting light or sound.

reflectoscope (re-flek'to-skōp). A form of reflecting lantern.

reflex (re'fleks) [*L. reflexus*]. 1. Reflected. 2. A reflected action or movement. **abdominal r's**, contractions about the navel on sharp downward friction of the abdominal wall. It indicates that the spinal cord from the eighth to the twelfth dorsal nerve is intact. **abdominocardiac r.**, any reflex in the heart produced by stimulating the abdominal sympathetic. Cf. *Livierato's sign* and *Prevel's sign*, under *sign*. **Abrams' r.**, reflex contraction of the lung following stimulation of the chest wall. **Abrams' heart r.**, contraction of the myocardium, with reduction in the area of cardiac dullness, which results when the skin of the precordial region is irritated. It is observed with the fluoroscope. **accommodation r.**, the dilatation or contraction of the pupil in accommodation. **Achilles tendon r.** (Gowers, 1876), contraction of the calf muscles excited by a blow upon the Achilles tendon, producing a flexion of the foot. **acromial r.**, slight reflexion of the forearm with slight internal rotation of the hand on tapping the acromion or coracoid process; seen in certain conditions. **adductor r.**, on tapping the tendon of the adductor magnus with the thigh in adduction, contraction of the adductors results. **anal r.**, contraction of the anal sphincter on irritation of the skin of the anus. **ankle r.**, ankle clonus: pressure on the sole with flexion of the

foot causes clonic contraction of the Achilles tendon. **anticus r.** See *Piotrowski's sign*, under *sign*. **r. arc**, an afferent nerve, a nerve center, an efferent nerve, and a muscle. **Aschner's r.** Same as *oculocardiac r.* **attention r. of pupil**, alteration of size in the pupil when the attention is suddenly fixed. Called also *Piltz's r.* **audito-oculogyric r.**, a turning of both eyes in the direction of a sudden sound. **auditory r.**, any reflex caused by stimulation of the auditory nerve; especially momentary closure of both eyes produced by a sudden sound. **aural r.**, any reflex connected with the auditory apparatus. Aural reflexes of compensation are—(1) Those of the labyrinthine escapement; (2) those of vasomotor compensation; (3) those of tympanic compensation, and (4) those of tubotympanic compensation. **auriculopalpebral r.** Same as *Kirsch's r.* **Babin-ski's r.** (1898), extension of the toes instead of flexion on stimulating the sole of the foot; it occurs in lesions of the pyramidal tract, and indicates organic, as distinguished from hysterical, hemiplegia. **Bechterew's r.** 1. *Plantar*. Plantar flexion of the foot or tapping the dorsum: seen in certain organic nervous affections. 2. *Deep*. Passive flexing of the toes and foot in a plantar direction is followed by flexion in a dorsal direction and by flexive movements of the knee and hip. 3. *Hypogastric*. Contraction of the muscles of the lower abdomen on stroking the skin of the inner surface of the thigh. 4. *Pupil*. Dilatation of the pupil on exposure to light: sometimes seen in tabes and general paralysis. 5. Tickling of the mucosa of the nasal cavity with a feather or piece of paper produces contraction of the facial muscles upon the same side of the face; called also *nasal r.* **Bechterew-Mendel r.**, tapping of the toe tendons produces extension of the great toe. **biceps r.**, contractions of the biceps muscle of the arm when its tendon is tapped. This reflex is normal but when greatly increased it indicates the same disease as increased neck jerk. **bone r.**, a reflex elicited by stimulus applied to a bone. **bregmocardiac r.**, pressure upon the bregmatic fontanel slows the action of the heart. **Brisauid's r.**, contraction of the tensor fasciae femoris muscle on tickling the sole. **Brudzinski's r.** See *Brudzinski's sign*, under *sign*. **bulbocavernous r.**, a tap on the dorsum of the penis retracts the bulbocavernous portion. **bulbomimic r.**, in coma from apoplexy, pressure on the eyeball causes contraction of the facial muscles on the side opposite to the lesion; in coma from toxic causes the reflex occurs on both sides. Called also *facial r.* and *Mondonesi's r.* **Buz-zard's r.**, the patellar reflex obtained by striking the tendon of the quadriceps muscle while the patient sits with the toes pressed against the floor. **cardiac r.**, reduction in the size of the area of cardiac dullness caused by irritation of the skin of the precordial region. **r. center**. See *center*. **Chaddock r.**, stimulation below the external malleolus produces extension of the great toe: it occurs in lesions of the pyramidal tract. **chain r.**, a series of reflexes, each serving as a stimulus to the next one, representing a complete activity. **chemical r.**, the bodily process produced by the action of a hormone. **chin r.**, a stroke on the lower jaw causes a clonic movement; chin clonus, or jaw jerk. **choked r.**, in kiascopy, absence of movement of the retinal illumination on reaching the point of reversal. **ciliary r.**, the movement of the pupil in accommodation. **cilio-spinal r.**, stimulation of the skin of the neck dilates the pupil. **cochleo-orbicular r.**, **cochleoopalpebral r.**, contraction of the orbicularis palpebrarum muscle when a sharp, sudden noise is made close to the ear; does not occur in total deafness from labyrinthine disease. **conditional r.**, **conditioned r.**, a reflex which is gradually induced and developed in the body by training and association, and which is subject to various forms of inhibition (Pavloff, 1911). **conjunctival r.**, closure of the eyelid when the conjunctiva is

touched. **consensual r.** Same as *crossed r.* **consensual light r.**, stimulation of one eye by light produces a reflex response in the opposite pupil. **contralateral r.**, a reflex of the leg on one side when passive flexion of the leg on the other side is made: seen in tuberculosis and epidemic meningitis. **corneal r.**, irritation of the conjunctiva closes the lids. Called also *eyelid closure r.* **corneomandibular r.**, movement of the lower jaw toward the side opposite the eye whose cornea is lightly touched, the mouth being open. **cranial r.**, any reflex whose paths are connected directly with the brain. **cremasteric r.**, stimulation of the skin on the front and inner side of the thigh retracts the testis on the same side; shows soundness of cord between first and second lumbar nerves. **crossed r.**, stimulation upon one side of the body makes a reflex on the other side. **cuboidodigital r.** See *Mendel's r.* **cutaneous r.**, a reflex in which stimulation of the skin causes wrinkling. **cutaneous pupillary r.**, dilatation of the pupil on pinching the skin of the cheek or neck. **dartos r.**, the patient stands with his feet wide apart and the examiner suddenly applies cold to the perineum; the dartos muscle undergoes vermicular contraction. **Davidson's r.**, a light seen through the pupil when an electric light is held in the mouth. **deeper r.**, any reflex elicited by irritating a deep structure. **defense r.**, contraction and extension motions in a paralyzed limb produced by plantar flexion of the toes. **delayed r.**, a reflex which occurs some time after the stimulus provoking it has been received. **depressor r.**, a reflex to stimulation resulting in decreased activity of the motor center. **digital r.** See *Haffmann's sign* (2), under *sign*. **direct r.**, a contraction on the same side as that of the stimulation. **direct light r.**, when a ray of light is thrown upon the retina through the pupil there is immediate contraction of the sphincter iridis, reducing the size of the pupillary aperture. **dorsal r.**, contraction of the back muscles in response to stimulation of the skin along the erector spinae. **dorsocuboidal r.** See *Mendel's r.* **elbow r.**, triceps reflex. **emergency light r.**, excessive stimulation of the retina by light produces contraction of the pupils, closure of the eyelids, and lowering of the eyebrows. **epigastric r.**, a withdrawal or spasm of the skin of the epigastrium caused by stimulating its surface or that of the fifth and sixth intercostal spaces near the axilla. **Erben's r.**, slowing down of the pulse upon bending head and trunk strongly forward, said to indicate vagal excitability. **erector spinae r.**, contraction of the erector spinae muscle on irritation of the skin along its border. **ether r.**, the sudden and increased flow of duodenal secretion following the introduction of ether into the duodenum. **eyeball-heart r.** See *oculocardiac r.* **eyelid closure r.** See *corneal r.* **facial r.** See *bulbomimic r.* **facial r.**, a reflex elicited by a sudden tap over a fascia. **faucial r.**, irritation of the fauces causing vomiting. **femoral r.**, irritation of the skin on the upper anterior aspect of the thigh flexes the foot and first three toes and extends the knee. **front-tap r.**, a tap on the skin muscles of the extended leg contracts the gastrocnemius. **gastrocolic r.**, a wave of peristalsis in the colon induced by the entrance of food into the empty stomach. **gastroiliac r.**, opening of the ileocecal valve induced by the presence of food in the stomach. **Gault's cochleopalpebral r.** See *cochleopalpebral r.* **Geigel's r.**, a reflex in the female corresponding to the cremasteric reflex in the male. **genital r.**, any reflex irritability due to disorder of the genital organs. **Gifford's r.**, contraction of the pupil when an effort is made to close the lids, which are held apart. **gluteal r.**, a stroke over the skin of the buttock contracts the glutei muscles. **Gordon's r.** See *paradoxic flexor r.* **Haab's r.**, bilateral pupillary contraction when the patient sits in a darkened room, and without accommodation or

convergence directs his attention to a bright object already within the field of vision. Called also *cerebral cortex r.* **heart r.** See *Abrams' heart r.* **Hirschberg's r.**, tickling of the sole at the base of the great toe causes adduction of the foot. **Hughes' r.** See *virile r.* (2d def.). **humoral r.** Same as *chemical r.* **hypochondrial r.**, sudden inspiration caused by quick pressure beneath the lower border of the ribs. **hypotheneur r.**, a reflex elicited by pressure on the pisiform bone. **indirect r.** Same as *crossed r.* **infraspinatus r.**, obtained by tapping a certain spot over the shoulder blade, on a line bisecting the angle formed by the spine of the bone and its inner border; outward rotation of the arm occurs, with simultaneous straightening of the elbow. **inguinal r.** Same as *Giegel's r.* **interscapular r.**, a stimulus applied between the scapulae contracts the scapular muscles. Called also *scapular r.* **inverted radial r.**, a flexion of the fingers without movement of the forearm, produced by tapping the lower end of the radius; believed to indicate disease of the fifth cervical segment of the spinal cord. **iris contraction r.** Same as *pupillary r.* **Jacobson's r.**, a reflex seen in cerebral spastic paralysis of the upper extremities: the patient rests his forearm upon the examiner's hand, with the thumb directed upward, the fingers slightly extended. A blow is then struck on the lower edge of the radius on the extensor side. If flexion of the fingers results, paralysis is indicated. **jaw jerk r.**, clonic contraction of the inferior maxilla and other muscles of mastication, causing jerky motions of the lower jaw on striking the lower jaw with a downward blow while it hangs passively open. It is seen only rarely in health, but is very noticeable in sclerosis of the lateral columns of the cord. **Joffroy's r.**, twitching of the gluteal muscles on pressure against the nates in spastic paralysis. **Kisch's r.**, closure of the eye as a result of tactile or thermal stimulation of the deepest part of the external auditory meatus and tympanum. **knee jerk r.**, the patellar reflex; reflex contraction or clonic spasm of the quadriceps muscle, produced by sharply striking the ligamentum patellae when the leg hangs loosely flexed at right angles. It is seen normally in health, but is absent in locomotor ataxia, multiple neuritis, lesions of the lower portion of the spinal cord, lesions of the anterior gray horns of the cord, meningitis, infantile paralysis, pseudohypertrophic paralysis, atrophic paralysis, diabetes, etc., and is increased in spinal irritability, lesions of the pyramidal tract, cerebral tumors, sclerosis of the brain and cord, etc. **Kocher's r.**, contraction of the abdominal muscle on compression of the testicle. **lacrimal r.**, secretion of tears elicited by touching the conjunctiva over the cornea. **laryngeal r.**, irritation of the fauces and larynx causes cough. **lid r.** Same as *corneal r.* **light r.** 1. A luminous image reflected from the membrana tympani. 2. A circular spot of light seen reflected from the retina with the retinoscopic mirror. **lip r.**, a reflex movement of the lips of sleeping babies which occurs on tapping near the angle of the mouth. Called also *mouth phenomenon*. **Loven r.**, general vasodilatation of an organ when its afferent nerve is stimulated. This secures a maximal supply of blood to the organ. **lumbar r.** Same as *dorsal r.* **lung r.**, reflex dilatation of the subjacent lung tissue from local irritation of the skin, as by cold or continued percussion. It may be sufficient to obscure slight degrees of percussion dullness. **mandibular r.**, jaw jerk reflex. **mass r.**, a reflex exhibited by the entire area controlled by the portion of the spinal cord which has been injured. **McCarthy's r.**, contraction of the orbicularis oculi muscle on tapping the supra-orbital nerve. **McCormack's r.**, percutting the patellar tendon produces adduction of the opposite leg. **Mendel's dorsal r. of foot**, a reflex elicited by percutting the dorsum of the foot. In normal

persons it causes dorsal flexion of the second to fifth toes; in certain organic nervous conditions there is plantar flexion of the toes. Called also *Mendel-Bechterew r.*, *cuboidodigital r.*, and *dorsocuboidal r.* **Mondonesi's r.**, bulbomimic reflex. **motor r.**, a reflex brought about by stimulation upon the periphery of the motor mechanism. **muscular r.**, a reflex movement due to the stretching of a muscle. **myenteric r.**, contraction of the intestine above and relaxation below a portion of the intestine that is irritated. **nasal r.** 1. Irritation of the schneiderian membrane provokes sneezing. 2. *Bechterew's r.*, 5th def. **obliquus r.**, stimulation of the skin below Poupart's ligament contracts a part of the external oblique muscle. **oculocardiac r.**, a slowing of the rhythm of the heart following compression of the eyes. A slowing of from 5 to 13 beats per minute is normal; one of from 13 to 50 or more is exaggerated; one of from 1 to 5 is diminished. If ocular compression produces acceleration of the heart, the reflex is called *inverted*. **oculo-cephalo-gyric r.**, the reflex by which the movements of the eye, the head, and the body are directed in the interest of visual attention. **Onanoff's r.**, contraction of the bulbocavernosus muscle on compressing the glans penis: said to be indicative of dementia praecox. **Oppenheim's r.** Same as *Oppenheim's sign*, see under *sign*. **palatal r.**, **palatine r.**, stimulation of the palate causes swallowing. **palmar r.**, tickling the palm flexes the fingers. **palm-chin r.**, when the thenar eminence is rapidly and vigorously irritated with a needle, the muscles of the chin on the same side are drawn up. **paradoxical flexor r.**, extension of the great toe on pressure or irritation of the deep flexor muscles of the calf of the leg: indicative of motor tract disturbance. Called also *Gordon's r.* **patellar r.**, knee jerk, or Westphal's sign: a stroke on the tense patellar tendon contracts the quadriceps and jerks the foot. **patellar r., paradoxical**, a stroke on the patellar tendon, the patient lying on his back, contracts the adductor muscles, while forcible flexion and sudden relaxation of the leg contract the anterior muscles **pathologic r.**, one which is not normal, but is the result of a pathologic condition, and may serve as a sign of disease. **penis r.** Same as *bulbocavernosus r.* **perception r.**, a reflex movement occurring when a perception is formed in consciousness. **periosteal r.**, a tap on the bones of the leg or forearm causes muscular contraction. It occurs in disease of the lateral column of the spinal cord. **peroneal r.**, a stroke on the tense peroneal muscles or when the foot is turned in causes reflex movements. **pharyngeal r.**, a stimulus applied to the pharynx causes swallowing. **pilomotor r.**, the production of goose flesh on stroking the skin; trichographism. **Piltz's r.** See *attention r.* **plantar r.**, irritation of the sole contracts the toes. **platysmal r.**, the act of nipping the platysma myoids contracts the pupil. **pneocardiac r.**, modification of the circulation on injecting irritating vapor into any part of the air passages. **pneopneic r.**, modification of the respiratory rhythm on injecting irritating vapor into any part of the air passages. **pressor r.**, a reflex to stimulation resulting in increased activity of a motor center. **psychic r.**, a reflex aroused by a stored-up impression of memory, such as the secretion of saliva at the sight or thought of good tasting food. **psychocardiac r.**, increase in the pulse rate on recalling an individual emotional experience. **psychogalvanic r.**, decreased electric resistance of the body as a result of mental or emotional agitation. **pupillary r.**, contraction of the pupil on exposure of the retina to light. **pupillary r., paradoxical**, stimulation of the retina by light dilates the pupil. **radial r.**, flexion of the forearm with sometimes flexion of the fingers as well, following tapping on the lower end of the radius. **rectal r.**, the process by which

the accumulation of feces in the rectum excites defecation. **red r.**, a luminous red appearance seen upon the retina. **Remak's r.**, plantar flexion of the first three toes and sometimes of the foot, with extension of the knee on stroking of the upper anterior surface of the thigh: it indicates interruption of the conducting paths of the cord. **reno-renal r.**, a reflex pain or anuria in a sound kidney in cases in which the other kidney is diseased. **Riddoch's mass r.**, in severe injury of the spinal cord stimulation below the level of the lesion produces flexion reflexes of the lower extremity, evacuation of the bladder, and sweating of the skin below the level of the lesion. **Roger's r.**, salivation or irritation of the esophagus. **Rossilimo's r.**, on stroking the plantar surface of the great toe, extension or abduction of the toe occurs in lesions of the pyramidal tract. **Ruggeri's r.**, acceleration of the pulse following strong convergence of the eyeballs toward something very close to the eyes: it indicates sympathetic excitability. **scapular r.** Same as *interscapular r.* **scapulo-humeral r.**, adduction with outward rotation of the humerus produced by percussing along the inner edge of the scapula. **Schäffer's r.**, flexion of the foot and toes on pinching the Achilles tendon at its middle third: seen in organic hemiplegia. **scrotal r.**, a slow, vermicular contraction of the dartos muscle obtained by stroking the perineum or by applying a cold object to it. **senile r.**, a gray reflection from the pupil of aged people due to hardening of the lens. **sexual r.**, the reflex of erection and ejaculation produced by stimulation of the genitals. **shot silk r.** See *shot silk retina*, under *retina*. **skin r.** Same as *platysmal r.* **skin pupillary r.**, dilatation of the pupil produced by irritation of the skin of the neck. **Snellen's r.**, unilateral congestion of the ear upon stimulation of the distal end of the divided auriculocervical nerve. **sole r.** Same as *plantar r.* **Somagyi's r.**, widening of the pupils on deep inspiration and their contraction on expiration, said to indicate irritable weakness or instability of the cardiac vagus. **spinal r.**, any reflex whose arc is connected with a center in the spinal cord. **Stokey r.**, with the leg semiflexed at the knee, the tendons of the semimembranosus and the semitendinosus muscles are tapped: flexion of the leg results. **Strümpell's r.**, leg movement with adduction of the foot produced by stroking the thigh or abdomen. **superficial r.**, any reflex provoked by a superficial stimulation. **supinator longus r.**, tapping of the tendon of the supinator longus produces flexion of the forearm. **supra-orbital r.**, *McCarthy's r.* **suprapatellar r.**, with the leg extended the index finger of the examiner is crooked above the patella and is struck. The result is a kick-back of the patella. **suprapubic r.**, stroking the abdomen above Poupart's ligament causes deviation of the linea alba toward the side that is stroked. **supra-umbilical r.** Same as *epigastric r.* **tarsophalangeal r.**, dorsal flexion of the second and third or second and fifth toes on tapping the dorsum of the foot in the region of the cuboid or external cuneiform bone: said to indicate some central organic lesion of the motor nervous system. **tendon r.**, a deep reflex. **tibio-abductor r.**, tapping of the tibia on the inner side of the leg results either in homolateral abduction of the leg or crossed adduction from side to side. **toe r.**, strong flexion of the great toe flexes all the muscles of the lower extremity. It is seen in pathologic states in which there is increased knee jerk. **tonic r.**, the passing of an appreciable period of time after the occurrence of a reflex before relaxation. **triceps r.**, extension of the forearm on tapping of the triceps tendon at the elbow while the forearm hangs limp at right angles to the arm. **ty r.**, the instinctive movement to grapple the mother's body when a very young infant is suddenly startled. **unconditioned r.**, a reflex which is fixed and invariable. Cf. *conditioned*

r. urinary r., desire to urinate on accumulation of the urine in the bladder to a certain amount. **vaccinoid r.**, a slight cutaneous reaction to vaccination in a person partially immune to small-pox. **vagus r.**, abnormal sensitiveness to pressure over the course of the vagus nerve seen in a lung affected with tuberculosis. **vascular r.**, constriction of an artery produced by peripheral irritation. **vesical r.**, desire to urinate produced by moderate distention of the bladder. **virile r.** 1. Same as *bulbocavernosus r.* 2. A reflex in the flaccid penis elicited by pulling upward the foreskin or glans penis, when a sudden downward jerk results. Called also *Hughes' r.* **visceral r.**, that in which the stimulus is set up by some state of an internal organ. **visceromotor r.**, contraction of abdominal muscles due to a stimulus from one of the viscera. **viscerosensory r.**, a region of sensitiveness to pressure on some part of the body due to disease of some internal organ. **viscerotrophic r.**, degeneration of any peripheral tissue as a result of chronic inflammation of any of the viscera. **watered-silk r.**, a peculiar appearance, like that of watered silk, visible upon the retinas of children. **Weiss' r.**, a curved reflex seen with the ophthalmoscope on the fundus of the eye to the nasal side of the disk; believed to be indicative of myopia. **Westphal's pupillary r.**, contraction of the pupil associated with closure or attempted closure of the eye. **wrist clonus r.**, extreme extension of the hand causes a local jerking movement. **zygomatic r.**, lateral motion of the lower jaw to the percussed side on percussion over the zygoma.

reflexa (re-fleks-'ah). Same as *decidua reflexa*.

reflexogenic (re-fleks-o-jen-'ik) [*reflex* + *γεννάν* to produce]. Producing or increasing reflex action.

reflexograph (re-fleks-'o-graf) [*reflex* + *γράφειν* to write]. An instrument for graphically recording a reflex.

reflexology (re-fleks-ol-'o-je). The science or study of reflexes.

reflexometer (re-fleks-om-'et-er) [*reflex* + *μέτρον* measure]. An instrument for measuring the force necessary to produce myotatic contraction.

reflexophil (re-fleks-'o-fil) [*reflex* + *φιλεῖν* to love]. Characterized by activity of reflexes.

reflux (re-'fluks) [L. *re-* back + *fluxus* flow]. A backward or return flow.

réforme (ra-form'). A French military term for the enforced retirement of soldiers for physical disability or unworthiness to serve.

refract (re-frakt') [L. *refringere* to break apart]. 1. To cause to deviate. 2. To ascertain errors of ocular refraction.

refracta dosi (re-frakt-'tah do'si) [L.]. In repeated and divided doses.

refraction (re-frak-'shun). 1. The act or process of refracting. 2. The deviation of light in passing obliquely from one medium to another of different density. The deviation occurs at the surface of junction of the two mediums which is known as the refracting surface. The ray before refraction is called the *incident ray*; after refraction it is the *refracted ray*. The point of junction of the incident and the refracted ray is known as the *point of incidence*. The angle between the incident ray and a line perpendicular to the refracting surface at the point of incidence is known as the *angle of incidence*; that between the refracted ray and this perpendicular is called the *angle of refraction*. The sine of the angle of incidence divided by the sine of the angle of refraction gives the *relative index of refraction*. **double r.**, that in which the incident ray is divided into two refracted rays, so as to produce a double image. Double refraction is produced by Iceland spar. See *Nicol prism*, under *prism*. **dynamic r.**, the normal accommodation of the eye which is being continually exerted without conscious effort. **index of r.**, the refractive power

of a medium as compared with that of air, which is assumed to be 1. **ocular r.**, the refraction of light produced by the mediums of the normal eye and resulting in the focusing of images upon the retina. **static r.**, the refraction of the eye when its accommodation is paralyzed.

refractionist (re-frak-'shun-ist). One skilled in determining the refracting power of the eyes and correcting refractive defects.

refractive (re-frak-'tiv). Pertaining to or subserving a process of refraction; having the power to refract.

refractivity (re-frak-tiv-'it-e). The quality of being refractive; the power or ability to refract.

refractometer (re-frak-tom-'et-er) [*refraction* + *μέτρον* measure]. 1. An instrument for measuring the refractive power of the eye. 2. An instrument for determining the indexes of refraction of various substances.

refractometry (re-frak-tom-'et-re). The measurement of refractive power with the refractometer.

refractory (re-frak-'to-re) [L. *refractorius*]. Not readily yielding to treatment.

refractoscope (re-frak-'to-sköp). An apparatus for auscultation of chest sounds so arranged that the listener is able to focus down upon a sound in a manner analogous to focusing a microscope.

refracture (re-frak-'chur). The operation of breaking over again a bone which has been fractured and has united with a deformity.

refrangibility (re-fran-jib-'it-e). Susceptibility of being refracted; the quality of being refrangible.

refrangible (re-fran-'jib-l). Susceptible of being refracted.

refresh (re-fresh'). To freshen or make raw again; to denude of an epithelial covering.

refrigerant (re-frij-'er-ant) [L. *refrigerans*]. 1. Relieving fever and thirst. 2. A cooling remedy. The refrigerants consist of cooling, acidulous drinks and evaporating lotions.

refrigeration (re-'frij-er-a'shun) [L. *refrigeratio*]. The therapeutical reduction of a high temperature. See also *refrigerator treatment*, under *treatment*.

refringent (re-frin-'jent) [L. *refringens*]. Same as *refractive*.

refusion (re-fu-'shun) [L. *refusio*]. The temporary removal and subsequent return of blood to the circulation.

regard, plane of (re-gard'). A plane that passes through the center of rotation and the point of fixation in the eye. **point of r.**, the point at which the eye is directly looking.

regeneration (re-jen-er-a'shun) [L. *re-* again + *generare* to beget]. The renewal or repair of injured tissue.

regenerin (re-jen-er-in). A proprietary compound of iron and manganese with ovoidicithin. This compound may be mixed with arsenacetin and lithium cacodylate to produce *arsenic-regenerin*. These preparations are claimed to be useful in conditions of anemia and faulty nutrition.

regimen (rej-'im-en) [L. "guidance"]. The systematic regulation of the diet and habits for some special purpose.

regio (re-'je-o). Latin for *region*. The various regions of the body, named according to the B N A nomenclature, can be seen by consulting the figures on p. 1045.

region (re-'jun) [L. *regio*]. Any particular part of the body, usually one marked out by arbitrary boundary lines. **abdominal r's.** See *abdomen*. **r. of accommodation**, the space including all points to which the eye can be adjusted by accommodation. **anal r.** Same as *ischiopectoral r.* **antebrachial ulnar r.**, the ulnar aspect of the forearm. **antebrachial volar r.**, corresponds to the palmar surface of the forearm. **anterior brachial r.**, corresponds to

Regions of the human body: anterior view.

Regions of the human body: posterior view.

Regions of the head and neck.

Perineal regions: A, male perineum; B, female, perineum.

the inner or anterior aspect of the arm below the deltoid and above the elbow. **aulic r.**, a region about the aqueduct of Sylvius. **axillary r.**, the axilla and its borders. **basilar r.**, the base of the skull. **Broca's r.** Same as *Broca's convolution*. See under *convolution*. **ciliary r.**, the part of the eye occupied by the ciliary body and its adjuncts. **clavicular r's**, **right** and **left**, the parts of the surface just above the clavicles. **cubital r., anterior**, the palmar aspect of the elbow. **cubital r., posterior**, the dorsal aspect of the elbow surrounding the olecranal region. **deltoid r.**, the upper or proximal part of the anterior aspect of the upper arm. **digital volar r.**, the palmar aspect of the fingers. **ecphyllactic r.**, a region of infection that cannot be protected by the defensive agencies of the body on account of the virulence of the infection. **encephalic r.** See *dorsolateral plate*, under *plate*. **epigastric r.**, the median part of the surface of the abdomen, between the hypochondriac regions. **extrapolar r.**, that region of the body which lies outside the influence of the poles in electrotherapy. **genito-urinary r.**, the anterior part of the perineal space. **gluteal r.**, the buttock. **hypencephalic r.** See *ventrolateral plate*, under *plate*. **hypochondriac r's**, **right** and **left**, the uppermost regions of the abdominal surface on either side of the epigastric region. See *abdomen*. **hypogastric r.**, a region of the lowest part of the abdomen, between the inguinal regions. See *abdomen*. **iliac r.** Same as *inguinal r.* **infra-axillary r.**, a triangular area on either side below the axilla. **infraclavicular r.**, an area on either side of the sternum below the clavicle. **inframammary r.**, the area situated below either mamma and above the lower border of the twelfth rib. **infrascapular r.**, the area on either side of the vertebral column and below the scapula. **infraspinous r.**, an area below the spine of the scapula on either side. **inguinal r's**, **right** and **left**, the groins; spaces on either side of the hypogastric region. **interscapular r.**, the space between the scapulae on both sides of the vertebral column. **ischioectal r.**, the area of the surface between the ischium and the rectum on either side. **lumbar r's**, **right** and **left**, the abdominal area on either side of the umbilical region. **mammary r.**, a space on either side of the chest between the third and sixth ribs. **motor r.**, the ascending frontal and parietal convolutions of the cerebrum. Called also *rolandic r.* **occipital r.**, the outer surface of the head, covering the occipital bone. **olecranal r.**, the surface of the point of the elbow over the olecranon. **olfactory r.**, the upper part of the cavity of the nose or of either nostril where the sense of smell is principally situated. **opticostriate r.**, the basal ganglia and the capsule. **parietotemporal r.** See *sensory r.* **perineal r.** See *perineum*. **precordial r.**, a part of the anterior surface of the body covering the heart and the pit of the stomach. **prefrontal r.**, the part of the frontal lobe of the cerebrum in front of the precentral fissures. **pterygo-maxillary r.**, a facial area whose external landmarks are the zygoma and the prominences of the lower jaw. **respiratory r.**, the nasal cavity below the olfactory region. **rolandic r.** See *motor r.* **scapular r.**, a portion of the back, on either side, covering the scapula. **sensory r.**, the sensorium commune; a part of the cerebral cortex on either side of the motor region. Called also *parietotemporal r.* **r's of the skull**. See under *area*. **stomach-lung r.**, the circular tympanic space under the left lung. **subauricular r.**, the space below the ear. **subicular r.**, the anterior part of the temporosphenoidal lobe. **subthalamie r.**, a portion of the tegmentum beneath the optic thalamus. **superior maxillary r.**, the part of the face occupied by the superior maxillary bone with its attached muscles, nerves, and vessels. **supraclavicular**

r., a region above either clavicle. **supraspinous r.**, a region above the spine of the scapulae. **tegmenal r.**, the upper surfaces of the crus cerebri and the corresponding parts of the pons and oblongata. **trabecular r.**, that region of the embryonic skull from which the sphenoid bone is developed. **umbilical r.**, the medical abdominal region, above the hypogastric region and between the lumbar regions. **volar r. of the hand**, the palmar aspect of the hand.

regional (re'jun-al). Pertaining to a region or to regions.

regression (re-gresh'un) [L. *regres'sio* a return]. 1. A return of symptoms. 2. Retrograde metamorphosis. 3. In biology, the tendency in successive generations toward mediocrity. See *Dalton's law of regression*, under *law*.

regressive (re-gres'iv). Characterized by regression.

regular (reg'u-lar) [L. *regula'ris*; *reg'ula* rule]. 1. Normal or conforming to rule. 2. Menstruating at the proper intervals. **r. school**, the school of medical practice and teaching which is based upon the principles accepted by the great body of physicians and founded upon experience and scientific investigation, without strict adherence to any one theory of therapeutics.

regulation (reg-u-la'shun) [L. *reg'ula* rule]. 1. The act of adjusting or state of being adjusted to a certain standard. 2. In biology, the adaptation of form or behavior of an organism to changed conditions.

regulin (reg'u-lin). A proprietary preparation of agar-agar and extract of cascara sagrada: used in constipation by adding it to food.

Reg. umb. Abbreviation for L. *re'gio umbil'i'ci*, region of the navel.

regurgitant (re-gur'jit-ant) [L. *re-* back + *gurgila're* to flood]. Flowing back or against the normal direction.

regurgitation (re-gur-jit-a'shun) [L. *re-* back + *gurgila're* to flood]. 1. The casting up of undigested food. 2. A backward flowing of the blood through the left auriculoventricular opening, due to imperfect closure of the mitral valve.

Rehfuß' test and tube (ra'fuss) [Martin E. Rehfuß, contemporary Philadelphia physician]. See under *tests*.

Reichel's duct (ri'kelz) [Friedrich Paul Reichel German obstetrician, born 1858]. See *duct*.

Reichert's cartilage (ri'kerts) [Karl B. Reichert, German anatomist, 1811-1884]. See *cartilage*.

Reichmann's disease (rik'manz) [N. Reichmann, contemporary physician in Warsaw]. See under *disease*.

Reid's base line (rēdz) [Robert William Reid, Scotch anatomist, born 1851]. See *base line*, under *line*.

Reil, island of (ril) [Johann Christian Reil, anatomist in Halle, 1758-1813]. See *insula*.

reimplantation (re'im-plan-ta'shun). Replacement of a part that has been taken out, as a tooth or an ovary.

reinfection (re-in-fek'shun). A second infection by the same or a similar virus.

reinforcement (re-in-fors'ment). The increasing of force or strength. **r. of reflex**, the increasing of a reflex response by causing the patient to perform some mental or physical concentration while the reflex is being elicited.

reinoculation (re'in-ok-u-la'shun). An inoculation that follows a previous one with the same virus.

Reinsch's test (rin'shez). See under *tests*.

reintubation (re-in-tu-ba'shun). Intubation performed a second time.

reinversion (re-in-ver'shun). Restoration to its normal place of an inverted organ, especially restoration of an inverted uterus.

- Reisseissen's muscles** (ris'i-senz) [François Daniel Reisseissen, German anatomist, 1773-1828]. Minute fibers of smooth muscle in the bronchioles.
- Reissner's membrane** (ris'nerz) [Ernst Reissner, anatomist in Berlin, 1824-1878]. See *membrane*.
- Reiter's disease** (ri'terz). See under *disease*.
- rejuvenescence** (re'ju-ven-es'ens) [L. *re-* again + *juvenescere* to become young]. A renewal of youth or of strength.
- relapsable** (re-lap'sa-bl). Liable to relapse.
- relapse** (re-laps') [L. *relap'sus*]. The return of a disease after its apparent cessation. **intercurrent r.**, a relapse occurring before the temperature has reached a normal level.
- relapsing fever** (re-lap'sing). See *fever*.
- relax** (re-laks'). A popular term for diarrhea.
- relaxant** (re-laks-ant) [L. *relaxa're* to loosen]. 1. Causing a lessening of tension. 2. An agent that lessens tension.
- relaxation** (re-laks-a'shun). 1. A lessening of tension. 2. A mitigation of pain.
- relief** (re-lēf') [L. *releva'tio*]. The mitigation or removal of pain or distress.
- relieve** (re-lēv') [L. *releva're* to lighten]. To mitigate or remove pain or distress; to give relief to.
- religiosus** (re-lij-e-o'sus) [L.]. The rectus superior oculi.
- reluxation** (re-luks-a'shun). Same as *redislocation*.
- Remak's band, fibers, ganglion, plexus**, etc. (ra-maks') [Robert Remak, German neurologist, 1815-1865]. See *band*, *fiber*, *ganglion*, *plexus*, etc.
- Remak's reflex, sign, type** (ra-maks') [Ernest Julius Remak, German neurologist, 1840-1911]. See *reflex*, *sign*, and *type*.
- remedial** (re-me'de-al) [L. *remedia'lis*]. Curative; acting as a remedy.
- remedy** (rem'ed-e) [L. *reme'dium*]. Anything that cures, palliates, or prevents disease. **concordant r's**, a homeopathic term for remedies of similar action, but of dissimilar origin. **Durande's r.**, a remedy for gall stones: essence of turpentine, 10 parts; ether, 15 parts. **Ehrlich-Hata r.** See *arsphenamine*. **inimic r's**, a homeopathic term for remedies whose actions are antagonistic. **tissue r's**, the twelve remedies which, according to the biochemical school of homeopathy, form the mineral bases of the body.
- Remijia** (re-mij'e-ah). A genus of rubiaceous shrubs. *R. peduncula'ta* and *R. purdiea'na* furnish cuprea bark and the derivatives of cupreine.
- remineralization** (re-min'er-al-iz-a'shun). The restoration of mineral elements, as to the human body.
- remission** (re-mish'un) [L. *remis'sio*]. A diminution or abatement of the symptoms of a disease; also the period during which such diminution occurs. **Legroux's r's**, long remissions which sometimes occur during the course of pulmonary tuberculosis.
- remittance** (re-mit'ens). Temporary abatement, without actual cessation, of symptoms.
- remittent** (re-mit'ent) [L. *remit'tere* to send back]. 1. Having periods of abatement and of exacerbation. 2. A fever characterized by remissions. See *fever*.
- ren** (ren), pl. *re'nes*. Latin for *kidney*. **r. mo'bilis**, movable kidney.
- renaden** (ren-ad-en) [L. *ren* kidney + *adēn* gland]. A therapeutic extract of the kidneys of animals: used in chronic diseases of the kidney. Daily dose, 90-120 grains (6-8 Gm.).
- renadesin** (ren-ad-e'sin). A proprietary styptic and anesthetic ointment containing epinephrine and benzamine lactate.
- renaglandin** (ren-ag-lan'din). A preparation of the suprarenal glands: used as a hemostatic.
- renal** (re'nal) [L. *rena'lis*]. Pertaining to the kidney.
- renatone** (ren'at-on). A proprietary preparation of digitalis, triticum, buchu, etc.
- Renaut's layer** (ren-ōz') [Joseph Louis Renaut, French physician, 1844-1917]. See under *layer*.
- renculin** (ren'ku-lin). An albuminoid said to exist in the suprarenal bodies.
- renculus** (ren'ku-lus). Reniculus.
- Rendu's method, tremor** (ron-dooz') [Henri Jules Louis Marie Rendu, French physician, 1844-1902]. See *method* and *tremor*.
- renes** (re'nēz). A therapeutical extract of the kidneys of pigs or sheep.
- renicapsule** (ren'e-kap-sül) [L. *ren* kidney + *cap'sula* capsule]. A suprarenal capsule.
- renicardiac** (ren-e-kar-de-ak) [*renal* + *cardiac*]. Pertaining to the kidneys and heart.
- reniculus** (ren-ik'u-lus), pl. *renic'uli*. One of the lobules composing the kidney, and consisting of a pyramid and its enclosing cortical substance.
- reniform** (ren'if-orm) [L. *ren* kidney + *for'ma* form]. Shaped like a kidney.
- renin** (ren'in). An extract prepared from the kidneys of animals.
- reniportal** (ren-e-pōr'tal) [L. *ren* kidney + *por'ta* gate]. Pertaining to the portal system of the kidneys.
- renipuncture** (ren'e-punkt-yur) [L. *ren* kidney + *punctu'ra* puncture]. Surgical incision or puncture of the capsule of the kidney: done for relief of albuminuric pain.
- rennet** (ren'et). The dairyman's name for an extract of calf's stomach. It contains rennin and is used for curdling the milk in cheese making.
- rennin** (ren'in). The milk-curdling ferment found chiefly in the gastric juice, but occurring also in pancreatic juice, the testis, and other organs, as well as in plants. Called also *chymosin*.
- rennigen** (ren-in'o'-jen). The proenzyme existing in the gastric glands, which, after secretion, is converted into rennin. Called also *prorennin*, *prochymosin*, *chymosinogen*, and *pexinogen*.
- renninum** (ren-i-num). Rennin.
- rennogen** (ren'o'-jen). See *rennigen*.
- renocutaneous** (re'no-ku-ta'ne-us). Pertaining to the kidneys and skin.
- renoform** (ren'o'-form). A hemostatic in nasal surgery prepared from the adrenals.
- renogastric** (re-no-gas'trik). Pertaining to the kidney and stomach.
- renography** (re-nog'raf-e) [L. *ren* kidney + *γραφειν* to write]. The study of the kidney by radiography.
- reno-intestinal** (re'no-in-tes'tin-al). Pertaining to the kidney and intestine.
- renopulmonary** (re-no-pul'mon-a-re). Pertaining to the kidney and lung.
- renunculus** (re-nung'ku-lus). Same as *reniculus*.
- reoxidation** (re-oks-id-a'shun). The act of taking up oxygen again, as the hemoglobin of the blood.
- Rep.** Abbreviation for *L. repeta'tur*, let it be repeated.
- repand** (re-pand') [L. *re-* back + *pan'dus* bent]. Wrinkled or wavy: said of bacterial cultures.
- repellent** (re-pel'ent) [L. *repel'lere* to drive back]. 1. Capable of dispersing a swelling. 2. An agent or remedy which causes a swelling or tumor to disappear.
- repeller** (re-pel'er). An instrument used in labor of animals to push back the fetus until the head and limbs can be properly placed for normal delivery.
- repercolation** (re'per-ko-la'shun) [L. *re-* again + *percola're* to filter]. A second or repeated percolation with the same materials.
- repercussion** (re-per-kush'un) [L. *repercus'sio* rebound]. 1. The driving in of an eruption or the scattering of a swelling. 2. Ballottement.

repercussive (re-per-kus'iv). An agent causing repercussion; a repellent.

replantation (re-plan-ta'shun). Same as *reimplantation*.

repletion (re-ple'shun) [L. *reple'tio*]. The condition of being full.

reposition (re-po-zish'un) [L. *repositio*]. Replacement in the normal position.

repositor (re-poz'it-or). An instrument used in returning displaced organs to the normal position.

reproduction (re-pro-duk'shun) [L. *re-* again + *productio* production]. The production of offspring by organized bodies. **asexual r.**, reproduction which takes place without the union of individual or germ cells of two different sexes. It includes cell division, budding, fission, spore formation, and parthenogenesis. **cytogenic r.**, reproduction in which the new individual proceeds from a single germ cell or zygote. **sexual r.**, reproduction by means of ova and spermatozoa or by the fusion of the nuclei of two cells. **somatic r.**, reproduction in which the new individual proceeds from a multicellular fragment produced by fission or budding.

reproductive (re-pro-duk'tiv). Subservient or pertaining to the production of offspring.

repullulation (re-pul-u-la'shun). Renewed growth by sprouting.

repulsion (re-pul'shun) [L. *re-* back + *pellere* to drive]. The act of driving apart or away; a force which tends to drive two bodies apart. It is the opposite of attraction.

resacatin (re-sas'e-tin). A derivative of oxyphenylacetic acid.

resaldol (re-sal'dol). A brown astringent powder, said to be dioxy-benzoyl-ortho-benzoic acid ethyl ester, composed of resorcin and salformin: used as an intestinal antiseptic in diarrhea, leukorrhea, and tuberculosis of the intestine. Dose, 5-15 grains (0.3-1 Gm.).

resalgin (re-sal'jin). A substance, antipyrine resorcyate, $(C_{11}H_{12}N_2O_2)_2C_7H_6O_4$, in crystalline needles, derived from antipyrine and potassium β -resorcyate.

resection (re-sek'shun) [L. *resec'tio*]. Excision of a part of an organ; especially, excision of the ends of bones and other structures forming a joint. **submucous r.**, **window r.**, excision of a portion of a deflected nasal septum after first laying back a flap of mucous membrane, which is replaced after the operation.

resene (res'en). Any one of a class of resin derivatives.

reserve air (re-zerv'). See *air*.

reserve, alkali. The amount of alkali radical available in the body to neutralize acid; the reservoir of alkali contained in the blood plasma and blood corpuscles, as sodium bicarbonate, dipotassium phosphate, and the alkaline salts of protein.

reservoir (rez'er-vvoir). A lymphatic cistern or other cavity for storage. **Pecquet's r.**, the receptaculum chyli. **r. of virus**, the source from which a host becomes parasitized. For instance, a person having sexual malarial parasites in his blood is a reservoir of virus.

resident (res'id-ent). Same as *intern*.

residual (re-sid'u-al) [L. *resid'uus*]. Remaining or left behind. **r. air**. See *air*.

residue (rez'id-u) [L. *resid'uum*, from *re-* back + *sid'ere* to sit]. A remainder; that which remains after the removal of other substances. **cancer r.**, the water-soluble portion of cancer cells left after splitting off the toxic radicals by heating the cancer cells in a 2 per cent solution of sodium hydroxide in absolute alcohol. **typhoid r.**, the substance remaining after treating a pure culture of typhoid bacilli with alcohol, ether, and sodium hydroxide: it is used as a remedy and an immunizing agent in typhoid fever.

residuum (re-zid'u-um) [L.]. A residue or remainder. **r. rubrum**, desiccated ox blood: used in anemia. **sporal r.** See *sporenrest*.

resilience (re-sil'e-ens) [L. *resili're* to leap back]. Elasticity; the property of returning to the former shape after compression.

resilient (re-sil'e-ent) [L. *resil'iens*]. Elastic; returning to its proper shape or size after compression or dilation.

resin (rez'in) [L. *resin'a*]. 1. Any one of a class of inflammable, amorphous vegetable substances of many kinds, obtained from plants and trees. True resins are insoluble in water, but are readily dissolved in alcohol, ether, and volatile oils. The chief resins are common resin, or rosin, Canada pitch, Burgundy pitch, caoutchouc, mastic, and resins of copaiba, japal, guaiac, dammar, ipomoea, and podophyllum. 2. Same as *rosin*. **acaroid r.** (from *Acarosis*, a former generic name of the plant producing it), a yellow resin from *Xanthorrhoea hastilis*, a liliaceous tree of Australia: tonic and stimulant. Dose, 6-12 grains (0.4-0.8 Gm.). **acaroid r., red**, a similar product of *X. australis*. **guaiac r.**, guaiacum. **gum r.**, any concrete vegetable juice containing resin, gum, a volatile oil, and extractive material.

resina (rez-i'nah). See *resin*.

resineon (rez-in'e-on). A volatile oil distilled from rosin: antiseptic.

resinoid (rez'in-oid). 1. Resembling a resin. 2. A substance resembling a resin. 3. A dry therapeutical precipitate prepared from a vegetable tincture.

resinol (rez'in-ol). 1. Same as *retinol*. 2. A proprietary antiseptic: used in diseases of the skin and mucous membranes as a local application.

resinotannol (rez'in-o-tan'ol). Any resin alcohol which gives a tannin reaction.

resinous (rez'in-us) [L. *resinosus*]. Of the nature of a resin.

resistance (re-zis'tans) [L. *resisten'tia*]. The opposition by a conductor to the passage of an electric current. **acid alcohol r.**, the power of a bacterium to resist the action of acid and alcohol. **r. coil**, a coil of wire in a circuit placed there to increase the resistance. **essential r.**, **internal r.**, resistance to a galvanic current which resides in the cells of a battery. **external r.**, **extraordinary r.**, that which pertains to that part of the circuit which is outside of the battery cell or cells.

inductive r. See *reactance*. **peripheral r.**, the resistance to the passage of the blood through the small blood vessels, especially the capillaries. **vital r.**, the resistance of the individual to the untoward affects of bacteria, infections, fatigue, etc.

resol (re'sol). A proprietary wood tar and potassium soap preparation: disinfectant.

resoldol (re-sol'dol). A condensation product of salformin and resorcinol. It is insoluble in water and acids, but freely soluble in alkalis: used as an intestinal tonic and astringent. Dose, 5-15 grains (0.333-1 Gm.).

resolution (rez-o-lu'shun) [L. *resolu'tio*]. The subsidence of an inflammation; the softening and disappearance of a swelling.

resolve (re-zolv') [L. *resol'vere*]. 1. To restore to the normal state after some pathologic process. 2. To separate a thing into its component parts.

resolvent (re-solv'ent) [L. *resolvens* dissolving]. 1. Promoting resolution or the dissipation of a pathologic growth. 2. An agent that causes resolution.

resolving power (re-zol'ving). The power of a lens for giving distinct and separate images of the fine details of an object.

resonance (rez'on-ans) [L. *resonan'tia*]. 1. The prolongation and intensification of sound produced by the transmission of its vibrations to a cavity, especially a sound elicited by percussion. Decrease of resonance is called *dulness*; absence

of resonance, *flatness*. 2. A vocal sound as heard in auscultation. **amphoric r.**, a sound resembling that produced by blowing over the mouth of an empty bottle. **bandbox r.**, the extremely resonant sound elicited by percussion in cases of emphysema of the lungs. **bell-metal r.**, a peculiar sound heard in pneumothorax when a coin placed on the chest wall is struck by another coin. **cough r.**, a peculiar auscultatory sound elicited by coughing. **cracked-pot r.**, a peculiar sound elicited by percussion over a pulmonary cavity that communicates with a bronchus. **hydatid r.**, a peculiar sound heard in the combined auscultation and percussion of a hydatid cyst. **osteal r.**, the sound elicited by percussion over a bony structure. **skodaic r.**, increased percussion resonance at the upper part of the chest, with flatness below it. **tympanic r.**, the drumlike reverberation of a cavity filled with air. **tympanitic r.**, the peculiar sound elicited by percussing a tympanitic abdomen. **vesicular r.**, the normal pulmonary resonance. **vesiculotympanic r.**, a resonance partly vesicular and partly tympanic. **vocal r.**, the sound of ordinary speech as heard through the chest wall. **whispering r.**, the auscultatory sound of whispered words heard through the chest wall. **wooden r.**, vesiculotympanic resonance.

resonant (rez'on-ant). Giving a vibrant sound on percussion.

resonator (rez'on-a-tor). An instrument used to intensify sounds. **Oudin r.**, a device for increasing the tension of an electric current.

resopyrine (res-o-pi'rin). A derivative of resorcin and antipyrine, $C_{11}H_{12}N_2O + C_6H_4(OH)_2$: in minute rhombic crystals.

resorbin (re-sor'bin). A mixture of almond oil, wax, soap, gelatin, and wool fat: used as a demulcent vehicle for drugs that are to be applied by inunction, and also as a basis for ointments.

resorcin (re-zor'sin). An incorrect name for resorcinol.

resorcinism (re-zor'sin-izm). Chronic poisoning by resorcin.

resorcinoform (re-zor-sin'o-form). A compound of resorcin and formaldehyde, used as an antiseptic.

resorcinol (re-zor'sin-ol). 1. A whitish, crystalline diatomic phenol, $C_6H_4(OH)_2$: isomeric with hydroquinone and pyrocatechin, and produced by fusing sodium benzene disulphonate with sodium hydroxide. It is soluble in water, ether, alcohol, and chloroform, and is used as an antiseptic and antipyretic, in a 2 per cent solution for spraying the throat in whooping cough and hay-fever, and in ointments for skin diseases. Dose, 2-10 grains (0.133-0.666 Gm.). 2. An antiseptic preparation of resorcin and iodoform: used as an antiseptic dressing.

r.-antipyrine. See *resopyrine*. **hexyl r.** See *hexylresorcinol*. **r. monoacetate**, a compound, *m*-hydroxyphenyl acetate, introduced as *euresol*. It gradually liberates resorcinol and is used, therefore, in the treatment of acne, chilblains, and seborrhea. **r. phthalein**. Same as *fluorescein*.

resorcinum (re-zor-si'nun). Resorcin.

resorcyalgin (re-zor-sil-al'jin). Same as *resalgin*.

resorption (re-sorp'shun) [L. *resorbe're* to suck up]. The removal by absorption of excreted matters. In dentistry, the gradual destruction of the dentin and cementum of a tooth root by lytic or phagocytic action.

resopyrine (re-zor-pi'rin). Resopyrine.

resosalyl (re-so-sal'il). A proprietary antiseptic preparation for use as a gargle, wash, etc.

respirable (res'pir-ab-l). Suitable for respiration.

respiration (res-pir-a'shun) [L. *respira'tio*]. The act or function of breathing; the act by which air is drawn in and expelled from the lungs, in-

cluding inspiration and expiration. *Inspiration* is performed by the contraction and descent of the diaphragm, elevation of the ribs by contraction of the external intercostal and levatores costarum muscles, by the elevation of the upper ribs by the scaleni and other muscles, and depression of the lower ribs by the muscles of the abdomen. *Expiration* is performed by the recoil of the ribs, which are also drawn in by the internal intercostal muscles, and by the upward forcing of the abdominal contents through the action of the abdominal muscles. Respiration supplies the blood with oxygen, which is taken in on inspiration, and removes from it carbon dioxide, water, and various organic matters, which are given off in expiration. Respiration occurs about seventeen times to the minute, the rate varying between thirteen and twenty-five in health. The quantity of air taken in and expelled by an ordinary respiration (*tidal air*) is 500 cc. In a forced inspiration additional air (*complemental air*) can be taken in to the amount of about 1500 cc.; and in forced expiration, about 1500 cc. of additional air (*supplemental air, reserve air*) can be expelled. About 1600 cc. of air (*residual air*) remains in the lungs after the fullest possible expiration. The quantity of air that can be expelled after the fullest possible inspiration represents the *vital or respiratory capacity*. **abdominal r.**, that which is chiefly kept up by the abdominal muscles and the diaphragm. **absent r.**, that in which the respiratory sounds are suppressed. **accelerated r.**, that which exceeds twenty-five respirations every minute. **amphoric r.**, that which is characterized by amphoric resonance, or a quality like that of the sound produced by blowing over the mouth of an empty jar. It is heard over phthisical or bronchiectatic cavities, in pneumothorax, in compression of lung from effusion. **artificial r.**, that which is maintained by artificial means. Among the methods of making artificial respiration are the following: *Buisi's method* is employed in asphyxiation of the newborn, and consists of holding the babe alternately on the stomach and back. *Method of Marshall Hall*: Put the body prone, gently press on the back, then removing the back pressure, turn the body on its side and press a little more, repeating this formula sixteen times every minute. It is known as the method of *prone or postural respiration*, or "ready method." *Howard's method*: Place the body supine, with a cushion under the back, so that the head is lower than the abdomen; the arms are held over the head, forcible pressure is made with both hands inward and upward, over the lower ribs, about sixteen times in a minute. *Schäfer's method*: Patient prone with forehead on one of his arms: straddle across patient with knees on either side of his hips, and press with both hands firmly upon the back over the lower ribs; then raise your body slowly, at the same time relaxing the pressure with your hands. Repeat this forward and backward movement about every five seconds. *Silvester's method*: Patient supine. The arms are pulled firmly over the head to raise the ribs, and kept there until air ceases to enter the chest. The arms are brought down to the chest, and are pressed against it for a second or so after air ceases to escape. This formula is repeated sixteen times in a minute. **Biot's r.** See *meningitic r.* **Beuchut's r.**, respiration in which inspiration is shorter than expiration: seen in children with bronchopneumonia. **bronchial r.** Same as *tubular r.* **bronchocavernous r.**, that which is intermediate in character between bronchial and cavernous. It is heard over a lung cavity with solidified lung tissue adjacent to it. **bronchovesicular r.**, a variety intermediate between the bronchial and vesicular forms. **cavernous r.**, a respiration marked by a peculiar prolonged hollow resonance, usually due to a cavity in the lung. It is heard in the same conditions as is amphoric respiration. **cerebral r.** Same as

- Corrigan's r.** **Cheyne-Stokes r.**, a type characterized by rhythmical variations in intensity—occurring in cycles. It is seen especially in coma from affection of the nervous centers. Each cycle consists of a gradual decrease in the intensity of the respiratory movements, followed by total cessation for a space of from five to forty seconds; this in turn is followed by gradual increase of respiratory movements until they reach a maximum and become dyspneic in character. **cog-wheel r.**, a form with a peculiar jerky inspiration; breathing in which the expiratory and inspiratory sounds are not continuous, but are split into two or more separate sounds. Called also *interrupted r.* **Corrigan's r.**, a shallow and frequent blowing respiration in a low fever. **costal r.**, that which is performed mainly by the rib muscles. **cutaneous r.**, the exhalation of vapors and absorption of oxygen by the skin. **diaphragmatic r.**, that which is mainly performed by the diaphragm. **diminished r.**, that in which the respiratory sounds are partly suppressed. **divided r.**, respiration marked by a pause between the inspiratory and expiratory sounds: heard on auscultation in emphysema. **forced r.**, that which takes in more air than is needed. **granular r.**, a vesicular respiration, giving a sound as if the air were passing through a tube with an uneven surface. **harsh r.** Same as *bronchovesicular r.* **indefinite r.**, a respiratory sound so feeble or so confused that it is difficult to assign to it a definite character. **internal r.** See *tissue r.* **interrupted r.**, that in which the sounds are not continuous. **jerky r.** Same as *cog-wheel r.* **Kussmaul's r.**, air hunger. See under *hunger*. **labored r.**, that which is performed with difficulty. **meningitic r.**, short and rapid breathing interrupted by pauses of ten to thirty seconds; occurring in healthy persons during sleep it has no important significance, but in meningitis it is regarded as an unfavorable sign. **metamorphosing r.** Same as *bronchocavernous r.* **nervous r.** Same as *cerebral r.* **physiologic r.** Same as *metabolism*. **puerile r.**, that in which the breathing sounds are more intense than those of normal adult respiration and resemble those of childhood. **rude r.** Same as *bronchovesicular r.* **Seitz's metamorphosing r.**, a variety of bronchial respiration consisting of an inspiratory murmur, beginning as a tubular bronchial sound and ending as either a cavernous or an amphoric tone. **slow r.**, that in which there are less than twelve respirations in each minute. **stertorous r.**, that which is accompanied by abnormal snoring sounds. **supplementary r.** Same as *puerile r.* **thoracic r.**, respiration performed by the intercostal and other thoracic muscles. Cf. *abdominal r.* **tissue r.**, the exchange of gases between the tissues and the blood. **tubular r.**, that which has high-pitched sounds, not unlike those made by blowing through a tube. It is heard in phthisical and pneumonic consolidation of lung, compression of lung, and sometimes over lung infiltrated with morbid growth. **vesicular r.**, the natural breathing of a sound and healthy adult person. **vesiculocavernous r.**, cavernous respiration with a vesicular quality. It indicates a cavity surrounded by healthy lung tissue. **vicarious r.**, increased action in one lung when that of the other lung is diminished. **wavy r.** Same as *cog-wheel r.*
- respirator** (res'pi-rā-tor). An apparatus to qualify the air that is breathed through it.
- respiratory** (res'pi-rā-tō-re) [L. *re*-again + *spi-ra're* to breathe]. Pertaining to respiration.
- respirazone** (res-pir-a'zōn). A proprietary remedy for asthma, hay-fever, and croup.
- respirometer** (res-pir-om'et-er). An instrument for determining the character of the respiratory movements.
- respiton** (res'pīt-on). A preparation of asclepias and berberis, used in skin diseases and catarrhal conditions.
- response** (res-pons') [L. *respon'sum* answer]. An action or movement due to the application of a stimulus.
- rest** (rest). 1. Repose after exertion. 2. A fragment of embryonic tissue that has been retained within the adult organism; called also *embryonal*, *epithelial*, and *fetal r.* **adrenal r.** Same as *suprarenal r.* **r. cure**, the treatment of disease by prolonged rest, chiefly in bed, with isolation, full diet, massage, and electricity. **embryonal r.**, **epithelial r.**, **fetal r.** See *rest* (2d def.). **occlusal r.**, a metallic part extending from a partial denture which engages on the whole or a part of the occlusal surface of a tooth to aid in supporting the denture. **suprarenal r.**; an accessory suprarenal body; a suprarenal exclave.
- rest atom.** See under *atom*.
- restbacillus** (rest-bas-il'us). Tubercle bacillus after removal of the portions that are soluble in water, a 10 per cent salt solution, alcohol, and ether.
- restbite** (rest'bit). The occlusion of the teeth when the jaw is at rest.
- rest cure.** See *Weir Mitchell treatment*, under *treatment*.
- restibrachium** (res-te-bra'ke-um), pl. *restibra'chia* [L. *res'tis* rope + *bra'chium* arm]. A restiform body: an inferior peduncle of the cerebellum. Called also *myelobrachium*.
- restiform** (res'tif-orm) [L. *res'tis* rope + *for'ma* form]. Shaped like a rope. See under *body*.
- restis** (res'tis), pl. *res'tes* [L. "rope"]. Same as *restibrachium*.
- restitu'tio ad in'tegrum** [L.]. Complete return to health.
- restitution** (res-tit-ū'shun) [L. *restitu'tio*]. 1. An act or process of restoration. 2. The rotation of the presenting part of the fetus outside of the vagina.
- restonal** (res'to-nal). A proprietary stimulant antipyretic and analgesic.
- restoration** (res-to-ra'shun). 1. A return to health. 2. Replacement in the normal position.
- restorative** (res-to-ra-tiv). 1. Promoting a return to health or to consciousness. 2. A remedy that aids in restoring health, vigor, or consciousness.
- restraint** (re-strānt'). The forcible confinement of a violently insane person. **chemical r.**, the quieting of a violently insane person by means of narcotics.
- resublimed** (re-sub-lim'd). Subjected to repeated processes of sublimation.
- resultant** (re-zul'tant). Any one of the products of a chemical reaction.
- resupination** (re'su-pin-a'shun) [L. *resupina're* to turn on the back]. 1. The act of turning upon the back or dorsum. 2. The position of one lying upon the back.
- resuscitation** (re'sus-it-a'shun) [L. *resuscita'tio*]. The restoration to life or consciousness of one apparently dead.
- retainer** (re-tān'er). In dentistry, an appliance for retaining in place teeth whose malposition has been adjusted.
- retamine** (ret'am-in). An alkaloid, C₁₅H₂₅N₂O, from the bark and twigs of *Ret'ama sphaerocar'pa*.
- retardation** (re-tar-da'shun). Delay, hindrance. **psychomotor r.**, underactivity of both mind and body. **r. of thought**, delay in thinking in which either the process of thought is set in motion slowly (*initial r.*), or the thought or action once having started is performed slowly (*executive r.*).
- retching** (ret'shing). A strong involuntary effort to vomit; vomituration.
- rete** (re'te), pl. *re'tia* [L. "net"]. A net or meshwork of nerve fibers, and especially of vessels. **acromial r.**, a rete under the deltoid muscle which establishes a communication between the acromial artery and the posterior circumflex and supra-scapular arteries. **articular r.**, a rete vasculosum

in or around a joint. **r. articula're cu'biti** [B N A], a wide arterial rete on the back of the elbow, which receives branches from the arteria collateralis media and radialis, arteria collateralis ulnaris inferior and superior, arteria recurrens interossea and radialis, and arteriae recurrens ulnares. **r. articula're ge'nu** [B N A], an extensive arterial rete on the capsule of the knee joint. It receives branches from arteria recurrens tibialis anterior and posterior, arteria genu inferior and superior lateralis and medialis, arteria genu media and suprema, ramus fibularis arteriae tibialis posterior. **bipolar r.**, a rete mirabile, whose vessels reunite into a single trunk. **cal-caneal r.**, **r. calca'nei**, **r. calca'neum** [B N A], an arterial rete on the posterior and lower surfaces of the calcaneus. It receives branches from rami calcanis mediales arteriae tibialis posterior, rami calcanis laterales arteriae peroneae and from the lateral and medial malleolar retia. **r. cana'lis hypoglos'si** [B N A], a venous rete surrounding the hypoglossal nerve in the hypoglossal canal which connects the sinus occipitalis and the plexus venosi vertebrales interni to the sinus petrosus inferior. **carpal r.**, **anterior** and **posterior**, two retia formed by the anterior and posterior carpal arteries and other nearby arteries. **r. dorsa'le ma'nus** [B N A], a network of veins on the back of the hand. **r. dorsa'le pe'dis** [B N A]. 1. An arterial rete on the dorsum of the foot. 2. A superficial net of anastomosing veins on the dorsum of the foot which drains into the great and the small saphenus veins. **epidermal r.**, the rete mucosum. **r. foram'inis ova'lis** [B N A], a venous rete which connects the cavernous sinus through the foramen ovale with the pterygoid plexus. **r. halle'ri**. Same as **r. testis**. **r. malleola're latera'le** [B N A], a small arterial rete on the lateral malleolus formed by branches of the arteria malleolaris anterior and posterior lateralis and arteria tarsea lateralis. **r. malleola're media'le** [B N A], a small arterial rete on the medial malleolus formed by the arteria malleolaris anterior and posterior medialis and the arteriae tarseae mediales. **r. malpigh'ii**, rete mucosum. **r. mirab'ile** [B N A], the sudden splitting of a small artery into a knot of smaller vessels which reunite to form a similar vessel which proceeds on its course as in the glomerulus of a kidney. **r. mirab'ile conjuga'tum**, **r. mirab'ile gem'inum**, a plexus of arteries and veins together. **r. mirab'ile simplex**, a plexus of arteries only, or of veins only. **r. muco'sum**, the innermost layer of the epidermis. See under *skin*. **r. na'si**, a venous plexus in the inferior turbinated bone. **neural r.**, **anterior** and **posterior**, any one of a series of arterial plexuses within the spinal canal situated ventrad and dorsad of the cord, and communicating above and below with the spinal arteries. **r. olec'rani**, a meshwork formed by branches of four or more arteries near the olecranon. **patellar r.** 1. A network of arterial branches which surrounds the patella, coming from the various arteries of the knee. 2. A venous plexus which also surrounds the patella. **plantar r.**, **r. planta're** [B N A], a thick venous rete in the subcutaneous tissue of the sole of the foot. **r. tes'tis** [B N A], the network made up of the vasa recta in the mediastinum testis. **unipolar r.**, a rete mirabile whose vessels do not reunite into a single trunk. **r. vasculo'sum** [B N A], a network of vessels formed by anastomoses between small arteries just before they become capillaries. **r. veno'sum dor'si pe'dis**, a venous plexus of the dorsum of the foot, communicating with the superficial venous arch.

retention (re-ten'shun) [L. *reten'tio*]. The persistent keeping within the body of matters normally excreted.

retial (re'te-al). Pertaining to or of the nature of a rete.

reticula (re-tik'u-lah) [L. "a little net"]. A fibrous

network connected with the lateral edge of the posterior gray horn of the cord.

reticular (re-tik'u-lar) [L. *reticu'laris*]. Pertaining to or resembling a net.

reticulated (re-tik'u-la-ted). Same as *reticular*.

reticulation (re-tik'u-la'shun) [L. *reticu'la* a net].

The formation of, or the presence of, a network.

reticulin (re-tik'u-lin). An albuminoid substance from the connective fibers of reticular tissue.

reticulitis (re-tik-u-li'tis). Inflammation of the reticulum of a ruminant animal.

reticulocyte (re-tik'u-lo-sit) [*reticulum* + *kytōs* cell]. A red blood cell showing a reticulum under vital staining.

reticulocytosis (re-tik'u-lo-si-to'sis). Reticulosis.

reticulo-endothelial system (re-tik'u-lo-en-do-the'le-al). See *reticulo-endothelial system*, under *system*.

reticulo-endothelioma (re-tik'u-lo-en-do-the-le-o'mah). A tumor of the reticulo-endothelial system.

reticulo-endotheliosis (re-tik'u-lo-en-do-the-le-o'sis). Hyperplasia of reticulo-endothelial tissue.

reticulosis (re-tik-u-lo'sis). A condition in which the blood contains more than the normal percentage of reticulocytes.

reticulum (re-tik'u-lum), pl. *reticu'la* [L. dim. of *rete* net]. 1. A network, especially a protoplasmic network in cells. 2. The second division of the stomach of a ruminant animal. **Ebner's r.**, a network of cells in the seminiferous tubules.

retiform (ret'if-orm) [L. *retifor'mis*; *rete* net + *for'ma* form]. Resembling a network.

retina (ret'in-ah) [L.]. The innermost tunic and perceptive structure of the eye, formed by the expansion of the optic nerve, and covering the back part of the eye as far as the ora serrata. It consists of ten layers, named, from within outward, as follows: (1) The membrana limitans in-

Section of retina of the eye (Hill).

terna; (2) the nerve fiber layer; (3) the layer of ganglion cells; (4) the inner molecular, or plexiform, layer; (5) the inner nuclear layer; (6) the outer molecular, or plexiform, layer; (7) the outer nuclear layer; (8) the membrana limitans externa; (9) the layer of rods and cones (called also *Jacob's membrane* and *bacillary layer*); and (10) the pigmentary layer. This last layer consists of pigmented epithelial cells, and is continued forward over the inner surface of the ciliary body, and is known as the *pars ciliaris ret'inae*. The various layers are connected transversely by fibers of connective tissue (*sustentacular fibers* of Müller). The layer of rods and cones forms the perceptive element of the retina and is connected by nerve fibers with the nerve fiber layer, which join to form the optic nerve. In the center of the posterior part of

the retina is the *mac'ula lu'tea*, the most sensitive portion of the retina; and in the center of the macula lutea is a depression, the *fov'ea centra'lis*, from which the rods are absent. About $\frac{1}{16}$ inch inside the fovea is the point of entrance of the optic nerve and its central artery (*central artery of the retina*). At this point the retina is incomplete and forms the *blind spot*. **coarctate r.**, a funnel-shaped condition of the retina caused by a fluid exudation between the retina and the choroid. **leopard r.**, a retina of a variegated or mottled appearance, due to retinitis pigmentosa. **lower r.**, the lower half of the retina. **nasal r.**, the nasal half of the retina. **shot silk r.**, an opalescent effect, as of changeable silk, sometimes seen in the retinas of young persons. **temporal r.**, the outer half of the retina. **tigroid r.**, the striped or spotted retina of retinitis pigmentosa. **upper r.**, the upper half of the retina.

retinaculum (ret-in-ak'u-lum), pl. *retinac'ula* [L. "halter"]. 1. A structure which retains an organ or tissue in its place. 2. A tenaculum for operations on hernia. **Barry's r.**, any one of a set of filaments within the graafian follicles. **r. capsulae articula'ris cox'ae**, one of the longitudinal folds of the cervical portion of the capsular ligament of the hip. **r. cu'tis**. 1. One of the bands of connective tissue attaching the corium to the subcutaneous tissue. 2. One of the folds of skin around a joint. **r. of the ileocecal valve**, a ridge on the internal surface of the cecum at either end of the opening of the ileocecal valve. **r. ligamen'ti arcua'ti**, a short external lateral ligament of the knee joint. **r. ligamen'ti arcua'ti** [B N A], a band of converging fibers which pass from the convex lower margin of the arcuate popliteal ligament to the capitulum fibulae. **r. morgag'ni**, a ridge formed by the coming together of segments of the ileocecal valve. **r. musculo'rum peronaeo'rum infe'rius** [B N A], a fibrous band which arches over the tendons of the peroneal muscles and holds them in position on the lateral side of the calcaneus. **r. musculo'rum peronaeo'rum supe'rius** [B N A], a fibrous band which arches over the peroneal tendons and helps to hold them in place below and behind the lateral malleolus. It extends from the malleolus downward and backward to the calcaneus. **r. patel'læ latera'le** [B N A], fibrous bands from the vastus lateralis muscle which pass down on the lateral side of the patella, help to strengthen the articular capsule, and are inserted together with the iliofibular tract into the tuberculum tractus iliotibialis. **r. patel'læ media'le** [B N A], fibrous bands from the vastus medialis muscle which pass down on the medial side of the patella, help to strengthen the articular capsule and are inserted into the lower border of the margo-infraglenoidalis tibiae. **r. peronaeo'rum infe'rius**. See *r. musculo'rum peronaeo'rum infe'rius*. **r. peronaeo'rum supe'rius**. See *r. musculo'rum peronaeo'rum supe'rius*. **r. ten'dinum**, an annular ligament of the ankle or wrist. **Weitbrecht's r.**, any one of a set of ligaments attached to the great trochanter.

retinal (ret'in-al). Pertaining to the retina.

retinitis (ret-in-i'tis). Inflammation of the retina. It is marked by impairment of sight, perversion of vision; edema, and exudation into the retina, and occasionally by hemorrhages into the retina. **r. albuminu'rica**, that which is associated with kidney disease. **apoplectic r.**, that which is characterized by extravasations of blood within the retina. **circinate r.**, a form characterized by brilliant white spots arranged in a wreathlike form near the macula or disk. **diabetic r.**, retinitis occurring in diabetes. **gravidic r.**, retinitis occurring along with the albuminuria of pregnancy. **r. haemorrhag'ica**, retinitis marked by profuse retinal hemorrhage. **hypertensive r.**, retinitis occurring in the course of arterial hypertension. **Jacobson's r.**, syphilitic retinitis. **Jensen's r.**, retinchoroiditis juxtapapillaris.

leukemic r., a variety seen in leukemia, and marked by hemorrhage and paleness of the retina. Called also *splenic r.* **metastatic r.**, retinitis caused by the location of septic emboli in the retinal vessels. **r. pigmento'sa**, a form marked by progressive retinal sclerosis with pigmentation and atrophy. It is attended by contraction of the field of vision and hemeralopia. There are star-shaped deposits of pigment in the retina, and the retinal vessels become obliterated. **proliferating r.**, a form attended with the development of dense masses of connective tissue, which extend from the retina into the vitreous. **r. puncta'ta albes-cens**, a variety characterized by the presence of minute white spots in the fundus. **punctate r.**, a form marked by the presence of a number of white or yellowish spots scattered over the fundus. **serous r.**, simple inflammation of the superficial layers of the retina. **solar r.**, retinitis due to exposure to sunlight. **splenic r.** See *leukemic r.* **striate r.**, a form marked by the presence of gray or yellowish streaks just back of the retinal vessels. **suppurative r.**, retinitis due to pyemic infection.

retinoblastoma (ret'in-o-blas-to'mah). A tumor arising from retinal germ cells.

retinochoroid (ret'in-o-ko'roid). Pertaining to the retina and the choroid.

retinochoroiditis (ret'in-o-ko-roid-i'tis). Inflammation of the retina and choroid. **r. juxtapapilla'ris**, a condition seen in young healthy subjects marked by a small inflammatory area on the fundus close to the papilla. Called also *Jensen's retinitis*.

retinocystoma (ret'in-o-sis-to'mah). Glioma of the retina.

retinoid (ret'in-oid). 1. Resembling the retina. 2. [ῥητιν resin + εἶδος form]. Resembling a resin.

retinol (ret'in-ol). A liquid hydrocarbon, $C_{20}H_{32}$, obtained by distilling pitch or resin. It is a solvent and antiseptic, and has been used in gonorrhea. Dose, 8 minims (0.5 cc.). Called also *rosinol* and *codol*.

retinopapillitis (ret'in-o-pap-il-i'tis). Inflammation of the retina and the optic papilla.

retinoscope (ret'in-o-sköp). An instrument for performing retinoscopy.

retinoscopy (ret-in-os'ko-pe) [*retina* + σκοπεῖν to examine]. Skiascopy; determination of the refractive state of the eye by observing the movements of lights and shadows across the pupil when light is thrown onto the retina from a moving mirror. Called also *shadow test*.

retinosis (ret-in-o'sis). A general term for degenerative conditions of the retina which are not inflammatory.

retort (re-tort') [L. *retor'ta* bent back]. A long-necked globular vessel used in distillation.

retractile (re-trak'til) [L. *retrac'tilis*]. Susceptible of being drawn back.

retraction (re-trak'shun) [L. *retrac'tio*, from *re-back* + *tra'here* to draw]. The act of drawing back; the condition of being drawn back. In dentistry, the condition in which the jaw is further back than normal as measured from the orbital plane.

retractor (re-trak'tor) [L.]. 1. An instrument for drawing back the edges of a wound. 2. Any retractile muscle. See *muscles*, table of. **Emmet's r.**, a self-retaining vaginal speculum.

retrad (re'trad) [L. *re'tro* backward]. Toward a posterior or dorsal part.

retrahens aurem (ret'ra-henz aw'rem) [L. "drawing back the ear"]. See *muscles*, table of.

retrenchment (re-trensh'ment). A procedure in plastic surgery consisting in the removal of redundant tissue and the production of cicatricial contraction.

retro- [L. *re'tro* backward]. A suffix signifying backward.

retro-auricular (re''tro-aw-rik'u-lar). Situated behind the auricle.

retrobronchial (re-tro-brong'ke-al). Behind the bronchi.

retrobuccal (re-tro-buk'al). Pertaining to the back part of the mouth.

retrobulbar (re-tro-bul'bar) [L. *re'tro* back + *bul'bus* bulb]. Situated or occurring behind the pons or behind the eyeball.

retrocardiac (re-tro-ka'r-de-ak). Behind the heart.

retrocatheterism (re't'ro-kath'e-ter-izm). Passing of a catheter through a suprapubic opening downward through the urethra to the external meatus.

retrocecal (re-tro-se'kal). Behind the cecum.

retrocedent (re-tro-se'dent) [L. *retroce'dens* going back]. 1. Going back, or returning. 2. Disappearing from the surface and affecting some interior organ.

retrocervical (re-tro-ser'vik-al). Behind the cervix uteri.

retrocession (re-tro-sesh'un) [L. *retroces'sio*]. 1. A going backward. 2. The translation of a disease from the surface to some interior organ.

retroclavicular (re-tro-klav-ik'u-lar). Behind the clavicle.

retroclusion (re-tro-klu'zhun) [L. *re'tro* back + *clau'dere* to close]. Closure of a bleeding artery by means of a pin passed over, behind, and under the vessel.

retrocolic (re-tro-kol'ik). Behind the colon.

retrocollic (re-tro-kol'lik) [L. *re'tro* backward + *col'lum* neck]. Pertaining to the back of the neck.

retrocollis (re-tro-kol'lis) [L. *re'tro* backward + *col'lis* neck]. Spasmodic wryneck in which the head is drawn directly backward.

retrocurive (re't'ro-ker'siv) [L. *re'tro* back + *curro* to run]. Marked by stepping backward, as *retrocurive* epilepsy.

retrodeviation (re't'ro-de-ve-a'shun). A general term inclusive of retroversion, retroflexion, retro-position, etc.

retrodisplacement (re't'ro-dis-pläs'ment). A backward displacement.

retrodural (ret-ro-du'ral). Behind the dura mater.

retro-esophageal (re't'ro-es-of-a'je-al). Situated or occurring behind the esophagus.

retroflexed (re'tro-flekst) [L. *re'tro* backward + *flex'us* bent]. Bent backward; in a state of retroflexion.

retroflexion (re-tro-flek'shun) [L. *retroflex'io*]. The bending of an organ so that its top is thrust back.

retrogasserian (ret-ro-gas-e're-an). Pertaining to the posterior root of the gasserian ganglion, as *retrogasserian* neurotomy.

retrograde (re'tro-gräd) [L. *re'tro* backward + *gra'di* to go]. Going backward; retracing a former course; catabolic. **r. embolism**, embolism in which the embolus has passed in a direction opposite to that of the blood stream.

retrography (re-trog'raf-e) [L. *re'tro* backward + *grap'hein* to write]. Same as *mirror writing*.

retrogression (ret-ro-gresh'un) [L. *re'tro* backward + *gra'di* to walk]. 1. Degeneration. 2. Catabolism.

retro-infection (ret-ro-in-fek'shun). Infection of the mother by the fetus in utero.

retro-insular (re-tro-in'su-lar) [L. *re'tro* backward + *insu'la* island]. Situated or occurring behind the insula.

retro-iridian (re't'ro-i-rid'e-an). Behind the iris.

retrojection (re-tro-jek'shun) [L. *re'tro* backward + *ja'cere* to throw]. The washing out of a cavity by an injected fluid.

retrojector (re-tro-jek'tor). An instrument used in washing out the uterus.

retrolabyrinthine (ret'ro-lab-er-in'then). Behind the labyrinth of the ear.

retrolingual (re-tro-ling'wal). Behind the tongue.

retromammary (re-tro-mam'a-re) [L. *re'tro* back + *mam'ma* breast]. Situated or occurring behind the mammary gland.

retromandibular (re't'ro-man-dib'u-lar). Behind the mandible or lower jaw.

retromastoid (re-tro-mas'toid). Situated behind the mastoid process.

retromorphosis (re't'ro-mor'fo'sis) [L. *re'tro* backward + *μόρφη* form]. Retrograde metamorphosis.

retro nasal (re-tro-na'zal) [L. *re'tro* behind + *nas'us* nose]. Situated or occurring behind the nose.

retro-ocular (re-tro-ok'u-lar) [L. *re'tro* back + *ocu'lus* eye]. Situated or occurring behind the eye.

retroperitoneal (re't'ro-per-it-o-ne'al) [L. *re'tro* back + *peritonium*]. Situated behind the peritoneum.

retroperitoneum (re't'ro-per-it-o-ne'um). The retroperitoneal space.

retroperitonitis (re't'ro-per-it-o-ni'tis). Inflammation in the retroperitoneal space.

retropharyngeal (re't'ro-far-in'je'al) [L. *re'tro* back + *pharyngeal*]. Situated or occurring behind the pharynx.

retropharyngitis (re't'ro-far-in-ji'tis). Inflammation of the posterior part of the pharynx.

retropharynx (re-tro-far'inks). The posterior part of the pharynx.

retropituitol (ret'ro-pit-u'it-ol). A proprietary fluid extract from the posterior lobes of the pituitary glands of young oxen.

retroplacental (re'tro-pla-sen'tal). Situated or occurring behind the placenta.

retroplasia (re't'ro-pla-se'ah) [L. *re'tro* backward + *πλάσις* formation]. Retrograde metaplasia; degeneration of a tissue or cell into a more primitive type.

retroposed (re-tro-pözd') [L. *re'tro* backward + *pos'itus* placed]. Displaced backward.

retroposition (re't'ro-po-zish'un). 1. Backward displacement. 2. Reposition.

retropulsion (re-tro-pul'shun) [L. *re'tro* back + *pel'ere* to drive]. 1. A driving back, as of the fetal head in labor. 2. A tendency to walk backward, as in some cases of locomotor ataxia.

retrorectal (re-tro-rek'tal). Behind the rectum.

retrospection (re-tro-spek'shun) [L. *re'tro* backward + *spic'ere* to look]. Morbid exercise of the memory.

retrostalsis (re-tro-stäl'sis). Reversed or backward peristaltic action.

retrosternal (re-tro-ster'nal) [L. *re'tro* back + *sternum*]. Situated or occurring behind the sternum.

retrosymphysial (re't'ro-sim-fiz'i-al). Behind the symphysis.

retrotarsal (re-tro-tar'sal). Situated behind the tarsus of the eye.

retro-uterine (re-tro-u'ter-in) [L. *re'tro* back + *u'terus* womb]. Situated or occurring behind the uterus.

retrovaccination (re't'ro-vak-sin-a'shun). The inoculation of a heifer with vaccine virus from a human subject, also vaccination with virus obtained from a cow which has been previously thus inoculated.

retrovaccine (ret-ro-vak'sen). Vaccine virus obtained by inoculating a calf with vaccine virus from a human subject.

retroversioflexion (re't'ro-ver-se-o-flek'shun). Retroversion combined with retroflexion.

retroversion (re-tro-ver'shun) [*L. retrover'sio; re'tro back + ver'sio turning*]. The tipping of an entire organ backward.

retroverted (re-tro-ver'ted). In a condition of retroversion.

retusion (re-tru'zhun) [*L. re-back + tru'dere to shove*]. Malposition of a tooth in which it occupies a position posterior to the line of occlusion.

Retzius' cavity, fibers, ligament, space, veins, etc. (ret'ze-us) [Anders Adolf Retzius, Swedish anatomist, 1796-1860]. See the nouns.

Retzius' foramen, striae (ret'ze-us) [Magnus Gustav Retzius, Swedish histologist, 1842-1919]. See *foramen* and *stria*.

reunient (re-un'yent) [*L. re-again + uni're to unite*]. Effecting the union of divided parts.

reuniol (re-u-ne-ol). An alcohol from oil of geranium, especially from a kind brought from the island of Réunion. It has a roseline odor.

Reuss' test (rois'ez). See under *tests*.

revaccination (re'vak-sin-a'shun). A second vaccination.

revellent (re-vel'ent) [*L. re-back + vell'ere to draw*]. Causing revulsion; revulsive.

Reverdin's operation (ra-veh'r-danz') [Jacques Louis Reverdin, surgeon at Geneva, 1842-1908]. See *operation*.

reversion (re-ver'shun) [*L. re-back + ver'sio turning*]. In genetics, inheritance from some remote ancestor of a character which has not been manifest for several generations. Cf. *atavism*.

revertose (re-ver'tös). A disaccharide formed by the action of maltase on very concentrated solutions of glucose.

Revilliod's sign (ra-ve-yōz') [Henri Revilliod, contemporary Swiss physician]. See under *sign*.

revivescence (re-vi-ves'ens) [*L. revivescere to revive*]. 1. The renewal of vital activities. 2. The reappearance of a local (cutaneous) reaction on the subcutaneous administration of tuberculin to a patient who has previously had a diagnostic (cutaneous) tuberculin test. Called also *recurrent reaction*.

revivification (re-viv'if-ik-a'shun) [*L. re-again + vi'vus alive + fa'cere to make*]. The paring or refreshing of diseased surfaces to promote their union.

revolute (rev'o-lüt). Turned back or curled back.

revulsant (re-vul'sant) [*L. revul'sans*]. Same as *revulsive*.

révulseur (re-vul-ser') [Fr.]. An instrument used in the performance of baunscheitism.

revulsion (re-vul'shun) [*L. revul'sio; from re-back + vell'ere to draw*]. The derivation of blood from a diseased part to another part.

revulsive (re-vul'siv) [*L. re-back + vell'ere to pull*]. 1. Effecting a revulsion. 2. A derivative agent or medicine.

rexotan (rek'so-tan). Methylene-tannin-urea, used in intestinal catarrh.

Reynold's test (ren'oldz). See under *tests*.

R. F. A. Abbreviation for *right fronto-anterior* position of the fetus.

R. F. P. An abbreviation for *right frontoposterior* position of the fetus.

Rh. The chemical symbol of *rhodium*.

rhabditic (rab-dit'ik). Pertaining to Rhabditis.

Three degrees of retroversion of uterus (Skene).

Rhabditis (rab-di'tis) [ράβδος rod]. A genus of minute nematode worms of the family Anguillulidae, living mostly in damp earth, but occasionally found in man. **R. genitalis**, sometimes occurs in the urinary organs. **R. hominis**, a viviparous parasite found in the feces of school children in Korea. **R. intestinalis** and **R. niellyi** also infest the human subject. **R. pellicis**, a species once found in the vagina.

rhabdium (rab'de-um) [ράβδος rod]. A voluntary muscle fiber.

rhabdoid (rab'doid) [ράβδος rod + εἶδος form]. Rod shaped.

rhabdomyoblastoma (rab'do-mi'o-blas-to'mah) [ράβδος rod + μυς muscle + βλάστος cell + -ωμα tumor]. A tumor the cells of which tend to differentiate into striated muscle cells.

rhabdomyochondroma (rab'do-mi'o-kon-dro'mah). A mixed chondroma and rhabdomyoma.

rhabdomyoma (rab'do-mi-o'mah) [ράβδος rod + μυομα]. A myoma composed of striated muscular fibers: called also *myoma striocellular*.

rhabdomyomyoxoma (rab'do-mi'o-mik-so'mah). A myxoma and rhabdomyoma.

rhabdomyosarcoma (rab'do-mi'o-sar-ko'mah). A combined sarcoma and rhabdomyoma.

rhabdonema (rab-do'ne-mah). Same as *rhabditiis*.

rhabdophobia (rab-do-fo'be-ah) [ράβδος rod + φόβος fear]. Morbid dread of a stick or of a beating.

rhachialgia (ra-ke-al'je-ah), and other words in *rhach-*. See *rachialgia*, etc.

rhachisan (ra'ke-san). A proprietary food for rickets, made of cod liver oil, iodine, lecithin-nuclein, manna, etc.

racoma (ra-ko'mah) [ρακέω to rend]. 1. An excoriation or rent of the skin. 2. A pendulous scrotum.

raebocrania (re-bo-kra'ne-ah) [ραιβός crooked + κρανίον skull]. Torticollis, or wryneck.

raeboscclia (re-bo-se'le-ah) [ραιβός crooked + σκέλος leg]. Bow leg, or knock knee.

raebosis, rhabosis (re-bo'sis) [ραιβός crooked]. Crookedness of the legs or of any normally straight part.

ragades (rag'ad-ēz) [pl. of ράγας rent]. Clefts, chaps, or excoriations in the skin, especially those of the anus.

ragadiform (rag-ad'if-orm) [ράγας rent + L. for'ma shape]. Fissured; containing cracks.

rhagiocrin (raj'e-o-krin). A clasmotocyte.

Rham. cat. Abbreviation for *Rham'nus cathartica*.

rhamnin (ram'nin). A proprietary fluidextract of *Rham'nus fran'gula*: it is aperient.

rhamnose (ram'nös). A methylpentose, CH₃(CHOH)₄CHO, sometimes found in the urine; it is dextrorotatory.

rhamnoside (ram'no-sid). A glucoside which on hydrolysis yields rhamnose.

rhamnoxanthine (ram-no-zan'thin). A crystalline principle from *Rham'nus fran'gula*: said to be identical with cascarin.

Rhamnus (ram'nus) [*L.; ράμνος*]. A genus of rhamnaceous trees and shrubs, often with a purgative bark and fruit. Among them are *R. cathartica*, or buckthorn; *R. purshiana*, cascara sagrada (q. v.), and *R. fran'gula*. See *cascara sagrada* and *Frangula*. *R. californica*, California buckthorn or coffee tree, is used in rheumatism. *R. croceus* is a species of buckthorn with edible red fruit, the excessive use of which tinges the skin red.

rhaphania (raf-a'ne-ah). See *raphania*.

Rhaphanus (raf'an-us) [*L. "radish"*]. A genus of cruciferous plants: radishes; also the homeopathic preparation of the root of the black garden radish, *R. sativa*.

rhaphe (ra'fe). Same as *raphe*.

rhapontic (rah-pon'tik) [ῥᾱ rhubarb + *ποντικόν* Pontic]. 1. Pertaining to rhubarb. 2. Rhubarb.

rhatany (rat'an-e) [Pg. *ratán'hia*]. Same as *Krameria*. **Peruvian r.**, *Krameria triandra*. **Savanna r.**, *Krameria ixina*.

Rhazes (ra'zēs). An Arabian physician, 850-932 A. D., the author of nearly 200 medical writings, most of which have been lost.

rheadin (re'ad-in). A principle, $C_{21}H_{21}NO_6$, from opium.

rheantin (re-an'tin). A proprietary antigonococcic vaccine for inoculation through the gastro-intestinal tract.

rheobacra'nia. See *rhaebocrania*.

rhebosce'lia. See *rhaeboscelia*.

rhebo'sis. See *rhaebosis*.

rhegma (reg'mah) [ῥήγμα rent]. A rupture, rent, or fracture.

rhein (re'in) [L. *rheum* rhubarb]. See *chrysophanic acid*, under *acid*.

rheombasmus (rem-baz'mus) [ῥεμβασμός]. 1. Mental wandering or distraction. 2. Wavering or morbid indecision.

rhenum (re'ne-um). A chemical element, atomic number 75, dissolved in solutions of certain minerals.

rheobase (re'o-bās). Rheobasis.

rheobasis (re-ob'as-is) [ῥέος current + *βάσις* step]. The minimum potential of electric current necessary to produce stimulation (L. Lapicque, 1909).

rheochord (re'o-kord) [ῥέος current + *χορδή* chord]. Same as *rheostat*.

rheometer (re-om'et-er) [ῥέος current + *μέτρον* measure]. 1. See *galvanometer*. 2. An instrument for measuring the velocity of the blood current.

rheonome (re'o-nōm) [ῥέος current + *νέμειν* to distribute]. An apparatus for determining the effect of irritation on a nerve.

rheophore (re'o-fōr) [ῥέος current + *φέρειν* to carry]. Same as *electrode*.

rheoscope (re'o-skōp) [ῥέος current + *σκοπεῖν* to view]. An instrument for detecting the presence of an electric current.

rheoscopic frog (re-o-skop'ik). See *frog*.

rheostat (re'o-stat) [ῥέος current + *ιστάσθαι* to place]. An appliance for regulating the resistance in an electric current.

rheotachygraphy (re'o-tak-ig'raf-e) [ῥέος current + *ταχύς* swift + *γράφειν* to record]. The photographic record of the curve of variation in experiments upon the electromotive action of muscles.

rheotaxis (re-o-tak'sis) [ῥέος current + *τάξις* arrangement]. The phenomenon of a body moving in a direction contrary to the current of the fluid in which it lies.

rheotome (re'o-tōm) [ῥέος current + *τέμνειν* to cut]. A device in a faradic battery for interrupting the current.

rheotrope (re'o-trōp) [ῥέος current + *τρέπειν* to turn]. An instrument for reversing an electric current.

rheotropism (re-ot'ro-pizm) [see *rheotrope*]. Rheotaxis.

rhestocythemia, **rhaestocythemia** (res'to-si-the-me-ah) [ῥαῖν to break, ruin + *κύτος* cell + *αἷμα* blood]. The occurrence of broken-down red corpuscles in the blood.

Rheum (re'um) [L.; ῥῆον]. A genus of cathartic polygonaceous plants. See *rhubarb*.

rheum, **rheuma** (rūm, rūmah) [ῥεῦμα flux]. Any watery or catarrhal discharge. **epidemic r.**, influenza. **salt r.**, eczema.

rheumacilate (ru-mas'il-āt). Methyl salicylate: a proprietary remedy for rheumatism.

rheumagon (ru'mag-on). A proprietary remedy for rheumatism and gout. It contains sodium iodide and phosphate, and is claimed to be useful externally and internally in rheumatism and syphilis. Dose, 30 minims (2 cc.).

rheumaprya, **rheumatopyra** (ru-map-i'rah, ru'-mat-o-pi'rah) [ῥεῦμα flux + *πῦρ* fire]. Acute rheumatism; rheumatic fever.

rheumarthritis, **rheumarthrosis** (ru-mar-thri'tis, ru-mar-thro'sis) [ῥεῦμα flux + *ἄρθρον* joint]. Rheumatism of the joints.

rheumasan (ru'mas-an). A preparation of salicylic acid and superfatting soap: used as an application in gout.

rheumatalgia (ru-mat-al'je-ah) [ῥεῦμα flux + *ἄλγος* pain]. Chronic rheumatic pain.

rheumatic (ru-mat'ik) [ῥευματικός]. Pertaining to or affected with rheumatism.

rheumatin (ru'mat-in). 1. A proprietary antilithic and sorbafacient remedy containing sodium iodide and sodium phosphate. 2. A salicylate of the salicylic acid ester of quinine; a tasteless white powder, slightly soluble in water, and used in rheumatism. Dose, 15-30 grains (1-2 Gm.). Called also *saloquinine salicylate*.

rheumatisant (ru-mat'iz-ant). A person subject to rheumatism.

rheumatism (ru'mat-izm) [L. *rheumatis'mus*; *ρευματισμός*]. A constitutional disease marked by inflammation of the connective tissue structures of the body, especially the muscles and joints, and attended by pain in the joints or muscles. It is usually recurrent, and is often due to exposure. **apoplectic r.**, rheumatism associated with cerebral apoplexy. **articular r.**, **acute**, an infectious disease of uncertain causation, attended with fever, sour sweat, scanty, high-colored urine containing a large amount of urea, and swelling of the joints from exudation into their cavities and infiltration around them. The symptoms pass from one joint to another, and recurrence is apt to take place. The inflammation may spread to other structures or organs, especially to the heart. Called also *inflammatory r.*, *acute rheumatic arthritis*, and *rheumatic fever*. **articular r.**, **chronic**, a form of chronic joint inflammation attended by moderate pain and producing progressive deformity by a combined hypertrophy and atrophy of cartilage and bone and nodular ossification of the soft structures. Called also *rheumatoid arthritis*, *arthritis deformans*, *osteoarthritis*, and *chronic r.* **Besnier's r.**, chronic arthrosynovitis. **cerebral r.**, acute rheumatic fever marked by chorea, delirium, convulsions, and coma. **gonorrheal r.**, acute articular rheumatism associated with gonorrheal urethritis, and frequently producing ankylosis of the joints. **r. of the heart**, rheumatism affecting the heart, due to spread of acute articular rheumatism, and producing valvular disease. **Heberden's r.**, rheumatism of the finger joint, marked by the formation of nodosities. **inflammatory r.** See *articular r.*, *acute*. **MacLeod's capsular r.**, a rheumatoid arthritis with effusion into the synovial capsules, bursae, and sheaths. **muscular r.**, a painful affection of the voluntary muscles and their fibrous structures. It may or may not be attended with constitutional symptoms. **nodose r.** 1. Articular rheumatism with the formation of nodules in the region of the joints. 2. Arthritis deformans. **subacute r.**, a mild but obstinately protracted form of rheumatism. **trench r.**, a painful myositis of the back and legs affecting soldiers in the trenches. **tuberculous r.**, an inflammatory state of the joints due to the toxins of tuberculosis. **visceral r.**, that which involves a viscus, more commonly the heart or pericardium.

rheumatismal (ru-mat'iz-mal). Pertaining to or of the nature of rheumatism.

rheumatocelis (ru'mat-o-ke'lis) [rheumatic + *κηλίς* spot]. Purpura rheumatica.

rheumatoid (ru'mat-oid) [ῥεῦμα flux + εἶδος form]. Resembling rheumatism. **r. arthritis**, chronic articular rheumatism. See *rheumatism*.

rheumatol (ru'mat-ol). A proprietary liniment for rheumatism.

rheumatopyra (ru'mat-o-pi'rah). Same as *rheumatopyra*.

rheumatosis (ru-mat-o'sis). Any disorder attributed to rheumatic origin.

rheumic (ru'mik). Pertaining to a rheum or flux.

rhaxis (rek'sis) [L.; ῥήξις]. The rupture of an organ or a vessel.

rhigolene (rig'o-lēn) [ῥίγος cold]. A light, inflammable petroleum distillate composed of butane and other volatile hydrocarbons. It evaporates rapidly, producing a lowering of the temperature of the surface from which it evaporates. It is used as a local freezing anesthetic for minor surgical operations.

rhinal (ri'nal) [ῥίς nose]. Pertaining to the nose.

rhinalgia (ri-nal'je-ah) [ῥίς nose + ἄλγος pain]. Pain in the nose.

rhinalgia (ri-nal'jin) [ῥίς nose + ἄλγος pain]. An antiseptic and analgesic preparation of alum-nol, oil of valerian, menthol, and cacao butter: used in affections of the nose and eyes.

rhinalum (ri-nal'um). A proprietary alum preparation for diseases of the nose.

rhinospasm (ring'ko-spazm). A spasmodic snoring during waking hours.

rhinedema, **rhinoedema** (ri-ne-de'mah) [ῥίς nose + ἕδεμα]. Edema of the nose; dropsy of the nose.

rhinencephalia (ri'nēn-sef'a-le-ah) [ῥίς nose + ἐγκέφαλος brain]. A monstrosity with a nose like a proboscis.

rhinencephalon (ri-nēn-sef'al-on) [ῥίς nose + ἐγκέφαλος brain] [B N A]. The rudimentary portion of the brain which has to do with the sense of smell. It consists of the olfactory lobe, the anterior perforated substance, the subcallosal gyrus, and the parolfactory area.

rhinencephalus (ri-nēn-sef'al-us). Rhinocephalus.

rhinenchysis (ri-nēn'kis-is) [ῥίς nose + ἐγχέειν to pour in]. Injection of a medicinal fluid into the nose.

rhinesthesia (ri-nēs-the'ze-ah) [ῥίς nose + αἴσθησις sensation]. The sense of smell.

rhineurynter (rin-u-rin'ter) [ῥίς nose + εὐρίνυεν to widen]. A dilatable rubber bag for distending a nostril.

rhinion (rin'e-on) [ῥύνιον nostril]. The lower end of the suture between the nasal bones.

rhinism (ri'nizm) [ῥίς nose]. The so-called nasal quality of voice.

rhinitis (ri-ni'tis) [ῥίς nose]. Inflammation of the mucous membrane of the nose. **acute catarrhal r.**, coryza, or cold in the head; an acute congestion of the mucous membrane of the nose, marked by dryness, followed by increased mucous secretion from the membrane, impeding respiration through the nose, and some pain. **atrophic r.**, a chronic form marked by wasting of the mucous membrane and the glands. **r. caseosa**, rhinitis with a caseous, gelatinous, and fetid discharge. **chronic catarrhal r.**, a form characterized by hypertrophy and later by atrophy of the mucous and submucous tissues. **croupous r.** See *fibrinous r.* **fibrinous r.**, a form characterized by the development of a false membrane. Called also *croupous r.* **gangrenous r.**, cancrum nasi. **hypertrophic r.**, a form in which the mucous membrane thickens and swells. **membranous r.**, chronic rhinitis with the formation of a membranous exudate. **pseudomembranous r.**, a form in which the inflamed region is covered with an opaque exudation. **purulent**

r., chronic rhinitis with the formation of pus. **scrofulous r.** Same as *tuberculous r.* **r. sicca**, a variety of atrophic rhinitis in which the secretion is entirely absent. **syphilitic r.**, a variety caused by syphilis, and marked by ulceration, caries of the bone, and a fetid discharge. **tuberculous r.**, a variety due to tuberculosis, and attended with ulceration, caries of the bone, and ozena. **vasomotor r.**, hay-fever.

rhino-antritis (ri'no-an-tri'tis) [ῥίς nose + antrum + -itis inflammation]. Inflammation of the nasal cavity and the antrum of Highmore.

rhinobyon (ri-no'be-on) [ῥίς nose + βύνω to plug]. A nasal tampon.

rhinocanthectomy (ri'no-kan-thek'to-me). Same as *rhinomectomy*.

rhinocaul (ri'no-kawl) [ῥίς nose + καυλός stalk]. The peduncle of an olfactory bulb.

rhinocoele (ri'no-sēl). See *rhinocoele*.

Rhinoceph'alus annula'tus. Same as *Boophilus bovis*.

rhinocephalus (ri-no-sef'al-us) [ῥίς nose + κεφαλή head]. A monster fetus with a nose like a head.

rhinochiloplasty (ri-no-ki'lo-plas-te) [ῥίς nose + χείλος lip + πλάσσειν to form]. Plastic surgery of the nose and lip.

rhinocleisis (ri-no-klī'sis) [ῥίς nose + κλείσις closure]. Obstruction of the nasal passages.

rhinocoele (ri'no-sēl) [ῥίς nose + κοιλία hollow]. The ventricle of the olfactory lobe of the brain.

rhinoculin (ri-nok'u-lin). A proprietary anesthetic ointment for use in hay-fever.

rhinodacryolith (ri-no-dak're-o-lith) [ῥίς nose + δάκρυον tear + λίθος stone]. A lacrimal concretion in the nasal duct.

rhinodynia (ri-no-din'e-ah) [ῥίς nose + ὀδύνη pain]. Pain in the nose.

rhinogenous (ri-noi'en-us) [ῥίς nose + γεννᾶν to produce]. Arising in the nose.

rhinokyphectomy (ri'no-ki-fek'to-me) [ῥίς nose + κύφος hump + ἐκτομή excision]. A rhinoplastic operation for rhinophysis by intranasal excision of the kyphosis or hump.

rhinophysis (ri'no-ki-fō'sis) [ῥίς nose + κύφος hump]. A nose which has a high protruding bridge.

rhinol (ri'nol). A proprietary snuff for hay-fever and coryza, containing borated suprarenin, cocaine, and antiseptics.

rhinolalia (ri-no-la-le-ah) [ῥίς nose + λαλιά speech]. A nasal quality of voice due to some disease or defect of the nasal passages. **r. aperta**, that which is caused by undue patency of the posterior nares. **r. clausa**, that which is due to undue closure of the nasal passages.

rhinolaryngitis (ri'no-lar-in-jī'tis). Inflammation of the mucous membrane of the nose and larynx.

rhinolaryngology (ri'no-lar-in-gol'o-je) [ῥίς nose + λάρυγξ larynx + λόγος treatise]. The sum of knowledge concerning the nose and larynx and their diseases.

rhinolin (ri'no-lin). A disinfectant and analgesic proprietary remedy.

rhinolite, **rhinolite** (ri'no-lit, ri'no-lith) [ῥίς nose + λίθος stone]. A nasal stone or concretion.

rhinolithiasis (ri'no-lith-i'as-is). A condition associated with the formation of rhinolites.

rhinologist (ri'nol-o-jist). An expert in the knowledge and treatment of diseases of the nose.

rhinology (ri-nol'o-je) [ῥίς nose + λόγος treatise]. The sum of knowledge regarding the nose and its diseases.

rhinomanometer (ri'no-man-om'et-er) [ῥίς nose + manometer]. A manometer for measuring the amount of nasal obstruction.

rhinometaplasty (ri-no-met'ap-las-te). Rhinoplasty.

rhinometer (ri-nom'et-er) [ῥίς nose + μέτρον measure]. An instrument for measuring the nose or its cavities.

rhinomiosis (ri''o-mi-o'sis) [ῥίς nose + μείωσις diminution]. Operative reduction of the size of the nose.

rhinomnectomy (ri-nom-ek'to-me) [ῥίς nose + ὄμμα eye + ἐκτομή excision]. Excision of the inner canthus of the eye.

rhinomycosis (ri''no-mi-ko'sis) [ῥίς nose + μυκός]. The presence of fungi in the nasal mucus.

rhinonecrosis (ri''no-ne-kro'sis) [ῥίς nose + νέκρσις]. Necrosis of the nasal bones.

rhinopathia (ri-no-path'e-ah). Rhinopathy. **r. vasomotoria**, hay-fever.

rhinopathy (ri-nop'ath-e) [ῥίς nose + πάθος disease]. Any disease of the nose.

rhinopharyngeal (ri''no-far-in'je-al). Same as *nasopharyngeal*.

rhinopharyngitis (ri''no-far-in'ji'tis). Inflammation of the nasopharynx. **r. mu'tilans**. See *gangosa*.

rhinopharyngocele (ri''no-far-ing'o-sēl). A tumor, usually an acrocele, of the nasopharynx.

rhinopharyngolith (ri''no-far-ing'o-lith) [ῥίς nose + φάρυγξ pharynx + λίθος stone]. Calculus of the nasal pharynx.

rhinopharynx (ri-no-far'inks). Same as *nasopharynx*.

rhinophonia (ri-no-fō-ne-ah) [ῥίς nose + φωνή voice]. A nasal twang or quality of voice.

rhinophyma (ri-no-fi'mah) [ῥίς nose + φύμα growth]. A nodular swelling and congestion of the nose.

rhinoplastic (ri-no-plas'tik). Pertaining to rhinoplasty.

rhinoplasty (ri''no-plas-te) [ῥίς nose + πλάσσειν to form]. The formation of a new nose out of tissue derived from another part. **Car-pue's r.**, Indian rhinoplasty. **dactylocostal r.**, the use of the finger and a costal cartilage to furnish material for plastic repair of the nose. **English r.**, that in which a nose is formed out of flaps from the cheeks. **Indian r.**, the formation of a nose from a flap taken from the forehead. **Italian r.**, **tagliaciotan r.**, the making of a nose out of the flesh of the arm.

rhinopolypus (ri-no-pol'ip-us) [ῥίς nose + πολypus]. A nasal polypus.

rhinoptia (ri-nop'she-ah). Internal strabismus.

rhinoreaction (ri-no-re-ak'shun). The nasal tuberculin reaction; an exudation appearing on the nasal mucous membrane after the application thereto of a solution of tuberculin in patients affected with tuberculosis. Called also *Moeller's reaction*.

rhinorrhagia (ri-nor-a'je-ah) [ῥίς nose + ῥήγνιναι to burst forth]. Nosebleed; epistaxis.

rhinorrhaphy (ri-nor'af-e) [ῥίς nose + ράφη suture]. An operation for epicanthus performed by excising a fold of skin from the nose and closing the opening with sutures.

rhinorrhea, **rhinorrhoea** (ri-nor-e'ah) [ῥίς nose + ῥοία flow]. The free discharge of a thin nasal mucus. **cerebrospinal r.**, discharge of cerebrospinal fluid through the nose.

rhinosalpingitis (ri''no-sal-pin-ji'tis) [ῥίς nose + σάλπιγξ tube + -ιτις inflammation]. Inflammation of the nasal mucosa and the eustachian tube.

rhinosclerin (ri-no-skle'r'in). A preparation derived from cultures of the bacillus of rhinoscleroma: used in treating that disease.

rhinoscleroma (ri''no-skle-ro'mah) [ῥίς nose + σκλήρωμα a hard swelling]. A form of indurated growth of the skin and mucous membrane of

the nose. The growth is of the nature of granulation tissue, and forms hard patches or nodules, which tend to increase in size and are painful on pressure. The disease is ascribed to the presence of the *Bacterium rhinoscleromatis*.

rhinoscope (ri'no-skōp) [ῥίς nose + σκοπεῖν to view]. A speculum for use in nasal examinations.

rhinoscopic (ri-no-skop'ik). Pertaining to rhinoscopy.

rhinoscopy (ri-nos'ko-pe). The examination of the nasal passages, either through the anterior nares (*anterior r.*) or through the nasopharynx (*posterior r.*). **median r.**, examination of the nasal cavity and the openings of the ethmoid cells, etc., by means of a long nasal speculum.

rhinosporidiosis (ri''no-spo-rid-e-o'sis). The condition produced by *Rhinosporidium* in the nasal cavity.

Rhinosporid'ium kineal'yi. A sporozoan parasite found in tumors of the septum nasi of natives of India. **R. seebe'ri**, a species which causes a form of nasal polypus.

rhinostegnosis, **rhinostenosis** (ri''no-steg-no'sis, ri''no-sten-o'sis) [ῥίς nose + στήγνωσις, στένωσις obstruction]. Obstruction of a nasal passage.

rhinotomy (ri-not'o-me) [ῥίς nose + τομή incision]. Incision into the nose.

rhinovaccination (ri''no-vak-sin-a'shun) [ῥίς nose + vaccination]. The application of vaccine or other immunizing material to the mucous membrane of the nose.

Rhipicephalus (ri-pis-ef'al-us) [ῥίπις fan + κεφαλή head]. A genus of cattle ticks, species of which are the agents in transmitting the piroplasma of cattle fever and other disease. **R. annula'tus**. Same as *Margaropus annulatus*. **R. appendicula'tus**, the brown tick, transmits the *Piroplasma parvum* of East African Coast fever. **R. bur'sa** transmits the *Piroplasma ovis*, which causes icterohematuria of sheep. **R. sanguin'eus**, the brown dog tick, a species found on many domestic animals. It transmits *Piroplasma canis* and *Haemogregarina*. **R. si'mus**, the black pitted tick, a species which transmits the *Piroplasma parvum* (*Theileria parva*) of East African Coast fever.

rhizagra (ri-zag'rah) [ῥίζα root + ἄγρα seizure]. An ancient forceps for the roots of teeth.

rhizanesthesia (ri-zan-es-the'ze-ah) [ῥίζα root + ανesthesia]. Nerve root anesthesia; spinal anesthesia; anesthesia produced by injecting a local anesthetic into the cavity of the spinal arachnoid.

Rhizobium (ri-zo'be-um). A genus of bacterial organisms. They are minute, aerobic, motile rods found in nodules on the roots of leguminous plants with which they are symbiotic and without which the plants do not thrive. They are able to "fix" atmospheric nitrogen. **R. radicle'ola**, one of the organisms that cause the formation of root nodules on the leguminous plants.

rhizodontropy (ri-zo-don'tro-pe) [ῥίζα root + ὀδούς tooth + τροπή pivot]. The fixation of an artificial crown upon the natural root of a tooth.

rhizodontropy (ri-zo-don'trip-e) [ῥίζα root + ὀδούς tooth + τρύπη hole]. The perforation of the root of a tooth for the discharge of morbid fluids.

Rhizog'lyphus parasiticus. A mite which lives on the ground in India and causes sore feet.

rhizoid, **rhizoidal** (ri'zoid, ri-zoi'dal) [ῥίζα a root + εἶδος form]. Rootlike; resembling a root.

rhizome (ri-zōm') [L. *rhizoma*; ῥίζωμα root stem]. The subterranean root stock of a plant.

rhizomelic (ri-zo-mel'ik) [ῥίζα root + μέλος limb]. Pertaining to or involving the hip joint and shoulder joint.

Rhizomucor parasiticus. A parasitic mold found in the sputum of a woman with a disorder resembling phthisis.

- rhizoneure** (ri'zo-nūr) [ρίζα root + νεύρον nerve]. A nerve cell which forms a nerve root.
- rhizoplast** (ri'zo-plast) [ρίζα root + πλαστός formed]. The root of the flagellum of a protozoan, extending to the nucleus.
- Rhizopoda** (ri-zop'o-dah) [ρίζα root + πούς foot]. A subdivision of the *Sarcodina*, having lobose or reticulate pseudopodia, and including the amebae.
- Rhizopus** (ri-zo'pus). A genus of the Mucoraceae. *R. nigra* has been found in mycosis of the nose, ear, tongue, and lungs.
- rhizotomist** (ri-zot'o-mist). In Greek medicine, a vagrant gatherer of medicinal herbs and simples.
- rhizotomy** (ri-zot'o-me) [ρίζα root + τομή a cut]. Surgical division of the posterior roots of the spinal nerves for pain or paralysis. Called also *Dana's operation*.
- rhodagen** (ro'da-jen). See *rodagen*.
- rhodallin** (ro-dal'in). Same as *thiosinamin*.
- rhodalzid** (ro-dal'zid). A proprietary albumin-thiocyanate preparation: used for treating caries, gout, arteriosclerosis, etc.
- rhodamine** (ro'dam-in). A dye similar to pyronine, but with a hydroxy-phenyl group attached to the central carbon atom. **R. B.** a tetra-ethyl rhodamine derivative, $(C_2H_5)_2N.C_6H_3OC(C_2H_4.COOH)C_6H_3N(C_2H_5)_2Cl$. **R. S.** a tetra-ethyl succinein, $(C_2H_5)_2N.C_6H_3OC(C_2H_4.COOH)C_6H_3N(C_2H_5)_2Cl$.
- rhodan** (ro'dan). A salt of sulphocyanic acid found in the nasal secretion.
- rhodane** (ro'dan). Sodium thiocyanate: used in the pains of tabes, arteriosclerosis, etc.
- Rhodesian fever** (ro-de'zhan). See under *fever*.
- rhodinol** (ro'din-ol). A compound, $C_{10}H_{18}O$, forming artificial or synthetic oil of rose.
- rhodium** (ro'de-um) [ῥόδιος rosy]. A hard and rare metal of the platinum group; atomic weight, 102.9; symbol, Rh; also its homeopathic trituration.
- Rhodnius prolixus**. A South American bug which is capable of transmitting *Trypanosoma cruzi*.
- Rhodococcus** (ro-do-kok'us) [ῥόδον rose + coccus]. A genus of Coccaceae. They are aerobic, gram-positive, saprophytic, and produce a red pigment. **R. agilis**, highly motile cocci producing a rosy pigment. **R. cinnabaeus**, a species that forms a brick-red pigment. **R. roseus**, non-motile cocci forming rose-colored pigment.
- rhodocyte** (ro'do-sit) [ῥόδον rose + κύτος cell]. A red blood corpuscle.
- rhodogenesis** (ro-do-jen'es-is) [ῥόδον rose + γένεσις production]. The restoration of the purple tint to rhodopsin after it has become bleached by the action of light.
- rhodophane** (ro'do-fan) [ῥόδον rose + φάνος bright]. A red pigment, or chromophane, from the retinal cones of birds and fishes.
- rhodophylactic** (ro'do-fi-lak'tik). Tending to preserve or restore the retinal purple; pertaining to rhodophylaxis.
- rhodophylaxis** (ro'do-fi-lak'sis) [ῥόδον rose + φλάξις defense]. The supposed property of the retinal epithelium of protecting and increasing the power of the retinal purple to regain its color after bleaching.
- rhodopsin** (ro-dop'sin) [ῥόδον rose + ὄψις vision]. The visual purple; the pigment of the outer segment of the retinal rods.
- rhombencephalon** (rom-ben-sef'al-on) [ῥόμβος rhomb + ἐγκέφαλος brain]. The portion of the brain situated below the isthmus: it includes the medulla oblongata and cerebellum.
- rhombo-atloideus** (rom'bo-at-loi'de-us). See *muscles*, table of.
- rhombocoele** (rom'bo-sēl) [ῥόμβος rhomb + κοίλη hollow]. The terminal distention of the canal of the spinal cord.
- rhomboid** (rom'boïd) [ῥόμβος rhomb + εἶδος form]. Shaped like a rhomb, or kite.
- rhomboideus** (rom-boïd'e-us). See under *muscles*, table of.
- rhomnol** (rom'nol). A proprietary nucleic acid derivative of the thymus gland of the calf: used in tuberculosis, diabetes, neurasthenia, etc.
- rhonchal, rhonchial** (rong'kal, rong'ke-al). Pertaining to, or of the nature of, a rhonchus.
- rhonchus** (rong'kus) [L.; ῥόγχος snore]. A rattling in the throat; also a dry, coarse rale in the bronchial tubes, due to a partial obstruction. See *rale*.
- rhotacism** (ro'tas-izm) [ῥωτακίζειν to misuse the letter r]. The incorrect use or overuse of *r* sounds; stammering.
- rhotanium** (ro-ta'ne-um). A gold-palladium alloy said to possess the same physical qualities as platinum.
- rhubarb** (ru'barb) [L. *rhabarbarum* wild rhubarb; ῥᾱ rhubarb]. The purgative and astringent root of *Rheum officinale* (also called rhubarb) and of several other species of the same genus. Rhubarb contains chrysophanic acid, tannic acid, and other principles. It is laxative, cholagogue, astringent, and a gastric tonic, and is used in constipation from intestinal indigestion, diarrhea, and hemorrhoids. Dose of drug (*rheum*) in substance, 2-30 grains (0.133-2 Gm.); of extract, 5-15 grains (0.333-1 Gm.); of fluidextract, 15-45 minims (1-3 cc.); of syrup, also of aromatic syrup, 1-4 fluidrachms (4-16 cc.); of tincture, 1-8 drachms (4-32 cc.); of aromatic tincture, 30-75 minims (2-5 cc.); of sweet tincture (*vincula rhei dulcis*), 1-4 fluidrachms (4-16 cc.); of wine, 1-2 fluidrachms (4-8 cc.); of *mistura rhei et saeae*, 1 drachm to 1 oz. (4-30 cc.); of compound pills (containing also aloe and myrrh), 2 pills; of *pulvis rhei compositus* (Gregory's powder), 20-60 grains (1.33-4 Gm.).
- Rhuphos** (ru'fos). A physician of Ephesus who practised at the beginning of the second century A. D. He wrote numerous works, of which but few have survived.
- Rhus** (rus) [L., gen. *rho'is*]. A genus of anacardiaceous trees and shrubs, many of them poisonous. **R. aromatica**, a shrub of North America, is tonic and stimulant in incontinence of urine and hematuria. Dose of fluidextract of root bark, 5-30 minims (0.3-2 cc.); of solid extract, 1-5 grains (0.066-0.333 Gm.). **R. diversiloba** is poison oak. **R. gla'bra**, sumac, a nonpoisonous species, is astringent and refrigerant, and is used in aphthae and pharyngitis. Dose of fluidextract, 30-60 minims (2-4 cc.). **R. toxicodendron**, or poison ivy, a poisonous species of sumac. The leaves or juice, when applied to the skin, cause a severe dermatitis and internal poisoning: used principally for rheumatism and in homeopathic practice. Dose of fluidextract, $\frac{1}{10}$ -1 minim (0.006-0.066 cc.); of tincture, 1-6 minims (0.066-0.4 cc.). **R. venenata**, swamp sumac, or poison sumac, is poisonous. **R. vernicifera** is the poisonous lacquer plant of Japan and China.
- rhusin** (ru'sin). A powdered concentration prepared from the bark of *Rhus gla'bra*; astringent. Dose, 1-2 grains (0.06-0.13 Gm.).
- rhyostomaturia** (ri'o-sto-mat-u're-ah) [ῥύας fluid + στόμα mouth + οὖρον urine]. The excretion of urinary elements by the salivary glands.
- rhyparia** (ri-pa're-ah) [ῥύπαρις filth]. Sordes; also filth.
- rhypphagy** (ri-pof'aj-e) [ῥύπος filth + φαγείν to eat]. The eating of filth.
- rhypphobia** (ri-po-fō-be-ah) [ῥύπος filth + φόβος fear]. Morbid dread of filth; ruphobia.

rhythm (ríthm) [L. *rhythmus*; *ῥυθμός*]. A measured movement; the recurrence of a motion at regular intervals. **cantering r.**, a heart rhythm resembling the cantering of a horse. It is marked by the occurrence of a third sound between the normal heart sounds. Called also *bruit de galop* and *Traube's murmur*. **circus r.**, circus movement or contraction; a movement travelling in circular fashion around a ring of muscle. **coupled r.**, an abnormal relation between the pulse and heart beat in which every other beat of the heart produces no pulse at the wrist. **gallop r.**, cantering rhythm. **idioventricular r.**, an automatic rhythm developed in the ventricles of the heart in complete heart block. **nodal r.**, heart rhythm initiated by the auriculoventricular node of the heart. **pendulum r.**, alternation in the rhythm of the heart sounds in which the diastolic sound is equal in time, character, and loudness to the systolic sound, the beat of the heart resembling the tick of a watch. It is indicative of commencing weakness of the heart. **reversed r.**, a condition of cardiac rhythm in which the ventricular beat immediately precedes the auricular beat. **sinus r.**, normal heart rhythm originating in the sino-auricular node. **ventricular r.**, the ventricular contractions which occur in cases of complete heart block.

rhythmour (ríth-mer). A device for making rhythmic interruptions of the current in a roentgen-ray machine.

rhythmical (ríth'mík-al). Characterized by rhythm.

rhythmicity (ríth-mis'it-e). A state of rhythmical contraction.

rhythmophone (ríth'mo-fón) [*ῥυθμός* rhythm + *φωνή* voice]. An instrument for magnifying the sounds of the heart beat.

rhythmotherapy (ríth-mo-ther'ap-e) [*ῥυθμός* rhythm + *θεραπεία* treatment]. The use of rhythm in treating disease, as the beating of time in treating stammering.

rhytidectomy (rit-id-ek'to-me) [*ῥυτίς* wrinkle + *ἐκτομή* excision]. Excision of wrinkles; a plastic operation for the removal of wrinkles.

rhytidosis (rit-id-o'sis) [*ῥυτίδωσις*; *ῥυτίς* wrinkle]. A wrinkling of the cornea; one of the signs of approaching death.

rib (ríb) [L. *costa*]. Any one of the twenty-four bones, each of which extends from a vertebra to or toward the sternum. The vertebral extremity of a rib is called the *head*; the contracted part which adjoins it forms the *neck*; at the back of the rib is the *tubercle*; farther outward the bone bends forward, producing the *angle*, from which proceeds the *body*, which passes forward and downward to the sternal extremity. **cervical r.**, a supernumerary rib occurring in the cervical region. **false r's**, the five lower ribs on either side, so called because they are not directly connected with the sternum. **floating r.**, a rib of either of the two lowest pairs, connected only with the vertebrae. **slipping r.**, abnormal mobility of the lower intercostal joint. **Stiller's r.**, a preternaturally movable tenth rib. **true r's**, the seven upper ribs on either side, which are connected with the vertebrae and the sternum. Called also *vertebrosternal r's*. **typhoid r.**, osteomyelitis of a rib occurring as a sequel of typhoid fever. **vertebral r.** Same as *floating r.* **vertebro-costal r's**, the three false ribs connected with the vertebrae and the costal cartilages. **vertebro-sternal r's**. See *true r's*. **Zahn's r's**. See *lines of Zahn*.

Rhytidectomy
(Babcock).

Ribbert's theory (ríb'erts) [Moritz Wilhelm Hugo Ribbert, German pathologist, 1855-1920]. See *theory*.

Ribera's method (re-ba'tahz) [José Ribera y Sans, Spanish surgeon, 1853-1912]. See *method*.

Ribes' ganglion (rēbz) [François Ribes, French surgeon, 1800-1864]. See *ganglion*.

ribose (rí'bōs). An aldo-pentose, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{CHO}$. It is a constituent of some of the nucleic acids and may sometimes be found in the urine.

rice (ríz). The cereal plant, *Oryza sativa*; also its seed or grain. The grain consists mainly of starch, and is used as a food and a dusting powder.

rice body. See *corpus oryzoides*.

rice water stools. See under *cholera*.

Richardson's sign (ríts'h'ard-sunz) [Sir Benjamin Ward Richardson, London physician, 1828-1896]. See *sign*.

Richet's aneurysm (re-shāz) [Didier Dominique Alfred Richet, French surgeon, 1816-1891]. A fusiform aneurysm.

Richet's bandage, fascia (re-shāz') [C. Robert Richet, French physiologist, born 1850]. See *bandage, fascia*.

Richter's hernia (rísh'terz) [August Gottlob Richter, surgeon in Göttingen, 1742-1812]. See *hernia*.

ricin (rí'sin) [L. *ricinus* castor oil plant]. 1. A poisonous principle or phytotoxin from the seed of the castor oil plant, *Ricinus communis*. It resembles the bacterial toxins in that injection into animals causes the production of an antitoxin. 2. A proprietary castor oil preparation.

ricinine (rí'sin-in). A crystallizable alkaloid, $\text{CH}_3\text{O}(\text{CN})\text{C}_5\text{H}_2\text{ON} \cdot \text{CH}_3$, from the seeds of the castor oil plant.

Ricinus (rí'sin-us) [L. "tick"]. A genus of euphorbiaceous plants. The seeds of *R. communis*, or castor oil plant, afford castor oil (*oleum ricini*). See *castor oil*, under *oil*. The leaves of the castor oil plant are galactagogue. Dose of fluidextract, 60 minims (4 cc.). A proprietary purgative fluid-extract of the seeds is also prepared. Dose, 15-60 minims (1-4 cc.).

rickets (rík'ets) [L. *rachi'tis* (q. v.): originally a distinct word, but now assimilated in meaning to the English word]. A constitutional disease of infancy (Glisson, 1650) in which the bones become soft and flexible from retarded ossification, due to deficiency of calcium salts. The disease is marked by bending and distortion of the bones under muscular action, by the formation of nodular enlargements on the ends and sides of the bones, by delayed closure of the fontanel, pain in the muscles, sweating of the head, and degeneration of the liver and spleen. There are often nervous affections, feverishness, convulsions, etc. Cold pressed cod liver oil and sunlight seem to have specific curative properties in rickets. **acute r.**, infantile scurvy. **adult r.**, a disease resembling rickets affecting adults. **fat r.**, a form in which the infant is plump and seems well nourished. **fetal r.** See *achondroplasia*. **hemorrhagic r.**, infantile scurvy. See *scurvy*. **late r.**, adult rickets. **lean r.**, rickets with wasting and progressive emaciation. **renal r.** See *renal infantilism*, under *infantilism*. **scurvy r.**, infantile scurvy. **tardy r.**, a disease of adults somewhat like rickets.

Ricketts' organism (rík'ets) [Howard Taylor Ricketts, American pathologist, 1871-1910]. See *Rickettsia* and *organism*.

Rickettsia (rík-et'se-ah) [Howard Taylor Ricketts]. A group of bacteria-like micro-organisms which are parasitic in the arthropods, highly adapted to their hosts, and are grown with difficulty on artificial media. Some are thought to be pathogenic. **R. corrodentia** is found extracellularly in the stomach of the dust louse (*Psocidae*) and is not known to

- be pathogenic. **R. ctenoceph'ali**, a form found in the celomic fluid of the cat flea (*Ctenocephalus felis*). **R. kai'ro**, a form found in Egypt in lice. Probably not pathogenic. **R. lectula'ria**, a nonpathogenic form resembling *R. prowazeki*, found in the bedbug (*Cimex lectularius*). **R. meloph'agi**, a form found extracellularly in the intestine of the sheep louse or tick (*Melophagus ovinus*). It is not pathogenic and has been cultivated on glucose blood agar. **R. nippon'ica**, an organism which may possibly be the cause of tsutsugamushi disease. **R. pedic'uli**, a general term for the extracellular forms found in lice. **R. prowazek'i** is found in the epithelial cells of the digestive tract of lice which have bitten typhus fever patients. It is regarded as the possible cause of typhus fever. **R. quinta'na**, an organism found extracellularly in the intestine of lice which have bitten trench fever patients and regarded as the possible cause of trench fever. **R. ricket'si**. Same as *Dermacentor exus rickettsi*. **R. ro'cha li'mae**, a form found intracellularly in the intestine of lice. Probably not pathogenic. **R. ru-minan'tium**, the causative organism of heart water disease of sheep. **R. trichodec'tae**, a form found in the louse, *Trichodectes pilosus*. **R. wolhyn'ica**. Same as *R. quinana*.
- rickety** (rik'et-e). Affected with rickets.
- Ricord's chancre** (re-kor'z') [Philippe Ricord, French physician, 1800-1889]. See *chancre*.
- rietal** (rik'tal). Pertaining to a fissure.
- riktus** (rik'tus) [L.]. A fissure or cleft; also a gaping, as of the mouth.
- Riddoch's reflex**. See under *reflex*.
- Rideal-Walker coefficient** (rid'e-al-waw'ker) [Samuel Rideal, English chemist, born 1863; J. F. Ainslie Walker, contemporary English chemist]. See under *coefficient*.
- Ridell's operation** (rid'elz). See under *operation*.
- riders' bone** (ri'derz). See under *bone*. **r. tendon**. See under *tendon*.
- ridge** (rij). A crest or elevated border. **basal r.**, a U-shaped ridge at the base of the posterior surface of the crown of a tooth: called also *cingulum*. **bicipital r's**, the edges of the bicipital groove. **buccocervical r.**, a ridge in the buccal surface of a deciduous molar tooth near the cervix. **buc-cogingival r.**, a ridge on the buccal surface of a deciduous molar tooth. **deltoid r.** Same as *crest, deltoïd*. **dental r's**, the projecting borders of the dental groove. **epicondylar r's**, the two ridges dividing the anterior and posterior faces of the humerus, starting from the condyles. **gastroc-nemial r.**, a ridge on the posterior surface of the femur for the attachment of the gastrocnemius muscles. **gluteal r.**, a ridge on the anterior surface of the femur for the attachment of the gluteus maximus muscle. **interosseous r.**, a ridge along the entire length of the inner surface of the fibula. **linguogingival r.**, a ridge on the lingual surface of the incisor and canine teeth near the gums. **marginal r's**, the ridges on the outer margins of the occlusal surfaces of molars or bicuspid teeth. **mylohyoid r.**, mylohyoid line. See *line*. **oblique r.**, the ridge running obliquely across the occlusal surface of upper molar teeth. **pectoral r.**, the external bicipital ridge. **pronator r.**, the ridge on the anterior surface of the ulna, which marks the extent of the attachment of the pronator quadratus. **pterygoid r.**, a ridge at the angle of junction of the temporal and infratemporal surface of the great wing of the sphenoid bone. **superciliary r.**, **supra-orbital r.**, the prominence of the frontal bone over the supra-orbital arch. **supple-mental r.**, an abnormal ridge on the surface of a tooth. **supracondylar r.** Same as *epicondylar r.* **tentorial r.**, a ridge on the upper inner surface of the cranium to which the tentorium is attached. **transverse r.**, a transverse ridge extending across the occlusal surface of a molar tooth.
- trapezoid r.**, an oblique ridge on the superior surface of the clavicle for the attachment of the trapezoid ligament. **triangular r.**, a ridge on the occlusal surface of a molar tooth from the point of a cusp to the center of the crown. **wolffian r.**, a prominence in the embryo which develops into the wolffian body.
- ridgel, ridgil** (rid'gel, -gil). Ridgling.
- ridgling** (rij'ling). A man or animal with one testicle removed.
- Ridley's sinus** (rid'lez) [Henry Ridley, English anatomist, 1653-1708]. See *sinus*.
- Riedel's disease, lobe** (re'delz) [Bernhard Moritz Carl Ludwig Riedel, surgeon in Jena, 1846-1916]. See under *disease* and *lobe*.
- Rieder's cells** (re'derz) [Hermann Rieder, German pathologist, born 1858]. Polymorphonuclear lymphoidocytes.
- Riegel's pulse, symptom, test-meal** (re'gelz) [Franz Riegel, German physician, 1843-1904]. See *pulse, symptom, and test-meal*.
- Riesman's sign** (res'manz) [David Riesman, contemporary Philadelphia physician]. See under *sign*.
- Riga's disease** (re'gahz) [Antonio Riga, Italian physician]. See under *disease*.
- Rigal's suture** (re-galz') [Joseph Jean Antoine Rigal, French surgeon, 1797-1865]. See *suture*.
- Riggs' disease** (rigz) [John M. Riggs, American dentist, 1810-1885]. See *disease*.
- rigidity** (rij-id'it-e) [L. *rigid'itas*; *rid'idus* stiff]. Stiffness or inflexibility, chiefly that which is abnormal or morbid. **anatomical r.**, rigidity of the cervix uteri in labor, without pathologic condition of the cervix, so that it dilates to only a limited extent, beyond which uterine contractions are of no avail. **cadaveric r.**, rigor mortis. **cerebellar r.**, stiffness of the body and limbs, due to a lesion of the middle lobe of the cerebellum. **clasp-knife r.**, spastic extension of the leg with a motion like that of a clasp-knife. **decere-brate r.**, a condition of marked tonus in the extensor muscles of an animal in which the cere-brum has been cut across, resulting in a rigid state of the body. **hemiplegic r.**, rigidity of the paralyzed limbs in hemiplegia. **pathologic r.**, rigidity of the cervix uteri in labor from some disease. **postmortem r.**, rigor mortis. **spas-modic r.**, rigidity of the cervix uteri due to spasmodic contraction.
- rigor** (ri'gor) [L.]. 1. A chill. 2. Rigidity. **acid r.**, coagulation of the protein of muscle produced by acids. **heat r.**, rigidity of muscles induced by heat. **r. mor'tis**, the rigidity or stiffening which follows after death, due to coagulation of the muscle plasm. **r. nervo'rum**, tetanus. **r. tre'mens**, paralysis agitans. **water r.**, a condition of rigor in a muscle caused by immersing it in water.
- rima** (ri'mah) [L. pl. *ri'mae*]. A crack, chink, or fissure. **r. cornea'lis** [B N A], corneal cleft; the cleft or groove in the scleral margin into which the limbus corneae fits. **r. glot'tidis** [B N A], the opening situated between the vocal folds, the medial borders of the vocal processes and parts of the bases of the arytenoid cartilages. **r. o'ris** [B N A], the opening of the mouth. **r. palpebra-rum** [B N A], the slit between the eyelids. **r. puden'di** [B N A], the space between the labia majora. **r. respira'toria**, the space behind the arytenoid cartilages. **r. vestib'ulae** [B N A], the false glottis. **r. voca'lis**, rima glottidis.
- rimal** (ri'mal). Pertaining to a rima.
- Rimini's test** (rim'in-ez). See under *tests*.
- rimmose** (rim'os) [L. *ri'ma* crack]. Marked by cracks and fissures.
- rimula** (rim'u-lah), pl. *rim'ulae* [L.]. A minute fissure, especially of the cord or brain.
- rind tumor**. See *lepidoma*.

rinderpest (rint'ér-pest) [Ger. *Rinder* cattle + *pest* plague]. The cattle plague. See under *plague*.

Rindersuche (rint'er-soosh-e) [Ger.]. Hemorrhagic septicemia in cattle.

Rindfleisch's cells, folds (rint'flish-ez) [Georg Eduard *Rindfleisch*, German physician, born 1836]. See *cell* and *fold*.

ring (ring) [L. *anulus*]. Any circular or annular organ or area. In chemistry, a collection of atoms arranged in a ring. **Abbe's r's**, catgut rings for supporting the ends of intestine to be stitched together. **abdominal r.**, **external**, an opening in the aponeurosis of the external oblique muscle for the spermatic cord or for the round ligament. **abdominal r.**, **internal**, an aperture in the transverse fascia for the spermatic cord or for the round ligament. **auricular r.**, the ring surrounding the opening between the auricle and ventricle of the primitive vertebrate heart. It is represented in the mammalian heart by the auriculoventricular node. **Bandl's r.**, a ring-shaped thickening of the uterus during labor, just above the internal os, and marking the lower limit of the contractile portion of the uterus. **benzene r.** (Kekulé, 1865), the closed hexagon of carbon atoms in benzene (C₆H₆), from which the different benzene compounds are derived by replacement of the hydrogen atoms. **Brokaw r.**, a ring of rubber tubing threaded with catgut strands and employed in intestinal anastomosis. **bronchial r's**, the cartilaginous rings of the bronchi. **Cabot's r's**. See *Cabot's ring bodies*, under *body*. **Cannon's r.**, a tonic contraction ring often visible in the right half of the transverse colon. **carbocyclic r.** See *carbocyclic*. **ciliary r.**, a ring of tissue in front of the ora serrata, comprising part of the ciliary body, and giving attachment to the ciliary processes and muscle. **conjunctival r.**, a ring at the junction of the cornea with the conjunctiva. **contraction r.** Same as *Bandl's r.* **coronary r.** See *coronary cushion*, under *cushion*. **crural r.** Same as *femoral r.* **Döllinger's r.**, an elastic ring around the circumference of the cornea formed by a thickening of Descemet's membrane. **femoral r.**, the abdominal opening of the femoral canal, normally closed by the crural septum and peritoneum. Called also *crural r.* **glaucomatous r.**, a light yellowish ring around the optic disk in glaucoma, indicating atrophy of the choroid. **heterocyclic r.** See *heterocyclic*. **homocyclic r.**, a chemical ring in which all the members are atoms of the same element. **inguinal r.** Same as *abdominal r.* **isocyclic r.** See *isocyclic*. **Löwe's r.**, a ring in the visual field caused by the macula lutea. **Lower's r's**, the rings of tendon around the four orifices of the heart. **Lusk's r.**, *Bandl's ring*. **lymphoid r.**, the ringlike series of lymphoid tissue formed by the lingual, faucial, and pharyngeal tonsil. **Maxwell's r.**, a ring resembling Löwe's, but smaller and fainter. **mitro-aortic r.**, a band of muscle surrounding both the mitral and aortic orifices of the heart in a single ring. **Müller's r.**, a muscular ring surrounding the junction of the cervical canal and the body of the uterus at an advanced stage of pregnancy. **Newton's r's**, the colored rings seen on the surface of thin, transparent membranes, as soap-bubbles, due to light wave interference. **Ochsner's r.**, a ring of mucous membrane around the opening of the pancreatic duct. **retraction r.** Same as *Bandl's r.* **Schröder's r.**, *Bandl's ring*. **spermatorrheal r.**, a ring worn on the penis to prevent erections. **tympenic r.**, the bony ring forming part of the temporal bone at the time of birth, and developing into the tympanic plate. **umbilical r.**, the aperture in the abdominal wall by which the umbilical cord communicates with the fetus. **Vossius' lenticular r.**, a ring of opacity in the crystalline lens caused by a force which presses the pupillary margin against the lens. **Waldeyer's tonsillar r.**, the ring of

adenoid tissue formed by the lingual, pharyngeal, and faucial tonsils.

ring-bone (ring'bôn). A bonelike callus on the pastern bone of a horse, resulting from inflammation. Frequently it extends into the interphalangeal joints, causing lameness. When the joint is not involved, the condition is sometimes called *false ring-bone*. **low r.** See *buttress foot*, under *foot*.

ring compound. A closed chain compound. See under *chain*.

Ringer's mixture or solution (ring'erz) [Sydney Ringer, English physiologist, 1835-1910]. See *mixture*.

Ringold test. See under *tests*.

ringolin (ring'o-lin). A preparation of cod liver oil, glycerin, balsam of Peru, and zinc oxide: used as a vehicle for skin applications.

ringworm (ring'wurm). A contagious disease of the skin of man and domestic animals marked by the formation of ring-shaped pigmented patches covered with vesicles or scales. The disease is due to either of two parasitic fungi, *Microsporon audouinii* or a variety of *Trichophyton*. See *linea*. **black-dotted r.**, a tropical form caused by *Trichophyton tonsurans*. **r. of the body.** See *linea trichophytina*. **Bowditch Island r.**, *tinea imbricata*. **Burmese r.**, *tinea imbricata*. **Chinese r.**, *tinea imbricata*. **crusted r.**, *favus*. **honeycomb r.**, *favus*. **hypertrophic r.**, *granuloma trichophyticum*. **Indian r.**, *tinea imbricata*. **oriental r.**, *tinea imbricata*, perhaps also *eczema marginatum*. **r. of the scalp.** See *linea tonsurans*. **Tokelau r.**, *tinea imbricata*.

Rinné's test (rin'ez) [Friedrich Heinrich Rinné, German otologist, 1819-1868]. See under *tests*.

riodine (ri'o-din). A proprietary 66 per cent solution in oil of an iodine product of castor oil containing about 17 per cent of iodine. It is used like other fatty iodine compounds. Dose, 6-18 grains (0.4-1.2 Gm.).

Riolan's muscle, nosegay (re-o-lanz') [Jean Riolan, French physician, 1578-1657]. See *muscle*, *nosegay*.

ripa (ri'pah) [L. "bank"]. A line marking the reflection of the ependyma of the ventricles of the brain over a tela or a plexus.

riparian (ri-pa're-an). Pertaining to the ripa; marginal.

Ripault's sign (re-pôz') [Louis Henry Antoin Ripault, French physician, 1807-1856]. See *sign*.

risiccol (ris'ik-ol). A proprietary powder containing 50 per cent castor oil, 49 per cent magnesia usta, and 1 per cent flavoring material.

Risley's prism (riz'léz) [Samuel D. Risley, ophthalmologist in Philadelphia, 1845-1920]. See under *prism*.

risorius (ri-so're-us) [L.]. See *muscles*, table of.

ristin (ris'tin). Ethyleneglycol monobenzoate: used in scabies.

risus (ri'sus). Latin for *laughter*. **r. cani'nus**, **r. sardon'icus**, a grinning expression produced by spasm of the facial muscles.

Ritter's disease (rit'erz) [Gottfried Ritter von Rittersheim, German physician, 1820-1883]. 1. Dermatitis exfoliativa infantum. 2. Winckle's disease.

Ritter's law, tetanus (rit'erz) [Johann Wilhelm Ritter, German physicist, 1776-1810]. See *law* and *tetanus*.

Ritter-Rollet phenomenon (rit'er-ro-lä') [Johann Wilhelm Ritter, German physicist, 1776-1810; see *Rollet*]. See under *phenomenon*.

rivalry, retinal (ri'val-re). The apparent alternate displacement of two figures by each other when viewed together, one by each eye.

Rivalta's disease, reaction (re-val'tahz) [Sebastiano Rivalta, contemporary Italian veterinarian]. See *disease* and *reaction*.

- rivanol** (ri'van-ol). A chemical disinfectant, 2-ethoxy-6, 9-diamino-acridinium hydrochloride, $\text{NH}_2\text{C}_6\text{H}_3(\text{N})\text{C}(\text{NH}_2)\text{C}_6\text{H}_3\text{O}\cdot\text{C}_2\text{H}_5$. It is used in the treatment of wounds infected with and of cellulitis caused by streptococci. Its disinfectant activity is increased by the presence of blood serum.
- Riva-Rocci sphygmomanometer** (re-vah-ro'c-tshe) [Scipione *Riva-Rocci*, contemporary Italian physician]. See *sphygmomanometer*.
- Riverius' potion** (re-ve're-us). See *Rivière's potion*, under *potion*.
- Rivière's potion** (re-ve-airz') [Lazare *Rivière*, French physician, 1589-1655]. See under *potion*.
- Rivière's sign** (riv-èrz') [Clive *Rivière*, British physician, 1873-1920]. See under *sign*.
- Rivini, ducts of** (re-ve'ne) [August Quirinus *Rivinus*, anatomist in Leipsig, 1652-1723]. See under *duct*.
- rivulose** (riv'u-lôs) [L. *ri'vus* brook]. Marked by wavy lines: said of bacterial colonies.
- ri'vus lacrima'lis**. Same as *lacus lacrimalis*.
- rixolin** (riks'o-lin). A mixture of oil of camphor and light petroleum.
- riziform** (riz'if-orm). Resembling grains of rice.
- R. M. A.** An abbreviation for *right mento-anterior* position of the fetus.
- R. M. P.** An abbreviation for *right mento-posterior* position of the fetus.
- R. N.** Abbreviation for *Registered Nurse*. See under *nurse*.
- R. O. A.** An abbreviation for *right occipilo-anterior* position of the fetus.
- roach** (rôtsh). See *Blatta*.
- roaring** (rôr'ing). A condition in the horse marked by a rough sound on inspiration and sometimes on expiration. It is due to some obstruction in the respiratory tract or to paralysis of the vocal cords.
- rob** (rob). A jelly, confection, or thick syrup, as of mulberries: sometimes variously medicated.
- elderberry r.**, a purgative extract prepared from the fruit of *Sambucus ni'gra* and *S. c'ulus*, elder shrubs of Europe.
- Robert's pelvis** (rob-airz') [Cesar Alphonse *Robert*, French surgeon, 1801-1862]. See *pelvis*.
- Roberts' test** (rob'erts) [Sir William *Roberts*, English physician, 1830-1899]. See under *tests*.
- Robertson's pupil** (rob'ert-sunz). See *Argyll Robertson* and *pupil*.
- robin** (ro'bin). A phytotoxin from the bark of *Robin'ia pseudaca'cia*, a locust tree of North America.
- Robin's myeloplax** (ro-baz') [Charles Philippe *Robin*, French anatomist, 1821-1885]. The osteoclasts.
- robinol** (ro'bin-ol). A proprietary preparation of glycerophosphates.
- Robinson's circle** (rob'in-sonz) [Fred Byron *Robinson*, American anatomist, 1857-1910]. See under *circle*.
- Robinson's disease** (rob'in-sonz) [Andrew R. *Robinson*, dermatologist in New York, 1845-1924]. See *disease*.
- Robiquet's paste** (rob-e-kaz') [Pierre Jean *Robiquet*, French physician, 1780-1840]. See *paste*.
- robboline** (rob'o-lin). A proprietary preparation of quinine, strychnine, phosphoric acid, tea, and wild cherry.
- roborant** (rob'o-rant) [L. *rob'orans* strengthening]. 1. Conferring strength; strengthening. 2. A proprietary nutrient preparation.
- roborin** (ro'bor-in) [L. *ro'bor* strength]. A proprietary tonic prepared from beef blood.
- Rochelle salt** (ro-shel'). Potassium and sodium tartrate, $\text{KOOC}(\text{CHOH})_2\text{COONa}$.
- rod** (rod). A straight, slim piece of matter: specifically, one of the rodlike bodies of the retina. **r. bipolar**, bipolar nerve cells of the inner muscular layer of the retina which are specially connected with the rod visual cells. The bipolar cells connected with the cone element are called *cone bipolars*. **Corti's r's**, rodlike bodies in a double row which form the arches of Corti. **r. ellipsoid**, the outer longitudinally striated portion of the inner rod section. Sometimes called *lenticular body*. **enamel r's**, the parallel hexagonal prisms forming the enamel of teeth. **r. epithelium**, epithelium the cells of which exhibit a peculiar rodlike striation. **r. fibers**, the attenuated fiberlike bodies of the rod visual cells which unite the nuclei of the latter, within the outer nuclear layer of the retina, with the retinal rods. **germinal r.**, a sporozoite. **r. granules**. See under *granule*. **r's of Heidenhain**, the rodlike cells of the renal tubules. **König's r's**, a series of steel bars each of which gives a note of certain pitch when struck. **Maddox r's**, a set of parallel cylindrical glass rods used in testing for heterophoria. **Reichmann's r.**, a short ivory rod with circular grooves and intervening projections, like the handle of an ivory knitting needle. It is used in auscultatory percussion of the stomach. The rod is firmly pushed down over the stomach at a right angle to its surface, and is gently stroked with the fingers. The stethoscope is applied over the organ and the pitch observed. When the rod passes beyond the limits of the stomach, a change in pitch occurs. **retinal r's**, highly specialized cylindrical neuro-epithelial cells containing rhodopsin; with the visual cones they form one of the layers of the retina. **r. segments**. See under *segment*.
- rodagen** (ro'daj-en). A preparation of the milk of goats from which the thyroids have been removed: used in exophthalmic goiter.
- rodent ulcer** (ro'dent). See *ulcer*.
- Rodman's operation** (rod'manz) [William L. *Rodman*, Philadelphia surgeon, 1854-1916]. See *operation*.
- rodalgia** (ro-do-nal'je-ah) [ῥόδον rose + ἄλγος pain]. Erythromelalgia.
- Roederer's ecchymoses, obliquity** (ra'der-erz) [Johann Georg *Roederer*, German obstetrician, 1727-1763]. See *ecchymosis* and *obliquity*.
- roentgen** (rent'gen). The international unit of roentgen radiation. It is the quantity of radiation which, when the secondary electrons are fully utilized and the wall effect of the chamber is avoided, produces in 1 cc. of atmospheric air at 0 C. and 75 cms. of mercury pressure, such a degree of conductivity that one electrostatic unit of charge is measured at saturation current.
- roentgen rays** (rent'gen) [Wilhelm Konrad von *Roentgen*, German physicist, 1845-1923]. See under *ray*.
- roentgenism** (rent'gen-izm). 1. The therapeutic application of roentgen rays. 2. The ill effect of the roentgen rays; disease induced by misuse of roentgen rays.
- roentgenization** (rent-gen-iz-a'shun). Exposure or subjection to the action of roentgen rays.
- roentgenize** (rent'gen-iz). To apply the roentgen rays.
- roentgenkater** (rent''gen-kah'ter) [Ger.]. See *roentgen intoxication*, under *intoxication*.
- roentgenocardiogram** (rent''gen-o-kar'de-o-gram). A polygraphic tracing of cardiac pulsation made by the roentgen rays.
- roentgenogram** (rent-gen'o-gram). A roentgen-ray photograph.
- roentgenograph** (rent'gen-o-graf). 1. A roentgen-ray photograph. 2. To make a roentgen-ray photograph.
- roentgenography** (rent-gen-og'raf-e). Photography by the roentgen rays.
- roentgenologist** (rent-gen-ol'o-jist). A physician who devotes himself to diagnosis and treatment by the roentgen rays.

- roentgenology** (rent-gen-ol'o-je) [roentgen rays + λόγος treatise]. The study of the roentgen rays.
- roentgenometer** (rent-gen-om'et-er). A skiometer.
- roentgenometry** (rent-gen-om'et-re). Measurement of the penetrating or therapeutical power of the roentgen rays.
- roentgenoscope** (rent-gen'o-sköp). A fluoroscope; an apparatus for examining the body by means of the fluorescent screen excited by the roentgen rays.
- roentgenoscopy** (rent-gen-os'ko-pe) [roentgen rays + σκοπεῖν to view]. Examination by means of roentgen rays; fluoroscopy.
- roentgenotherapy** (rent-gen-o-ther'ap-e) [roentgen rays + θεραπεία treatment]. Therapeutical use of the roentgen rays.
- roentgram, roentogram** (rent'gram, rent'o-gram). A roentgen-ray photograph.
- roentgraphy** (ren-to'g-ra-fe). The making of roentgenograms; roentgenography.
- roeteln, roetheln** (ret'eln). See *röteln*.
- Roffo's test** (rof'öz). See under *tests*.
- Roger's bacillus** (ro-zhāz') [C. A. Roger, French physician, born 1860]. See *bacillus*.
- Roger's disease, reaction, symptom** (ro-zhāz') [Henri Louis Roger, French physician, 1811-1892]. See *disease, reaction, symptom*.
- Roger-Josué test** (ro-zha-zho-zu-a') [H. L. Roger and Otto Josué, French physician, born 1860]. See *blister test, under tests*.
- Rogers' sphygmomanometer** (roj'erz) [Oscar H. Rogers, physician in New York, born 1857]. See *sphygmomanometer*.
- roka** (ro'kah). A tree of Arabia and Africa, *Trichilia emel'ica*: it affords various remedial products.
- Rokitansky's disease, tumor**, etc. (ro-kit-an'-skéz) [Karl Freiherr von Rokitansky, pathologist in Vienna, 1804-1878]. See *disease, tumor, etc.*
- rolandic** (ro-lan'dik). Described by or named in honor of Luigi Rolando, Italian anatomist, 1773-1831, as the rolandic area, *convolution, fissure*, etc. See under *area, convolution, fissure, etc.*
- rolandometer** (ro-lan-dom'et-er). An instrument for determining the positions of the various fissures of the surface of the brain.
- roll culture** (röl kult'ür). See under *culture*.
- roll, iliac**. A mass shaped like a sausage, located in the left iliac fossa and produced by induration of the walls of the sigmoid fossa. Called also *sigmoid sausage*.
- roller** (röl'er). A cylinder of cotton, linen, or flannel rolled up for surgeons' or dressers' use. **massage r.**, a proprietary apparatus for use in electric massage.
- Roller's central nucleus** (röl'lerz) [Christian Friedrich Wilhelm Roller, German neurologist, 1802-1878]. See under *nucleus*.
- Rolleston's rule** (röl'es-tonz) [Sir Humphrey Rolleston, contemporary London physician]. See under *rule*.
- Rollet's chancre** (rol-yāz') [Joseph Rollet, French physician, 1824-1894]. Mixed chancre.
- Rollet's stroma** (röl'ets) [Alexander Rollet, Austrian physiologist, 1834-1903]. See *stroma*.
- Rollier's treatment** (rol-yāz') [A. Rollier, Swiss physician]. See under *treatment*.
- romanopexy** (ro-man'o-pek-se) [L. *roma-num* the sigmoid + πῆξιν fixation]. Sigmoidopexy.
- romanoscope** (ro-man'o-sköp). A speculum for examining the sigmoid flexure.
- Romanovsky's method or stain** (ro-man-of'-skéz) [Dimitri Leonidov Romanovsky, Russian physician, born 1861]. See under *stain*.
- Romberg's disease, sign** (rom'bergz) [Mortiz H. Römberg, physician in Berlin, 1795-1873]. See *disease and sign*.
- Rombergism** (rom'berg-izm). Romberg's sign.
- Römer's experiment, serum** (re'merz) [Paul Römer, professor in Greifswald, 1876-1916]. See *experiment and serum*.
- Rommelaere's sign** (rom-el-a-erz') [Guillaume Rommelaere, Belgian physician, born 1836]. See under *sign*.
- rongeur** (raw-zhär') [Fr.]. A form of gouge forceps or nippers.
- röntgraphy**, etc. See *roentgraphy*, etc.
- roof** (roof). See *legmen*.
- root** (root) [L. *radix*]. 1. The descending axis of a plant or any one of its branches. 2. That portion of an organ (such as a hair or nail) that is buried in the tissues. 3. A nerve root; the part of a nerve adjacent to the center with which it is connected; in spinal and cranial nerves, the part of the nerve between the cells of origin or termination and the ganglion. **American spikenard r.**, *Aralia*. **angelica r.**, *angelica*. **anterior r.**, one of two masses of nerve fibers given off from the spinal cord and uniting to form a spinal nerve composed of motor fibers. Called also *motor r.* **beth r.**, *Trillium*. **blood r.**, *sanguinaria*. **burdock r.**, *Lappa*. **r. canal**, the socket of the root of a tooth; a part of an alveolus. **canker r.**, *Coptis*. **r. cells**, cells of the nerve roots. **cowslip r.**, *primulin*. **Culver's r.**, *leptandra*. **deadly nightshade r.**, *belladonna*. **dorsal r.** See *posterior r.* **East India r.**, *Galangal*. **facial r.**, the root of the facial nerve, consisting of fibers from the nucleus of the facial to the facial colliculus and thence to the ventral surface of the lower portion of the pons. **inkberry r.**, *Phytolacca*. **kuth r.** See *Saussurea lappa*. **lady slipper r.**, *Cypripedium*. **life r.**, *Senecio*. **lily of the valley r.**, *Convallaria*. **liquorice r.**, *Glycyrrhiza*. **motor r.** See *anterior r.* **mouth r.**, *Coptis*. **musk r.**, *sumbul*. **nerve r.**, a bundle of nerve fibers given off from the spinal cord which joins with another similar bundle to form a spinal nerve. **olfactory r.** See *olfactory stria*, under *stria*. **orange r.**, *Hydrastis*. **Oregon grape r.**, *Berberis*. **orris r.** See *Florentine iris*, under *iris*. **papoose r.**, *caulophyllum*. **pellitory r.**, *pyrethrum*. **pink r.**, *Spigelia*. **pleurisy r.**, *asclepias*. **poke r.**, *Phytolacca*. **posterior r.**, a nerve root containing sensory fibers. **queen's r.**, *Stillingia*. **spignet r.**, *Aralia*. **squaw r.**, *caulophyllum*. **stump r.**, *Plasmodiophora*. **unicorn r.**, *aletris*. **ventral r.** Same as *anterior r.* **wild yam r.**, *yam r.*, *Dioscora*. **yellow jasmin r.**, *Gelsemium*. **r. zone**. See *zone*.
- rootstock**. See *rhizome*.
- R. O. P.** An abbreviation for *right occipitoposterior* position of the fetus.
- ropy** (ro'pe). Sticky and stringy.
- rosa** (ro'zah). Latin for *rose*. **r. gal'lica**. See under *rose*.
- rosacea** (ro-za'se-ah). See *acne rosacea*. **r. hypertrophica**, *pachydermatosis*.
- rosaniline** (ro-zan'il-in). A basic dye, triamino-tolylidiphenylmethane chloride or monomethyl fuchsin, $\text{CH}_3(\text{NH}_2)\text{C}_6\text{H}_4\text{C}(\text{C}_6\text{H}_4\text{NH}_2)\text{C}_6\text{H}_4\text{NH}_2\text{Cl}$. It can be used in place of fuchsin in Endo medium and as a stain. **r. acetate**, a substance used as a red dye. **r. hydrochloride**, fuchsin. **r. trisulphonic acid**, acid fuchsin.
- rosary, rachit'ic** (ro'za-re). The row of beadlike nodules which appear on the ribs at their junction with the cartilages in rickets.
- rose** (röz) [L. *ro'sa*]. Any plant or species of the genus *Ro'sa*. The petals of *pale r.* (*Ro'sa centifolia*) are used in making rose water and cold cream (*unguentum aquae ro'sae*). The petals of *red r.* (*Ro'sa gal'lica*) are used in making *confect'io ro'sae*, *mel ro'sae*, *extractum ro'sae flu'idum*, and *syru'pus ro'sae*. The flowers of *Ro'sa damasce'na* afford the oil of *r.*, or attar of roses (*oleum ro'sae*). **r. cold**, hay-fever coming on at the time of the blooming

- of roses, and attributed to the inhalation of rose pollen. **bengal r.**, a dye, the dichlor- or the tetrachlorerythrosin, $\text{NaO} \cdot (\text{C}_6\text{H}_4\text{O})_2\text{C} \cdot \text{C}_6\text{H}_3\text{Cl}_2 \cdot \text{COONa}$. **damask r.**, the *Rosa damascena*; its flowers afford the oil or attar of roses (*o'leum ro'sae*). **dog r.** (*Rosa canina*) produces a fruit or hip used in pharmacy. **pale r.**, the flowers of *Rosa centifolia*, whose petals are used in preparing rose water and cold cream. **red r.**, the flowers of *Rosa gallica*; from the petals the confection of roses is prepared. The fluidextract is a mild astringent. Dose, $\frac{1}{2}$ –2 fluidrachms (2–8 cc.); of syrup, 1–2 fluidrachms (4–8 cc.).
- Rose's position** (ro'zez) [Frank Atcherly Rose, British surgeon]. See under *position*.
- Rose's position, tetanus** (ro'zez) [Edmund Rose, physician in Berlin, 1836–1903]. See *position* and *tetanus*.
- Rose's test** (ro'zez) [Joseph Constantine Rose, German physician, 1826–1893]. See under *tests*.
- rosein** (ro'ze-in). Fuchsin.
- rosemary** (rōz'ma-re). See *Rosmarinus*. **marsh r.**, the plant *Statice limonium*; a strong astringent.
- Rosenbach's disease, law, sign, test** (ro'zen-bahks) [Ottomar Rosenbach, physician in Berlin, 1851–1907]. See under *disease, law, sign, tests*.
- Rosenbach's streptothrix, tuberculin** (ro'zen-bahks) [F. J. R. Rosenbach, German physician, 1843–1923]. See *streptothrix, tuberculin*.
- Rosenberger's stain** (ro'zen-ber-gerz) [Randal Rosenberger, Philadelphia bacteriologist]. See under *stains, table of*.
- Rosenheim's enema** (ro'zen-himz) [Theodor Rosenheim, contemporary German physician]. See *enema*.
- Rosenmüller's body, organ** (ro'zen-me-lerz) [Johann Christian Rosenmüller, anatomist in Leipzig, 1771–1820]. See *body, organ*.
- Rosenow's serum** (ro'zen-owz) [Edward Carl Rosenow, American bacteriologist, born 1875]. See under *serum*.
- Rosenthal's canal** (ro'zen-tahlz) [Isidor Rosenthal, German physiologist, born 1836]. See *canal*.
- Rosenthal's test** (ro'zen-talz) [S. M. Rosenthal, American physician]. See under *tests*.
- Rosenthal's vein** (ro'zen-tahlz) [Friedrich Christian Rosenthal, anatomist in Greifswald, 1780–1829]. See *vein*.
- roseola** (ro-ze'o-lah) [L.]. Any rose-colored rash; specifically, *epidemic r.*, or *rubeola*. **r. choleraica**, an eruption sometimes seen in cholera. **epidemic r.** Same as *rubeola*. **r. febrilis**, a nonpathognomonic erythema occurring in simple and malarial fevers. **idiopathic r.**, roseola occurring independently of any other disease. **r. infantilis**, the rose rash of infants, chiefly occurring in infantile febrile conditions. **symptomatic r.**, roseola occurring as a symptom of some eruptive fever. **syphilitic r.**, an eruption of rose-colored spots in early secondary syphilis. Called also *syphilitic exanthem* and *macular syphilid*. **r. typhosa**, the eruption of typhoid or typhus fever. **r. vaccinia**, a rash sometimes occurring after vaccination.
- roseolus** (ro-ze'o-lus). Of the nature of a roseola, or rash.
- Roser's sign** (ro'zerz) [Wilhelm Roser, German surgeon, 1817–1888]. See under *sign*.
- roset, rosette** (ro'zet). Same as *spirem*. **r. of Golgi**. Same as *sporocyst*.
- rosin** (ro'zin) [L. *resina*]. Colophony; the resinous substance that remains after the distillation of the oil of turpentine from the fresh pitch of pine wood. It is chiefly abietic acid anhydride, $\text{C}_{44}\text{H}_{68}\text{O}_4$. It is used as an adhesive and stimulant addition to plasters.
- rosinol** (ros'in-ol). Retinol.
- Rosmarinus** (ros-mar-i'nus) [L. "sea-dew"]. A genus of labiate plants. **R. officinalis**, or common rosemary, affords the fragrant volatile oil of rosemary. Dose of oil, 1–2 minims (0.066–0.13 cc.); of spirit (*spir'itus rosmari'ni*), 1–2 fluidrachms (4–8 cc.).
- rosolic acid** (ro-zol'ik). See *acid*.
- Ross' bodies** (ros'ez) [Edward Halford Ross, contemporary English pathologist]. See under *body*.
- Ross' test** (ros'ez) [Hugh Campbell Ross, English pathologist, 1875–1926]. See under *tests*.
- Rossbach's disease** (ros'bahks) [Michael Joseph Rossbach, German physician, 1842–1899]. Gastrocnemius.
- Rossel's test** (ros-elz') [Otto Rossel, contemporary Swiss physician]. See under *tests*.
- Rossiella** (ros-e-el'ah). A genus of piroplasma-like organisms parasitic in the blood of certain animals. **R. rossi** is found in the jackal in British East Africa.
- Rossolimo's reflex** (ros-o-le'mōz) [Serge Rossolimo, Russian neurologist, died 1928]. See under *reflex*.
- rostellum** (ros-tel'um), pl. *rostel'la* [L. "little beak"]. A small beak or hooklike process; especially the hook-bearing part of the head of an endoparasitic worm.
- rostral** (ros'tral) [L. *rostra'lis*, from *ros'trum* beak]. 1. Pertaining to or resembling a rostrum; having a rostrum or beak. 2. Directed toward the front end of the body; opposed to *caudal*.
- rostrate** (ros'trāt) [L. *rostratus* beaked]. Having a beaklike process.
- rostriform** (ros'trif-orm) [L. *ros'trum* beak + *for'ma* form]. Shaped like a beak.
- rostrum** (ros'trum), pl. *ros'trums* or *ros'tra* [L. "beak"]. A beaklike appendage or part. **r. cor'poris callo'si** [B N A], the anterior and lower end of the corpus callosum. **r. sphenoidale** [B N A], the beak of the sphenoid bone; the part which articulates with the vomer.
- rot** (rot). 1. Decay. 2. A disease of sheep, and sometimes of man, caused by *Dis'oma hepaticum*. **drosera r.**, inherited phthisis of young children, said by some homeopaths to be curable by drosera. **foot-r. of cattle**, a form of necrosis of the foot in cattle caused by infection with the *Bacillus necrophorus*. **foot-r. of sheep**, a disease of the feet of sheep, marked by decay of the hoof and an offensive discharge; thought to be due to soft, wet pastures. **grinders' r.** See *grinders' phthisis*, under *phthisis*. **liver r.**, a disease of sheep caused by the liver fluke, *Fasciola hepatica*. **potters' r.** See *potters' phthisis*, under *phthisis*.
- rotary, rotatory** (ro'ta-re, ro'ta-to-re). Marked by or produced by rotation.
- rotate** (ro'tāt). To turn around; to twist.
- rotation** (ro'ta-shun) [L. *ro'tatio*, *ro'tare* to turn]. The process of turning around an axis; movement of a body about its axis, called the *axis of r.* In dentistry, the rotation of a malturned tooth in its central axis into a normal position; also malposition of a tooth due to turning around a longitudinal axis. **r. joint**, a lateral ginglymus. **specific r.**, the arc through which a substance rotates the plane of polarization.
- rotator** (ro'ta'tor). A muscle which revolves a part on its axis.
- rotatores spinae**. See *muscles, table of*.
- Rotch's sign** [Thomas Morgan Rotch, physician in Boston, 1848–1914]. See *sign*.
- röteln** (ret'eln). Same as *rubella*.
- rotexed** (ro'text). Rotated and bent to one side.
- rotexion** (ro-tex'yon). The act of rotating and flexing.
- Roth's vas aberrans** (rōts) [Moritz Roth, Swiss physician, 1839–1914]. See *vas aberrans*.

Roth-Bernhardt disease (rôt-bern'hart) [Vladimir K. Roth, Russian neurologist, born 1848; Martin Bernhardt, neurologist in Berlin, born 1844]. See *disease*.

rötheln (ret'eln) [Ger.]. Same as *rubella*.

rotlauf (rot'lauf) [Ger.]. Swine erysipelas. See under *erysipelas*.

rotterin (rot'er-in) [L. *rotteri'num*]. A disinfectant mixture of citric acid and thymol, of each, $1\frac{1}{2}$ grains; salicylic acid, 10 grains; boric acid, 45 grains; zinc phenolsulphonate and zinc chloride, of each 75 grains; to be dissolved in 4 quarts of water.

Rottlera (rot'ler-ah). See *Kamala*.

rottlerin (rot'ler-in). A yellowish, crystalline coloring matter, $(C_{11}H_{10}O_3)_8$, from kamala. Called also *mallotoxin*.

rotula (rot'u-lah) [L. dim. of *ro'ta* wheel]. 1. The patella. 2. Any disklike bony process. 3. A troche or lozenge.

rotulad (rot'u-lad). Toward the patella, or the patellar aspect.

rotular (rot'u-lar). Pertaining to the patella.

rotz (rôts) [Ger.]. Glanders in horses.

rouget du porc (roo-zha' du pork') [Fr.]. Same as *swine erysipelas*.

Rouget's bulb, cells (roo-zhâz') [Antoine D. Rouget, French physiologist]. See *bulb* and *cell*.

Rougnon-Heberden disease (roon-yaw') [Nicholas François Rougnon, French physician, 1727-1799; William Heberden]. Angina pectoris.

rouleau (roo-lo'), pl. *rouleaux* [Fr. "roll"]. A roll of red blood corpuscles.

round ligament (rownd). See *ligament*. **round-worm**. See *Ascaris*.

roup (roop). An infectious respiratory disease of poultry, marked by formation of a grayish-yellow exudate on the respiratory mucous surfaces; sometimes called *avian diphtheria* and *swelled head*.

Rous' sarcoma [Francis Peyton Rous, American physician, born 1879]. See under *sarcoma*.

Roussel's serum, sign, etc. (roo-selz') [Theophile Roussel, French physician, 1816-1903]. See *serum*, *sign*, etc.

routinism (roo-tên'izm). Extreme medical conservatism: the use of an unvarying course in the treatment of disease.

Roux's operation (rooz) [Philibert Joseph Roux, Paris surgeon, 1780-1854]. See *serum*.

Roux's serum, spatula, stain (rooz) [Pierre Paul Emile Roux, French bacteriologist, born 1853]. See *serum*, *spatula*, and *stain*.

Rovsing's sign (rov'sings) [Thorikild Rousing, surgeon in Copenhagen, 1862-1927]. See *sign*.

Rowntree and Geraghty's test (roun'tree; ger'-ah-te) [Leonard George Rowntree, American physician, born 1883; John T. Geraghty, Baltimore physician, 1876-1924]. The phenolsulphonphthalein test. See *phenolsulphonphthalein*.

R. Q. Abbreviation for *respiratory quotient*.

R. R. Abbreviation for *Riva-Rocci sphygmomanometer*.

R. S. A. An abbreviation for *right sacro-anterior* position of the fetus.

R. S. B. Abbreviation for *Regimental Stretcher Bearer*.

R. S. P. An abbreviation for *right sacroposterior* position of the fetus.

R. T. Abbreviation for *reading test*.

Ru. Symbol for *ruthenium*.

rubber-dam (rub'er-dam). A sheet of India rubber used by dentists in mouth work.

rubber tissue (rub'er tish'u). Gutta-percha in sheets: used in surgery.

rubedo (ru-be'do) [L.]. Blushing or other redness of the skin.

rubefacient (ru-be-fa'shent) [L. *ru'ber* red + *fa'cere*

to make]. 1. Reddening the skin. 2. An agent that reddens the skin.

rubella (ru-bel'ah). 1. Epidemic roseola; röteln, or German measles; an acute exanthematous febrile disease not unlike measles. After an incubation period of from one to three weeks the disease begins with slight fever and catarrhal symptoms, sore throat, pains in the limbs, and the appearance of an eruption of red papules similar to those of measles, but lighter in color, not arranged in crescentic masses, and disappearing without desquamation within a week. See *exanthemas*, table of. 2. Measles. **r. scarlatino'sa**. Same as *fourth disease*. See under *disease*.

rubeola (ru-be-o'lah) [L. *ru'ber* red]. 1. Measles. 2. Rubella. **r. scarlatino'sa**. See *fourth disease*, under *disease*.

rubeco'sis (ru-be-o'sis). Redness. **r. i'ridis diabética**, a redness of the eyeball seen in diabetes and due to capillary changes.

ruber (ru'ber). Latin for *red*; the red nucleus.

rubescens (ru-bes'ent) [L. *rubes'cere* to become red]. Reddish; becoming red.

Rubia (ru-be'ah) [L.]. See *madder*.

rubidol (ru-bid'e-ol). A solution in oil of rubidium and potassium mercuric iodide: used externally as a resolvent.

rubidium (ru-bid'e-um) [L. *ru'bidus* red]. A rare metallic alkaline element; atomic weight, 85.45; symbol, Rb. **r. and ammonium bromide**, a substance, $RbBr + 3NH_4Br$: used like potassium bromide. Dose, 20-30 grains (1.333-2 Gm.). **r. bromide**, a binary compound, $RbBr$: used like potassium bromide. Dose, 5-60 grains (0.333-4 Gm.). **r. chloride**, a substance, $RbCl$: said to increase the arterial tension. Dose, 2-5 grains (0.133-0.333 Gm.). **r. iodide**, a binary compound, RbI , partly soluble in water: valued in treating diseases of the eye, pharynx, and skin. Dose, 4-8 grains (0.25-0.5 Gm.). **r. tartrate**, a salt, $RbC_4H_4O_6$: used in cardiac neuroses. Dose, 3-5 grains (0.18-0.333 Gm.).

rusty, rubiginous, rubiginose (ru-bij'in-us, ru-bij'in-ös) [L. *ru'bi'go* rust]. Having a rusty, brownish color: said of sputum.

rubigo (ru-bi'go). Latin for *rust*.

rubijervine (ru-bij'er'vin). A crystalline alkaloid, $C_{26}H_{43}NO_3 \cdot H_2O$, from white hellebore.

rubin (ru'bin). Same as *fuchsin*.

Rubin's test (ru'binz) [I. C. Rubin, contemporary New York physician]. See under *tests*.

Rubinate water (ru'bin-at). See under *water*.

Rubner's test (roob'nerz) [Max Rubner, physiologist in Berlin, born 1854]. See under *tests*.

rubor (ru'bor) [L. "redness"]. Redness due to inflammation.

rubrescine (ru-bres'er-in). A crystalline alkaloid, $C_{13}H_{16}N_2O_2$, formed by the oxidation of eseroline.

rubric (ru'bric). Red; specifically, pertaining to the red nucleus.

rubrol (ru'bröl). A proprietary remedy for gonorrhea, used by injection.

rubrospinal (ru-bro-spi'nal). Pertaining to the red nucleus and the spinal cord.

Rubus (ru'bus) [L.]. A genus of rosaceous plants, including the blackberries, raspberries, brambles, dewberries, and cloudbberries. The root barks of *R. canadensis*, *trivialis*, and *villo'sus*, species of blackberry, are tonic and astringent, and used in diarrhea. Dose of fluidextract and of syrup, 10-60 minims (0.666-4 cc.). The fruits of *R. idae'us* and *R. strigo'sus*, red raspberries, are used in pharmacy.

rubyl (ru'bil). Quinine bismuth iodide in 10 per cent oily suspension. Intramuscular dose in the treatment of syphilis, 3 cc., equivalent to 0.30 Gm. of the drug.

Ruck's tuberculin [Karl von Ruck, American physician, 1849-1922]. See *tuberculin*.

ructus (ruk'tus) [L.]. The belching of wind; eructation.

Rudbeckia (rud-bek'e-ah) [after O. *Rudbeck*, 1630-1702, and O. *Rudbeck*, Jr., 1660-1740]. A genus of composite-flowered herbs of North America. The cone flower, *R. laciniata*, thimble weed, is a diuretic and tonic. Dose of fluidextract, 15-60 minims (1-4 cc.). *R. hirta*, a composite-flowered plant of North America; also its homeopathic preparation.

rudiment (ru'dim-ent). 1. An organ or part having little or no function but which has functioned at an earlier stage of the same individual or in his ancestors. 2. An organ or part at an early stage of development.

rudimentary (ru-dim-en'ta-re). Imperfectly developed.

rudimentum (ru-dim-en'tum) [L.]. A rudiment. **r. procesus vaginalis** [BNA], a band of connective tissue in the spermatic cord which is the vestige of the processus vaginalis.

rue (roo) [L. *Ruta*]. The rutaceous herb, *Ruta graveolens*. The volatile oil (*o'leum ruta'e*) from the leaves is an irritant poison, and is used as an abortifacient and emmenagogue. Dose of fluidextract, 15-30 minims (1-2 cc.); of oil, 1-5 minims (0.066-0.333 cc.). **goat's r.** See *Galega*.

Ruffini's organs (roo-fe'nēz) [Angelo *Ruffini*, contemporary Italian anatomist]. See under *organ*.

rufopin (ru-fe-o'pin). A reddish-yellow, crystalline substance, $C_{14}H_{20}O_4$, derivable from opianic acid, and isomeric with rufallic acid.

rufous (ru'fus) [L. *ru'fus* red]. Dull red; also having reddish hair and a ruddy complexion.

ruga (ru'gah), pl. *ru'gae* [L.]. A ridge, wrinkle, or fold. **r. gastrica**. See *r. of the stomach*. **r. palatina**, any one of the transverse ridges extending outward on both sides of the raphe of the palate. **r. of the stomach**, wrinkles which appear on the surface of the mucous membrane of the stomach when the muscular coat contracts. **r. of the vagina**, small transverse folds of the mucous membrane of the vagina extending outward from the columns.

Rugby knee (rug'be). Schlatter's disease.

Ruggeri's reflex or sign (roo-ger-ēz). See under *reflex*.

rugine (roo-zhēn'). A raspatory.

rugitus (ru'jit-us) [L. "roaring"]. Rumbling in the intestines.

rugose, rugous (ru'gōs, ru'gus) [L. *rugosus*]. Characterized by wrinkles.

rugosity (ru-gos'it-e) [L. *rugositas*]. 1. The condition of being rugose; roughness. 2. A fold, wrinkle, or ruga.

Ruhmkorff coil (room'korf) [Heinrich Daniel *Ruhmkorff*, German electrician, 1823-1887]. See *coil*.

rule, Anstie's. A rule used in connection with life insurance examination: the maximum amount of absolute alcohol which can be taken by an adult without injury is $1\frac{1}{2}$ oz. daily. This is equivalent to about 3 oz. of whisky, brandy, gin, or rum; about 4 glasses of sherry or other strong wine; to 1 pint of claret, champagne, or other light wine; to 3 glasses of strong ale or porter; or 5 glasses of beer or light ale. **Cowling's r.**, the dose of a drug for a child is obtained by multiplying the adult dose by the fraction obtained by dividing the child's age by 24. **Gibson's r.**, in pneumonia, if the pulse pressure in millimeters of mercury does not fall below the pulse rate, the prognosis is good; if it does, prognosis is bad. **His' r.**, reckon the duration of pregnancy from the first day of the missed menstruation. **Jackson's r.**, after epileptic attacks, simple nervous processes are more quickly recovered from than complex ones. **Liebermeister's r.**, in febrile tachycardia the pulse beats increase at the rate of about eight to every degree centigrade of temperature. **Moot's**

r., in anesthesia, the pulse pressure is an indication of cardiac strength and must be high enough to compensate for deficient kidney function. **phase r.**, a homogeneous chemical substance of n components is capable of $n + 1$ modifications of phase; e. g., the phases of H_2O are ice, water, and steam. A heterogeneous chemical system of p coexistent phases and c variable components has $p + 2 - c$ degrees of freedom or variations of phase, i. e., the sum of its coexistent phases and its possible changes of phase exceeds the number of its components by 2. **Royleston's r.**, the ideal systolic pressure for an adult is the figure represented by 100 plus half the age in years. The maximal physiologic pressure is 100 plus the age. **Schütz's r.**, the amount of substrate decomposed in the same time interval by varying enzyme concentrations is not always proportional to the concentration of the enzyme, but is often proportional to the square root of this quantity. **van't Hoff's r.**, the velocity of chemical reactions is increased twofold or more for each rise of 10 degrees C. in temperature. **Young's r.** See *Young's rule*.

rum (rum). An alcoholic spirit distilled from the refuse of sugar-making. **bay-r.**, spiritus myricae, a cosmetic and hair dressing; an alcoholic solution of the oil of *Myrica ascris*. **cherry r.**, rum in which cherries have been put.

rumen (ru'men) [L. "gullet"]. The first stomach of a ruminant, or cud-chewing animal. Called also *paunch*.

ruminitis (ru-men-i'tis). Inflammation of the rumen.

rumenotomy (ru-men-ot'o-me) [*rumen* + *tomē* cut]. The operation of cutting into the rumen of an animal for the purpose of removing foreign bodies or impacted food or for evacuating gases.

Rumex (ru'meks) [L.]. A genus of polygonaceous plants; dock. The root of *R. crispus*, yellow dock, is astringent, tonic, and popularly esteemed as a cholagogue. Dose, $\frac{1}{2}$ -1 drachm (1-3.8 Gm.); of fluidextract, 15-60 minims (1-4 cc.).

rumicin (ru'mis-in). 1. Chrysophanic acid. 2. A proprietary preparation of *Ru'mex crispus*. Dose, 2-4 grains (0.13-0.26 Gm.).

rumin (ru'min). A proprietary dry concentration prepared from *Ru'mex crispus*. Dose, 3 grains (0.19 Gm.).

ruminant (ru'min-ant). 1. Chewing the cud. 2. One of the order of animals which have a stomach with four complete cavities (1, rumen; 2, reticulum; 3, omasum; 4, abomasum), through which the food passes in digestion. The division includes oxen, sheep, goats, deer, and antelopes.

rumination (ru-min-a'shun) [L. *rumina'tio*]. The casting up of the food to be chewed a second time; particularly the regurgitation of food after almost every meal, part of it being vomited and the rest swallowed: a condition seen in infants. See *mercyism*.

Rummo's disease (room'ōz) [Gaetano *Rummo*, Italian physician, died 1918]. Cardiophtosis.

rump (rump). The gluteal region, or buttock.

Rumpel-Leede phenomenon or sign (room'pel-le'deh) [Theodor *Rumpel*, German physician, 1862-1923; C. *Leede*, German physician, born 1882]. See under *phenomenon*.

Rumpf's symptom (roompfs) [Theodor *Rumpf*, German physician, born 1851]. See *symptom*.

Runeberg's formula, type (roo'ne-bergs) [Johan Wilhelm *Runeberg*, Finnish physician, 1843-1918]. See *formula* and *type*.

runround (run'round). Paronychia following the circumference of the nail.

Ruotte's operation (roo-ots). See under *operation*. **rupia** (ru'pe-ah) [*pūs* sordes]. An eruptive disease of the skin in which ill-conditioned bullae or vesicles are formed, which become scabby. It is almost always a manifestation of tertiary syphilis.

rupial (ru'pe-al). Pertaining to, resembling, or due to, rupia.

rupioid (ru'pe-oid). Resembling rupia.

rupophobia (ru-po-fō'be-ah) [ῥῦφος fifth + φόβος fear]. An insane or morbid dread of filth.

Ruppell's serum (roop'elz). See under *serum*.

rupture (rup'tshur). 1. Forcible tearing or breaking of a part. 2. A hernia.

ruscol (rus'kol). A preparation of a bismuth compound and birch tar: used in erysipelas, eczema, etc.

Rusconi's anus (roos-ko'nēz) [Mauro *Rusconi*, Italian biologist, 1776-1849]. The blastopore.

rushes (rush'ez). Waves of contractile activity running from one end of the intestine to the other and serving to transport the intestinal contents. Called also *peristaltic rushes*.

Russell's bodies [William *Russell*, contemporary physician in Edinburgh]. See under *body*.

Russell effect (rus'el) [W. J. *Russell*, British physicist]. See under *effect*.

russul (rus'ol). A tincture of colchicum and capscum, containing mustard oil and oil of wintergreen: used in rheumatism.

Russo's reaction (roos'ōz) [Mario *Russo*, contemporary Italian physician]. See *reaction*.

rust (rust). 1. Iron oxide or hydroxide, forming a reddish deposit on metallic iron where the latter has been exposed to moisture; also a similar deposit on other metals that have been exposed to dampness. 2. A fungous disease of plants characterized by the formation of rustlike spots on them.

Rust's disease, phenomenon [Johann Nepomuk *Rust*, German surgeon, 1775-1840]. See *disease* and *phenomenon*.

Ruta (ru'tah) [L.]. See *rue*.

rutacarpine (ru-te-kar'pin). A crystalline alkaloid, $C_{15}H_{13}N_3O$, from *Evodia rutacarpa*.

ruthenium (ru-the'ne-um). A rare, very hard metallic element; symbol, Ru; atomic weight, 101.7.

rutidosis (ru-tid-o'sis) [ῥυτίς wrinkle]. Shriveling or wrinkling of the cornea; rhytidosis.

rutilizm (ru'til-izm) [L. *ru'tilis* red, inclining to golden yellow]. Red-headedness.

rutin (ru'tin). A crystalline substance from rue.

rutonal (ru'to-nal). A proprietary sedative phenylmethyl-malonyl-urea, $C_6H_5(CH_3)C(CO.NH)_2CO$, similar to phenobarbital, but less toxic and slower in its action; used in epilepsy in daily doses of 0.3 Gm., gradually increased to 0.4 Gm. or even to 0.7 Gm.

rutting (rut'ing). The sexual excitement in the female of animals. See *estrus*.

ruttle (rut'tl). An old popular name for a rattling in the throat.

Ruysch's membrane, muscle, tube, vein (rish'iz) [Frederic *Ruysch*, Dutch anatomist, 1638-1731]. See under *membrane*, *muscle*, *tube*, *vein*.

Ryan's skin test (ri'anz) [A. H. *Ryan*, American physician]. See under *test*.

rye (ri). The cereal plant, *Secale cereale*, and its nutritious seed. **spurred r.** See *ergot*.

rye smut. Ergot.

rypia (ri'pe-ah). Same as *rupia*.

rytidosis (ri-tid-o'sis). Same as *rutidosis*.

S

S. Abbreviation for Latin *se'mis* half, *sinis'ter* left; also the symbol for *sulphur*, *sen*, or *sive*.

s. Symbol for one-thousandth part of a second.

S. A. Abbreviation for L. *secundum ar'tem*, according to art.

Sa. Chemical symbol of *samarium*.

S. A. L. Abbreviation for L. *secundum ar'tis le'ges*, according to the rules of art.

sabadilla (sab-ah-dil'ah) [Spanish *cebadilla*; *cebada* barley]. The poisonous seed of *Asagraea serrula'ta*, a melantheaceous plant of Mexico. It contains veratrin and is emetocathartic. It is used to destroy parasites.

sabadilline (sab-ad-il'in). Cevadilline.

sabadine (sab'ad-in). A white, crystalline alkaloid, $C_{20}H_{31}NO_8$, from *sabadilla*.

sabadinine (sab-ad'in-in). A crystallizable principle, $C_{27}H_{45}NO_8$, from *sabadilla*.

sabal (sa'bal). The U. S. P. name for the fruit of *Sereno'a*. See *Serenoa*.

Sabatier's suture (sab-bah-te-āz') [Raphael Bienvenu *Sabatier*, French surgeon, 1732-1811]. See under *suture*.

Sabbatia (sab-a'she-ah) [after L. *Sabbati*, an Italian botanist]. A genus of gentianaceous herbs of many species: called American centaury: used like gentian. **S. angularis**, American centaury, is a good tonic and stomachic, and is valued in the treatment of intermittent and remittent fevers. Dose of fluidextract, 30-60 minims (2-4 cc.). **S. campestris** is recommended for dyspeptic sick headache. Dose of fluidextract, $\frac{1}{2}$ -1 fluidrachm (1-4 cc.). **S. elliot'tii**, Elliott's centaury, or quinine flower, is a tonic and antiperiodic. Dose of the fluidextract, 30-60 minims (2-4 cc.).

sabbatin (sab'at-in). An antiperiodic and antipyretic preparation of *Sabba'tia elliot'tii*.

saber-legged (sa'ber-legd). Having the angle of the hock more acute than normal, so that the hind feet stand well under the body: said of horses.

saber shin. A tibia with a marked anterior convexity, seen in hereditary syphilis.

sabina (sa-bin'ah). Latin for *savin*.

Sabouraud's agar (sab-oo-rōz) [Raymond *Sabouraud*, French dermatologist, born 1864]. See *French proof agar*, under *agar*.

sabromin (sa-bro'min). Calcium dibrombehenate, $Ca(C_{21}H_{41}Br_2.COO)_2$, a proprietary preparation containing 28.5 per cent of bromine and used like other bromine preparations. Dose, 5-20 grains (0.3-1.2 Gm.). Called also *calbroben*.

sabulous (sab'u-lus) [L. *sabulo'sus*; *sab'ulum* sand]. Gritty or sandy.

sabulum (sab'u-lum) [L. "fine sand"]. Same as *acerulus*.

saburra (sab-u-rah). Sordes; foulness of the stomach, mouth, or teeth.

saburral (sab-ar'al) [L. *sabur'a* sand]. Pertaining to or the nature of sordes, or of foulness of the stomach.

sac (sak) [L. *sac'cus*; σάκος]. Any baglike organ. **abdominal s.**, a serous sac in the embryo which develops into the abdominal cavity. **air s.**, any one of the air cells of the lungs. **allantoic s.** See *allantois*. **amniotic s.**, the amnion. **aneurysmal s.**, the dilated coats of an artery in a sacculated aneurysm. **conjunctival s.**, the sac formed between the bulbar and palpebral conjunctivae. **s. dartique de la femme**, Broca's pouch. **dental s.**, **dentinal s.**, the vascular sac enclosing the enamel organ and dentinal papillae. **dural s.**, the process of *dura mater*

at the caudal end of the spinal cord. **embryonic s.**, the blastodermic vesicle. **endolymphatic s.** See *sacculus endolymphaticus*. **gestation s.**, the sac that encloses the embryo in ectopic pregnancy. **hernial s.**, the pouch of peritoneum which encloses the protruding intestine in a case of hernia. **Hilton's s.**, a laryngeal pouch. **lacrimal s.**, the dilated upper end of the lacrimal duct. **Lower's s's**, sacculated portions of the external jugular vein at exit of the vein from the skull. **omental s.**, the pouch formed between the ascending and descending portions of the great omentum. **pleural s.**, the cavity of the pleura. **pudendal s.** See *Broca's pouch*, under *pouch*. **salt s.**, a small sac made of gauze and containing salt, one or more of which are packed into a wound, the object being to produce drainage of the wound by the osmotic action of the salt. **serous s.**, the sac made up of the pleura, pericardium, and peritoneum. **tear s's**, the lacrimals. **vitelline s.**, the sac enclosing the vitellus. **yolk s.**, the umbilical vesicle.

saccapelo (sak-ah-pe'lo). A proprietary depilatory.

saccate (sak'at) [L. *sacca'tus*]. 1. Shaped like a sac. 2. Contained in a sac.

saccharamide (sak-ar-am'id). An amide, $\text{COOH}(\text{CHOH})_4\text{CO.NH}_2$, of saccharic acid.

saccharascope (sak'ar-as-kōp) [σάκχαρον sugar + σκοπεῖν to view]. A fermentation saccharimeter. See *saccharimeter*.

saccharate (sak'ar-āt). A salt of saccharic acid.

saccharated (sak'ar-a-ted) [L. *sacchara'tus*, from *sac'charum* sugar]. Sugary; charged with or containing sugar.

saccharephidrosis (sak'ar-ef-id-ro'sis) [σάκχαρον sugar + ἐφιδρώσις sweating]. The discharge of sugar in the sweat.

saccharide (sak'ar-id). One of a series of carbohydrates, including the sugars. The saccharides are divided into monosaccharides, disaccharides, trisaccharides, and polysaccharides. **s. group**, a hypothetical group, $\text{C}_6\text{H}_{10}\text{O}_6$, from which the di-, tri-, tetra-, and polysaccharides derive their names.

sacchariferous (sak-ar-if'er-us) [L. *sac'charum* sugar + *fer're* to bear]. Containing or yielding sugar.

saccharification (sak'ar-if-ik-a'shun) [L. *sac'charum* sugar + *fa'cere* to make]. Conversion into sugar.

saccharimeter (sak-ar-im'et-er). [L. *sac'charum* sugar + *me'trum* measure]. A device for estimating the proportion of sugar in a solution. It is either a polarimeter, indicating the proportion of sugar by the number of degrees through which it rotates the plane of polarization, or a hydrometer, indicating the proportion of sugar by the specific gravity of the solution. **Einhorn's s.**, a form of fermentation saccharimeter. **fermentation s.**, a saccharimeter in the form of a bent graduated tube and closed at one end. The amount of sugar in the urine is indicated by the gas which collects at the closed end when yeast is added to the urine. **Lohnstein's s.**, an instrument for performing a quantitative fermentation test of sugar in the urine.

saccharin (sak'ar-in). See *gluside*.

saccharine (sak'ar-in) [L. *sacchari'nus*]. Sugary; of a sweet taste.

saccharinol (sak-ar'in-ol). See *saccharin*.

saccharobacillus (sak'ar-o-bas-il'us). Same as *Bacillus pasteurianus*.

saccharobiose (sak'ar-o-bi'os). Same as *disaccharose*.

saccharogalactorrhea, **saccharogalactorrhea** (sak'ar-o-gal-ak-tor-e'ah) [σάκχαρον sugar + γάλα milk + ροία flow]. The secretion of milk containing an excess of sugar.

saccharolytic (sak'ar-o-lit'ik) [σάκχαρον sugar + λύσις dissolution]. Capable of chemically splitting up sugar.

saccharometabolic (sak'ar-o-met-ab-ol'ik). Pertaining to the metabolism of sugar.

saccharometabolism (sak'ar-o-met-ab-o-lism). The metabolism of sugar.

saccharometer (sak-ar-om'et-er). Same as *saccharimeter*.

Saccharomyces (sak-ar-om'is-ēz) [σάκχαρον sugar + μύκης fungus]. Pl. *saccharomyce'tes*. A genus of ascomycetous fungi; the yeasts. They are oval or spherical, unicellular organisms which are distinguished by gemmation or budding, the presence of ascospores and absence of mycelial threads. **S. albicans**, a pathogenic species causing thrush in the mouth; in white, oval, spherical, or cylindrical cells, sometimes forming long filaments. **S. anginae** was found in a case of tonsillitis. **S. apiculatus**, a species from fermenting fruit; its oval cells are joined at the ends. **S. blanchardii**, a species that was found as a gelatinous mass weighing about 2 pounds in the peritoneal cavity. **Busse's s.**, a form discovered in a patient with degenerated nodules in the bones and internal organs. **S. capillitii**, a species from the scalp, with spherical cells: said to cause pityriasis capitis. **S. cerevisiae**, a species with oval or spherical cells, from brewer's yeast: it causes alcoholic fermentation. **S. coprogenus**, a form from decomposing feces, in short chains of oval or spherical cells. **S. ellipsoidus**, a form from wine yeast, forming elliptical cells, solitary or in branching chains: it causes alcoholic fermentation in wines. **S. epidermice**. Same as *Cryptococcus epidermidis*. **S. exiguus**, a form in beer yeast: the cells are elliptical and solitary, or in branching chains: it causes late fermentation in beer. **S. galactioides**, a species from milk, with oval or elliptical cells: it produces a fermentation in milk. **S. glu'tinis**, a nonpathogenic species from air, potatoes, and the skin in seborrhea; its cells are cylindrical, oval, or spherical: it forms a rosy pigment. **S. granulomatosus**, a variety producing granulomatous tumors in pigs. **S. guttula'tus**, a species which is able to change glucose into alcohol. It is pathogenic for rats and guinea-pigs. **S. hansenii** changes sugars into oxalic acid. **S. hominis**, a species occurring in chronic infectious pyemia. It is pathogenic for animals. **S. lemonnierii**, a pathogenic fungus found in bronchitis (Sartory and Lasseur, 1915). **S. lithogenes**, a species from the lymph glands of an ox suffering from carcinoma of the liver: pathogenic to animals. **S. mesentericus**, a species which causes a fermentation in fruit acids: it is found in fermenting fruits. **S. mycoderma**, a species from fermenting liquors and diabetic urine, in which it produces a slight fermentation seen in cylindrical, oval, or elliptical cells, forming branched chains. **S. neoformans**, regarded by some as the germ of cancer. **S. pastorianus**, a species from fermenting wine and beer: cells oval or clavate. **S. rubrum**, a Brazilian species causing a parapsoriasis affection (Magalhaes, 1914). **S. subcutaneus tumefaciens**, a species found in a myxoma of the thigh: pathogenic for animals. **S. tumefaciens albus**, a species discovered in certain cases of pharyngitis: pathogenic for mice, guinea-pigs, and rabbits.

Saccharomyces (Rivas).

Saccharomycetes (sak'ar-o-mi-se'tēz). A family

of Ascomycetes, the members of which are usually unicellular and contain granules and ascospores.

saccharomycetic (sak''ar-o-mi-set'ik). Due to the presence of yeast fungi.

saccharomycetolysis (sak''ar-o-mi-set-ol'is-is) [*saccharomyces* + *λυσις* solution]. The splitting up of saccharomyces.

saccharomycosis (sak''ar-o-mi-ko'sis). 1. Any disease condition due to a yeast fungus. 2. A skin disease in which nodules are seen filled with saccharomyces. See *lymphangitis epizootica*.

saccharorrhoea, **saccharorrhoea** (sak''ar-o-re'-ah) [*σάκχαρον* sugar + *ροία* flow]. Diabetes mellitus, or glycosuria.

saccharosan (sak''ar-o-san). A form of anhydrosugar.

saccharose (sak''ar-ös) [L. *saccharum* sugar]. Ordinary cane sugar or beet sugar, $C_{12}H_{22}O_{11}$. It is a disaccharide, crystallizing in prisms, soluble in water, and turning the plane of polarization to the right. By boiling with acids and by the action of certain enzymes it is hydrolyzed and converted into dextrose and levulose. It is extensively used as a food and as a sweetening agent, and is much employed in pharmacy, forming the basis of syrups, electuaries, confections, etc. The name is extended to all the members of a series of substances having the same chemical formula. They are glucosides of the monosaccharides.

saccharosuria (sak''ar-o-su're-ah) [*saccharose* + *ούρον* urine]. The presence of saccharose in the urine.

saccharum (sak''ar-um) [L.; *σάκχαρον*]. 1. Sugar, especially cane sugar, or saccharose. 2. A genus of graminaceous plants. *S. officinarum*, sugar cane, affords a large part of the commercial supply of sugar. See under *sugar*. **s. acerum**, **s. canadense**, maple sugar. **s. lac'tis**, sugar of milk; lactose. **s. ustum**, caramel.

saccharuria (sak''ar-u're-ah) [*σάκχαρον* sugar + *ούρον* urine]. The presence of sugar in the urine.

sacciform (sak''sif-orm) [L. *saccus* sac + *for'ma* form]. Shaped like a sac or bag.

saccular (sak''u-lar). Shaped like a sac.

sacculated (sak''u-la-ted) [L. *sacculatus*]. Characterized by sacculations or by saccules.

sacculation (sak''u-la'shun). 1. A sacculus, or pouch. 2. The quality of being sacculated, or pursed out with little pouches.

saccule (sak''ül) [L. *sacculus*]. 1. A little bag or sac. 2. That one of the two divisions of the membranous labyrinth of the vestibule of the ear which communicates with the ductus cochlearis. Called also *sacculus proprius* and *vestibular saccule*. **laryngeal s.** See *pouch*, *laryngeal*.

sacculocochlear (sak''u-lo-kok'le-ah). Pertaining to the sacculus proprius and to the cochlea.

sacculus (sak''u-lus), pl. *sac'culi* [L.]. 1. A little bag filled with herbs or medicines to be worn upon the body. 2. Any saccule, pouch, or bursa. 3. See *sacculæ* (2d def.). **s. communis**, the utricle of the ear; the larger of the two main divisions of the membranous labyrinth. **s. den'tis**, a fibrous bag in the jaw which encloses an unerupted tooth, being connected with the overlying tissue of the gum by the gubernaculum dentis. **s. endolymphaticus**. See *sacculus endolymphaticus*. **s. lacrima'lis**, the lacrimal sac; a dilatation at the upper end of the lacrimal duct. **s. laryng'is**. See *pouch*, *laryngeal*. **s. prop'rius**, the saccule of the ear; the smaller of the two divisions of the membranous labyrinth. **s. vestib'uli**. Same as *sacculæ* (2d def.).

sacculus (sak''us), pl. *sac'ci* [L.; *σάκκος*]. A sac or pouch. **s. endolymphaticus** [B N A], the blind, flattened cerebral end of the endolymphatic duct. **s. lacrima'lis** [B N A], the lacrimal sac. See *sac*.

Sachs' test. See under *tests*.

Sachs-Georgi test [Hans Sachs, German bacteriologist, born 1877; Walter Georgi, German bacteriologist, 1889-1920]. See under *tests*.

Sachsse's solution, test (zahk'sez) [Georg Robert Sachsse, German chemist, 1840-1895]. See *solution* and *tests*.

sacra media (sa'kra'h me'de-ah) [L.]. The middle sacral artery.

sacrad (sa'krad). Toward the sacrum, or sacral aspect.

sacral (sa'kral) [L. *sacra'lis*]. Pertaining to or situated near the sacrum.

sacralgia (sa-kral'je-ah) [*sacrum* + *ἄλγος* pain]. Pain in the sacrum.

sacralization (sa'kral-is-a'shun). Exaggerated development of the transverse processes of the fifth lumbar vertebra until they look like parts of the sacrum.

sacratama (sah-krah-tah'mah). Pirquet's word formula to indicate a child in normal nutrition, in which *s* stands for sanguis (blood), *c* for crasitudo (fat), *t* for turgor (water content), and *m* for musculus (musculature). The *a* after each of these letters represents the normal. By changing the vowels the intensity of any of the four qualities may be indicated: *i* indicating excessive, *e* abundant, *a* medium or normal, *o* reduced, and *u* slight. For instance, *so* would indicate reduced hemoglobin; *cra*, medium amount of fat; *ta* medium turgor; *mu*, very weak musculature; *i. e.*, *socratamu* = a moderately anemic, well-nourished, fairly rounded-out child of weak muscular development.

sacroctomy (sa-krek'to-me) [*sacrum* + *ἐκτομή* excision]. Excision of the sacrum for cancer of the rectum; Kraske's operation.

sacriplex (sa'krip-leks). The sacral plexus.

sacro-anterior (sa'kro-an-te're-or). Having the sacrum directed forward.

sacrocoanization (sa'kro-ko-ka-in-iz-a'shun). Injection of cocaine into the spinal canal, the needle being introduced into the sacrolumbar space at the first sacral vertebra.

sacrocoxygeal (sa'kro-kok-sij'e-al). Pertaining to the sacrum and coccyx.

sacrocoxygeus anti'cus (sa'kro-kok-sij'e-us). The curvator coccygis muscle.

sacrocoxyx (sa-kro-kok'siks). The sacrum and coccyx together.

sacrocoxalgia (sa'kro-koks-al'je-ah). Same as *sacrocoxilis*.

sacrocoxitis (sa'kro-kok-si'tis) [*sacrum* + L. *co'xa* hip]. Inflammation of the sacro-iliac joint.

sacrodynia (sa-kro-din'e-ah) [*sacrum* + *δύσνη* pain]. Pain in the sacral region.

sacro-iliac (sa-kro-il'e-ak). Pertaining to the sacrum and ilium.

sacrolumbalis (sa'kro-lum-ba'lis) [L.]. See *muscles*, *table of*.

sacrolumbar (sa-kro-lum'bar) [*sacrum* + L. *lum'bus* loin]. Pertaining to the sacrum and to the loin.

sacroperineal (sa'kro-per-in-e'al). Pertaining to the sacrum and the perineum.

sacroposterior (sa'kro-pos-te're-or). Having the sacrum directed backward.

sacropromontory (sa-kro-prom'on-to-re). The promontory of the sacrum.

sacrosciatic (sa'kro-si-at'ik) [*sacro-* + *sciatic*]. Pertaining to the sacrum and the ischium.

sacrospinal (sa-kro-spi'nal) [*sacrum* + L. *spi'na* spine]. Pertaining to the sacrum and the spine, or vertebral column.

sacrospinalis (sa'kro-spi-na'lis). See under *muscles*, *table of*.

sacroctomy (sa-krot'o-me) [*sacrum* + *τέμνειν* to cut]. The operation of cutting out the lower end of the sacrum.

- sacro-uterine** (sa-kro-u'ter-in). Pertaining to the sacrum and the uterus.
- sacrovertebral** (sa-kro-ver'te-bral). Pertaining to the sacrum and the vertebrae.
- sacrum** (sa'krum) [L. "sacred"]. The triangular bone situated dorsad and caudad from the two ilia. It is formed of five united vertebrae wedged in between the two innominate bones. **assimilation s.**, a sacrum in which a lumbar vertebra is fused to the sacrum, or one in which the first sacral vertebra is free, resembling a lumbar vertebra.
- sactosalpinx** (sak-to-sal'pinks) [σακρός stuffed + σάλπιγξ tube]. Dilatation of the inflamed oviduct from retention of its secretions: hydrosalpinx in which the tube is distended to such an extent as to form large tumors.
- saddle** (sad'l). A part or section of the base of an artificial denture carrying less than fourteen teeth.
- saddle back** (sad'l bak). See *lordosis*.
- saddle joint** (sad'l joint). A joint in which a convex surface fits into a concave one.
- saddle nose** (sad'l nōz). A nose with a bridge much depressed.
- sadism** (sa'dizm) [Marquis de Sade]. Sexual perversion in which satisfaction is derived from the infliction of cruelty upon another.
- sadist** (sa'dist). A practitioner of sadism.
- sadistic** (sa-dis'tik). Pertaining to sadism.
- Saemisch's operation, ulcer** (sa'mish's) [Edwin Theodor Saemisch, ophthalmologist in Bonn, 1833-1909]. See *operation, ulcer*.
- Saenger's operation, suture** (zeng'erz) [Max Saenger, gynecologist in Prague, 1853-1903]. See *operation, suture*.
- Saenger's sign** (zeng'erz) [Alfred Saenger, German neurologist, born 1853]. See *sign*.
- saeptum** (sep'tum). Latin for *septum*.
- safety tube** (sā'te). That part of the eustachian tube which is always open.
- safflower** (saf'low-er). See *Carthamus*.
- saffron** (saf'ron). See *Crocus*. **American s.** See *Carthamus*. **meadow s.** See *Colchicum*. **Spanish s.** See *Crocus*. **s. substitute**, dinitrocresol, a poisonous yellow coal tar dye.
- safranine** (saf'ran-in). A methyl or ethyl substitution product of an azin base, $(\text{NH}_2\text{C}_6\text{H}_3\text{N})_2(\text{OH})\cdot\text{C}_6\text{H}_5$. It is used as a pink stain in microscopy and as a test for sugar in the urine. See under *tests*. It is a respiratory and cardiac poison. **s. O**, a mixture of dimethyl and trimethyl phenosafranine.
- safranophil** (saf-ran'o-fil) [safranine + φιλέιν to love]. 1. Readily stained with safranine. 2. Any cell or element readily stained with safranine.
- safrene** (saf'rēn). A hydrocarbon, $\text{C}_{10}\text{H}_{16}$, obtained from sassafras.
- safrol** (saf'rol). An oily, volatile, anodyne substance, the methylene ether of allyl dioxybenzene, $\text{C}_8\text{H}_8\text{C}_6\text{H}_3\text{O}_2\text{CH}_2$, from sassafras oil: useful in headache and neuritis. Dose, 20-30 minims (1.333-2 cc.).
- safrosin** (saf'ro-sin). Bluish eosin.
- safu** (saf'foo). A disease of the skin seen among the inhabitants of the Turk Islands (South Seas). It may be a form of frambesia.
- sagapenum** (sag-ap-e-num) [L.; σαγάπηνον]. A fetid gum-resin from *Ferula persica*, much like galbanum and asafetida: little used.
- sage** (sāj). A labiate plant, *Salvia officinalis*. See *Salvia*.
- sagittal** (saj'it-al) [L. *sagitta*'lis; sagit'ta arrow]. Shaped like or resembling an arrow.
- Sagnac rays** (san-yak'). See under *ray*.
- sago** (sa'go). A starch mainly revived from the pith of various species of palm, chiefly of the genus *Sagus*.
- sagradin** (sag-ra'din). A proprietary preparation of cascara sagrada: aperient.
- sagrotan** (sag'ro-tan). An antiseptic and germicide liquid composed of chlorcresol 8 per cent, chlorxylenol 4 per cent, soap 22 per cent, alcohol 9 per cent, and water 57 per cent: used as a wound irrigant and for the disinfection of excreta in dilutions of from 1:20 to 1:100.
- sagur** (sa'gur). An astrigent gall formed on certain East Indian tamarisks.
- Sahli's desmoid reaction, test, whistle** (sah'lēz) [Herman Sahli, physician in Bern, born 1856]. See under *reaction, tests*, and *whistle*.
- Saigon cinnamon** (si-gon'). See *cinnamon*.
- Saint Anthony's fire**. Erysipelas.
- St. John Long's liniment** [John St. John Long, an English quack and portrait painter, 1800-1837]. See *liniment*.
- Saint Vitus' dance**. Chorea.
- saiodin** (sa-i'o-din). See *sajodin*.
- sajina** (sah-je'nah). An East Indian plant, *Moringa pterygosperma*: used in rheumatism and dyspepsia.
- sajodin** (saj'o-din). A colorless or yellowish powder, calcium monoiodobenzenate, $(\text{C}_2\text{H}_4\text{I.CO.O})_2\text{Ca}$: used like the iodides. Dose, 15-45 grains (1-3 Gm.) daily.
- sakushu fever** (sah-koo'shoo). See under *fever*.
- sal** (sal). Latin for *salt*. **s. acetosel'la**, potassium binoxalate. **s. aera'tus**, potassium bicarbonate. **s. alem'broth**. See *alembroth*. **s. ammoniac**, ammonium chloride. **s. caroli-num facti'tum**, artificial Carlsbad salt. **s. commu'nis**, common salt; sodium chloride. **s. dam'mar**, an aromatic resin from the sal tree, *Shorea robusta*, of India. **s. de duo'bus**, potassium sulphate. **s. diuret'icum**, potassium acetate. **s. enix'um**, potassium bisulphate. **s. ethyl**, a proprietary preparation of ethyl salicylate in gelatin globules containing 5 minims (0.33 cc.). **s. hepatic'a**, a proprietary effervescent saline laxative. **s. kissingen'se facti'tum**, artificial Kissingen salt. **s. pol'ycrest**, potassium sulphate with sulphur. **s. prunel'la**, potassium nitrate in balls. **s. so'dae**, sodium carbonate. **s. vichya'num facti'tum**, artificial Vichy salt. **s. volat'ile**, **s. volat'ilis**, ammonium carbonate.
- salabrose** (sal'ab-rōs). A form of anhydrosugar.
- salacetin** (sal-as-e'tin). Phenylamine acetosalicylate: used as an antiseptic, analgesic, and uric-acid solvent.
- salacetol** (sal-as-e'tol). A crystalline compound of acetone and salicylic acid, $\text{OH.C}_6\text{H}_4\text{COO.CH}_2\text{-CO.CH}_3$: antirheumatic and antiseptic. Dose, 30-45 grains (2-3 Gm.). Called also *salicylacetol* and *salantol*.
- salactol** (sal-ak'tol). A compound of sodium salicylate, sodium lactate, and hydrogen peroxide: used in diphtheria.
- salamanderin** (sal-am-an'der-in). A poisonous base from the skin of a species of salamander.
- salamide** (sal-am'id). An amide derivative of salicylic acid or from the oil of gaultheria: antirheumatic.
- salantol** (sal-an'tol). See *salacetol*.
- salarabin** (sal-ar'ab-in). A proprietary antidiarrheic and intestinal astringent for veterinary work.
- salazolol** (sal-az'o-lon). Salipyrine.
- salborol** (sal-bor'ol). An antirheumatic and antiseptic compound containing boric acid and phenylsalicylate.
- salbromalid** (sal-bro'mal-id). A proprietary compound containing salicylic acid, ammonium bromide, and acetanilid: antirheumatic. Same as *antinerwin*.
- saldanine** (sal'dan-in). A locally anesthetic alkaloid from *Datura arborescens*, a Mexican tree or shrub.

salen (sal'en). A proprietary mixture of methyl and ethylglycolic esters of salicylic acid.

salenal (sal'en-al). A proprietary ointment of salen.

salep (sa'lep). The dried tubers of various species of orchid; nutritious and demulcent, and reputed to be aphrodisiac.

saleratus (sal-er-a'tus). Potassium bicarbonate, KHCO_3 .

salethyl (sal-eth'il). A proprietary ethyl salicylate, said to be chemically pure.

salfein (sal'fen). A proprietary analgesic, antiseptic and antispasmodic mixture. Dose, 5-10 grains (0.333-0.666 Gm.).

salhipnone (sal-hip'nōn). Benzoylmethylsalicylic acid ester, $\text{C}_6\text{H}_5\text{O}(\text{COC}_6\text{H}_5)\text{COOCH}_3$; an antiseptic in colorless needles.

salia effervescentia. Effervescent salts; the N. F. name for preparations made by adding sodium bicarbonate and tartaric and citric acids to the active salt.

salibromine (sal-ib-ro'min). White crystals of dibrom-salicylic-methyl-ester.

salicaine (sal-ik-a'in). A proprietary brand of saligenin.

salicamar (sal'ik-am-ar'). A clear, syrupy fluid, $\text{CH}_2\text{OH}.\text{CHOH}.\text{CH}_2\text{O}.\text{C}_6\text{H}_4.\text{CO}_2.\text{CH}_2\text{CHOH}.\text{CH}_2\text{OH}$, a glycerin ester of glycosalicylic acid: antirheumatic and stomachic.

salicidol (sal-is'id-ol). A proprietary form of mercury salicylate.

salicin (sal'is-in) [L. *salix* willow]. A bitter tonic and antiperiodic glucoside, $\text{C}_6\text{H}_{11}\text{O}_5.\text{O}.\text{C}_6\text{H}_4.\text{CH}_2\text{OH}$, in white, powdery crystals, from willow and poplar. Ptyalin and emulsin hydrolyze it to dextrose and ortho-oxybenzyl alcohol. It is used in rheumatism, and, like quinine, in intermittent fever, coryza, and neuralgia. Dose, 5-30 grains (0.333-2 Gm.).

salicitrin (sal-is-it'rin). Novaspirin.

salicol (sal'ik-ol). A proprietary combination of methyl alcohol, oil of gaultheria, salicylic acid, and water: antiseptic.

salicyl (sal'is-il). The supposed radical, $\text{C}_7\text{H}_5\text{O}_2$, of salicylic acid. **s. salicylic acid**, diplosal.

salicylacetyl (sal'is-il-as-e'tol). Same as *salacetol*.

salicylage (sal'is-il-aj). The treatment of food substances with salicylic acid so as to preserve them.

salicylal (sal-is-il'al). Salicylic aldehyde. See *aldehyde*.

salicylaldehyde (sal-is-il-al'de-hid). Salicylous acid. See under *acid*.

salicylamide (sal'is-il-am'id). A yellow, analgesic and antirheumatic crystalline derivative of methyl salicylate, $\text{C}_6\text{H}_4(\text{OH})\text{CONH}_2$, the amide of salicylic acid. It is used like salicylic acid. Dose, 3-5 grains (0.2-0.33 Gm.).

salicylanilide (sal'is-il-an'il'id). A compound formed by heating a mixture of salicylic acid, aniline, and phosphorus trichloride.

salicylase (sal-is'il-ās). An enzyme oxidizing salicylaldehyde into salicylic acid.

salicylate (sal'is-il-at). Any salt of salicylic acid. The alkali salicylates are used like salicylic acid in rheumatism. The official salicylates are those of lithium, methyl, acetyl, phenyl, iron, and sodium.

salicylated (sal'is-il-a-ted). Containing or impregnated with salicylic acid.

salicylbromanilide (sal'is-il-brōm-an'il'id). Same as *salbromilide*.

salicylic (sal-is'il'ik). Pertaining to the radical salicyl. **s. acid**. See *acid*.

salicylide (sal'is-il-id). Salicylous acid. See under *acid*.

salicylism (sal'is-il-izm). The toxic effects of excessive dosage with salicylic acid or its salts.

salicylize (sal'is-il-iz). To treat with or bring under the influence of salicylic acid.

salicyl (sal'is-il-ol). A fragrant volatile liquid, $\text{C}_7\text{H}_5\text{O}_2$, obtainable from salicin and from various plants.

salicylquinine (sal'is-il-kwin'in). Saloquinine.

salicyl-resorcinol (sal'is-il-re-zor'sin-ol). An analgesic, antipyretic, and antiseptic compound, $\text{C}_{13}\text{H}_{10}\text{O}$, derived from salicylic aldehyde and resorcinol. Dose, 5-15 grains (0.33-1 Gm.).

salicyl-resorcinol-ketone. Trioxbenzophenone: an antiseptic used in skin diseases and in typhoid fever. Dose, 45-60 grains (3-4 Gm.).

salicyluric acid (sal-is-il-u'rik). See *acid*.

salicylsin (sal-is-il'sin). A proprietary make of thiosinamine salicylate.

salifebrin (sal-ef-e'brin). Salicylanilide, a white, antiseptic powder, $\text{C}_{13}\text{H}_{11}\text{NO}_2$: antineuralgic and antipyretic: used in rheumatism and malaria.

salifiable (sal'if-i-ab-l) [L. *sal* salt + *fi'eri* to become]. Capable of combining with acids so as to form salts.

saliformin (sal-if-or'min). Methenamine, salicylate, $(\text{CH}_2)_6\text{N}_4.\text{C}_6\text{H}_4(\text{OH}).\text{COOH}$, a white, soluble, crystalline powder. It is soluble in water and alcohol, and is used as an antiseptic and a solvent of uratic deposits. Daily dose, 15-30 grains (1-2 Gm.).

salify (sal'if-i). To convert into a salt.

saligallol (sal-ig-al'ol). Disalicylate of pyrogallol, $(\text{OH}.\text{C}_6\text{H}_4.\text{COO})_2\text{C}_6\text{H}_3.\text{OH}$; a resin-like substance: used externally in skin diseases, and as a vehicle of various applications used as varnishes.

saligenin (sal-ij'en-in). Salicylic alcohol, $\text{OH}.\text{C}_6\text{H}_4.\text{CH}_2\text{OH}$, ortho-oxybenzyl alcohol; derivable from salicin and convertible into salicylic acid. It occurs in colorless scales or needles, soluble in alcohol, ether, and hot water: used in rheumatism, typhoid, and malarial fever. It is a local anesthetic similar in action to procaine hydrochloride. Dose, $\frac{7}{8}$ -15 grains (0.5-1 Gm.).

saligenol (sal-ij'en-ol). Same as *saligenin*.

salihexin (sal-i-hek'sin). A proprietary urinary antiseptic, methenamine-acetyl-aminosalicylic acid.

salimenthol (sal-im-en'thol). A light yellowish fluid, the salicylic acid ester of menthol: used as an anodyne in capsules.

salimeter (sal-im'et-er) [L. *sal* salt + *me'trum* measure]. A hydrometer for ascertaining the strength of saline solutions.

salinaphthol (sal-in-a'f'tol). See *betol*.

saline (sa'lin) [L. *salis* mus; *sal* salt]. Salty; of the nature of a salt; containing a salt or salts.

salinigrin (sal-in'igrin). A glucoside, $\text{C}_{13}\text{H}_{16}\text{O}_7$, from the bark of willow: used like salicin.

salinometer (sal-in-om'et-er). An instrument (hydrometer) for direct reading of the salt content of a liquid.

saliodin (sal-i'o-din). A proprietary preparation for the treatment of uric acid diathesis.

saliphen (sal'if-en). See *saliphenin*.

saliphenin (sal-if-e'nin). Salicyl-paraphenetidin, $\text{C}_6\text{H}_4(\text{OC}_6\text{H}_5)\text{NH}.\text{C}_6\text{H}_3(\text{OH})\text{CO}$: an antipyretic.

salipyrin (sal-ip'irin). Antipyrine salicylate, $\text{C}_{11}\text{H}_{12}\text{N}_2\text{O}.\text{OH}.\text{C}_6\text{H}_4.\text{COOH}$, a crystalline substance, somewhat soluble in water, and containing about 58 parts of salicylic acid and 42 parts of antipyrine. It is soluble in 200 parts of cold, and 25 parts of boiling water; freely soluble in alcohol and ether. It is an anodyne and antipyretic, and is used in rheumatism, neuralgia, and hectic fever. Dose, 15-30 grains (1-2 Gm.).

saliretin (sal-ir-e'tin). A whitish-yellow, resinous substance, $\text{C}_{14}\text{H}_{14}\text{O}_3$, obtainable from salicin or saligenin.

saliseparin (sal-is-ep'ar-in). See *parillin*.

salit (sal'it). An oily fluid, a salicylic acid ester of borneol, $\text{C}_{10}\text{H}_{17}\text{O}.\text{CO}.\text{C}_6\text{H}_4.\text{OH}$, insoluble in water, but freely soluble in alcohol, ether, and oils. It is

split up in the body into salicylic acid and borneol. It is applied by innunction in a mixture with an equal part of olive oil.

salitannol (sal-it-an'ol). A white, amorphous powder, $C_{14}H_{10}O_6$; a derivative of salicylic and gallic acids: insoluble in water, ether, and chloroform, but slightly soluble in alcohol. It is a surgical antiseptic.

salthymol (sal-ith-i'mol). Thymol ester of salicylic acid, $C_6H_3(CH_3)(C_6H_7)O.COC_6H_4(OH)$, a white and sweet, crystalline powder: soluble in alcohol or ether; slightly in water. It is used as an internal antiseptic.

salitonias (sal-it-o'ne-ah). A proprietary stomach remedy.

saliva (sal-i'vah) [L.]. The spittle; a clear, alkaline, somewhat viscid, digestive fluid secreted by the salivary glands. It contains ptyalin, a digestive ferment, and serves to moisten and soften the food, keeps the mouth moist, and converts starch into maltose. The saliva also contains mucin, serum-albumin, globulin, leukocytes, epithelial debris, and potassium thiocyanate. Certain toxins frequently occur in it. **chorda s.**, submaxillary saliva produced in response to stimulation of the chorda tympani nerve. It is less viscid and turbid than that of the unstimulated gland. **ganglionic s.**, that which is obtained by irritating the submaxillary gland. **lingual s.**, that which is secreted by Ebner's glands and other serous glands of the tongue. **parotid s.**, that which is produced by the parotid gland. It is thinner and less viscid than the other varieties, containing no mucin. **sublingual s.**, that of the sublingual gland, the most viscid of all. **submaxillary s.**, that of the submaxillary gland. **sympathetic s.**, the secretion of the submaxillary gland on stimulation of its sympathetic nerve supply. It is more viscid and turbid than that of the unstimulated gland.

salivant (sal-iv-ant). Provoking a flow of saliva.

salivary (sal-iv-a-re) [L. *saliva'rius*]. Pertaining to the saliva.

salivate (sal-iv-ät). To produce an excessive flow of saliva.

salivation (sal-iv-a'shun) [L. *saliva'tio*]. An excessive discharge of saliva; ptyalism.

salivator (sal-iv-a-tor). An agent which salivates.

salivatory (sal-iv-at-o-re). Causing salivation.

salivin (sal-iv-in). Ptyalin.

salivolithiasis (sal-i'vo-lith-i'as-is) [*saliva* + *lithos* stone]. Formation of a salivary calculus.

Salix (sal'iks) [L. for *willow*]. A genus of trees and shrubs: the willows. The bark is a bitter tonic, containing salicin. See *willow*.

Salkowski's test (sal-kow'skēz) [Ernst Leopold *Salkowski*, physiologic chemist in Berlin, 1844-1923]. See under *tests*.

sallenders (sal'en-derz). See *mallenders*.

salmester (sal-mes'ter). See *mesotan*.

salmine (sal'min). A protamine from the spermatozoa of the salmon.

Salmonella (sam-o-nel'ah) [Daniel Elmer *Salmon*, American pathologist, 1850-1914]. 1. A name given to the *Bacillus suispestifer*, formerly known as *Bacillus cholerae-suis*. 2. A genus of the Bacteriaceae found in the intestinal tract in acute inflammatory conditions. **S. ammoniacae**, a species which changes urea into ammonia. **S. enteritidis**. Same as *Bacterium enteritidis*. **S. foetida**, an organism isolated by Perez from the nasal discharge of ozena patients. **S. paratyphi**, *Bacterium paratyphosum* A. **S. schotmuel-leri**, *Bacterium paratyphosum* B.

salmonellosis (sam-o-nel-o'sis). An infectious disease of hogs having a low degree of contagiousness, caused by the *Bacillus suispestifer* and resembling hog cholera in its symptoms and lesions.

salo (sa'lo). Proprietary disinfectant and deodorizer.

salochinine (sal-o-kin'in). See *saloquinine*.

salocoll (sal'o-kol). Phenocoll salicylate, $C_2H_5O.C_6H_4.NH.CO.CH_2.NH_2.C_7H_5O_3$, a crystalline salt: used as an antirheumatic and antipyretic. Dose, 10-20 grains (0.666-1.333 Gm.).

salocreol (sal-o-kre'ol). A salicylic acid derivative of b'ech wood creosote phenols: used by innunction in rheumatism, erysipelas, gout, etc.

salol (sa'lol). 1. See *phenyl salicylate*. 2. Any one of that group of the esters of salicylic acid to which normal salol belongs. **acetyl s.** See *spiroform*. **s. camphor**, a mixture of 3 parts of phenyl salicylate and 1 part of camphor, forming a colorless, oily liquid: used as a local antiseptic. **s. chloral**, an oily liquid, a compound of salol and hydrated chloral, used as a hypnotic and antiseptic.

Salomon's test (sal'o-monz) [Hugo *Salomon*, contemporary physician in Vienna]. See under *tests*.

salop (sal'op). Same as *salep*.

salophen (sal'o-fen). See *phenetsal*.

salophenin (sal-o-fe'nin). Phenetsal.

saloquinine (sa-lo-kwin'in). A crystalline substance, $OH.C_6H_4.CO.O.C_20H_{23}N_2O$, the salicylic acid ester of quinine. It is soluble in alcohol and ether. It is used like quinine in rheumatism, neuralgia, sciatica, typhoid fever, etc. Dose, 15-30 grains (1-2 Gm.). Also called *salochinine*. **s. salicylate**. Same as *rheumatin*.

salosantal (sa-lo-san'tal). A preparation of salol and oil of santal: used in gonorrhea, cystitis, and nephritis. Dose, 10-20 minims (0.66-1.33 cc.).

salpingectomy (sal-pin-jek'to-me) [*σάλπινξ* tube + *ἐκτομή* excision]. Surgical removal of an oviduct.

salpingemphraxis (sal'pin-jem-fraks'is) [*σάλπινξ* tube + *ἐμφράξις* stoppage]. Obstruction of an oviduct or of the eustachian tube.

salpingian (sal-pin'je-an) [*σάλπινξ* tube]. Pertaining to an oviduct or to a eustachian tube. **s. dropsy**, hydrosalpinx.

salpingion (sal-pin'je-on). A point at the apex of the petrous bone on its lower surface.

salpingitic (sal-pin-jit'ik). Pertaining to salpingitis.

salpingitis (sal-pin-jit'is) [*σάλπινξ* tube]. Inflammation of an oviduct or of the eustachian tube. **chronic vegetating s.**, a form characterized by marked hypertrophy of the mucosa of the oviduct. **hemorrhagic s.**, that which attends rupture of a blood vessel and effusion of blood. **interstitial s.**, that which is attended with hyperplasia of the connective tissue. **mural s.**, **parenchymatous s.** See *pachysalpingitis*. **nodular s.**, a form attended with the growth of nodules in the walls and mucosa of the tube. **s. profluens**, salpingitis in which the discharge has been locked up in the tube for a time, but afterward discharges. **pseudofollicular s.**, that which is characterized by agglutination of the walls of the tube, causing a formation of saccules. **purulent s.**, inflammation of the oviduct attended with suppuration. **tuberculous s.**, a nodular salpingitis due to the tubercle bacillus.

salpingocatheterism (sal-ping-o-kath'et-er-izm). The catheterization of a eustachian tube.

salpingocele (sal-ping'o-sel) [*σάλπινξ* tube + *κῆλη* hernia]. Hernial protrusion of a fallopian tube.

salpingocyesis (sal-ping'o-si-e'sis) [*σάλπινξ* tube + *κύσις* pregnancy]. Pregnancy in an oviduct.

salpingomalleus (sal-ping'o-mal'e-us). The tensor tympani muscle.

salpingo-oophorectomy (sal'ping-o-o'of-o-rek'to-me) [*σάλπινξ* tube + *oophorectomy*]. Surgical removal of an oviduct and ovary.

salpingo-oophoritis, **salpingo-ovaritis** (sal'ping-o-o'of-o-ri'tis, sal-ping'o-o-var-i'tis) [*salpin-*

- gitis* + *oophoritis*]. Inflammation of an oviduct and an ovary.
- salpingo-oophorocele** (sal-ping'-o-o-of-or'-o-sēl) [*salpingocele* + *oophorocele*]. Hernia containing the ovary and fallopian tube.
- salpingo-oothecitis** (sal-ping'-o-o-o-the-si'tis) [*σάλπιγξ* tube + *φωθήκη* ovary + *-itis* inflammation]. Salpingo-oophoritis.
- salpingo-oothecocoele** (sal-ping'-o-o-o-the'-ko-sēl) [*σάλπιγξ* tube + *φωθήκη* ovary + *κήλη* hernia]. Hernia of the ovary and oviduct.
- salpingo-oophectomy** (sal-ping'-o-o-o-thek'-to-me) [*σάλπιγξ* tube + *φωθήκη* ovary + *ἐκτομή* excision]. Salpingo-oophorectomy.
- salpingo-ovariectomy** (sal-ping'-o-o-va-re-ek'-to-me). Same as *salpingo-oophorectomy*.
- salpingo-ovariotomy** (sal'-pin-go-o'-va-re-ot'-o-me). Same as *salpingo-oophorectomy*.
- salpingoperitonitis** (sal-ping'-o-per-it-o-ni'tis). Inflammation of the peritoneum lining the fallopian tube.
- salpingopexy** (sal-ping'-o-pek-se) [*σάλπιγξ* tube + *πῆξις* fixation]. The operation of fixing the fallopian tube.
- salpingopharyngeal** (sal-ping'-o-far-in'-je-al). Pertaining to the eustachian tube and the pharynx.
- salpingopharyngeus** (sal-ping'-o-far-in'-je-us). The levator palati muscle.
- salpingorrhaphy** (sal-ping-or'a-fe) [*σάλπιγξ* tube + *ράφῃ* suture]. The stitching of an oviduct to its ovary after a partial removal of the latter.
- salpingosalpingostomy** (sal-ping'-o-sal-ping-os'-to-me). The operation of implanting a fallopian tube that has been operated on into its fellow.
- salpingoscope** (sal-ping'-o-skōp) [*σάλπιγξ* tube + *σκοπεῖν* to examine]. An instrument for exploring the nasopharynx and eustachian tube.
- salpingostaphylone** (sal-pin'-go-staf'il-in). Pertaining to the eustachian tube and the uvula.
- salpingostaphylinus** (sal-ping'-o-staf-il-i'-nus) [*σάλπιγξ* tube + *σταφυλή* uvula]. The tensor palati muscle.
- salpingostomatomy** (sal-pin'-go-sto-mat'-o-me) [*σάλπιγξ* tube + *στόμα* mouth + *τομή* cut]. The operation of resecting a portion of the oviduct and forming a new abdominal ostium.
- salpingostomy** (sal-ping-os'-to-me) [*σάλπιγξ* tube + *στόμα* mouth]. The formation of an opening or fistula into an oviduct for the purpose of drainage.
- salpingotomy** (sal-ping-ot'-o-me) [*σάλπιγξ* tube + *τέμνειν* to cut]. Surgical incision of an oviduct.
- salpingo-ureterostomy** (sal-ping'-o-u-re-ter-os'-to-me) [*σάλπιγξ* tube + *ureter* + *στόμα* mouth]. The operation of making an anastomosis between the ureter and the fallopian tube.
- salpingysterocycosis** (sal-pin-jis'-ter-o-si-e'sis) [*σάλπιγξ* tube + *ὕστερα* womb + *κύσις* pregnancy]. Pregnancy partly in the oviduct and partly in the uterus.
- salpinx** (sal'pinks) [*σάλπιγξ* tube]. 1. An oviduct. 2. A eustachian tube.
- salpyrin** (sal-pi'rin). Same as *salipyrin*.
- salseparisin** (sal-sep-ar'i-sin). See *parillin*.
- salt** (sawlt) [L. *sals*; *ἅλς*]. 1. Sodium chloride, or common salt. 2. Any compound of a base or radical and an acid; any compound of an acid some of whose replaceable hydrogen atoms have been substituted. **acid s.**, any salt in which the combining power of the acid is not completely exhausted. **baker's s.**, ammonium carbonate; sometimes used in leavening cakes. **basic s.**, any salt with more than the normal proportion of the basic elements. **bay s.**, common salt derived from sea water. **bile s.**, the salt of a bile acid. **buffer s.**, a salt, such as sodium bicarbonate and sodium phosphate, in the blood, which is able to absorb acid or alkali without a corresponding change in hydrogen ion concentration. **Carlsbad s.**, a mixture of sodium sulphate, potassium sulphate, sodium chloride, and sodium bicarbonate. **common s.**, sodium chloride, NaCl. **Crab Orchard s.**, a complex saline obtained by evaporating the water of a spring at Crab Orchard, Ky. **diuretic s.**, potassium acetate, CH₃-COOK. **double s.**, any salt in which the hydrogen atoms of the acid have been replaced by two metals. **Epsom s.**, magnesium sulphate. **Everitt's s.**, iron and potassium cyanide. **s. frog**, Cohnheim's frog; a frog whose blood has been entirely removed from the vessels and replaced by a salt solution. **Gettysburg s.**, a salt compound obtained from the water of a lithic spring at Gettysburg, Pa. **Glauber's s.**, sodium sulphate. **halide s.**, **haloid s.**, any binary compound of a halogen—i. e., of chlorine, iodine, bromine, fluorine. **Homburg's sedative s.**, boric acid. **microcosmic s.**, sodium and ammonium phosphate, NaNH₄HPO₄H₂O. **Mon-sel's s.**, iron subsulphate; a brown and highly styptic substance. **neutral s.**, **normal s.**, any salt which is neither acid nor basic. **pancreatic s.**, a mixture of the pancreatic ferments with common salt; used as a digestant. **peptic s.**, common salt mixed with pepsin; used as a digestant. **Plimmer's s.**, sodium antimony tartrate; used in trypanosome infection. **Preston's s.**, **smelling s.**, aromatized ammonium carbonate; stimulant and restorative. **salt-rheum**, chronic eczema. **Rochelle s.**, potassium and sodium tartrate. **Siegnette's s.** Same as *Rochelle s.* **s. solution**. See *solution*.
- salt action**. A reaction produced on the body cells by concentrated solutions of salts circulating in the body.
- saltation** (sal-ta'shun) [L. *saltatio*]. Chorea, or the dancing which sometimes accompanies it.
- saltatorial** (sal-tat'-o-re-al). Saltatoric.
- saltatoric**, **saltatory** (sal-tat'-o-rik, sal'tat'-o-re). Marked by leaping or dancing. See *spasm*.
- Salter's incremental lines** (sawlt'erz) [Sir James A. Salter, English dentist of the nineteenth century]. See under *line*.
- salt fever**. See *fever*.
- salt-free diet**. See *dechloridation*.
- salt glow**. A rubbing of the entire body with moistened salt. It is followed by a vivid pink glow of the skin and has a gently stimulating tonic effect.
- salt peter** (sawlt-pe'ter) [L. *salpētra* or *sal pētrae*]. Potassium nitrate, KNO₃. **Chile s.**, sodium nitrate.
- salts** (sawltz). A saline purgative. See *Epsom s.*, *Glauber's s.*, *Rochelle s.*, under *salt*.
- salt sac** (sawlt-sak). See under *sac*.
- salubrin** (sal'u-brin). A preparation containing alcohol, acetic acid, acetic ether, and water: antiseptic and hemostatic; used externally and in gargles.
- salubrious** (sal-u'bre-us) [L. *salu'bris*]. Conducive to health; wholesome.
- salubrol** (sal'u-brol). Tetrabromomethylene diantipyrine: a product of the action of bromine on methylene and antipyrine: a harmless and inodorous powder, antiseptic and hemostatic; used like iodoform.
- saludador** (sah-loo-thah-thōr) [Sp. "a healer"]. In Spain, a person who professes to be able to restore the health by the exercise of mysterious natural powers.
- salufer** (sal'u-fer) [L. *sal'us* health + *fer're* to bring]. An antiseptic and astringent solution of sodium silicofluoride.
- salumin** (sal'u-min). Aluminum salicylate, Al(OH-C₆H₄CO.O)₃, a reddish powder, used as an astringent and disinfectant in rhinitis and pharyn-

- gitis. **insoluble s.**, pure salumin in powder: used in nasal and throat diseases. **soluble s.**, salumin rendered soluble by ammonia and used in a solution.
- salunguene** (sal-un'gwēn). A proprietary salicylic ester salve: used in veterinary practice.
- salusol** (sal'u-sol). A proprietary astringent, antiseptic, and germicide, being a compound spirit of acetic ether.
- salutarium** (sal-u-ta're-um) [L. *salus* health]. A resort for the preservation of health.
- salutary** (sal'u-ta-re) [L. *saluta'ris*]. Favorable to the preservation and restoration of health.
- salvacea** (sal-va'se-ah). A proprietary soothing medicine for outward use.
- salvarsan** (sal-var'san). See *arsphenamine*. **s. copper**, a yellowish-red powder, a combination of arsphenamine and copper: suggested by Ehrlich for use in protozoan infections. **s. milk**. See under *milk*. • **sulphoxylate s.**, a modified arsphenamine.
- salvarsanized serum** (sal-var'san-izd). See *serum*.
- salvarsannatrium** (sal'var-san-na'tre-um). Sodium arsphenamine; a derivative of arsphenamine so prepared that when dissolved in distilled water its solution has the same composition as solutions of arsphenamine prepared by neutralization with sodium hydrate.
- salvatella** (sal-val-el'ah) [L.]. A small vein of the little finger and dorsum of the hand.
- salve** (sahv). A thick ointment or cerate. See *ointment*. **Deshler's s.**, compound resin cerate. **fetron s.**, a salve composed of from 3 to 5 per cent of the anilide of stearic acid with petrolatum. **mother's s.**, brown ointment.
- salvelin** (sal-ve'lin). A protamine from the sperm of lake trout, *Salvelinus namaycush*.
- salveol** (sal-ve-ol). An antiseptic solution of sodium creosotate in cresol.
- Salvia** (sal've-ah) [L.]. A genus of labiate plants. The leaves of *S. officinalis*, sage, contain a volatile oil, and are sudorific, carminative, and astringent: used in sore throat and as an application to ulcers, also for the purpose of checking excessive milk secretion. Dose of fluidextract, $\frac{1}{4}$ -1 fluidrachm (1-4 cc.).
- salvin** (sal'vin). A preparation of ethereal silica-ceratin, used in skin diseases.
- salviol** (sal've-ol). An eleopten, $C_{10}H_{16}O$, from the volatile oil of *Salvia officinalis*.
- salvosal** (sal'vo-sal). See *solvosal*.
- salyrgan** (sal-er'gan). A proprietary diuretic and antisyphilitic, being a 10 per cent solution of mercury salicylallylamide-*o*-acetate of sodium. Dose, 0.5-2 cc. Called also *mersalyl*.
- salysal** (sal'is-al). An insoluble, colorless, tasteless, odorless, crystalline powder, the salicyl ester of salicylic acid, $OH.C_6H_4.CO.O.C_6H_4.COOH$; used the same as the salicylates. Called also *disposal*.
- Salzer's operation, test-meal** (salz'erz) [Fritz Adolf Salzer, surgeon in Utrecht, born 1858]. See *operation and test-meal*.
- samaderin** (sam-ad'er-in). A light-yellow, bitter, crystalline principle from the fruit and bark of *Samadera indica*. It paralyzes the voluntary muscles and quickens the respiration.
- samandaridine** (sam-an-dar'id-in). An alkaloid from the skin of various salamanders: less poisonous than samandarine.
- samandarine** (sam-an'dar-in). A poisonous alkaloid from the skin of various salamanders.
- samarium** (sam-a're-um). A very rare metallic element; symbol, Sm; atomic weight, 150.4.
- sambucin** (sam-bu'sin). A proprietary diuretic tincture of the bark of *Sambucus nigra*.
- Sambucus** (sam-bu'kus) [L. "the elder-tree"]. A genus of caprifoliaceous trees and shrubs; elder. The flowers of *S. canadensis* or *S. nigra* are sudorific, and are used as a dressing for wounds, burns, ulcers, etc. The berries are sudorific and alterative. *Aqua sambuci* is used as a flavoring agent.
- samol** (sam'ol). An ointment containing 25 per cent of salimethol.
- samshu** (sam-shoo'). A Chinese spirit distilled from rice.
- sanal** (sa'nal). A proprietary surgical antiseptic.
- sanarthrit** (san-ar'hrith). A proprietary alcoholic extract of cartilage for protein therapy of arthritis, especially gonorrheal arthritis.
- sanative** (san'at-iv) [L. *sana're* to heal]. Having a tendency to heal; curative.
- sanatogen** (san-at'o-jen). A patent medicine composed essentially of 95 per cent casein and 5 per cent of sodium glycerophosphate: used as a food for invalids.
- sanatol** (san'at-ol). A thick, brown, proprietary liquid containing sulphuric acid and the phenol esters: disinfectant and antiseptic. Called also *Armanni's creolin*.
- sanator** (san-a'tor). A proprietary wine of ferromanganese and glycerophosphate of lime.
- sanatorium** (san-at-o're-um) [L. *sana'torius* conferring health, from *sana're* to cure]. 1. An establishment for the treatment of sick persons, especially a private hospital for convalescents or those who are not extremely ill. The term is now applied particularly to an establishment for the open-air treatment of tuberculous patients. 2. A health station; a health resort in a hot region.
- sanatory** (san'at-o-re) [L. *sana'torius*]. Conducive to health.
- sanatose** (san'at-ös). A preparation similar in composition to sanatogen.
- Sanctorius** (sank-to're-us). An Italian physician, 1561-1636. He was professor of medicine at Padua, and published several works, the most important of which is "Ars de Statica Medicina."
- sand bath** (sand bath). See *bath*.
- sand, brain** (sand). **Acervulus cerebri, intestinal s.**, sandlike matter made up of oxides of calcium and phosphorus, bacteria, bile pigment, etc., formed in the intestine. Its presence is attended with pain and mucous colic.
- sand crack**. A crack in a horse's hoof, sometimes causing lameness. When situated on the inside of the hoof it is termed *quarter crack*; when in the fore part of the hoof it is *toe crack*.
- sandalwood** (san'dal-wood) [L. *santalum*]. 1. The fragrant wood of *Santalum album*, white or yellow sandal, and of other trees of the genera *Santalum* and *Fusanus*. The oil and other preparations are used like copaiba in gonorrhea, bronchitis, and diarrhea. Dose of oil, 5-30 minims (0.333-2 cc.); of fluidextract, 1-2 fluidrachms (4-8 cc.). 2. Red sandalwood, red saunders; the wood of *Pterocarpus santalinus*, a leguminous tree (L. *santalum rubrum*): used as a coloring agent.
- sandarac** (san'dah-rak) [σανδαράκη]. A white, transparent resin from *Calvitris quadrivalvis*, a tree of Africa. It is used in dentistry in an alcoholic solution as a separating fluid and as a preservative varnish for plastic casts.
- sandaracing** (san'dar-ak-ing). The painting of a dental cast or impression with sandarac.
- Sanders' sign** (san'derz) [James Sanders, English physician, 1777-1843]. See under *sign*.
- sandfly** (sand'fi). See *Phlebotomus papatassii*.
- s. fever**. See under *fever*.
- sandoptal** (san'dop-tal). A proprietary hypnotic.
- Sandström's bodies** (zant-strämz) [Ivar Sandström, Swedish anatomist of the nineteenth century]. The parathyroids.

- Sandwith's bald tongue** (sand'withs) [Fleming Mant *Sandwith*, British physician, 1853-1918]. See under *tongue*.
- sane** (sān) [L. *sa'nus*]. Of sound mind.
- sang** (sang). 1. Ginseng. 2. Sangaree.
- sangaree** (sang-ar-e') [Sp. *sangria*]. A drink containing wine or porter: often prescribed as a tonic or galactic.
- sangogen** (san'go-jen). A proprietary compound of iron albuminate and manganese with strychnine and an arsenical compound.
- sangrenal** (sang're-nal). A preparation from the exsanguinating renal glands of the sheep: used as an astringent and hemostatic and as a cardiac stimulant and tonic.
- sanguestin** (sang-wes'tin). A proprietary preparation of a principle derived from the suprarenal glands.
- sanguicolous** (sang-wik'o-lus) [L. *san'guis* blood + *col'ere* to dwell]. Inhabiting or living in the blood.
- sanguifacient** (sang-we-fa'shent) [L. *san'guis* blood + *fa'cere* to make]. Forming blood.
- sanguiferous** (sang-wif'er-us) [L. *san'guis* blood + *fer're* to bear]. Conveying or containing blood.
- sanguiferrin** (sang-wif'er-in). A liquid preparation of hemoglobin, iron, and manganese.
- sanguification** (sang'wif-ik-a'shun) [L. *san'guis* blood + *fa'cere* to make]. The process of making blood; also conversion into blood.
- sanguimotor, sanguimotory** (sang-wim-o'tor, sang-wim-o'tor-e) [L. *san'guis* blood + *mo'tor* mover]. Pertaining to the circulation of the blood.
- sanguinal** (sang'win-al). A preparation of fresh blood, defibrinated and dried, and said to contain 10 per cent of hemoglobin, 46 per cent natural blood salts, and 44 per cent of muscle albumin. It is used as a hematonic in chlorosis and anemia.
- Sanguinaria** (sang-win-a're-ah) [L.]. A genus of papaveraceous plants. The rhizome of *S. canadensis*, bloodroot, contains the alkaloid sanguinarine, and is a gastric tonic, emetic, expectorant, and cholagogue. It is useful in coughs, jaundice, bronchitis, etc. In large doses it is an irritant poison. Dose of vinegar (*acetum sanguinariae*), 10-30 minims (0.666-2 cc.); of fluid extract, 5-15 minims (0.333-1 cc.); of tincture, 5-30 minims (0.333-2 cc.).
- sanguinarin** (sang-win-a're-in). A proprietary concentration from sanguinaria.
- sanguinarine** (sang-win-a'rin). 1. A white alkaloid, $C_{40}H_{52}NO_4 \cdot H_2O$, from *Sanguinaria canadensis*: tonic and expectorant. Dose, $\frac{1}{16}$ - $\frac{1}{4}$ grain (0.0016-0.016 Gm.). 2. A precipitate or concentration prepared from *S. canadensis*. Dose, $\frac{1}{4}$ -1 grain (0.008-0.066 Gm.).
- sanguine** (sang'win) [L. *sanguin'eus*; *san'guis* blood]. 1. Abounding in blood. 2. Ardent; hopeful.
- sanguineous** (sang-win'e-us) [L. *sanguin'eus*]. Abounding in blood; pertaining to the blood.
- sanguino** (sang'win-o). A therapeutic preparation of blood, in a liquid or in tablets, said to contain all the carbohydrates, fats, albumins, and iron salts of the animal economy.
- sanguinoform** (sang-win'o-form). A proprietary preparation containing hemoglobin and nucleated erythrocytes, from embryonic pigs.
- sanguinol** (sang'win-ol). A proprietary liquid preparation of a petrolate with sanguinaria and antiseptics.
- sanguinolent** (sang-win'o-lent) [L. *sanguinolentus*]. Of a bloody tinge.
- sanguinopoietic** (sang'win-o-poi-et'ik) [L. *san'guis* blood + *poi'etis* to make]. Forming blood.
- sanguirenal** (sang-wir-e'nal) [L. *san'guis* blood + *ren* kidney]. Pertaining to the blood and the kidneys.
- sanguis** (sang'wis). Latin for blood.
- sanguisuga** (sang-wis-u'gah) [L. *san'guis* blood + *su'gere* to suck]. A leech.
- saniculit** (san'ik-ult). A certain system of quack medicine.
- sanies** (sa'ne-ēz) [L.]. A fetid, ichorous discharge from a wound or ulcer, containing serum, pus, and blood.
- sanipurulent** (sa'ne-o-pu'ru-lent). Partly sanious and partly purulent.
- sanioseous** (sa'ne-o-se'rus). Partly sanious and partly serous.
- sanious** (sa'ne-us) [L. *sanio'sus*]. Of the nature of sanies.
- sanipractic** (san-ip-rak'tik). A system of medical practice based on applied prophylactic and therapeutic sanitation.
- sanitarian** (san-it-a're-an). A person who is expert in matters of sanitation and public health.
- sanitarium** (san-it-a're-um) [L.]. An incorrect spelling or form of the word *sanatorium*.
- sanitary** (san-it-a're) [L. *sanita'rius*]. Promoting or pertaining to health. **s. train**. See under *train*.
- sanitas** (san'it-as) [L. "health"]. A proprietary disinfectant prepared from turpentine.
- sanitation** (san-it-a'shun) [L. *san'itas* health]. The establishment of environmental conditions favorable to health; assanation.
- sanitol** (san'it-ol). A proprietary mouth wash.
- sanity** (san'it-e) [L. *san'itas* soundness]. Soundness, especially soundness of mind.
- sanka** (sang'kah). A proprietary coffee preparation with a large portion of the caffeine removed.
- sanmethyl** (san-meth'il). A proprietary preparation of methylene blue, copaiba, phenyl salicylate, oils of santal and cinnamon, and the oleoresins of matico and cubeba. It is used in gonorrhea, etc. Dose, 10 minims (0.666 cc.), in capsule.
- sanmetto** (san-met'o). A proprietary mixture of saw palmetto and santal.
- sano** (sa'no). A proprietary dietetic remedy for anemia and indigestion.
- sanocalcin** (san-o-kal'sin). A preparation claimed to be calcium glycerinolactophosphate: used in chronic infectious diseases. Dose, 1-8 grains (0.1-0.5 Gm.).
- sancrocin** (san-o-kris'in) [L. *sa'nus* health + *χρυσός* gold]. A double thiosulphate of sodium and gold, $3Na_2S_2O_3 \cdot Au_2S_2O_3 \cdot 4H_2O$, a white crystalline substance containing 37 per cent of gold. Used by intravenous or intramuscular injection for the treatment of tuberculosis. Dose, 8-15 grains (0.5-1 Gm.). See *Møllgaard treatment*, under *treatment*.
- sanoform** (san'o-form). A colorless, crystalline substance, diiodomethyl salicylate, $OH \cdot C_6H_4I_2 \cdot CO \cdot O \cdot CH_3$: used as a substitute for iodoform.
- sanogyl** (san'o-jil). A tooth paste containing fluoride salts and neoarsphenamine in a soap base.
- sanolith** (san'o-lith). A proprietary tablet of calcium sulphate charged with a preparation of formaldehyde: used in aerial disinfection.
- sanose** (sa'nōs). A compound of casein (80 parts) and albumose (20 parts): a food for the sick; used also as a vehicle.
- sanosin** (san'o-sin). A preparation used for inhalation in pulmonary tuberculosis, consisting of flowers of sulphur, powdered charcoal, and powdered eucalyptus leaves with oil of eucalyptus.
- Sansevieria** (san'se-vi-e're-ab) [L.]. A genus of East Indian liliaceous plants; good in urethral, pulmonary, and rheumatic affections.
- Sansom's sign** (san'somz) [Arthur Ernest Sansom, English physician, 1838-1907]. See *sign*.
- Sanson's images** (san'sonz) [Louis Joseph Sanson, French physician, 1700-1841]. See *Purkinje-Sanson images*, under *image*.

- santal** (san'tal) [L. *san'talum*]. White, or true, sandalwood.
- santalín** (san'tal-in). A red, crystalline, resin-like dye, $C_{15}H_{14}O_6$, from red saunders. Called also *santalic acid*.
- santal-monal** (san-tal-mo-nal'). A French antiseptic, analgesic, and diuretic containing methylene blue in balsamic oils.
- santalol** (san'tal-ol). A sesquiterpene alcohol, $C_{15}H_{22}OH$, the chief constituent of sandalwood. It is used in gonorrheal urethritis and cystitis. Dose, 3 grains (0.2 Gm.). **s. salicylate**, santyl.
- santalum** (san'tal-um). Sandal wood. **s. rubrum**, red saunders; the heart wood of *Pterocarpus santalinus*.
- santol** (san'tol). 1. A colorless, crystalline principle, $C_{20}H_{32}O_3$, from red saunders. 2. A proprietary sandalwood preparation for gonorrhea, etc.
- santolin** (san'to-lin). A proprietary preparation of oil of sandal, phenyl salicylate, and diastase, and the oleoresins of copaiba, cubeb, and matico: used in urethritis and cystitis.
- santonica** (san-ton'ik-ah) [L.]. Levant wormseed, or cina; the dried flower heads of *Artemisia maritima*. Santonica contains santonin, and is used as a vermifuge, especially for seatworms and roundworms, and for incontinence of urine. In large doses it is mydriatic and diuretic. Overdoses may cause convulsions and vertigo, and give a yellow or pinkish tint to objects seen. Dose, 5-30 grains (0.33-2 Gm.); of fluidextract, 15-60 minims (1-4 cc.). The *trochisci santonini* contain 1 grain of santonin.
- santonin** (san'to-nin) [L. *santoninum*]. A colorless, crystalline, and poisonous active principle, the inner anhydride of santoninic acid, $(CH_3)_2C_{10}H_5O \cdot CH(CH_3)CO_2$, from santonica. It is used as a vermifuge like santonica. Dose, 1-4 grains (0.066-0.266 Gm.).
- santoninoxim** (san'to-nin-oks'im). A crystalline substance, $C_{15}H_{13}O_3NOH$, prepared from antelmintic santonin. Dose for a child, $\frac{1}{2}$ -2 $\frac{1}{2}$ grains (0.049-0.149 Gm.); for an adult, 2-4 grains (0.132-0.264 Gm.).
- Santorini's cartilages, duct, muscle**, etc. (san-to-re'nez) [Giovanni Domenico Santorini, Italian anatomist, 1681-1737]. See *cartilage, duct, muscle*, etc.
- santozea** (san-to'ze-ah). A preparation of santal, saw palmetto, etc: used as a diuretic and genito-urinary tonic.
- santyl** (san'til). A proprietary salicylic acid ester of santalol, $C_{15}H_{25}O \cdot CO \cdot C_6H_4OH$: used internally in gonorrhea. Dose, 25 minims (1.5 cc.) three times a day.
- santylmethylether** (san'til-meth'il-e'ther). Same as *thyresol*.
- sap** (sap). The natural juice of a living structure. **cell s.**, enchylema. **nuclear s.** See *karyolymph*.
- sapa** (sap'ah). A proprietary solid substitute for liquid soap.
- sapacol** (sap'ak-ol). A proprietary antiseptic paste for cutaneous affections.
- sapene** (sap'en). A liquid soap used as a vehicle for various proprietary antiseptics.
- saphena** (saf-e'nah) [L.; *σαφηνης* manifest]. Either of two large superficial veins of the leg. See *saphenous vein*, under *vein*.
- saphenous** (saf'e-nus). Pertaining to or associated with a saphena: applied to certain arteries, nerves, veins, etc.
- sapid** (sap'id) [L. *sap'idus*]. Having or imparting an agreeable taste.
- sapin** (sa'pin). A nontoxic ptomaine, $C_6H_{14}N_2$: isomeric with cadaverine and neuridine.
- sappiphore** (sap'if-or) [L. *sa'pis* taste + *φορεῖν* to bear]. Any member of a series of atomic groups which influence taste. If these are suitably mated, a sweet taste is said to result; if discordantly, a bitter taste.
- sapo** (sa'po) [L. for *soap*]. 1. Soap; a compound of a fatty acid with a suitable base. 2. White castile soap made of soda and olive oil: used in pills, suppositories, plasters, and liniments: detergent. **s. animalis**, *sapo domesticus*. **s. cinereus** (gray soap, or mercurial salve soap), a soap containing 50 per cent, by weight, of mercury and 5 per cent of benzoated fat. **s. domesticus**, a preparation of a soft soap made of animal fat and soda. **s. durus**, hard soap. **s. mollis** (soft soap), **s. viridis** (green soap), a soap made of linseed or other oil, potash, alcohol, and water: used in skin diseases and liniments. Called also *green s.*
- sapocarb** (sa-po-kar'bol). An antiseptic solution of cresol in potassium soap.
- sapocrinin** (sa-po-krin'in). Fleig's name for secretion produced by rubbing of the intestinal mucous membrane with a solution of soap.
- sapodermin** (sa-po-der'min). A proprietary soap containing 0.2 to 1 per cent of mercuric albuminate: used in syphilitic and other skin affections.
- sapogenin** (sa-poj'en-in). A crystalline substance, $C_{14}H_{22}O_2$, derivable from saponin.
- sapolan** (sa-po-lan). An ointment base composed of soap, wool fat, and crude naphtha.
- sapolanolin** (sa-po-lan'o-lin). A preparation of 5 parts of wool fat and 4 parts of soft soap: used in eczema and acne.
- saponaceous** (sa-po-na'shus) [L. *sa'po* soap]. Of a soapy quality or nature.
- saponal** (sa'po-nal). Soap, 20 per cent; sodium carbonate, 60 per cent; and other ingredients: detergent.
- Saponaria** (sa-po-na're-ah). A genus of plants. The root of *S. officinalis*, or soapwort, has alterative properties and was formerly used in skin diseases.
- saponatus** (sa-po-na'tus) [L.]. Charged or mixed with soap.
- saponetin** (sa-po-ne'tin). A crystalline substance, $C_{40}H_{66}O_{16}$, from soapwort, etc.
- saponification** (sa-po-nif-ik-a'shun) [L. *sa'po* soap + *fa'cere* to make]. The act or process of converting or becoming converted into soap. In chemistry, the term now denotes the hydrolysis of an ester by an alkali, resulting in the production of a free alcohol and an alkali salt of the ester acid.
- saponin** (sap-o'nin). 1. A glucoside, $C_{32}H_{64}O_{18}$, found in soapwort, quillaia, and many other plants: it is an irritant poison; it is expectorant and emetic. 2. Any glucoside of the group to which typical saponin belongs.
- sapotin** (sap-o'tin). A white, crystalline glucoside, $C_{28}H_{52}O_{20}$, from the seeds of *Sapo'ia zapotil'la*.
- sapotinetin** (sap'o'tin-e'tin). A principle, $C_{17}H_{35}O_{10}$, from sapotin.
- sapotoxin** (sa-po-toks'in) [L. *sa'po* soap + *toxin*]. A poisonous glucoside, $C_{17}H_{35}O_{10}$, found in soapbark (quillaia).
- sappan wood** (sap'an). The wood of a Philippine tree, *Caesalpin'ia sap'pan*. A decoction is used as a dye, and also to control hemorrhage. Called also *sibucuo*.
- Sappey's fibers, ligament, veins** (sap'ež) [Marie Philibert Constant Sappey, French anatomist, 1810-1896]. See *fiber, ligament, vein*.
- sapphism** (saf'fiz'm) [after *Sappho*, Greek poetess]. Tribadism, or sexual perversion between women.
- Sappin'ia diploi'dea**. * A genus of coprozoic amebae having a definite cuticle and two similar nuclei. It has been called also *Amoeba diploidea* and *Bahikampfia diploidea*.
- sapremia, sapraemia** (sap-re'me-ah) [*σαπρός* rotten + *αἷμα* blood]. Intoxication due to the presence in the blood of the products of saprophytic

and nonpathogenic bacteria. Called also *septic intoxication* and *putrid intoxication*.

sapremic, sapraemic (sap-re'mik). Pertaining to or of the nature of the sapremia.

saprin (sa'prin) [σαπρίν putrid]. A ptomaine, $C_6H_{11}N_2$, from decaying visceral substances: not poisonous.

saprodontia (sa-pro-don'she-ah) [σαπρός rotten + ὀδὸν tooth]. Caries of the teeth.

saprogen (sap'ro-jen). Any saprogenic micro-organism.

saprogenic, saprogenous (sap-ro-jen'ik, sap-roj'en-us) [σαπρός putrid + γεννᾶν to produce]. Causing or arising from putrefaction.

saprol (sa'prol). A dark-brown, inflammable, oily mixture of 40 per cent of crude cresols in hydrocarbons from petroleum: disinfectant.

Saprolegnia (sap-ro-leg'ne-ah) [σαπρός putrid + λέγων border]. A genus of phycomycetous fungi. The species are partially saprophytic. *S. fe'rax* is destructive to salmon and to various water animals.

saprophilous (sa-profil'us) [σαπρός putrid + φιλεῖν to love]. Living upon decaying and dead matter; a term applied mainly to various micro-organisms.

saprophyte (sap-ro-fit) [σαπρός putrid + φυτόν plant]. Any vegetable organism living upon dead or decaying organic matter.

saprophytic (sap-ro-fit'ik) [σαπρός putrid + φυτόν plant]. Of the nature of or pertaining to a saprophyte.

saprophyra (sa-pro-pi'rah) [σαπρός putrid + πῦρ fire, fever]. Putrid or typhus fever.

saprotyphus (sa-pro-ti'fus) [σαπρός putrid + τύφος typhus]. True or putrid typhus.

saprozoic (sap-ro-zo'ik) [σαπρός filth + ζῶν animal]. Living on dead or lifeless matter.

saprozoite (sap-ro-zo'it). A protozoan organism which does not require a living host.

sapucainha oil (sah-poo-kin'hah). See under *oil*.

sarampion (sar-am'pe-on). See *serempion*.

sarcin (sar'sin) [σάρξ flesh]. 1. Same as *hypoxanthine*. 2. Same as *sarcine*.

Sarcina (sar-si'nah) [L. "pack"]. A genus of Coccaceae characterized by the fact that cell division occurs under favorable conditions in three planes, forming regular packets. *S. alba*, a species with small cocci found in air and water. *S. auranti'aca*, a species from air, water, and from white beer, producing a golden-yellow pigment (linoxanthine). *S. au'rea*, a species from pulmonary exudates of pneumonia; it produces a bright yellow pigment. *S. can'dida*, a species from water and the air of a brewery. *S. fla'va*, a species from beer and cheese; it produces a yellow pigment. *S. fusces'cens*, a species from the human stomach. *S. hyali'na*, a species from marsh water. *S. intestina'lis*, a species from the intestines of man, animals, and fowls. *S. littora'lis*, a species from sea water, producing a red pigment. Löwenberg's s., a pathogenic form from a case of ozena. *S. lu'tea*, a species from air, the conjunctival sac, human skin, potato, water, etc., producing a yellow pigment. *S. max'ima*, a large species from malt mash. *S. minu'ta*, a very small species from sour milk. *S. mor'rhuae*, a species from codfish. *S. no'bilis*, a species from old ascitic fluid, producing a brick-red pigment. *S. paludo'sa*, a species from marsh water. *S. pulmo'num*, a nonpathogenic species from the sputum of phthisis. *S. reitenbach'ii*, a form from decaying water plants. *S. re'nis*, a species from the kidneys of tuberculous cadavers. *S. ro'sea*, a species from air, beer, red milk, etc.: it produces an intensely red pigment. *S. ure'a'e*, *S. uri'nae*, a form from the human bladder; not pathogenic. *S. ventric'uli*, a species from the stomachs of men and animals, forming colonies of

considerable size. *S. viola'cea*, a species from water producing a violet pigment. *S. vircho'wii*, a species from the human lung: said to cause the condition known as pseudomycosis sarcinica.

sarcine (sar'sin) [L. *sarci'na* pack]. A cube composed of eight bacterial cells (sarcine of the first power), or of sixty-four cells (sarcine of the second power), produced by the division of sarcinae.

sarcinic (sar-sin'ik). Pertaining to sarcinae.

sarcitis (sar-si'tis) [σάρξ flesh + -itis inflammation]. Same as *myositis*.

sarco- [σάρξ flesh]. A prefix denoting relation to flesh.

sarco-adenoma (sar'ko-ad-en-o'mah). Same as *adenosarcoma*.

sarcoblast (sar'ko-blast) [σάρξ flesh + βλαστός germ]. The primitive cell which develops into a muscle cell.

sarcocarcinoma (sar'ko-kar-sin-o'mah). Sarcoma and carcinoma combined.

sarcocele (sar'ko-sel) [σάρξ flesh + κήλη tumor]. Any fleshy swelling or tumor of the testicle.

sarcocol (sar'ko-kol) [L. *sarcocol'la*; σάρξ flesh + κόλλα glue]. A nauseous gum-resin from various African species of *Penae'a*; also a similar drug from Asia: now discarded as medicines.

sarcocyst (sar'ko-sist). A globular, oval, or elongated body produced by the growth of Sarcocystis and called the tubes of Rainey and of Meischer. They can sometimes be seen with the unaided eye in the muscles.

sarcocystin (sar-ko-sis'tin). A toxin obtained from the bodies of species of Sarcocystis.

Sarcocystis (sar-ko-sis'tis) [σάρξ flesh + κύστις bladder]. A genus of the Sarcosporidia. *S. bertram'i* is said to have been found in man. *S. blanchar'di* is found in cattle. *S. huet'i* is found in the seal. *S. kor'tei* is found in monkeys. *S. mischeria'na* is found in the pig. *S. muc'o'sa* is found in the kangaroo and perhaps in man. *S. mur'is* is found in rats and perhaps in man. *S. tenel'la* is found in sheep and cattle and in man. *S. tenel'la bu'bali* is found in the meat of Indian buffaloes (*Bu'balus buf'felus*).

sarcocyte (sar'ko-sit) [σάρξ flesh + κύτος cell]. The middle layer of the ectoplasm of a protozoan lying between the epicyte and the myocyte.

sarcode (sar'kod) [σάρξ flesh + εἶδος form]. The protoplasm of animal cells.

Sarcodina (sar-ko-di'nah) [σαρκώδης, fleshlike]. The lowest class of protozoa in which the body protoplasm is naked, locomotion and ingestion of blood being accomplished by pseudopodia. It includes Amoebae, Foraminifera, Heliozoa, and Radiolaria.

sarco-enchondroma (sar'ko-en-kon-dro'mah). Sarcoma combined with enchondroma.

sarcogenic (sar'ko-jen'ik) [σάρξ flesh + γεννᾶν to produce]. Forming flesh.

sarcoglia (sar-kog'le-ah) [σάρξ flesh + γλία glue]. The substance which composes the eminences of Doyen at the points of entrance of nerves into muscle fibers.

sarcoid (sar'koid) [σάρξ flesh + εἶδος form]. 1. Resembling flesh; fleshy. 2. A sarcoma-like tumor; a general term applied to a group of skin lesions generally credited with being of tuberculous nature. *s. of Boeck*, multiple benign sarcoid. *Darier-Roussy s.*, a type of multiple benign sarcoid, characterized by the large size of its nodules and its subcutaneous location. *multiple benign s.*, a condition marked by the presence of nodules on the skin, caused by proliferation of connective tissue surrounding the blood vessels; called also *sarcoid of Boeck* and *miliary lupoid*.

sarcolactate (sar-ko-lak'tât). Any salt of sarcolactic acid.

sarcolactic acid (sar-ko-lak'tik). See under *acid*.

sarcolemma (sar-ko-lem'ah) [σάρξ flesh + λέμμα husk]. The delicate elastic sheath which invests every striated muscle fiber. See *muscle*.

sarcolemmic, sarcolemmous (sar-ko-lem'ik, sar-ko-lem'us). Pertaining to or of the nature of sarcolemma.

sarcology (sar-kol'o-je) [σάρξ flesh + λόγος treatise]. That branch of anatomy which treats of the soft tissues of the body.

sarcolysis (sar-kol'is-is) [see *sarcolyte*]. Disintegration of the soft tissues; disintegration of flesh.

sarcolyte (sar'ko-lit) [σάρξ flesh + λυειν to dissolve]. A cell concerned in the disintegration of the soft tissues.

sarcolytic (sar-ko-lit'ik). Disintegrating flesh.

sarcoma (sar-ko'mah), pl. *sarcamas* or *sarco'mata* [σάρξ, σαρκός flesh + -ωμα tumor]. A tumor made up of a substance like the embryonic connective tissue; tissue composed of closely packed cells embedded in a fibrillar or homogeneous substance. Sarcomas are often highly malignant. See also *chondrosarcoma*, *fibrosarcoma*, *lymphosarcoma*, *melanosarcoma*, *myxosarcoma*, *osteosarcoma*, etc. **Ab-ernethy's s.**, a variety of fatty tumor found principally on the trunk. **adipose s.**, one which contains a copious element of fat. **alveolar s.**, a variety having a reticulated fibrous stroma inclosing groups of sarcoma cells, which resemble epithelial cells and are inclosed in alveoli walled with connective tissue. **angiolithic s.** Same as *psammoma*. **botryoid s.**, a grapelike form occurring within the cervix uteri. **chicken s.**, a malignant spindle-cell growth which can be transmitted to but one strain of fowl and is caused by a filtrable virus. **chloromatous s.**, a round-cell sarcoma of the periosteum of the skull, having a greenish color. Same as *chloroma*. **cylindromatous s.**, a sarcoma whose substance is traversed by cylinders of myxomatous tissue. **deciduocellular s.**, malignant deciduoma of the uterus. See *syncytioma malignum*. **encephaloid s.** Same as *round-cell s.* **fasciculated s.**, a spindle-cell sarcoma. **giant-cell s.**, a variety named from its containing large multinucleated cells, or myeloplaxes. **infective s.**, a growth in the dog, of uncertain nature, and attributed to infection. **Kaposi's s.**, multiple soft bluish nodules of the skin with hemorrhages, similar to infectious granulomas, and under certain conditions developing neoplastic characteristics. **leukocytic s.**, leukemia. **lymphatic s.**, lymphosarcoma. **mammary s.**, a sarcoma having the appearance and texture of mammary tissue. **medullary s.**, a soft, bleeding, fungous sarcoma; fungus haematodes. **melanotic s.**, a variety whose substance is pigmented with melanin. **mixed-cell s.** Same as *polymorphous s.* **multiple hemorrhagic s.** Same as *Kaposi's s.* **myelogenic s.**, a sarcoma involving the bone marrow. **myeloid s.**, a variety containing both giant cells and spindle cells. **net-cell s.**, a variety of myxosarcoma. **oat-cell s.**, **oat-shaped-cell s.**, a sarcoma in which the cells are bluntly elongated and contain long oval nuclei. **osteogenic s.**, a general term for tumors occurring in bone and arising from bone cells of osteogenic tissue. **osteoid s.**, a sarcoma in which bony tissue has developed. **parosteal s.**, a sarcoma situated close to the outer surface of a bone. **polymorphous s.**, a sarcoma containing cells of several varieties. **retroperitoneal s.**, sarcoma situated behind the peritoneum. **round-cell s.**, encephaloid or medullary cancer: a sarcoma with large or small cells resembling leukocytes. **Rous s.**, a peculiar sarcoma-like growth found in some fowls. From it can be obtained a filtrable virus which on inoculation into other fowls reproduces similar growths. **serocystic s.**, a proliferous cyst with intracystic growths. **spindle-cell s.**, a form with spindle-shaped cells; a recurrent fibroid or fibroplastic tumor. **withering s.**, mycosis fungoides.

sarcomatoid (sar-ko'mat-oid). Resembling sarcoma.

sarcomatosis (sar'ko-mat-o'sis). A condition characterized by the formation of sarcomas. **s. cutis**, the development of sarcomatous growths on the skin. **general s.**, the occurrence of sarcomas in several parts of the body at the same time.

sarcomatous (sar'ko-mat-us). Pertaining to or of the nature of sarcoma.

sarcomelanin (sar-ko-mel'an-in) [σάρξ flesh + μέλας black]. The black pigment of melanosarcoma.

sarcomere (sar'ko-mēr) [σάρξ flesh + μέρος part]. Any one of the segments into which the lines or membranes of Krause are supposed to divide a muscular fibrilla.

sarcomphalocoele (sar-kom-fal'o-sēl) [σάρξ flesh + ὀμφαλός navel + κήλη tumor]. A fleshy tumor of the umbilicus.

sarcomyces (sar-ko-mi'sēz) [σάρξ flesh + μύκης fungus]. A fleshy fungous growth.

Sarcophaga (sar-kof'ag-ah) [σάρξ flesh + φαγείν to eat]. A genus of flies of the family Muscidae. The larvae are sometimes accidental parasites on man. *S. carnaria* is widely distributed in Europe. *S. communis* is widely distributed in the United States. *S. chrysos'toma* is found in tropical America. *S. magnifica* is found in Russia.

Sarcophaga carnaria.

sarcoplasm (sar'ko-plazm) [σάρξ flesh + πλάσμα plasm]. The interfibrillary matter of the striated muscles; the substance in which the fibrillae of the muscle fiber are embedded.

sarcoplastic (sar-ko-plaz'mik). Composed of or containing sarcoplasm.

sarcoplast (sar'ko-plast) [σάρξ flesh + πλαστός formed]. An interfibrillary cell of a muscle, itself capable of being transformed into a muscle.

sarcopoietic (sar'ko-poi-et'ik) [σάρξ flesh + ποιεῖν to make]. Producing flesh or muscle.

Sarcopsylla (sar-ko-sil'ah). See *chigger*.

Sarcoptes (sar-kop'tēz) [σάρξ flesh + κῶπτεν to cut]. A genus of acarids, including *S. scabiei*, or the itch mite which produces scabies in man. See *scabies*. Varieties of *S. scabiei* cause mange of swine, horses, and dogs.

sarcosepsis (sar-ko-sep'sis) [σάρξ flesh + σepsis]. Sepsis due to the presence of bacteria in the tissues.

sarcosin (sar'ko-sin). Methyl-glycocol, a crystallizable substance, $\text{CH}_3\text{NHCH}_2\text{COOH}$, from decomposing creatine and caffeine.

sarcosis (sar-ko'sis) [σάρξ flesh]. 1. The presence of multiple fleshy tumors. 2. Abnormal increase of flesh.

sarcosome (sar'ko-sōm) [σάρξ flesh + σῶμα body]. The darker and contractile part of a muscle fibril.

Sarcosporidia (sar'ko-spo-rid'e-ah) [σάρξ flesh + sporidia]. An order of sporozoan parasites found in the muscles of warm-blooded animals and producing anemia and cachexia. See *Sarcocystis*.

sarcosporidiosis (sar'ko-spo-rid-e-o'sis). The condition of being infected with Sarcosporidia.

sarcostosis (sar-kos-to'sis) [σάρξ flesh + ὀστέον bone]. Ossification of the fleshy tissues.

sarcostyle (sar'ko-stil) [σάρξ flesh + στῦλος column]. Any one of the primitive fibrillae of an elementary muscle fiber: a muscle column.

sarcotherapeutics (sar'ko-ther-ap-u'tiks) [σάρξ flesh + therapeutics]. Treatment of disease by the use of animal extracts.

sarcotherapy (sar-ko-ther'ap-e). Sarcotherapeutics.

sarcotic (sar-kot'ik) [σαρκωτικός]. Promoting the growth of flesh.

sarcotome (sar'kō-tōm) [σάρψ flesh + τέμνειν to cut]. A kind of écraseur worked by a spring.

sarcous (sar'kus) [σάρψ, σαρκός flesh]. Pertaining to flesh or to muscular tissues.

sardoniac (sar-don'ik) [L. *sardoniacus*; Σαρδονικός Sardinian]. Noting a kind of spasmodic or tetanic grin or involuntary smile, the *risus sardoniacus*: so called from a plant of Sardinia, probably a *Ranunculus*, or crowfoot, which was believed to produce it.

sarkin (sar'kin). Same as *hypoxanthine*.

Sarothamnus (sa-ro-tham'nus) [σάρον broom + θάμνος shrub]. A genus of leguminous European shrubs. *S. scoparius* is called broom. See *Scoparius*.

Sarracenia (sar-as-e'ne-ah). A genus of poly-petalous plants, known as *sidesaddle flower* and *pitcher plant*, type of the order Sarracenaceae. *S. purpurea*, the commonest of the pitcher plants of North America, is vaunted as a cure for small-pox: also its homeopathic preparation. The secretion of the pitcher of this plant is said to contain digestant and anesthetic ferments. It is a stimulant, diuretic, and aperient. *S. flava*, a species known as *trumpetleaf* and *humisman's-horn*, is an effective remedy for diarrhea. Dose of fluid-extract of rhizome, 5-15 minims (0.333-1 cc.).

sarsa (sar'sah), gen. *sar'sae* [L.; Sp. *sarça* briar]. Same as *sarsaparilla*.

sarsaparilla (sar'sap-ar-il'ah) [L.; Sp. "briar vine"]. The root of *Smilax officinalis*, *S. mexicana*, *S. medica*, and other species of tropical America. It contains the glucoside parillin, and is alterative and diuretic. It is employed, often in connection with iodides and mercurials, in late syphilis and chronic rheumatism, and is in high popular esteem as a tonic and blood purifier. Dose of fluidextract, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.); of compound fluidextract, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.); of decoction, 4-15 fl.oz. (118-444 cc.); of syrup, 1-4 fluidrachms (4-16 cc.).

sartian (sar'shan) [named for the *Sarts*, a people of Central Asia]. Noting an epidemic skin disease of Central Asia, characterized by facial nodules which become converted into scabby ulcers: probably furunculosis orientalis.

sartorius (sar-to're-us) [L. from *sar'tor* tailor]. See *muscles*, table of.

Sassafras (sas'af-ras) [L.]. A genus of lauraceous trees. The root bark of *S. variifolia*, a tree of North America, is aromatic, stimulant, diaphoretic, and carminative. It is sometimes employed in the treatment of syphilis and skin diseases. The volatile oil contains safrene and safrol. It is an antinarcotic and carminative, but is chiefly used as a flavoring agent. Dose of fluidextract, 30-60 minims (0.66-3.33 cc.). The pith of the stems of *sassafras* (*S. medulla*) affords a mucilage (*mucilago sassafras medullae*) which is used as a demulcent in bronchial and gastric affections, and as an application in eye diseases.

sassy-bark (sas'e). The poisonous bark of *Erythrophloeum guineense*. See *Erythrophloeum*.

sat. Abbreviation for *saturated*.

satamul (sah'tah-mool). The *Asparagus sarmen-tosus*, a medicinal plant of India.

satellite (sat'el-it) [L. *satelles* companion]. 1. A vein that closely accompanies an artery, such as the brachial. 2. A minor, or attendant, lesion situated near a larger one.

satellitosis (sat-el-i-to'sis). Accumulation of free nuclei about the ganglion cells of the brain cortex: seen in general paralysis, etc.

satrose (sat'rōs). A commercial preparation of oatmeal for use in diabetes.

saturated (sat'u-ra-ted). 1. Having all the chemical affinities satisfied. 2. Unable to hold in solution any more of a given substance.

saturation (sat-u-ra'shun) [L. *satura'tio*]. 1. The act of saturating or condition of being saturated. 2. In radiotherapy, the delivery of an erythema dose within a short time and then maintaining this effect for some time by additional smaller doses. 3. An effervescing draft or potion.

saturnine (sat'ur-nin) [L. *saturni'nus*; *saturnus* lead]. Pertaining to or produced by lead.

saturnism (sat'ur-nizm) [L. *saturnus* lead]. Chronic lead poisoning; plumbism.

satyria (sat-ir'e-ah). A proprietary tonic for the genito-urinary system.

satyriasis (sat-ir-i'a-sis) [σάτυρος satyr]. Excessive venereal impulse in the male.

satyromania (sat'ir-o-ma'ne-ah) [σάτυρος satyr + *mania* madness]. Same as *satyriasis*.

saucer, auditory. A saucer-shaped fold of the embryonic ectoderm which develops into the otocyst.

Sauerbruch's cabinet, prosthesis (sow'er-brooks) [Ferdinand *Sauerbruch*, surgeon in Berlin, born 1875]. See under *cabinet* and under *prosthesis*.

saurin (zow'er-in). A proprietary preparation of a pure active culture of Massol's bacillus.

sauerkraut (sow'er-krowt). Cabbage cut fine and allowed to ferment in a brine made of its own juice salted. Sauerkraut and its juice have been prescribed in diabetes and in uric acid conditions.

Saundby's test (sawnd'bēz) [Robert *Saundby*, English physician, 1849-1918]. See under *tests*.

saunders, red (sawnd'derz). See *sandalwood*.

Saunders' disease, sign (sawnd'derz) [Edward Watt *Saunders*, physician in St. Louis, born 1854]. See *disease* and *sign*.

sauriasis (saw-rī-as-is). Sauriosis.

sauriderma (saw-rid-er'mah) [σαῦρος lizard + δέρμα skin]. Ichthyosis hystrix.

sauridon (saw'rid-on) [σαῦρος lizard]. A disinfectant substance distilled from fossil shells.

sauriosis (saw-re-o'sis) [σαῦρος lizard]. Ichthyosis sebacea cornea; Darier's disease.

sauroid (saw'roid) [σαῦρος lizard + εἶδος form]. Resembling a reptile. **s. cell** or **stage**. See *normoblast*.

saurol (saw'rol). A proprietary ammonium sulphur substitute for ichthyol derived from fossil fauna in the chalk layers of Trefontane, near Meriac, Switzerland.

sausage, sigmoid (saw'saj). See *sigmoid roll*, under *roll*.

sausage poisoning (saw'saj). See *allantiasis* and *botulism*.

sauserism (saw'sar-izm). A dry or paralyzed condition of the tongue.

Saussure's hygrometer (so-sūrż) [Horace Bénédict de *Saussure*, Swiss physicist, 1740-1779]. See *hygrometer*.

Saussurea lap'pa. A plant of India. The essential oil is antiseptic and disinfectant. The powdered root (kuth root) is expectorant and is used in asthma.

Savill's disease (sa'vilz) [Thomas Dixon *Savill*, physician in London, 1856-1910]. See *disease*.

savin (sav'in) [L. *sabi'na*]. The evergreen shrub, *Juniperus sabina*. The leaves and tops afford an acid volatile oil, which is a poisonous stimulant, emmenagogue, and abortifacient. Its use in producing abortions is extremely dangerous. It is also given in dysmenorrhea, amenorrhea, gout, and rheumatism, and is used locally as an application to ulcers, condylomas, and carious teeth. Dose of fluidextract, 5-15 minims (0.333-1 cc.); of tincture, 20-60 minims (1.333-4 cc.); of oil, 1-5 minims (0.066-0.333 cc.).

savoline (sav'o-lin). A proprietary cleansing fluid, used also as a medium for lotions and injections.

savonal (sav'o-nal). A soap mixture, used as an ointment base.

saw (saw). A cutting instrument with a cutting or serrated edge. **Adams' s.**, a small straight saw with a long handle, for osteotomy. **amputating s.**, one for use in performing amputations. **Butcher's s.**, an amputating saw with a blade that can be set at various angles. **chain s.**, one in which the teeth are set upon links, the saw being moved by pulling upon one or the other handle. **crown s.**, a form of trephine. **Farabeuf's s.**, a saw the blade of which can be set at any desired angle. **Gigli's wire s.**, a wire with saw teeth, used in cranial operations. **hemp s.**, a hempen cord used in cutting soft tissues. **Hey's s.**, a small saw for enlarging orifices in bones. **s.palmetto**.

Gigli's wire saw.

See **Serenoa**. **separating s.**, a saw for separating teeth. **Shrady's s.**, a saw for bone work operated through a fenestrated cannula which has been introduced alongside the bone by a trocar. **string s.**, the string used in treating esophageal strictures by the "string method" (q. v.). **subcutaneous s.** Same as **Shrady's s.**

saxifrage (saks'if-rāj) [L. *saxifraga*; *sax*'um stone + *fran*'gere to break]. 1. A popular name for various herbs, chiefly those of the genus *Saxifraga*, formerly reputed serviceable against urinary calculus; not now employed in scientific medicine. 2. *Pimpinella saxifraga*, or Burnet saxifrage; an umbelliferous plant of Europe: an aromatic, stomachic, diaphoretic, and diuretic. Dose of fluidextract of root, 15-30 minims (1-2 cc.).

saxifragrant (saks-if-rag-rant) [L. *saxifragus*]. 1. Dissolving or breaking up calculi. 2. A remedy for calculus.

saxin (sak'sin). A proprietary agent 600 times as sweet as sugar: used like saccharin.

saxol (sax'ol). A proprietary liquid paraffin.

saxolin (sak'so-lin). A semisolid preparation of petroleum hydrocarbons resembling petrolatum.

Sayre's jacket (särz) [Lewis Albert Sayre, American surgeon, 1820-1901]. See *jacket*.

Sb. The symbol of antimony (*stibium*).

SbCl₃. Antimony trichloride.

Sb₂O₃. Antimony trisulphide.

Sb₂O₅. Antimonious oxide.

Sb₂O₆. Antimonious oxide.

Sc. The symbol of scandium.

S. C., s. c. Abbreviation for *closure of the semilunar valves*.

scab (skab). 1. The crust of a superficial sore. 2. To become covered with a crust or scab. **crown s.**, a cancerous sore around the corners of the hoof of a horse. **foot s.** Same as *sheep s.* **head s.**, any acariasis of the head, especially the sarcoptic scab of the head of sheep. **sheep s.**, a disease of sheep caused by the mite *Psoroptes communis*, which infests the skin at the base of the hairs. A scab is formed which comes off, bringing the wool along with it. **Transkeian s.**, Veldt sore.

scabies (ska'be-ēz) [L. from *scab'ere* scratch]. The itch; a contagious skin disease due to the itch mite, *Sarcoptes scabiei*, which bores beneath the skin, forming uncini or burrows. The disease is attended with intense itching, together with the eczema caused by scratching. Called also *psora*. **Boeck's s.**, **s. crusto'sa**, Norwegian itch; a form characterized by crusts and pustules, and said to be due to an acarid parasitic upon wolves. **bovine s.**, a disease of cattle resembling sheep scab. **s. feri'na**, acariasis itch of animals.

Norwegian s., radesyge. **ovine s.**, sheep scab. See under *scab*.

scabiophobia (ska'be-o-fo-be'ah) [*scabies* + *φόβος* fear]. Morbid fear of scabies.

Scabiosa (ska-be-o'sah) [L.]. A genus of dipsaceous plants called *scabiosus*: various species are popularly regarded as depuratives of the blood.

scabrities (ska-brish'e-ez) [L.]. A scaly or rough state of the skin. **s. un'guis**, a thickened and distorted condition of the nails.

scala (ska'lah) [L. "staircase"]. Any one of the three passages of the cochlea. **s. me'dia**, **s. of Löwenberg**, the cochlear canal; the space between the basilar membrane and Reissner's membrane: it contains the organ of Corti. See *ear*. **s. tym'pani** [B N A], the tympanic canal; the part of the spiral canal of the cochlea which is situated below the lamina spiralis ossea and the lamina basilaris. See *ear*. **s. vestib'uli** [B N A], the vestibular canal; the part of the spiral canal of the cochlea above the lamina spiralis. See *ear*.

scald (skawld). 1. A burn caused by a hot liquid or a hot, moist vapor. 2. Same as *scald head*.

scald head (skawld hed'). A popular name for favus, porrigo, or other scaly affections of the scalp.

scale (skāl). 1. [L. *squa'ma*]. Any thin, platelike structure, as of epithelial cells, compacted and shed from the skin. 2. [L. *scala*]. Anything marked off at regular intervals. 3. To scrape tartar from the teeth. **absolute s.**, the temperature scale which is based on the absolute zero (minus 273.13 C.). **Baumé s.**, a hydrometer scale for determining the specific gravity of liquids. **Benoi's s.**, a scale for measuring the hardness of roentgen rays in terms of the thickness of aluminum necessary to reduce the intensity of the rays to that of the same rays that have been passed through a screen of silver .11 mm. thick. **Bloch's s.**, a series of solutions of tincture of benzoin in glycerinated water, employed to determine by comparison of turbidity the amount of albumin precipitated in urine or other fluid by heat. **centigrade s.**, the scale of a centigrade thermometer. **Charrière s.**, a scale for grading the size of urethral sounds and catheters. **Clark's s.** (*of the hardness of water*). It is based on the number of grains of calcium carbonate per imperial gallon. **diaphanometric s.**, a scale used for measuring the transparency of turbid solutions such as are produced in flocculation tests. **Dunfermline s.**, a scheme for classifying children according to their degree of nutrition: 1, superior condition; 2, passable condition; 3, requiring supervision; 4, requiring medical treatment. **Kelvin s.** See *absolute s.* **Sorensen s.**, a scale for hydrogen ion concentration in which the values are expressed in pH. **Tallqvist's s.**, a series of lithographed colors showing the tints of blood of from 10 to 100 per cent of hemoglobin, and accompanied by a booklet containing sheets of prepared paper. A sheet of the paper is moistened with a drop of blood and the color compared with the scale.

scalene (ska'lēn) [σκαληνός uneven]. 1. Unequally three sided. 2. Pertaining to one of the scalenus muscles.

scalenus (ska-le'nus) [L.; σκαληνός uneven]. See *muscles*, table of.

scaler (ska'ler). An instrument for performing the operation of scaling. **curet s.**, a scaler having two cutting edges approximately parallel to the shank. **hoe s.**, a scaler having a single cutting edge, the blade being turned up at approximately a right angle to the shank.

scaling (ska'ling). Removal of concretions from the visible tooth surface and that part of the surface covered by the marginal gingiva or its equivalent.

scall (skawl). 1. Any scaly, or scabby, disease of the skin. 2. Favus of animals. **honeycomb s.**,

an eruption consisting of small ulcers separated by raised edges. **milk s.**, crusta lactea.

scalma (skal'mah). A contagious febrile disease of the horse marked by coughing, difficult breathing, fever, loss of strength, and sometimes by pleuritis.

scalp (skalp). That part of the integument of the head which is hairy in both sexes.

scalpel (skal'pel) [L. *scalpel'lum*]. A small, straight knife, usually with a convex edge.

scalpriform (skal'prif-orm). Shaped like a chisel.

scalprum (skal'prum) [L. "knife"]. A raspatory; also a strong knife.

scaly (ska'le) [L. *squamo'sus*]. 1. Scalelike. 2. Characterized by scales.

scaly leg (ska'le leg). A disease of domestic fowls marked by heavy scales and incrustations on the legs, produced by a burrowing mite, *Cnemidocoptes mutans*.

scammonia (skam'o-ne-ah). Scammony.

scammonin (skam'o-nin). A glucoside, $C_{34}H_{56}O_{16}$, found in scammony.

scammony (skam'one) [L. *scammo'nium*, *scammo'nia*]. The plant *Convolvulus scammo'nia*, of Asia Minor and Syria. The root (*Scammo'niae radix*, U. S. P.) affords a gummy and resinous exudate (*scammo'niae res'ina*, *scammo'nium*), which is an anthelmintic and hydragogue cathartic. It contains scammonium, and is employed chiefly, in conjunction with other purgatives, for constipation and dropsy. Dose of root, 3-10 grains (0.2-0.666 Gm.); of resin, 2-10 grains (0.133-0.666 Gm.); of mixture, 1 fl.oz. (30 cc.); of compound powder (which contains jalap also), 15 grains (1 Gm.). **Mexican s.** is very similar to the true scammony.

scandium (skan'de-um). A very rare metallic element; symbol, Sc; atomic weight, 45.1.

scanning (skan'ing). Noting a manner of utterance characterized by somewhat regularly recurring pauses. See *speech*.

Scanzoni's operation (skan-tso'nēz) [Friedrich Wilhelm Scanzoni, German obstetrician, 1821-1891]. See under *operation*.

scapha (ska'fah) [L. "a skiff"] [B N A]. The long curved depression which separates the helix from the anthelix: called also *scaphoid fossa* and *fossa of helix*.

scaphocephalic (ska''fo-sef-al'ik) [*σκάφη* boat + *κεφαλή* head]. Having a keeled or boat-shaped head.

scaphocephalism, **scaphocephaly** (ska-fo-sef'al-izm, ska-fo-sef'al-e). The condition of being scaphocephalic.

scaphocephalous (ska-fo-sef'al-us). Same as *scaphocephalic*.

scaphohydrocephalus (ska''fo-hi-dro-sef'al-us). Hydrocephalus in which the head assumes a boat-like shape.

scaphohydrocephaly (ska''fo-hi-dro-sef'al-e). A scaphocephalic form of the head due to hydrocephalus.

scaphoid (ska'foid) [L. *scaphoid'es*; *σκάφη* skiff + *εἶδος* form]. 1. Shaped like a boat; navicular. 2. The os scaphoides: the outer bone of the first row of the carpal bones. 3. A bone on the inner side of the tarsus, before the astragalus and behind the cuneiform bone.

scaphoiditis (skaf-oi-di'tis). Inflammation of the scaphoid bone. **tarsal s.** See *Kohler's disease*, under *disease*.

scapula (skap'u-lah), pl. *scapulæ* [L.]. The shoulder blade; the flat, triangular bone in the back of the shoulder. **scaphoid s.**, a scapula in which the vertebral border is more or less concave. **s. ala'ta**. See *winged s.* **winged s.**, a scapula having a prominent vertebral border. Called also *s. alata*.

scapulargia (skap-u-lal'je-ah) [*scapula* + *ἄλγος* pain]. Pain in the scapular region.

scapular (skap'u-lar). Of or pertaining to the scapula.

scapulary (skap'u-la-re). A shoulder bandage, like a pair of suspenders or braces, to hold in place a body bandage or girdle.

scapulectomy (skap-u-lek'to-me) [*scapula* + *ἐκτομή* excision]. The surgical removal of the scapula.

scapuloclavicular (skap'u-lo-klav-ik'u-lar). Pertaining to the scapula and the clavicle.

scapulodinia (skap'u-lo-din'e-ah) [*scapula* + *δύσιν* pain]. Pain in the region of the shoulder.

scapulohumeral (skap'u-lo-hu'mer-al). Pertaining to the scapula and the humerus.

scapulopexy (skap'u-lo-pek-se) [*scapula* + *πῆξις* fixation]. The operation of fixing the scapula to the ribs; done in some cases of myopathy.

scapulothoracic (skap'u-lo-tho-ras'ik). Pertaining to the scapula and the thorax.

scapus (ska'pus) [L. "shaft"]. The shaft of the hair.

scar (skar) [*σχάρα*]. Same as *cicatrix*. **shilling s's**, round, superficial cicatrices left behind by an eruption of rupia.

scarf, **Mayor's**. A triangular bandage for immobilizing the upper limbs, and consisting of a square of stout cotton material 40 inches across, folded obliquely, 40 inches of 3-inch bandage, a plug of carded cotton 6 inches long and 4 inches thick, and a dozen stout safety pins.

scarf-skin (skarf'-skin). The cuticle or epidermis. See *skin*.

scarification (skar'if-ik-a'shun) [L. *scarifica'tia*]. The making of a set of small, superficial incisions or punctures in the skin.

scarificator (skar'if-ik-a-tor). An instrument for making a scarification.

scarlatin (skar'lat-in). An antiscarlatinal serum extracted from the blood of infected animals. Called also *Morpinami's scarlatina toxin*.

scarlatina (skar-lat-i'nah) [L. "scarlet"]. An acute contagious and exanthematous fever with a scarlet eruption, or rash; scarlet fever (Sydenham, 1675). It begins with chills, vomiting, and sore throat, followed by pyrexia and rapid pulse. After

Scapula, posterior view: 1, Supraspinous fossa; 2, infraspinous fossa; 3, superior margin; 4, scapular (coracoid) notch; 5, axillary margin; 6, glenoid cavity; 7, inferior angle; 8, neck of the scapula; 9, vertebral margin; 10, spine; 11, its triangular commencement, upon which the tendon of the trapezius muscle moves; 12, acromion; 13, arterial foramen; 14, coracoid process. (Leidy.)

Scaphocephaly (Church and Peterson).

Scarificator (DaCosta).

- about twenty-four hours the eruption appears as a rash of thickly set red spots, which begin to fade in two or three days, and is often gone by the end of the first week. The fever departs in favorable cases with the disappearance of the eruption, which is attended by a desquamation of the skin in fine, branny scales and in large flakes. Recovery may often be looked for in two or three weeks, but is seldom complete in less than six weeks, and it is during this stage that kidney complications are liable to occur, chiefly as a result of exposure to cold or wet. The nephritis is liable to lead to dropsy and uremia. Throat, ear, and eye complications are not infrequent, and often prove chronic. Scarlatina attacks principally children and youths, but may affect adults also. Second attacks are extremely rare. See *exanthemas*, table of. **s. angino'sa**, a dangerous form with marked throat symptoms. **s. haemorrhagica**, scarlatina in which there is extravasation of the blood into the skin and mucous membranes. **s. la'tens**, that in which no rash or fever is observed, but which is manifested in kidney disease or some other resultant complication. **s. malig'na**, a variety with severe symptoms and great prostration, often fatal; also a form in which the rash disappears suddenly and prematurely. **s. rheumatica**, dengue. **s. sim'plex**, a mild form attended with but little soreness of the throat.
- scarlatinal** (skar-lat'in-al). Pertaining to or due to scarlatina.
- scarlatinella** (skar-lat-in-el'ah). Mild apyretic scarlet fever.
- scarlatiniform, scarlatinoid** (skar-lat-in'if-orm, skar-lat-in-oid). Resembling scarlatina. **metadiphtheritic s.**, an eruption with symptoms resembling those of scarlet fever, sometimes seen in convalescence from diphtheria.
- scarlet** (skahr'let). A bright red tinged with orange or yellow. **Bleibrich s., water-soluble**, an azo dye used as a plasma stain, $C_6H_4(SO_2ONa).N:N-C_6H_4(SO_2ONa).N:N.C_{10}H_7.OH$. **s. fever**. See *scarlatina*. **s. G.** Same as *sudan III*. **s. J. Jg.** Same as *bluish eosin*. **s. R., s. red**. See under *red*.
- Scarpa's fascia, foramen, membrane, shoe, triangle** (skar'phaz) [Antonio Scarpa, Italian anatomist and surgeon, 1747-1832]. See *fascia, foramen, membrane, shoe, triangle*.
- Scat**. Abbreviation for *L. scat'ula*, a box.
- scatacratia** (skat-ak-ra'she-ah) [σκῶρ dung + ἀκρατία inability]. Incontinence of the feces.
- scatemia** (ska-te'me-ah) [σκῶρ dung + αἷμα blood]. Intestinal toxemia.
- scatol** (ska'tol). See *skatol*.
- scatologic** (ska-tol-oi'ik). Pertaining to fecal matter.
- scatology** (ska-tol'o-je) [σκῶρ dung + λόγος treatise]. The study of the feces.
- scatophagy** (ska-tof'aj-e) [σκῶρ dung + φαγεῖν to eat]. The eating of excrement.
- scatoscopy** (ska-tos'ko-pe) [σκῶρ dung + σκοπεῖν to view]. Inspection of the feces.
- scatoxyl** (ska-tok'sil). The radical, C_8H_6ON .
- scatula** (skat'u-lah) [L. for "parallelepiped"]. An oblong paper box for powders or pills.
- scavenger cell** (skav'en-jer). See *cell*.
- Sc. D.** Abbreviation for *Doctor of Science*.
- Sc. D. A.** Right scapulo-anterior position of the fetus.
- Sc. D. P.** Right scapuloposterior position of the fetus.
- Sc. L. A.** Left scapulo-anterior position of the fetus.
- Sc. L. P.** Left scapuloposterior position of the fetus.
- Scedosporium** (se-do-spo're-um). A genus of fungi causing Madura foot.
- scelalgia** (ske-lal'je-ah) [σκελῆς leg + ἄλγος pain]. Pain in the leg.
- Sceletth treatment** (ske'leth) [Charles E. Sceletth, Chicago physician]. See under *treatment*.
- scelotyrbē** (sel-o-ter'be) [σκελῆς leg + τύρβη disorder]. Spastic paralysis of the legs.
- Schacher's ganglion** (shah'kerz) [Polycarp Gottlieb Schacher, German physician, 1674-1737]. The ciliary ganglion.
- Schachowa's tube** (shah'ko-vahz) [Seraphina Schachowa, Russian histologist in Bern, 19th century]. See under *tube*.
- Schäfer's method** (sha'ferz) [Edward Albert Schäfer, English physiologist, born 1850]. See under *respiration, artificial*.
- Schäfer's reflex** (sha'ferz) [Max Schäffer, contemporary German neurologist]. See *reflex*.
- Schamberg's disease** (sham'bergz) [Jay Frank Schamberg, Philadelphia dermatologist, born 1870]. See under *disease*.
- Schanz's syndrome** (schants') [Alfred Schanz, contemporary German physician]. See *syndrome*.
- scharlach r** (shar'lak). Same as *scarlet red*. See under *red*.
- Schaudinn's bacillus** (shaw-dinz') [Fritz Schaudinn, German bacteriologist, 1871-1906]. The *Spirochaeta pallida*.
- Schauta's operation**. See under *operation*.
- Schede's method** (sha'déz) [Max Schede, surgeon in Bonn, 1844-1902]. A method of treating necrosis of bone by scraping away all dead bone and diseased tissue, permitting the cavity to fill with a blood clot, and keeping the latter moist and aseptic by a cover of gauze and rubber tissue.
- Scheele's green** (sha'lez or shélz) [Karl William Scheele, Swedish chemist, 1742-1786]. Copper arsenite.
- Scheiner's experiment** (shi'nerz) [Christoph Scheiner, physicist, 1575-1650]. The experiment of looking at an object through two pin holes close together in a card. If the object is in focus, only one image is observed; if not, two or more images are seen.
- schema** (ske'mah) [σχῆμα outline]. A plan, outline, or arrangement; in homeopathy, the arrangement of the drug symptoms in anatomical order. **Hamberger's s.**, the external intercostal and the intercartilaginous muscles are inspiratory muscles, the internal intercostal muscles are expiratory.
- schematic** (ske-mat'ik) [σχηματικός resembling]. Serving as a diagram or model. See *eye*.
- schematograph** (ske-mat'o-graf). A tracing in reduced form of the outline of the body.
- Schenck's disease** (shenks) [Benjamin R. Schenck, American surgeon, born 1872]. Sporotrichosis.
- Schenk's theory** (shenks) [physiologist in Vienna, 1840-1904]. See under *theory*.
- Scherer's test** (sha'rerz) [Johann Joseph von Scherer, German physician, 1814-1869]. See under *tests*.
- scherlievo** (skär-ly'a'vo). A contagious disorder formerly prevalent in Illyria and Dalmatia: supposed to have been syphilis.
- Scheurlen's bacillus** (shor'lenz). See *bacillus*.
- Schiassi's operation, solution** (she-as'ez) [B. Schiassi, contemporary Italian surgeon]. See under *operation and solution*.
- Schick's sign, test** (sheeks') [Béla Schick, Austrian pediatrician in New York]. See under *sign and tests*.
- Schiff's biliary cycle** (shifs) [Moritz Schiff, German physiologist, 1823-1896]. See under *cycle*.
- Schiff's test** (shifs) [Hugo Schiff, German chemist in Florence, 1834-1915]. See under *tests*.
- Schilder's disease or encephalitis** (shil'derz). Encephalitis periaxialis diffusa.
- Schimmelbusch's disease** (shim'el-boosh-ez) [Curt Schimmelbusch, German surgeon, 1860-1895]. See under *disease*.

schindylesis (skin-dil-e'sis) [σχινδύλησις a splintering]. A synarthrosis in which one bone is received into a slit in another, as in the articulation of the perpendicular plate of the ethmoid bone with the vomer.

Schinus (ski'nus) [σχίνος mastic]. A genus of anacardiaceous trees of warm regions. *S. molle*, of tropical America (pepper tree), affords a kind of mastic, and is a mild purgative and aromatic.

Schiøtz's tonometer (she-ets') [Hjalmar Schiøtz, Norwegian physician, born 1850]. See *tonometer*.

schistasis (skis'tas-is) [σχίστος split]. A splitting; specifically, a congenital defect consisting of a split condition of the body, as schistocormia, schistomelia, schistosomia.

schistocelia (skis-to-se'le-ah) [σχιστός split + κοιλία belly]. Congenital fissure of the abdomen.

schistocephalus (skis-to-sef'al-us) [σχιστός cleften + κεφαλή head]. A fetus born with a cleft head.

schistocoelia (skis-to-se'le-ah). Schistocelia.

schistocormia (skis-to-kor'me-ah). A congenitally cleft condition of the trunk.

schistocormus (skis-to-kor'mus) [σχιστός split + κορμός trunk]. A monster fetus in which the trunk is cleft.

schistocyte (skis'to-sit) [σχιστός cleft + κύτος cell]. 1. A blood corpuscle undergoing segmentation. 2. A product of the division of a red blood corpuscle in malaria. **parasitiferous s.**, that half of a divided red blood corpuscle which contains a parasite.

schistocytosis (skis''to-si-to'sis) [σχιστός cleft + κύτος cell]. The accumulation of schistocytes in the blood.

schistoglossia (skis-to-glos'e-ah) [σχιστός cleft + γλώσσα tongue]. Fissure of the tongue.

schistomelia (skis-to-me'le-ah). A congenitally cleft condition of a limb.

schistomelus (skis-tom'e-lus) [σχιστός split + μέλος limb]. A monster with a cleft limb.

schistometer (skis-tom'et-er) [σχιστός cleft + μέτρον measure]. An instrument for measuring the aperture between the vocal cords.

schistoprosopia (skis''to-pros-o'pe-ah) [σχιστός split + πρόσωπον face]. A fissure of the face due to defective development.

schistoprosopus (skis-to-pros'o-pus) [σχιστός cleft + πρόσωπον face]. A monster fetus born with a cleft face.

schistorachis (skis-tor'a-kis) [σχιστός cleft + ράχis spine]. Same as *spina bifida*.

Schistosoma (skis-to-so'mah) [σχιστός cleft + σώμα body]. A genus of trematode parasites or flukes; the blood flukes.

S. cercariae, a parasite of snails in lake waters, associated with a dermatitis developing in persons who wade in such waters. *S. haematobium*, a common parasite of tropical countries, especially Egypt, occurring in the natives, especially boys from six to ten years of age. It is found in dilatation of the veins, especially the cystic vein, producing irritability of the bladder, hematuria, and dysentery. The parasites enter the body by the alimentary tract, especially by drinking water, the invertebrate host being a small snail, *Isidora* (*Bulinus*) *contorta* and probably other species. Called also *Distoma haematobium* and *Bilharzia haematobia*. *S. japonica*, the

Schistosoma haematobium, male and female (X 6) (Looss).

Asiatic blood fluke, a species found in Japan, China, and the Philippines, causing the katayama disease. The transmitting host is the small mollusk, *Blanfordia nosophora*, which enters the body of man through the drinking water. The symptoms of the infection point to the liver and the spleen, consisting of ascites, cachexia, bronchial trouble, and urticarial spots (urticarial fever). *S. mansoni*, this species is very similar to *S. haematobium* except that (1) it is found in the feces instead of the urine, (2) the egg has a spur, and (3) its invertebrate host is the fresh-water snail, *Planorbis*. *S. pathologicum*, a form pathogenic for mice. The invertebrate host is the snail (*Limnaea*).

schistosomia (skis-to-so'me-ah). Congenital fissure of the abdomen.

schistosomiasis (skis-to-so'mi'as-is). Infection with Schistosoma. **Asiatic s.**, infestation with *Schistosoma japonicum*; katayama disease. **intestinal s.**, infestation with *Schistosoma mansoni*, which produces inflammation of the liver and intestines. **urinary s.**, infestation with *Schistosoma haematobium*, causing cystitis and hematuria.

schistosomus (skis-to-so'mus) [σχιστός cleft + σώμα body]. A monster fetus with a fissured abdomen. The lower limbs are usually rudimentary or wanting.

schistosternia (skis-to-ster'ne-ah) [σχιστός cleft + sternum]. Schistothorax.

schistothorax (skis-to-tho'raks) [σχιστός cleft + θώραξ chest]. Congenital fissure of the chest or sternum.

schistotrachelus (skis-to-trak'e-lus) [σχιστός split + τράχηλος neck]. A monster fetus with fissure of the neck.

schizaxon (skiz-aks'ōn) [σχίζειν to divide + ἄξων axis]. An axon which is divided into two equal, or nearly equal, branches.

schizocyte (shiz'o-sit). Schistocyte.

schizocytosis (skiz-o-si'to-sis) [σχίζειν to divide + κύτος cell]. Schistocytosis.

schizogenesis (skiz-o-jen'es-is) [σχίζειν to split + γένεσις production]. Reproduction by sporulation without fertilization; asexual sporulation. Cf. *sporogony*.

schizogenous (skiz-oj'en-us). Reproducing by schizogenesis.

schizogony (skiz-og'o-ne). Same as *schizogenesis*.

schizoid (skiz'oid). Resembling schizophrenia: a term applied by Bleuler to the shut-in, unsocial, introspective type of personality and by Kretschmer to the physical type resembling that of persons with dementia praecox, i. e., the asthenic dysplastic type.

schizomycete (shiz-o-mi-set') [σχίζειν to divide + μύκης fungus]. Any organism or species belonging to the *Schizomycetes*.

Schizomycetes (shiz-o-mi-se'tēz), pl. [σχίζειν cleft + μύκης fungus]. A class of vegetable microorganisms, the bacteria or fission fungi. The class includes *Mycobacteriales*, or slime mold bacteria; the *Eubacteriales*, or true bacteria; the *Thiobacteriales*, or sulphur bacteria; *Actinomycetales*, or thread bacteria; and *Spirochaetales*, or spiral organisms.

schizomycetic (skiz''o-mi-set'ik). Due to the presence of bacteria.

schizomycosis (skiz''o-mi-ko'sis). Any disease due to the presence of schizomycetes.

schizont (ski'zont) [σχίζειν to divide]. One of the developmental forms of a protozoan which exhibits alternation of generations. The schizont develops by schizogony, giving rise to isospores which develop without conjugation. The other form is the *sporont*, which develops by sporogony, giving rise to anisospores which conjugate to form schizonts. Called also *monont* and *agamont*.

- schizophrenia** (skiz-o-fre'ne-ah) [$\sigma\chi\lambda\epsilon\upsilon$ to divide + $\varphi\eta\eta$ mind]. Bleuler's term for dementia praecox which, according to his interpretation, represents a cleavage or fissuration of the mental functions.
- schizophrenic** (skiz-o-fren'ik). Pertaining to or affected with schizophrenia.
- schizophrenosis** (skiz-o-fre-no'sis). Southard's term for any disease of the dementia praecox group.
- Schizosiphon** (shiz-o-si'fon). A genus of nematogenous schizomycetes with flagelliform filaments, slender toward the extremity.
- schizothemia** (skiz-o-the'me-ah) [$\sigma\chi\lambda\epsilon\upsilon$ to divide + $\theta\epsilon\mu\alpha$ theme]. Interruption of an argument by reminiscences; regarded as hysterical by Breuer and Freud.
- schizothemic** (skiz-o-the'mik). Marked by schizothemia.
- schizothymic** (skiz-o-thi'mik) [$\sigma\chi\lambda\epsilon\upsilon$ to divide + $\theta\upsilon\mu\eta$ mind]. Schizophrenic.
- schizatonias** (skiz-o-to'ne-ah) [$\sigma\chi\lambda\epsilon\upsilon$ to divide + $\rho\acute{o}\nu\sigma$ tone]. Division of the influx of tone to the muscles, so that, for instance, the flexor groups of the arm become hypertonic, while in the leg the extensors become hypertonic.
- schizotrichia** (skiz-o-trik'e-ah) [$\sigma\chi\lambda\epsilon\upsilon$ to split + $\theta\rho\iota\chi$ hair]. Splitting of the hairs at the ends.
- schizotrypanosis** (skiz-o-tri-pan-o'sis). Infection by Schizotrypanum, a condition with symptoms resembling Hodgkin's disease.
- Schizotrypanum cru'zi**. An organism resembling trypanosomes, but which undergoes schizogony in the vertebrate host. It causes an American form of trypanosomiasis, Chagas' disease, which is transmitted by Cimex, Rhodnius, Triatoma, Ornithodoros, and Rhipicephalus. See *Chagas' disease*, under *disease*.
- schizozoite** (skiz-o-zo'it) [$\sigma\chi\lambda\epsilon\upsilon$ to divide + $\zeta\acute{o}\nu$ animal]. Same as *merozoite*.
- Schlammsieber** (shlahm'fe-ber) [Ger. "slime fever"]. Mud fever; a disease resembling Weil's disease, which prevailed among young persons who worked in the flooded districts near Breslau in the summer of 1891.
- Schlatter's disease, operation** (shlat'erz) [K. Schlatter, surgeon in Zurich, born 1864]. See *disease* and *operation*.
- Schleich's anesthesia, solution** (shliks) [Karl Ludwig Schleich, surgeon in Berlin, born 1859]. Infiltration anesthesia. See *anesthesia, solution*.
- Schlemm's canal** (shlemz) [Friedrich S. Schlemm, German anatomist, 1795-1858]. See *canal*. **S's ligaments**, two ligamentous bands strengthening the capsule of the shoulder joint.
- Schlesinger's sign** (shla'zing-erz) [Hermann Schlesinger, Austrian physician, born 1868]. See *sign*.
- Schlösser's method or treatment** (shles'erz) [Carl Schlösser, German oculist, 1857-1925]. See *treatment*.
- Schmidl's anastomosis** (shme'delz) [Casimir Christoph Schmidl, German anatomist, 1718-1792]. See under *anastomosis*.
- Schmidt's fibrinoplastic** (shmits) [Eduard Oskar Schmidt, German anatomist, 1823-1886]. Serum-globulin.
- Schmidt's syndrome** (shmits) [Johann Friedrich Moritz Schmidt, German laryngologist, born 1838]. See *syndrome*.
- Schmidt's test** (shmits) [Adolf Schmidt, physician in Halle, 1863-1919]. See under *tests*.
- Schmorl's furrow** (schmorlz) [C. G. Schmorl, German pathologist, born 1861]. A depression over the apex of the lung, said to be indicative of a tendency to tuberculosis.
- schmutzdecke** (schmoots'dek-uh). The carpet-like layer of bacteria, algae, and other microorganisms which forms on the surface of a slow sand filter and which aids in purifying the water.
- Schneider's carmin** (shni'derz) [Franz Coelestin Schneider, German chemist, 1813-1897]. See *carmin*.
- schneiderian membrane** (sni-de're-an) [Conrad Victor Schneider, German physician, 1610-1680]. See under *membrane*.
- Schöler's treatment** (sha'lerz) [Heinrich Leopold Schöler, German ophthalmologist, born 1844]. See *treatment*.
- Schönbein's reaction, test** (shān'linz) [Christian Friedrich Schönbein, German chemist, 1799-1868]. See *reaction, tests*.
- Schönlein's disease** (shān'linz) [Johann Lukas Schönlein, German physician, 1793-1864]. See *disease*.
- Scott's treatment** (shots) [Theodore Scott, physician in Nauheim, 1850-1921]. See *treatment*.
- Schreger's lines** (shra'gerz) [Bernhard Gottlob Schreger, German anatomist, 1766-1825]. * See under *line*.
- Schreiber's maneuver** (shri'berz) [Julius Schreiber, German physician, born 1848]. See *maneuver*.
- Schridde's granules, hairs** (shrid'ez) [H. Schridde, contemporary German physician]. See under *granule* and *hair*.
- Schröder's ring, operation** (shra'derz) [Karl Schröder, German gynecologist, 1838-1887]. See *ring* and *operation*.
- Schröder's test** (shra'derz) [Woldemar von Schröder, German physician, 1850-1898]. See *tests*.
- schrombrone** (skrom'b'rōn). A histone found in mackerel sperm.
- Schrön's bacillus, granule** (shrenz) [Otto von Schrön, German pathologist in Naples, 1837-1913]. See *bacillus* and *granule*.
- Schroth's treatment** (shrōts) [Johann Schroth, German physician, 1800-1856]. See under *treatment*.
- Schrötter's chorea** (shret'erz) [Leopold von Schrötter, Viennese laryngologist, 1837-1908]. Chorea of the larynx.
- Schuchardt's operation** (shoo'kharts). Paravaginal hysterectomy.
- Schüffner's granules** (shef'nerz) [Wilhelm Schüffner, contemporary German pathologist]. See under *granule*.
- Schüle's sign** (she'lez) [Heinrich Schüle, contemporary German psychiatrist]. See under *sign*.
- Schüller's method** (shil'erz) [Karl Heinrich Anton Ludwig Max Schüller, surgeon in Berlin, 1843-1907]. See under *method*.
- Schüller's phenomenon** (shil'erz) [Arthur Schüller, contemporary Austrian neurologist]. See *phenomenon*.
- Schultze's bundle, cells, tract** (shoolt'sez) [Max Johann Schultze, German biologist, 1825-1874]. See *bundle, cell, tract*.
- Schultze's fold, method** (shoolt'sez) [Bernhard Sigismund Schultze, German gynecologist, 1827-1919]. See *fold* and *method*.
- Schultze's monochord** (shoolt'sez). See *monochord*.
- Schultze's test** (shoolt'sez) [Ernst Schultze, Swiss chemist, 1860-1912]. See under *tests*.
- Schultze-Chvostek's sign**. Chvostek's sign.
- Schütz's micrococcus** (shitz'ez) [Johann Wilhelm Schütz, German veterinarian, 1839-1920]. See *micrococcus*.
- Schwabach's test** (svah'baks) [Dagobert Schwabach, otologist in Berlin, born 1846]. See under *tests*.
- Schwalbe's corpuscles, fissure, foramen, sheath, space, etc.** (shval'bez) [Gustav Schwalbe, German anatomist, 1844-1916]. See *corpuscle, fissure, foramen, sheath, space, etc.*
- Schwann, sheath of** (shwon) [Theodor Schwann, German physiologist, 1810-1882]. The neuro-

lemma of a nerve fiber. **S., white substance of**, the myelin of a medullated nerve fiber.

Schwartz's method (shvartz) [Charles Edouard Schwartz, French surgeon, born 1852]. Multiple ligation for varicose veins.

Schwartz's operation (shvart'sez) [Hermann Schwartz, German otologist, 1837-1910]. See *operation*.

Schwarz's test (shvarz). 1. [Karl Leonhard Heinrich Schwarz, German chemist, 1824-1890]. See under *test*. 2. [G. Schwarz, contemporary German physician]. See under *tests*, 2d def.

Schwediauer's disease (shva'de-ow-erz) [François Xavier Schwediauer, Austrian physician, 1748-1824]. See under *disease*.

schweinerrothlauf (shwi-ner-ot'lowf). Same as *rouget du porc* (q. v.), or swine erysipelas.

schweineseuche (shwi'nes-oy'ke) [Ger.]. Swine plague.

Schweinfurt green (shwin'foort). Paris green.

Schweitzer's reagent (shvi'tsers) [Matthias Eduard Schweitzer, German chemist, 1818-1860]. See *reagent*.

schwelle (shwel'eh). German for *threshold*.

Schweninger's method (shwen'in-gerz) [Ernst Schweninger, German physician, 1850-1924]. Reduction of obesity by the restriction of fluids in the diet.

sciage (se-ahzh') [Fr.]. A sawing movement in massage.

sciagram, sciagraphy, etc. See *skiagram, skiagraphy*, etc.

sciatic (si-at'ik) [L. *sciat'icus*; *ισχιαδικός*]. Pertaining to the ischium.

sciatica (si-at'ik-ah) [L.]. A painful inflammation of the sciatic nerve, usually a neuritis. It is attended with paresthesia of the thigh and leg, tenderness along the course of the nerve, and sometimes by wasting of the calf muscles. The pain is constant, but subject to exacerbations. The disease usually attacks persons of middle age.

scieropia (si-er-o'pe-ah) [*σκιερός* shady + *ὥψ* eye]. Visual defect in which objects appear in a shadow.

scilla (sil'ah). Latin for *squill*.

scillain (sil'ah-in). An amorphous and poisonous glucoside from squill: diuretic. Dose, $\frac{1}{16}$ grain (0.0011 Gm.).

scillaren (sil'ar-en). * A glucoside obtained from squill. It is used as an expectorant and a cardiac tonic.

scillin (sil'in). A yellowish, crystalline glucoside from squill.

scillipicrin (sil-ip-ik'rin) [*σκίλλα* squill + *πικρός* bitter]. A yellow, bitter, and amorphous active principle from squill: diuretic. Dose, $\frac{1}{16}$ grain (0.0011 Gm.).

scillitin (sil'it-in). One of the active principles of squill: diuretic. Dose, $\frac{1}{16}$ grain (0.001 Gm.).

scillitoxin (sil-it-oks'in) [L. *scil'la* squill + *toxin*]. A brown, amorphous principle found in squill: a cardiac poison. Diuretic dose, $\frac{1}{16}$ grain (0.001 Gm.).

Scindapsus officinalis (sin-dap'sus). An araceous Asiatic plant: esteemed in oriental medicine.

scintillascope (sin-til'as-kōp) [L. *scintil'la* spark + *σκοπεῖν* to view]. Same as *spinthariscopes*.

scintillation (sin-til-a'shun) [L. *scintilla'tio*]. 1. An emission of sparks. 2. A subjective visual sensation, as of seeing sparks.

scirrhenanthus (skir-en-kan'thus) [*σκίρρος* hard tumor + *ἐν* in + *κάνθος* canthus]. Scirrhous of the lacrimal gland.

scirrholepharoneus (skir'o-blef-ar-ong'kus) [*σκίρρος* hard + *βλεφάρων* eyelid + *ὄγκος* tumor]. A scirrhous tumor of the eyelid.

scirrroid (skir'oid) [*σκίρρος* scirrhous + *εἶδος* form]. Resembling a scirrhous.

scirrroma (skir-o'mah) [*σκίρρος* hard + *-ωμα* tumor]. A scirrhous. **s. caminiano'rums**, chimney-sweeper's cancer, or soot cancer.

scirrhophthalmia (skir-of-thal'me-ah) [*σκίρρος* hard + *ὀφθαλμός* eye]. Scirrhous of the eye.

scirrhosarca (skir-o-sark'ah) [*σκίρρος* scirrhous + *σάρξ* flesh]. Scleroderma, or sclerema neonatorum.

scirrhous (skir'us) [L. *scirrho'sus*]. Pertaining to or of the nature of a scirrhous.

scirrhous (skir'us) [*σκίρρος*]. A hard cancer with a marked predominance of connective tissue.

scissel (siz'el). Small pieces of metal cut from a plate which is being made into the base of a denture.

scission (sizh'un) [L. *scin'dere* to cut]. Fission; splitting. In chemistry, the splitting of a molecule into two or more new molecules, particularly the splitting of one carbon from a chain.

scissiparity (sis-ip-ar'it-e) [L. *scin'dere* to split + *parere* to bring forth]. Reproduction by fission.

scissor gait (siz'er gāt). See under *gait*.

scissor leg (siz'er leg). A crossing of the legs from deformity.

scissors (siz'erz). A cutting instrument with two opposed blades. **canalicular s.**, delicate scissors with one of the blades probe pointed: used in slitting the lacrimal canal. **cannula s.**, probe pointed scissors used in slitting a canal lengthwise. **craniotomy s.**, strong f-shaped shears for use in opening the fetal head. **de Wecker's s.**, small scissors for operations on the eyeball, in which the blades are operated by pressure on two springs joined at the end like a pair of tweezers. **Jewish s.**, a cutting instrument used in circumcision: they have a limited use in surgery. **Liston's s.**, scissors for cutting plaster-of-paris bandages. **Smellie's s.**, short, strong-bladed scissors with external cutting edges: used in craniotomy.

scissura (sis-su'rah) [L.]. A splitting. **s. pilo'rums**, splitting of the hair.

sclera (skle'rah) [L.; *σκληρός* hard]. [B N A] The sclerotic coat of the eye or sclera; the tough white supporting tunic of the eyeball, covering it entirely except the segment covered by the cornea.

scleradenitis (skle'rad-en-i'tis) [*σκληρός* hard + *ἀδὴν* gland + *-itis* inflammation]. Inflammation and hardening of a gland.

scleral (skle'ral). Pertaining to the sclera.

scleratitis (skle-rat-i'tis). See *scleritis*.

scleratogenous (skle-rat-oj'en-us). Same as *sclerogenous*.

sclerectasia (skle-rek-ta'zhe-ah) [*sclera* + *ἐκτα-sis* extension]. A bulging out of the sclera.

sclerecto-iridectomy (skle-rek'to-i-rid-ek'to-me). The operation of excision of a portion of the sclera and of the iris for glaucoma. Called also *Lagrange operation*.

sclerectome (skle-rek'tōm). An instrument for performing sclerectomy.

sclerectomy (skle-rek'to-me) [*σκληρός* hard + *ἐκτομή* excision]. 1. Excision of a part of the sclera. 2. Removal of the sclerosed parts of the middle ear after otitis media.

scleredema (skle-re-de'mah). Sclerema neonatorum.

sclerema (skle-re'mah) [*σκληρός* hard]. A hardened or sclerosed state of a tissue, especially of the skin. **s. adulto'rums**, diffuse symmetrical scleroderma. **s. neonato'rums**, a very fatal disease of early infancy, with coldness, hardening, and tightness of the skin, especially that of the feet and legs, and depression of the respiration and pulse. It is thought to be due to coagulation or congelation of the fat.

sclerencephalia, sclerencephaly (skle''ren-sef-
a'le-ah, skle-ren-sef'al-e) [σκληρός hard +
ἐγκέφαλος brain]. Sclerosis of the brain.

sclerenchymatous (skle-ren-kim'at-us). Of the
nature of sclerenchyma.

sclererythrin (skle-rer'ith-rin) [scleritium +
ἐρυθρός red]. A red coloring matter from ergot.

scleriosis (skle-rí-as-is) [σκληρίασις]. 1. Same
as *scleroderma*. 2. A hardened state of an eyelid.

sclerin (skle'rín). Same as *rhinosclerin*.

scleriritomy (skle-rí-rit'o-me) [sclera + iris +
τέμνω to cut]. Incision of the sclera and iris in
anterior staphyloma.

scleritis (skle-rí'tis) [sclera + -itis inflammation].
Inflammation of the sclerótica. It may be super-
ficial (*episcleritis*) or deep. The latter form
causes bulging and thinning of the sclerotic.

sclero-adipose (skle-ro-ad'ip-ös). Composed of
fibrous and fatty tissue.

scleroblastema (skle''ro-blas-te'mah) [σκληρός
hard + blastema]. The embryonic tissue which
takes part in the formation of bone.

scleroblastemic (skle''ro-blas-tem'ik). Pertaining
to the scleroblastema.

sclerocataracta (skle''ro-kat-ar-ak'tah) [σκληρός
hard + καταρράκτης downpour]. A hard cata-
ract.

sclerochoroiditis (skle''ro-ko-roid-i'tis). Inflam-
mation of the sclera and the choroid coat, result-
ing in atrophy of both coats and protrusion of the
former. **s. anterior**, involves the anterior por-
tions of the sclera and causes anterior staphyl-
oma. **s. posterior**, a condition seen in pro-
gressive myopia in which posterior staphyloma
occurs in the region of the optic disk.

scleroconjunctival (skle''ro-kon-junk-ti'val). Per-
taining to the sclera and conjunctiva.

scleroconjunctivitis (skle-ro-kon-junk-tiv-i'tis).
Inflammation of the sclera and the conjunctiva.

sclerocornea (skle-ro-kor'ne-ah). The sclera and
the cornea considered as forming one organ.

sclerocorneal (skle-ro-kor'ne-al). Pertaining to
the sclera and the cornea.

sclerodactylia (skle''ro-dak-til'e-ah) [σκληρός
hard + δακτύλος finger]. Scleroderma of a finger
or of the fingers and toes. **s. annularis ain-
humoides**, a form which sometimes destroys the
terminal phalanges.

scleroderma (skle-ro-der'mah) [σκληρός hard +
δέρμα skin]. A disease of the skin in which thick-
ened, hard, rigid, and pigmented patches occur,
the connective tissue of the corium and subcuta-
neous structures being increased, a hidebound
condition resulting (Watson, 1754). The ordinary
form (*s. adultorum*) begins in middle life, and is
often incurable. **s. circumscriptum**, morphea.
diffuse symmetrical s., scleroderma. **s. neo-
natorum**. Same as *sclerema neonatorum*.

sclerodermatitis, sclerodermatitis (skle''ro-der-
mat-i'tis, skle''ro-der-mi'tis) [σκληρός hard +
δέρμα skin]. Inflammation and hardening of the
skin.

sclerogenous (skle-roj'en-us) [σκληρός hard +
γενᾶν to produce]. Producing sclerous tissue.

sclerogummatous (skle-ro-gum'at-us). Composed
of fibrous and gummatous tissue.

scleroid (skle'roid) [σκληρός hard + εἶδος
form]. Having a hard texture.

sclero-iodine (skle-ro-i'o-din). A principle obtain-
able from ergot in small quantities.

sclero-iritis (skle-ro-i-ri'tis). Inflammation of the
sclera and of the iris.

sclerokeratitis (skle''ro-ker-at-i'tis) [σκληρός
hard, sclera + κέρασ cornea]. Inflammation of
the sclera and of the cornea.

sclerokerato-iritis (skle''ro-ker'at-o-i-ri'tis). In-
flammation of the sclera, cornea, and iris.

scleroma (skle-ro'mah) [σκληρώμα induration].
A hardened patch or induration, especially of the
nasal or laryngeal tissues. **s. respiratorium**,
rhinoscleroma.

scleromeninx (skle-ro-me'ninks) [σκληρός hard
+ μῆνιγξ membrane]. The dura mater.

scleromere (skle'ro-mēr) [σκληρός hard + μέρος
part]. Any segment or metamere of the skeletal
system.

sclerometer (skle-rom'et-er) [σκληρός hard +
μέτρον measure]. An instrument for determining
the hardness of substances.

scleromucin (skle-ro-mu'sin) [σκληρός hard +
μύκιν]. A slimy, active principle from ergot.

scleronychia (skle-ro-nik'e-ah) [σκληρός hard
+ ὄνυξ nail]. A simultaneous thickening and
dryness of the nails.

scleronyxis (skle-ro-nik'sis) [σκληρός hard +
νύξις puncture]. Surgical puncture of the sclera.

sclero-oophoritis (skle''ro-o-o-f-o-ri'tis) [σκληρός
hard + oophoritis]. Sclerosing inflammation of
the ovary.

sclero-oothecitis (skle''ro-o-o-the-si'tis). Sclero-
oophoritis.

sclero-optic (skle-ro-op'tik). Pertaining to the
sclerótica and the optic nerve.

sclerophthalmia (skle-rof-thal'me-ah) [σκληρός
hard + ὀφθαλμός eye]. The condition in which,
from imperfect differentiation of the sclera and
cornea, the former encroaches on the latter, so
that only the central part of the cornea remains
clear.

scleroprotein (skle-ro-pro'te-in) [σκληρός hard
+ protein]. A name proposed as a substitute for
albuminoid. See *albuminoid* (3).

sclerosal (skle-ro'sal). Sclerous.

sclerosarcoma (skle''ro-sar-ko'mah) [σκληρός
hard + σάρκωμα fleshy tumor]. A hard, fleshy
variety of epulis.

sclerosed (skle-rözd'). Affected with sclerosis.

sclerosing (skle-ro'zing). Causing or undergoing
sclerosis.

sclerosis (skle-ro'sis) [σκληρώσις hardness]. An
induration, or hardening; especially harden-
ing of a part from inflammation and in diseases
of the interstitial substance. The term is used
chiefly for such a hardening of the nervous sys-
tem due to hyperplasia of the connective tissue.
Alzheimer's s., hyaline degeneration of the
smaller cerebral blood vessels; presenile insanity.
amyotrophic lateral s., a disease marked by a
hardening of the lateral columns of the spinal cord
with muscular atrophy. It may invade the
oblongata and affect the ventral columns also.
The disease always ends fatally in from one to
three years, death occurring from extension of
the hardening to the medulla oblongata. **annu-
lar s.**, sclerosis of the spinal cord, forming a
band around it. **anterolateral s.**, sclerosis of
the ventral and lateral columns of the cord
leading to spastic paraplegia. Called also *ventro-
lateral s.* **arterial s.**, arteriosclerosis. **ar-
teriocapillary s.** Same as *arteriosclerosis*.
bone s., eburnation. **cerebral s.**, multiple
sclerosis of the brain. **cerebrospinal s.**,
multiple sclerosis of the brain and spinal cord. See
multiple s. **combined s.**, sclerosis of both
the posterior and lateral columns of the cord.
diffuse s., a form affecting large areas of the
brain and cord. **disseminated s.**, **focal s.**,
insular s. Same as *multiple s.* **lateral s.**,
a form seated in the lateral columns of the cord.
It occurs either as a *primary* affection, resulting
in spastic paraplegia, attended with rigidity
of the limbs, increase of the tendon reflexes,
and absence of nutritive and sensory distur-
bance. The disease may also be *secondary* to
myelitis, in which there is spastic paraplegia, with
sensory and other disturbances. **lobar s.**,

sclerosis involving an entire lobe of the brain. **miliary s.**, sclerosis occurring in minute spots. **Mönckeberg's s.**, degeneration of the arteries marked, in the arteries of large size, by extensive degeneration of the media, with atrophy of its muscular elements and frequent calcareous deposits in the atrophied muscle cells. There is usually a similar calcareous deposit in the smaller arteries. **multiple s.**, a disease marked by sclerosis occurring in sporadic patches throughout the brain or spinal cord, or both. It is regarded as probably of infective origin. Among its symptoms are weakness, incoordination, strong jerking movements of the legs, and especially of the arms, amenomania or other abnormal mental exaltation, scanning speech, nystagmus, etc. It is not curable, and may last for many years. Called also *Charcot's disease*, *disseminated s.*, and *insular s.* **posgerior s.**, sclerosis of the posterior columns of the cord, leading to locomotor ataxia. See *locomotor ataxia*. **posterolateral s.**, Friedreich's ataxia, or, more correctly, the lesion of the posterior and lateral columns of the spinal cord which leads to it. **s. re'dux**. See *chambre redux*. **tuberos s.**, a condition characterized pathologically by the presence of numerous glial tumors within the brain, and marked by progressive mental deterioration, epileptic convulsions, and tumors of the skin and viscera. **unicellular s.**, the development of bands of fibrous material between the cells of a gland. **vascular s.**, arteriosclerosis. **s. ventric'uli**, sclerotic gastritis. **ventrolateral s.** See *anterolateral s.*

scleroskeleton (skle-ro-skel'et-on) [σκληρός hard + skeleton]. Those parts of the bony skeleton that are formed by the ossification of ligaments, tendons, or fasciae.

sclerostenosis (skle-'ro-ste-no'sis) [σκληρός hard + στένωσις narrowing]. Induration or hardening combined with contraction. **s. cuta'nea**, scleroderma.

Sclerostoma (skle-ros'to-mah). A genus of nematode worms. **S. duodena'le**, Ankylostoma duodenale. **S. syn'gamus**, Syngamus trachealis.

Sclerostominae (skle-ro-sto'mi-ne). A subfamily of the Strongylidae, characterized by hooks of plates in the mouth. It contains five genera: *Ankylostoma*, *Necator*, *Triodontophorus*, *Oesophagostoma*, and *Physaloptera*.

sclerostomy (skle-ros'to-me) [sclera + στόμα opening]. The operation of forming a fistulous opening through the sclera for the relief of glaucoma.

sclerothrix (skle'ro-thriks) [σκληρός hard + θρίξ hair]. Abnormal hardness and dryness of the hair.

sclerotic (skle-rot'ik) [L. *scleroticus*; σκληρός hard]. 1. Hard, or hardening; affected with sclerosis. 2. Same as *sclerothica*. **s. acid**, a yellowish-brown substance, one of the active principles of ergot. It is used as an ebolic. Dose, $\frac{1}{2}$ -2 grains (0.03-0.13 Gm.).

sclerothica (skle-rot'ik-ah) [L.]. See *sclera*.

scleroticectomy (skle-'rot-is-ek'to-me) [sclerothica + ἐκτομή excision]. Excision of a portion of the sclera.

scleroticochoroiditis (skle-rot'ik-o-ko-roi-di'tis). See *sclerochoroiditis*.

scleriticonyx (skle-rot'ik-o-niks'is). Same as *scleronyxis*.

scleroticopuncture (skle-rot'ik-o-punk'tshur). Scleronyxis.

scleritotomy (skle-'rot-ik-ot'o-me) [σκληρός hard + τομή cut]. Surgical incision of the sclera, as in an operation for cataract.

sclerotitis (skle-ro-ti'tis). Same as *scleritis*.

sclerotium (skle-ro'she-um) [σκληρός hard]. The hard, blackish mass formed by certain fungi, such as the ergot of rye.

sclerotome (skle'ro-töm) [σκληρός hard + τέμνειν to cut]. 1. An instrument used in the incision of the sclera. 2. One of the masses of tissue in the early embryo which develops into the skeleton; skeletogenous tissue.

sclerotomy (skle-rot'o-me) [σκληρός hard + τομή a cut]. Surgical incision of the sclera. **anterior s.**, the opening of the anterior chamber of the eye, chiefly done for the relief of glaucoma. **posterior s.**, an opening made into the vitreous through the sclera, as for detached retina or the removal of a foreign body.

sclerotrachia (skle-ro-trik'e-ah) [σκληρός hard + θρίξ hair]. A hard, dry state of the hair.

sclerozone (skle-ro-zōn) [σκληρός hard + ζώνη zone]. Any surface on a bone giving attachment to the muscles from a given myotome.

scolociasis (sko-les-i'as-is) [σκόληξ worm]. The morbid state due to the presence of larvae of moths or butterflies in the body.

scoliciform (sko-les'if-orm). Resembling a scolex.

scolicitis (sko-le-si'tis) [σκόληξ worm]. Same as *appendicitis*.

scoleoid (sko'lek-oid). 1. Resembling a worm. 2. Resembling a scolex; hydatid.

scoleoidectomy (sko-lek-oi-dek'to-me). Appendicectomy.

scoleoiditis (sko'le-koid-i'tis) [σκολοειδής vermiform]. Same as *appendicitis*.

scolerology (sko-le-kol'o-je) [σκόληξ worm + λόγος discourse]. Same as *helminthology*.

scolotomy (sko-lek'to-me). Appendicectomy.

scolodocostomy (sko-le-do-kos'to-me). Same as *appendicostomy*.

scolex (sko'leks), pl. *scol'ices* [σκόληξ worm]. The anterior end of a tapeworm, consisting of the head and neck.

scoliohypophosis (sko'le-o-ki-fo'sis) [scoliosis + hypophosis]. Combined lateral and posterior curvature of the spine.

scolimeter (sko-le-om'et-er) [σκολιός crooked + μέτρον measure]. An apparatus for measuring curves, especially those of the spinal column.

scoliorachitic (sko'le-o-ra-ki'tik). Affected with scoliosis and rickets.

scoliosimetry (sko'le-os-e-om'et-re) [σκολίωσις curvature + μέτρον measure]. The measurement of curvatures, especially those of the vertebral column.

scoliosis (sko-le-o'sis) [σκολίωσις curvature]. Abnormal curvature of the vertebral column, especially a lateral curvature. **cicatricial s.**, that which is due to a cicatricial contraction following caries or necrosis. **coxitic s.**, scoliosis in the lumbar region caused by hip disease. **empyematic s.**, that which is caused by empyema. **habit s.**, scoliosis due to improper position of the body. **inflammatory s.**, that which is due to vertebral disease. **ischiatric s.**, that which is due to hip disease. **myopathic s.**, that which is due to paralysis of the muscles that support the trunk. **ocular s.**, **ophthalmic s.**, scoliosis attributed to tilting of the head on account of astigmatism. **osteopathic s.**, that which is caused by disease of the vertebrae. **paralytic s.**, lateral curvature of the spinal column. **rachitic s.**, spinal curvature due to rickets. **rheumatic s.**, that which is due to rheumatism of the dorsal muscles. **sciatic s.**, curvature of the spinal column toward the affected side in sciatica. **static s.**, that which is due to difference in the length of the legs.

scoliosometer (sko-le-o-som'et-er). Scoliosimeter.

scoliotic (sko-le-ot'ik). Affected with or pertaining to scoliosis.

scoliotone (sko'le-o-tōn). An apparatus for the forcible correction of scoliosis.

scolopsia (sko-lap'se-ah) [σκόλοψ a pointed thing].

A suture between two bones that allows motion upon each other.

scombrin (skom'brin). A protamine found in mackerel sperm.

scoop (skoop). A spoonlike instrument for clearing out cavities. **Mules' s.**, a form of curet used in eye operations.

scoparin (sko-pa'rin). A yellowish, crystalline principle, $C_{20}H_{20}O_{10}$, from the tops of *Cyl'isus scoparius*; diuretic. Hypodermic dose, $\frac{1}{2}$ -1 grain (0.033-0.066 Gm.).

scoparius (sko-pa're-us). The tops of *Cyl'isus scoparius*, or broom, a leguminous shrub. They contain the alkaloid sparteine and the principle scoparin. They are diuretic, purgative, and emetic, and are used in dropsy. Dose of fluidextract, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.); of decoction, 1-2 fl.oz. (30-60 cc.).

scopin (sko'pin). A substance formed by the gentle hydrolysis of hyoscyne. It is $OH.C_6H_5O.N.CH_3$, and readily changes into oscin.

scopola (sko-po'lah). The dried rhizome and larger roots of *Scopo'lia carniol'ica*. It contains the same constituents as *At'ropa belladon'na*, and is used like belladonna, as a sedative and narcotic. Dose, 5 grains (0.324 Gm.).

scopolamine (sko-pol-am'in). A mydriatic alkaloid $C_{17}H_{21}NO_4 + H_2O$, from the root of *Scopo'lia atro-poi'des*, *At'ropa belladon'na*, and other solanaceous plants. It is the same as hyoscyne. Dose of hydrochlorate, $\frac{1}{20}$ - $\frac{1}{10}$ grain (0.00025-0.0011 Gm.). **s. hydrobromide**, a crystalline sedative and mydriatic, $C_{17}H_{21}O_4N.HBr.3H_2O$, similar in action to atropine, but not producing dryness of the throat and other disagreeable symptoms. Subcutaneous dose, $\frac{1}{20}$ - $\frac{1}{10}$ grain (0.00025-0.0011 Gm.). It is used locally in 0.1 to 0.2 per cent solution. **s. hydrochloride**, $C_{17}H_{21}O_4N.HCl.2H_2O$. **s. stable**, scopomannit.

scopoleine (sko-po'le-in). A crystalline alkaloid, $C_{17}H_{21}NO_4$, from plants of the genera *Scopo'lia*, *Dubo'sia*, and *At'ropa*: a strong mydriatic and sedative.

Scopolia (sko-po'le-ah) [after J. A. Scopoli]. A genus of solanaceous plants. *S. atro-poi'des* (carniolica), of Europe, and *S. japon'ica* and *S. lu'rida*, of Asia, have properties like those of hyoscyamus and belladonna. Dose of fluidextract of the rhizome, 1-3 minims (0.06-0.2 cc.).

scopoline (sko'po-lin). An alkaloid or glucoside, $C_8H_{13}NO_2$, obtainable from scopolamine; narcotic.

scopomannit (sko-po-man'it). A proprietary aqueous solution of scopolamine hydrobromide containing 10 per cent of mannite.

scopometer (sko-pom'it-er). An instrument for measuring the turbidity of solutions, *i. e.*, the density of a precipitate.

scopomorphine (sko-po-mor'fin). A proprietary combination of scopolamine bromide and morphine hydrochloride.

scopomorphinism (sko-po-mor'fin-izm). Addiction to the use of scopolamine and morphine.

scopophobia (sko-po-fo'be-ah) [*σκοπεῖν* to view + *φῶβος* fear]. A morbid dread of being seen.

scoracratia (skor-ak-ra'she-ah) [*σκόρπ* dung + *ἀκρατία* lack of control]. The involuntary discharge of feces.

scorbutamin (skor-bu'tam-in). A name proposed for vitamin C. See *vitamin*.

scorbutic (skor-bu'tik) [L. *scorbu'ticus*]. Pertaining to or affected with scurvy.

scorbutus (skor-bu'tus). Latin for *scurvy*.

scordinemia (skor-din'e-me-ah) [for "yawning"]. Yawning and stretching with a feeling of lassitude, occurring as a preliminary symptom of some infectious disease.

scoretemia, **scoretæmia** (skor-et-e'me-ah) [*σκόρπ* dung + *αἷμα* blood]. Autointoxication due to

the absorption of putrescent fecal material from the intestine.

scotodinia (sko-to-din'e-ah) [*σκότος* darkness + *δίνω* whirl]. Dizziness with obscurity of vision and headache.

scotogram, **scotograph** (sko'to-gram, sko'to-graf) [*σκότος* darkness + *γράφειν* to write]. 1. Same as *skiagraph*. 2. The effect produced upon a photographic plate in the dark by certain substances.

scotographic (sko-to-graf'ik). Affecting a photographic plate in the dark.

scotography (sko-tog'raf-e). Same as *skiagraphy*.

scotoma (sko-to'mah), pl. *scoto'mata* [*σκότωμα*].

1. A blind or partially blind area in the visual field. 2. An appearance as of dark, vanishing, cloudy patches before the eyes. **absolute s.**, an area in the visual field as to which the eye is absolutely blind. **annular s.**, a scotomatous zone which surrounds the center of the visual field. Called also *ring s.* **s. auris**, loss of power to hear sounds which come from a certain direction. **central s.**, blindness limited to a part of the visual field corresponding to the macula lutea. **color s.**, color blindness as to a part of the visual field. **flimmer s.**, a kind in which the glimmering begins in the center of vision and spreads outward. **flickering s.**, a variety with serrate margins, and usually producing an extensive defect of vision. Same as *teichopsia*. **insular s.**, a scotoma occurring as a spot completely surrounded by the visible portion of the field. **negative s.**, scotoma in which the blind arc does not appear as a dark area but merely as a blank. **paracentral s.**, a scotoma the edge of which passes through the fixation point. **peripapillary s.**, enlargement of the blind spot. **peripherals s.**, a spot of absent vision anywhere in the visual field outside the point of fixation. **physiologic s.**, the blind-spot. **positive s.**, one which is seen by the patient as a dark spot. **relative s.**, scotoma in which the acuity of vision in the blind arc is only diminished. **ring s.** See *annular s.* **scintillating s.**, the sudden appearance before the eyes of a luminous cloud having a zigzag outline, whence it is called fortification spectrum. See *teichopsia*. It often foreruns an attack of migraine.

scotomagraph (sko-to'mah-graf) [*scotoma* + *γράφειν* to write]. An instrument for recording a scotoma.

scotomatous (sko-tom'at-us). Pertaining to or affected with scotoma.

scotometer (sko-tom'et-er) [*scotoma* + *μέτρον* measure]. An instrument for diagnosing and measuring scotomata.

scotometry (sko-tom'et-re). The measurement and recording of scotomata by the scotometer.

scotophobia (sko-to-fo'be-ah) [*σκότος* darkness + *φῶβος* fear]. Morbid fear of darkness.

scotopia (sko-to'pe-ah) [*σκότος* darkness]. Dark adaptation; the adjustment of the eye for darkness. Cf. *photopia*.

scotopsy (sko-tos'ko-pe) [*σκότος* darkness + *σκοπεῖν* to view]. Same as *skiascopy*.

scototherapy (sko-to-ther'ap-e) [*σκότος* darkness + *θεραπεῖα* treatment]. Treatment of disease by the complete exclusion of light rays.

scours, white. A diarrhea affecting calves during the first few days after birth; a form of septicemia from infection through the umbilical cord.

Scr., scr. Abbreviation for *scruple*.

scratches (skratsh'ez). Eczematous inflammation of the feet or a horse.

screatus (skre-a'tus) [L.]. Paroxysmal hawking and snorting, due to neurosis.

screen, fluorescent (skrēn). A plate in the fluoroscope coated with crystals of calcium tungstate.

screws (skreuz). Caisson disease.

screw-worm. See *Cochliomyia macellaria*.

scriveners' palsy (skriv-nerz). Writers' cramp.

scrobiculate (skro-bik'-u-lät) [L. *scrobiculatus*]. Marked with pits or cavities.

scrobiculus (skro-bik'-u-lus) [L. "little trench" or "pit"]. A small hollow, pit, or cavity. **s. cor'dis** [L. "pit of the heart"], the anterior depression called the pit of the stomach; the precordial depression.

scrofula (skrof'-u-lah) [L. "brood sow"]. Tuberculosis of the lymphatic glands, and sometimes of bones and joint surfaces, with slowly suppurating abscesses and fistulous passages, the inflamed structures being subject to a cheesy degeneration. It is essentially a disease of early life.

scrofulid, scrofulide (skrof'-u-lid, -lid) [Fr. *scrofulide*]. Same as *scrofuloderm*.

scrofuloderm (skrof'-u-lo-derm) [*scrofula* + *δέρμα* skin]. Any skin affection of tuberculous origin, and marked by irregular superficial ulcers. **s. gummo'sa**, a deep tuberculosis of the skin forming a gumma-like lesion. **papular s.** Same as *lichen scrofulosorum*. **pustular s.**, a form in which large or small sluggish pustules of the skin are formed, which, after ulcerating, leave depressed scars. **tuberculous s.**, granuloma: a subcutaneous nodule which degenerates slowly and leads to an indolent fistulous ulcer. **ulcerative s.**, a tuberculous scrofuloderm in its ulcerating stage. **verrucous s.**, tuberculous lupus characterized by necrogenic or other warty growths.

scrofuloderma (skrof'-u-lo-der'mah). See *scrofuloderm*.

scrofulophyma (skrof'-u-lo-fi'mah) [*scrofula* + *φύμα* growth]. A tuberculous growth of the skin.

scrofulosis (skrof'-u-lo'sis). A tendency toward scrofula; the scrofulous diathesis.

scrofulotuberculosis (skrof'-u-lo-tu-ber-ku-lo'sis). Same as *attenuated tuberculosis*. See *tuberculosis*.

scrofulotuberculous (skrof'-u-lo-tu-ber'ku-lus). Characterized by scrofulous tubercle.

scrofulous (skrof'-u-lus). Affected with or of the nature of scrofula.

scroll bone (skröl bôn). Either of the turbinated bones.

scroll ear (skröl êr). An ear in which the pinna is rolled up.

Scrophularia nodo'sa (skrof-u-la're-ah). The *Scrophularia marilandica*, a North American variety of *S. nodo'sa*, is deobstruent, anodyne, and diuretic. Dose of fluidextract, 30-60 minims (2-4 cc.).

scrotal (skro'tal). Pertaining to the scrotum.

scrotoctomy (skro-tek'to-me) [*scrotum* + *ἐκτομή* excision]. Excision of a portion of the scrotum.

scrotitis (skro-ti'tis). Inflammation of the scrotum.

scrotocoele (skro'to-sel) [*scrotum* + *κῆλη* hernia]. Scrotal hernia.

scrotum (skro'tum) [L. "bag"]. The pouch which contains the testicles and their accessory organs. It is composed of skin, the dartos, the spermatic, cremasteric and infundibuliform fasciae, and the tunica vaginalis. **s. lapillo'sum**, calcareous atheroma of the scrotum. **lymph s.**, dilatation of the scrotal lymphatics, as in certain cases of filariasis; described by Wong, of Canton, in 1888.

scrumbox (skrum'poks). An acne-like skin disease in football players in England.

scruple (skrup'l) [L. *scrupulus*]. Twenty grains, apothecaries' weight; symbol, ℥. See *weights and measures, table of*.

scrupulosity (skru-pu-lus'it-e). Morbid sensitiveness in matters of conscience.

sculcopine (skul'ko-pin). A proprietary astringent preparation of skullcap and hydrastis.

scultetus (skul-te'tus) [after Johann *Scultet*, German

surgeon, 1505-1645]. Same as *scultetus bandage*. See under *bandage*.

scurf (skurf). Dandruff; a branny substance of epidermic origin.

scurvy (skur've) [L. *scorbutus*]. A nutritional disease, due to dietetic errors, and marked by weakness, anemia, spongy gums, a tendency to mucocutaneous hemorrhages and a brawny induration of the muscles of the calves and legs. It oftenest affects mariners and those who use salted meats and few or no vegetables. The use of fresh potatoes, scurvy grass, and onions as food, and especially the drinking of lime juice, are preventive and remedial measures. **Alpine s., s. of the Alps**. Same as *pellagra*. **button s.**, a skin disease, formerly endemic in Ireland, characterized by button-like excrescences. **s. grass**, a cruciferous plant, *Cochlearia officinalis*, a remedy for scurvy: used in infusion or taken raw or cooked as a food or salad. **infantile s.**, a nutritional disease of infants characterized by the same symptoms as scurvy in adults. Called also *Barlow's disease*, *Moller's disease*, and *Cheadle's disease*. **land s.** Same as *purpura haemorrhagica*. **s. rickets**, infantile scurvy associated with rickets. **sea s.**, the true scurvy, such as mainly affects mariners.

scute (sküt) [L. *scutum* shield]. Any squama or scalelike structure; especially the bony plate which divides the upper part of the tympanic cavity from the mastoid cells. **tympanic s.**, a thin plate of bone between the attic of the tympanum and the mastoid cells.

Scutellaria (sku-tel-a're-ah). A genus of labiate herbs, called skullcap. *S. lateriflora*, a plant of North America, is nervine, antispasmodic, and tonic, and is used in malarial fever and epilepsy. Dose of fluidextract, 30-60 minims (2-4 cc.); of extract, 4-15 grains (0.26-1 Gm.).

scutellarin (sku-tel-a'rin). A crystalline principle, $C_{10}H_8O_8$, found in scutellaria and other labiate plants. Dose, 1-4 grains (0.066-0.26 Gm.).

scutiform (sku'tif-orm) [L. *scutum* shield + *for'ma* form]. Shaped like a shield.

scutular (sku'tu-lar). Marked by scutula, or small, shield-shaped crusts.

scutulum (sku'tu-lum), pl. *scutula* [L.]. Any one of the disklike crusts of favus.

scutum (sku'tum) [L. "shield"]. 1. The acute, or roof of the attic. 2. The thyroid cartilage. 3. The patella. 4. A hard chitinous plate on the anterior portion of the dorsal surface of the Ixodidae or true ticks. **s. pec'toris**, the sternum.

scybala (sib'al-ah). Plural of *scybalum*.

scybalous (sib'al-us). Of the nature of or composed of scybala.

scybalum (sib'al-um), pl. *scy'bala* [σκύβαλον]. A dry, hard mass of fecal matter in the intestine.

scyllite (si'tit) [σκύλλος a young dog]. A hexose from the liver and kidneys of sharks, skates, etc.

scymnol (sim'nol). A substance allied to cholic acid found in the bile of *Scymnus borealis*, a marine fish of the shark family.

scyphoid (si'foid) [σκύφος cup + εἶδος form]. Shaped like a cup.

scythropasmus (si-thro-paz'mus) [σχυθροπασμός; σκυθράειν to look sullen]. A dull, fatigued expression, regarded as a grave symptom in serious disease.

scytitis (si-ti'tis) [σκῦτος skin]. Same as *dermatitis*.

scytoblastema (si'to-blas-te'mah) [σκῦτος skin + βλάστημα sprout]. The rudimentary skin of the embryo.

Scytonema (si-to-ne'mah) [σκῦτος skin + νῆμα thread]. A genus of schizomycetes with cylindrical phycochromous filaments.

S. D. A. Right sacro-anterior position of the fetus.

S. D. P. Right sacroposterior position of the fetus.

- Se.** The chemical symbol of *selenium*.
- seamstresses' cramp.** See *cramp*.
- searcher** (sur'cher). A sound used in searching for stone in the bladder.
- seasickness** (se'sik-nes). Nausea and malaise caused by the motion of a ship at sea.
- seatangle** (se'tang-l). See *Laminaria*.
- seatworm** (set'worm). Same as *Oxyuris*.
- seaweed** (se'weed). A plant growing in the sea; especially a plant of the class *Algae*.
- sebaceous** (se-ba'shus) [*L. seba'ceus*]. 1. Pertaining to sebum or suet. 2. Secreting a greasy lubricating substance.
- sebadilla** (seb-ad-il'ah). See *sabadilla*.
- sebastomania** (se'bas-to-ma'ne-ah) [*σεβαστος* reverend + *μανία* madness]. Religious insanity.
- sebiagogic** (seb-e-ag-oj'ik) [*L. se'bum* + *ἀγωγός* leading]. Producing fatty or sebaceous matter.
- sebiferous** (se-bif'er-us) [*L. sebi'ferus*, from *se'bum* suet + *fer're* to bear]. Same as *sebi'parous*.
- sebi'parous** (se-bip'ar-us) [*L. sebi'arus*; *se'bum* suet + *παίρειν* to produce]. Producing a fatty secretion.
- sebirol** (se'bir-ol). A proprietary vermifuge based upon the active principle of the plant *Ribes embe'lia*.
- sebolite, sebolith** (seb'o-lit, seb'o-lith) [*sebum* + *λίθος* stone]. A concretion formed in a sebaceous gland.
- seborrhagia** (seb-or-a'je-ah). Same as *seborrhea*.
- seborrhea, seborrhoea** (seb-or-e'ah) [*L. se'bum* suet + *ροία* flow]. A chronic disease of the sebaceous glands marked by the occurrence of an excessive discharge of sebum from the glands, forming white or yellowish, greasy scales on the body. It is generally attended with itching or burning. **s. adipo'sa**, that in which the secretion is oily, especially occurring about the nose and forehead. Called also *s. oleo'sa*. **s. capil-lit'ii**, *s. cap'itis*, seborrhea of the scalp. **s. co'rea**, seborrhea with a waxy secretion. **concrete s.**, greasy crusts of the scalp or of the smooth parts. **s. congesti'va**. Same as *lupus erythematosus*. **s. cor'poris**, a form affecting the trunk; lichen circinatus. **eczematoid s.**, that associated with inflammation of the scalp. **s. facie'i**, a form which affects the face: it may follow smallpox or any of the exanthematous fevers. **s. furfura'cea**, a scaly, dandruffy form of seborrhoea sicca. **s. genera'lis**, that which affects the entire surface. **s. nig'ra**, *s. nig'ricans*, a variety which is characterized by a dark-colored secretion. **s. oleo'sa**, that in which the discharge is oily. See *s. adiposa*. **s. sic'ca**, a common form of seborrhea characterized by the formation of brownish-gray scales or scabs. **s. squa'mo neonato'rum**, ichthyosis sebacea.
- seborrheal** (seb-or-e'al). Characterized by seborrhea.
- seborrheic** (seb-or-e'ik). Affected with or of the nature of seborrhea.
- seborrheid, seborrheide** (seb-or-e'id). A seborrheic eruption.
- seborrhoic** (seb-o-ro'ik). Seborrheic.
- sebum** (se'bum). 1. Latin for *suet*, or *sebum*. 2. The secretion of the sebaceous glands; a thick, semifluid substance composed of fat and epithelial debris from the cells of the malpighian layer. **s. cuta'neum** [B N A], the fatty secretion of the sebaceous glands. **s. palpebra'le** [B N A], the secretion of the meibomian glands. **s. praepu'tia'le** [B N A], smegma.
- secacornin** (se-kak-or'nin). A proprietary preparation of the active principles of ergot. Dose, 8-15 minims (o.5-1 cc.).
- Secale** (se-ka'le) [*L. "rye"*]. A genus of graminaceous plants. **S. cerea'le** produces rye, a cereal grain. **S. cornu'tum**, the ergot of rye. See *ergot*.
- secalin** (sek'al-in). One of the active principles of ergot: said to be identical with trimethylamine, N(CH₃)₃.
- secalintoxin** (sek'al-in-toks'in). A principle obtainable from ergot. It is a compound of secalin with ergochrysin. It is less active than chrysotoxin, and is probably identical with cornutin.
- secalose** (sek'al-ōz). A carbohydrate obtainable from rye: when dried, it forms a white, hygroscopic powder, convertible by inversion into levulose.
- secernent** (se-ser'nent) [*L. secer'nens* secreting]. 1. Secreting. 2. Any secreting organ or surface.
- Sechenoff's center** (setsh'en-ofs) [Ivan Sechenoff, Russian neurologist of the 19th century]. See *Sechenoff's center*, under *center*.
- seclusion of the pupil** (se-klu'zhun) [*L. seclu'sio* pupil'lac]. Same as *annular posterior synechia*. See under *synechia*.
- secodont** (se'ko-dont) [*L. seca're* to cut + *ὀδούς* tooth]. Having teeth in which the tubercles of the molars are provided with cutting edges.
- second intention** (sek'und). See *healing and intention*. **s. nerve**, the optic nerve.
- secondary** (sek'un-da-re) [*L. secunda'rius*; *secun'dus* second]. Second or inferior in order of time, place, or importance.
- secreta** (se-kre'tah) [*L. pl.*]. The secretions.
- secretagogue** (se-kre'tag-og) [*secretion* + *ἀγωγός* drawing]. A substance which acts as a stimulant to the secretion of glands.
- secrete** (se'krēt) [*L. secer'nere*, *secre'tum* to separate]. To separate or elaborate from the blood.
- secretin** (se-kre'tin). 1. A substance secreted by the mucosa of the duodenum and jejunum. It is carried by the blood to the pancreas, in which organ it stimulates the secretion of pancreatic juice. 2. A general name for any hormone which stimulates glandular secretion. **gastric s.**, gastrin.
- secretion** (se-kre'shun) [*L. secre'tio*, from *secer'nere* to secrete]. 1. The process or function of separating various substances from the blood. 2. Any secreted substance. **antilytic s.**, saliva secreted by the submaxillary gland with nerves intact, as distinguished from that secreted when the nerve is divided. **external s.**, one that is discharged upon the external or internal surface of the body. **internal s.**, a secretion that is not discharged by a duct from the body, but is given off into the blood and lymph, taking an important part in metabolism. Such secretions are furnished by the thyroid, the spleen, the adrenals, the testicles, the pituitary body, etc. Those that excite metabolic processes are hormones, those that depress are chalones or colyones. See *endocrine*. **paralytic s.**, secretion from a gland after paralysis or division of its nerve.
- secretodermatosis** (se-kre''to-der-mat-o'sis). Any derangement of the secreting functions of the skin.
- secretogen** (se-kre'to-jen). A proprietary extract from the duodenum.
- secretagogue** (se-kre'to-gog) [*secretion* + *ἀγωγός* leading]. Stimulating glandular secretion; also a substance that stimulates secretion.
- secretory-inhibitory** (se-kre''to-in-hib'it-o-re). Producing decreased secretion.
- secretomotor, secretomotory** (se-kre-to-mo'tor, se-kre-to-mo'to-re). Exciting or stimulating secretion: said of nerves.
- secretory** (se-kre'to-re). Pertaining to secretion or affecting the secretions.
- sectarian** (sek-ta're-an). A practitioner of medicine who "follows a dogma, tenet, or principle based on the authority of its promulgator to the exclusion of demonstration and practice" (Judicial Council A. M. A.).
- sectile** (sek'til) [*L. secti'lis*, from *seca're* to cut]. Susceptible of being cut.

sectio (sek'shé-o) [L. *seca're* to cut]. Latin for **section**. **s. agrippina**. See **section**, **cesarean**. **s. al'ta**, suprapubic cystotomy. **s. cadaveris**, a postmortem examination; an autopsy. **s. lateralis**, lateral lithotomy. **s. median'a**, median lithotomy.

section (sek'shun) [L. *sec'tio*]. 1. An act of cutting. 2. A cut surface. 3. A segment; also any subdivision of an organ. **abdominal s.**, laparotomy. **cesarean s.**, the operation of delivering a fetus by incision through the abdominal wall and uterus. It is done when delivery by the natural passages is impossible or dangerous. When performed after death of the mother, it is called *post-mortem cesarean s.* **frontal s.**, a cut made through the body or a part of the body transversely from right to left. **perineal s.**, external urethrotomy. **Pitres' s's**, a series of six transverse sections made through the brain, as follows: 1. *Prefrontal s.*, through the prefrontal lobe. 2. *Pediculo-frontal s.*, two centimeters in front of the fissure of Rolando. 3. *Frontal s.*, at the level of the ascending frontal convolution. 4. *Parietal s.*, through the ascending parietal convolution. 5. *Pediculo-parietal s.*, three centimeters behind the fissure of Rolando. 6. *Occipital s.*, through the middle of the occipital lobe. **Saemisch's s.**, a surgical operation for the relief of corneal complications. **sagittal s.**, a cut in a dorsoventral or anterioposterior direction through the body or a part of it. **serial s.**, histologic section made in a consecutive order and so arranged for the purpose of microscopical examination. **sigaultian's s.**, symphysiotomy. **s. smoother**, a mechanism for preventing the section made for microscopical study from curling up. **vaginal s.**, incision through the vaginal wall into the abdominal cavity.

sector (sek'tor) [L. "cutter"]. The area of a circle included between an arc and the radii bounding it. **sectorial** (sek'to're-al) [L. *sec'tor*, cutter]. Cutting. **secundae viae** (se-kun'de vi'e) [L. "second way"]. The lacteals and blood vessels.

secundigravida (se-kun'dig-rav'id-ah) [L. *secun'dus* second + *grav'ida* pregnant]. A woman pregnant for the second time.

secundina cerebri (se-kun'di-nah ser'e-bri). The pia-arachnoid. **s. oc'uli**, the middle coat of the choroid. **s. u'teri**, the chorion.

secundinae (se-kun'di-ne). Same as *secundines*.

secundines (se-kun'dinz) [L. *secundi'nac*]. The afterbirth; the placenta and membranes expelled after childbirth.

secundipara (se-kun-dip'ah-rah) [L. *secun'dus* second + *para're* to produce]. A woman who has borne two children.

secundiparity (se-kun-dip-ar'it-e). The condition of being a secundipara.

secundiparous (se-kun-dip'ah-rus). Having borne a second child.

secundum artem (se-kun'dum ar'tem) [L.]. In an approved or professional manner.

Sed. Abbreviation for *L. sed'es*, stool.

sedasi'na gualdo'ni. The benzoic ether of dimethyl-amino-propanol.

sedaspirin (sed-as'pir-in). A proprietary compound of aspirin and bromine.

sedatin (sed'at-in). Same as *valeridin*.

sedation (se-da'shun) [L. *sedatio*]. The production of a sedative effect; the act or process of calming.

sedative (sed'at-iv) [L. *sedati'vus*]. 1. Allaying activity and excitement. 2. A remedy that allays excitement. **Battley's s.**, extract of opium, 360 grains; boiling water, 7 f.oz.; alcohol, $\frac{1}{2}$ f.oz., and cold water, to make 10 f.oz. Dose, 5 minims (0.3 cc.). **cardiac s.**, a drug that abates the force of the heart's action, such as aconite, antimony, chloral, chloroform, conium, the nitrites, tobacco, etc. **cerebral s.**, one which principally affects the

brain. To this class belong cannabis, camphor, the bromides, hyosine, and the hypnotic and revulsive agents. **gastric s.**, one which soothes or lessens irritability of the stomach, such as bismuth salts, cerium oxalate, cocaine, hydrocyanic acid, silver nitrate. **general s.**, one which affects all the organs and functions. These are alcohol, bromides, camphor, chloroform, ether, hydrocyanic acid, the hypnotics, opium, warm baths, etc. **genital s.**, any anaphrodisiac agent, like the bromides, camphor, or hops. **intestinal s.**, one which diminishes intestinal irritation: in general, they are also gastric sedatives. **nerve trunk s.**, one which acts upon the trunks of the nerves, like antipyrine, aconite, cocaine, cannabis, conium, and curare. **nervous s.**, a sedative which acts upon and through the nervous system. The cerebral, spinal, and nerve trunk sedatives belong to this class. **respiratory s.**, one which affects especially the respiratory centers and organs. Among them are chloral, chloroform, conium, curare, hydrocyanic acid, gelsemium, and opium. **spinal s.**, any drug which abates the functional or abnormal activity of the spinal cord. The principal drugs of this class are bromides, calabar bean, the nitrites, gelsemium, and chloral. **vascular s.**, one which affects the vasomotor activities. In general, they are the drugs named above as cardiac sedatives.

sedatol (sed'at-ol). A proprietary preparation of heroin for respiratory diseases.

sedentary (sed'en-ta-re) [L. *sedenta'rius*]. 1. Sitting habitually; of inactive habits. 2. Pertaining to a sitting posture.

Sédillot's operation (sa-de-yoz') [C. E. *Sédillot*, French surgeon, 1804-1883]. See under *operation*.

sédiment (sed'im-ent) [L. *sedimen'tum*]. A precipitate, especially one that is formed spontaneously. **urinary s.**, the deposit of solid matter left after the urine has been allowed to stand for some time. See *urine*.

sedimentation (sed'im-en-ta'shun). The act of causing the deposit of sediment, especially by the use of a centrifugal machine. **erythrocyte s.**, the sinking of red cells in a mass of drawn blood. The degree of rapidity at which this sinking occurs is called **s. rate**. **s. reaction** or **test**. See under *reaction* and *tests*.

sedimentator (sed'im-en-ta'tor). A centrifugal machine for separating sediments from the urine.

sedinha (sa-dên'yah) [Portuguese]. A homeopathic preparation of a Brazilian herb.

sedobrol (se'do-brol). A proprietary preparation of sodium bromide combined with bouillon in the form of tablets: used in epilepsy.

sedol (se'dol). A proprietary analgesic, antispasmodic, and sedative containing morphine hydrochloride, scopolamine hydrobromide, and spartein sulphate.

sedox (se'doks). A proprietary wound dressing.

seed (sēd). 1. The mature ovule of a flowering plant. 2. Semen. 3. A small cylindrical shell of platinum encasing a piece of capillary glass tubing containing radium emanation. Such "seeds" are implanted into tumors for the application to them of radium emanation. 4. To inoculate a culture medium with micro-organisms. **celery s.**, *Apium larkspur s.*, Delphinium.

seedy toe. See under *toe*.

seehear (se'här). A device by which the motions and sounds of the heart are rendered audible and visible.

Seeligmüller's sign (za'lik-me-lerz) [Otto Ludovic G. A. *Seeligmüller*, German neurologist, 1837-1912]. See *sign*.

seepage (se'paj). 1. Oozing of fluid; percolation: also the quantity of fluid that percolates. 2. Continuous rectal infusion.

Seessel's pouch or pocket (za'selz) [A. *Seessel*,

German embryologist of the 19th century]. See under *pouch*.

segestor (se-jes'tor). A proprietary embalming fluid.

Ségla's type (sa-glaz'h) [Jules Ségla, French physician, born 1856]. The psychomotor type of paranoia.

segment (seg'ment) [L. *segmentum*]. A piece cut off or marked off, either actually or by an imaginary line. **ceratobranchial s.** See *stylohyoid arch*, under *arch*. **cranial s.**, the three segments into which the bones of the cranium may be divided. They are distinguished as the occipital, the parietal, and the frontal. **epibranchial s.** See *stylohyoid arch*, under *arch*. **hypobranchial s.** See *stylohyoid arch*, under *arch*. **interannular s.**, the portion of a nerve fiber between two consecutive nodes of Ranvier. See *nerve*. **Lantermann's s.**, the segments of the sheath of Schwann situated between the Schmidt-Lantermann incisures. **medullary s.**, divisions of the medullary sheath of a nerve fiber between two successive incisures of Schmidt. **mesodermal s.** See *somite*. **neural s.**, a neuromere. **occipital s.**, the posterior of the three cranial segments. See *cranial s.* **pharyngobranchial s.** See *stylohyoid arch*, under *arch*. **primitive s.** See *somite*. **pubic s. of the pelvis**, that portion of the floor of the pelvis which is between the symphysis pubis and the anterior wall of the vagina, which latter it includes. **Ranvier's s's**, the portions of the medullary substance of a nerve fiber between Ranvier's nodes. **rivianian s.**, an irregular notch at the upper border of the tympanic sulcus. **rod s.**, the two segments which make up one of the rods of the retina. The *outer rod s.* is the portion presenting a uniform diameter, while the *inner rod s.* has a slightly increased diameter. **sacral s.**, that portion of the floor of the pelvis which lies between the sacrum and the posterior vaginal wall. **Schmidt-Lantermann s's**, elongated pieces which seem to compose the medullary substance of nerve fibers: seen after treatment of the fibers with osmic acid. **spinal s.**, a portion of the spinal cord contained between two imaginary sections, one on each side of a nerve pair.

segmental (seg-men'tal). Pertaining to or forming a segment; undergoing segmentation.

segmentation (seg-men-ta'shun). Division into parts more or less similar, especially that which takes place in the fertilized ovum. **s. cavity**. See *cavity*. **centrolecithal s.**, segmentation in which a central mass of nutritive yolk is surrounded by the segmentation spheres. **complete s.** See *total s.* **haustral s.** See *haustral churning*. **holoblastic s.** See *total s.* **incomplete s.** See *partial s.* **meroblastic s.** See *partial s.* **s. nucleus**. See *nucleus*. **partial s.**, a variety in which the formative yolk alone undergoes segmentation. Called also *incomplete s.* and *meroblastic s.* **s. sphere**. See *sphere*. **total s.**, a variety in which the entire ovum undergoes segmentation. Called also *holoblastic s.* and *complete s.* **unequal s.**, a variety in which the spheres of one pole are smaller and more numerous than those of the opposite pole.

segmenter (seg'ment-er). A young malarial organism in the stage in which it divides into segments in the blood corpuscle.

segregation (seg-re-ga'shun). In genetics the separation of the two genes of a pair in the process of maturation so that only one goes to each germ cell. Also the result of the offspring of this separation.

segregator (seg're-ga-tor). An instrument for securing the urine from each kidney separately. **Harris' s.**, an instrument for collecting the urine from each kidney separately. **Luys' s.**, an instrument for collecting the urine from each kidney separately.

Séguin's symptom (sa-ganz') [Edouard Séguin, French alienist, 1812-1880]. See under *symptom*.

Seidelin bodies (si'de-lin) [Harold Seidelin, contemporary British physician]. See under *body*.

Seidlitz powder (sid'litz) [named from a mineral spring in Bohemia]. See *powder*.

Seignette's salt (sin-yets') [Pierre Seignette, apothecary in Rochelle, 1660-1719]. Rochelle salt.

seisesthesia (sis-es-the'-ze-ah) [σείσις concussion + αίσθησις perception]. The perception of concussion; a sensation of concussion.

seismesthesia, seismaesthesia (sis-mes-the'-zhe-ah) [σεισμός shake + αίσθησις sensation]. Tactile perception of vibrations in a liquid or aerial medium.

seismotherapy (siz-mo-ther'ap-e) [σεισμός shake + θεραπεία]. The treatment of disease by mechanical vibration.

seizure (se'zhur). The sudden attack or recurrence of a disease. **psychic s.**, psycholepsy.

sejunction (se-junk'shun). An interruption of the continuity of association complexes which leads to a breaking up of the personality.

sekisanine (sek-is'an-in). An alkaloid, C₃₄H₃₆N₂O₆, found along with carcissine.

sekretin (se-kre'tin). Secretin prepared from the duodenum of the pig: used in diabetes.

selacean (se-la'se-an). One of a class of vertebrates which includes the sharks and rays.

selenin (se'le-nin). A serum obtained from cultures of *Diplococcus semilunaris*.

seleniol (se-le'ne-ol). A colloidal preparation of selenium recommended for the treatment of cancer.

seleniovanadium (se-le'-ne-o-va-na'-de-um). A proprietary selenium preparation recommended for the treatment of cancer.

selenium (se-le'ne-um) [σελήνη moon]. 1. A non-metallic element resembling sulphur; symbol, Se; atomic weight, 79.2. Compounds of selenium have been used in the experimental treatment of tumors in rats. 2. A homeopathic trituration of the same.

selenodont (se-le'no-dont) [σελήνη moon + ὀδούς tooth]. Having teeth with crescentic ridges, as in the molars of man.

selenoplegia, selenoplexia (se-le-no'ple'-je-ah, -plek'se-ah) [σελήνη moon + πλῆξις stroke]. A disease condition once believed to be due to the influence of the moon's rays.

self-abuse (self'ab-tis'). Same as *masturbation*.

self-digestion (self'di-jes'chun). Same as *autodigestion*.

self-fermentation (self-fer-men-ta'shun). See *autolysis*.

self-hypnosis (self-hip-no'sis). Hypnosis by autosuggestion.

self-infection (self'in-fek'shun). See *autoinfection*.

self-limited (self-lim'it-ed). Limited by its own peculiarities, and not by outside influence: said of a disease that runs a definite limited course.

self-pollution (self-pol-u'shun). Masturbation.

self-suspension (self'sus-pen'shun). The suspension of the body by the head and axillae (*axillocephalic s.*) or by the head (*cephalic s.*) for the purpose of stretching the vertebral column.

sella turcica (sel'ah tur'sik-ab) [L. for "Turkish saddle"]. The pituitary fossa; the transverse depression in the back part of the upper surface of the sphenoid bone which contains the hypophysis and the circular sinus.

sellanders (sel'an-derz). Same as *mallanders*.

seller (sel'ar). Pertaining to the sella turcica.

Sellards' test (sel'ardz) [Andrew Watson Sellards, American physician, born 1884]. See under *tests*.

Selters water, seltzer water (sel'ters, selt'ser) See *water*.

Sem. Abbreviation for *L. se'men*, seed.

semeiography (sem-i-og'ra-fe) [σημεῖον sign + γράφω writing]. A description of the signs or symptoms of disease.

semeiology (sem-i-ol'o-je) [σημεῖον sign + λόγος treatise]. Symptomatology.

semeiotic (sem-i-ot'ik) [σημειωτικός]. 1. Pertaining to the signs or symptoms of disease. 2. Pathognomonic.

semeiotics (sem-i-ot'iks). Same as *symptomatology*.

semelincident (sem-el-in'sid-ent) [*L. se'mel* once + *in'cidens* falling upon]. Attacking a person only once.

semen (se'men), gen. *se'minis* [*L.* for "seed"]. 1. Any seed or seedlike fruit. 2. The thick, whitish, liquid, fecundating secretion produced by the testes and ejaculated in coition. It is composed of liquor seminis (a clear, limpid fluid), holding in suspension the spermatozoa, seminal and other granules, epithelial cells, and oil globules. **s. contra.** Same as *santonica*.

semenuria (se-men-u're-ah) [*semen* + οὖρον urine]. The presence of semen in the urine.

semi- [*L. se'mis* half]. A prefix signifying half, or one half.

semicanal (sem'e-kan-al'). A trench or furrow open at one side.

semicana'lis mus'culi tenso'ris tym'pani [B N A]. The canal in the temporal bone for the tensor tympani muscle. **s. tu'bæ audi'tivæ** [B N A], the larger lower and lateral portion of the canalis musculotubarius which forms the lateral bony part of the auditory (eustachian) tube.

semicartilaginous (sem'e-kar-til-aj'in-us). Partly cartilaginous.

semicircular canal (sem-e-sir'ku-lar). See *canal* and *ear*.

semicoma (sem-e-ko'mah). A mild coma from which the patient may be aroused.

semicomatose (sem-e-ko'mat-ōs). In a condition of semicoma.

semicretin (sem-e-kre'tin). A person affected with a modified or incomplete form of cretinism.

semicretinism (sem-e-kre'tin-izm). A relatively mild form of cretinism; partial cretinism with ability to appreciate the bodily wants and some knowledge and use of language.

semicrista (sem-e-kris'tah). A small or rudimentary crest. **s. incisi'va**, the nasal crest.

Semid. Abbreviation for *L. semidrach'ma*, half a drachm.

semidecussation (sem'e-de-kus-a'shun). 1. An incomplete crossing of nerve fibers. 2. The decussation of the pyramids.

semidiagrammatic (sem'e-di-ah-gram-at'ik). Partly diagrammatic; modified so as to illustrate a principle, rather than to serve as an exact copy of nature.

semiflexion (sem-e-flek'shun). The position of a limb midway between flexion and extension.

semifluctuating (sem-e-fluk'tshu-a-ting). Giving a somewhat fluctuating sensation on palpation.

semiglutin (sem-e-glu'tin). A substance, $C_{36}H_{48}N_{17}O_{22}$, derived from gelatin and resembling a peptone.

Semih. Abbreviation for *L. semiho'ra*, half an hour.

semilunar (sem-e-lu'nar) [*L. semiluna'ris*; semi-half + luna moon]. Resembling a crescent, or half-moon. **s. cartilages**, two crescentic lamellae of fibrocartilage of the knee joint, serving to deepen the surface of the head of the tibia for articulation with the condyles of the femur.

semilunare (sem'e-lu-na're) [*L.*]. The semilunar bone of the wrist; the second bone of the first row of carpal bones, counting from the thumb side.

semiluxation (sem'e-luk-sa'shun). Same as *subluxation*.

semimalignant (sem'e-mal-ig'nant). Somewhat malignant.

semimembranosus (sem'e-mem-bran-o'sus) [*L. se'mis* half + *membrano'sus* membranous]. See *muscles*, table of.

semimembranous (sem-e-mem'bran-us). Made up in part of membrane or fascia.

seminal (sem'in-al) [*L. semina'lis*]. Pertaining to seed or to the semen.

seminarcosis (sem'e-nar-ko'sis). See *twilight sleep*, under *sleep*.

seminase (sem'in-ās). A ferment found in alfalfa.

semination (sem-in-a'shun) [*L. semina'tio*]. The introduction of semen into the vagina or uterus.

seminiferous (sem-in-if'er-us) [*L. se'men* seed + *fer're* to bear]. Producing or conveying semen.

seminoma (sem-in-o'mah) [*semen* + -oma tumor]. A tumor arising from the spermatogonial cells.

seminormal (sem-e-nor'mal). Of one half the normal or standard strength.

seminuria (sem-in-u're-ah) [*L. se'men* seed + οὖρον urine]. The discharge of semen in the urine.

semiography (se-me-og'raf-e). Semeiography.

semiology (se-me-ol'o-je). See *semeiology*.

semiorbicular (sem'e-or-bik'u-lar). Semicircular.

semitic (se-mi-ot'ik). Semeiotic.

semiparasite (sem-e-par-as'it). An organism with moderate infestiousness for living tissue, such as the typhoid bacillus and cholera vibrio.

semipenniform (sem-e-pen'if-orm). Penniform on one side; said of a muscle the fibers of which are attached to one side of the tendon.

semipermeable (sem-e-per'me-a-bl). Permitting the passage of certain molecules and hindering that of others. See under *membrane*.

semiplegia (sem-e-ple'je-ah). See *hemiplegia*.

semipronation (sem'e-pro-na'shun). 1. The act of bringing to a semiprone position. 2. A semiprone position.

semiprone (sem-e-prōn') [*L. se'mis* half + *pro'nus* prone]. Midway between pronation and supination.

semirecumbent (sem'e-re-kum'bent). Reclining but not completely recumbent.

semis (se'mis). Latin for *half*; abbreviated to ss.

semisideratio, semisideration (sem-e-sid-er-a'she-o, sem-e-sid-er-a'shun). Hemiplegia.

semisomnus (sem-e-som'nus). Semicoma.

semisopor (sem-e-so'por). Semicoma.

semispeculum (sem-e-spek'u-lum). A blunt gorget shaped like a half-speculum; used in lithotomy.

semispinalis (sem'e-spi-na'lis) [*L.*]. See *muscles*, table of.

semistarvation (sem'e-star-va'shun). The so-called hunger cure.

semisulcus (sem-e-sul'kus) [*L. se'mis* half + *sul'cus* furrow]. A channel which, with an adjacent and opposing one, forms a sulcus.

semisupination (sem'e-su-pin-a'shun). The act of bringing to a semisupine position; a semisupine position.

semisupine (sem'e-su-pin'). Same as *semiprone*.

semitendinosus (sem'e-ten-din-o'sus). See *muscles*, table of.

semitendinous (sem-e-ten'din-us) [*L. semitendino'sus*]. In part composed of a tendinous structure.

semitertian (sem-e-ter'shan). Partly tertian and partly quotidian.

semivalent (sem-iv'al-ent). Having one half the power which is normal.

Semon's law, sign (se'monz) [Sir Felix Semon, German laryngologist in London, 1849-1921]. See *law* and *sign*.

semprolin (sem'pro-lin). A proprietary petroleum emulsion; used as a laxative.

- senasal** (sen'as-al). A cathartic preparation of senna and sodium phosphate.
- senecine** (sen'e-sin). 1. A concentration prepared from *Senecio grœcilis*: tonic, diuretic, and emmenagogue; also a homeopathic preparation of the same plant. 2. A proprietary emmenagogue elixir prepared from *Senecio jacobaeae*. 3. An alkaloid said to be derivable from *Senecio vulgaris*. 4. A concentration prepared from *Senecio aureus*. Dose, 1-3 grains (0.066-0.2 Gm.).
- Senecio** (sen-e'she-o) [L. "old man"]. A genus of composite-flowered plants: many species are reputed to be tonic and diuretic. *S. aureus*, the common ragwort, or liferoot, is a diuretic and diaphoretic, expectorant, and tonic. Dose of fluid-extract, 30-60 minims (2-4 cc.); of solid extract, 5-10 grains (0.333-0.666 Gm.).
- senecionine** (se-ne-se-o'nin). A crystalline alkaloid, $C_{15}H_{25}NO_6$, from certain species of *Senecio*.
- senega** (sen'e-gah) [L.]. The root of *Polygala senega*, or seneca snakeroot, a plant of North America. It contains senegin and polygalin, and is expectorant and diuretic; in large doses emetic and purgative. It is used mainly in the later stages of pneumonia, asthma, catarrhal laryngitis, and bronchorrhea, and sometimes in dropsy as a hydragogue. Dose of abstract, 5-10 grains (0.333-0.666 Gm.); of fluidextract, 5-15 minims (0.333-1 cc.); of syrup, 1-2 fluidrachms (4-8 cc.); of tincture, 1 fluidrachm (4 cc.).
- senegin** (sen'e-jin). The active principle of senega; a saponin. Dose, $\frac{1}{4}$ -1 grain (0.016-0.66 Gm.).
- senescence** (se-ne'sens) [L. *senescere* to grow old]. The process or condition of growing old.
- senescent** (sen-es'cent). Growing old.
- seng** (seng). A proprietary restorative medicine, said to be the active constituent of Asiatic ginseng.
- senile** (se'nîl) [L. *senilis*]. Of, or pertaining to, old age.
- senilism** (se'nîl-izm). Premature old age.
- senility** (se-nîl'it-e) [L. *senilitas*]. Old age; the feebleness of body and mind incident to old age.
- senium** (se'ne-um). Old age; senility.
- Senn's bone plates** (senz) [Nicholas Senn, American surgeon, 1844-1908]. Plates of decalcified bone, used in approximating and suturing a divided intestine. **S's test**. See under *tests*.
- senna** (sen'ah) [L. from Arabic]. The leaflets of *Cassia acutifolia*, *C. angustifolia*, and other leguminous plants of the same genus. Senna is a purgative cholagogue. Its active principle is said to be cathartic acid, an unstable glucoside: combined with ammonia it is a strong purgative, but the acid injected into the veins has no effect. Senna is much employed in the constipation of children and pregnant women. Its action appears to be exerted upon all parts of the intestinal canal. In infusion with spigelia it is very serviceable against ascarides. As an aperient it is used to promote menstruation. It is an ingredient of black draft, Vienna draft, licorice powder, and many other laxative preparations. Dose in substance, 5-60 grains (0.333-4 Gm.); of confection, 1-2 drachms (4-8 Gm.); of fluidextract, 1-4 fluidrachms (4-16 cc.); of syrup, 1-2 fluidrachms (4-8 cc.); of tincture, 1-4 fluidrachms (4-16 cc.); of compound infusion, 4 fl.oz. (120 cc.); of *pulvis glycyrrhizae compositis*, 30 grains (2 Gm.); of *mistura senae composita* (black draft), 1-4 fl.oz. (30-120 cc.). **Alexandrian s.**, a variety derived mainly from *Cassia acutifolia*. **American s.**, *Cassia marilandica*, an inferior and unofficial species. **Indian s.**, *linneveyi* s., the leaflets of *Cassia angustifolia* or *C. elongata*, grown in India. **Mecca s.**, Indian senna.
- sennatin** (sen'at-in). An active principle extracted from senna: used subcutaneously as a cathartic. Dose, 2 grains (0.12 Gm.).
- sennin** (sen'nin) [after N. Senn]. A combination of phenol and iodine, employed as an antiseptic surgical dressing.
- senopia** (sen-o'pe-ah) [L. *senilis* pertaining to old age + *opsis* vision]. A change in the power of vision of old people by which they return to the sight of their youth. Called also *gerontopia*.
- sensation** (sen-sa'shun) [L. *sentire* to feel]. An impression conveyed by an afferent nerve to the sensorium commune. **articular s.**, the sensation produced by the contact of moving joint surfaces. **common s.** (Gemeingefühl), the general feeling superinduced by the summation of all the bodily sensation (E. H. Weber, 1846). **de-layed s.**, a sensation which is not perceived until some time after the application of the stimulation. **external s.**, **objective s.**, the effect produced upon the mind by an external object through the medium of the senses. **general s.**, a sensation felt throughout the body. **girdle s.**, zonesthesia. **internal s.**, **subjective s.**, a sensation perceptible only to the subject himself, and not connected with any object external to his body. **palmesthetic s.** See *palmesthetic sensibility*, under *sensibility*. **reflex s.**, **referred s.**, a sensation felt on a place other than the point of application of the stimulus. **strain s.**, a sensation as of a strain or straining. **transferred s.** Same as *referred s.*
- sense** (sens) [L. *sentire*; *sentire* to think]. A faculty by which the conditions or properties of things are perceived. Hunger, thirst, malaise, and pain are varieties of sense; a sense of equilibrium, of well being (euphoria), and other senses are also distinguished. **acids s.**, that power of the stomach to regulate the secretion of HCl in accordance with the needs of digestion. **color s.**, the faculty by which various colors are perceived and distinguished. **concomitant s.**, a secondary sensation, developed, without special stimulation, along with a primary sensation. **cutaneous s.**, sensation which is perceived at or on the skin, as touch, temperature, etc. **dermal s.**, one of the senses of the skin, as of pressure, temperature, etc. **genetic s.**, **reproductive s.**, the instinct which leads to the act of procreation. **kines-thetic s.**, the muscular sense. **light s.**, the faculty by which we distinguish degrees of brilliancy. **muscle s.**, **muscular s.**, the faculty by which muscular movements are perceived. **s. organ**, an organ which receives a stimulus and transforms it into a sensation. Sense organs consist of nerve cells (*central s. organs*) and sensory nerve endings (*peripheral s. organs*), which, in the case of special senses, are highly specialized. **posture s.**, a variety of muscular sense by which we distinguish the position or attitudes of the body or its parts. **pressure s.**, the faculty by which we appreciate pressure upon the surface of the body. **respi-ratory s.** Same as *besoin de respirer*. **s. shock**. See *shock*. **sixth s.**, the general feeling of consciousness of the entire body; cenesthesia or coenaesthesia. **space s.**, that combination of the senses chiefly of sight and touch) which gives us information as to the relative positions and relations of objects in space. **special s.**, any one of the five senses of seeing, feeling, hearing, taste, and smell. **stereognostic s.**, the sense by which form and solidity are perceived. **temperature s.**, the faculty by which a person is able to appreciate differences of temperature. **time s.**, the ability to appreciate time intervals, especially in sound and in music. **tone s.**, the power of distinguishing one tone from another. **visceral s.**, **seventh s.**, the internal and subjective sensations supposed to appertain to the ganglionic portion of the nervous system.
- sensibilatrice** (sen-se-be-lat-rēs'). Same as *amboceptor*.
- sensibiligen** (sen-sib-il'ij-en). See *sensibilisinogen*.
- sensibilin** (sen-sib-il'in). A substance formed in the body as a reaction against the first injection of

a protein in anaphylaxis. Called also *anaphylactic reaction body* and *anaphylactin*.

sensibilisin (sen-sib-il'is-in). Besredka's term for a specific antibody produced in the blood by a sensitizing injection. The sensitizing injection contains an active element (*sensibilisinogen*), which gives rise in the injected animal to sensibilisin. On injection of the same protein a reaction takes place between the sensibilisin and a third substance present in the protein and called *antisensibilisin*. See *anaphylactic antibody*, under *antibody*.

sensibilisinogen (sen'sib-il-is-in-o'-jen). See under *sensibilisin*.

sensibility (sen-sib-il'it-e) [*L. sensibil'itas*]. Susceptibility of feeling; ability to feel or perceive.

bone s., pallesthesia. **deep s.**, the sensibility to pressure and movement which exists after the skin area is made completely anesthetic. **epicritic s.**, the sensibility to gentle stimulations which furnishes the means for making fine discriminations of touch and temperature. This sensibility exists in the skin only. **mesoblastic s.** Same as *deep s.* **palmesthetic s.**, the sensibility of the skin to sensations of vibration, as a tuning-fork applied to the skin. **protopathic s.**, the sensibility to strong stimulations of pain and temperature which is low in degree and poorly localized. Such sensibility exists in the skin and in the viscera, and acts as a defensive agency against pathologic changes in the tissues. **recurrent s.**, sensibility exhibited in the anterior root of a spinal nerve when the distal portion is stimulated after division. **somesthetic s.**, bodily consciousness; the sensory consciousness of bodily movements; the sensibility of the somatic sensory receptors. **splanchnesthetic s.**, the consciousness or sensibility dependent on the splanchnic receptors.

sensibilization (sen-sib-il-iz-a'shun). 1. The act of making more sensitive. 2. Same as *sensitization*.

sensibilizer (sen'sib-il-i-zer). Same as *amboceptor*.

sensible (sen'sib-l) [*L. sensib'ilis*]. Capable of sensation; perceptible to the senses.

sensiferous (sen-sif'er-us) [*L. sen'sus* sense + *fer're* to carry]. Transmitting sensations.

sensigenous (sen-sij'en-us) [*L. sen'sus* sense + *γεννᾶν* to generate]. Producing sensory impulses.

sensimeter (sen-sim'et-er). An instrument for measuring the degree of sensitiveness of anesthetic and hyperesthetic areas on the body.

sensitogen (sen-sit-in-o'-jen). A general term including all the antigens which have a sensitizing effect on the body or which produce a hypersusceptible condition, such as anaphylactogen, allergen, sensibilisinogen.

sensitive (sen'sit-iv) [*L. sensit'ivus*]. Able to receive or to transmit a sensation; capable of feeling or of responding to a sensation.

sensitization (sen-sit-i-za'shun). 1. The process of rendering a cell sensitive to the action of a complement by subjecting it to the action of a specific amboceptor. 2. Same as *anaphylaxis*. **active s.**, the sensitization that results from the injection of a dose of antigen into the animal. **passive s.**, the sensitization which results when some of the blood of a sensitized animal is injected into a normal animal. **protein s.**, that bodily state in which the individual is sensitive or hypersusceptible to some foreign protein, so that when there is absorption of that protein, a typical reaction is set up.

sensitized (sen'sit-izd). Rendered sensitive. **s. vaccine**. See under *vaccine*.

sensitizer (sen'sit-i-zer). Same as *amboceptor*.

sensitizin (sen-sit-i'zin). Same as *anaphylactogen*.

sensitometer (sen-sit-om'et-er). A set of sensitive photographic plates for testing the penetration of the body by light rays.

sensomobile (sen-so-mo'bil). Moving in response to a stimulus.

sensomobility (sen'so-mo-bil'it-e). The capacity of man or animals for movement in response to a sensory stimulus.

sensomotor (sen-so-mo'tor). Both sensory and motor.

sensoparalysis (sen'so-par-al'is-is). Paralysis of the sensory or afferent nerves of a part.

sensorial (sen-so're-al) [*L. sensoria'lis*]. Pertaining to the sensorium.

sensoriglandular (sen'so-re-glan'du-lar). Producing glandular activity as one of the consequences of stimulation of the sensory nerves.

sensorimetabolism (sen'so-re-met-ab'o-lizm). The production of some metabolic action as a result of stimulation of the sensory nerves.

sensorimotor (sen'so-re-mo'tor). Both sensory and motor.

sensorimuscular (sen'so-re-mus'ku-lar). Producing reflex muscular action in response to a sensory impression.

sensorium (sen-so're-um) [*L. senti're* to perceive]. Any sensory nerve center; more frequently, the whole sensory apparatus of the body. **s. commune**, that part of the cerebral cortex that receives and coordinates all the impressions sent to the individual nerve centers.

sensorivascular (sen'so-re-vas'ku-lar). Producing vascular changes as a result of stimulation applied through the sensory nerves.

sensorivasomotor (sen'so-re-vas-o-mo'tor). Same as *sensorivascular*.

sensory (sen'so-re) [*L. senso'rius*]. Pertaining to or subserving sensation.

sensualism (sen'shu-al-izm) [*L. sen'sus* sense]. The condition of being dominated by bodily passions.

sentient (sen'she-ent) [*L. senti'ens*]. Able to feel; sensitive; having sensation or feeling.

sentinel (sen'tin-el). A watcher or guard. **s. gland**. See under *gland*. **s. pile**. See under *pile*.

sentisection (sen-te-sek'shun) [*L. senti're* to perceive + *sectio* to cut]. Vivisection of an unanesthetized animal.

separation (sep-ar-a'shun). In dentistry, the spacing of teeth in the same arch.

separator, separatory (sep'ar-a-tor, sep'ar-a-to-re) [*L. separa'tor*]. A device for effecting a separation. In dentistry, an appliance for forcing adjoining teeth apart.

separatorium (sep'ar-a-to're-um). An instrument used in separating the pericranium from the subjacent bone.

sepedogenesis (sep'ed-o-jen'es-is). Sepedogenesis.

sepedon (se-pe'don) [Gr.]. A septic condition: putridity.

sepedonogenesis (sep'e-do-no-jen'es-is) [*sepedon* + *L. gen'esis* production]. The production of septic conditions.

sepia (se'pe-ah) [*L.; σπηια* squid]. The inspissated inky juice of a cuttle-fish, or squid; also a homeopathic preparation of the same.

sepium (se'pe-um) [*L.; σπηια* cuttle-fish]. The bone of a cuttle-fish, *Se'pia officina'lis*.

sepsin (sep'sin) [*σῆψις* decay]. A poisonous, crystallizable ptomaine from decaying yeast and from animal matter.

sepsis (sep'sis) [*σῆψις* decay]. Poisoning by the products of a putrefactive process. See *septicemia*.

incarcerated s., an infection which is latent after the primary lesion has apparently healed, but which may be stirred into activity by a slight trauma. **s. intestinalis**, poisoning from the eating of damaged food, such as canned meats, ice cream, sausages, or cheese. **s. len'ta**, a condition produced by infection with the *Streptococcus vir'idans*. It is marked by slowly developing symptoms of a low infection ending in chronic endo-

- carditis. **oral s.**, a disease condition in the mouth or adjacent parts which may affect the general health through the dissemination of toxins. **puerperal s.**, sepsis occurring after childbirth, due to putrefactive matter absorbed from the parturient canal.
- Sep'sis viola'cea.** The common dung fly, which may be found in houses.
- sepsometer** (sep-som'et-er) [σῆψος putrefaction + μέτρον measure]. An instrument for detecting organic matter in the air.
- Sept.** Abbreviation for *L. sep'tem*, seven.
- septacrol** (sep'tak-rol). A crystalline powder soluble in water. It is an addition product of silver nitrate and diamino-trimethyl-acridinium nitrate and contains about 24 per cent of silver.
- septal** (sep'tal). Pertaining to the septum.
- septan** (sep'tan) [*L. sep'tem* seven]. Recurring every seventh (sixth) day.
- septate** (sep'tāt). Divided by a septum.
- septatome** (sep'tah-tōm). See *septome*.
- septavalent** (sep-tah'val-ent). Same as *septivalent*.
- sepectomy** (sep-tek'to-me) [septum + ἐκτομή excision]. Excision of a portion of the nasal septum.
- septicemia, septaemia** (sep-te'me-ah). Same as *septicemia*.
- septentrionaline** (sep-ten'tre-o-na'lin). A poisonous alkaloid, $C_{33}H_{46}N_2O_8$, from *Aconitum septentrionale*. It is a sensory paralyzant with anesthetic properties.
- septic** (sep'tik) [*L. sep'ticus*; σηπτικός]. Produced by or due to putrefaction.
- septicemia, septicaemia** (sep-tis-e'me-ah) [σηπτικός putrid + αἷμα blood]. A morbid condition due to the presence of pathogenic bacteria and their associated poisons (toxins and toxalbumins) in the blood. It is accompanied by chills, profuse sweat, and irregularly remittent fever and great prostration. Called also *septic infection* and *sepsis*. **apoplectiform s. of fowls**, a septicemia of fowls marked by apoplectiform symptoms and caused by the *Streptococcus gallinarum*. **bronchopulmonary s.**, septicemia from the aspiration of infected wound secretions into the trachea in operations on the larynx. **Bruce's s.**, Malta fever. **cryptogenic s.**, septicemia in which the focus of infection is not evident during life. **fowl s.**, a disease of fowls caused by the *Spirillum (Vibrio) metschnikovii*, marked by diarrhea, hyperemia of the alimentary canal, and the presence of a blood-tinged yellowish liquid in the small intestine. **s. haemorrhagica bubalo-rum**. Same as *barbone*. **hemorrhagic s.**, any one of a group of animal diseases caused by microorganisms of the genus *Pasteurella* and marked by hemorrhages, with local edema, infectious pleuropneumonia, and intestinal lesions; included in the group are hemorrhagic septicemia of cattle and of sheep, septic pleuropneumonia of calves, fowl cholera, rabbit septicemia, and swine plague. **lymphovenous s.**, infection of the deep cellular planes of the body. **melitensis s.**, Malta fever. **morphine injector's s.** See *Whitmore's disease*, under *disease*. **mouse s.**, an infectious disease of mice, due to *Erysipelothrix (Bacillus) murisepticus*. **phlebotic s.**, pyemia. **puerperal s.**, septicemia in which the focus of infection is a lesion of the mucous membrane received during childbirth. See *sepsis*, *puerperal*. **rabbit s.**, an infectious disease of rabbits due to the presence of *Pasteurella cuniculicida* and of methylguanidine, a toxin produced by that microbe. **sputum s.**, a form produced by inoculation of certain of the micro-organisms of the sputum. **typhoid s.**, general infection with typhoid bacillus. **vibrio s.**, the deadly septicemia produced by *Vibrio metschnikovii*.
- septicemic** (sep-tis-e'mik). Pertaining to, or of the nature of, septicemia.
- septicidin** (sep-tis-i'din). A proprietary serum for the treatment of swine plague and chicken cholera.
- septicine** (sep'tis-in). A ptomaine, or compound of hexylamine and amylamine, from putrid flesh.
- septicocemia, septicoaemia** (sep'tik-o-e'me-ah). Same as *septicemia*.
- septicophlebitis** (sep'tik-o-fle-bi'tis) [septic + phlebitis]. Inflammation of the veins, due to septic poisoning.
- septicopyemia** (sep'tik-o-pi-e'me-ah). Septicemia and pyemia combined. **cryptogenic s.** See *spontaneous s.* **metastatic s.**, a form marked by septic deposits in the lungs caused by embolism from putrid thrombi. **spontaneous s.**, a variety developing without obvious cause or from a slight wound of the skin. Called also *cryptogenic s.*
- septicopyemic** (sep'tik-o-pi-e'mik). Pertaining to septicopyemia.
- septicozymoid** (sep'tik-o-zi'moid). A hypothetical substance supposed by some to supply the necessary feeding ground for septic processes.
- septiferous** (sep-tif'er-us) [sepsis + *L. fer're* to carry]. Transmitting septic poisoning.
- septigravida** (sep-tig-rav'id-ah) [*L. sep'tum* seven + *grav'ida* pregnant]. A woman pregnant for the seventh time.
- septile** (sep'til). Of or pertaining to a septum.
- septimetritis** (sep'tim-e-tri'tis) [septic + metritis]. Septic inflammation of the uterus.
- septipara** (sep-tip'ah-rah) [*L. sep'tem* seven + *par'ere* to produce]. A woman who has borne seven children.
- septavalent** (sep-tiv'al-ent) [*L. sep'tem* seven + *va'lens* able]. Able to combine with or to replace seven hydrogen atoms.
- septoforma** (sep-to-for'mah). A product claimed to be a condensation product of formaldehyde with terpenes, naphthalenes, and members of the phenol group: used as a disinfectant for instruments, in 5 to 10 per cent solution; as a wash for wounds, in 3 per cent solution; and in various skin diseases in a 10 per cent ointment.
- septomarginal** (sep-to-mar'jin-al). Pertaining to the margin of a septum.
- septometer** (sep-tom'et-er). 1. [*L. saep'tum* partition + *me'trum* measure]. An instrument for measuring the thickness of the nasal septum. 2. [σηπτός decayed + μέτρον measure]. Same as *septometer*.
- septonasal** (sep-to-na'zal). Pertaining to the nasal septum.
- septosan** (sep'to-san). A proprietary liquid disinfectant and antiseptic irritant.
- septotome** (sep'to-tōm) [septum + τομή a cutting]. An instrument for operating on the nasal septum.
- septotomy** (sep-tot'o-me). The operation of incising the nasal septum.
- septulum** (sep'tu-lum). A small septum. **s. testis** [B N A], one of the incomplete fibrous septa which pass from the mediastinum to the tunica albuginea of the testicle.
- septum** (sep'tum), pl. *sep'ta* [*L. saep'tum* septum]. A dividing wall or partition. **s. alveoli**, one of the thin plates of bone separating the alveoli of the jaw. **s. atriorum** [B N A], **s. auricularum**, the wall that separates the auricles of the heart. **Bigelow's s.**, a layer of hard, bony tissue in the neck of the femur. **bronchial s.**, **s. bronchia'le**, a projection into the bronchial tube at its bifurcation. **s. bulbi ure'thrae** [B N A], the fibrous septum dividing the interior of the bulb of the urethra into two equal parts. **s. canalis musculotubarii** [B N A], the cochleariform process; a thin lamella of bone which divides the canal musculotubarius into the upper semicanalis tensoris tympani and the lower semicanalis tubae auditivae. **s. cartilagin'eum** [B N A], the plate of cartilage forming the anterior part of the nasal

septum. s. cervicale intermedium [B N A], the membrane joining the cervical spinal arachnoid and dura mater in the middle line. **Cloquet's s.**, the septum curale internum. **s. corporum cavernosum clitoridis** [B N A], an incomplete fibrous septum between the two lateral halves of the clitoris. **crural s.**, the layer that closes the femoral ring. **Douglas' s.**, the septum formed by the union of Rathke's folds, forming the rectum of the fetus. **s. femorale** [B N A], the thin fibrous membrane which helps to close the annulus femoralis. It is derived from the fascia transversalis, it is perforated for the passage of lymphatic vessels and it is embedded in fat. **gingival s.**, **gum s.**, the part of the gum which occupies the interproximal spaces. **s. of glans penis, s. glandis penis** [B N A], an incomplete fibrous septum in the median plane of the glans penis and especially below the urethra. **hemal s.**, a structure of animals which in man is represented by the linea alba and the transversalis, iliac, and rectovesical fasciae. **s. interalveolare**, one of the partitions between the tooth sockets. **interauricular s.** Same as *s. atriorum*. **intermuscular s.**, the sheaths of aponeurosis separating some of the muscles of the extremities. **inter-radical s.**, the bony septum between the roots of multirooted teeth. **intraventricular s.** Same as *s. ventriculorum*. **s. linguae** [B N A], the median vertical fibrous part of the tongue. **s. longitudinalis**, a sheet of fascia on the anteromedial side of the large blood vessels of the neck. It passes from the fascia praevertebralis diagonally forward and outward to the deep layer of the fascia colli. **s. lucidum**. 1. *s. pellucidum*. 2. The stratum corneum of the epidermis. **mediastinal s.**, **s. mediastinalis** [B N A], the mass of tissues and organs between the sternum in front and the vertebral column behind and which separates the two lungs. It contains the heart and its large vessels, the trachea, esophagus, thymus, and lymph glands. **membranous s.**, **s. membranaeum nasi** [B N A], the anterior inferior portion of the septum of the nose. It is below the cartilago septi nasi and contains the crus mediale cartilaginis alaris majoris. **s. membranaeum ventriculorum cordis** [B N A], a small membranous area of oval shape in the upper back part of the septum ventriculorum cordis. It is entirely devoid of muscle fibers and is situated just between and in front of the opposed margins of the valvulae semilunares dextra and posterior aortae. **s. musculare ventriculorum cordis** [B N A], the thick muscular partition which separates the two ventricles of the heart. **nasal s.**, **s. nasi** [B N A], the partition in the midplane which separates the two nasal cavities. It is made up of a septum nasi osseum and a septum cartilagineum and membranaceum nasi. **s. nasi osseum** [B N A], the posterior portion of the nasal septum. It consists of the vomer below and the lamina perpendicularis ossis ethmoidalis above. **neural s.**, a prolongation, chiefly in the lower vertebrates, of the general investing fascia, extending medially from the surface toward the skeleton. In man it is represented by the ligamentum nuchae and the supraspinous and interspinous ligaments. **s. orbitale** [B N A], the anterior protecting wall of the eyeball, composed of the tarsi, the canthal ligaments, and the tarso-orbital fascia. **s. pectiniforme**, the partition which separates the corpora cavernosa of the penis. **pellucid s.**, **s. pellucidum** [B N A], a double membrane which separates the anterior cornua of the lateral ventricles of the brain. It is situated in the median plane, it is triangular in shape and it is bounded above by the corpus callosum, in front by the genu corporis callosi, below in front by rostrum corporis callosi and the lamina rostralis and below behind by the columna and corpus fornicis. **s. penis** [B N A], the tunica alba lying between the corpora cavernosa of the penis. **pharyngeal s.**, the partition which separates the

mouth cavity from the pharynx in the embryo. **s. pontis**, the septum of the pons varolii. **s. posticum**, the membranous septum which extends from the arachnoid to the pia, opposite the dorsal fissure of the spinal cord. **recto-vaginal s.**, the wall which separates the rectum from the vagina. **s. scroti** [B N A], **s. of scrotum**, a fibromuscular partition in the median plane which divides the scrotum into two nearly equal parts. **s. sinuum frontaliu[m]** [B N A], a thin lamina of bone in the lower front part of the frontal bone which lies more or less in the median plane and separates the frontal sinuses. **s. sinuum sphenoidaliu[m]** [B N A], a thin lamina of bone in the body of the sphenoid bone which lies more or less in the median plane and which separates the sphenoidal sinuses. **s. spurium**, a ridge on the roof of the atrium of the embryonic heart. **subarachnoidal s.**, the septum posticum. **s. transversum**, the ridge in the ampulla of the semicircular canal which bears the crista acustica. **s. tubae**, the cochleariform process. **s. of ventricles of heart, s. ventriculorum cordis** [B N A], the partition which separates the ventricles of the heart. See *s. membranaceum* and *musculare ventriculorum cordis*.

septuplet (sep'tu-plet) [L. *septuplum* a group of seven]. Any one of seven children born at a birth.

Seq. luce. Abbreviation for *L. sequen'ti luce*, the following day.

sequardin (se-kwar'din) [after Brown-Séquard]. A proprietary sterilized testicular extract.

sequel (se'kwel). Sequela.

sequela (se-kwe'lah), pl. *sequelae* [L.]. Any lesion or affection following and caused by an attack of disease.

sequester (se-kwes'ter) [L.]. Same as *sequestum*.

sequestral (se-kwes'tral). Pertaining to or of the nature of a sequestum.

sequestration (se-kwes-tra'shun) [L. *sequestra'tio*]. 1. The formation of a sequestum. 2. The isolation of a patient. 3. The shutting off of a portion of the blood from the general circulation by means of bands about the thighs and arms, for the purpose of reducing hemorrhage in operations on the head or trunk.

sequestrectomy (se-kwes-trek'to-me) [L. *sequestrum* + *ἐκτομή* excision]. The surgical removal of a sequestum.

sequestrotomy (se-kwes-trot'o-me) [*sequestum* + *τεμνέω* to cut]. The surgical removal of necrosed bone.

sequestum (se-kwes'trum), pl. *seques'tra* [L.]. A piece of dead bone that has become separated during the process of necrosis from the sound bone. **s. forceps**, a forceps for removing a sequestum.

Illustrating the formation of a sequester: A, A, Sound bone; B, B, new bone; C, C, granulations lining involucrum; D, cloaca; E, sequester. (DaCosta.)

primary s., a sequester that is entirely detached. **secondary s.**, a sequester that is partially detached and may be pushed into place. **tertiary s.**, a sequester that is only cracked, and remains in its place.

sera (se'rah). Latin plural of *serum*.

seralbumin (se-ral-bu'min). Serum albumin: the albumin of the blood.

serangitis (se-ran-jit'is) [*σῆραγξ* cavern + *-itis* inflammation]. Same as *cavernitis*.

seraphtin (se-raft'in). A trade name for a serum said to be curative and prophylactic in foot and mouth disease.

serempion (se-rem'pe-on). A fatal form of measles occurring in the West Indies.

Serenoa (ser-e-no'ah) [after *Sereno* Watson]. A genus of palms. *S. serrula* is the saw palmetto or sabal of the southern United States. A fluid-extract of the berries is diuretic, expectorant, and aphrodisiac: used in diseases of the prostate and bladder. The medicinal virtues of the drug are said to reside in its various oils. Dose of fluid-extract, 30–120 minims (2–8 cc.); of extract, 5–10 grains (0.333–0.666 Gm.).

seroglobulin (ser-glob'u-lin). See *paraglobulin*.

serial (se're-al). Arranged in or forming a series.

seribele (ser-e-bel'e). The seeds and root bark of *Conarus africanus*: used to expel tapeworm. Dose, 2 f.oz. (60 cc.) in decoction.

sericeps (ser'is-eps) [L. *sericus* silken + *caput* head]. A silken bag used in making traction on the fetal head.

sericin (ser'is-in). Silk glue or silk gelatin; a protein, $C_{15}H_{25}N_5O_8$, derivable from silk.

sericum (ser'ik-um) [L.; *σῆρικός* silken]. Silk; a product of various insect larvae, but chiefly of *Bombyx mori*, the silkworm: used in surgery.

series (ser'is-ēz) [L. "row"]. A group or succession of objects or substances arranged in regular order or forming a kind of chain. **aliphatic s.** See *aliphatic*. **aromatic s.**, the compounds derived from benzene. **fatty s.**, methane and its derivatives and the homologous hydrocarbons. **homologous s.**, a series of compounds each member of which differs from the one preceding it by the radical CH_2 .

seriflux (ser'if-luks) [L. *serum* whey + *fluxus* flow]. A thin, watery discharge.

serine (se'rin). 1. A white, crystalline amino-acid, alpha-amino-beta-hydroxy-propionic acid, $CH_2OH.CHNH_2.COOH$, obtained by boiling sericin with dilute sulphuric acid (Emil Fischer, 1902). It is also obtainable from horn by hydrolysis. 2. Serum albumin.

seriscission (ser-is-sizh'un) [L. *sericum* silk + *scindere* to cut]. The cutting of soft tissues by means of a silken ligature.

Serjania (ser-ja-ne'ah). A genus of tropical trees, some of them poisonous. *S. letha'lis* grows in Brazil; from it a native bee collects an exceedingly poisonous honey.

sero-albuminuria (se'ro-al-bu-min-u're-ah). The presence in the urine of serum albumin.

sero-anaphylaxis (se'ro-an-af-il-aks'is). Anaphylaxis produced by the use of blood serum.

serobacterin (se-ro-bak'ter-in). A sensitized vaccine; an emulsion of a bacterium which has been treated by the application of the corresponding immune serum. See under *vaccine*.

serochrome (se'ro-krōm) [serum + *χρῶμα* color]. The coloring matter of normal serum.

serocolitis (se'ro-ko-lit'is) [serous + *colitis*]. Inflammation of the serous surface of the colon.

seroculture (se'ro-kul-tshur). A bacterial culture on blood serum.

serocym (se'ro-sim). The designation of the fresh normal blood plasma used in Hirschfeld and Klinger's coaguloreaction.

serocystic (se-ro-sis'tik). Made up of serous cysts.

seroden (se'ro-den). A colloidal combination of iodine with serum proteins.

serodermatosis (se'ro-der-mat-o'sis). A skin disease with serous effusion into the skin.

serodiagnosis (se'ro-di-ag-no'sis). Diagnosis made by means of reactions taking place in the blood serum. See *serum diagnosis*, under *diagnosis*.

sero-enteritis (se'ro-en-ter-i'tis). Inflammation of the serous coat of the intestine.

sero-enzyme (se-ro-en-zim). An enzyme or ferment existing in the blood serum.

serofibrinous (se-ro-fib'rin-us). Both serous and fibrinous.

serofibrous (se-ro-fi'brus). Pertaining to serous and fibrous surfaces; as, *serofibrous* apposition.

serofluid (se-ro-flu'id). A serous fluid.

seroformalin (se-ro-for'mal-in). An antiseptic dusting powder composed of blood serum coagulated, dried, and mixed with formaldehyde.

seroglobulin (se-ro-glob'u-lin). Serum globulin; the globulin of the blood serum.

serohemorrhagic (se'ro-hem-o-raj'ik). Characterized by serum and blood.

serohepatitis (se'ro-hep-at-i'tis) [serous + *hepatitis*]. Inflammation of the peritoneal coat which covers the liver.

sero-immunity (se'ro-im-u'nit-e). Immunity produced by antiserum.

serolactescent (se'ro-lak-tes'ent). Resembling serum and milk.

serolemma (se-ro-lem'ah) [serous + *λέμμα* sheath]. The membrane from which the false amnion is developed.

serolin (se'ro-lin) [L. *serum* serum + *oleum* oil]. A crystallizable compound from the serum of the blood.

serolipase (se-ro-li-pās). Lipase from blood serum.

serologic, serological (se-ro-loj'ik, se-ro-loj'ik-al). Pertaining to serums and the study of serums.

serologist (se-ro-l'o-jist). One who is an expert in serology.

serology (se-ro-l'o-je) [serum + *λόγος* treatise]. The study of serums and their actions.

seromembranous (se-ro-miem'bran-us). Both serous and membranous; composed of serous membrane.

seromucoid (se-ro-mu'koid). A substance sometimes found in urine.

seromucous (se-ro-mu'kus). Partly serous and partly mucous.

seromuscular (se-ro-mus'ku-lar). Pertaining to the serous and muscular coats of the intestine.

seronol (se'ro-nol). A preparation for influenza containing guaiacol, eucalyptol, and camphor in sterilized olive oil: injected daily into the gluteal muscles for five or six days.

seroots (se-roots'). Tabanid flies.

seroperitoneum (se'ro-per-it-o-neum). The presence of free fluid in the peritoneum; ascites.

seropht'his pernicio'sa endem'ica. Beriberi.

serophysiology (se'ro-fiz-e-ol'o-je). The study of the physiologic mechanism of serum action.

serophyte (se'ro-fit) [serum + *φύρον* plant]. A micro-organism which grows readily in the body fluids.

seroplastic (se-ro-plas'tik). Same as *serofibrinous*.

seropneumothorax (se'ro-nu-mo-tho'raks). Pneumothorax with a serous effusion in the pleural cavity.

seroprevention (se'ro-pre-ven'shun). Prophylactic injection of serum.

seroprognosis (se'ro-prog-no'sis). The prognosis of a disease by study of its seroreactions.

seroprophylaxis (se'ro-pro-fil-ak'sis). The injection of convalescent serum into persons who have been exposed to infection: done as a prophylactic measure.

seropurulent (se-ro-pu'ru-lent). Both serous and purulent.

seropus (se-ro-pus'). Serum mingled with pus.

seroreaction (se-ro-re-ak'shun). A reaction occurring in a serum or as a result of the action of a serum. Cf. *fixation of the complement*. **Klausner's s.** See *Klausner's reaction*, under *reaction*.

serosa (se-ro'sah). Any serous membrane.

serosamucin (se-ro-sah-mu'sin). A protein resembling mucin, found in inflammatory ascitic exudates.

serosanguineous (se''ro-sang-win'e-us). Pertaining to or containing both serum and blood.

serosaprophyte (se''ro-sap-ro-fit). A micro-organism which thrives in the body fluids only when they have become degenerated.

seroscopy (se-ros'ko-pe) [*serum* + *σκοπεῖν* to examine]. Diagnostic examination of serum with the agglutinoscope.

serose (se-rō's). An albumose obtained from serum albumin.

seroserous (se-ro-se'rus). Pertaining to two or more serous membranes.

serosine (se'rō-sin). A proprietary antiseptic, antipyretic, and sedative preparation.

serositides (se-ro-si'tid-ēz). Plural of *serositis*.

serositis (se-ro-si'tis) [*serous membrane* + *-itis* inflammation]. Inflammation of a serous membrane. **multiple s.**, polyorhomeningitis.

serosity (se-ros'it-e). The quality possessed by serous fluids.

serosynovial (se''ro-si-no've-al). Both serous and synovial.

serosynovitis (se''ro-sin-o-vi'tis). Synovitis with effusion of serum.

serotaxis (se-ro-taks'is) [*serum* + *τάξις* arrangement]. The determination of the blood serum toward the skin in diagnosis by the application of caustic potash in solution, so as to bring pathogenic germs to the skin.

serotherapeutical (se''ro-ther-ap-u'tik-al). Pertaining to serotherapy.

serotherapist (se-ro-ther'ap-ist). One who treats disease by serotherapy.

serotherapy (se-ro-ther'ap-e) [*serum* + *θεραπεία* treatment]. 1. Whey cure. 2. Passive immunization for protective or curative purposes by the injection of the blood serums of animals that have been actively immunized by inoculation with the bacteria or the bacterial toxins of the disease.

serothorax (se-ro-tho'rax). Hydrothorax.

serotina (se-rot'in-ah) [L. "late"]. Same as *decidua serotina*.

serotoxin (se-ro-toks'in). A toxin formed in and from blood serum when the latter is treated with kaolin, barium sulphate, or in other ways.

serous (se'rus) [L. *sero'sus*]. 1. Pertaining to or resembling serum. 2. Producing or containing serum. **s. inflammation**, inflammation in which the exudate is of a serous nature; also inflammation of a serous membrane. **s. membrane**, the membrane lining one of the large lymph spaces of the body. It is composed of a basement membrane located upon ordinary connective tissue, and bearing a single layer of endothelial cells. A serous membrane consists of two layers forming a closed sac—the *parietal portion*, lining the wall of the cavity, and the *visceral portion*, covering the viscera contained in it. See *membrane*.

serovaccination (se-ro-vak-sin-a'shun). Injection of serum combined with vaccination to produce passive immunity by the former and active immunity by the latter.

serozym, serozyme (se'ro-zim) [L. *serum* + *ζύμη* yeast]. Bordet's name for the prothrombin present in the blood serum, his view being that thrombin is formed by a union of serozyme and cytozyme. The serozyme exists in an inactive form, proserozyme, which is converted by the calcium of the blood into serozyme.

serpentaria (ser-pen-ta're-ah) [L. *serpens* snake]. The rhizome and roots of *Aristolochia serpentaria*, Virginia snakeroot, and *A. reticulata*, or Texas snakeroot, herbs of North America. *Serpentaria* is tonic, diaphoretic, and diuretic, and is used as a stimulant in typhoid fever and typhoid pneumonia, as a digestive tonic, and in eruptive fevers. Dose of fluidextract, 10–30 minims (0.666–2 cc.); of tincture, $\frac{1}{2}$ –2 fluidrachms (2–8 cc.); of infusion, 1 fl.oz. (30 cc.); of *tinctura cincho-nae composita*, 1 fluidrachm (4 cc.).

serpiginous (ser-pij'in-us) [L. *serpere* to creep]. Creeping from part to part.

serpigo (ser-pi'go) [L. *serpere* to creep]. Any creeping eruption; tinea or herpes.

serpolet (ser'po-let) [L. *serpyllum* thyme]. A kind of camphory oil from *Thymus serpyllum*, used mainly in perfumery; also the plant which produces it; wild thyme.

serpyllum (ser-pil'um). Latin for *thyme*.

serrago (ser'a-go), gen. *serra'ginis* [L.]. Sawdust. It has a limited use in surgical dressings.

serrate, serrated (ser'at, ser'a-ted) [L. *serra'tus*, from *ser'ra* saw]. Having a sawlike edge.

Serratia (ser-a'she-ah). A genus of the Bacteriaceae. They are saprophytic and produce a red or pink pigment. **S. marcescens**, *Erythrobacillus (Bacillus) prodigiosus*; a common well-known organism producing a bright red pigment.

serration (ser-a'shun) [L. *serra'tio*]. 1. A structure or formation with teeth like those of a saw. 2. A notch like one between two teeth of a saw.

serratus (ser-a'tus). See *muscles*, table of.

serrefine (sar-fēn) [Fr.]. A small spring forceps for compressing bleeding vessels.

serreneoud (sar-nœud) [Fr. *ser'rer* to press + *noeud* knot]. An instrument used in surgery for tightening ligatures.

Serres' angle, glands (särz) [Etienne Renaud Augustin Serres, French physiologist, 1786–1868]. See *angle* and *gland*.

serrulate (ser'u-lät) [L. *serrula'tus*]. Marked or bordered with small serrations or projections.

Sertoli's cell, column (ser-to'lez) [Enrico Sertoli, Italian histologist]. See *cell* and *column*.

serum (se'rum), pl. *serums* or *ser'a* [L. "whey"]. 1. The clear portion of any animal liquid separated from its more solid elements; especially the clear liquid (*blood s.*) which separates in the clotting of blood from the clot and the corpuscles. 2. Blood serum from animals that have been inoculated with bacteria or their toxins. Such serum, when introduced into the body, produces passive immunization by virtue of the antibodies which it contains. 3. See *blood serum*. **Abderhalden's cancer s.**, a blood serum from an animal which has been injected with cancer fluid and has thus developed protective ferments. Such serum has been used in treating patients with cancer. **Adamkiewicz's s.**, cancerin. **adapted s.**, a serum resulting from immunization. **adrenal s.**, a serum to which has been added an extract from the adrenal gland of an animal. Such a serum has a toxic effect upon the adrenal glands of animals of the species from which the extract was made. **s. albumin**. See *albumin*. **allergic s.**, a serum which produces hypersensitiveness (anaphylaxis) to serum injections. **anallergic s.**, a serum which does not produce hypersensitiveness (anaphylaxis) to serum injections. **antagonistic s.**, treatment of a disease by the injection of serum of some antagonistic disease; as the treatment of patients have myxedema with serum from patients with exophthalmic goiter. **anti-amarillic s.**, an animal serum recommended for use in treating yellow fever. **anti-anthrax s.**, an antitoxic serum prepared by the inoculation of bouillon cultures of virulent anthrax. **antiblastomycetic s.**, serum from birds inoculated with blastomycetes of cancer, proposed for protective inoculation against the blastomycetes

of carcinoma. **antibothropic s.**, serum used to produce immunization against the bites of rattlesnakes. **anticancerous s.**, a serum for use in treating cancer. It is obtained from an animal which has been injected with some preparation of cancerous tissue. **anticholera s.**, a serum made by injecting horses with killed or (and) live cultures of the *Vibrio cholerae*, or with toxins or with other products of the germs. See *Kraus' s.* **anticoagulative s.**, a serum which prevents the coagulation of serum. **anticolibacillary s.**, a serum for the treatment of *Bacillus coli* infection. **anticomplementary s.**, a serum which interferes with or destroys the activity of complement. **anticrotalis s.**, an antivenomous serum which is protective against the poison of the rattlesnake. **anticytotoxic s.**, an immune blood serum which neutralizes the activity of a cytotoxic serum. **antidiphtheric s.** 1. See *diphtheria antitoxin*, under *antitoxin*. 2. A serum produced by injecting an animal with killed or living diphtheria germs, or with both. It is used therapeutically to inhibit or kill the diphtheria germs rather than to neutralize the diphtheria toxin. **antidysenteric s.**, a serum from horses immunized against the dysentery bacterium or its toxin, or both. **anti-epithelial s.** Same as *epitheliolytic*. **antigonococcus s.**, a serum from goats immunized against the gonococcus. **antigourmeaux s.**, a serum for the treatment of strangles. **antihepatic s.**, serum of an animal into which has been injected liver matter from another animal. This serum is destructive to the liver of the animal of the species from which the injected matter was taken. **anti-influenza s.**, blood serum from goats or horses which have been injected first with nonvirulent and then with virulent influenza organisms. **antileprous s.**, a serum for the treatment of leprosy. **antimeningococcus s.**, a polyvalent serum prepared by injecting first an antilysozyme of the strains and later living cultures (method of Flexner and Jobling). **antimorphine s.**, a serum obtained from animals that have been injected with increasing doses of morphine. **anti-ophidic s.** [*Ophidia*, an order of reptiles including serpents], serum which combats the poison of snakes. **anti-pancreatic s.**, serum of an animal into which has been injected pancreatic extract from another animal. This serum is destructive to the pancreas of the animal of the species from which the extract was taken. **antiparamoecious s.**, a serum resulting from immunization with paramoecium, a protozoan organism. **antipertussis s.**, blood serum from patients convalescent from pertussis. **antipest s.** See *antiplague serum*. **antiphagocytic s.**, a serum which destroys phagocytes. **antiplague s.**, a serum obtained from animals which have been repeatedly injected with killed or living plague germs (*Pfeifferella pestis*), or with both, or with some preparation of the germs. **antiplatelet s.**, a serum which dissolves blood platelets, obtained by repeatedly injecting a rabbit with guinea-pig platelets. **antipneumococcus s.**, a serum found in the blood of horses which have been injected with pneumococci. The type I serum is particularly valuable therapeutically. **antisarcomatous s.**, serum from an animal into which sarcoma tissue has been injected: said to be useful to prevent the growth of sarcoma. **antiscarlatinal s.** See *Moser's s.* **antispermototoxic s.** See *antispermotoxin*. **antistaphylococcus s.**, a serum thought to be curative of staphylococcus infection. **antistreptococcus s.**, a serum obtained from the blood of animals which have been injected with killed or living streptococci or with both. It is used in treating various streptococcal infections. **antitetanic s.** See *tetanus antitoxin*. **antithyroid s.**, a serum obtained by immunizing animals with thyroid cells or with their nucleoproteins. **antitoxic s.**, a serum which contains the antitoxin of a pathogenic organism. **antitubercle s.**, a serum prepared by injecting an animal with killed or with living

tubercle germs (*Mycobacterium tuberculosis*) or with both or with a preparation of the germs. **antityphoid s.**, a serum derived from horses which have been injected with filtered bouillon cultures of *Bacterium typhosum* for several years and with the typhoid germs. It is used in the treatment of typhoid fever. **antivenomous s.**, a serum used as a remedy for snake bite, prepared from the blood of horses or asses which have been immunized against the venom of serpents. Called also *Calmette's s.* **antivirilic s.**, a serum which contains antivirulin. **Aronson's s.**, an antistreptococcus serum. **artificial s.**, a solution containing albumin, salts, etc.: used in intravenous and intraperitoneal injections. **autosalvarsanized s.** See *salvarsanized s.* **bacteriolytic s.**, a serum which contains the bacteriolytic of a microorganism. **Banzhof's s.**, a concentrated and purified antipneumococcus serum. **Bardel's s.**, a mixture of sodium chloride, phenol, sodium phosphate, sodium sulphate, and water. **Beebe's s.**, a serum obtained from the blood of thyroidectomized animals: used in conditions of thyroid hyperactivity. **Behring's s.**, a serum against diphtheria. **blister s.**, the fluid found in a blister. It is sometimes injected back into the patient in nonspecific protein therapy. **Blondel's s.**, the serum of fresh milk, prepared by filtration after coagulation and neutralization. **blood s.**, the clear, usually amber-colored, fluid which separates when blood clots. It contains neither fibrin nor corpuscles. See also *blood serum*. **Bruschetтини's s.**, an antituberculosis serum vaccine prepared by mixing with a bacterial vaccine a serum obtained by immunizing animals with increasing quantities of endotoxins secured by producing a pleural exudate in rabbits through injections of alveolar and tubercle bacilli. **Bull and Pritchett's s.**, an antitoxic serum for gas-bacillus infection. **Calmette's s.** See *antivenomous s.* **cancer s.**, a serum for the treatment of cancer, prepared in the same way as diphtheria antitoxin. **Carrasquilla's s.**, an antileprous serum of little therapeutical value. **Catani's s.**, sodium chloride, 4 parts; sodium carbonate, 2 parts; and boiled distilled water, 1000 parts; for injection in infectious diseases. **Chantemesse's s.** See *antityphoid serum*. **Cheron's s.**, crystalline phenol, 1 part; sodium chloride, 2 parts; sodium phosphate, 4 parts; sodium sulphate, 8 parts; boiled distilled water, 100 parts: for injection in infectious diseases. **convalescent s.**, blood serum from a patient who is convalescent from an infectious disease: such a serum is used as a prophylactic injection in such diseases as measles, scarlet fever, whooping cough, etc. **Crocq's s.**, sodium phosphate, 2 parts; boiled distilled water, 100 parts: for injection in infectious diseases. **Cuguillere's s.**, an antituberculosis preparation of allyl sulphide, 1 Gm.; tincture of myrrh, 1 cc.; and Hayem's glycerinated serum, 100 cc. **cytotropic s.**, a serum rendering cells ingestible by phagocytes. **Degkwitz's s.**, a serum from immunized sheep for prophylactic use in measles. **Deutschmann's s.**, a serum obtained from horses injected with increasing doses of sterile yeast: used by injection in various infectious diseases. Dose, 30-60 minims (2-4 cc.). **Dochez's s.**, an antiscarlatinal serum obtained by immunizing horses with a culture of *Streptococcus hemolyticus*. **Dopter's s.**, a serum effective against the parameningococcus. **Dorset-Niles s.**, a serum for immunizing against hog cholera. **double s.**, a mixture of immune serums from horses and cattle, believed to furnish a greater variety of specific amboceptors than a serum from either animal alone. **Doyen's s.**, a serum from cows whose udders have been inoculated with *Micrococcus neoformans*: used in cancer. **Dujardin-Beaumetz s.**, a solution containing potassium carbonate and sulphate, sodium chloride, lactate, and phosphate. **Dunbar's s.**, an antitoxin from the pollen of ragweed, goldenrod, rye, etc.; used

in the treatment of hay-fever. **Emmerich-Scholl s.**, a serum for cancer, obtained from the blood of sheep which have been inoculated with streptococci cultures derived from inoculated rabbits. **endotheliolytic s.**, serum which destroys endothelial cells. It is obtained from the blood of animals immunized with endothelial cells. **s. equinum.** See *horse s.* **Felton's s.**, a concentrated antipneumococcus horse serum. **Flexner's s.**, an antidipllococcus serum used in the treatment of cerebrospinal meningitis by injection into the spinal canal. **foreign s.**, serum from an animal to be injected into one of another species. **Gabritschewsky's s.**, an antiscarlatinal serum. **gastrotoxic s.**, a serum toxic to the gastric mucous membrane. **s.-globulin.** Same as *paraglobulin.* **glycerin s.**, blood serum which contains 5 per cent of glycerin; used as a culture medium for tubercle bacilli. **Haffkine's s.**, not a serum. See *Haffkine's vaccine*, under *vaccine.* **Hayem's s.**, sodium chloride, 5 parts; sodium sulphate, 1 part; distilled and boiled water, 1000 parts: for injection in infectious diseases. **heterologous s.**, a serum derived from an animal of another species. **Hoffmann's s.**, epitheliolysine. **hog cholera s.**, hogs having some immunity either from having recovered from an attack of the disease or as a result of an injection of hog cholera serum, are injected several times intravenously at intervals of three to four weeks with infectious blood from a hog sick with hog cholera. The serum of such hyperimmune hogs is used both in the prevention and in the cure of hog cholera. **horse s.**, serum obtained from the blood of horses; it may be normal serum or immune serum. It is claimed to be useful in hemorrhagic diseases to increase the coagulability of the blood. **Howell's s.**, a solution of sodium chloride and bicarbonate, calcium chloride, and potassium chloride. **Huchard's s.**, a solution in 100 cc. of distilled water; sodium phosphate, 10 Gm.; sodium chloride, 5 Gm.; and sodium sulphate, 2.5 Gm. **immune s.**, a serum containing one or more antibodies; especially one in which the antibody content has been increased by recovery from its specific infection or by injection with its specific antigen. **inactive s.**, a serum which has been treated until its activity has been destroyed: it is injected to aid in the elimination of toxic material. **inorganic s.** See *Trunczek's s.* **isotonic s.**, serum which contains enough saline matter to preserve the red corpuscles. **jequiritol s.**, an antitoxin that corrects the effects of jequiritol. **Jonsell's s.**, an antituberculosis serum obtained by injecting horses intravenously or subcutaneously with frequently increasing doses of human bacilli of attenuated virulence. **Kapp's s.** See *novepithel.* **Kitasato's s.**, an anticholera serum. **Kolle's s.**, a serum used in treating cerebrospinal meningitis. **Kraus' s.**, a serum for treating cholera prepared by immunizing horses with a toxin derived from a vibrio isolated from patients dying from a cholera-like infection. **Kronecker and Lichtenstein's s.**, sodium chloride, 6 or 7 parts; sodium carbonate, 0.1 part; water, 1000 parts: for injection in infectious diseases. **s. lac'tis**, the whey of milk. **Latta's s.**, sodium chloride, 3 to 5 parts; sodium carbonate, 1.7 parts; boiled distilled water, 3 to 4 parts: for injection in infectious diseases. **Leclainche-Vallée s.**, a polyvalent serum derived from horses inoculated with several varieties of staphylococcus, streptococcus, Bacillus coli, pyocyanus, Bacillus proteus, Vibrio septicus, and Bacillus aerogenes: used in the treatment of wound infections and septicemia. **Leclerc's s.**, sodium chloride, 40 parts; sodium phosphate, 4 parts; boiled distilled water, 1000 parts: for injection in infectious diseases. **leukocygenic s.**, horse serum treated so as to render it stable: said to cause marked migration of leukocytes to the site of injection and used in treating infected wounds. **leukocytolytic s.**, serum that destroys leukocytes; it is from the blood of

animals immunized with leukocytes. **leukotoxic s.**, a serum that destroys leukocytes. **Leyden's s.**, blood serum from patients recovering from scarlet fever. **Löffler's s.** See *Löffler's blood serum*, under *blood serum.* **Lustig's s.**, a serum obtained from horses which have been immunized with Lustig and Galeotti's vaccine, q. v., under *vaccine.* **s. lutein**, the lipochrome, or yellow coloring matter of serum. **Luton's s.**, crystalline sodium phosphate, 4 parts; sodium sulphate, 10 parts; boiled distilled water, 100 parts: for injection in infectious diseases. **lymphatolytic s.**, serum which destroys lymphatic tissues, such as the spleen and lymph glands. **Maragliano's s.**, an antitubercle serum prepared by injecting animals with unheated products of the tubercle bacilli. **marine s.**, a mixture of sea water 83 parts with 190 parts of spring water for hypodermic injection. **Marmorek's s.**, a serum obtained by injecting animals with young cultures of tubercle germs which have been grown on a leukotoxic serum and then with strains of streptococci obtained from tuberculous patients. **Mathieu's s.**, a solution containing 6 Gm. of sodium sulphate, 4 Gm. of sodium phosphate, 1 Gm. of sodium chloride, 20 cc. of glycerin, in 100 cc. of distilled water. **Menzel's s.**, a serum for treating rheumatic fever; it is obtained by inoculating horses with living cultures derived from human cases. **mercurialized s.**, a solution of mercuric chloride in normal horse serum diluted with physiologic salt solution for intravenous or intraspinal injection. **Merz's s.** 1. A preparation containing hamamelis extract in tubes for use in hemorrhoids. 2. Veraserol. **Morpinami's s.** See *scarlatin.* **Moser's s.**, antistreptococcus serum produced by inoculating horses with several kinds of streptococci from the blood of scarlet fever patients. **mottle s.**, an immune serum containing flagellar agglutinins. **multi-partial s.**, polyvalent serum. **muscle s.**, muscle plasma deprived of its myosin. **nephrolytic s.**, a serum which has a specific destructive effect on kidney tissue. **nephrotoxic s.**, a serum having a specific toxic effect on the kidney. It is produced by treating serum with an emulsion of kidney substance from an animal, the serum being toxic for animals of the same species. **neurolytic s.**, **neurotoxic s.**, a serum which exerts a specific toxic action on the brain and spinal cord. It is produced by treating serum with emulsion of brain and cord of an animal, the serum being toxic for animals of the species. **normal s.** 1. Serum from a normal untreated animal. It is used in treating bleeding in hemophilia and melena cases and in nonspecific protein therapy. 2. Serum of which 0.1 cc. will neutralize ten times the minimal lethal dose of a definite bacteria toxin. **Pane's s.**, antipneumococcus serum. **Paquin's s.**, a tuberculous serum obtained by successive inoculation of horses. **Parascandolo's s.**, a serum obtained by inoculation of an animal with mixed cultures of staphylococci and streptococci. **s. paste**, a preparation of serum of ox blood and zinc oxide. When painted over denuded surfaces, it dries, leaving a protective film. **petit s.**, a nonsensitizing, nontoxic, but vaccinating substance derived from serum by mixing with 2 parts of 90 per cent alcohol, treating the resulting precipitate with physiologic salt solution, and filtering. Cf. *Vaughan's split products*, under *product.* **plague s.**, **Yersin's s.**, anti-plague serum. **polyvalent s.**, a serum obtained by inoculating animals with several varieties of an organism, such as streptococcus. **pooled s.**, the mixed serum from a number of subjects. **prophylactic s.**, a serum for immunizing against a disease. **Quentin's s.**, marine serum. **Query's s.**, a serum for syphilis obtained by inoculating monkeys with filtered bouillon cultures of *Spirochaeta pallida.* **Renzi's s.**, a solution, in 1000 cc. of water, of 1 Gm. iodine, 3 Gm. of potassium iodide, and 6 Gm. of sodium chloride. **Richet-Héricourt s.**, a serum for use in

cancer. **Rogers' s.**, a serum for treatment of exophthalmic goiter. **Römer's s.**, an antipneumococcus serum. **Rosenow's s.**, blood serum from horses that have been immunized by injection with the pleomorphic streptococcus isolated from patients with poliomyelitis: used intramuscularly in the preparalytic stage of epidemic poliomyelitis. **Roussel's s.**, a solution of 50 Gm. of sodium phosphate in 1000 cc. of water. **Roux's s.**, antidipteric serum. **Ruppell's s.**, a serum for cerebrospinal meningitis prepared from a number of strains of the micrococcus. **Ruppell and Rickmann's sl.**, an antituberculosis serum prepared by injecting living and virulent human bacilli into cattle or mules, and after tuberculous lesions have been produced, injecting the animals with increasing amounts of tuberculin, bacillary extracts, and living bacilli. **salvarsanized s.**, blood serum taken from a patient after an intravenous injection of salvarsan. See *Swift-Ellis method*, under *method*. **Sanarelli's s.**, a serum used in protective inoculation against yellow fever. **Sapellier's s.**, a solution, in 100 cc. of boiled water, of 60 Gm. of sodium chloride, 5 Gm. of potassium chloride, 31 Gm. of sodium carbonate, 4.5 Gm. of sodium phosphate, and 3.5 Gm. of potassium sulphate. **Schiassi's s.**, a solution for the physiologic treatment of wounds, containing 6.5 Gm. of sodium chloride, 0.3 Gm. of potassium chloride, 1 Gm. of fused calcium chloride, 0.5 Gm. of sodium bicarbonate, 1.5 Gm. of glucose, and 1000 Gm. of distilled water. **Schiess' s.**, a solution, in 1000 cc. of water, of 75 Gm. of sodium chloride and 50 Gm. of sodium bicarbonate. **Schurupow's s.**, a serum used in the treatment of Asiatic cholera. **Sclavo's s.**, a bactericidal serum for treating human anthrax, produced by inoculating the ass with anthrax bacilli. **specific s.**, a serum which contains a large number of amoebocytes having a special affinity for a given cell. **Spengler's s.**, an antituberculous serum obtained from the dissolved erythrocytes of the blood of animals: used hypodermically. Called also *immunkörper* and *I. K.* **streptococcus s.** See *antistreptococcus s.* **surgical s.**, sodium chloride, $\frac{7}{8}$ parts; boiled distilled water, 1000 parts: for injection in surgical cases. **Sydman's s.** See *Sydman's solution*, under *solution*. **thymotoxic s.**, a serum which has a specific toxic effect on thymus tissue. **thyrolytic s.**, a serum formed in an animal on injection of the extract of cells of the thyroid body of other animals, and capable of dissolving the thyroid of the animal from which the cells were taken. **thyrotoxic s.**, a serum destructive to thyroid tissue. **Torrey's s.**, antionococcus serum. **Trunccek's s.**, an aqueous solution of sodium sulphate, chloride, phosphate, and carbonate with potassium sulphate, in the proportion in which they exist in the human blood: used for arteriosclerosis, rheumatism, epilepsy, uremia, diabetes, paralysis agitans, etc. Dose, 15 minims (1 cc.) subcutaneously or $1\frac{1}{2}$ fl.oz. (35 cc.) by the rectum every three or four days. Called also *inorganic serum*. **Tunncliff's s.**, serum of goats immunized against measles: used as a measles prophylactic. **Vallée's s.** Same as *Leclainche-Vallée s.* **Vandervelde's s.** 1. A solution of 3 Gm. each of sodium glycerophosphate and sodium chloride in 1000 cc. of water. 2. A solution of 3 Gm. each of sodium chloride, sodium phosphate, and potassium chloride, 2.5 Gm. of sodium carbonate, and 2 Gm. of potassium sulphate in 100 cc. of water. **von Leyden's s.** See *Leyden's s.* **Weinberg's s.**, antituberculous serum. **Wlaeff's s.**, an antituberculous serum. **yeast s.**, serum from animals which have been given increasing doses of yeast in their food; recommended for use in various infections. **Yersin's s.**, antiplague serum.

serumal (se-ru'mal). Pertaining to or formed from serum. **s. calculus.** See under *calculus*.

serum casein (se'rum ka'se-in). Paraglobulin.

serum disease (se'rum dis-ēz'). See *serum sickness*, under *sickness*.

serum fast (se'rum fast). Resistant to the destructive effect of serum: said of bacteria.

serum identical (se'rum i-den'tik-al). Acting in the same way toward a given immune serum.

serum sickness (se'rum sik'nes). See under *sickness*.

serum therapy (se'rum ther'ap-e). See *serotherapy*.

serumuria (se-ru-m-u're-ah). Same as *albuminuria*.

Serv. Abbreviation for *L. ser'va*, keep, preserve.

Servetus (ser-ve'tus), Michael. A Spanish theologian and physician, 1509-1553. He is believed by some to have preceded Harvey in the discovery of the circulation of the blood.

serviette (sār-ve-et') [Fr.]. A towel or napkin.

sesame (ses'am-e) [L. *sesamum*; σάμαρον]. The plants *Sesum indicum* and *S. orientale*; also their oil-bearing seeds. The oil (*oleum sesami*), called oil of benne, is used like olive oil. The seeds are demulcent, and are useful in dysentery.

sesamoid (ses'am-oid) [L. *sesamoides*; σάμαρον sesame + εἶδος form]. Resembling a grain of sesame. See *bone*.

sesamoiditis (ses'am-oid-i'tis). Inflammation of the sesamoid bones and surrounding structures of a horse's foot.

sesqui- [L. *sesqui-* a half more]. A prefix meaning one and a half.

sesquibasic (ses-kwe-ba'sik) [L. *sesqui-* one and a half + *bas* base]. Formed by the substitution of two atoms of a base for three of the hydrogen atoms of an acid.

sesquibo (ses'kwe-bo) [L. *sesqui* one and one half + *bovinum*]. Pirquet's term for a milk nutrient intermediate between simple and double nutrient. It contains 150 nems. Cf. *dubo* and *sibo*.

sesquicarbonate (ses-kwe-kar'bo-nāt). A carbonate in which the carbonic acid radical is united to a base in the proportion of three to two: an archaic term.

sesquichloride (ses-kwe-klo'rid). A chloride in which the chlorine is united to a base in the proportion of three to two: an archaic term.

sesquih. [L. *sesquihora*]. An abbreviation for *an hour and a half*.

sesquihora (ses-kwi-ho'rah) [L.]. An hour and a half.

sesquioxide (ses-kwe-oks'id). A compound of three parts of oxygen with two of another element.

sesquisalt (ses'kwe-sawlt). A salt containing three parts of an acid with two of a base.

sesquisulphate (ses-kwe-sul'fāt). A sulphate containing three parts of sulphuric acid united with two of another element.

sesquisulphide (ses-kwe-sul'fid). A sulphide containing three parts of sulphur united with two of another element.

sessile (ses'il) [L. *sesilis*]. Attached by a broad base; not pedunculated or stalked.

Sesunc. Abbreviation for *L. sesunc'cia*, an ounce and a half.

setaceous (se-ta'shus) [L. *seta*; *se'ta* bristle]. Slender and rigid, like a bristle.

Setaria equina. A filarial nematode found in the abdominal cavity of the horse.

setiferous (se-tif'er-us) [L. *seta* bristle + *ferre* to bear]. Bearing bristles; covered with bristles.

setigerous (se-tij'er-us) [L. *seta* bristle + *gere* to carry]. Same as *setiferous*.

seton (se'ton) [Fr. *seton*; L. *seta* bristle]. 1. A strip or skein of silk or linen drawn through a wound in the skin to make an issue. 2. The tract or fistula so formed.

Setschenow's center, nucleus (sets'en-ofs) [Ivan Setschenow, Russian neurologist]. See *center*.

seven-barks (sev'en-barks). Hydrangea.

seven-day fever. See *nanukayami*.

seventh nerve (sev'enth). The facial nerve. See *nerves*, *table of*.

sevetol (sev'e-tol). A preparation of predigested animal and vegetable fats.

sevum (se'vum). Latin for *suet*. **s. benzoina'tum**, benzoinated suet. **s. praepara'tum**, prepared suet.

sewage (su'āj). The matters found in sewers. It consists of the excreta of man and animals, waste matters from kitchens, and other substances. **activated s.**, sewage mixed with activated sludge. **domestic s.**, sewage from dwellings, business buildings, factories, or institutions. **septic s.**, sewage undergoing anaerobic putrefaction.

sewerage (su'er-āj). The system of pipes arranged for carrying off the excreta and waste matters of a house or a town.

sewer gas (su'er gas). The poisonous vapor emanating from foul sewers.

sex (seks) [L. *sex'us*]. The distinctive generative character.

sex intergrade. See under *intergrade*.

sexdigitate (seks-dij'it-āt) [L. *sex* six + *dig'itus* digit]. Having six fingers on the hand or six toes on the foot.

sexivalent (sek-siv'al-ent) [L. *sex* six + *val'ere* to have power]. Able to combine with or displace six atoms of hydrogen.

sex-limited. Affecting one sex only.

sex-linked. A term applied to characters which are inherited unequally by males and females.

sexology (seks-ol'o-je). The study which deals with the sexes and their relations.

sexian (seks'tan) [L. *sexta'nus* of the sixth]. Recurring every sixth day.

sextigravida (seks-tig-rav'id-a) [L. *sex* six + *gravi'da* pregnant]. A woman pregnant for the sixth time.

sextipara (seks-tip'ah-rah) [L. *sex'tus* sixth + *par'ere* to produce]. A woman who has borne six children.

sextonol (seks'to-nol). A proprietary preparation of quinine, strychnine, iron, manganese, soda, and lime.

sextuplet (seks'tu-plet) [L. *sex'tus* sixth]. Any one of six born at one birth.

sexual (seks'u-al) [L. *sexua'lis*]. 1. Pertaining to sex. 2. A person considered in his sexual relations. **contrary s.**, a sexual invert.

sexuality (seks-u-al'it-e). The characteristic quality of the male and female reproductive elements.

sexvalent (seks'val-ent) [L. *sex* six + *val'ens* able]. Having a chemical valence of six.

S.-G. Abbreviation for *Sachs-Georgi test*.

Sgambati reaction or test (sgahm'bah-te) [O. *Sgambati*, physician in Rome]. See under *reaction*.

S. G. O. Abbreviation for *Surgeon-General's Office*.

shaddock (shad'ok). See *naringin*.

shadow (shad'o). A faded or colorless red blood corpuscle. **blood s.** Same as *phantom corpuscle*. See under *corpuscle*. **Gumprecht's s.**, the crushed and deformed cells often seen in leukemic lymphadenosis. **heart s.**, the roentgen-ray shadow of the heart. **Ponick's s's**, phantom corpuscles. **s. test**. See *skiascopy*.

shadowform (shad'o-form). A proprietary preparation for the ready production of a liquid barium meal.

shadowgram, shadowgraph (shad'o-gram, shad'o-graf). Same as *skiagram*.

shadowgraphy (shad'o-graf-e). Same as *skiagraphy*.

shadow nucleus (shad'o). See under *nucleus*.

shakes (shäks). A popular name for the cold

paroxysm of intermittent fever. **spelter s.**, a form of disease seen among brass-founders, characterized by violent chills.

shaking palsy (sha'king). See *paralysis agilis*.

shank (shangk). The tibia or shin; also the leg.

Sharpey's fibers (shar'pez) [William Sharpey, English anatomist, 1802-1880]. See *fiber*.

shashitsu (shah-shit'soo). See *tsutsugamushi disease*, under *disease*.

shaven-beard appearance (sha'ven-bërd). The appearance of the intestinal glands in typhoid fever, being dark colored, with fine white markings.

Shear test (shër). See under *test*.

sheath (shëth) [L. *vagi'na*]. A tubular body enclosing or surrounding some organ. **adventitial s.**, a structure within the brain which separates the extra- and the intra-adventitial spaces. **arachnoid s.**, the delicate membrane between the dural and pial sheath of the optic nerve. **capillary s.**, the wall of a lymph channel surrounding a capillary. **carotid s.**, a portion of the cervical fascia which encloses the carotid artery, the internal jugular vein, and the vagus nerve. **caudal s.**, a tubular cytoplasmic structure at the base of the nucleus in the early spermatid. **chor-dal s.**, the sheath of the notochord. **crural s.** Same as *femoral s.* **dental s.**, the layer of tissue which lines the dentinal tubules. Called also *Neumann's s.* **dural s.**, the external investment of the optic nerve. **femoral s.**, the fascial envelop of the femoral vessels. **s. of Henle**, the envelop of a nerve fiber outside of the neurilemma. **s. of Hertwig**, an investment of epithelial cells around the unerupted tooth and inside of the dental follicle which are derived by budding from the enamel organ. **lamellar s.**, the perineurium. **Mauthner's s.**, the double granular protoplasmic sac or layer, marked with lengthwise striae, beneath Schwann's sheath. It incloses the myelin. **medul-lary s.** Same as *myelin s.* **myelin s.**, the sheath surrounding the axis-cylinder of some (*myelinated, medullated*) nerve fibers. It consists of myelin supported by a network of neurokeratin and is itself surrounded by the neurilemma. Called also *medullary s.* **Neumann's s.** See *dental s.* **notochordal s.**, an elastic sheath surrounding the notochord. Called also *elastica externa*. **nucleated s.** See *neurilemma*. **s's of the optic nerve**, the envelops that surround the optic nerve, formed by extension of the membranes of the brain. **perinephritic s.**, the sheath of fascia investing the kidney. **peri-vascular s.**, a lymphatic organ which surrounds some of the blood vessels of the brain. **pial s.**, an extension of the pia which partly surrounds the optic nerve. **primitive s.**, the neurilemma. **s. of the rectus**, the sheath enclosing the rectus muscle, formed by the splitting of the tendon of the internal oblique muscle. **root s.**, the epithelial sheath of the root of the embryonic tooth. **Scar-pa's s.**, the cremasteric fascia. **Schwalbe's s.**, the thin envelop of an elastic fiber. **s. of Schwann**, the neurilemma. **synovial s.**, the membrane which lines a bony passage through which a tendon passes. **tangential s.**, the fibrocellular sheath enclosing the carotid arteries.

sheep cholera. See under *cholera*.

sheep pox (shëp' poks). See *ovinia*.

sheep scab (shëp' skab). See under *scab*.

sheet (shët). An oblong piece of cotton or linen for a bed covering. **draws s.**, a folded sheet placed under a patient in bed so that it may be withdrawn without lifting the patient.

shelf (shelf). A shelflike structure, normal or abnormal, in the body. **Blumer's s.**, a pocket-like cavity in the abdomen due to carcinoma. **dental s.**, the shelflike epithelial invagination formed by the dental ridge, beneath which the dental papillae are formed; called also *dental ledge*. **mesocolic**

- s., the transverse mesocolon and the great omentum taken together.
- shell crown.** See under *crown*.
- shell, diffusion.** A small sac of semipermeable membrane used in the Abderhalden reaction.
- shell shock.** See under *shock*.
- shellac** (shel-ak'). Shell-lac; a variety of lac from India, produced on various plants by an insect, *Coccus lac'tis*. It is of some use in surgery.
- Shenton's arch or line** (shen'tonz). See under *line*.
- sherbet** (sher'bet). The name of various refreshing, cooling, or medicinal drinks; chiefly used in oriental regions.
- Sherrington's law** (sher'ing-tonz) [Charles Scott Sherrington, contemporary English physiologist]. See under *law*.
- sherry** (sher'e) [L. *vinum xer'icum*]. A variety of white or brownish wine from Xeres, in Spain.
- shi chun tze.** See under *Quisqualis*.
- shield** (sheld). 1. Any protecting tube. 2. The metal tube that covers the core of soft iron in the primary coil of a faradic battery; by sliding or drawing it the current is intensified or diminished at will. **Buller's s.**, a watch glass fitted over the eye to guard it from gonorrheal or ophthalmic infection. **embryonic s.**, the dark circular field due to cell proliferation within the area pellucida, in which the primitive streak appears. **nipple s.**, a cover to protect the nipple of a nursing woman. **phallic s.**, a device for the antiseptic protection of the male genitals during surgical operations.
- shift to the left.** Armet's term for an increase in the number of leukocytes with less complex nuclei at the expense of the more complex ones.
- shift to the right.** A condition exactly opposite to shift to the left.
- Shiga's bacillus** (she'gahz) [Kiyoshi Shiga, a contemporary Japanese physician]. See under *bacillus*.
- Shiga-Kruse bacillus** (she'gah-kru'seh). Shiga's bacillus.
- shikimene** (shik'im-en). Same as *sikimin*.
- shilajatu** (she-laj-at'oo). A mineral gum which exudes from the heated rocks in summer in India; used as a diuretic. See *silajit*.
- shimamushi disease** (shim-am-oo'she). See *tsutsugamushi disease*, under *disease*.
- shin** (shin). The crest or anterior edge of the tibia; the tibia itself; also the anterior aspect of the leg below the knee. **trench s.**, a painful condition of the tibialis muscles seen in soldiers in the trenches. It is attended by headache, fever, and is regarded as an infectious fibrositis.
- shingles** (shin'glz). Herpes zoster. See *zoster*.
- shirt-stud abscess** (shirt'stud). See *abscess*.
- Shive solution.** See under *solution*.
- shiver** (shiv'er). 1. A slight chill or tremor. 2. To tremble, as from a chill.
- shivering** (shiv'er-ing). Chorea affecting the muscles of the hip and thigh of a horse.
- shock** (shok). Sudden vital depression, due to an injury or emotion which makes an untoward impression upon the nervous system. Shock may be slight and transient, or profound and even fatal. In severe shock the prostration may amount to immobility or syncope; but in other cases the patient is restless and excited. Recovery from shock is followed by more or less quickening of the pulse and respiration and abnormally high temperature. **aerial s.**, a neurotic condition in soldiers due to the aerial disturbance produced by bursting shells. The aerial wave compression is believed to affect arterial pressure in the body by causing changes in the atmospheric pressure. **allergic s.** See *anaphylactic s.* **anaphylactic s.**, a violent attack of symptoms produced by a second injection of serum or protein and due to anaphylaxis. See *anaphylaxis*. **anaphylactoid s.**, colloidoclasia. **apoplectic s.**, a stroke of apoplexy. **barium s.**, a hemoclastic shock produced when barium is injected into the veins. **cardiac s.** See *heart s.* **colloid s.**, pseudo-anaphylaxis. **colloidoclastic s.** See *colloidoclasia*. **deferred s.**, severe physical or mental disturbance, of which the symptoms occur a considerable time after the injury or mental impression is received. **electric s.**, the sudden impression produced by the passage of an electric current through any part of the body. **epigastric s.**, the effect of a sudden blow upon the epigastrium. **erethismic s.**, a form of shock in which the patient is excited and restless. **faradic s.**, the effect produced by faradization. **fetal s.**, distress sometimes produced by the movements of the fetus in utero. **heart s.**, a sudden collapse of the functions of the heart during exertion; often fatal. **hemoclastic s.** See *hemoclastic crisis*, under *crisis*. **insulin s.**, a condition of circulatory insufficiency resulting from overdosage with insulin which causes too sudden reduction of blood sugar. It is marked by tremor, sweating, vertigo, diplopia, convulsions, and collapse. **mental s.**, that which is due to emotion or to a mental impression. **s. of metaballoidispersion**, shock due to a change (usually diminution) in the degree of dispersion of the colloids of the body. **paralytic s.**, a sudden paralytic attack. **peptone s.**, **protein s.**, a state of acute intoxication manifested by a chill with fever, spasm of the bronchi, acute emphysema, and vomiting and diarrhea, produced by the intravenous injection of peptone or other substance of protein nature, such as bacterial proteins, animal or vegetable proteins, organic extracts, etc. **phenolic s.**, a hemoclastic crisis produced by the intravenous injection of phenol. **railway s.**, a nervous shock caused by a railroad accident. **secondary s.**, a second shock, following a first, often due to the formation of a heart clot. **sense s.**, a relatively mild, nightmare-like attack which comes on mainly in the first stages of sleep. **serum s.** See *serum sickness* and *anaphylactic s.* **sexual s.**, a state of prostration following coitus or rape. **shell s.**, a condition of lost nervous control with numerous psychic symptoms, ranging from extreme fear to actual dementia, produced in soldiers under fire by the noise and concussion from bursting shells. **static s.**, the effect produced by the discharge of static electricity. **surgical s.**, that which is due to injury. **testicular s.**, the effect of a sharp stroke upon the testes. **torpid s.**, shock in which the patient lies prostrate and immobile. **traumatic s.**, shock due to injury or violence. **wound s.**, shock resulting from a wound.
- shoddy fever** (shod'e). A febrile disease caused by the dust in shoddy factories, and marked by cough, dyspnea, and headache.
- shoe, Charlier's.** A horse's shoe which allows the sole and the frog to come to the ground exactly as in the unshod foot. **Scarpa's s.**, a metal brace used in treating talipes equinus by preventing palmar extension of the foot beyond a right angle.
- shoe boil** (shoo boil). See *capped elbow*, under *elbow*.
- shoe-dye poisoning.** See under *poisoning*.
- Shoemaker's line.** See under *line*.
- shoemakers' spasm** (shoo'ma-kerz). See under *spasm*.
- short circuit** (short ser'kit). 1. See *circuit*. 2. To form an opening between two portions of intestine above and below an obstruction.
- shot-compressor** (shot'kom-pres-or). A sort of forceps for compressing split-shot on sutures.
- shot-feel.** A bodily sensation as of the rolling of shot down the body, sometimes occurring in acromegaly.
- shotgun prescription.** See under *prescription*.

shot-silk phenomenon, reflex (shot-silk'). See *watered-silk reflex*, under *reflex*.

shoulder (shōl'der). The junction of the arm and trunk; also that part of the trunk which is bounded at the back by the scapula. **s. blade**, the scapula. **bull's-eye s.**, a horse's shoulder having on it a loose flabby disk of hyperplastic skin with a central denuded surface. **s. girdle**. See *girdle*. **pegged s.**, a condition in the horse marked by limitation of movement in the shoulder. **s. slip**, inflammation of shoulder muscles and tendon in the horse.

show (shō). The appearance of blood that fore-runs a labor or menstruation.

shower, erythroblastic (show'er). A rapid and marked increase in the nucleated red cells of the blood occurring in pernicious anemia. **uric acid s.**, temporary increase in the uric acid contents of the urine; occurring in the course of a gouty attack.

Shrady's saw (shra'dēz) [George Frederick Shrady, New York surgeon, 1837-1907]. See *saw*.

Shrapnell's membrane (shrap'nēlz) [Henry J. Shrapnell, English anatomist]. See *membrane*.

shut-in personality. See under *personality*.

shuttlemakers' disease. See under *disease*.

Si. The symbol of *silicon*.

sialangitis, sialogangitis (si-ag-an-tri'tis, si'-ag-on-an-tri'tis) [σιαλῶν jawbone + *angitis*]. Inflammation in the antrum of Highmore.

sialaden (si-al'ad-en) [σιαλον saliva + *ἀδὴν* gland]. A salivary gland.

sialadenitis (si'al-ad-en-i'tis). Inflammation of a salivary gland.

sialadenoncus (si'al-ad-en-on'g'kus) [sialaden + *ὄγκος* mass]. A tumor of a salivary gland.

sialagogue (si-al'ag-og). Same as *sialogogue*.

sialaporia (si'al-ap-o're-ah) [σιαλον saliva + *ἀπορία* lack]. Deficiency in the amount of saliva.

sialemesia (si-al-em'es-is) [σιαλον saliva + *ἔμεσις* vomiting]. The hereditary vomiting of saliva.

sialic (si-al'ik) [σιαλικός]. Pertaining to the saliva.

sialine (si'al-in) [L. *siali'nus*]. Pertaining to the saliva.

sialism, sialismus (si'al-izm, si-al-iz'mus) [σιαλισμός]. Salivation; ptyalism.

sialo-adenitis (si'al-o-ad-en-i'tis). Sialadenitis.

sialo-aerophagy (si'al-o-a-er-of'aj-e) [σιαλον saliva + *ἀήρ* air + *φάγειν* to eat]. The swallowing of saliva and air.

sialo-angitis (si'al-o-an-je-i'tis). Sialo-angitis.

sialo-angitis (si'al-o-an-ji'tis). Inflammation of the salivary ducts.

sialodochitis (si'al-o-do-ki'tis) [σιαλον saliva + *δοχή* receptacle + *-itis* inflammation]. Inflammation of the salivary ducts.

sialoductilitis, sialoductitis (si'al-o-duk-ti-l'i'tis, si'al-o-duk-ti'tis) [σιαλον saliva + L. *ductus* duct + *-itis* inflammation]. Inflammation of Stenson's duct.

sialogenous (si-al-oj'en-us) [σιαλον spitte + *γενᾶν* to produce]. Producing salivation.

sialogogic (si-al-o-goj'ik). Sialogogue.

sialogogue (si-al'o-gog) [σιαλον spitte + *ἀγογός* leading]. 1. Producing a flow of saliva. 2. A medicine which promotes a flow of saliva; the principle sialogogues are mercury, jaborandi, pilocarpine, potassium iodide, and lobelia.

sialolith (si-al'o-lith) [σιαλον saliva + *λίθος* stone]. A salivary calculus.

sialolithiasis (si'al-o-lith-i'as-is) [σιαλον saliva + *λίθιασις* formation of a stone]. The formation of salivary calculi or the condition characterized by it.

sialogogy (si-al-oj'o-je) [σιαλον saliva + *λόγος* treatise]. The study of the saliva.

sialorrhea, sialorrhoea (si'al-or-e-ah) [σιαλον spitte + *ῥοία* flow]. Same as *salivation*. **s. pancreatic, a**, the spitting of fluid resembling saliva or pancreatic juice, sometimes seen in disease of the pancreas.

sialoschesis (si-al-os'kes-is) [σιαλον saliva + *σχέσις* suppression]. Suppression of the salivary secretion.

sialosemiology (si'al-o-se-mi-ol'o-je) [σιαλον saliva + *semiology*]. Diagnosis by means of a chemical examination of the saliva and the pharyngeal secretion.

sialosis (si-al-o'sis) [σιαλον saliva]. The flow of saliva.

sialostenosis (si'al-o-ste-no'sis) [σιαλον saliva + *στενός* narrow]. Stenosis, or narrowing, of a salivary duct.

sialosyrinx (si'al-o-si'rinks) [σιαλον saliva + *σύριγξ* pipe]. 1. A salivary fistula. 2. A syringe for washing out the salivary ducts, or a drainage tube for the salivary ducts.

sialotic (si-al-ot'ik). Pertaining to or marked by the flow of saliva.

sialozemia (si'al-o-ze-me-ah) [σιαλον saliva + *ζῆμα* loss]. The involuntary flow of saliva.

sib (sib) [Anglo-Saxon *sib* kin]. Related by blood; a blood relation.

sibbens (sib'enz). A disease formerly prevalent in Scotland, somewhat resembling yaws and syphilis.

sibilant (sib'il-ant) [L. *sib'ilans* hissing]. Of a shrill, hissing or whistling character.

sibilus (sib'il-us) [L.]. A whistling or sibilant rale.

sibling (sib'ling). One of two or more offspring of the same parents.

sibo (se'bo). Pirquet's term for a cow's milk nutrient having the same value as human milk (lac simplex bovinum).

sibred (sib'red). Relationship; kindred.

sibship (sib'ship). Relationship by blood; blood relationship.

Sibson's furrow (sib'sunz) [Francis Sibson, English physician, 1814-1876]. See under *furrow*.

siccative (sik'at-iv) [L. *sic'cus* dry]. Drying; removing moisture from surrounding objects.

sicchasia (sik-ka'ze-ah) [σικχασία]. Nausea.

sicco (sik'o). A proprietary iron-protein preparation in powder form.

siccolabile (sik-o-lab'il). Altered or destroyed by drying.

siccoles (sik'olz). Preparations in a dried form of bad-tasting liquids, as castor oil.

siccostabile (sik-o-sta'bil). Not altered by drying.

siccus (sik'us). Latin for *dry*.

sick (sik). 1. Not well; not in good health. 2. Affected with nausea. 3. Menstruating.

sick headache. Migraine.

sickle-cell anemia. See under *anemia*.

sicklelema (sik-le-me-ah). The presence of sickle cells in the blood; meniscocytosis.

sickness (sik'nes). The condition of being ill; ill health. **aerial s.** Same as *aviators' disease*.

See disease. African s. See *Congo trypanosomiasis*, under *trypanosomiasis*. **altitude s.** See *mountain s.*

aviation s. See *aviators' disease*, under *disease*. **balloon s.**, a condition similar to mountain sickness occurring in aeronauts.

black s., kala-azar. **car s.**, nausea and malaise from railway travel. **falling s.**, epilepsy. **gall s.** See *galzichte*.

Gambian horse s., a fatal infection of horses and cattle throughout central Africa caused by *Trypanosoma congolense*.

grass s., a disorder occurring in western Australia, Queensland, and parts of Brazil, marked by vomiting after meals, and by some attributed to a spirochete in the stomach. Called also *gastric*

- spirochetosis* and *Belyando sprew. green s.*, chlorosis. **laughing s.**, pseudobulbar paralysis. **milk s.** See *trembles*. **Monday morning s.**, a condition sometimes seen in horses after having remained idle for a few days. It is marked by sweating, lameness, pain in the legs, and nervous excitement. **monthly s.**, menstruation. **morning s.**, the nausea of early pregnancy. **mountain s.**, nausea and dyspnea occurring at great elevations. It is caused by the lessened oxygenation of the body due to the rarefaction of the air breathed. **protein s.**, symptoms, such as eruptions, fever, edema, and pain in the joints, following the injection of foreign proteins into the body. **radiation s.** See *x-ray s.* **sea s.**, nausea and malaise caused by the motion of a ship. **serum s.**, a form of anaphylactic or allergic reaction following the injection of foreign serum and marked by urticarial rashes, edema, adenitis, joint pains, high fever, and prostration. Called also *serum disease*. **sleeping s.** 1. See *Congo trypanosomiasis*, under *trypanosomiasis*. 2. Lethargic encephalitis. See *encephalitis*. **spotted s.**, *pinta*. **sweating s.** See *military fever*, under *fever*. **talking s.**, epidemic encephalitis marked by extreme excitement, muscular twitching, and talkativeness. **tin s.**, a form of poisoning caused by a continued diet of canned food. **trolley s.**, a peculiar sickness said to be caused by riding in electric cars. **vomiting s.**, an extremely fatal disease in Jamaica due to eating damaged ackus, the fruit of *Blighia sapida*. **x-ray s.**, a feeling of sickness and acute general symptoms which sometimes follow the application of massive doses of short wave roentgen and radium rays. It is attributed by some to breathing the ozone and nitrogen pentoxide produced by the high-tension current of the x-ray machine. Called also *radiation sickness*, *roentgenator*.
- Sida asiatica** (si'dah). A plant called iām takuri in India, where it is used in the treatment of sores. **S. rhomboidea**, a mucilaginous plant used in India for dysentery.
- Siddall test** (sid'al) [A. C. Siddall, contemporary American physician]. See under *tests*.
- side** (sid). The portion of the surface of the body between the dorsal and ventral aspects, the lateral aspect.
- sidebone** (sid'bōn). A condition of horses marked by hardness of the lateral cartilages above the heels from deposit of lime salts. The condition results in lameness.
- side-chain theory**. See *Ehrlich's side-chain theory*, under *theory*.
- sideration** (sid-er-a'shun) [L. *sidera'ri* to be blasted by a constellation]. 1. Sudden destruction of vital forces. 2. Therapeutical application of electric sparks.
- siderism** (sid'er-izm) [σίδηρος iron]. Same as *metallotherapy*.
- siderodromophobia** (sid'er-o-dro-mo-fō-be-ah) [σίδηρος iron + δρόμος way + φόβος fear]. Morbid dread of railway travel.
- siderogenous** (sid-er-o'jen-us) [σίδηρος iron + γεν- to produce]. Producing or forming iron.
- siderol** (sid'er-ol). A proprietary preparation of beef extract, iron, and phosphorus: sold for use in anemia, general debility, rickets, etc.
- siderophil**, **siderophile** (sid'er-o-fil). 1. Same as *siderophilous*. 2. A siderophilous tissue or structure.
- siderophilous** (sid-er-ōf'il-us) [σίδηρος iron + φιλεῖν to love]. Having a tendency to absorb iron.
- siderophobia** (sid'er-o-fō-be-ah). Same as *siderodromophobia*.
- siderophone** (sid'er-o-fōn) [σίδηρος iron + φωνή voice]. An instrument for detecting, by a telephone-like arrangement, the presence of iron splinters in the eyeball.
- sideroscope** (sid'er-o-skōp) [σίδηρος iron + σκοπεῖν to see]. A magnet or other appliance for determining the presence of metallic iron as a foreign body in the eye.
- siderosis** (sid'er-o'sis) [σίδηρος iron]. 1. Pneumocniosis due to the inhalation of iron particles. 2. Excess of iron in the blood. **s. bul'bi**, the deposit of an iron pigment within the eye. **hematogenous s.**, pigmentation with an iron compound derived from the blood. **hepatic s.**, the deposit of an abnormal quantity of iron in the liver: called also *iron-liver*. **urinary s.**, presence of hemosiderin granules in the urine. **xenogenous s.**, pigmentation with an iron oxide derived from a foreign body.
- siderous** (sid'er-us) [σίδηρος iron]. Containing iron.
- sidual** (sid'on-al). Piperazin quinate, a white powder, soluble in water. It is a uric acid solvent. Dose, 15-30 grains (1-2 Gm.). **new s.**, quinic acid anhydride: used like sidual.
- Siebold's operation** (ze'bolts) [Gaspard von Siebold, German surgeon, 1736-1807]. Hebotomy.
- Siegle's otoscope** (ze'glez) [Emil Siegle, French aurist in Stuttgart, 1833-1900]. See *otoscope*.
- Sierra salvia**, **Serra salvia** (se-er'ah sal've-ah, ser'ah sal've-ah). The plant *Artemisia frigida*, or mountain sage: antiperiodic.
- sieve** (siv). A network of wire, hair, or silk placed in a frame and used for sifting.
- Sig.**, **sig.** Abbreviation for L. *signetur*, let it be labeled.
- signaultian operation** (se-go'she-an) [Jean René Sigault, French surgeon of the 18th century]. See *operation*.
- sigh** (si) [L. *suspirium*]. An audible and prolonged inspiration, followed by a shortened expiration.
- sight** (sit). 1. The act or faculty of vision. 2. A thing seen. **day s.**, nyctalopia, or night blindness. **far s.**, **long s.**, hypermetropia. **near s.**, **short s.** Same as *myopia*. **night s.**, hemeralopia, or day blindness. **old s.** Same as *presbyopia*. **short s.**, myopia.
- sigillative** (sig'il-a-tiv) [L. *sigilla* mark]. Tending to cicatrization.
- sigma r.** See under *reaction*.
- sigmatism** (sig'mat-izm) [σίγμα letter s]. The incorrect or difficult or too frequent use of the s sound.
- sigmoid** (sig'moid) [L. *sigmoïdes*; συγμοειδής]. Shaped like the letter S, or like the Greek sigma (Σ or C).
- sigmoidectomy** (sig-moi-dek'to-me). Excision of a portion of the sigmoid flexure of the colon.
- sigmoiditis** (sig-moid-i'tis). Inflammation of the sigmoid flexure.
- sigmoidopexy** (sig-moi'do-peks-e) [*sigmoid* + πήξις fixation]. The operation for rectal prolapse, done by making an incision in the lower abdomen, and pulling the sigmoid until the prolapse disappears, and then stitching the sigmoid to the abdominal wound.
- sigmoidoproctostomy** (sig-moid'o-prok-tos'to-me) [*sigmoid* + *proctostomy*]. The creation of an artificial opening at the junction of the sigmoid flexure and the rectum.
- sigmoidorectostomy** (sig-moi'do-rek-tos'to-me). Same as *sigmoidoproctostomy*.
- sigmoidoscope** (sig-moid'o-skōp) [*sigmoid* + σκοπεῖν to view]. A speculum for examining the sigmoid flexure.
- sigmoidoscopy** (sig-moid-os'ko-pe). Inspection of the sigmoid flexure by the aid of a long speculum (sigmoidoscope).
- sigmoidostomy** (sig-moid-os'to-me) [*sigmoid* + στόμα mouth]. The formation of an artificial anus in the sigmoid flexure.

Sigmund's glands (zēg'moonds) [Karl Ludwig Sigmund, Austrian physician, 1810-1883]. See under *gland*.

sigmuth (sig'muth). Trade name for tartrobituminate of sodium and potassium in sulphur water.

sign (sīn) [L. *signum*]. Any objective evidence of a disease. **Aaron's s.**, a sensation of pain or distress in the epigastric or precordial region on pressure over McBurney's point in appendicitis. **Abadie's s.** 1. Spasm of the levator palpebrae superioris muscle; a sign of exophthalmic goiter. 2. Insensibility of the Achilles tendon to pressure; seen in locomotor ataxia. **Abrahams' s.**, a sound between dull and flat obtained on percussion over the acromion process in early tuberculosis of the apex of the lung. **accessory s.**, **assident s.**, any nonpathognomonic sign of disease. **Ahlfeld's s.**, irregular tetanic spasms of portions of the uterus after the third month of gestation. **Allis' s.**, relaxation of the fascia between the crest of the ilium and the greater trochanter: a sign of fracture of the neck of the femur. **Andral's s.** Same as *Andral's decubitus*. See *decubitus*. **Angelescu's s.**, a sign of tuberculosis of the vertebrae, consisting in inability to bend the spine while lying on the back so as to rest on the head and heels alone. **antecedents.**, any precursory indication of an attack of disease. **anterior tibial s.**, involuntary extension of the tibialis anticus muscle when the thigh is forcibly flexed on the abdomen: seen in spastic paraplegia. **anticus s.** See *Piotrowski's s.* **Argyll Robertson pupil s.** See *pupil*. **Arnoux's s.**, a sign of twin pregnancy, consisting of a peculiar rhythm in the fetal heart beat produced by the action of the two hearts and resembling the sound of the hoofs of a pair of trotting horses. **Arroyo's s.**, asthenocoria. **assident s.** Same as *accessory s.* **Auenbrugger's s.**, a bulging of the epigastrium, due to extensive pericardial effusion. **Aufrecht's s.**, a feeble breathing sound heard just above the jugular fossa: it points to a tracheal stenosis. **Babès' s.**, tenderness over the splenic artery together with muscular rigidity, indicative of aneurysm of the abdominal aorta. **Babinski's s's.** 1. Loss or lessening of the Achilles tendon reflex in sciatica: this distinguishes it from hysterical sciatica. 2. Same as *Babinski's reflex*. See *reflex*. 3. The patient lies on his back with arms folded and alternately flexes and extends the trunk on the thigh. The toes gradually separate from each other in lesions of the pyramidal tract and in hysterical paralysis. 4. In hemiplegia the contraction of the platysma muscle in the healthy side is more vigorous than on the affected side, as seen in opening the mouth, whistling, blowing, etc. 5. The patient lies on the floor, with arms crossed upon his chest, and then makes an effort to rise to the sitting posture. On the paralyzed side the thigh is flexed upon the pelvis and the heel is lifted from the ground, while on the healthy side the limb does not move. This phenomenon is repeated when the patient resumes the lying posture. It is seen in organic hemiplegia, but not in hysterical hemiplegia. Called also *combined flexion phenomenon*. 6. When the paralyzed forearm is placed in supination it turns over to pronation: seen in organic paralysis. Called also *pronation sign*. **Baccelli's s.**, aphonic pectoriloquy: good conduction of the whisper in patients with pleural effusion. **Baillarger's s.**, inequality of the pupils in paralytic dementia. **Ballance's s.**, resonance of right flank when patient lies on his left side: seen in splenic rupture. **Ballet's s.**, ophthalmoplegia externa, with loss of all voluntary eye movements, the pupil movements and automatic eye movements persisting: seen in exophthalmic goiter and hysteria. **Bamberger's s.** 1. Allochiria. 2. Presence of signs of consolidation at the angle of the scapula, which disappear when the patient leans forward: sign of pericardial

effusion. **Bárány's s.** See *Bárány's symptom*, under *symptom*. **Bard's s.**, in organic nystagmus the oscillations of the eye increase as the patient's attention follows the finger moved alternately from one side to the other; but in congenital nystagmus the oscillations disappear in like condition. **Barre's pyramidal s.**, the patient lies face down and the legs are flexed at the knee; he is unable to hold the legs in this vertical position if there is disease of the pyramidal tracts. **Baruch's s.**, resistance of the temperature in the rectum to a bath of 75 F. for fifteen minutes; a sign of typhoid fever. **Bassler's s.**, in chronic appendicitis, a sharp pain is caused by pinching the appendix between the thumb and the iliaca muscle. The procedure is carried out by pressing the tip of the thumb into the abdominal wall midway between the umbilicus and the anterior superior spine of the ilium and then pressing to the right. **Bastedo's s.**, the production of pain and tenderness in the right iliac fossa (at McBurney's point) on inflation of the colon with air by means of a rectal tube: seen in latent or chronic appendicitis. **Battle's s.**, discoloration in the line of the posterior auricular artery, the ecchymosis first appearing near the tip of the mastoid process: seen in fracture of the base of the skull. **Beaumés' s.**, sternalgia; retrosternal pain as an indication of angina pectoris. **Beccaria's s.**, a painful sense of pulsation in the occiput in pregnancy. **Bechterew's s.**, in tabes dorsalis; anesthesia of the popliteal space. **Becker's s.**, increase of pulsation in the retinal arteries in exophthalmic goiter. **Beevor's s.**, a sign of functional paralysis consisting in inability of the patient to inhibit the antagonistic muscles. **Béhier-Hardy s.**, aphonia in the early stages of pulmonary gangrene. **Berger's s.**, an irregular-shaped or elliptical pupil in the early stages of tabes dorsalis, paralytic dementia, and certain paralyses. **Bernhardt's s.**, perverted and painful sensations on the outer and anterior surfaces of the thigh; experienced in displacement of the external cutaneous nerve. **Bethes's s.**, when the examiner standing back of the patient places his fingers so that the tips rest on the upper surfaces of corresponding ribs high up in the patient's axillae, unilateral impairment of expansion is accurately indicated by the lessened degree of respiratory movement of the ribs on the side affected. **Bezold's s.**, an inflammatory swelling below the apex of the mastoid process; an evidence of mastoiditis. **Bieg's entotic s.**, when sounds are heard by the patient only when spoken through an ear trumpet, joined by a catheter to the eustachian tube, disease of the malleus or incus is indicated. **Biermer's s.** Same as *Gerhardt's s.* **Biernacki's s.**, analgesia of the ulnar nerve in paralytic dementia and tabes dorsalis. **Binda's s.**, a sudden movement of the shoulder when the head is passively and sharply turned toward the other side; an early sign of tuberculous meningitis. **Bird's s.**, a definite zone of dulness with absence of the respiratory sounds in hydatid disease of the lung. **Blécard's s.**, a sign of the maturity of the fetus consisting of a center of ossification in the lower epiphysis of the femur. **Blumberg's s.**, short acute pain felt by the patient when the examiner's hand is pressed over McBurney's point and lifted up suddenly; it occurs in all forms of peritoneal inflammation. **Boas' s.**, lactic acid in the gastric juice in certain cases of cancer of the stomach. **Bolognini's s.**, a sensation of friction observed on alternate pressure with the fingers of both hands on the right and left sides of the belly: an early indication of measles. **Bonnet's s.**, pain on thigh adduction in sciatica. **Bordier-Fränkel s.**, an outward and upward rolling of the eye in peripheral facial paralysis. **Borsieri's s.**, when the finger-nail is drawn along the skin in early stages of scarlet fever, a white line is left which quickly turns red. **Boston's s.**, in exophthalmic goiter, when

the eyeball is turned downward there is arrest of descent of the lid, spasm, and continued descent. **Bouchard's s.**, a few drops of Fehling's solution are added to the urine and the mixture is shaken; if pus from the kidney is present, fine bubbles will form which push to the surface the coagulum formed by heating. **Bouillau's s.** 1. A peculiar tinkling at the right side of the apex beat in hypertrophy of the heart. 2. Permanent retraction of the chest in the precordial region: a sign of adherent pericardium. **Bouveret's s.**, distention of the cecum and right iliac fossa in obstruction of the large intestine. **Bozzolo's s.**, a visible pulsation of the arteries within the nostrils: said to indicate aneurysm of the thoracic aorta. **Brauch-Romberg s.** See *Romberg's s.* **Braun-Fernwald s.** (of pregnancy), a symmetrical enlargement of the uterus, one side being greater than the other, with a longitudinal line or furrow separating the two. **Braxton-Hicks s.** Same as *Hicks' s.* **Brenner's s.**, a metallic rub over the twelfth left rib behind when the patient sits up. It is seen in perforation of the stomach and is caused by bubbles of air collecting between the stomach and the diaphragm. **Brickner's s.**, diminished oculo-auricular associated movements seen in impairment of function of the facial nerve. **Brissaud-Marie s.**, hysterical glossolabial hemispasm. **Broadbent's s.**, a retraction seen on the back, near the eleventh and twelfth ribs, on the left side, due to pericardial adhesion. **Brodie's s's.** 1. A black spot on the glans penis: a sign of urinary extravasation into the spongiosum. 2. Same as *Brodie's pain*, see under *pain*. **Brown-Séguard's s.** Same as *Brown-Séguard's paralysis*. See under *paralysis*. **Brown's dipping crackle s.**, a fine crackling sound heard on placing the stethoscope over the right iliac fossa and dipping suddenly with it: heard in intestinal perforation in typhoid fever. **Brown's gravitation s.**, the area of tenderness in the lower abdomen is marked out. The patient is then turned on the unaffected side. If, in from fifteen to thirty minutes, the tenderness has moved one or two inches, or if the tenderness and rigidity should become marked, immediate operation is indicated. **Brudzinski's s.** 1. In meningitis, when the neck of the patient is bent, flexure movements of the ankle, knee, and hip are produced. 2. In meningitis, when passive flexion of the lower limb on one side is made, a similar movement will be seen in the opposite limb: called also *contralateral reflex*. **Brun's s.**, intermittent headache, vertigo, vomiting, etc., on suddenly moving the head in cysticercus disease of the fourth ventricle. **Bryson's s.**, lessened power of expansion of the thorax, sometimes noticed in exophthalmic goiter. **Burger's s.** Same as *Garcé's s.* **Burghart's s.** See under *symptom*. **Burton's s.**, a blue line at the junction of the teeth with the gums in chronic lead poisoning. **Cantelli's s.**, dissociation between the movements of the head and eyes: as the head is raised the eyes are lowered, and *vice versa*. Called also *doll's eye s.* **Cardarelli's s.**, transverse pulsation of the laryngotracheal tube in aneurysms and in dilatation of the arch of the aorta. **cardiac s.**, a sign of cancer, consisting of marked diminution in the area of cardiac dullness when the patient is in the recumbent position. Called also *Gordon's s.* **cardiorespiratory s.**, a change in the normal pulse-respiration ratio from 4 : 1 to 2 : 1; seen in infantile scurvy. **Castellino's s.** See *Cardarelli's s.* **Cejka's s.**, invariability of the cardiac dullness during the different phases of respiration: a sign of adherent pericardium. **Chaddock's s.**, extension of the toes on irritating the skin in the external malleolar region: seen in lesions of the corticospinal reflex paths. Called also *external malleolar s.* **Charcot's s's.** 1. The raising of the eyebrow in peripheral facial paralysis, and the lowering of the same part in facial contraction. 2. Intermittent limping in

arteriosclerosis of the legs and feet. **Charcot-Vigouroux s.** See *Vigouroux's s.* **Chase's s.**, pain in the cecal region, felt when the examiner's hand is passed quickly and deeply along the transverse colon from left to right, the descending colon being closed by pressing deeply with the other hand. **Chaussier's s.**, pain in the epigastrium preceding eclampsia. **Cheyne-Stokes s.** See under *respiration*. **Chvostek's s.**, a sudden spasm on tapping one side of the face: seen in postoperative tetany. **Clark's s.**, obliteration of hepatic dullness, due to tympanitic distention of the abdomen. **Claude's hyperkinesia s.**, reflex movements of parietic muscles elicited by painful stimuli. **Claybrook's s.**, a sign of rupture of the abdominal viscera, consisting in the transmission of the sounds of the heart beat and of respiration so that they can be heard over the abdomen, the transmission of the sounds being due to the presence of fluid, exudate, or blood. **Cleeman's s.**, creasing of the skin just above the patella, indicative of fracture of the femur with overriding of fragments. **Cloquet's needle s.**, a clean needle is plunged into the biceps muscle; if life be not extinct, it soon oxidizes. **cogwheel s.** See *cogwheel phenomenon*, under *phenomenon*. **coin s.** Same as *coin test*. See under *tests*. **Cole's s.**, deformity of the duodenal contour as seen in the roentgenogram, a sign of the presence of duodenal ulcer. **combined plantar s.**, the simultaneous disappearance of the cortical plantar reflex and the spinal plantar reflex: seen in hysteria. **Comby's s.**, whitish patches on the buccal mucosa and the gums: an early sign of measles. **commemorative s.**, any sign of a previous disease. **complimentary opposition s.** Same as *Grasset, Gausse, and Hoover s.* **contralateral s.** See *Brudzinski's s.* (2d def.). **Coopernail s.**, ecchymosis on the perineum and scrotum or labia: a sign of fracture of the pelvis. **Corrigan's s.** 1. A purple line at the junction of the teeth with the gum in chronic copper poisoning. 2. A peculiar expanding pulsation indicative of aneurysm of the abdominal aorta. See also *Corrigan's pulse*, under *pulse*. **coughing s.** See *Huntington's s.* **Courvoisier's s.**, a gallbladder much distended from obstruction of the common duct indicates tumor rather than calculus. **Crichton-Browne's s.**, tremor of the outer angles of the eyes and of the labial commissures in the earlier stages of parietic dementia. **Cullen's s.**, discoloration of the skin about the umbilicus, regarded as a sign of ruptured extra-uterine pregnancy. **Dalrymple's s.**, abnormal wideness of the palpebral opening in exophthalmic goiter. **Damoisseau's s.** Same as *Ellis' line*, under *line*. **Dance's s.**, depression in the right iliac region in intussusception. **Davidsohn's s.**, absence of illumination of the pupil on transillumination with an electric light placed in the mouth: indicates tumor or fluid in the maxillary antrum. **Davis' s.**, an empty state and a yellowish or pale tint of the pulseless arteries: a sign of death. **Dawbarn's s.**, in acute subacromial bursitis, when the arm hangs by the side palpation over the bursa causes pain, but when the arm is abducted this pain disappears. **de la Camp's s.**, relative dullness over and to both sides of the fifth and sixth vertebrae in tuberculosis of the bronchial lymph nodes. **Déjerine's s.**, aggravation of symptoms of radiculitis produced by coughing, sneezing, and straining at stool. **Delbet's s.**, in aneurysm of the main artery of a limb, if the nutrition of the part distal to the aneurysm is maintained, although the pulse may have disappeared, the collateral circulation is sufficient. **Delmege's s.**, deltoid flattening, an early sign of phthisis. **Demarquay's s.**, fixation or lowering of the larynx during phonation and deglutition; a sign of syphilis of the trachea. **de Musset's s.**, rhythmic oscillation of the head caused by pulsations of the carotid arteries: a sign of aortic insufficiency.

de Mussy's s., the presence in the left hypochondriac region of a spot intensely painful on pressure: an indication of diaphragmatic pleurisy. **Desault's s.**, a sign of intracapsular fracture of the femur, consisting of alteration of the arc described by rotation of the great trochanter, which normally describes the segment of a circle, but in this fracture rotates only as the apex of the femur as it rotates about its own axis. **D'Espine's s.** (1889). 1. In the normal person, on auscultation over the spinous processes, pectoriloquy ceases at the bifurcation of the trachea, and in infants opposite the seventh cervical vertebra. If pectoriloquy is heard lower than this it indicates enlargement of the bronchial lymph nodes. 2. In pulmonary tuberculosis the bronchophony over the spinous processes is heard at a lower level than in health. **Dewees' s.**, expectoration of tough whitish mucus by a pregnant woman. **Dixon Mann's s.** See **Mann's s.** **doll's eye s.** See **Cantelli's s.** and **Widowita's s.** **Dorendorf's s.**, fullness of the supraclavicular groove on one side in aneurysm of the aortic arch. **Douglas' s.** See **Douglas' cry**, under **cry**. **Drummond's s.**, a whiff heard at the open mouth during respiration in cases of aortic aneurysm. **Duchenne's s.**, the sinking in of the epigastrium on inspiration in paralysis of the diaphragm or in certain cases of hydropericardium. **Duckworth's s.**, seemingly complete stoppage of respiration several hours before stoppage of the heart beat; seen in conditions of intracranial pressure. **duct s.**, a red spot seen at the orifice of Steno's duct in mumps. **Duga's s.**, inability to place the hand on the shoulder of the other side while the elbow rests on the chest; seen in shoulder dislocation. **Duncan-Bird s.** Same as **Bird's s.** **Dupuytren's s.** 1. A crackling sensation on pressure over a sarcomatous bone. 2. In congenital dislocation of the head of the femur there is a free up-and-down movement of the head of the bone. **Duroziez's s.** Same as **Duroziez's murmur** (q. v. under **murmur**). **echo s.**, the repetition of the last word or clause of a sentence; seen in certain brain diseases. **Dutemps and Cestan s.**, a sign of complete peripheral paralysis: when the patient is asked to look forward, and then attempts to close both eyes slowly, the upper lid on the paralyzed side moves upward a trifle, owing to the action of the levator palpebrae superioris. **Elliot's s.**, induration of the edge of a syphilitic skin lesion. **Ellis' s.**, the peculiar curved line of dulness discoverable during resorption of a pleuritic exudate. **Erb's s.** 1. Increased electric irritability of motor nerves in cases of tetany. 2. Dulness in percussion over the manubrium of the sternum in acromegalia. **Erben's s.** See **Erben's reflex**, under **reflex**. **Erb-Westphal s.**, loss of the patellar tendon reflex seen in tabes dorsalis and in some other spinal or cerebral diseases. **Ericksen's s.**, when the iliac bones are sharply pressed toward each other pain is felt in sacro-iliac disease but not in hip disease. **Erni's s.**, the cavernous tympany developed over an apical cavity that has previously been filled with fluid. Sometimes gently rapping over such a filled cavity with a hard instrument will excite coughing, which will expel the secretion, and thus the cavernous signs are developed. **Eustace Smith's s.** Same as **Smith's s.** **Ewart's s.**, undue prominence of the upper border of the first rib in certain cases of pericardial effusion. **Ewing's s.** 1. Percussion dulness at the inner side of the angle of the left scapula, indicating an accumulation of fluid in the pericardium behind the heart. 2. Tenderness at the upper inner angle of the orbit: a sign of obstruction of the outlet of the frontal sinus. **external malleolar s.** See **Chaddock's s.** **extinction s.**, extinction of the eruption over an area about the size of the palm when normal human serum is injected intracutaneously; characteristic of the eruption of

scarlet fever. **fabere s.** See **Patrick's test**, under **tests**. **Faget's s.** (1860), a fall in the pulse rate while the fever remains high or rises; seen in yellow fever. **Fajersztajn's crossed sciatic s.**, in sciatica, when the leg is flexed, the hip can also be flexed, but not if the leg be held straight; flexing sound thigh with leg straight causes pain on affected side. **fan s.**, spreading of the toes apart following the stroking of the sole of the foot with a dull needle. It forms part of the Babinski reflex. **Federici's s.**, on auscultating the abdomen the heart sounds can be heard in cases of intestinal perforation with gas in the peritoneal cavity. **Filipovitch's s.**, the yellow discoloration of prominent parts of the palms and soles in typhoid fever. **Fischer's s.**, on auscultation over the manubrium with the patient's head bent backward there is sometimes heard, in tuberculosis of the bronchial glands, a murmur due to pressure of the glands on the innominate veins. **Fisher's s.**, a presystolic murmur in certain cases of adherent pericardium. **Flint's s.**, Flint's murmur. See under **murmur**. **Flora's s.**, a sign of neurasthenia consisting in defective tetanic response to prolonged faradic stimulation of the muscles alleged to be affected. **flush-tank s.**, the passage of a large amount of urine and the coincident temporary disappearance of a lumbar swelling: a sign of hydronephrosis. **Forchheimer's s.**, the presence of a reddish eruption on the soft palate in German measles. **forearm s.** See **Leri's sign**. **fornication s.** See **Tinel's s.** **Fournier's s.**, the sharp delimitation characteristic of a syphilitic skin lesion. **Francke's s.**, deep tenderness over the apex of the lung behind. **Fränkel's s.**, diminished tonicity of the hip joint muscles in tabes dorsalis. **Frédéricq's s.**, the presence of a red line on the gums in pulmonary tuberculosis. **Friedreich's s.**, diastolic collapse of the cervical veins due to adherent pericardium. **Fürbringer's s.**, in cases of subphrenic abscess the respiratory movements will be transmitted to a needle inserted into the abscess, which is thus distinguished from abscess above the diaphragm. **Gangolphe's s.**, a serosanguineous abdominal effusion in strangulated hernia. **Garel's s.**, absence of light perception on the affected side of the antrum of Highmore on electric transillumination; seen in diseases of the antrum of Highmore. **Gerhardt's s.** 1. The absence of laryngeal movements in dyspnea due to aneurysm of the aorta. 2. Change of percussion sound on change of the patient's position; seen in pneumothorax and in pulmonary tuberculosis. **Gifford's s.**, inability to evert the upper lid; seen in exophthalmic goiter. **Gilbert's s.**, opsiria indicative of hepatic cirrhosis. **Glasgow's s.**, a systolic sound in the brachial artery in latent aneurysm of the aorta. **Goggia's s.**, in health, the fibrillary contraction produced by striking and then pinching the brachial biceps extends throughout the whole muscle: in debilitating disease, such as typhoid fever, the contraction is local. **Golden's s.**, paleness of the cervix uteri: regarded as a sign of tubal pregnancy. **Golonbov's s.**, tenderness on percussion over the tibia in chlorosis. **Gordon's s.** 1. Same as **Souque's phenomenon**. 2. See **cardiac s.** **Gould's bowed-head s.**, the bowing of the head in walking to see the ground in any destructive disease of the peripheral portion of the retina: this act brings the image upon the functioning part of the retina. **Gowers' s.**, abrupt intermittent oscillation of the iris under the influence of light: seen in certain stages of tabes dorsalis. **Graefe's s.**, failure of the eyeball to move downward promptly and evenly with the upper lid in looking downward, instead it moves tardily and jerkily; seen in exophthalmic goiter. **Grancher's s.**, equality of pitch between expiratory and inspiratory murmurs; a sign of obstruction to expiration. **Grasset's s.**, **Grasset-Bychowski s.** See **Grasset's phenomenon**, under **phenomenon**. **Grasset, Gausseil, and Hoover s.**, when the patient in a recumbent

position attempts to lift the paretic limb, there is greater downward pressure on the examiner's hand with the sound limb than is observed in the test with a normal person. **Greene's s.**, outward displacement of the free cardiac border by the expiratory movement in pleuritic effusion. It is detected by percussion. **Griesinger's s.**, edematous swelling behind the mastoid process; seen in thrombosis of the transverse sinus. **Griesinger-Kussmaul s.**, pulsus paradoxus. **Grisolle's s.**, if, on stretching an affected portion of the skin, the papule becomes impalpable to the touch, the eruption is caused by measles; if, on the contrary, the papule can still be felt, the eruption is one of smallpox. **Grocco's s.** 1. A sign of pleural effusion consisting in the presence of a triangular area of dullness (*Grocco's triangle*) on the back, on the side opposite to that on which the effusion is present. Called also *Grocco's triangle* and *Grocco's triangular dullness*. 2. Acute dilatation of the heart produced by muscular effort in the early stages of exophthalmic goiter. 3. Extension of the liver dullness to the left of the midspinal line, indicating enlargement of the organ. **Grossman's s.**, dilatation of the heart as a sign of early pulmonary tuberculosis. **Gubler's s.**, a swelling on the wrist in lead poisoning. **Guilland's s.**, brisk flexion at the hip and knee joint when the contralateral quadriceps muscle is pinched: a sign of meningeal irritation. **Günzberg's s.**, a resonant area between the gallbladder and the pylorus with localized borborygmi; seen in duodenal ulcer. **Guttmann's s.**, a humming sound heard over the thyroid in exophthalmic goiter. **Guye's s.**, aprosopia in children with adenoids. **Guyon's s.**, the ballotement and palpation of a floating kidney. **Hahn's s.**, persistent rotation of the head from side to side in cerebellar disease of childhood. **Hall's s.**, a tracheal diastolic shock felt in aneurysm of the aorta. **Hatchcock's s.**, tenderness on running the finger toward the angle of the jaw in mumps. **Haudek's s.**, a projecting shadow in radiographs of penetrating gastric ulcer, due to settlement of bismuth in pathologic niches of the stomach wall. Called also *Haudek's niche*. **Heberden's s's**, Heberden's nodes. **Hegar's s.**, softening of the lower segment of the uterus: an indication of pregnancy. **Heilbronner's s.**, Heilbronner's thigh. See *thigh*. **Heim-Kreysig s.**, a depression of the intercostal spaces occurring along with the cardiac systole in adherent pericarditis. **Helat's s.**, in mastoid suppuration a tuning-fork placed on the diseased area is heard for a shorter time than when placed on any other part. **Hennebert's s.**, in the labyrinthitis of congenital syphilis compression of the air in the external auditory canal produces a rotary nystagmus to the diseased side; rarefaction of the air in the canal produces a nystagmus to the opposite side. Called also *pneumatic sign* or *test*. **Hernig-Lommel s.**, respiratory arrhythmia. See *arrhythmia*. **Hertzel's s.**, if in the normal person the circulation of both legs and one arm is entirely stopped by pneumatic pressure, the blood pressure in the other arm rises about 5 mm. Hg. In arteriosclerosis, however, there is a rise as high as 60 mm. Hg. **Heryng's s.**, an infra-orbital shadow produced by pus in the maxillary antrum and observable by electric illumination of the buccal cavity. **Hicks' s.**, intermittent contraction of the uterus after the third month of pregnancy; it may also be caused by a uterine tumor. **Hochsinger's s.**, indicanuria in the tuberculosis of childhood. **Hoffmann's s.** 1. Increased mechanical irritability of the sensory nerves in tetany. 2. A sudden nipping of the nail of the index, middle, or ring finger produces flexion of the terminal phalanx of the thumb and of the second and third phalanx of some other finger. Called also *digital reflex*. **Hoover's s.**, in the normal state or in genuine paralysis, if the patient, lying on a couch, is di-

rected to press the leg against the couch, there will be a lifting movement seen in the other leg. This phenomenon is absent in hysteria and malingering. **Hope's s.**, double heart beat in aortic aneurysm. **Howship-Romberg s.** See *Romberg-Howship s.* **Huchard's s.** 1. When a change from a standing to a recumbent posture is not followed by a diminution of the pulse rate, it is a sign of arterial hypertension. 2. Paradoxical percussion resonance in pulmonary edema. **Huetter's s.**, the absence of the transmission of osseous vibration in cases of fracture with fibrous material interposed between the fragments. **Huntington's s.**, the patient is recumbent, with his legs hanging over the edge of a table, and is told to cough. If the coughing produces flexion of the thigh and extension of the leg in the paralyzed limb, it indicates lesion in the palli spinal path. **Hutchinson's s's.** 1. Interstitial keratitis and a dull-red discoloration of the cornea in inherited syphilis. 2. See *teeth*, *Hutchinson's*. 3. Hutchinson's trio: interstitial keratitis, notched teeth, and otitis occurring together in inherited syphilis. **hyperkinesis s.** See *Claude's hyperkinesis s.* **hyperossei s.** See *Souquet's phenomenon*, under *phenomenon*. **Itard-Cholewa s.**, anesthesia of the tympanic membrane in otosclerosis. **Jaccoud's s.**, prominence of the aorta in the suprasternal notch: an indication of leukemia. **Jackson's s.** 1. Of cardiac failure: a discrepancy between the pulse rate and that of the heart beat. 2. Prolongation of the sound of expiration over the part of the lung affected with tuberculosis (Chevalier Jackson). See *asthmatoïd wheeze*, under *wheeze*. **Jacquemier's s.**, a violet-colored spot on the mucous membrane of the vagina just below the urethral orifice, seen after the fourth week of pregnancy. **Jadelot's s's.** See *Jadelot's line*, under *line*. **Jellinek's s.**, the brownish pigmentation which occurs in many cases of hyperthyroidism. **Joffroy's s.**, absence of facial contraction in exophthalmic goiter when the patient suddenly turns his eye upward. **Johnson's s.**, alterations of color of the vaginal cervix from violet to pink, with alterations of consistence from hard to soft: a sign of early pregnancy. **Jorissen's s.**, nonacceleration of the pulse on changing from a horizontal to the erect position: a sign of pregnancy. **Josseraud's s.**, a loud metallic sound heard over the pulmonic area in acute pericarditis. **Jürgensen's s.**, delicate crepitation of pleural tubercles sometimes heard in auscultation in acute pneumonic phthisis. **Karplus's s.**, a modification of the vocal resonance, in which, on auscultation over a pleural effusion, the vowel *u* spoken by the patient is heard as *a*. **Keen's s.**, increased diameter of the leg at the malleoli in Pott's fracture of the fibula. **Kehr's s.**, severe pain in the left shoulder in some cases of rupture of the spleen. **Kellock's s.**, increase of the vibration of the ribs on sharp percussion with the right hand, the left hand being placed firmly on the thorax under the nipple: a sign of pleural effusion. **Kernig's s's.** 1. In the dorsal decubitus the patient can easily and completely extend the leg; in the sitting posture or when lying with the thigh flexed upon the abdomen the leg cannot be completely extended: it is a sign of meningitis. 2. Hypertonia. **kink s.**, tenderness on a line joining the umbilicus and the center of Poupart's ligament: indicative of ileal kink. **Klippe-Weil s.**, flexion and adduction of the thumb when the patient's contracted fingers are extended by the examiner: it points to pyramidal tract disease. **Kocher's s.** See *Kocher's symptom*, under *symptom*. **Koplik's s.**, the appearance of a crop of buccal macules, consisting of small, dark-red spots surrounded by minute white specks; seen in the prodromal stage of measles. **Korányi's s.** Same as *Grocco's s.* **Kreysig's s.** See *Heim-Kreysig s.* **Krisowski's s.**, cicatricial lines which radiate from the mouth in inherited syphilis. **Kussmaul's s.**, overfulness of the jugular veins on inspiration, seen

in mediastinopericarditis and mediastinal tumor. **Küster's s.**, a cystic tumor on the median line anterior to the uterus in cases of ovarian dermoids. **Labordes's s.** Same as *Cloquet's needle s.* **Laennec's s.**, the occurrence of rounded, gelatinous masses (Laennec's perles) in the sputum of bronchial asthma. **Lafora's s.**, picking of the nose regarded as an early sign of cerebrospinal meningitis. **Landin's s.**, a sign of pregnancy, consisting in a circular elastic area, which offers a sensation of fluctuation to the examining finger, situated in the median line of the anterior surface of the body of the uterus just above the junction of the body and the cervix. This area increases in size as pregnancy advances. **Landolf's s.**, systolic contraction of the pupil and diastolic dilatation, seen in aortic insufficiency. **Landou's s.**, inability to grasp the uterus bimanually in the presence of slight ascites. **Langoria's s.**, relaxation of the extensor muscles of the thigh: a symptom of intracapsular fracture of the femur. **Larcher's s.**, grayish, cloudy discolorations of the conjunctivae that are speedily blackened: a sign of death. **Lasègue's s.**, in sciatica, flexion of the thigh upon the hip is painless; and when the knee is bent, such flexion is easily made: this distinguishes the case from hip joint disease. **Laugier's s.**, a condition in which the styloid process of the radius and of the ulna are on the same level: seen in fracture of the lower part of the radius. **Lebhardt's s.** Same as *Jacquemin's s.* **leg s.** 1. See *Schlesinger's s.* 2. See *Neri's s.* **Legendre's s.**, greater resistance on the unaffected side in the closed eyelid to its being raised by the examiner's finger, in facial hemiplegia. **Leichtenstern's s.**, in cerebrospinal meningitis, tapping lightly any bone of the extremities causes the patient to wince suddenly. **Lennhoff's s.**, a furrow appearing on deep inspiration below the lowest rib and above an echinococcus cyst of the liver. **Leri's s.**, passive flexion of the hand and wrist in the affected side in hemiplegia shows no normal flexion at the elbow. **Lesieur's s.**, impaired resonance over the right lower thorax posteriorly, occurring in typhoid fever. **Lesieur-Privey's s.** Same as *albuminoreaction*. **Leudet's s.** Same as *bruit de Leudet*. **Levasseur's s.**, the failure of the scarificator and cupping-glass to draw blood: a sign of death. **Lichtheim's s.**, in subcortical aphasia, although the patient cannot speak, he is able to indicate with his fingers the number of syllables in the word he is thinking of. **ligatures s.**, in hematuria, the development of ecchymoses in the distal part of a limb to which a ligature has been applied. **Litten's s.** See *phenomenon, diaphragmatic*. **Livierato's s.**, vasoconstriction when the abdominal sympathetic is irritated by striking the anterior abdomen along the xiphoid-umbilical line. **Lloyd's s.**, a symptom of renal calculus, consisting of pain in the loin on deep percussion over the kidney, even when pressure causes no pain. **Lombardi's s.**, the appearance of venous varicosities in the region of the spinous processes of the seventh cervical and first three thoracic vertebrae; seen in early pulmonary tuberculosis. Called also *varicose zone of warning*. **Lorens's s.**, ankylotic rigidity of the spinal column, especially of the thoracic and lumbar segments: sometimes seen in incipient phthisis. **Löwy's s.**, marked dilatation of the pupil on the instillation of adrenalin into the conjunctival sac: seen in pancreatic insufficiency. **Lucas's s.**, distention of the abdomen in the early stages of rickets. **Lucatello's s.**, the external (axillary) temperature is higher than the oral by 0.2-0.3 degrees in hyperthyroid patients. **Ludloff's s.**, swelling and ecchymosis at the base of Scarpa's triangle together with inability to raise the thigh when in a sitting posture, a sign of traumatic separation of the epiphysis of the great trochanter. **Macewen's s.**, on percussion of the skull behind the junction of the frontal, temporal, and parietal bones, there is a more resonant note

than normal in internal hydrocephalus and cerebral abscess. **Magendie-Hertwig s.**, deviation of the eye in which one eye is directed higher than the other. **Magnan's s.**, a sensation as of foreign bodies being under the skin: seen in users of cocaine. **Magnus's s.**, after death the light ligation of a finger causes no visible change in its distal portion. **Mahler's s.**, a steady increase of pulse-rate without corresponding elevation of temperature: seen in thrombosis. **Maisonneuve's s.**, marked hyperextensibility of the hand: a symptom of Colles' fracture. **Mann's s.** 1. In exophthalmic goiter the two eyes appear not to be on the same level. 2. Lessened resistance of the scalp to a constant electric current: seen in certain traumatic neuroses. **Mannaberg's s.**, accentuation of the second sound of the heart in abdominal disease, especially appendicitis. **Mannkopf's s.**, increase in the frequency of the pulse on pressure over a painful spot: not present in simulated pain. **Mannkopf-Rumpf s.** Same as *Mannkopf's s.* **Marañón's s.**, a vasomotor reaction following stimulation of the skin over the throat; seen in exophthalmic goiter. **Marie's s.**, tremor of the body or extremities in exophthalmic goiter. **Marie-Foix s.**, withdrawal of lower leg on transverse pressure of tarsus or forced flexion of toes, even when the leg is incapable of voluntary movement. **Masini's s.**, marked dorsal extension of the fingers and toes in mentally unstable children. **Matheiu's s.**, a splashing sound heard on rapid percussion in the region about the umbilicus in complete intestinal obstruction. **Mayo's s.**, relaxation of the muscles controlling the lower jaw, indicative of profound anesthesia. **Mayor's s.**, the sound of the fetal heart beat in pregnancy. **McBurney's s.**, tenderness at a point midway between the umbilicus and the anterior superior spine of the ilium: it is seen in appendicitis. **McClintock's s.**, a pulse rate exceeding 100 an hour or more after childbirth. It points to postpartum hemorrhage. **mechanical grip s.**, when the examiner's finger is inserted into the contracted hand of the patient, the grip relaxes when the hand is passively flexed in the forearm. **Meltzer's s.** 1. Loss of the normal second sound, heard on auscultation of the heart after swallowing: symptomatic of occlusion or contraction of the lower part of the esophagus. 2. Pain on active flexion of the hip, with the knee extended, while the examiner presses firmly down over McBurney's point: seen in appendicitis. **Mendel's s.**, an area on the epigastrium about the size of a half dollar, tender to percussion: occurring in gastric and duodenal ulcer. **Mendel-Bechterew s.** 1. Bechterew's pupil reflex. 2. Flexion of small toes on percussion with hammer of dorsal surface of cuboid bone: a sign of organic hemiplegia. **Meunier's s.**, daily loss of weight in measles, following the incubative stage and preceding the eruptive stage. **Meyer's s.**, fornication of the hands and feet in the eruptive stage of scarlet fever. **Milian's s.**, in subcutaneous inflammation of the head and face the ears are not involved, but in skin diseases they are. **Mirchamp's s.**, a sign of mumps, when a sapid substance, such as vinegar, is applied to the mucous membrane of the tongue, a painful reflex secretion of saliva in the gland about to be affected. **Möbius's s.**, inability to keep the eyeballs converged in exophthalmic goiter: due to insufficiency of the internal recti muscles. **Monteverde's s.**, failure of any response to the subcutaneous injection of ammonia: a sign of death. **Morquio's s.**, the patient lying supine resists all attempts to raise the trunk to a sitting posture until the legs are passively flexed: noticed in epidemic poliomyelitis. **Moskowitz's s.**, a sign of vascular gangrene. On making a circular compression of the base of the limbs by elastic bands, and then, after a few minutes, releasing the pressure, the skin, which has been rendered anemic, will become red. If the limbs are healthy the redness appears with the

same intensity and rapidity on each side. On a gangrenous limb there is usually a slower and less extensive hyperemia than on a healthy one. **Müller's s.**, a sign of aortic insufficiency, consisting of pulsation of the uvula and redness of the tonsils and velum palati, occurring synchronously with the action of the heart. **Murphy's s.**, a sign of gallbladder disease, consisting of inability of the patient to take a deep inspiration when the physician's fingers are hooked up deep beneath the right costal arch, below the hepatic margin. **Musset's s.**, rhythmical jerking movement of the head, seen in cases of aortic aneurysm and aortic insufficiency. **Naunyn's s.**, a sign of cholecystitis, consisting in deep tenderness when, at the end of a full inspiration, the examiner's fingers are thrust upward beneath the costal arch at the outer limit of the right epigastrium. **neck s.** Same as *Brudzinski's s.* (1st def.). **Negro s.**, exaggerated excursion of the eyeball on the side most severely affected by paralysis when the eyeballs are turned up. **Neri's s.** 1. A sign of organic hemiplegia, consisting in the spontaneous bending of the knee of the affected side as the leg is passively lifted, the patient being in the dorsal position. 2. The patient being recumbent, his upper extremities are extended and pronated on the examining table: when the forearm is flexed by the hand of the examiner passed under it, the sound forearm remains pronated, but the paretic forearm goes into supination. **niche s.**, Haudek's sign. **Nikolsky's s.**, a condition in which the outer layer of the skin is easily rubbed off by slight injury. **Nothnagel's s.**, paralysis of the facial muscles, especially in respect of movements connected with the emotions; observed in cases of tumor of the thalamus. **objective s.**, one that can be seen, heard, or felt by the diagnostician. Called also *physical s.* **Oliver's s.**, tracheal tugging: a sign of aneurysm of the aorta. **Oliver-Cardarelli's**, **Olshausen's s.**, when a tumor is found in young unmarried women lying anterior to the uterus it is likely to be a dermoid cyst. **Onanoff's s.**, Onanoff's reflex. See *reflex*. **Oppenheim's s.**, contraction of the tibialis anticus, extensor hallucis longus, extensor digitorum communis, and sometimes of the peroneal muscles on stroking the median surface of the leg at the posterior margin of the tibia from above downward: seen in spastic conditions of the lower extremities. **Oppolzer's s.**, in serofibrinous pericarditis palpation shows that the seat of the apex beat changes with the posture of the patient. **orbicularis s.**, in hemiplegia, inability to close the eye on the paralyzed side without closing the other. **Osler's s.**, small, painful, erythematous swellings in the skin of the hands and feet in malignant endocarditis. **Pagniello's s.**, intense pain on pressure over the left ninth intercostal space, between the posterior and middle axillary lines: seen in malaria. **palmoplantar s.** See *Filipovich's s.* **Parkinson's s.**, an immobile, masklike expression in paralysis agitans. **Parrot's s's.** 1. Dilatation of the pupil on pinching the skin of the neck: seen in meningitis. 2. Bony nodes on the outer table of the skull of infants with inherited syphilis. **Pastia's s.**, transverse lines, usually two or three, in the fold of the elbow in scarlet fever. They are rose red at first, but later turn dark red or wine colored. They are visible before the appearance of the rash, remain through the eruptive stage, and continue after desquamation. **Paul's s.**, feebleness of the apex beat, with forcible impulse over the rest of the heart: indicative of pericardial adhesions. **Pende's s.**, development of goose flesh after rubbing the skin: a sign of hypo-adrenia. **Perez's s.**, a friction sound heard over the sternum when the patient raises and drops his arms: a sign of mediastinal tumor or of aneurysm of the arch of the aorta. **Pfuhl's s.**, inspiration increases the force of flow in paracentesis in the case of subphrenic abscess,

but lessens it in the case of pyopneumothorax. This distinction is lost when the diaphragm is paralyzed. **Pfuhl-Jaffé s.**, in pyopneumothorax the liquid issues from the exploratory puncture or incision with considerable force during inspiration: in true pneumothorax during expiration. **physical s.** Same as *objective s.* **Pilcz's s.**, the Westphal-Pilcz phenomenon. **Pinard's s.**, a sharp pain on pressure over the fundus uteri: after the sixth month of pregnancy a sign of breech presentation. **Pins' s.**, a sign seen in pericarditis, consisting of disappearance of the symptoms that simulate pleurisy when the patient is placed in the knee-chest position. **Piotrowski's s.**, percussion of the tibialis muscle produces dorsal flexion and supination of the foot. When this reflex is excessive it indicates organic disease of the central nervous system. Called also *anticus reflex*. **Pitres' s's.** 1. Hyperesthesia of the scrotum and testes in tabes dorsalis. 2. Anterior deviation of the sternum in pleuritic effusion. **plumb-line s.**, the estimation in sternal displacement by a plumb-line in the diagnosis of pleuritic effusion. **pneumatic s.** See *Hennebert's s.* **Pool-Schlesinger s.**, spasm of the extensor muscles of the knee and of the muscles of the calf in tetany. See *Schlesinger's s.* **Porter's s.** Same as *Oliver's s.* **Potain's s.**, extension of percussion dullness in dilatation of the aorta from the manubrium to the third costal cartilage on the right-hand side. **Pottenger's s.** 1. Intercostal muscle rigidity on palpation in pulmonary and pleural inflammatory conditions. 2. Different degrees of resistance on light touch palpation, noted (1) over solid organs when compared with hollow organs; (2) over foci of disease in the lungs and pleura when compared with that over normal organs. **Prat's s.**, muscular rigidity as a sign of gangrene or necrosis in wounds, and as an indication for operation. **Prevel's s.**, acceleration of the heart beat when a reclining subject changes to the upright position. **Prevost's s.**, conjugate deviation of the head and eyes, the eyes looking toward the affected hemisphere and away from the palsied extremities: seen in hemiplegia. **pronation s.** See *Babinski's s.* (5th def.). **pseudo-Graef's s.**, slow descent of the upper lid on looking down, and quick ascent on looking up: seen in conditions other than exophthalmic goiter. **Putnam's s.**, lengthening of the leg in hysterical hip disease. **pyramidal s.** See *Barre's pyramidal s.* **Quant's s.**, a T-shaped depression in the occipital bone, sometimes seen in rickets. **Queckenstedt's s.**, when the veins in the neck are compressed on one or both sides there is a rapid rise in the pressure of the cerebrospinal fluid of healthy persons, and this rise quickly disappears when pressure is taken off the neck. But when there is a block in the vertebral canal the pressure of the cerebrospinal fluid is little or not at all affected by this maneuver. **Quénu-Muret s.**, in aneurysm, the main artery of the limb is compressed and then a puncture is made at the periphery; if blood flows, the collateral circulation is probably established. **Quincke's s.**, a blanching of the finger-nails at each diastole of the heart; seen in aortic insufficiency. **Quinquaud's s.**, trembling of patient's fingers, felt when his fingers, spread apart, are placed vertically in the palm of the examiner's hand: said to be a sign of alcoholism. **radialis s.** See *Strümpell's s.* (3d def.). **Raimistes' s.**, the hand and arm are held upright by the examiner. If the hand is sound, it remains upright on being released: if paretic the hand flexes abruptly at the wrist. **Ramond's s.**, rigidity of the erector spinae muscle indicative of pleurisy with effusion. The rigidity relaxes when the effusion becomes purulent. **Rasch's s.**, fluctuation of the liquor amnii obtained as by ballottement in early pregnancy. **Raynaud's s.** Same as *acro-asphyxia*. **Reder's s.**, a tender point on the right side above O'Beirne's sphincter: seen in appendicitis.

Remak's s., a double sensation caused by pricking with a needle in *tabes dorsalis*. **Reusner's s.**, increased volume of the pulse in the uterine arteries, perceptible in Douglas' culdesac in the fourth month of pregnancy and later. **Revilliod's s.**, inability to close the eye on the affected side in paralysis of the superior facial nerve. **Richardson's s.**, the application of a tight fillet to the arm as a test of death: if life be present, the veins on the distal side of the fillet become more or less distended. **Riesman's s.**, a bruit heard with the stethoscope over the closed eye in exophthalmic goiter. **Riess' s.**, on listening over the stomach in some cases of adherent pericardium, the heart sounds are heard loud and metallic in quality. **Rinman's s.**, the appearance in early pregnancy of cordlike radiations proceeding from the nipple. **Ripault's s.**, external pressure upon the eye during life causes only a temporary change in the normal roundness of the pupil; but after death the change so caused may be permanent. **Risquez's s.**, the presence of blood pigment loose in the blood: a sign of malaria. **Ritter-Rollet s.**, flexion of the foot on gentle electric stimulation; extension on energetic stimulation. **Riviere's s.**, an area of change in percussion note denoting a band of increased density across the back at the plane of the spinous processes of the fifth, sixth, and seventh dorsal vertebrae: a sign of pulmonary tuberculosis. **Romberg's s.**, swaying of the body when standing with the feet close together and the eyes closed: a sign of locomotor ataxia. Called also the *Brausch-Romberg s.* **Romberg-Howship s.**, the lancinating pains in the leg occurring in incarcerated obturator hernia. **Rommelaere's s.**, an abnormally small proportion of normal phosphates and of sodium chloride in the urine of the cancerous cachexia. **Rosenbach's s's.** 1. Absence of the abdominal reflex in inflammatory disease of the intestines. 2. Absence of a reflex in pinching the skin of the abdomen on the paralyzed side in hemiplegia. 3. A fine rapid tremor of the closed eyelids in exophthalmic goiter. 4. Inability to close the eyes immediately on command: seen in neurasthenia. **Rosenheim's s.**, a friction sound in the left hypochondrium: a sign of perigastritis. **Rosenthal's s.**, stabbing and burning pain caused by a faradic current applied to the spinal column: a sign of spondylitis. **Roser-Braun s.**, absence of dural pulsation: a sign of cerebral tumor or abscess. **Rossolimo's s.**, Rossolimo's reflex. See *reflex*. **Rotch's s.**, dullness on percussion of the right fifth intercostal space: a sign of pericardial effusion. **Roth's s.**, percussional dullness between the fifth and sixth costal cartilages. It is due to either tricuspid stenosis and dilatation of the right auricle or to a pericardial effusion. **Rothschild's s.** 1. Prematural flattening and mobility of the sternal angle: seen in phthisis. 2. Rarefaction of the outer third of the eyebrows in thyroid inadequacy. **Roussel's s.**, sharp pain on light percussion on the subclavicular region, between the clavicle and fourth rib: a sign of incipient tuberculosis. **Rovighi's s.**, a fremitus felt on percussion and palpation of a superficial hepatic hydatid. **Rovsing's s.**, pressure on the left side over the point corresponding to McBurney's point will elicit the typical pain at McBurney's point in appendicitis, but not in other abdominal affections. **Ruggeri's s.**, Ruggeri's reflex. See under *reflex*. **Rumpel-Leede s.** See *Rumpel-Leede phenomenon*, under *phenomenon*. **Rumpf's s.** 1. Alternating fibrillary and tonic contractions after the cessation of strong faradization: seen in traumatic neuroses. Called also *Rumpf's traumatic reaction*. 2. Quickening of the pulse on pressure over a painful point: seen in neurasthenia. **Rust's s.**, in caries or malignant disease of the cervical vertebrae the patient supports his head with his hands while moving the body. **Saenger's s.**, a light reflex of the pupil

that has ceased returns after a short stay in the dark, in cerebral syphilis, but not in *tabes dorsalis*. **Sanders' s.**, an undulating cardiac impulse, especially at the epigastrium: a sign of pericardial adhesion. **Sansom's s's.** 1. Marked increase of the area of dullness in the second and third intercostal spaces, due to pericardial effusion. 2. A rhythmical murmur heard with a stethoscope applied to the lips in aneurysm of the thoracic aorta. **Sarbo's s.**, analgesia of the peroneal nerve: sometimes noticed in locomotor ataxia. **Saunders' s.**, on wide opening of the mouth there takes place in children associated movements of the hand consisting of opening of the hand and extension and separation of the fingers; called also *mouth-and-hand synkinesia*. **Schapiro's s.**, no slowing of the pulse rate on lying down: indicative of weakness of the heart muscle. **Schepelmann's s.**, in dry pleurisy the pain is increased when the patient bends his body toward the well side, whereas in intercostal neuralgia it is increased by bending toward the affected side. **Schick's s.**, stridor heard on expiration in an infant with tuberculosis of the bronchial glands. **Schlange's s.**, dilatation above and absence of peristalsis below the point of obstruction in intestinal obstruction. **Schlesinger's s.**, in tetany, if the patient's leg is held at the knee joint and flexed strongly at the hip joint, there will follow within a short time an extensor spasm at the knee joint, with extreme supination of the foot. Called also *leg phenomenon* and *Pool's phenomenon*. **Schlunge's s.**, lack of peristalsis below the seat of intestinal obstruction, with dilatation above it. **Schüle's s.**, the omega melancholium. **Schultze's s.** 1. Same as *Choestek's s.* 2. See *tongue phenomenon*, under *phenomenon*. **Seeligmüller's s.**, mydriasis on the side of the face affected with neuralgia. **Seguin's s.**, contraction of the muscles preceding an epileptic attack, and giving warning of its approach. **Seitz's s.**, bronchial inspiration which begins harshly and then becomes faint: indicative of a cavity in the lung. **Semon's s.**, impairment of the mobility of the vocal cords in malignant disease of the larynx. **Shelly's s.**, a sage-like eruption on the palate and lips in influenza. **Shibley's s.**, in the presence of consolidation of the lung or a collection of fluid in the pleural cavity, all spoken vowels come through the stethoscope to the ear of the examiner as "ah." **Sicar's s.**, a metallic resonance on percussion with two coins on the front of the chest and auscultation at the back, observed in some cases of effusion within the pleura. **Sieur's s.** Same as *coin test*, under *tests*. **Signorelli's s.**, extreme tenderness on pressure on the retromandibular point in meningitis. See *retromandibular point*, under *point*. **Silex's s.**, furrows radiating from the mouth in inherited syphilis. **Simon's s.** 1. Retraction or fixation of the umbilicus during inspiration. 2. Absence of the usual correlation between the movements of the diaphragm and thorax: seen in beginning meningitis. **Sisto's s.**, constant crying as a sign of congenital syphilis in infancy. **Skeer's s.**, a small circle in the iris, near the pupil, in both eyes; seen in tuberculous meningitis. **Skoda's s.**, a tympanitic sound heard on percussing the chest above a large pleural effusion or above a consolidation in pneumonia. **Smith's s.**, a murmur heard in cases of enlarged bronchial glands on auscultation over the manubrium with the patient's head thrown back. **Somagyi's s.** See *Somagyi's reflex*, under *reflex*. **somatic s.**, any sign presented by the trunk and limbs rather than by the sensory apparatus. **Souques' s.**, when the patient seated in a chair is suddenly thrown back, the lower extremities do not extend normally or otherwise attempt to counteract the loss of balance. 2. Souques' phenomenon. **Spiegelberg's s.**, a feeling like that of friction against wet India rubber, conveyed to the finger by a

cervix uteri affected with malignant disease. **spinal s.**, tonic contraction of the spinal muscles on the diseased side in pleurisy. **stairs s.**, difficulty in descending a stairway in locomotor ataxia. **Stellwag's s.**, an apparent widening of the palpebral opening in exophthalmic goiter. **Sterles' s.**, increased pulsation over the cardiac region in intrathoracic tumors. **Sternberg's s.**, sensitiveness to palpation of the muscles of the shoulder girdle in pleurisy. **Stewart-Holmes s.**, the patient rests his elbow on the table and the examiner grasps his wrist. The patient then tries to flex the arm against the resistance of the examiner. When the wrist is released, flexion occurs, but is again arrested by the contraction of the triceps. This takes place in normal patients, but in hypotonia the flexion of the arm continues without any action on the part of the biceps. **Stiller's s.**, detachment, or loose attachment, of the tenth rib to the costal cartilages; preternatural mobility or fluctuation of the tenth rib in enteroptosis or gastropstosis. **Stocker's s.**, in typhoid fever, if the bed clothes be pulled down, the patient takes no notice; but in tuberculous meningitis the patient resents the interference and immediately draws the clothes up again. **Stokes' s.**, a severe throbbing in the abdomen, at the right of the umbilicus, in acute enteritis. **Straus' s.**, the injection of pilocarpine in facial paralysis due to a central lesion does not cause any difference in the perspiration of the two sides; but if the paralysis be of peripheral origin, the secretion of the paralyzed side is markedly affected. **Strauss' s.**, increase of fat following the use of fatty foods in chylous ascites. **Strümpell's s.** 1. Dorsal flexion of the foot when the thigh is drawn up toward the body: seen in a paralyzed limb. Called also *tibial phenomenon*. 2. Dorsal flexion of the great toe in an extremity affected with paresis. 3. Inability to close the fist without marked dorsal extension of the wrist. Called *radialis s.* **Strunsky's s.**, a sign for detecting lesions of the anterior arch of the foot. The examiner grasps the toes and flexes them suddenly. This procedure is painless in the normal foot, but causes pain if there is inflammation of the anterior arch. **subjective s.**, one which is apparent only to the patient, such as pain or vertigo. **Sucker's s.**, deficient complementary fixation in lateral eye rotation: seen in exophthalmic goiter. **Tansini's s.**, in cancer at the pylorus the abdomen is shrunken in unless there is metastasis in the bowel below, in which case the abdomen is prominent. **Tarnier's s.**, effacement of the angle between the upper and lower uterine segments in pregnancy; an indication of the inevitable approach of an abortion. **Tay's s.** See *cherry-red spot*, under *spot*. **Tellais' s.**, pigmentation of the eyelid in exophthalmic goiter. **Ten Horn's s.**, if gentle traction in the right spermatic cord causes pain, appendicitis is indicated. **Testivin's s.**, the formation of a colloid-like pellicle on the urine after removing the albumin and treating with acid and then with one third of its volume of ether; said to occur during the incubation of infectious diseases. **Theimich's lip sign**, a protrusion or pouting of the lips elicited by tapping the orbicularis oris muscle. **Thornton's s.**, severe pain in the region of the flanks in nephrolithiasis. **thyroid s.**, an injection of thyroid extract retards the pulse and causes a fall in the systolic arterial pressure, while the oculocardiac reflex persists or becomes positive, in persons with increased thyroid function. **Tinel's s.**, a tingling sensation in the distal end of a limb when percussion is made over the site of a divided nerve. It points to beginning regeneration of the nerve. Called also *formication s.* and *distal tingling on percussion* (D. T. P.). **Toma's s.**, in ascites from peritoneal inflammation when the patient lies on his back percussion on the right side of the abdomen gives tympany; on the left side, dullness. **Traube's s.**, a faint double sound heard in

auscultation over the femoral arteries in aortic regurgitation. **Tresilion's s.**, a reddish appearance of Stenson's duct in mumps. **Trimaudeau's s.**, if the dilatation above an esophageal stricture is conic, the stricture is fibrous; if cup shaped, the stricture is malignant. **Troisier's s.**, enlargement of the lymph glands above the clavicle; a sign of intra-abdominal malignant disease or of retrosternal tumor. **Trousseau's s.**, a muscular spasm on pressure over large detached arteries or nerves; seen in tetany. **Unthoff's s.**, nystagmus occurring in multiple cerebrospinal sclerosis. **ulnar s.**, analgesia of the ulnar nerve on one side, generally present in insane patients, except general paralytics. **Unschuld's s.**, a tendency to cramp in the calves of the legs; an early indication of diabetes. **Uriolla's s.**, the presence in the urine of malarial patients of minute black granules of blood pigment. **Vanzetti's s.**, in sciatica the pelvis is always horizontal in spite of scoliosis, but in other lesions with scoliosis the pelvis is inclined. **vein s.**, a bluish cord along the midaxillary line formed by the swollen junction of the thoracic and superficial epigastric vein; seen in tuberculosis of the bronchial glands. **Verco's s.**, subungual striae or dots of hemorrhage on the hands and feet in nodal fever. **Vigouroux's s.**, diminished electric resistance of the skin in exophthalmic goiter. **Villaret's s.**, flexion of the great toe on percussion of the Achilles tendon, a sign of lesion of the sciatic nerve and its branches. **Vincent's s.**, the Argyll Robertson pupil. **Vipond's s.**, generalized adenopathy seen during the incubation period of the exanthematous fevers of childhood. **vital s.**, the pulse, respiration, and temperature. **Voltolini's s.** Same as *Heryng's s.* **von Graefe's s.**, failure of the upper lid to move downward with the eyeball in glancing downward; seen in exophthalmic goiter. **von Wahl's s.** See *Wahl's s's*. **Wahl's s's.** 1. Local meteorism, or distention on the proximal side of an obstruction of the bowel. 2. A blowing or scraping sound at the systole, heard over an artery soon after its partial division by an injury. **Warthin's s.**, exaggerated pulmonary sounds in cases of acute pericarditis. **Weber's s.**, paralysis of the oculomotor nerve of one side and hemiplegia of the opposite side. **Wegner's s.**, a broadened, discolored appearance of the epiphyseal line in infants dying from hereditary syphilis. **Weill's s.**, absence of expansion in the subclavicular region of the affected side in infantile pneumonia. **Weiss' s.**, contraction of facial muscles when lightly percussed: it occurs in hysteria, neurasthenia, tetany, etc. **Wenckebach's s.**, crossing of the profile of the chest in deep inspiration over that of the chest at rest: seen in adherent pericardium. **Wernicke's s.**, the hemiopic pupillary reaction. See under *reaction*. **Westphal's s.**, loss of the knee jerk in locomotor ataxia. **Widmer's s.**, the temperature in the right axilla is distinctly higher than the left; a sign of appendicitis. **Widowitz's s.**, protrusion of the eyeballs and sluggish movements of the eyeballs and eyelids seen in diphtheritic paralysis. Called also *doll's eye s.* **Wilder's s.**, an early sign of exophthalmic goiter consisting in a slight twitch of the eyeball when it changes its movement from adduction to abduction or vice versa. **Williams' s.** 1. A dull tympanitic resonance heard in the second intercostal space in severe pleural effusion. 2. Lessened lung expansion on the affected side; a side of adherent pericardium. **Williamson's s.**, markedly diminished blood pressure in the leg as compared with that in the arm on the same side, seen in pneumothorax and pleural effusion. **Wintrich's s.**, a change in the pitch of the percussion note when the mouth is opened and closed; it indicates a cavity in the lung. **Wölfler's s.**, in hour-glass stomach fluids pass quickly, but on subsequent lavage the water contains food and foul matter. **Wolko-**

witsh's s., marked relaxation of the abdominal muscles of the right side in chronic recurrent appendicitis. **Wood's s.**, relaxation of the orbicularis muscle, fixation of the eyeball, and divergent strabismus, indicative of profound anesthesia. **Wreden's s.**, presence in the external auditory meatus of a gelatinous matter in children who are born dead. **Zaufal's s.**, saddle nose. **Zugsmith's s.**, abnormal dullness on percussion in the second interspace for a variable distance on both sides of the sternum; seen in gastric ulcer and carcinoma.

signa (sig'nah). Latin for *mark* or *write*: abbreviated to *s.* or *sig.* on prescriptions. See *prescription*.

signature (sig'nat-chür) [L. *signatu'ra*]. 1. That part of a prescription which gives directions as to the taking of the medicine. See *prescription*. 2. Any characteristic feature of a substance formerly regarded as an indication of its medicinal virtues: thus, the eyelike mark on the flower of the euphrasia was supposed to show its usefulness in eye diseases; the liver-like shape of the leaf of liverwort pointed to its use in hepatic diseases; the yellow color of saffron indicated its use in jaundice.

signaturist (sig'nat-ur-ist). One who believes in the doctrine of signatures.

Signorelli's sign (sen-yor-el'ez) [Angelo Signorelli, a contemporary Italian physician]. See under *sign*.

Sig. n. pro. Abbreviation for *L. sig'na nom'ine pro'prio*, label with the proper name.

siguatera (sig-wah-ta'rah) [Sp.]. Poisoning due to the eating of certain kinds of fish.

sijna (sij'nah). An East Indian bark, used in colics; ecboil if given in large doses.

sikimi (sik'im-e) [Japanese]. The plant, *Illic'ium religiosum*.

sikimin (sik'im-in). A poisonous hydrocarbon, $C_{10}H_{16}$, which is found in the leaves of *Illic'ium religiosum*.

sikimitoxin (sik-im-it-oks'in). A poisonous substance extracted from sikimi.

sila'jit (sil'aj-it). An exudation from rock surfaces during the hot season in certain parts of India: used in Hindoo medicine.

silbamin (sil'bam-in). Silver fluoride, a powder used in a solution of 1 : 1000 for irrigating the bladder and the urethra.

silberol (sil'ber-ol). A proprietary silver phenol-sulphonate, $OH.C_6H_4.SO_2.OAg$: used in gonorrhea and in eye inflammations.

silex (si'leks). Same as *silica*.

silhouettograph (sil-oo-et'o-graf). A photograph of a person's shadow picture (silhouette).

silica (sil'ik-ah) [L. *sil'ix* flint]. Silicon dioxide, SiO_2 , or silicic anhydride; also its homeopathic preparation.

silicate (sil'ik-at) [L. *sil'icus*]. Any salt of silicic acid.

silicea (sil-is'e-ah). A homeopathic preparation of silica.

silicic acid (sil-is'ik). See *acid*.

silicious (sil-ish'us). Resembling or containing silica.

silicofluoride (sil'ik-o-flu'o-rid). A compound of silicon and some other base with fluorine.

silicol (sil'ik-ol). An organic silica compound, silicic oxide casein metaphosphate: used in the treatment of tuberculosis.

silicon (sil'ik-on) [L. *sil'ix* flint]. A nonmetallic tetrad element whose dioxide is silica; symbol, Si; atomic weight, 28.3. **s. fluoride**, a compound whose fumes are sometimes fatal to workers in superphosphate factories.

silicosis (sil-ik-o'sis) [L. *sil'ix* flint]. Pneumonoconiosis due to the inhalation of the dust of stone, sand, or flint; grinders' disease.

silicotic (sil-ik-ot'ik). 1. Pertaining to silicosis. 2. A person affected with silicosis.

silin (sil'in). The citrosilicate of methenamine: used in uric acid diathesis.

siliqua olivae (sil'ik-wah o-liv'e) [L. "husk of the olive"]. The fibers which appear to encircle superficially the inferior olive of the brain. Their outer and inner portions are termed *funiculi siliquae*.

silique (sil'ek') [L. *sil'iqua* pod]. A slender pod of a cruciferous plant, like the pods of the mustard and radish.

siliquose (sil'ik-wös). Having siliques, or resembling a silique. See *catactar* and *desquamation*.

silkworm-gut (silk'worm-gut). A strand drawn from a silkworm which has been killed when ready to spin its cocoon. It is used, like catgut, for sutures, but is much less pliable than the latter, and not so absorbable.

sillonneur (si-yon-nuhr) [Fr.]. A three-bladed scalpel for operations on the eye.

Silpha sinua'ta (sil'lah). An animal organism sometimes found upon the remains of persons long dead.

Silphium (sil'fe-um) [L.; *σιλφιον*]. A genus of large, composite-flowered herbs known as *rosin weeds*. *S. laciniatum*, the compass plant of North America, is useful in coughs and in remittent fevers. Dose of fluidextract, 30-60 minims (2-4 cc.).

silver (sil'ver). A white, soft, malleable, and ductile monad metal; symbol, Ag; atomic weight, 107.88. Its compounds are extensively used in medicine, and metallic silver is employed in surgery and in the manufacture of instruments. See *argentum*. **s. arsphenamine**, a combination of the disodium salt of dioxy-diamino-arseno-benzol with silver oxide, $Ag_2O.2[NH_2(ONa)C_6H_4As]$, a brownish-black powder used as is arsphenamine. It contains approximately 20 per cent of arsenic and 15 per cent of silver. **s. bromide**, a binary compound, $AgBr$. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.016-0.033 Gm.). **s. chloride**, horn silver, a white solid, $AgCl$: alternative. Dose, $\frac{1}{4}$ -3 grains (0.033-0.19 Gm.). **s. citrate**. Same as *tirol. colloidal s.* See *collargol*, *collargolum*. **s. cyanide**, a white powder, $AgCN$: antisyphilitic. Dose, $\frac{1}{10}$ - $\frac{1}{20}$ grain (0.001-0.003 Gm.). **s. eosolate**, a salt, $C_6H_5OCH_3.OCH_3H_3OAg_2(SO_4)_3$, an antiseptic and germicide powder: used in skin diseases and gonorrhea. **s. fluoride**, a glassy, brown, antiseptic, and caustic substance, AgF . **s. iodate**, an insoluble astringent and antiseptic salt, $AgIO_3$. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.01-0.033 Gm.). **s. iodide** [L. *argen'ti io'didum*], a light-yellowish, binary, powdery compound, AgI : useful in syphilis and in nervous diseases, and used locally for conjunctivitis. Dose, $\frac{1}{10}$ -1 grain (0.006-0.06 Gm.). **s. lactate**. See *actol*. **s. nitrate** [L. *argen'ti ni'tras*], $AgNO_3$, a salt in transparent, tabular, rhombic crystals. It is a very important caustic counterirritant and escharotic, and is used internally in epilepsy and in diseases of the stomach and intestines. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.008-0.033 Gm.). *Fused* silver nitrate, or lunar caustic, is prepared in cones or pencils for external use. *Dilute* silver nitrate consists of one part of the nitrate with two of potassium nitrate. It is for external use, and is much milder in its action than the pure nitrate. **s. oxide** [L. *argen'ti ox'idum*], a brownish-black powder, Ag_2O , used like silver nitrate: employed in uterine and vaginal diseases. Dose, $\frac{1}{4}$ -2 grains (0.033-0.13 Gm.). **s. phenolsulphonate**. See *silberol*. **s. protalbin**. See *largin*. **s.-protein**, silver oxide made colloidal by the addition of protein. **mild s.-protein** (protargin mild), a compound of silver with protein, containing from 10 to 25 per cent of silver. It is but slightly irritant, and appears to be an efficacious prophylactic against gonorrheal infection. **strong s.-protein** (protargin strong),

- a compound of silver and protein containing about 8 per cent of silver. Although strong silver-protein contains less silver than mild silver-protein it is more irritant and a more efficient germicide. The various proprietary brands of these two official compounds differ chiefly in the protein radical.
- s. salvarsan.** See *silver arsphenamine*.
- s. sulphocarbolate.** See *silberol*.
- silver-fork deformity.** The peculiar forklike deformity produced by Colles' fracture.
- Silvester's method** (sil-ves'terz) [Henry Robert Silvester, English physician, 1829-1908]. See under *respiration, artificial*.
- silvestrene** (sil-ves'trēn). A hydrocarbon, $C_{10}H_{16}$, obtainable from European oil of turpentine.
- silviodide** (sil'vo-did). A proprietary preparation, known as milk of silver iodide, used like the silver salts, as an antiseptic and germicide.
- silvoform** (sil'vo-form). See *sophol*.
- silvol** (sil'vol). A brand of mild silver-protein.
- Simaba** (sim-a'bāb). A genus of simarubaceous trees and shrubs, various species of which are medicinal. *S. cedron*, of tropical America, affords cedron seed: locally much employed as an antispasmodic, antipyretic, and as a cure for dyspepsia. Dose of fluidextract, 1-8 minims (0.06-0.5 cc.).
- Simaruba** (sim-ar-u'bāh). A genus of tropical American trees, several species of which are medicinal. The root bark of *S. amara* is a bitter tonic and astringent. Dose of fluidextract, 10-30 minims (0.666-2 cc.).
- simesthesia** (sim-es-the'ze-ah). Osseous sensibility.
- similac** (sim'il-ak) [L. *sim'ilis* like + *lac* milk]. A proprietary modified cow's milk for infant feeding.
- similia similibus curantur** (sim-il'e-ah sim-il'-ib-us ku-ran'tur) [L. "likes are cured by likes"]. The doctrine, or the brocard that expresses it, which lies at the foundation of homeopathy; namely, that a disease is cured by those remedies which produce effects resembling the disease itself.
- similimum** (sim-il'im-um) [L. "likest"]. The homeopathic remedy which most exactly reproduces the symptoms of any disease.
- Simmonds' disease** [Morris Simmonds, physician in Hamburg, born 1855]. See under *disease*.
- Simonart's thread** (se-mo-narz') [Pierre Joseph Cécilien Simonart, Belgian obstetrician, 1817-1847]. See *thread*.
- Simonea folliculorum.** Same as *Demodex folliculorum*.
- Simonelli's test** (si-mo-nel'ēz) [F. Simonelli, contemporary Italian physician]. See under *tests*.
- Simon's operation, sign** (si'monz) [John Simon, English surgeon, 1824-1876]. See *operation* and *sign*.
- Simon's position** (ze'monz) [Gustav Simon, German surgeon, 1824-1876]. See *position*.
- simple** (simp'l) [L. *sim'plex*]. 1. Neither compound nor complex; single. 2. An old term for any herb with real or supposed medicinal virtues.
- simpler, simplist** (sim'pler, sim'plis). An herb doctor.
- Simpson light** (simp'sun) [William Speirs Simpson, British civil engineer, died 1917]. See *light*.
- Simpson's forceps** (simp'sunz) [Sir James Young Simpson, Scottish obstetrician, 1811-1870]. See *forceps*.
- Simpson's splint** (simp'sunz) [William Kelly Simpson, laryngologist in New York, born 1855]. See *splint*.
- Sims' position, speculum, etc.** (simz) [J. Marion Sims, New York gynecologist, 1813-1883]. See *position, speculum, etc.*
- simul** (si'mul). Latin for *at once*.
- simulation** (sim-u-la'shun) [L. *simula'tio*]. 1. The act of counterfeiting a disease; malingering. 2. The imitation of one disease by another.
- Simulium** (sim-u'le-um). A genus of robust, hump-backed dipterous insects which are known as black flies, sand flies, or buffalo gnats. They are widely distributed and a great pest at times. *S. columbaceu'se*, a species in southern Europe which has been known to kill children. *S. griseocol'lis*, the nimetti found in the Sudan. *S. pecu'drum*, the buffalo gnat, a terrible scourge to horses and cattle. *S. venus'tum*, a species widely distributed in North America.
- simulo** (sim'u-lo). A proprietary tincture of the seeds of *Cap'paris coria'cea*, or caper: used for hysteria and epilepsy.
- sinalbin** (sin-al'bin). A white, crystalline glucoside, $C_{40}H_{64}N_2O_{16}$, from the seeds of white mustard, *Sin'pis al'ba*. It hydrolyzes into methyl-phenyl-isothiocyanate (the volatile oil of white mustard), glucose, and sinapine sulphate.
- sinamin** (sin-am'in). Allyl cyanamide, C_3H_5-NHCN , from crude oil of black mustard.
- sinapine** (sin-a'pin). An alkaloid from the seeds of white mustard. It is the choline ester of sinapic acid with the formula $OH(OCH_2)_2C_6H_4(CO_2-(CH_2)_3N(CH_3)_3OH$.
- Sinapis** (sin-a'pis) [L. for "mustard"; *σίναφις*]. A genus of cruciferous plants; mustard. Now regarded as a subgenus of *Bras'sica*. See *mustard*.
- S. al'ba**, white mustard. See *mustard*.
- S. ni'gra**, black mustard. See *mustard*.
- sinapiscopy** (sin-ap-is'ko-pe) [*σίναφις* mustard + *σκοπέω* to view]. The application of mustard as a test for sensory disturbance.
- sinapism** (sin'ap-izm) [L. *sinapis'mus*; *σινάπισμος*, *σινάπισμα*]. A plaster or paste of ground mustard seed; a mustard plaster.
- sinapized** (sin'ap-izd). Mixed with or containing mustard.
- sinapol** (sin'ap-ol). A proprietary analgesic for external use.
- sinapolin** (sin-ap'o-lin). Dialylurea, a compound, $C_{14}H_{12}N_2O_2 \cdot C_7H_{12}NO_2$, from mustard oil.
- sin cipital** (sin'sip'it-al). Pertaining to the sin ciput.
- sin ciput** (sin'sip-ut) [L.]. The anterior and upper part of the head.
- sinew** (sin'u). The tendon of a muscle. **back s.**, the large flexor tendon at the back of the cannon bone of quadrupeds. Called also *back tendon*.
- weeping s.**, an encysted ganglion, chiefly on the back of the hand, containing synovial fluid.
- Sing., sing.** An abbreviation of L. *singulo'rum*, of each.
- singers' nodule** (sing'erz). Same as *chorditis tuberosa*.
- singultation** (sing-ul-ta'shun). A hiccup.
- singultous** (sing-ul'tus). Affected with hiccup.
- singultus** (sing-ul'tus) Latin for *hiccup*. **s. gas'tricus nervo'sus**, hiccup due to a neurotic condition of the stomach.
- sinigrin** (sin'ig-rin). Potassium myronate; a compound found in black mustard seed. It is hydrolyzed by myrosin into dextrose, potassium bisulphate, and allyl-isothiocyanate (C_3H_5NCS , the volatile oil of black mustard).
- sinistral** (sin-is'trad). To or toward the left.
- sinistral** (sin-is'tral) [L. *sinistra'lis*]. Pertaining to the left side.
- sinistrality** (sin-is'tral'it-e). Left handedness.
- sinistral** (sin-is'traw'tral) [L. *sinis'ter* left + *au'ris* ear]. Hearing better with the left ear.
- sinistrin** (sin-is'trin) [L. *sinis'ter* left]. Same as *inulin*.
- sinistocardia** (sin-is-tro-kar'de-ah) [L. *sinis'ter* left + *kardia* heart]. Displacement of the heart to the left.

sinistrocerebral (sin-'is-tro-ser'e-bral) [L. *sinis-ter* left + *cerebral*]. Pertaining to or situated in the left cerebral hemisphere.

sinistrocular (sin-is-trok-'u-lar). Left eyed: having the left eye the stronger.

sinistrocularity (sin-'is-trok-u-lar'it-e) [L. *sinis-ter* left + *oculus* eye]. The state of having the left eye the stronger.

sinistrogyration (sin-is-'tro-ji-ra'shun) [L. *sinis-ter* left + *gyrus* a turn]. A turning to the left, as a movement of the eye or the plane of polarization.

sinistromanual (sin-is-tro-man-'u-al) [L. *sinis-ter* left + *ma'nus* hand]. Left hand.

sinistropedal (sin-is-trop'e-dal) [L. *sinis-ter* left + *pes* foot]. Using the left foot in preference.

sinistrotorse (sin-'is-trōrs). Turned to the left.

sinistrose (sin-'is-trōs). A levorotatory sugar sometimes found in the urine.

sinistrosis (sin-is-tro-'sis). [L. *sinis-ter* unlucky]. Shell shock; the nervous and mental condition, including defects of speech and hearing, occurring in persons who have gone through bombardments in war.

sinistrotorsion (sin-'is-tro-tor'shun) [L. *sinis-ter* left + *tor'sio* twist]. A twisting toward the left: used mainly of the eye.

sinkaline (sing-'kal-in). A base found in mustard: identical with choline.

sino-atrial, sino-audicular. See *sinu-atrial* and *sino-audicular*.

sinomenine (sin-om'en-in). A crystalline alkaloid, $C_{19}H_{23}NO_4$, from *Sinomenium diversifolium*.

Si non val. Abbreviation for *L. si non va'leat*, if it does not answer.

sinospiral (si-no-spi'ral). Pertaining to the sinus venosus and having a spiral course: said of certain muscle fibers of the heart.

sinter (sin'ter). The calcareous or silicious matter deposited by mineral springs.

sintoc (sin'tok). The bark of *Cinnamo'mum sin'loc*, of the East Indies: it resembles cinnamon.

sinu-atrial (sin-u-at're-al). Same as *sinu-audicular*.

sinu-audicular (sin-'u-aw-rik-'u-lar). Pertaining to the sinus venosus and the auricle of the heart.

sinuberase (sin-u'ber-ās). A proprietary preparation for use in enteritis, dysentery, dyspepsia, constipation, and other intestinal disorders.

sinuitis (sin-u-'it'is). Same as *sinusitis*.

sinuous (sin'u-us) [L. *sinuosus*]. Bending in and out; winding.

sinus (sin'us) [L. for "cavity," "bosom," etc.]. 1. A recess, cavity, or hollow space. 2. A dilated channel for venous blood: found chiefly within the cranium. 3. An air cavity in one of the cranial bones; especially one communicating with the nose. Such are the ethmoid, frontal, maxillary, and sphenoid sinuses. 4. A suppurating channel or fistula. **accessory s's of the nose**, they are the frontal, maxillary, sphenoidal and ethmoidal sinuses. **air s.**, a cavity in a bone containing air. **s. of the anterior chamber**, the narrow space at the edge of the anterior chamber of the eye, between the border of the cornea and the root of the iris. **s. aor'tae, aortic s.**, a pouchlike dilatation of the aorta, opposite each of the segments of the semilunar valve. **Arlt's s.**, a small recess occasionally seen in the lower part of the lacrimal sac. **auricular s.** Same as *sinus venosus* (1). **basilar s.** Same as *transverse s. Breschet's s.*, the sphenoparietal sinus. **s. carot'icus**, an extension of the cavernous sinus into the carotid canal. **s. cavernosus** [B N A], **cavernous s.**, a venous sinus of irregular shape at the side of the body of the sphenoid bone. It rests on the root of the ala magna, it extends from the superior orbital fissure to the tip of the pyramid, it contains numerous fibrous trabeculae, and it is

traversed by the internal carotid artery and by the abducens, maxillary, oculomotor, ophthalmic and trochlear nerves, and the carotid plexus. **cerebral s's**. Same as *cranial s's*. **circular s. s. circula'ris** [B N A], the venous ring around the hypophysis formed by the two cavernous and the anterior and posterior intercavernous sinuses. **s. circula'ris foram'inis mag'ni**, the venous ring formed when the occipital sinus is double by its two stems and the plexus venosi vertebrales interni. **s. circula'ris i'ridis**. Same as *Schlemm's canal*. **s. coch'leae**, a branch of the internal jugular vein within the cochlear aqueduct. **coronary s.**, **s. corona'rius** [B N A], a rather large venous channel which is situated in the coronary sulcus on the diaphragmatic surface of the heart. It receives blood from right and left and from the apex and empties into the posterior part of the right auricle between the opening of the inferior vena cava and the ostium venosum. **costomediastinal s. of pleura**, **s. costo-mediastina'lis pleu'rae** [B N A], a wedge-shaped space along the line at which the costal pleura meets the mediastinal pleura in front which is not completely filled with lung tissue. **costophrenic s.** Same as *phrenicocostal s.* **cranial s's**, channels in the cranium, consisting partly of bone and partly of dura mater, containing venous blood. **Cuvier's s's**, two venous channels of the embryo, one on either side: the one on the right is developed into the precava. **s. du'rae ma'tris** [B N A], an anastomosing system of large venous channels between the layers of the dura mater encephali. They are devoid of valves, they do not collapse when drained, and in some parts contain numerous cross trabeculae. **s. epididy'midis** [B N A], a long slitlike serous pocket between the upper part of the testis and the overlying epididymis. **ethmoid s's**, air spaces or cells within the ethmoid bone. **facial s.**, the inferior longitudinal sinus. **frontal s's**, two air cavities in the lower border of the frontal bone beneath the supraciliary ridge: communicates through the infundibulum with the nasal fossa. **Guérin's s.**, a diverticulum behind Guérin's fold. **Huguier's s.**, a depression in the tympanum between the fenestra ovalis and the fenestra rotunda. **intercavernous s's**, two sinuses, anterior and posterior, connecting the cavernous sinuses. **s. jugula'ris**, either of three enlargements on the jugular vein. **s. of the kidney**, the inward extension of the hilum of the kidney. **s. lac'teus**, **s. lactif'erus** [B N A], the wide part of the duct of the mammary gland, just before it enters the nipple. **s. of the larynx**, the ventricle of the larynx. **lateral s.**, either of the two cranial venous sinuses which begin at the torcular herophili and go to the internal jugular vein. **Lieutaud's s.**, a straight sinus running between the inferior longitudinal sinus and the lateral sinus. **longitudinal s., inferior**, a venous sinus along the lower border of the falx cerebri, connected with the straight sinus. **longitudinal s., superior**, a venous sinus along the convex border of the falx cerebri, extending to the torcular. **lymph s.**, a lymph channel; a space which conveys lymph. **s. of Maier**, an occasional diverticulum of the lacrimal sac into which the lacrimal canaliculi open. **mastoid s's**, the cells within the mastoid portion of the temporal bone. **maxillary s.**, **s. maxilla'ris** [B N A], a cavity in the body of the maxilla which communicates with the middle meatus of the nose: called also *antrum of Highmore*. **Meyer's s.**, **s. Meyer'i**, a small depression in the floor of the external auditory canal just in front of the membrana tympani. **s. of Morgagni**, the space between the upper border of the superior constrictor muscle of the pharynx and the base of the skull which is closed by the fascia pharyngobasilaris. **oblique s.**, a fold of pericardium over the posterior surface of the left auricle. **occipital s.**, **s. occipita'lis** [B N A], a venous sinus of the dura mater which passes downward and

forward in the attached margin of the tentorium cerebelli from the confluens sinuum to the margin of the foramen magnum where it divides and becomes the sinus marginales. **oral s.** Same as *stomodeum*. **s. paranasales** [B N A], the accessory sinuses of the nose: they are the frontal sphenoidal, maxillary, and ethmoidal sinuses. **parasinoidal s.**, any one of several spaces in the dura mater opening into a cranial blood sinus; called also *lacuna lateralis* or *lacus lateralis*. **s. pericranii**, a soft fluctuating vascular tumor of the scalp which communicates directly with an intracranial sinus through a defect in the skull. **Petit's s's.** Same as the sinuses of Valsalva. **petrosal s., inferior**, a venous sinus arising from the cavernous sinus and running along the lower edge of the petrous bone to the internal jugular vein. **petrosal s., superior** a sinus which runs in a groove in the petrous bone from the posterior part of the cavernous sinus to the lateral sinus. **s. phlebitis.** See under *phlebitis*. **phrenicocostal s.**, that pleural sinus situated at the junction of the costal and diaphragmatic pleurae. **pilonidal s.**, a suppurating sinus of the coccygeal region containing a tuft of hair. **piriform s.**, pyriform sinus. **placental s.**, a venous channel near the edge of the placenta. **pleural s's**, spaces where the individual portions of the pleura pass into each other at an angle and which are never completely filled by the lung. **s. pocularis**, a lacuna in the prostatic portion of the urethra. Called also *uricularis prostaticus* and *uterus masculinus*. **posterior s.**, a groove in the posterior wall of the tympanic cavity above the pyramidal eminence. **s. praecervicalis**, the depression at the side of the neck, developed in the embryo by the growth of the branchial arches. **s. prostaticus.** Same as *s. pocularis*. **pulmonary s's**, the pouchlike dilations of the pulmonary artery opposite to each segment of the semilunar valve. **pyriform s.**, a fossa on the side of the larynx external to the aryepiglottic fold. **s. rectus** [B N A], a venous sinus of the dura mater. It is situated in the line of union of the falx cerebri and the tentorium cerebelli, it is triangular on cross section, and it extends from just below the splenium of the corpus callosum backward and downward to the confluens sinuum. **s. renalis** [B N A], the cavity of the kidney. **s. reuniens**, the sinus venosus of the embryonic heart. **rhomboid s.**, the fourth ventricle of the brain. **Ridley's s's.**, the circular sinus. **sagittal s.**, **s. sagittalis inferior** [B N A], a small venous sinus of the dura mater. It is situated in the posterior half of the lower concave border of the falx cerebri and opens into the upper end of the sinus rectus. **s. sagittalis superior** [B N A], a long arched venous sinus of the dura mater which follows the sagittal sulcus from the foramen caecum back to the confluens sinuum. **sigmoid s.**, the portion of the lateral sinus which lies on the mastoid bone and jugular process of the occipital. It is S shaped. **s. sphenoidal** [B N A], one of the paranasal sinuses. It is a cavity of variable size in the anterior part of the body of the sphenoid bone and it opens into the nasal cavity above the superior concha. **s. sphenoparietalis** [B N A], a venous sinus of the dura mater which starting at the lower end of the coronal suture follows the posterior edge of the anterior cranial fossa medialward and empties into the cavernous sinus. **straight s.** See *s. rectus*. **s. sulciformis**, a furrow on the inner surface of the vestibule of the ear, below the hemispheric and hemielliptic fossae, opening into the aquaeductus vestibuli. Called also *sulcus ad aquaeductus vestibuli* and *recessus labyrinthi*. **tarsal s.**, **s. tarsalis** [B N A], the space between the calcaneus and the astragalus containing the interosseous ligament. **tentorial s.**, the straight sinus. **terminal s.**, a vein which encircles the vascular area in the blastoderm. **s. thrombosis.** See *thrombosis*. **tonsillar s.**, the space between the palatine

arches wherein the tonsil is located. **transverse s.**, **s. transversus** [B N A], a large venous sinus of the dura mater. It starts at the protuberantia occipitalis interna follows the attached margin of the tentorium cerebelli around to the temporal bone and there turns medialward and downward to the jugular foramen. **s. transversus pericardii** [B N A], a passage within the pericardial sac between the aorta and pulmonary artery in front and the atria behind. **s. tympani** [B N A], a deep fossa on the medial wall of the tympanic cavity. It is bounded behind by the eminentia pyramidalis, below by the subiculum promontorii, and it goes over in front into the fossula fenestrae cochleae. **s. urogenitalis** [B N A], a duct in the embryo into which the Wolffian ducts and bladder empty and which goes to the cloaca. It forms the vagina in woman and part of the urethra in man. **uterine s's**, venous canals in the wall of the impregnated uterus. **uteroplacental s's**, sinuses carrying blood from the placenta into the uterine sinuses. **s. of Valsalva**, the aortic and pulmonary sinuses; pouches in the aorta and pulmonary artery behind each semilunar valve. **s. venarum cavarum** [B N A], the posterior medial portion of the right atrium. It is separated from the rest of the atrium by the sulcus terminalis atrii dextri and contains the openings of the venae cavae. **s. venosus**. 1. The main part of the cavity of either auricle of the heart. It is the portion into which the veins empty their blood. Called also *atrium* and *s. of the auricle*. 2. [B N A]. The common venous receptacle in the embryo attached to the posterior wall of the primitive auricle: it receives the umbilical and vitelline veins and the ducts of Cuvier. **s. venosus sclerae** [B N A], the canal of Schlemm; a ringlike vein in the sclera encircling the cornea. **vertebral s's**, two venous sinuses running along the spinal canal. **s. vertebrales longitudinales** [B N A], the vertebral sinuses.

sinusal (si'nus-al). Pertaining to a sinus.

sinusitis, sinuitis (si-nu-si'tis, sin-u-i'tis). Inflammation of a sinus. **frontal s.**, inflammation of the frontal sinus.

sinusoid (si'nus-oid) [*sinus* + *ēidos* form]. 1. Resembling a sinus. 2. A form of terminal blood channel consisting of a large, irregular anastomosing vessel, having a complete endothelial wall, but little or no adventitia. Sinusoids are found in the liver, suprarenals, heart, parathyroid, carotid gland, spleen, hemolymph glands, and pancreas.

sinusoidal current (si-nus-oid'al). See *current*.

sinusoidalization (si-nu-soi-dal-iz-a'shun). The application of a sinusoidal current.

sinuventricular (si'nu-ven-trik'u-lar). Pertaining to the auricular sinus venosus and the ventricle of the heart.

SiO₂. Silicon dioxide.

siomine (si'o-min) Methenamine tetraiodide, (CH₂)₆NI₄, a red powder containing 78.5 per cent of iodine. It is decomposed in the intestine into methenamine and iodide and produces the effect of iodides. Dose, same as potassium iodides.

Si op. sit. Abbreviation for *L. si o'pus sit*, if necessary.

siphac (si'fak). An obsolete name for the peritoneum.

siphon (si'fun) [*σιφων* tube]. A bent tube of two unequal arms: used in the transfer of liquids, also in wound drainage and in lavage of the stomach. **Duguet's s.**, a rubber tube armed with a trocar for performing thoracentesis without aspiration.

siphonage (si'fun-aj). The use of the siphon, as in washing the stomach or in draining wounds.

Siphonaptera (si-fo-nap'ter-ah) [*σιφων* tube + *ἀπτερος* wingless]. An order of insects, the fleas. They are small, wingless, laterally compressed insects adapted to sucking blood.

siphonoma (si-fon-o'mah) [σίφων tube + -oma tumor]. See *cylindroma*.

Siphunculata (si-funk-u-la'tah). An order of insects including the lice.

Siphunculi'na funic'ola. The oriental "eye-fly" which may transmit yaws.

Sippy method or treatment (sip'e) [Bertram Welton Sippy, physician in Chicago, 1866-1924]. See under *treatment*.

siqua [coined from *L. sidentis altitudinis quadratio*, the square of the sitting height]. Pirquet's unit for calculating the area of the absorptive surface of the intestine; it is the square of the sitting height (in centimeters).

siren-limb. See *sirenomelus*.

sirenomelus (si'ren-om'e-lus) [σειρήν siren + μέλος limb]. A monster with fused legs and with no feet.

siriasis (sir-i'as-is) [from *σειρῖαν* to be hot]. Thermic fever, or sunstroke.

sirikaya (ser-ik-a'yah). The tree *Anona squamosa*, whose leaves are sudorific and bark purgative.

siritch (sir'itsh) [Arabic]. Oil of sesamum.

sirolin (sir'o-lin). A proprietary preparation of beech tar and guaiacol: used in pulmonary diseases.

sirup (sir'up). See *syryp*.

-sis. A termination or ending of words of Greek origin, signifying state or condition.

sismotherapy (sis-mo'ther'ap-e). Seismotherapy.

Sisto's sign (sēs'tōz) [Genaro Sisto, Chilian pediatrician, died 1923]. See under *sign*.

sistomensin (sis-to-men'sin). A preparation containing the luteolipoid of the corpus luteum: used to check excessive menstrual flow.

Sisyrinchium galaxioides (sis-ir-in'ke-um). A South American iridaceous plant; its bulbs are purgative and diuretic.

sitfast (sit'fast). A small hard tumor on the skin of a horse's back.

sitiergia (sit-e-ir'je-ah) [σιτίον food + εἶργεν to bar out]. Insane rejection of food.

sitiology (sit-e-ol'o-je). Same as *sitology*.

sitiomania (sit-e-o-ma'ne-ah). Sitomania.

sitiophobia (sit'e-o-fa'be-ah). Same as *sitophobia*.

sitology (si-tol'o-je) [σίτος food + λόγος discourse]. The sum of knowledge regarding food, diet, and nutrition.

sitomania (si-to-ma'ne-ah) [σίτος food + μανία madness]. 1. Excessive hunger, or insane craving for food. 2. Periodic bulimia.

sitophobia (si-to-fa'be-ah) [σίτος food + φόβος fear]. A morbid or insane dread of eating.

sitosterol (si-tō-ste'rol). A sterol, $C_{28}H_{44}O$, from wheat embryos.

sitotherapy (si-to-ther'ap-e) [σίτος food + θεραπεία treatment]. Treatment by food; dietotherapy.

sitotoxin (si-to-toks'in). Any basic poison generated in a cereal food by a plant micro-organism.

sitotoxism (si-to-toks'izm) [σίτος food + τοξικόν poison]. Poisoning by diseased vegetable foods.

sitotropism (si-tot'ro-pizm) [σίτος food + τρόπος turning]. Response of living cells to the attractive or repulsive influence of food.

situs (si'tus). Latin for *site* or *position*. **s. in-ver'sus vis'cerum**, lateral transposition of the viscera of the thorax and abdomen. **s. per-ver'sus**, dislocation of any viscus. **s. trans-ver'sus**. Same as *s. inversus viscerum*.

Sirenomelus.

sitz bath (sits' bath). See *bath*.

Sium (si'um). See *ninsi*.

Si vir. perm. Abbreviation for *L. si vi'res permil'-lant*, if the strength will permit.

six-o-six (606) (siks-o-siks). See *arsphenamine*.

sixth nerve (siksth). The abducent nerve. See *nerves, table of*.

Sjöqvist's method (syek'vists) [John August Sjöqvist, Swedish physician, born 1863]. See under *method*.

skatol (ska'tol) [σκάωρ, σκατός dung]. Beta-methyl indole, a strong-smelling, crystalline substance, $CH_3.C_8H_6N$, from human feces. It is produced by the decomposition of proteins in the intestine and directly from the amino-acid tryptophane.

skatologic (ska-tol-oj'ik). See *scatologic*.

skatology (ska-tol'o-je). Scatology.

skatophagy (ska-tof'aj-e) [σκάωρ, σκατός dung + φαγείν to eat]. Same as *coprophagy*.

skatosin (ska-to'sin). A base, $C_{10}H_{16}N_2O_2$, derived from certain proteins.

skatoxyl (ska-toks'il). An oxidation product of skatol, $CH_3.C_8H_6NO$, found in the urine in certain cases of disease of the large intestine.

skein (skän). The threadlike figure seen in the earlier stages of karyokinesis. **test s's**, Holmgren's yarns: skeins of worsted yarn for testing color blindness.

skelalgia (ske-lal'je-ah) [σκελῖς leg + ἄλγος pain]. Pain in the leg.

skeletal (skel'et-al). Pertaining to the skeleton.

skeletin (skel'et-in). Any one of a number of gelatinous substances occurring in invertebrate tissue, and including chitin, sericin, spongin, etc.

skeletization (skel'et-iz-a'shun). 1. Extreme emaciation. 2. The removal of the soft parts from the skeleton.

skeletogenous (skel-et-oj'en-us) [σκελετόν skeleton + γεννᾶν to produce]. Producing skeletal or bony structures.

skeletogeny (skel-et-oj'en-e). The formation of the skeleton; the origin and development of the skeleton.

skeletography (skel-et-og'raf-e) [skeleton + γράφειν to write]. A description of the skeleton.

skeletology (skel-et-ol'o-je) [σκελετόν skeleton + λόγος treatise]. The sum of what is known regarding the skeleton.

skeleton (skel'et-on) [σκελετόν]. The hard framework of the animal body; especially the bony framework of the higher vertebrate animals; the bones of the body collectively. See further under *dermoskeleton*, *endoskeleton*, *exoskeleton*, *neuro-skeleton*, and *splanchnoskeleton*. **appendicular s.**, the skeleton of the limbs. **axial s.**, the skeleton of the head and trunk. **visceral s.**, that portion of the skeleton which protects the viscera, as the sternum, ribs, and innominate bones.

skeletopie (skel'et-o-pe) [skeleton + τόπος place]. The position of an organ in relation to the skeleton.

Skene's gland (skēnz) [Alexander J. C. Skene, physician in Brooklyn, 1838-1900]. See *gland*.

skeneitis, **skenitis** (ske-ni'tis). Inflammation of Skene's glands.

skeneoscope, **skenoscope** (ske'no-skōp) [Skene's glands + σκοπεῖν to examine]. An endoscope for examining Skene's glands.

skeocytosis (ske'o-si-to'sis) [σκαῖός left + κύτος cell]. Presence of immature forms of white cells in the blood; called also *deviation to the left*.

skeptophylaxis (skep'to-fi-laks'is) [σκεπητικός doubtful + φylaξίς]. A condition in which a minute dose of a substance poisonous to animals will produce immediate temporary immunity to the action of the poison, although the blood of the ani-

mal may be highly toxic during that period of immunity (Lambert, Ancel, and Bouin, 1910).

skiabaryt (ski-ab'ar-it). A proprietary preparation of barium sulphate for roentgen ray use.

skiagram (ski-ag-ram) [σκιά shadow + γράμμα writing]. Same as roentgenogram.

skiagraph (ski-ag-raf) [σκιά shadow + γράφω to write]. A picture or photograph made by the roentgen rays. A roentgenogram.

skiagraphy (ski-ag'raf-e) [σκιά shadow + γράφω to write]. Roentgenography. The art or process of making roentgenograms or photographs by means of the roentgen rays. It is performed by placing the part or article between the rays and a photographic plate, when the rays will penetrate many substances, as the flesh, which are impervious to ordinary light-rays; but any substance, as bone or glass, which is impervious to the roentgen rays, will cast a shadow of itself upon the photographic plate.

skiameter (ski-am'et-er) [σκιά shadow + μέτρον measure]. An instrument for measuring the intensity of the roentgen rays, and thus determining how long an exposure is needed.

skiascope (ski-as-kōp). An instrument for performing skiascopy.

skiascopy (ski-as'ko-pe) [σκιά shadow + σκοπεῖν to view]. 1. Pupilloscopy or retinoscopy: the determination of eye refraction by illuminating the retina with a mirror and observing the movements of light and shade on the pupil (Chibret, 1886). Called also *shadow test*. 2. Examination of the body by the roentgen ray; fluoroscopy.

Skilern's fracture (skil'ernz) [Penn Gaskell *Skilern*, Jr., American surgeon, born 1882]. See under *fracture*.

skimmianine (skim-i'an-in). A crystalline alkaloid, $C_{22}H_{29}N_3O_9$, from *Skimmia japonica*.

skin (skin). The outer integument, or covering, of the body. It is made up of an epithelial layer, the epidermis, cuticle, or scarf skin, and the true s. (corium, derma, or cutis vera). The epidermis (*cuticle*, or scarf skin) is made up of several layers, from without inward as follows: The horny layer (*stratum corneum*), which consists of layers of flattened horny cells; the *stratum lucidum* (Ohl's layer), consisting of transparent nucleated cells; the *stratum granulosum* (granular layer, Langerhans' layer), consisting of flattened granular cells; the *stratum mucosum* (mucous layer, malpighian layer, rete mucosum), consisting of pigmented columnar cells, the outer part of which is covered with prickles, forming the *prickle layer*. The true s. (corium, derma, or cutis vera) is divided from the epidermis by a basement-membrane, and consists of an outer, or *papillary*, layer, containing the nerve endings and capillaries, and a deeper *reticular* layer, largely made up of fibrous bundles. Beneath the skin is the *subcutaneous connective tissue*, consisting of oblique elastic fibers extending between the corium and fasciae or deeper tissues, and containing lymphatics, vessels, nerves, and generally fat. **beaters' s.** Same as *goldbeaters' s.* **s. bound**, hide bound; affected with scleroderma. **crocodile s.**, ichthyosis sauroderma. **elastic s.** See *cutis hyperplastica*. **glossy s.**, a shining, glazed appearance of the skin, seen in states in which the trophic nerve supply of the skin is interrupted. **goldbeaters' s.**, a very thin, tough membrane prepared from ox's cecum and from the intestine of other animals. **s. grafting**, the implantation of bits of skin to form centers of cicatrization. **s. heart**, a name for the peripheral vessels; so called for their importance in various metabolic processes. **loose s.**, dermatolysis. **paper s.**, parchment skin. **parchment s.** 1. The thin, atrophic-looking, stretched skin of cutaneous atrophy; xeroderma. 2. A dry condition of the skin of cattle and sheep, especially such a condition accompanying verminous bronchitis. **piebald s.**

See under *piebald*. **sailors' s.**, a condition in which the skin is of a bluish-red color, thickened, and covered with warty growths. **scurf s.**, the cuticle. **wash-leather s.**, a condition in which silver makes a black mark upon the skin.

skink (skingk). A lizard, *Scincus officinalis*: its dried flesh is used in oriental medicine.

sklero-. For words thus beginning, see under *sclero-*.

Skoda's râle, sign, etc. (sko'dahz) [Joseph Skoda, Austrian physician, 1805-1881]. See *râle, sign*, etc.

skodaic resonance (sko-da'ik) [see above]. See under *resonance*.

skolecitis. For words beginning *sco-*, see those beginning *sco-*.

skookum-chuck (skoo'kum-tchuk') [Chinook jargon for "good waters"]. A salt obtained from the waters of a lake in the state of Washington: used in skin diseases.

skopometer (sko-pom'et-er). An instrument for measuring color, cloudiness, and other optical phenomena of liquids without using standards for comparison.

skotogram, skotograph, etc. See *scotogram, scotograph*, etc.

skull (skul). The bony framework of the head, composed of eight cranial bones and the fourteen bones of the face. The cranial bones are the occipital, two parietal, two temporal, frontal, ethmoid, and sphenoid. The facial bones are the two lacrimal, two nasal, two palate, two inferior turbinate, two superior maxillary, two malar, the vomer, and the inferior maxilla. The ear bones, or ossicles, are not considered a part of the skull. **natiform s.**, a skull marked by Parrot's nodes, which give it a buttock shape. **s. cap.** 1. The sinciput or calvarium. 2. Same as *scutellaria*. **steeple s.**, oxycephaly.

skunk cabbage (skungk-kab'ij). The fetid araceous marsh plant, *Symplocarpus foetidus*, of North America. Its rhizome is stimulant, antispasmodic, and narcotic. Dose of fluidextract, 10-40 minims (0.666-2.666 cc.).

skyshine (ski'shin). The light rays reflected from the sky and clouds.

S. L. A. Left sacro-anterior position of fetus.

slack of the optic nerve (slak). The surplus length of the optic nerve, permitting a certain amount of play of the ball. It averages 5½ millimeters.

slaked lime (slakt). A white powder obtained by pouring one-half its weight of water on quicklime.

slant (slant). A sloping surface of agar in a test tube; also a slant culture. **s. culture**, a bacterial culture in which the test tube is placed in a slanting position for the agar to solidify.

sleep (slēp). A period of rest for the body and mind, during which volition and consciousness are in partial or complete abeyance and the bodily functions partially suspended. The movements of breathing and of the pulse are less frequent than in the waking state; the pupils are also contracted and the secretions partly suspended. **s. drunkenness**. See *somnolentia* (2d def.). **electric s.**, loss of voluntary movement and presence of general anesthesia induced by the application to the head of a rapidly interrupted electric current. **paroxysmal s.**, narcolepsy. **temple s.** Same as *incubation*, 2d def. **twilight s.** (Gauss), a condition of light anesthesia marked by mental subconsciousness, produced by the hypodermic administration of morphine and scopolamine. In this state the patient, while responding to pain, does not retain it in her memory. It is employed in the conduct of labor. Called also *scopolamine-morphine anesthesia*. **s. walking**, somnambulism.

sleeping disease (sle'ping). Narcolepsy.

sleeping sickness. See *Congo trypanosomiasis*, under *trypanosomiasis*.

slide (slid). A glass plate on which objects are placed for microscopical examination.

slime mold (slim mōld). A fungus-like animal growth; myxomycetes, or mycetozoa.

sling (sling). A bandage or suspensory for supporting a part. **s. of the lenticular nucleus**, a tract of nerve fibers passing beneath the optic thalamus to enter the lenticular nucleus. Called also *ansa nuclei lenticularis*.

slippery elm. See *Ulmus*.

slobbering (slob'er-ing). An abnormal flow of saliva in animals.

sloe (slo). See *Prunus spinosa*.

slough (sluf). A mass of dead tissue in or cast out from living tissue.

sloughing (sluf'ing). The formation or separation of a slough.

slows (slōz). Same as *trembles*.

S. L. P. Left sacroposterior position of fetus.

Sluder's method or operation (slu'derz) [Greenfield *Sluder*, American laryngologist, 1865-1928]. Removal of the tonsil along with its capsule.

S.'s neuralgia, neuralgia of the splenopalatine ganglion.

sludge (slujh). The more or less solid matter which settles out of sewage. **activated s.**, sludge from well aerated sewage, which, being well supplied with oxidizing bacteria, ensures the presence of sufficient oxidizing organisms to activate the next tankful of sewage. **dewatered s.**, sludge from which the water has been removed by drying or pressing.

Sm. The symbol for *samarium*.

S. M. A. The trade name for a milk preparation used as a substitute for cow's milk in infant feeding.

smalarina (smal-ari'nah). A mercury and antimony preparation, $C_6H_5O_7N_4HgSb$: used in the treatment of malaria.

small intestine (smawl). See *intestine*.

smallpox (smawl'poks). See *variola*. **inoculation s.**, the direct, purposeful transfer of variola virus from a patient to a well person, usually a child. It was widely practised before the advent of vaccination. **milk s.**, amaas.

smartweed. See *Polygonum*.

smear culture (smēr'kult-yur). See under *culture*.

Smee cell (smee) [Alfred *Smee*, English surgeon, 1818-1877]. See under *cell*.

smegma (smeg'mah) [σμήγμα soap]. A thick, cheesy, ill-smelling secretion found under the prepuce and around the labia minora. Called also *smegma præputii*. **s. clitoridis** [B N A], the thick, cheesy secretion found on and around the glands of the clitoris. **s. embryo'num**, the vernix caseosa. **s. præpu'tii** [B N A]. See *smegma*.

smell-brain. The rhinencephalon.

Smellie's scissors (smel'ez) [William *Smellie*, British obstetrician, 1697-1763]. See *scissors*.

smelting-house smoke. Crude arsenious acid.

smilacin (smi'las-in) [σμιλακίνος pertaining to smilax]. 1. A poisonous glucoside, $C_{18}H_{36}O_6$, from sarsaparilla. 2. A precipitate or concentration prepared from sarsaparilla.

Smilax (smi'laks) [L.; σμῖλαξ bindweed]. A genus of climbing smilacine plants. The roots of various tropical American species are known as sarsaparilla (q. v.). China root, the rhizome of *S. chi'na*, an Asiatic species, is used like sarsaparilla. **S. pseudo-chi'na**, the bamboo brier of North America, is said to be more efficacious than the imported sarsaparillas in the treatment

of syphilis. Dose of fluidextract, 30-120 minims (2-8 cc.).

Smith's disease [Eustace *Smith*, London physician, 1835-1914]. Mucous colitis. **S's sign.** See under *sign*.

Smith's fracture [Robert William *Smith*, Irish surgeon, 1807-1873]. See *fracture*.

Smith's operation [Henry *Smith*, English surgeon in India]. See under *operation* (2d def.).

Smith's phenomenon [Theobald *Smith*, American pathologist, born 1859]. See *Theobald Smith phenomenon*, under *phenomenon*.

Smith's test [Walter George *Smith*, contemporary Irish physician]. See under *tests*.

Smith-Pitfield method [John Blackburn *Smith*, contemporary English surgeon; Robert L. *Pitfield*, American physician, born 1870]. See under *stains and staining*.

S. M. O. Abbreviation for *Medical Officer of Schools*.

smokers' cancer. See *cancer*.

smudging (smuj'ing). A defect of speech in which the difficult consonants are omitted.

smut. See *ustilago* and *urocystis*.

Sn. The symbol of tin [L. *stannum*].

S. N. Abbreviation for *L. secundum natu'ram*, according to nature.

snakeroot (snak-root). See *Cimicifuga*, *senega*, and *serpentaria*. **button s.**, the North American plant, *Liatris spicata*: diuretic and deobstruent; used in nephritis, gonorrhea, and leukorrhea. Dose of fluidextract of root, $\frac{3}{4}$ -2 fluidrachms (2-8 cc.). **Canada s.** See *Asarum*. **senega s.**, Polygala. **Texas s.**, Aristolochia reticulata. **Virginia s.**, Aristolochia serpentaria. **white s.**, Eupatorium urticaefolium.

snap-finger (snap'fin-ger). See *finger*.

snare (snair). A wire loop or noose for removing polypi and tumors, being placed around them and tightened so as either to cut them off at the base or to tear them out by the roots. **cold s.**, a snare that has not been heated. **hot s.**, a wire snare heated by a galvanic current, and used to burn off growths. Called also *galvanocauteric s.* **Jarvis' s.**, a wire snare operated by a screw in the handle.

sneeze (snēz). 1. To expel air forcibly and spasmodically through the nose and mouth. 2. The sudden violent and audible expiration through the mouth and nose.

Snell's law [Simeon *Snell*, English ophthalmologist, 1851-1909]. See under *law*.

Snellen's type (snel'enz) [Hermann *Snellen*, ophthalmologist in Utrecht, 1834-1908]. See *test type*.

snore (snōr). 1. To breathe noisily in sleep or coma. 2. A noisy breathing in sleep or coma; stertor.

snow blindness (sno). See *blindness*.

snow, carbon dioxide. The snow formed by the rapid evaporation of liquid carbon dioxide. It gives a temperature of about 110 degrees below zero, producing instant freezing of the skin when applied. It is used locally in various skin diseases.

snowflake (sno'flāk). The *Leuco'ium ver'num*; an old-world amaryllidaceous plant: emetic and poisonous.

snuff (snuf). Any medicinal or errhine powder to be inhaled into the nose. **catarrh s.**, a powder used by insufflation for coryza. **niopo s.** See *parica*.

snuffles (snuff'lz). A catarrhal discharge from the nasal mucous membrane in infants, generally in congenital syphilis.

SO₂. Sulphur dioxide.

soamin (so-am'in). Sodium para-aminophenyl-arsenate, a proprietary preparation used like atoxyl in protozoal diseases, especially in syphilis.

soap (sōp) [L. *sa'po*]. Any compound of one or more fatty acids, or their equivalents, with an alkali. See *sapo*. Soap is detergent and is much employed in liniments, enemas, and in making pills. It is also a mild aperient and antacid. See also under *sapo*, *emplastrum*, *linimentum*, etc. **animal s.**, *sapo domesticus*. **arsenical s.**, a soap containing arsenic: used in taxidermy to preserve skins. **s. bark**. See *guilajia*. **carbolic s.**, a disinfectant soap containing 10 per cent of phenol. **Castile s.**, a hard soap, either white or mottled, prepared from olive oil and soda. **curd s.**, *sapo domesticus*. **green s.** See *sapo viridis*. **guaiaac s.**, a resin of guaiacum saponified with liquor potassae. **hard s.** Same as *soda s.* **McClintock's s.**, a disinfectant soap containing an active mercury salt. **potash s.** See *soft s.* **soda s.**, soap made from soda and olive oil. Called also *hard s.* **soft s.**, a liquid soap made from potash and some oil. The official *sapo mollis* is made from cottonseed oil. It is used as a detergent and stimulant. Called also *potash s.* and *green s.* **Starkey's s.**, a soap made of potassium carbonate, turpentine oil, and Venice turpentine in equal parts. **superfatted s.**, a soap having an excess of fat over that necessary to neutralize all the alkali. **zinc s.**, a soap containing zinc oxide or zinc sulphate: for use as an ointment or plaster.

sob (sob). A short convulsive inspiration, attended with contraction of the diaphragm and spasmodic closure of the glottis.

socaloin (so-kal'o-in). A variety of aloin, $C_{15}H_{16}O_7$, from Socotrine aloes: said to be identical with zanaloin.

socia parotidis (so'she-ah pa-rat'id-is) [L. "companion of the parotid"]. A detached part or exclave of the parotid gland.

sociology (so-se-ol'o-je) [L. *so'cius* fellow + *λόγος* treatise]. The science to social relations and phenomena.

socket (sok'et). A hollow or depression, into which a corresponding part fits. **tooth s.**, the cavity in which the root of a tooth rests; an alveolus.

Socotrine aloes (sok'o-trēn) [*Socotra*, an island in the Indian Ocean]. See under *aloes*.

soda (so'dah). A loose term which generally refers to sodium hydrate, NaOH (caustic soda); also sodium carbonate, Na_2CO_3 (washing soda), or sodium bicarbonate, $NaHCO_3$ (baking soda). **baking s.**, sodium bicarbonate. **caustic s.**, sodium hydroxide. **chlorinated s.**, a mixture of sodium chloride and sodium hypochlorite. Its official solution, solution of chlorinated soda (*Labarraque's solution*), is used as a disinfectant and deodorizer and as an application to foul ulcers. It is also the basis of surgical solution of chlorinated soda (Dakin's solution). **s. cum cal'ce**, an escharotic preparation of equal parts of sodium hydroxide and lime. **s. lime**, a mixture of lime and sodium hydroxide: used for absorbing carbon dioxide or water. **s. soap**. See *soap*. **washing s.**, sodium carbonate. **s. water**, carbonic acid water; water impregnated with carbon dioxide.

sodiarsphenamine (so-di-ars-fen'am-in). Sodium arsphenamine. See *arsphenamine*.

sodic (so'dik). Containing soda or sodium.

sodii (so'de-i). Latin for genitive of *sodium*.

sodicitrate (so'de-o-sit'rāt). A citrate of sodium and another element.

sodiotartrate (so'de-o-tar'trāt). A tartrate of sodium and another element.

sodium (so'de-um). A soft, white, alkaline metallic element; symbol, Na; atomic weight, 23; specific gravity, 0.972. It is equivalent and has a strong affinity for oxygen and other nonmetallic elements. **s. acetate**, a compound, $CH_3.COONa$: used as a diuretic. Dose, 15-60 grains (1-4 Gm.). **s. acetylsalicylate**. See *hydropirin*. **s. acet-**

ylsulphanilate, a white, crystalline substance: antipyretic. **acid s. borate**, antipyrone. **acid s. phosphate**. See *sodium biphosphate*. **acid s. phosphosalicylate**, a salt in colorless crystals, $C_6H_3(OH)CO_2HSO_3Na$: used in the treatment of rheumatism. **s. aminophenylarsenate**, a colorless, tasteless, powder: used in syphilis and protozoan diseases. **s. aniline arsenate**. Same as *atoxyl*. **s. anisate**, a hygroscopic, microcrystalline powder, $CH_3O.C_6H_4.CO.ONa. \frac{1}{2}H_2O$: antiseptic and antipyretic. Dose, 15 grains (1 Gm.). **s. antimony thioglycolate**, an organic compound of antimony, $CO_2CH_3.Sb.S-CH_2.COONa$: used in the treatment of granuloma inguinale. **s. antimonyl tartrate**, a compound used in the treatment of trypanosomiasis. **s. arsenanilate**. See *atoxyl*. **s. arsenate**, $Na_2HASO_4 + 7H_2O$. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.001-0.005 Gm.); of solution (*liquor*), 2-15 minims (0.133-1 cc.). **s. arsenotartarate**, used in skin diseases, intermittent fever, etc. **s. aurate**, $NaAuO_2$: used as an antiseptic in 0.5 per cent solution. **s. aurochloride**, gold and sodium chloride, $AuCl_3.NaCl + 2H_2O$, a yellow powder: antisyphilitic. Dose, $\frac{1}{4}$ -1 grain (0.016-0.066 Gm.). **s. aurothiosulphate**. See *sanocrysin*. **s. benzoate**, a compound, $C_6H_5.CO_2Na$: used as an antilithic in gout and rheumatism, and as an antiseptic in diphtheria, etc. Dose, 5-15 grains (0.333-1 Gm.). **s. benzo-sulphimid**, the sodium salt of gluside (soluble gluside). **s. benzoysulphonate**, a sodium salt of gluside, $C_6H_4(CO)SO_2NNa + 2H_2O$. It is more soluble in water than saccharin and its uses are those of saccharin. **s. bicarbonate**, or baking soda, $NaHCO_3$: used as an antacid and antirheumatic, and in dyspepsia, rheumatism, gout, diabetes, etc. Dose, 5-30 grains (0.333-2 Gm.); of *li'quor so'dae efferves'cens*, 2-8 fl.oz. (60-250 cc.). **s. biphosphate**, $NaH_2PO_4.H_2O$, used to render the urine acid. **s. bismuth citropyroborate**, a salt in glistening leaflets: serviceable in dyspepsia and gastralgia. **s. bisulphate**, $NaHSO_4$: used as an antiferment, internally and externally. Dose, 3-10 grains (0.2-0.666 Gm.). **s. bisulphite**, $NaHSO_3$. It is used as an antiseptic. **s. biurate** exists in certain gouty deposits. **s. borate**. See *borax*. **s. borate, neutral**, an antiseptic used for wounds and for eye diseases. See *antipyrone*. **s. borobenzoate**, an antiseptic and antilithic; composed of 3 parts of sodium borate, mixed with sodium benzoate. **s. bromide**, NaBr, a substance in white or colorless crystals: used in epilepsy, hysteria, and as a hypnotic sedative. Dose, 5-30 grains (0.333-2 Gm.). **s. cacodylate**, an arsenical remedy, $(CH_3)_2AsO_3ONa$, dimethyl arsenate, in the form of a white, amorphous powder, soluble in water. It is used in tuberculosis, anemia, malaria, psoriasis, etc. Maximum daily dose, 1-3 grains (0.065-0.2 Gm.), hypodermically. **s. caffeine sulphonate**. The same as *symphorol*. **s. cantharidate**, a preparation of sodium hydroxide and cantharidin: in solution it is used subcutaneously in tuberculosis. **s. carbonate**, washing soda, $Na_2CO_3 + 10H_2O$; a salt in large, colorless crystals; antacid, antirheumatic, and irritant: used internally and externally in the form of baths. Dose, 5-20 grains (0.333-1.333 Gm.). **s. carbonate, dried**, the foregoing salt deprived of its water of crystallization. Dose, 5-15 grains (0.333-1 Gm.). **s. carbonate, monohydrated**, $Na_2CO_3 + H_2O$. **s. chlorate**, $NaClO_3$, a salt in colorless crystals: detergent and alterant. Dose, 5-20 grains (0.333-1.333 Gm.); of solution (*liquor*), 10-60 minims (0.666-4 cc.). **s. chloride**, common salt, NaCl, a white, crystalline compound, soluble in water. It is a necessary ingredient of the human body and consequently of food. Its properties are similar to those of potassium chloride. A 0.75-0.90 per cent solution (*physiologic sodium chloride solution*) is used for intravenous and other injections in hemorrhage and cholera, as a local application in rhinitis, conjunctivitis, etc.,

and as a preservative for microscopical specimens. Dose, 10–60 grains (0.666–4 Gm.). **s. chloroborate**, a white, crystalline, antiseptic agent. **s. cinnamate**, a white, crystalline agent, $\text{NaC}_9\text{H}_7\text{O}_2$, soluble in water, and used in the treatment of tuberculosis. Dose, $\frac{1}{4}$ –1 grain (0.02–0.065 Gm.). **s. citrate**, a white, crystalline salt, $2\text{Na}_2\text{C}_6\text{H}_5\text{O}_7 + 11\text{H}_2\text{O}$: purgative and antacid. Dose, 10–15 grains (0.65–1 Gm.). It is an ingredient of *sol'di citro-larvatis efferves'cens*. **s. citrobenzoate**, a white powder used in the treatment of asthma and bronchitis. **s. citrophosphate**. See *mela-chol*. **s. copaivate**, a salt: used like copaiba. **s. cresylate**, an alkaline antiseptic salt. **s. cyanide**, a powder soluble in water, NaCN : used like potassium cyanide. **s. diaphtholate**, a disinfectant substance. **s. dibromomercureate**, a soluble mercurial compound, $\text{HgBr}_2 \cdot \text{NaBr}$: used hydrochemically in syphilis. **s. diiodosalicylate**, $\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{COONa}$, an analgesic, antipyretic, and antiseptic agent, in white, scaly crystals. Dose, 8–15 grains (0.5–1 Gm.). **s. dimethylarsenate**. Same as *s. cacodylate*. **s. dioxide**, **s. peroxide**, a white powder, Na_2O_2 : used in dentistry as an antiseptic. **s. diphosphate**. See *sodium bi-phosphate*. **s. dithiosalicylate**. 1. A yellowish antiseptic powder: it is used externally, chiefly in veterinary practice. 2. A gray, antiseptic powder: useful in rheumatism. Dose, 3–15 grains (0.2–1 Gm.). These two salts represent two of the nine dithiosalicylic acid. **s. ethylate**, a white powder, $\text{CH}_3\text{CH}_2\text{ONa}$: used externally in the treatment of lupus and psoriasis. **s. ethylsulphate**, a salt in crystalline plates, $\text{NaC}_2\text{H}_5\text{SO}_4$: cathartic. **s. fluoride**. Same as *fluorol*. **s. fluosilicate**. See *s. silicofluoride*. **s. formate**, a white, crystalline substance, $\text{H} \cdot \text{CO} \cdot \text{ONa} \cdot \text{H}_2\text{O}$, soluble in water and glycerin. It is used by injection in surgical tuberculosis. Dose, $\frac{1}{4}$ –1 grain (0.025–0.08 Gm.). **s. glyceroborate**, an effective and nonpoisonous disinfectant. **s. glycerophosphate**, a nerve tonic salt, $\text{C}_3\text{H}_5(\text{OH})_2\text{PO}_2(\text{ONa})_2 + 7\text{H}_2\text{O}$; also a solution of the same. Dose, 3–4 grains (0.20–0.26 Gm.). **s. glycocholate**, a cholagogue salt, $\text{C}_{20}\text{H}_{37}\text{NO}_6\text{Na}$, obtained from bile. **s. guaiacol carbonate**, **s. methylsalicylate**, a white, antirheumatic powder. **s. gynocardate**, a yellowish-white powder: used in leprosy. Dose, 15–30 grains (1–2 Gm.). **s. hippurate**, a uric acid solvent. Dose, 5–15 grains (0.3–1 Gm.). **s. hydrate**, **s. hydroxide**, soda; a hard, white solid, NaOH , soluble in water. It is strongly alkaline and caustic. It is used as a caustic and as an antacid. Dose of *li'quor sol'da*, 5–30 minims (0.333–2 cc.). **s. hypophosphite**, a salt, $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$, used in skin diseases, tuberculosis, and rickets. Dose, 5–20 grains (0.333–1.33 Gm.). **s. hyposulphite**, $\text{Na}_2\text{S}_2\text{O}_3 + 5\text{H}_2\text{O}$, a salt in colorless prisms or plates, mostly used in skin diseases. Dose, 6–20 grains (0.333–1.333 Gm.). **s. indigotindisulphonate**, indigo carmine, the sodium salt of indogotindisulphonic acid, $\text{C}_{16}\text{H}_8\text{O}_2\text{N}_2(\text{SO}_3\text{Na})_2$, a blue powder or purple mass: used as a stain in histology and as a test for sugar. **s. iodate**, NaIO_3 , a salt used as an alternative, especially in diseases of the mucous surfaces. **s. iodide**, NaI , a binary haloid in colorless crystals: used in syphilis, rheumatism, hepatic diseases, etc. Dose, 5–15 grains (0.333–1 Gm.); of solution (*li'quor*), 5–30 minims (0.333–2 cc.). **s. kakodylate**. See *s. cacodylate*. **s. kussinate**, a whitish-yellow, amorphous salt, $\text{NaC}_{10}\text{H}_{17}\text{O}_{10}$: used to expel tapeworms. **s. lygosinate**, a greenish, crystalline compound, $\text{C}_{17}\text{H}_{12}\text{O}_8\text{Na}_2 + 7\text{H}_2\text{O}$, the sodium salt of dioxydibenzol acetone: used in 3 to 8 per cent solution in gonorrhea. **s. metaxyocyaninamate**. See *zimphe*. **s. metavanadate**, a very poisonous vanadium salt, NaVO_3 . Its use stimulates nutrition and improves the appetite: used in anemia, neurasthenia, diabetes, and tuberculosis. Daily dose, 1–5 grains (0.065–0.33 Gm.). **s. methylarsenate**. See *arsenal*. **s. methylsulphate**, a colorless crystalline cathartic salt,

$\text{NaO} \cdot \text{SO}_2 \cdot \text{OCH}_3$. **s. monosulphate**, a salt, Na_2SO_4 , recommended for lead poisoning. **s. morrhuate**, a salt used in the treatment of leprosy and tuberculosis. **s. naphtholate**, Same as *microcidin*. **s. nitrate**, Chili salt-peter, NaNO_3 , a compound with purgative properties, sometimes administered for dysentery. Dose, 8–40 grains (0.5–2.5 Gm.). **s. nitrite**, a white crystalline salt, NaNO_2 : used in angina pectoris, epilepsy, sea sickness, atony, and functional disorders of the bladder. Dose, $\frac{1}{4}$ –3 grains (0.033–0.2 Gm.). **s. nucleinate**, a white powder: employed in puerperal infections; also in pneumonia and in the diagnosis of tuberculosis. Dose, 30–45 grains (2–3 Gm.). **s. oleate**, the sodium salt of oleic acid, $\text{NaC}_{18}\text{H}_{33}\text{O}_2$, used in laxative pills: said to have useful action on the biliary tract. **s. orthovanadate**. See *northovan*. **s. ossalinate**, a salt of an acid obtainable from ox marrow: used like cod liver oil. **s. oxylphanaphtholate**, a white powder, $\text{C}_{10}\text{H}_6\text{OH} \cdot \text{COONa}$: antiseptic and antipyretic. **s. paracresolate**, a bitter, colorless, crystalline powder, the sodium salt of oxytoluic acid, $\text{CH}_3 \cdot \text{C}_6\text{H}_4(\text{OH}) \cdot \text{COONa}$: used in acute rheumatism. Daily dose, 45–90 grains (3–6 Gm.). **s. parafuorbenzoate**, a white powder: used internally for lupus, with great caution. **s. perborate**, a compound, $\text{NaBO}_3 \cdot 4\text{H}_2\text{O}$, formed by treating sodium peroxide with boric acid. On dissolving the substance in water peroxide of hydrogen is generated. **s. peroxide**, Na_2O_2 , a white powder soluble in water in which it liberates oxygen. **s. persulphate**, a compound, $\text{Na}_2\text{S}_2\text{O}_8$, having tonic and antipyretic properties. As it liberates oxygen easily, it is used in 3 to 5 per cent solution as a dressing for ulcer, lupus, etc. **s. phenolsulphonate**. Same as *s. sulphocarbolate*. **s. phenol sulphuricinate**, a caustic liquid employed in the treatment of diphtheria. **s. phenosuccinate**, a white powder: antipyretic and antineuralgic. Dose, $\frac{1}{4}$ –46 grains (0.5–3 Gm.). **s. phosphate**, a salt, $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$: used as an aperient and cholagogue in diarrhea, jaundice, scrofula, rickets, etc. Dose, 5–30 grains (0.3–2 Gm.). **s. phosphate, effervescent**, a dry granular mixture of exsiccated sodium phosphate, sodium bicarbonate, tartaric acid, and citric acid. It liberates carbon dioxide in water. **s. phosphate, exsiccated**, the anhydrous salt, Na_2HPO_4 . **s. and potassium tartrate**. See under *potassium*. **s. pyroborate**. See *borax*. **s. pyrophosphas**, **s. pyrophosphate**, $\text{Na}_4\text{P}_2\text{O}_7 + 10\text{H}_2\text{O}$, a salt in colorless prisms: used in pharmacy. Dose, 5–20 grains (0.3–1.33 Gm.). **s. quadriurate**, exists in certain samples of gouty urine. **s. salicylate**, a white, crystalline salt, $\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{COONa}$: antirheumatic: it is the salt usually employed to obtain the constitutional effect of salicylic acid. Dose, 2–10 grains (0.133–0.666 Gm.). **s. santoninate**, a vermicide remedy, effective, but said to be dangerous: used in eye diseases to stimulate the visual powers. Dose, 2–8 grains (0.13–0.5 Gm.). **s. silicate**, Na_2SiO_3 : antiseptic. Its aqueous solution (liquid glass) hardens to a glasslike solid, and is used in preparing immovable surgical dressings. **s. silico-fluoride**, a white, crystalline, antiseptic substance, Na_2SiF_6 . It is used as an antiseptic, deodorant, and styptic in wounds, carious teeth, cystitis, gonorrhea, etc., in a 1 : 500 solution. **s. sozoidolote**, a white, crystalline powder, $\text{C}_8\text{H}_{12}\text{OH} \cdot \text{SO}_3\text{Na} + 2\text{H}_2\text{O}$: antiseptic, and is used internally and subcutaneously in phthisis. Dose, internally, 4–8 grains (0.25–0.5 Gm.). **s. stearate**, $\text{CH}_3(\text{CH}_2)_{16}\text{COONa}$, a white soapy powder: used in skin diseases. **s. succinate**, a compound, $(\text{CH}_2 \cdot \text{CO} \cdot \text{ONa})_2$: used in catarrhal jaundice. Dose, 5–15 grains (0.3–1 Gm.). **s. sulphanilate**, a salt in white plates, $\text{C}_6\text{H}_4\text{NH}_2 \cdot \text{SO}_2\text{NaO} \cdot 2\text{H}_2\text{O}$: used in acute nasal catarrh. **s. sulphate**, Glauber's salt: a white, efflorescent salt, $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$: purgative. Dose, 5–20 grains (0.333–1.333 Gm.). **s. sulphite**, a salt in white crystals, $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$: an antiferment.

- Dose, 5–20 grains (0.333–1.333 Gm.). **s. sulphite**, **exsiccated**, the anhydrous salt, Na_2SO_3 . **s. sulphobenzoate**, a compound, $\text{ONa}.\text{SO}_2.\text{C}_6\text{H}_4.\text{CO}.\text{ONa}$: used as a urinary antiseptic. Dose, 15–30 grains (1–2 Gm.). **s. sulphocaffeate**. See *sympborol*. **s. sulphocarbonate**, a salt, $\text{OH}.\text{C}_6\text{H}_4.\text{SO}_2.\text{ONa} + 2\text{H}_2\text{O}$, in white or colorless prisms: antiseptic and antifermentative. Dose, 8–30 grains (0.518–2 Gm.). **s. sulphocyanate**, a compound, NaSCN , which has been used in the treatment of hypertension. Dose, 2 grains (0.15 Gm.), gradually increasing up to 5 grains (0.3 Gm.). **s. sulphoichthyolate**, a dark-brown, tarry substance: used like ichthyol. **s. sulphurinate**. See *polysoveal*. **s. sulphosalicylate**, a white, crystalline, astringent powder, $\text{C}_6\text{H}_3(\text{OH})\text{COOH}$ $\leftarrow$ SO_3Na soluble in water, and used as an antirheumatic like the salicylate. Dose, 2–10 grains (0.133–0.66 Gm.). **s. sulphovinate**, a white purgative salt, sodium ethyl sulphate, $\text{O}.\text{C}_2\text{H}_5.\text{SO}_3.\text{ONa}.\text{H}_2\text{O}$. Dose, 5 drachms (19 Gm.). **s. sulphurosobenzoate**, a colorless, liquid salt, a nontoxic antiseptic for external use. **s. taurocholate**, the sodium salt of taurocholic acid: used to stimulate biliary secretion. Dose, 2–6 grains (0.13–0.4 Gm.). **s. tellurate**, used in the night sweats of tuberculosis. Dose, $\frac{1}{2}$ – $\frac{3}{4}$ grain (0.01–0.02 Gm.). **s. tetraborate**. See *borax*. **tetrabromphthalain** **s.** See *tetrabromphthalain sodium*. **s. tetraiodophenolphthalain**. See *tetraiodophenolphthalain*. **s. thiocyanate**. See *s. sulphocyanate*. **s. thiolinate**, a soluble preparation of thiolin and soda: used like ichthyol in skin diseases. **s. thiophenate**, a white, antiseptic and antipruritic powder, $\text{SNa}.\text{C}_6\text{H}_4.\text{SO}_2.\text{ONa}$: used in ointments for prurigo. **s. thiophene sulphonate**, a white, crystalline salt, $\text{SC}_6\text{H}_4.\text{SO}_2.\text{ONa}$. **s. thiosulphate**, a material, $\text{Na}_2\text{S}_2\text{O}_3$, used in various chemical tests. Same as *s. hyposulphite*. **s. trioxybismuthobenzoate**, a soluble aromatic compound of bismuth containing about 50 per cent of bismuth. Dose of a 20 per cent solution intramuscularly, 30–45 minims (2–3 cc.). **s. triphenylosaniline**, alkal blue. **s. tumenol sulphonate**, a dry, dark-colored powder: used in the treatment of skin diseases. **s. valerianate**, a white, crystalline salt, $\text{NaC}_5\text{H}_9\text{O}_2$: a nerve stimulant and antispasmodic. Dose, 1–5 grains (0.065–0.33 Gm.). **s. vanadate**, used in anemia, diabetes, tuberculosis, neurasthenia. Subcutaneous dose, $\frac{1}{10}$ grain (0.001 Gm.); daily dose by the mouth, $\frac{1}{10}$ grain (0.002 Gm.).
- sodokosis** (so-do-ko'sis). Rat bite fever. See under *fever*.
- sodoku** (so'do-koo). Japanese name for rat bite fever.
- sodomist** (sod'o-mist). One who practises sodomy.
- sodomite** (sod'om-it). Sodomist.
- sodomy** (sod'o-me) [after the city of *Sodom*]. Copulation between males by the anus.
- sodophthalyl** (so-do-thal'il). Disodoquinone phenolphthalain: used as a laxative.
- sodor** (so'dor). The trade name for steel capsules containing liquid carbonic acid: used for impregnating beverages with carbonic acid.
- Soemmering's spot** (sem'er-ingz) [Samuel Thomas von *Soemmering*, physician in Frankfurt-am-Main, 1755–1830]. The macula lutea.
- sofos** (so'fos). A proprietary mixture of sodium dihydrogen phosphate and sodium hydrogen carbonate rendered stable by coating the particles of one of the constituents with 2 per cent sugar. When treated with water, sodium phosphate is formed and carbon dioxide is set free.
- softening** (sof'en-ing). The process of becoming soft; malacia; any morbid process of becoming soft, as of the brain or spinal cord, or of the vascular coats. **anemic s.**, disintegration of brain matter from deficient blood supply. **s. of the brain**. 1. A popular designation for progressive dementia with general paralysis. 2. True softening of the brain substance; encephalomalacia. **colliquative s.**, softening in which the tissues become liquefied. **gray s.**, a stage in which the fat produced by degeneration has been more or less absorbed. **green s.**, a stage in which there is green pus present in the degenerated spot. **hemorrhagic s.**, softening of a part due to hemorrhage into it. **inflammatory s.**, a form of red softening due to inflammation. **mucoid s.**, myxomatous degeneration. **pyriform s.** Same as *yellow s.* **red s.**, softening of a patch or of patches of brain substance, with local redness due to congestion. **s. of the stomach**, gastromalacia; softening of the stomach walls due to an extremely acid condition of its contents: the condition is usually seen after death. **white s.**, the stage next following yellow softening, in which the spot has become white from the presence of fatty deposit. **yellow s.**, the second of the three stages of the myelic process, characterized by fatty degeneration; the stage following red softening, in which the patch has become yellow as a result of degenerative changes.
- soil disease** (soil). Any disease caused by exhalations from decaying matter in the soil.
- soja bean** (so'yah). See *soy bean*.
- sokodu** (so-ko'doo). The Japanese name for rat bite fever.
- sokosha** (so-ka'sha). The Japanese name for rat bite fever.
- Sol**. Abbreviation for *solution*.
- sol** (sol). 1. A colloidal solution in which the mixture is liquid. See *gel*. 2. An abbreviation for *solution*.
- solaesthin** (so-les'thin). A proprietary brand of dichloromethane for use as an anesthetic.
- solandrine** (so-lan'drin). An alkaloid from the plant *Solan'dra lae'vis*, having properties like those of hyosine.
- solanaine** (so-lan'e-in). An alkaloid, $\text{C}_{48}\text{H}_{78}\text{NO}_{13}$, from *Solanum dulcamara*.
- solangustine** (so-lan-gus'tin). A crystalline alkaloid, $\text{C}_{33}\text{H}_{53}\text{NO}_7.\text{H}_2\text{O}$, from *Solanum angustifolium*.
- solanidine** (so-lan'id-in). An alkaloid, $\text{C}_{18}\text{H}_{31}\text{ON}$, derived from solanin.
- solanin** (so-lan'in). A poisonous narcotic substance, $\text{C}_{48}\text{H}_{78}\text{NO}_{12}$, obtainable as a white, opaque, powder, or crystalline substance from *Solanum nigrum* and other solanaceous plants. Dose, $\frac{1}{2}$ –1 grain (0.011–0.066 Gm.).
- solanoid** (so-lan-oid) [*L. solanum* potato + *ēidos* form]. Resembling a raw potato in texture.
- solanoma** (so-lan-o'mah). A solanoid cancer.
- Solanum** (so-la'num) [*L.* "nightshade"]. A genus of herbs and shrubs, including the potato, several of the nightshades, and many poisonous and medicinal species. **S. carolinense**, horse-nettle, a plant of the United States. The fluid extracts of the root and berries are used in epilepsy. Dose, 30 minims (2 cc.). **S. crispum**. See *natri*. **S. dulcamara**. See *bitter-sweet*. **S. mammosum**, the so-called apple of Sodom, a plant of North America; also its homeopathic preparation. **S. oleaceum**, the jaquerioba, an herb of tropical America; also a homeopathic preparation of its blossoms. **S. tomatillo**. See *natri*. **S. tuberosum**, the common potato.
- solar** (so'lar) [*L. solaris*]. 1. Pertaining to the sun. 2. Noting the great sympathetic plexus and its principal ganglia: so called from their radiating nerves. **s. plexus**. See *plexus*.
- solargentum** (sol-ar-jen'tum). A brand of mild silver-protein.
- solarium** (so-la're-um) [*L.*]. A sun parlor; a glass-enclosed room in which sun baths are taken.
- solarize** (so'lar-ize) [*L. sol* sun]. To expose to the sun.

solarson (sol-ar'son). A 1 per cent solution of ammonium heptenchlorarsenate: used as a means of administering arsenic in the treatment of anemia, chlorosis, malaria, neuroses, and dermatoses.

solation (sol-a'shun). The transformation of a gel into a sol.

Soldaini's reagent or test (sol-dah-e'nēz) [Arturo Soldaini, Italian chemist]. See under *tests*.

solder (sod'er or sol'der). A fusible alloy of metals used to unite the edges or surfaces of two pieces of metal.

soldier's heart. See under *heart*.

sole (sōl) [L. *sol'lea*; *plan'ta*]. The bottom of the foot.

convex s., dropped s. See *pumiced foot*, under *foot*.

s. plate, a mass of protoplasm in which motor nerve endings are embedded.

solenoid (so'len-oid). A cage in which the patient is placed in arsonvalization.

Solenop'tes capilla'tus. A sucking louse found on cattle.

solestina (so-les-ti'nah). A commercial brand of methylene chloride.

soleus (so'le-us) [L. "pertaining to the sole"]. See *muscles*, table of.

solferino (sol-fer-e'no). Same as *fuchsin*.

solid (sol'id) [L. *sol'idus*]. 1. Not fluid nor gaseous; not hollow. 2. A substance or tissue not fluid nor gaseous.

Solidago (sol-id-a'go) [L.]. An extensive genus of composite-flowered plants: the golden-rods. *S. virginica*, of Europe and North America, is aromatic and diuretic, and is employed as an astrigent vulnerary. Dose of fluidextract, $\frac{1}{2}$ -1 fl.oz. (15-30 cc.).

solidism (sol'id-izm) [L. *sol'idus* solid]. The obsolete doctrine that changes in the solids of the body, such as expansion or contraction, are the causes of every disease.

solidist (sol'id-ist). One who accepts the doctrine of solidism.

solidistic (sol'id-is'tik). Pertaining to solidism or to the solidists.

solitaenia (sol-it-e'ne-ah). A brown powder, consisting chiefly of an extract of pomegranate bark and castor oil: used for tapeworm.

solitary (sol'it-a-re) [L. *solita'rius*]. Placed alone; not grouped with others.

sol-lunar (sol-lu'nar) [L. *sol* sun + *lu'na* moon]. Caused by the sun and moon.

soloid (sol'oid). The trade mark name for preparations of compressed drugs for external use. **s. nizin**, tablets each one of which contains 2 grains (0.13 Gm.) of zinc sulphamate: used as an astrigent and antiseptic in gonorrhea.

Solomon's seal (sol'om-unz sēl). A popular name for various plants of the genus *Polygonatum*. *P. officinale* is a mucilaginous astrigent and vulnerary: used also in rheumatism. It is said to be poisonous in large doses. Dose of fluidextract of root, 1-2 fluidrachms (4-8 cc.).

solphinol (sol'fin-ol). An antiseptic mixture of borax, boric acid, and alkaline sulphites.

soliquinate (sol-kwin'at). A proprietary antiseptic preparation of oxyquinoline sulphate.

solubility (sol-u-bil'i-tē). The quality or fact of being soluble; susceptibility of being dissolved.

soluble (sol'u-bil) [L. *solu'bilis*]. Susceptible of being dissolved.

solubrol (sol'u-brol). A proprietary iodoform substitute.

solurol (sol'u-rol). A trade name for a preparation of nucleotin phosphoric acid. Called also *thyminic acid*.

solusin (so-lu'sin). A preparation containing bichloride of mercury, 1.4 parts; sodium arsenate, 0.5 part; sodium iodide, 24 parts; and water, 100 parts. It is used for intravenous injection.

solute (so-lūt'). A substance dissolved in a solution.

A solution consists of a solute and a solvent.

solutio (so-lu'she-o). Latin for *solution*.

solution (so-lu'shun) [L. *solu'tio*]. 1. The process of dissolving. 2. A liquid containing dissolved matter in a state of molecular subdivision, the whole forming a homogeneous mixture for the official solutions. See under *liquor*. 3. A loosening or separation. See also *contiguity*, *solution of*, and *continuity*, *solution of*.

Adams' s., a mixture of 100 parts ammoniated alcohol and 110 parts of ether (65°).

alcoholic s., a solution in which alcohol is the solvent.

Almén's s. See *Almén's test*, under *tests*.

ammoniacal silver s., add ammonium hydroxide to a 5.2 per cent solution of silver nitrate until the precipitate formed is redissolved and make the volume up to 2.6 per cent.

ammonium thiocyanate s., a solution of such strength (about 1.3 per cent) that 1 cc. of it is equal to 1 cc. of standard silver nitrate solution.

anisotonic s., a solution which is not isotonic.

aqueous s., a solution in which water is the solvent.

arsenical s. Same as *Fowler's s.*

Barfoed's s. See *Barfoed's test*, under *tests*.

basic lead acetate s., dissolve 180 Gm. of lead acetate in 700 cc. of boiling water, add 110 Gm. of finely powdered lead oxide (litharge) and boil one-half hour. Cool, filter, and add water to make 1 liter.

Belloste's s., solution of mercurous nitrate.

Beyrnick's s., a synthetic culture medium for the growth of nitrogen-fixing organisms. It contains potassium acid phosphate 1 Gm., magnesium sulphate 0.2 Gm., sodium chloride 0.02 Gm., 0.1 per cent solution of ferric sulphate 1 cc., 0.1 per cent solution of manganese sulphate 1 cc., and dextrose 20 Gm. in 1000 cc. of water.

Biett's s., solution of ammonium arsenate.

Bondin's s., a weak aqueous solution of arsenous acid and wine.

borosalicylic s. Same as *Thiersch's s.*

Boulton's s., a mixture of 110 minims of compound solution of iodine, 40 minims of liquefied phenol, 2½ fl.oz. of glycerin, and enough water to make 16 fl.oz. Called also *French mixture*.

buffer s., a solution which is able to resist appreciable change in its hydrogen ion concentration by taking up any excess of acid or alkali added to it.

Burnett's s., an aqueous solution of zinc chloride.

Burrow's s., alum, 5 parts, and lead acetate, 25 parts, dissolved in 500 parts of water: used in the treatment of burns and of eczema.

Calot's s., guaiacol 1 Gm., creosote 5 Gm., ether 30 cc., iodoform 10 Gm., and olive oil 70 cc.

centinormal s., a solution that is one-hundredth part as strong as the normal solution.

Channing's s., a solution of potassium mercuric iodide.

Christmas' s. See *phenosalyl*.

cleaning s., dissolve 100 Gm. of potassium bichromate in 10 per cent sulphuric acid and make up to 1 liter.

Clemens' s., liquor arsenii bromidi: a 1 per cent solution of the bromide of arsenic. Dose, 1-4 minims (0.066-0.266 cc.).

Cohn's s., a synthetic medium for growing yeast and molds. It contains monopotassium acid phosphate 5 Gm., calcium phosphate 0.5 Gm., magnesium sulphate 5 Gm., and ammonium tartrate 10 Gm., in water 1000 cc.

colloid s., colloidal s., a solvent containing minute particles of matter suspended in it. The solvent is called the continuous phase and the suspended matter the disperse phase. Called also *disperse system*. See *dispersoid* and *emulsoid*.

compound s. of cresol. See *liquor cresolis compositus*.

s. of contiguity, a dislocation, as of the bones of a joint.

s. of continuity, a break, division, or fracture, as of a bone.

Cutler's s., a solution containing equal parts of phenol, tincture of iodine, and chloral hydrate.

Dakin's s. See *surgical s. of chlorinated soda*.

Daufresne's s., a modified Dakin's solution: dissolve 200 Gm. of bleaching powder in 5 liters of water and make a separate solution of 100 Gm. of dry sodium carbonate and 90 Gm. of sodium bicarbonate in 5 liters of water; after filtering the two solutions are mixed.

decimolar s., a solution having one tenth the strength

of a molar solution. **decinormal s.**, a solution having one tenth the strength of a normal solution. **Delbet's s.**, a solution of 12.1 parts of anhydrous magnesium chloride in 1000 parts of water: used in irrigating wounds. **deodorant s.**, a solution of zinc sulphate, naphthol, oil of thyme, hypophosphorous acid, and water. **Dobell's s.**, an aqueous solution of sodium bicarbonate, borax, phenol, and glycerin: used as a wash or spray for nasal and throat diseases. **Donovan's s.**, a solution of the iodides of arsenic and mercury: used for cutaneous and venereal sores. Dose, 2-10 minims (0.133-0.666 cc.). See *Liquor arsenii et hydrargyri iodidi*. **Dujardin-Beaumetz's s.**, sodium carbonate, 1 part; potassium sulphate, 1 part; sodium lactate, 1 part; sodium phosphate, 0.5 part; sodium chloride, 3.1 parts, distilled water, 1000 parts: for injection in infectious diseases. **Dunham's s.**, a solution of 1 per cent of peptone and 0.5 per cent of sodium chloride in distilled water: used in making the indol test. **Ehrlich's s.**, a basic aniline dye dissolved in aniline oil and water. **Ehrlich-Biondi s.** See under *stain*. **Elsberg's s.**, a 20 per cent solution of iodine in alcohol and ether. **etheral s.**, a solution in which ether is the solvent. **Farrant's s.**, a mounting preparation used in bacteriological work: glycerin, water, arsenous acid solution, in equal parts, gum arabic, half a part. **Fehling's s.**, dissolve 34.65 Gm. of copper sulphate in water and make up to 500 cc.; dissolve 125 Gm. of potassium hydroxide and 173 Gm. of Rochelle salt in water and make up to 500 cc. For use mix equal parts of the two solutions. **Fischer's s.**, a solution of sodium chloride, 14 Gm., and sodium carbonate, 20 Gm., in 1000 cc. of water: used by rectal or intravenous injection in anuria from Bright's disease and eclampsia. **Flemming's s.**, a strong solution of aconite. **Fowler's s.**, a solution of potassium arsenite, made from 10 Gm. of arsenous acid, 20 Gm. of potassium carbonate, 30 cc. of compound tincture of lavender, and enough distilled water to make 100 cc. It is a very convenient form for the administration of arsenic. Dose, 3-10 minims (0.2-0.666 cc.). **Frohmann's s.**, an aqueous solution of cocaine hydrochlorate, morphine hydrochlorate, sodium chloride, antipyrine, and guaiacol: used as a local anesthetic in dentistry. **Gabbet's s.**, a solution containing methylene blue, 2 Gm.; sulphuric acid, 25 cc., and water, 75 cc. It is used as a decolorizer and contrast stain for tubercle bacilli. **Gannal's s.**, solution of aluminum acetate. **Golgi's s.**, a mixture of 1 part of an 8 per cent solution of potassium bichromate with 2 parts of a 1 per cent chromic acid solution. **gram molecular s.**, a solution containing a gram molecule of the substance to a liter of the solution. **Gram's s.**, iodine 1 part, and potassium iodide 2 parts, dissolved in 300 parts of water: used in Gram's method of staining. **Gulland's s.**, a mixture of 25 cc. of absolute alcohol, 25 cc. of ether, and 0.4 cc. of a 20 per cent alcoholic solution of corrosive mercuric chloride. **Hall's s.**, solution of strychnine acetate. **Harrington's s.**, a solution for hand disinfection consisting of commercial alcohol (94 per cent), 640 cc.; hydrochloric acid, 60 cc.; water, 300 cc.; corrosive mercuric chloride, 0.8 Gm. **Hayem's s.**, a fluid used in microscopical examination of the blood. It consists of corrosive mercuric chloride, 0.5; sodium sulphate, 5; sodium chloride, 1; and distilled water, 200. **Hershell's malt extract s.** See *malt extract solution*. **Hubl's iodine s.**, 25 Gm. of iodine and 30 Gm. of corrosive mercuric chloride in 1 liter of 95 per cent alcohol. **Huchard's s.**, sodium phosphate, 10 parts; sodium chloride, 5 parts; water, 100 parts: for injection in infectious diseases. **Hühnerfeld's s.**, a solution of glacial acetic acid, 2 cc.; distilled water, 1 cc.; and oil of turpentine and alcohol, each, 100 cc. **Huntoon's s.**, an aqueous solution of pneumococcus antibodies used in the treatment of lobar pneumonia. **hyperosmotic s.**, hyper-

tonic s., a solution having an osmotic pressure greater than that of blood serum. **hypobromite s.** Solution A: Dissolve 125 Gm. of sodium bromide in water, add 125 Gm. of bromine, and make up to 1 liter. Solution B is a 22.5 per cent solution of sodium hydroxide. For use 1 volume of solution A, 1 volume of solution B, and 3 volumes of water. **hyposmotic s.**, **hypotonic s.**, a solution having an osmotic pressure less than that of blood serum. **IKI s.**, any aqueous solution of iodine (I) with the addition of potassium iodide (KI) to render it more soluble. **isomotic s.** Same as *isotonic s.* **isotonic s.**, a solution having an osmotic pressure the same as that of some other solution with which it is compared. An *isotonic salt s.* is an aqueous solution of sodium chloride (0.9 per cent) having an osmotic pressure the same as that of the blood serum. **Javel s.**, a solution of sodium or potassium hypochlorite used as a wound antiseptic and in the purification of water. **Kaiserling's s.**, a solution for preserving morbid tissues, prepared by dissolving 30 Gm. of potassium acetate and 10 Gm. of potassium nitrate in 750 cc. of distilled water and adding 300 cc. of solution of formaldehyde. **Koppeschaar's s.**, a decinormal solution of bromine: used as a test. **Labarraque's s.**, a solution of chlorinated soda containing 2.5 per cent of available chlorine: disinfectant. See *soda, chlorinated*. **Lang's s.**, a solution of 0.75 Gm. of sodium chloride, 12 Gm. of mercury perchloride, 5 Gm. of acetic acid, in 100 cc. of distilled water. **Langé's s.**, a colloidal gold solution, made by adding 5 cc. of a 1 per cent solution of gold chloride and 5 cc. of a 2 per cent solution of potassium carbonate to 500 cc. of hot distilled water. This mixture is heated to the boiling point and then there is added 5 cc. of a 1 per cent solution of formaldehyde, the whole being shaken until it has a clear red color. **Leary's s.**, an antiseptic mouth wash consisting of an aqueous solution containing 1 per cent of iodine and 2 per cent of potassium iodide. **Locke's s.**, a solution of sodium chloride, 0.9 per cent; calcium chloride, 0.024 per cent; potassium chloride, 0.042 per cent; sodium bicarbonate, 0.01 to 0.03 per cent; and dextrose, 0.1 per cent. It is used in physiologic experiments to keep the mammalian heart beating. **Locke's s. (citrate)**, sodium chloride, 0.2 Gm.; potassium chloride, 0.5 Gm.; calcium chloride, 0.1 Gm.; sodium citrate, 10 Gm.; and distilled water to 1000 cc. After autoclaving the reaction is adjusted to pH 7.4. **Löffler's s.**, a solution of toluol and iron in alcohol: used locally in diphtheria. See *Löffler's method*, under *stain*. **Lugol's s.**, the official compound solution of iodine (liquor iodi compositus, U. S. P.), containing iodine 5, potassium iodide 10, distilled water to make 100. Dose, 1-10 minims (0.066-0.666 cc.). **Magendie's s.**, a solution of 16 grains of morphine sulphate in 1 fl.oz. of water: used for hypodermic injection. **malt extract s.**, a 2½ per cent solution of malt extract in water clarified and sterilized for use as a bacteriological culture medium. **Mandl's s.**, a solution used locally in chronic catarrh, consisting of 5 grains iodine, 10 grains potassium iodide, 2 minims phenol, and ½ oz. glycerin. **Mathieu's s.**, sodium sulphate, 6 parts; sodium phosphate, 4 parts; sodium chloride, 1 part; glycerin, 20 fluid parts; water, 100 fluid parts: for injection in infectious diseases. **Mayer's s.**, a solution of 1 part each of potassium phosphate, magnesium sulphate, and calcium phosphate in 200 parts of water: a bacterial culture liquid. **McDonald's s.**, a solution for sterilizing the hands and the skin of the abdomen consisting of acetone 40 parts, denatured alcohol 60 parts, and pyxol 2 parts. **Mencières s.** See *Mencières's mixture*, under *mixture*. **Mitchell's s.**, a solution of ½ grain of cocaine and 7½ grain of epinephrine in 50 cc. of normal salt solution, and another in 100 cc. of salt solution; the first is used in anesthesia and nerve blocking; the second, for general infiltration of the tissues. **molar s.**, **molar s.**, a solution containing

1 mol. (gram molecule) of the solute in 1 liter of the solution. **molecular disperse s.**, a true solution or a system in which the dispersed particles have a diameter of about 0.1 micron. **molybdate s.**, dissolve 100 Gm. of molybdic acid in 144 cc. of ammonium hydroxide (specific gravity 0.90), and 271 cc. of water. Then add slowly 480 cc. of nitric acid (specific gravity 1.42) and 1148 cc. of water. **Monsel's s.**, a styptic solution of basic ferric sulphate or subsulphate; liquor ferri subsulphatis. **Naegeli's s.**, a synthetic culture medium for growing yeasts and molds. It contains dibasic potassium phosphate 1 Gm., magnesium sulphate 0.2 Gm., calcium chloride 0.1 Gm., and ammonium tartrate 10 Gm., in 1000 cc. of water. **Nessler's s.** Same as *Nessler's reagent*, under *reagent*. **nitrate s.**, a bacteriological culture medium consisting of peptone 10 Gm., potassium nitrate 10 Gm., and water 1000 cc. **normal s.**, one which contains in each liter 1 Gm. of (acid) hydrogen or enough of the reagent to unite with or replace 1 Gm. of hydrogen. **normal salt s.** See *saline s.* **normal toxin s.**, a diphtheritic toxin bouillon which contains one hundred toxin units. **nuclear s.**, breaking up of a cell nucleus; carolysis. **Ochsner's s.**, phenol, 0.5 per cent; aqueous saturated solution of boric acid, 66 per cent; and alcohol, 33 per cent. **Orth's s.**, a histologic fixation mixture of 10 parts of Müller's fluid and 1 part of solution of formaldehyde. **Pacini's s.**, a solution used in microscopical examination of blood. It consists of corrosive mercuric chloride, 2; sodium chloride, 4; glycerin, 26; and distilled water, 226. **Panas' s.**, 1 part of mercuric iodide dissolved in 400 parts of alcohol and 20,000 parts of water; used in eye inflammations. **Pappenheim's s.** See under *stains*, *table of*. **Pasteur's s.**, a bacteriological culture medium for growing yeast and molds. It contains ammonium tartrate 10 Gm., cane sugar 100 Gm., and the ash from 10 Gm. of yeast in 1000 cc. of water. **Pavy's s.**, a solution containing in 1 liter 4.158 Gm. of copper sulphate, 20.4 of potassium hydroxide, 20.4 of potassium and sodium tartrate, and 300 cc. of ammonia water. **Pearson's s.**, liquor sodii arsenatis: the solution of sodium arsenate. **peptone salt s.** See *peptone water*, under *culture medium*. **Perenyi's s.**, an embryological fixing solution, consisting of 4 parts of a 10 per cent solution of nitric acid, 3 parts of alcohol, and 3 parts of a 0.5 per cent solution of chromic acid. **physiologic salt s.** See *saline s.* **Plehn's s.** See under *stains*, *table of*. **Plenck's s.**, an external syphilitic preparation made by dissolving 1 ounce of mercuric chloride and 1 drachm of camphor in 12 ounces of alcohol, and mixing it with a solution of 1 ounce of alum and 1 drachm of lead acetate in 12 ounces of vinegar; it should be used with care. **Potain's s.**, a mixture of equal parts of solutions of gum arabic, sodium sulphate, and sodium chloride: used for diluting the blood preparatory to counting the corpuscles. **Pregl's s.**, an antiseptic solution of the sodium salt of hydriodic acid and iodic acid with iodine (0.04 per cent). **protein-free s.** See *protein-free culture medium*. **Purdy's s.**, a solution containing copper sulphate, 4.752; potassium hydroxide, 23.5; stronger ammonia water, 350; glycerin, 38; and distilled water to make 1000 parts. **Rienzi's s.**, iodine, 1 part; potassium iodide, 3 parts; sodium chloride, 6 parts; distilled water, 1000 parts: for injection in infectious diseases. **Ringer's s.**, a physiologic solution used for perfusing the heart of a frog. It contains sodium chloride, 0.650; potassium chloride, 0.014; calcium chloride, 0.012; sodium bicarbonate, 0.020; monosodium phosphate, 0.001* (dextrose, 0.200); and water to 100. **Rotter's s.**, an antiseptic solution consisting of 2 Gm. of phenol, 3 Gm. of boric acid, 5 Gm. each of zinc chloride and zinc phenol-sulphonate, 5 centigrams of mercury chloride, 25 of sodium chloride, 60 of salicylic acid, and 10 each of thymol and citric acid. **Sachsse's s.**, a solution of potassium iodide, potassium hydroxide, and red

iodide of mercury in water: used as a test for sugar. **saline s.**, **salt s.**, a solution of sodium chloride, or common salt, in distilled water. *Normal* or, more correctly, *physiologic salt s.* is one that contains 0.9 per cent of salt. It resembles in action and density most of the animal fluids, and is used for intravenous injection after profuse hemorrhage or severe diarrhea. **Salkowski's s.**, a mixture of 2 parts of barium hydroxide solution saturated at room temperature with 1 part of barium chloride solution saturated at room temperature. **Sapelier's s.**, sodium chloride, 60 parts; potassium chloride, 5 parts; sodium carbonate, 32 parts; sodium phosphate, 1.5 parts; potassium sulphate, 3.5 parts; boiled water, 900 parts: for injection in infectious diseases. **saturated s.**, a solution in which the solvent has taken up all of the substance that it can hold in solution. **Schallibaum's s.**, a solution for attaching paraffin sections to slides, consisting of 1 part of celloidin in 3 or 4 parts of oil of cloves. **Schiassi's s.** See *Schiassi's serum*, under *serum*. **Schleich's s.** See *Schleich's anesthetic*, under *anesthetic*. **Schwarz's s.**, sodium chloride, 6 Gm.; solution of potassium hydroxide and sodium hydroxide, 2 minims; water, 1000 cc.; for injection in infectious diseases. **seminormal s.**, a solution containing half as much of a reagent as the normal solution. **Shive s.**, 10.4 cc. of a 0.5 molar solution of calcium nitrate, 30 cc. of a 0.5 molar solution of magnesium sulphate, and 36 cc. of a molar monopotassium and phosphate, mixed with enough distilled water to make 1 liter. **special acetic acid-acetate s.**, dilute 100 cc. of 50 per cent acetic acid with an equal volume of 5 per cent sodium acetate solution. **standard s.**, one which contains in each liter a definite amount of any reagent. Called also *volumetric s.* **standard amino-acid s.**, a solution of glycocoll, leucine, phenylalanine, or tyrosine which contains 0.07 mg. of nitrogen per cubic centimeter. **Stewart's s.** 1. A solution of 1 part of aluminum sulphate and 2 parts of chlorinated lime in 100 parts of water, the whole boiled for five minutes: used for sterilizing the hands of surgeons. 2. A solution containing 1 grain calomel in 2 oz. each of alcohol, glycerin, and tincture of iodine. **supersaturated s.**, a solution made in a heated condition, containing a greater quantity of a solid than could be dissolved at any ordinary temperature. **surgical s. of chlorinated soda**, a buffered aqueous solution of sodium hypochlorite containing about 0.23 per cent of active chlorine (Cl⁺) or 0.46 per cent available chlorine. It is prepared by the interaction of sodium carbonate and chlorinated lime, the final solute being treated with boric acid to obtain alkalinity pH 8 to 10. See *Carrel-Dakin treatment*, under *treatment*. **Suzmann's s.**, a saline infusion solution consisting of sodium chloride, 6 parts; sodium carbonate, 1 part; and distilled water, 1000 parts. **Sydmann's s.**, sodium chloride, 6 parts; sodium bicarbonate, 1 part; water, 1000 parts: for injection in infectious diseases. **test s.** See *test solution*. **Thiersch's s.**, a solution of boric acid, 12 parts, and salicylic acid, 2 parts, in 1000 parts of water: used as an antiseptic wash. **Thompson's s.**, liquor phosphori: a solution of 1 grain of phosphorus, 460 minims of absolute alcohol, 10 minims of spirit of peppermint, and 2 fl.oz. of glycerin. **Toison's s.** See under *stain*. **Tsuchiya's s.**, a solution of 1.5 Gm. of crystalline phosphotungstic acid in 100 Gm. of 96 per cent alcohol and 5 Gm. of concentrated hydrochloric acid: used for quantitative estimation of the albumin in the urine. **Tyrode's s.**, a modified Locke's solution containing magnesium. It is used especially for perfusing the intestine of the rabbit. It contains: Sodium chloride, 0.800; potassium chloride, 0.020; calcium chloride, 0.020; magnesium chloride, 0.010; monosodium phosphate, 0.005; sodium bicarbonate, 0.100; glucose, 0.100; and water to 100. **Uchinsky's s.**, a solution in 1000 cc. of water of 4 Gm. of asparagin,

- 6 Gm. of ammonium lactate, 2 Gm. of neutral sodium phosphate, and 5 Gm. of sodium chloride: used as a culture medium for bacteria. **van Swieten's s.**, a solution of corrosive mercuric chloride in 100 parts of alcohol and 900 parts of water. **Villate's s.**, a mixture of 6 parts each of zinc sulphate and copper sulphate with 12 parts of solution of lead subacetate and 20 parts of vinegar: used in the treatment of caries. **Vlemingck's s.**, liquor calcis sulphuratae; a mixture of fresh slaked lime, 2 parts; sublimed sulphur, 3 parts; and water enough to make 12 parts. It is used in seborrhea. **Volhard's s.**, a decinormal solution of potassium thiocyanate. **volumetric s.** See *standard s.* **Waller's s.**, to 1 liter of Hubl's solution add 50 cc. of strong hydrochloric acid. **Wijs's s.**, a solution of iodine monochloride made as follows: Dissolve separately in glacial acetic acid 9.4 Gm. of iodine trichloride and 7.2 Gm. of iodine. Mix, make up to a liter, and titrate. **Winogradsky's s.**, a synthetic culture medium for the growth of nitric organisms. It contains potassium phosphate 1 Gm., magnesium sulphate 0.5 Gm., calcium chloride 0.01 Gm., sodium chloride 2 Gm., and ammonium sulphate 2 Gm., in 1000 cc. of water. **Winogradsky's s.** (*for nitrous organisms*): It contains ammonium sulphate 1 Gm., potassium sulphate 1 Gm., and basic magnesium carbonate 5 to 10 Gm., in water 1000 cc. **Woelfler's s.**, benzoin varnish; a preparation made by shaking together 1 part of iodoform and 10 parts of compound tincture of benzoin: used to paint over raw tissues. **Wright's s.**, sodium citrate, 11 grains; sodium chloride, 20 grains, and distilled water to make 1 fl.oz. **Zenker's s.**, a fixative solution of corrosive mercuric chloride 5, potassium bichromate 2.5, sodium sulphate 1, water 100. **Ziehl's s.** See *stains, table of*.
- solutol** (sol'u-to'l). An antiseptic solution of cresol and sodium cresotinate.
- solv.** An abbreviation of Latin *sol've*, dissolve.
- solvable** (sol'va-bl). Soluble.
- solvate** (sol'vāt). A compound of one or more molecules of a solvent with the ions or with the molecules of a dissolved substance.
- solvation** (sol'va'shun). Chemical combination of a solvent with the solute.
- solvent** (sol'vent) [*L. solvens*]. 1. Dissolving; effecting a solution. 2. A liquid that dissolves or that is capable of dissolving.
- solveol** (sol've-ol). A patented solution of cresol and sodium cresotinate: disinfectant.
- solvin** (sol'vin). Sodium sulphuricinate: a brown, viscid liquid prepared from any fatty acid by the action of sulphuric acid, and neutralized with sodium hydroxide; it is a strong solvent, and destroys the red blood corpuscles: antiseptic.
- solvolysis** (sol'vol'is-is). A general term for double decomposition reactions of the type of hydrolysis, ammonolysis, and sulpholysis.
- solvosal** (sol'vo-sal). A compound, $C_6H_5.CO_2.C_6H_4.O.P(OH)_2$, or salol phosphorous acid, whose lithium salt is diuretic and antiseptic and is used like salicylic acid. Called also *salolphosphinic acid*.
- soma** (so'mah) [Gr.]. The body; the body tissue as distinguished from the germ cells.
- somacule** (so'mak-ul) [*σώμα* body]. The smallest possible particle of protoplasm.
- Somogyi's reflex** or **sign**. See under *reflex*.
- somal** (so'mal). Pertaining to the body.
- somaplast** (so'mah-plazm). Somatoplasm.
- somasthenia** (sōm-as-the'ne-ah) [*σώμα* body + *ἀ neg.* + *σθένος* strength]. A condition of bodily weakness, poor appetite and sleep, and inability to maintain a normal active life without easy exhaustion.
- somatalgia** (so-mat-al'je-ah) [*σώμα* body + *ἄλγος* pain]. Bodily pain.
- somatasthenia** (so'mat-as-the'ne-ah). Somasthenia.
- somatesthesia** (so-mat-es-the'ze-ah) [*σώμα* body + *αἴσθησις* sensation]. The consciousness of having a body.
- somatesthetic** (so-mat-es-thet'ik). Pertaining to somatesthesia.
- somatic** (so-mat'ik) [*σωματικός*]. Pertaining to the body; especially pertaining to the framework of the body, as distinguished from the viscera.
- somaticosplanchnic** (so-mat'ik-o-splank'nik). Somaticovisceral.
- somaticovisceral** (so-mat'ik-o-vis'er-al). Pertaining to the body and viscera.
- somatist** (so'mat-ist) [*σώμα* body]. A psychiatrist who believes that neuroses and psychoses are of physical origin and are based on bodily lesions.
- somatoblast** (so-mat'o-blast) [*σώμα* body + *βλαστός* germ]. Any one of the cytotoblasts aggregated in the protoplasm of the cell outside of the body.
- somatoceptor** (so-mat'o-sep-tor). A receptor concerned in receiving stimuli of the skeletal and somatic musculature.
- somatochrome** (so-mat'o-krōm) [*σώμα* body + *χρῶμα* color]. Any nerve cell which has a well-marked cell body completely surrounding the nucleus, its colorable protoplasm having a distinct contour: used also adjectively.
- somatoderm** (so-mat'o-derm) [*σώμα* body + *δέρμα* skin]. The somatic layer of mesoderm.
- somatodidymus** (so'mat-o-did'im-us) [*σώμα* body + *δίδυμος* twin]. A twin monster with the bodies united.
- somatodymia** (so'mat-o-dim'e-ah) [*σώμα* body + *δύειν* to enter]. The blending of the bodies of twin monsters into one.
- somatogenesis** (so'mat-o-jen'es-is) [*σώμα* body + *γένεσις* production]. The formation or emergence of bodily structure out of hereditary sources; the formation of somatoplasm out of germ plasm.
- somatogenetic** (so-mat'o-jen-et'ik). Aiding in the reproduction of the body.
- somatogenic** (so'mat-o-jen'ik) [*σώμα* body + *γεννᾶν* to produce]. Originating in the cells of the body.
- somatology** (so-mat-ol'o-je) [*σώμα* body + *λόγος* word]. The sum of what is known regarding the body; the study of the anatomy and physiology of the body.
- somatome** (so'mat-ōm) [*σώμα* body + *τέμνειν* to cut]. 1. An appliance for cutting the body of the fetus. 2. A somite.
- somatopagus** (so-mat-op'ag-us) [*σώμα* body + *πηγνύναι* to fix]. A double monstrosity with separate trunks.
- somatopathic** (so-mat-o-path'ik) [*σώμα* body + *πάθος* disease]. Disordered in body; organic, as distinguished from psychopathic or neuropathic.
- somatoplasm** (so-mat'o-plasm) [*σώμα* body + *πλάσσειν* to mold]. The protoplasm of the body cells as distinguished from that of the germ cells. Cf. *germ plasm*.
- somatopleural** (so'mat-o-plu'ral). Pertaining to the somatopleure.
- somatopleure** (so-mat'o-plūr) [*σώμα* body + *πλευρά* side]. 1. The somatic mesoblast; the upper layer of the mesoblast adjoining the epiblast, the under one being the splanchnopleure. 2. More correctly, the layer formed by the somatic mesoblast and the epiblast.
- somatopsychic** (so-mat-o-si'kik) [*σώμα* body + *ψυχή* mind]. Pertaining to both body and mind.
- somatopsychosis** (so'mat-o-si-ko'sis) [*σώμα* body + *psychosis*]. Southard's name for a mental disease symptomatic of bodily disease.
- somatoschisis** (so-mat-os'kis-is) [*σώμα* body + *σχίσσις* splitting]. Splitting of the bodies of vertebrae.

somatose (so'mat-ōs). A patented yellow food-powder made up of soluble albumoses derived from beef. **milk s.**, a similar preparation of albumoses derived from milk.

somatoplanchnopleuric (so'mat-o-splank-no-plu'rik). Pertaining to the somatopleure and the splanchnopleure.

somatotomy (so-mat-ot'o-me) [σώμα body + τέμνειν to cut]. The anatomy or dissection of the body.

somatotridymus (so'mat-o-trid'im-us) [σώμα body + τριδύμος threefold]. A fetal monster with three trunks.

somesthesia (so-mes-the'ze-ah). The sensibility to bodily feeling or bodily sensations.

somesthetic, somæsthetic (so-mes-thet'ik) [σώμα body + αἰσθησις sensation]. Pertaining to the bodily sensations.

somital (som'it-al). A proprietary preparation for general anesthesia.

somite (so'mit) [σώμα body]. 1. A segment of the trunk of the embryo; one of the segmented masses of mesoderm in the vertebrate embryo which gives rise to the somatic muscles. Called also *myotome*, *primitive segment*, *mesodermal segment*, *mesoblastic s.* or *provertebral s.* Same as *metamere*.

somnal (som'nal) [L. *son'nus* sleep]. A clear, colorless liquid, $C_7H_{12}NO_5Cl_3$, from urethane, alcohol, and chloral. It is hypnotic and diuretic. Dose, in alcoholic solution (1-3 parts), 20-60 minims (1.333-4 cc.).

somnalgisin (som-nal-je'sin). A proprietary sedative, analgesic, and antipyretic. Dose, 1-5 grains (0.065-0.33 Gm.).

somnambulance (som-nam'bu-lans). Somnambulism.

somnambulation (som-nam-bu-la'shun). Sleep walking.

somnambulism (som-nam'bu-lizm) [L. *somnambulis'mus*; *son'nus* sleep + *ambula're* to walk]. 1. Habitual walking in the sleep. 2. A hypnotic state in which the subject has the full possession of his senses.

somnambulist (som-nam'bu-list). A person who walks in his sleep; a sleep walker.

somnarium (som-na're-um) [L. *son'nus* sleep]. An institution for the treatment of functional neuroses by sleep.

somnificient (som-nif'a-shent) [L. *son'nus* sleep + *fac'ere* to make]. 1. Causing sleep; hypnotic. 2. A medicine which induces sleep.

somnifen, somnifene (som'nif-ēn). A soluble hypnotic, diethyl-diallyl-barbiturate of diethylamine.

somniferin (som-nif'er-in) [L. *son'nus* sleep + *fer're* to bring]. 1. A derivative of morphine, said to be safer and more effective than morphine. 2. A narcotic alkaloid from *Wittia'nia somnifera*.

somniferous (som-nif'er-us) [L. *son'nus* sleep + *fer're* to bring]. Inducing or causing sleep.

somnific (som-nif'ik). Somnificient.

somniloquence, somniloquism, somniloquy (som-nil'o-kwens, som-nil'o-kwizm, som-nil'o-kwe) [L. *son'nus* sleep + *lo'qui* to speak]. The habit of talking in one's sleep.

somniloquist (som-nil'o-kwist). One who talks in his sleep.

somnipathist (som-nip'ath-ist) [L. *son'nus* sleep + πάθος illness]. A person in or subject to hypnotic trance.

somnipathy (som-nip'ath-e) [L. *son'nus* sleep + πάθος sickness]. A condition of hypnotic trance.

somnoform (som'no-form). A mixture of 60 parts of ethyl chloride with 35 parts of methyl chloride and 5 parts of ethyl bromide: used as an anesthetic for minor operations.

somnol (som'nol) [L. *son'nus* sleep]. Chloretthral alcoholate, $C_8H_{11}O_5Cl_3$; a hypnotic and cerebral sedative: used like chloral hydrate.

somnolence (som'no-lens) [L. *somnolen'tia* sleepiness]. Sleepiness; also unnatural drowsiness.

somnolent (som'no-lent) [L. *somnolent'us*]. Affected with somnolence.

somnolentia (som-no-len'she-ah) [L.]. 1. Drowsiness, or somnolence. 2. Sleep drunkenness; a condition of incomplete sleep in which some of the faculties are excited while the rest are in repose. The patient is excited and may become violent.

somnolism (som'no-lizm). A state of mesmeric, or hypnotic, trance.

somnone (som'nōn). A proprietary hypnotic preparation of opium, lactucarium, and lupulin. Dose, 15-30 minims (1-2 cc.).

somnos (som'nos). A proprietary chloral preparation.

somnus (som'nus) [L.]. Sleep.

somnopsychosis (so'mo-si-ko'sis) [σώμα body + ψυχοσις]. A mental disorder in which the symptoms are chiefly bodily, that is, sensory, motor, or visceral, in character.

somosphere (so'mo-sfēr) [σώμα body + σφαίρα sphere]. One of the elements of the archiplasm.

sonde coudé (sond koo-da') [Fr. "bent sound"]. A catheter with an elbow, or sharp, beaklike bend, near the end.

soneryl (son'er-il). A white, crystalline hypnotic, butyl-ethyl-barbituric acid. Dose by mouth, 2-4 grains (0.1-0.2 Gm.); by subcutaneous injection, 1-2 grains (0.05-0.1 Gm.).

sonifer (son'if-er) [L. *son'us* sound + *fer're* to bear]. A variety of ear trumpet.

sonitus (son'it-us) [L. "sound"]. A sounding or tinkling in the ears; tinnitus aurium.

Sonne dysentery (son'e) [Carl Sonne, Danish bacteriologist]. A form of dysentery caused by a strain of organisms (*Sonne bacillus*, *Sonne organism*) differing from those of Shiga and of Flexner.

sonnin (son'in). An antiseptic compound of boric acid and phenols.

sonometer (so-nom'et-er) [L. *son'us* sound + μέτρον measure]. 1. An apparatus for testing acuteness of hearing. 2. An instrument for measuring the ratios of sound vibrations in various bodies.

sonorous (so-no'rus) [L. *son'rus*]. Resonant; sounding.

soor (sōr). German for *thrush*.

soot cancer, soot wart (soot). The scrotal cancer of chimney sweepers.

sophistication (so-sis-tik-a'shun) [σοφιστικός deceitful]. The adulteration of food or medicine.

sophol (so'fol). A proprietary preparation of formaldehyde, nucleic acid, and silver; silver formonucleinate: used in gonorrheal ophthalmia.

sophomania (sof-o-ma'ne-ah) [σοφός wise + μανία madness]. An insane belief in one's own great wisdom.

Sophora (sofo'ra) [Arabic *sofāra*]. A genus of leguminous trees and shrubs. The root and seed of *S. tomentosa* are used in India to arrest choleraic vomiting. For certain poisonous species, see *loco*.

sophorine (sofo'o-rin). A fluid alkaloid found in the seeds of various species of *Sophora*; it is poisonous and has properties like those of Calabar bean.

sopor (so'por) [L.]. Sound, deep, or profound sleep.

soporiferous (so-po-rif'er-us) [L. *so'por* sleep + *fer're* to bring]. Inducing deep or profound slumber.

soporific (so-po-rif'ik) [L. *soporif'icus*]. Causing or inducing profound sleep.

soporose, soporous (so'po-rōs, so'por-us) [L. *so'porus*]. Associated or affected with coma or profound slumber.

S. op. s. Abbreviation for *L. si o'pus sit*, if necessary.

Soranus (so-ra'nus). A celebrated Greek physician, the most renowned gynecologist of antiquity, born at Ephesus and educated at Alexandria. He lived under the reigns of the emperors Trajan and Hadrian. Among his writings are "Acute and Chronic Diseases" and "On the Obstetric Art," parts of which have survived.

sorbefacient (sor-be-fa'shent) [*L. sorbere* to suck + *facere* to make]. 1. Promoting absorption. 2. A remedy that promoted absorption.

sorbite (sor'bit). A crystalline, hexahydric alcohol, $\text{CH}_2\text{OH}(\text{CHOH})_4\text{CH}_2\text{OH}$, from the tree *Sorbus aucuparia*. It is also called sorbitol, has a sweet taste, and yields dextrose on oxidation.

sorbose (sor'bōs). A ketl-hexose, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{COCH}_2\text{OH}$, resembling levulose in its properties, but much more easily crystallized. It can be obtained from the juice of the berries of the mountain ash after the sorbitol of the juice has been oxidized by *Bacterium xylinum*.

sorcymes (sor'simz). Combinations of albuminous bodies with metals in such wise that in the breaking down process of the former the metals are set free; the detection of the free metals by the usual chemical reagents is then a measure of the albuminoid decomposition. In the serodiagnosis of pregnancy, a combination of iron and placental extract is used. When used in diagnosis, the preparations are called *diastorcymes*; when employed to bring about reactions against pathologic processes for therapeutic purposes, they are called *serasorcymes*.

sordes (sor'dēz) [*L. "filth"*]. The dark-brown, foul matter which collects on the lips and teeth in low fevers. It consists of a mixture of food, epithelial matter, and micro-organisms. **s. gas-tricæ**, undigested food, mucus, etc., in the stomach.

sore (sōr). A lesion of the tegument, such as an ulcer or abscess; less frequently, a wound. **chrome s.** See *chrome ulcer*, under *ulcer*. **fungating s.**, a soft chancre with granulations. **hard s.**, a chancre. **Lahore s.** See *furunculus orientalis*. **Madagascar s.**, **oriental s.** See *furunculus orientalis*. **Moulton s.**, **furunculus orientalis. **Naga s.**, a chronic and malignant form of ulcer occurring among workers in tea gardens in Assam. **Pendjeh s.**, **furunculus orientalis. **soft s.**, a chancroid. **Umballa s.**, **furunculus orientalis. **Veldt s.**, an ulceration on the legs and forearms, occurring in South Africa. **venereal s.**, a chancreoid.******

sore-head. See *epithelioma contagiosum*.

sore-shins. Periostitis of the metacarpal bones of the horse.

sore throat (sōr thrōt') See *laryngitis*, *pharyngitis*, *tonsillitis*. **clergyman's s.**, dysphonia clericorum. **cyclists' s.**, a form of sore throat peculiar to bicyclers, and said to be due to inhalation of road dust. **diphtheria s.**, croupous tonsillitis. **Fothergill's s.**, ulcerative angina of severe scarlatina. **hospital s.**, septic inflammation of the pharynx and fauces sometimes affecting nurses and interns in hospitals. **putrid s.**, gangrenous pharyngitis. **septic s.**, a severe type of sore throat occurring in epidemics, marked by intense local hyperemia with or without a grayish exudate and enlargement of the cervical lymph glands. It is caused by a peculiar type of hemolytic streptococcus, the infection being spread by direct contact or by milk. Called also *streptococcus sore throat* and *streptococcus tonsillitis*. **spotted s.**, follicular tonsillitis. **streptococcus s.** See *septic s.* **ulcerated s.**, putrid sore throat.

Soret effect (so-ra'). See under *effect*.

sorghum (sor'gum) [*L.*]. 1. A cerealike grass, *Andropogon sorghum*, of many varieties: cultivated for its juice, from which sugar and syrup are prepared. It is frequently a cause of poison-

ing to cattle who eat it. 2. A syrup prepared from the above: used as an article of food. The seed of broomcorn, a cultivated variety of *A. saccharatum*, is a soothing diuretic. Dose of fluidextract, 1 fluidrachm (4 cc.).

sorisin (so-rī'sin). A solution of sulphoguaiacolate of sodium with iron or arsenic in syrup of orange: used as a tonic for anemic and poorly nourished children.

soroche, sorroche (sor-o-chā') [*Sp. "antimony"*]. Mountain sickness of the Andes, incorrectly ascribed to metallic exhalations.

sororiation (so-ro-re-a'shun) [*L. sororia're* to increase together]. Increase in size of the breasts at puberty.

sorption (sorp'shun). The combination of water within a colloid or coagulum.

S. O. S. Abbreviation for *L. si o'pus sit*, if occasion require, if necessary.

sonon (so'son). An artificial food product, recommended as a substitute for meat.

soteroocyte (so'ter-o-sit) [σωτηρ savior + κύτος cell]. Platelet.

sotopan (so'to-pān). A proprietary compound stated to be composed of quinine, iron, bromine, calcium, and phosphoric acid: stomachic, sedative, and roborant.

soudan III (soo-dān'). A diazo compound: used as a stain for fats. See *sudan*.

soudanite (su'dān-ēt) [*Fr.*; from *Sudan* (Arabic *sudan* black), in Africa]. A fever of tropical Africa, often leading to homicidal mania.

souffle (soof'fl) [*Fr.* a puff; *L. sufflare* to blow]. A soft, blowing, auscultatory sound. **cardiac s.**, any cardiac murmur of a blowing quality. **electric s.**, the aura, or slight current of electrified air, which passes from a static electric machine while it is in action. **fetal s.**, a blowing sound sometimes heard in pregnancy: supposed to be due to compression of the umbilical vessels. **funic s.**, **funicular s.**, a hissing souffle synchronous with the fetal heart sounds, and supposed to be produced in the umbilical cord. **placental s.**, a souffle supposed to be produced by the blood current in the placenta. **splenic s.**, a sound said to be sometimes audible over a diseased spleen. **umbilical s.** Same as *funicular s.* **uterine s.**, a sound made by the blood within the arteries of the gravid uterus.

soual (soo'al). A severe form of scabies in Arabs.

soul pain (sōl pān). Psychalgia.

souma, soumaya (soo'mah, soo-mah'yah). A disease of cattle, horses, goats, and camels in the Sudan; caused by the *Trypanosoma vivax*, which is transmitted by various species of *Glossina*.

sound (sownd) [*L. sonus*]. 1. The effect produced on the organ of hearing by the vibrations of the air or other medium. 2. The vibrations collectively which normally impress the organs of hearing. 3. An instrument to be introduced into a cavity, so as to detect a foreign body or to dilate a stricture. **anasarcous s.**, a bubbling sound of moist quality often heard over edematous skin. **auscultatory s.**, any sound heard on auscultation. **bandbox s.**, a highly resonant sound elicited by percussion over the chest in cases of emphysema of the lung. **Beatty-Bright friction s.**, the friction sound of pleurisy. **bell s.** Same as *bruit d'arain*. **Belloco's s.** See *Belloco's cannula*, under *cannula*. **bellows s.**, an endocardial murmur resembling the sound made by a bellows. **Béniqué's s.**, a lead or tin sound, having a wide curve, for dilating urethral strictures. **bottle s.** Same as *amphoric rôle*. See *rôle*. **cardiac s.** Same as *heart sounds*. **coin s.** Same as *bruit d'arain*. **s.-conducting apparatus**, the parts of the auditory apparatus external to the cochlea. **cracked-pot s.**, a percussion sound indicative of a pulmonary cavity into which the breath may pass. **cracked-pot s.**,

cranial, a peculiar sound due to the separation of the cranial sutures from a cerebellar tumor. **esophageal s.**, a long, flexible sound for exploring the esophagus. **flapping s.**, the peculiar sound made by the closure of the heart valves. **friction s.**, any sound produced by the rubbing of one surface over another. **heart s's**, the two sounds heard over the cardiac region. The first is dull and prolonged, and occurs along with the systole of the ventricles; the second occurs along with the closure of the semilunar valves, and is short and sharp. **hippocratic s.**, the succussion sound heard in pyopneumothorax or seropneumothorax. **kettle-singing s.**, a sound resembling the boiling of water in a kettle: heard in the chest in the early stages of pulmonary tuberculosis. **lacrimal s.**, a sound of small caliber for use in the lacrimal canal. **metallic s.**, a sound having a metallic quality heard especially over cavities in the chest. **mid-diastolic s.**, a sharp sound heard on auscultation just before the first sound of the heart, produced by the auricular systole when the auricular and ventricular systoles are discontinuous. **muscle s.**, the sound heard over a muscle when in a condition of contraction. **peacock s.**, a quality of voice due to various defects and lesions of the air passages. **s.-perceiving apparatus**, the cochlea and the auditory nerve, with its terminations and connections with the auditory nucleus and auditory center. **percussion s.**, any sound obtained by percussion. **respiratory s.**, any sound heard on auscultation over any portion of the respiratory tract. **shaking s.** Same as *succussion s.* **siphon s.**, a variety of tube or siphon for the stomach. **sizzling s's**, sounds as of fermentation in the stomach. **subjective s.** 1. Same as *phonism*. 2. The sound sometimes produced by the blood current in the ears of the auscultator. **succussion s's**, splashing sounds heard on succussion over a distended stomach and in hydropneumothorax. **to-and-fro s.**, the peculiar friction sound heard in pericarditis and pleuritis. **urethral s.**, a long, slim, slightly conical instrument of steel for exploring and dilating the urethra. **water-wheel s.** See *bruit de moulin*. **water-whistle s.**, a whistling sound heard over a fistula of the lung. **Winternitz's s.**, a double-current catheter. For other sounds, see under *bruit*, *fremitus*, *murmur*, and *râle*.

Souques' phenomenon, sign (soo-káz'). [Achille Souques, contemporary French neurologist]. See under *phenomenon* and *sign*.

sourwood (sow'er-wood). A small tree of North America, *Oxyden'drum arbo'reum*: its leaves are tonic, refrigerant, and diuretic. Dose of fluid-extract, $\frac{1}{2}$ -2 fluidrachms (2-8 cc.); of extract, 0.33-1 Gm.).

southernwood (suth'ern-wood). See *abrotanum*.

Southey's tubes (south'ez) [Reginald S. Southey, English physician, 1835-1899]. See under *tube*.

Soxhlet's apparatus (soks'lets) [Franz Soxhlet, German chemist, 1848-1926]. See under *apparatus*.

soya (so'yah). See *soy bean*.

soy bean (soy). The bean of the leguminous plant, *So'ja his'pida* (*Glyci'ne so'ja*), or Chinese bean. It contains little starch and is rich in albuminoids, and from it is prepared a meal which is used in making bread for diabetics. It also furnishes a ferment, urease. See *urease*.

Soymida febrif'uga (soi'mid-ah). A tree of southern Asia. The bark is bitter, astringent, and aromatic: very useful in intermittent fevers.

sozal (so'zal). Aluminum paraphenol sulpho-nate; a crystalline powder, $[\text{C}_6\text{H}_4(\text{OH})\text{SO}_3\text{O}]_2\text{Al}$, soluble in water, glycerin, and alcohol: used as an antiseptic in a 1 per cent solution, especially for application to ulcers:

sozalbumin (so-zal-bu'min) [*σώζειν* to save + *albumin*]. Any defensive protein that is not a toxalbumin.

sozin (so'zin) [*σώζειν* to save]. Any defensive protein occurring normally in the body. Sozins are distinguished as *mycosozins*, or those which act by destroying the bacteria themselves, and the *toxosozins*, or those that counteract the poisons generated by the bacteria.

soziodol (so-zi'o-dol). See *sozioidol*.

sozoborol (so-zo-bo'rol). A preparation of aristol and the borates and soziodates: used in nasal catarrh.

sozoderma (so-zo-der'mah). A proprietary antiseptic soap.

sozioidol (so-zi'o-dol). Sozioidolic acid: a proprietary antiseptic diiodoparaphenolsulphonic acid, $\text{C}_6\text{H}_2\text{I}_2(\text{OH})\text{SO}_3\text{H}$, occurring in acicular prisms, being a derivative of iodine and phenolsulphonic acid. It is used as an antiseptic, disinfectant, and parasiticide, chiefly in the form of soziodolates.

sozioidolate (so'zi-o-dol'-lät). Any compound of sozioidol. The sozioidolates of mercury, sodium, zinc, etc., are antiseptic remedies. **lead s.**, a compound in fine needles: antiseptic. **mercury s.**, a pale-yellow powder, $(\text{OH}.\text{C}_6\text{H}_2\text{I}_2.\text{SO}_3)_2\text{Hg}$, soluble in salt water: used locally and by injection in the treatment of syphilis. It is used in a 25 per cent solution or a 1 per cent ointment. **potassium s.**, a white, crystalline salt, $\text{C}_6\text{H}_2\text{I}_2(\text{OH})\text{SO}_3\text{K} + 2\text{H}_2\text{O}$: antiseptic; soluble in 10 parts of water: used as an antiseptic in burns, eczemas, etc., in 10 to 25 per cent dusting powder or 10 per cent ointment. **sodium s.**, a white, crystalline compound, $\text{C}_6\text{H}_2\text{I}_2\text{OH}.\text{SO}_3\text{Na} + 2\text{H}_2\text{O}$, soluble in water, glycerin, and alcohol: used as an antiseptic; internally, in diarrhea, diabetes, phthisis, etc., and externally in wounds, diphtheria, skin diseases, etc. Dose, 5-30 grains (0.3-2 Gm.); of solution, 1 to 8 per cent. **zinc s.**, an antiseptic, $(\text{C}_6\text{H}_2\text{I}_2(\text{OH})\text{SO}_3)_2\text{Zn} + 6\text{H}_2\text{O}$, in colorless crystals: used as an astringent antiseptic in gonorrhea, catarrh, etc., in 5 to 20 per cent dusting powder or 2 per cent solution.

sozolic acid (so-zol'ik). See *aseptol*.

Sp., sp. An abbreviation for *L. spir'itus*, spirit.

space (späs) [*L. spa'tium*]. Any area or cavity of the body. **apical s.**, the space between the wall of the alveolus and the apex of the root of a tooth. It is filled with the soft tissue of the peridental membrane and is the seat of alveolar abscess. **arachnoid s.** See *subarachnoid s.* and *subdural s.* **axillary s.**, the axilla. **Bogros' s.**, a space having the peritoneum above and the fascia transversalis below; in it the lower part of the external iliac artery can be found without cutting the peritoneum. **bregmatic s.**, the anterior fontanel. **Broca's s.**, the central part of the anterior olfactory lobe of the brain. **Burns' s.**, a triangular space just above the manubrium and between the two layers of the deep cervical fascia which here divides to be attached to the front and back of this bone. **cardiac s.**, the space on the surface of the chest which overlies the heart. The *deep cardiac s.* is the portion that lies over the lung-covered parts of the heart. The *superficial cardiac s.* is the area in the chest that lies over the portion of the heart that is not covered by the lung. **cartilage s's**, the spaces in hyaline cartilage which contain the cartilage cells. **cathodal dark s.** See *Crookes' s.* **cell s's**, the spaces in the ground substance of connective tissue enclosing the connective tissue corpuscles. **chyle s's**, the central lymphatic spaces of the villi of the intestine. **circumferential s.**, the space between the ciliary body and equator of the lens. **Colles' s.**, a space under the perineal fascia containing the transversus perinei, ischioavernosus, and bulbocavernosus muscles, the posterior scrotal or labial vessels and nerves, and the bulbous portion of the

urethra. **complemental s.**, the space between the two layers of the pleura at the lower border of the lung. **corneal s's**, the spaces between the lamellae of the substantia propria of the cornea which contain corneal cells and interstitial lymph. **Cotunnii's s.**, the space within the membranous labyrinth. **Crookes' s.**, a dark space at the cathode of a nearly exhausted roentgen-ray tube through which a current is being passed. Called also *cathodal dark s.* **cupola s.**, the attic of the tympanum. **Czermak's s's**, irregular vacant places in the interglobular substance of dentin. **dead s.** 1. A space remaining after suture of a wound which is not closed by the dressings that are applied. 2. The space within the bronchial tree, so called because the air filling this space is not useful in the respiratory process. **Douglas' s.**, Douglas' pouch. See *pouch*. **epidural s's**, the lymph spaces between the dura of the spinal cord and the periosteum lining the spinal canal. **epispinal s's**, the spaces between the substance of the spinal cord and the pia mater. **epitympanic s.**, the attic of the tympanum. **Fontana's s's**, the spaces between the processes of the ligamentum pectinatum of the iris. **haversian s's**, haversian cavities, irregular, marrow-filled cavities in spongy and in developing bones. **Henke's s.**, a space containing connective tissue between the spinal column and the pharynx and esophagus. **His' perivascular s's**, the lymph spaces that surround the blood vessels of the spinal cord. **intercostal s.**, the space between two adjacent ribs. **intercruial s.**, the triangular space between the crura cerebri. **interfascial s.** See *Tenon's s.* **interglobular s's**, irregular spaces near the periphery of the dentin due to defective calcification. **interlamellar s's**, the spaces between the lamellae of the cornea. **interosseous s's**, spaces between parallel long bones. **interpeduncular s.**, the posterior perforated space. **interpleural s.**, the mediastinum. **interproximal s.**, **interproximate s.**, the space between adjoining teeth; called also *septal s.* **interseptal s.**, a space in the embryonic heart between the superior and the spurious septa. **intervalvular s's**, the intervals—(1) between the aortic sinuses and (2) between the pulmonary sinuses on the outer side respectively of the aorta and the pulmonary artery. **intra-adventitial s.**, a lymph space in the brain just within the adventitial sheaths. **intravaginal s.** See *subvaginal s.* **Kiernan's s's**, interlobular lymph spaces in the liver. **Kretschmann's s.**, a depressed area in the attic of the tympanum below Prussak's space. **Kuhnt's s's**, a succession of radiating spaces in the eye containing aqueous humor. **Larrey's s's**, intervals between those parts of the diaphragm which are attached to the ribs and that which is attached to the sternum. **Leshaft's s.**, a rhombus which in some persons exists between the external oblique muscle in front, the latissimus dorsi behind, the serratus posticus above, and the internal oblique below. Here an abscess may point or a hernia occur. **lymph s.**, an open space connected with the lymphatic system; in a wide sense the term includes the serous and synovial cavities. **lymph s.**, **subdural**, an extensive capillary lymph cleft between the dura and the arachnoid. **Magendie's s's**, lymph spaces between the pia and arachnoid corresponding to the principal sulci of the brain. **Malacarne's s.**, the posterior perforated space. **Meckel's s.**, an intradural cavity which contains the gasserian ganglion. **mediastinal s.**, the mediastinum. **medullary s.**, the central space and intervals between the trabeculae of bone which contain the marrow. **Mohrenheim's s.**, a groove on the deltoid muscle for the cephalic vein and a branch of the acromiothoracic artery. **s. nerve.** See *nerve*. **Nuel's s.**, an opening in the organ of Corti between the outer brain cells and the outer rods. **parasinoidal s's**,

spaces in the dura along the superior longitudinal sinus which receive the venous blood. **Parona's s.**, a space between the pronator quadratus muscle and the deep flexor tendons in the forearm about 2 inches above the wrist, in direct continuity with tendon sheaths and middle palmar space. **perforated s.**, an area at the base of the brain pierced by several blood vessels. Called also *substantia perforata*. **perforated s.**, **anterior**. See *substantia perforata anterior*. **perforated s.**, **posterior**. See *substantia perforata posterior*. **perichoroid s.**, the space between the choroid and the sclera. **perivascular s.**, the Virchow-Robin space. **pharyngomaxillary s.**, the space included between the lateral wall of the pharynx, the internal pterygoid muscle, and the cervical vertebrae. **pneumatic s.**, any one of the accessory sinuses of the nose. **Poiseuille's s.**, that part of the cavity of a blood vessel, situated near the periphery, in which red corpuscles do not move. **popliteal s.**, the lozenge-shaped space at the back of the knee and thigh. **postperforated s.**, the posterior perforated space. **preperitoneal s.**, the space or series of alveolar spaces below the peritoneal tissue and in front of the bladder. Called also *Retzius' s.* **prevesical s.**, the space immediately above the os pubis and between the transversalis fascia and the posterior surface of the rectus abdominis muscle. **Prussak's s.**, a space in the attic having, above, the external ligament of the malleus, outward, Shrapnell's membrane, and the neck of the malleus inward. **retroperitoneal s.**, the space behind the peritoneum and in front of the spinal column and lumbar muscles. **retropharyngeal s.**, the space behind the pharynx containing areolar tissue. **Retzius' s.** See *preperitoneal s.* **Robin's s's**, minute spaces in the external coat of an artery connecting with the lymphatics. **Schwalbe's s.** Same as *subvaginal s.* **semilunar s.** See *Traube's s.* **s. sense.** See *sense*. **septal s.**, the deep portion of the interproximal space. See *interproximal s.* **subarachnoid s.**, a space between arachnoid and pia containing cerebrospinal fluid. **subdural s.**, a lymph space between the dura and the arachnoid. **subgingival s.**, the space between the gingiva and the tooth enamel which it covers. **subumbilical s.**, the somewhat triangular space within the body cavity just below the navel. **subvaginal s.**, a lymph space within the sheath of the optic nerve. **suprasternal s.**, Burn's space. **Tarin's s.**, the posterior perforated space. **Tenon's s.**, a lymph space between the sclera and Tenon's capsule. **thyrohyal s.**, the depressed space between the thyroid cartilage and hyoid bone in front. **Traube's semilunar s.**, an area on the left side and front of the lower part of the chest, over which the air in the stomach produces a vesiculotympanic sound. **triangular s.**, the triangular space on the external surface of the bladder between the vasa deferentia and the reflection of the rectovesical pouch. **undefended s.** Same as *pars membranacea septi*. **Virchow-Robin s.**, a lymph space between the outer and middle coats of an artery; called also *perivascular s.* **Westberg's s.**, the peri-aortic space between the pericardium and the beginning of the aorta. **yolk s.**, the space formed by the retraction of the vitellus of the ovum from the zona pellucida. **Zang's s.**, an interval on the supraclavicular fossa between the two lower tendons of the sternomastoid muscle. **zonular s's**, the intercommunicating spaces between the fibers of the suspensory ligament of the lens; called also *canal of Petit*.

spadic (spa'dik). The native name in western South America for the leaves of the coca plant when used for chewing.

spagiric (spaj-ir'ik). Pertaining to the obsolete alchemistic or paracelsian system of medicine.

spagurist (spa'jŭr-ist). An iatrochemist: a follower of Paracelsus.

Spahlinger's treatment (spah'lin-jerz) [Henry Spahlinger, a nonmedical research worker of Geneva]. See under *treatment*.

Spallanzani (span-an-zan'e), Lazzaro. An eminent Italian anatomist, 1729-1799. In 1768 he published "On the Action of the Heart in the Blood Vessels"; he also wrote several other treatises.

spanemia, spanaemia (span-e'me-ah) [σπανός scarce + αἷμα blood]. Poverty or thinness of the blood; anemia.

spanemic (span-e'mik). 1. Pertaining to or affected with spanemia; anemic. 2. A medicine that tends to impoverish the blood.

Spanish fly (span'ish). See *Cantharis*.

spanomenorrhea (span-o-men-o-re'ah) [σπανός scarce + μενορρhea]. Scanty menstruation.

spanopnea, spanopnoea (span-op-ne'ah) [σπανός scanty + πνοία breath]. A nervous affection, with slow, deep breathing and a subjective feeling of dyspnea.

sparadrap (spar'ad-rap) [L. *sparadrapum*]. A medicated bandage or plaster.

sparer (spar'er). A substance which is destroyed in metabolism, but which, through its destruction, lessens the destruction of other substances.

sparganosis (spar-gan-o'sis). Infestation with *Spar-ganum*.

Sparganum (spar-ga'nŭm). A group name for several larvae of the family Dibothriocephalidae, of which the adult form is unknown and the true genus, therefore, undetermined. **S. baxteri**, a species found in an abscess of the thigh in Africa. **S. mansoni**, a species found in China and Japan, perhaps the same as *Bothriocephalus mansoni*. **S. proliferum**, a species found in the connective tissue of man in Japan and in the United States.

spargosis (spar-go'sis) [σπάργωσις swelling]. Excessive swelling or distention, particularly of the mammae with milk.

spark (spark). A flash of light attended with a crackling sound, made by a discharge of electricity. **direct s.**, an electric spark which passes through the body from electrodes without the use of a Leyden jar.

Sparmannia africa'na (spar-man'e-ah). A mucilaginous African plant (order *Tiliaceae*): emollient.

sparteine (spar'te-in) [L. *spar'tium* broom]. A clear liquid alkaloid, $(CH_2)_2C_6H_5N.CH_2.C_6H_5N.(CH_2)_2$, from broom (*sco'parius*). It is poisonous, and acts like digitalis. Dose, $\frac{1}{2}$ -2 grains (0.033-0.133 Gm.). **s. sulphate**, a white, crystalline compound, $C_{15}H_{22}N_2.H_2SO_4 + 5H_2O$; a cardiac poison: used like digitalis. Dose, $\frac{1}{10}$ -1 grain (0.0065-0.065 Gm.).

sparium (spar'she-um) [σπάριον]. Same as *Sco'parius*.

spasm (spazm) [L. *spas'mus*; σπασμός]. A sudden, violent, involuntary, rigid contraction due to muscular action. When persistent, it is called *tonic s.*; when characterized by alternate contraction and relaxation, it is a *clonic s.*; also a sudden but transitory constriction of a passage, canal, or orifice. Spasm is attended by pain and interference with function, producing involuntary movement and distortion. **s. of accommodation**, spasm of the ciliary muscles, producing excess of accommodation for near objects. **athetoid s.**, a spasm in which the affected member makes movements like those of athetosis. **Bell's s.**, convulsive tic. **bronchial s.**, spasmodic contraction of the muscular coat of the bronchial tubes, such as occurs in asthma. **cadaveric s.**, rigor mortis causing movements of the limbs. **canine s.**, the sardonic grin. See *sardonic*. **carpopedal s.**, spasm of the wrist or foot, or of the thumbs and great toes: seen in children with rickets

and in cases of laryngismus stridulus. **cerebral s.**, one due to a cerebral lesion. **clonic s.**, a spasm in which rigidity of the muscles is followed immediately by relaxation. **cynic s.** See *risus sardonicus*. **facial s.**, clonic spasm of the muscles supplied by the facial nerve, either involving the entire side of the face or confined to a limited region around the eye. **fixed s.**, permanent rigidity of a muscle or set of muscles. **functional s.** Same as *occupation neurosis*. See *neurosis*. **habit s.**, habitually performed spasmodic movements; especially involuntary movements performed habitually in connection with particular acts, as teething. See also *tic*. **handicraft s.**, any occupation neurosis. **histrionic s.**, convulsive tic; convulsion of the facial muscles analogous to writers' cramp. **inspiratory s.**, spasmodic contraction of the muscles of inspiration. **intention s.**, muscular spasm occurring on attempting voluntary movement. **lock s.**, a firm tonic spasm that seems to lock the fingers together, as in writers' cramp and in other similar affections. **malleatory s.** Same as *malleation*. **mimic s.**, convulsion of the facial muscles. **mobile s.**, a tonic spasm with irregular movements of the extremities. It occurs especially after hemiplegia, and is then called *spastic hemiplegia* and *posthemiplegic chorea*. **myopathic s.**, that which accompanies a disease of the muscles. **nititating s.** Same as *winking s.* **nodding s.**, salaam convulsions; clonic spasm of the sternomastoid muscles, producing bowing motions. **occupation s.**, a spasm, such as writers' cramp, due to continual repetition of some movement. **perineal s.**, vaginodynia. **phonatory s.**, spasm of the tensors of the vocal bands. **professional s.** Same as *occupation s.* **progressive torsion s.**, dystonia musculorum deformans. **respiratory s.**, spasm of the muscles of respiration. **retrocolic s.**, spasmodic retroflexion of the head. **Romberg's s.**, masticatory spasm of the muscles supplied by the fifth nerve. **rotatory s.**, intermittent spasm of the splenius muscle causing rotation of the head. **salaam s.** Same as *nodding s.* **saltatory s.**, palmus; clonic spasm of the muscles of the legs, producing a peculiar jumping or springing motion in the patient. **sewing s.**, spasm of the muscles of the forearm and hand in those engaged in sewing, such as seamstresses, shoemakers, tailors, etc. **shoemakers' s.**, spasm of the muscles of the forearm and hand in shoemakers. **Smith's s.**, hephestic hemiplegia. See *hemiplegia*. **syncronic s.**, clonic spasm of more than one muscle. **tetanic s.** 1. Emphrothotonos, pleurothotonos, or opisthotonos. 2. Same as *tonic s.* **tonic s.**, spasm in which rigidity persists for a considerable time. **tonoclonic s.**, a convulsive twitching of the muscles. **tooth s.**, infantile eclampsia. **toxic s.**, that which is due to a poison. **winking s.**, spasmodic twitching of the orbicularis palpebrarum muscle and of the eyelid. **writers' s.**, writers' cramp.

spasmodermia (spaz-mo-der'me-ah) [σπασμός spasm + δέρμα skin]. A spasmodic affection of the skin.

spasmodic (spaz-mo'dik) [σπασμώδης]. Of the nature of a spasm.

spasmodism (spaz'mo-dizm). A spasmodic condition due to medullary excitation.

spasmology (spaz-mol'o-je) [σπασμός spasm + λόγος discourse]. The sum of what is known regarding spasms.

spasmolygmus (spaz-mo-lig'mus) [σπασμός spasm + λυγμός a sob]. Spasmodic hiccup.

spasmophile (spaz'mo-fil). Same as *spasmophilic*.

spasmophilia (spaz-mo-fil'e-ah) [σπασμός spasm + φιλέω to love]. Spasmophilic diathesis; a condition in which the motor nerves show abnormal sensitiveness to mechanical or electric stimulation, and the patient shows a tendency to spasm, tetany, and convulsions.

spasmophilic (spas-mo-fil'ik). Marked by a tendency to spasms.

spasmotin (spaz'mo-tin). A poisonous ecbohic and acid principle, $C_{20}H_{32}O_9$, from ergot. Dose, $\frac{2}{3}$ -1½ grains (0.04-0.1 Gm.).

spasmotoxin (spaz-mo-toks'in) [σπασμός spasm + τοξικόν poison]. A poisonous principle from cultures of the bacillus of tetanus.

spasmus (spaz'mus) [L.; σπασμός spasm]. Same as *spasm*. **s. nu'tans**, nodding spasm.

spasmyl (spaz'mil). A proprietary form of camphor-benzoyl-valerianate. It is put up in perles soluble in the intestines.

spastic (spas'tik) [σπαστικός]. Of the nature of or characterized by spasms.

spasticity (spas-tis'ti-e). The state or quality of being spastic; marked hypertonus of muscles.

spa'tia zonula'ria. Same as *Petit's canal*.

spatial (spa'shal). Pertaining to space.

spatium (spa'she-um), pl. *spa'tia*; Latin for *space*. **s. an'guli i'ridis** [B N A], the space of Fontana; any one of several irregular spaces between the fibers of the pectinate ligament of the iris. **spa'tia intercosta'lia** [B N A], the intercostal spaces. **s. interfascia'le (teno'ni)** [B N A], a lymph space between the fascia bulbi and the eyeball. **spatia interglobula'ria** [B N A], small irregular cavities in which the dentinal canals terminate in the region of the neck of a tooth and along the root. **s. interos'sea metacarpi** [B N A], **s. interos'sea metatarsi** [B N A], any one of the four spaces between the metacarpal or the metatarsal bones. **spa'tia intervagina'lia ner'vi opt'ici** [B N A], the spaces between the vaginal sheaths of the optic nerve. **s. perichorioidea'le** [B N A], the lymph space between the tunica vasculosa oculi and the sclera which is found at all points except at the optic nerve and at the rima cornealis. **s. perilymphat'icum** [B N A], all of the space in a semicircular canal except that within the semicircular duct. **s. retroperitonea'le** [B N A], the space between the posterior parietal peritoneum and the posterior abdominal wall. It contains the kidneys, suprarenal glands, the ureters and the large vessels and nerves. **s. zonula'ria** [B N A], the interstices between the fibers of the zonula ciliaris. The spaces are filled with lymph which communicates with the posterior chamber of the eye.

spatter-dock. See *Nuphar*.

spatula (spat'u-lah) [L.]. A flat, blunt, knife-like instrument, used for spreading plasters and for mixing ointments and masses. **s. mal'lei**, the flat end of the handle of the malleus, attached to the membrana tympani. **Roux's s.**, a small steel spatula for transferring infected material to culture tubes.

spatulated (spat'u-la-ted). Flattened into the shape of a spatula.

spavin (spav'in). A disease of the hock joint of a horse, producing lameness. **blood s.**, a soft swelling on the inside of the hock, formed by dilatation of a vein. **bog s.**, a dilatation of the capsular ligament of the tibiotarsal joint of a horse, forming a swelling on the inside of the hock. **bone s.**, an exostosis on the inside of the hock. **high s.**, a tumor or enlargement on the uppr part of the inside of the hock.

spavined (spav'ind). Affected with spavin.

spay (spa). To deprive of the ovaries.

spearmint (spēr'mint). See under *Mentha*.

specialism (spesh'al-izm). Devotion to a special department of medicine or surgery.

specialist (spesh'al-ist). A practitioner who devotes himself to a special class of diseases.

species (spe'shēz) [L.]. 1. Any primary subdivision of a genus. 2. A mixture or powder prepared from dried herbs, seeds, barks, and the like: chiefly intended to be made into a decoction.

tion. aromatic s. [L. *spe'cies aromati'cae*], a mixture of garden thyme, wild thyme, peppermint, lavender (2 parts each), and cubeb and cloves (1 part each). **diuretic s.** [L. *spe'cies diureti'cae*], a mixture of ononis root, lovage root, juniper berries, and licorice. **emollient s.** [L. *spe'cies emollien'tes*], a powder containing althea leaves, melilot, mallow, flaxseed, and matricaria. **s. laxan'tes**, a mixture of senna, elder flowers, fennel, anise, and potassium bitartrate. Called also *St. Germain tea*, or *German tea*. **s. ligno'nur**, wood tea; a preparation of sassafras, licorice, ononis root, and guaiacum wood. **s. pectora'les**, a mixture of althea, tus-silago, licorice, mullein leaves, and orris root; breast tea.

specific (spe-sif'ik) [L. *specif'icus*]. 1. Pertaining to a species. 2. Produced by a single kind of micro-organism. 3. A remedy specially indicated for any particular disease. **s. gravity**. See *gravity*.

specificity (spes-if-is'ti-e). The quality or fact of being specific.

specillum (spe-sil'um) [L. *spec'e're* to look]. A sound or probe.

spectacles (spek'tak-lz) [L. *spectacula*; *specta're* to see]. A pair of lenses in a frame to assist vision. **bifocal s.**, **Franklin s.**, **pantoscopic s.**, spectacles with two lenses of different foci for each of the eyes: the upper lens for distant, and the lower for near, vision. **compound s.**, spectacles fitted with extra colored glasses, or extra lenses, to be used as occasion requires. **decentered s.**, spectacles with lenses formed from eccentric portions of two convex lenses. **divided s.**, bifocal spectacles. **Masselon's s.**, spectacles with an attachment for keeping the upper lid raised in cases of paralytic ptosis. **mica s.**, spectacles of sheet mica: used to protect the eye from foreign bodies. **periscopic s.**, spectacles with either menisic or concavoconvex lenses, with the concave surfaces toward the eyes: these allow the eyes considerable latitude of motion. **prismatic s.**, spectacles with prismatic glasses for correcting muscular defects. **pulpit s.**, spectacles containing the lenses in the lower segments of the glasses only. **stenopeic s.**, spectacles fitted with metal plates, having each a small central aperture. **tinted s.**, spectacles of a glass so colored as to protect the eyes from the effects of too bright light. **wire frame s.**, a kind of spectacles of wire gauze worn to protect the eye from the entrance of foreign bodies.

spectral (spek'tral). Pertaining to a spectrum; performed by means of a spectrum.

spectrochrome (spek'tro-krōm) [L. *spec'trum* + *chrōma* color]. A term applied to a method of treatment consisting of exposure of the part to be treated to light of various colors.

spectrocolorimeter (spek'tro-ko-lor-im'et-er). An ophthalmospectroscope used in detecting color blindness for one color.

spectrometry (spek-trom'et-re) [L. *spec'trum* image + *me'trum* measure]. The determination of the places of the lines in a spectrum.

spectrophotometer (spek'tro-to-m'et-er) [*spec'trum* + *photometer*]. 1. An apparatus for measuring the light sense by means of a spectrum. 2. An apparatus for estimating the quantity of coloring matter in solution by the quantity of light absorbed (as indicated by the spectrum) in passing through the solution.

spectrophotometry (spek'tro-to-m'et-re). The use of the spectrophotometer.

spectropolarimeter (spek'tro-po-lar-im'et-er). A combined spectroscopic and polariscope for determining optical rotation.

spectroscope (spek'tro-skōp) [L. *spec'trum* image + σκοπεῖν to view]. An instrument for developing and analyzing the spectrum of a body.

spectroscopic (spek-tro-skop'ik). Of, pertaining to, or performed by, the spectroscope.

spectrum (spek'trum), pl. *spec'tra* [L. "image"]. A variously colored band into which light is decomposed in passing through a prism or grating of glass. **absorption s.**, one afforded by light which has passed through various gaseous mediums, each gas absorbing those rays of which its own spectrum is composed. **chemical s.**, that part of the spectrum which includes the ultraviolet or actinic rays. **chromatic s.**, that part of the spectrum which includes the visible rays. **continuous s.**, one in which Fraunhofer's lines are not developed. **diffraction s.**, a spectrum formed by the passage of light through a diffraction grating. **fortification s.** See *teichopsia*. **gaseous s.**, one which is afforded by an incandescent gas. **ocular s.** Same as *after-image*. **prismatic s.**, one obtained by refraction through a prism. **solar s.**, that which is afforded by sunlight. **thermal s.**, that part of the spectrum which contains the ultrared or heat rays. **toxin s.**, a diagram in the form of a spectrum employed by Ehrlich to show the neutralizing power of antitoxin.

speculum (spek'u-lum, pl. *spec'ula* [L. "mirror"]). 1. An appliance for opening to view a passage or cavity of the body. 2. The septum pellucidum. **bath s.**, a kind of vaginal dilator introduced during the bath and allowing the water to fill the vagina. It is used in connection with the sitz bath. **Boze-man's s.**, a bivalve speculum the blades of which remain parallel when separated. **Brinkerhoff's**

Specula: *a*, Collin's bivalve; *b*, Sims'; *c*, wire bivalve.

s., a rectal speculum consisting of a conical tube having a closed extremity, but provided with a sliding bar on the side which provides an opening. **Cook's s.**, a three-pronged rectal speculum. **Cusco's s.**, a form of vaginal speculum, the two blades of which are worked by a screw. **duck-billed s.**, a form of two-valved vaginal speculum. **Fergusson's s.**, a cylindrical speculum for the vagina made of silvered glass. **Gruber's s.**, a form of ear speculum. **s. Helmon'tii**, the central tendon of the diaphragm. **Kelly's s.**, a rectal speculum tubular in shape and fitted with an obturator. **Martin's s.**, a rectal speculum, consisting of a conical cylinder with an obturator. **Mathews' s.**, a four-pronged rectal speculum. **Politzer's s.**, a form of ear speculum. **s. rhomboidum**, the lumbodorsal fascia. **Sims' s.**, a form of duck-billed vaginal speculum. **stop s.**, an eye speculum with an appliance for controlling the degree to which its branches spread.

spedalskhed (sped-alsk'hed). Norwegian leprosy. **Spee's curve, embryo** (spaz) [Ferdinand Grof von Spee, German embryologist, born 1855]. See under *curve* and *embryo*.

speech (spētsh). The utterance of vocal sounds conveying ideas. **s. center**, that situated in the third left frontal convolution. See *center*. **clipped s.**, utterance in which the words uttered are slurred over and uncompleted: it is sometimes one of the features of general paresis. Called also *slurred s.* **echo s.** 1. Echolalia. 2. Speech produced in the hypnotic state by pressure on the neck, abdomen, or right eyebrow, or speaking into the mouth.

explosive s., loud, sudden enunciation seen in certain brain diseases. **mirror s.**, a speech abnormality in which the order of syllables in a sentence is reversed. **s. reading**, the understanding by deaf mutes of what is spoken. **scampering s.** Same as *clipped s.* **scanning s.**, speech in which the syllables are separated by prolonged pauses. **slurred s.**, the chopping off of syllables on words in speech: seen in paralysis of the insane. **staccato s.**, speech in which each syllable is uttered separately: seen in multiple sclerosis. **s. tract**, the fibers connecting the speech center with the nuclei of the nerves which supply the muscles of phonation.

speedwell (spēd'wel). See *Veronica*.

speedy-cut (spe'de-kut). Injury of the foreleg of a horse near the knee, made by the shoe of the opposite foot.

Spencer-Wells facies [Sir Thomas Spencer-Wells, English surgeon, 1818-1897]. See *Well's facies*, under *facies*.

Spengler's fragments, immune body, methiod, tuberculin, etc. (speng'lerz) [Carl Spengler, contemporary Swiss physician]. See under *fragment, body, tuberculin*, etc.

Spens' syndrome (spenz) [Thomas Spens, physician in Edinburgh, 1764-1842]. Adams-Stokes' disease. See *disease*.

sperm (sperm) [σπέρμα seed]. 1. The semen or testicular secretion. 2. One of the mature germ cells of a male animal. **s. cell**, a spermatozoon; more correctly, a spermatid. **s. nucleus**, the nucleus of a spermatozoon.

sperma (sper'mah). See *sperm*.

spermaceti (sper-mas-e'te) [L.; also *ceta'ceum*; σπέρμα seed + κῆτος whale]. A white, crystalline fat, consisting chiefly of cetyl palmitate, C₁₆H₃₁O₂.C₁₆H₃₃, from the head of the sperm whale, *Physeter macroceph'alus*, and the bottle-nosed whale, *Hyper'o'don rostra'tus*. It is a demulcent, and is an ingredient of various cerates and ointments. Called also *cetaceum*.

spermacrasia (sper-mak-ra'zhe-ah) [σπέρμα semen + ἀκρασία ill mixture]. Deficiency of spermatozoa in the semen.

spermase (sper'mās). An oxidizing enzyme found in barley.

spermateliosis (sper'mah-te-le-o'sis). Spermiogenesis.

spermatemphraxis (sper'mat-em-fraks'is) [σπέρμα seed + ἐμπάσσειν to obstruct]. Obstruction to the discharge of semen.

spermathanaton (sper-mah-than'at-on) [sperm + θάνατος death]. A proprietary contraceptive, being a mixture of sodium meta- and tetraborates, setting free hydrogen peroxide.

spermatic (sper-mat'ik) [L. *spermat'icus*; σπερματικός]. Pertaining to the semen; seminal.

spermatid (sper'mat-id). A cell derived from a secondary spermatocyte by fission, and developing into a spermatozoon. Called also *spermato-blast*.

spermatin (sper'mat-in) [σπέρμα seed]. An albuminoid substance derived from the semen. It is related to mucin and to nucleo-albumin.

spermatism (sper'mat-izm) [σπερματισμός]. The production or discharge of semen.

spermatitis (sper-mat-i'tis). Inflammation of a vas deferens; deferentitis or funiculitis.

spermatoblast (sper'mat-o-blast) [σπέρμα seed + βλαστός germ]. A term originally applied to the supporting cell of Sertoli, but now used with the same meaning as *spermatid*.

spermatocoele (sper-mat-o-sēl) [σπέρμα seed + κῆλη tumor]. A cystic distention of the epididymis or the rete testis containing spermatozoa.

spermatocidal (sper'mat-o-si'dal) [sperm + L. *ca'e dere* to kill]. Destructive to spermatozoa.

spermatocyst (sper'mat-o-sist) [σπέρμα seed + κύστις bladder]. A seminal vesicle; also a spermatocyte.

spermatocystectomy (sper'mat-o-sis-tek'to-me) [spermatocyst + ἐκτομή excision]. Excision of the seminal vesicles.

spermatocystitis (sper'mat-o-sis-ti'tis). Inflammation of a seminal vesicle.

spermatocystotomy (sper'mat-o-sis-tot'o-me) [spermatocyst + τομή cut]. The operation of making an incision into the seminal vesicles for the purpose of draining.

spermatocytal (sper'mat-o-si'tal). Pertaining to a spermatocyte.

spermatocyte (sper'mat-o-sit) [σπέρμα seed + κύτος cell]. The mother cell of a spermatid. **primary s.**, a cell derived from a spermatogonium. **secondary s.**, one of the two cells into which a primary spermatocyte divides, and which in turn gives origin to spermatids.

spermatogenesis (sper'mat-o-jen'es-is) [σπέρμα semen + γένεσις origin]. 1. The development of the spermatozoon. 2. Same as *meiosis*.

spermatogenic (sper'mat-o-jen'ik) [σπέρμα semen + γεννᾶν to produce]. Producing semen or spermatozoa.

spermatogenous (sper-mat-oj'en-us). Spermatogenic.

spermatogeny (sper-mat-oj'en-e). Same as *spermatogenesis*.

spermatogone (sper'mat-o gōn). Spermatogonium.

spermatogonium (sper'mat-o-go'ne-um) [σπέρμα seed + γονή generation]. An undifferentiated germ cell of a male, originating in a seminal tubule and dividing into two primary spermatocytes. Called also *spermatophore*, *spermatospore*, and *spermospore*.

spermatoid (sper'mat-oid) [σπέρμα seed + εἶδος form]. 1. Resembling semen. 2. A male or flagellated form of the malarial microparasite.

spermatology (sper-mat-ol'o-je) [σπέρμα seed + λόγος treatise]. The sum of what is known regarding the semen.

spermatolysin (sper-mat-ol'is-in). A substance causing spermatolysis.

spermatolysis (sper-mat-ol'is-is) [σπέρμα seed + λύσις solution]. Destruction or solution of spermatozoa.

spermatolytic (sper'mat-o-lit'ik). Pertaining to spermatolysis.

spermatomere (sper'mat-o-mēr). Spermatomerite.

spermatomerite (sper'mat-o-me'rit) [σπέρμα seed + μέρος part]. One of the granules of chromatin into which the sperm nucleus splits up after entrance of the spermatozoon.

spermatomicrons (sper'mat-o-mi'kronz). Minute particles found in the semen of various animals. They are seen best with a dark-field microscope and show brownian motion.

spermatopathia, **spermatopathy** (sper'mat-o-path-e'ah, sper-mat-op'ath-e) [σπέρμα seed + πάθος affection]. A disease condition of the semen.

spermatophobia (sper'mat-o-fō-be-ah) [σπέρμα seed + φόβος fear]. A morbid dread of being affected with spermatorrhea.

spermatophore (sper-mat-o-fōr) [σπέρμα seed + φερεῖν to carry]. 1. See *spermatogonium*. 2. A capsule containing several spermatozoa.

spermatoplasia (sper'mat-o-pla'ne-ah) [σπέρμα seed + πλάνη wandering]. Metastasis of the semen.

spermatopoeitic (sper'mat-o-poi-et'ik) [σπέρμα seed + ποιεῖν to produce]. Subservient or promoting the secretion of semen.

spermatorrhea (sper'mat-or-e'ah) [σπέρμα seed + ῥοία flow]. Involuntary, too frequent, and excessive discharge of semen without copulation.

spermatoschesis (sper-mat-os'ke-sis) [σπέρμα semen + σχέσις check]. Suppression of the secretion of semen.

spermatosome (sper-mat'o-sōm). Spermatozoon.

spermatospore (sper-mat'o-spōr) [σπέρμα semen + σπόρος spore]. A spermatogonium.

spermatotoxin (sper'mat-o-toks'in). Same as *spermatozin*.

spermiovum (sper-mat-o'vum) [σπέρμα seed + L. ovum egg]. A fecundated ovum.

spermatoxin (sper-mat-oks'in). A toxin destructive to spermatozoa; especially an antibody produced by injecting an animal with spermatozoa.

spermatozoa (sper'mat-o-zō'ah). Plural of *spermatozoon*.

spermatozoal, **spermatozoan** (sper-mat-o-zō'al, -zō'an). Pertaining to spermatozoa.

spermatozoicide (sper'mat-o-zō'is-id) [σπέρμα seed + ζῶν animal + L. caedere to kill]. 1. Causing the death of spermatozoa. 2. An agent which destroys the spermatozoa.

spermatozoid (sper'mat-o-zoid) [σπέρμα seed + ζῶν animal + εἶδος form]. 1. Same as *spermatozoon*. 2. The male germ cell in plants.

spermatozoon (sper'mat-o-zō'on) [σπέρμα semen + ζῶν animal], pl. *spermatozoa*. The motile generative element of the semen which serves to impregnate the ovum. It consists of a head, or nucleus, a middle piece, and a flagellum, or tail.

spermaturia (sper-mat-u're-ah) [σπέρμα seed + οὖρον urine]. The presence or discharge of semen in the urine.

sperm center (sperm sen-ter). The centrosome of the spermatozoon during fertilization.

spermectomy (sper-mek'to-me). Excision of a portion of the spermatic cord.

spermiduct (sper'mid-ukt) [σπέρμα seed + L. ducere to lead]. The ejaculatory duct and vas deferens together.

spermine (sper'min). 1. A base, $\text{NH}_2(\text{CH}_2)_3\text{NH}(\text{CH}_2)_4\text{NH}(\text{CH}_2)_3\text{NH}_2$, from semen, sputum, and from various other animal substances. It is a soluble crystalline substance, and has an active tonic and stimulating influence upon the nervous system. It is used in neurasthenia, locomotor ataxia, diabetes, etc., and in all nervous disorders complicated with anemia. Dose of 2 per cent solution, 8-15 minims (0.5-1 cc.), subcutaneously. 2. A therapeutical preparation of the testes of animals. Called also *testicle juice*. 3. **aurochloride**, a golden-yellow compound, $\text{C}_2\text{H}_5\text{N.HCl.AuCl}_3$. 4. **phosphate**, the substance, $(\text{C}_2\text{H}_5\text{N})_4\text{H}_4\text{Ca}(\text{PO}_4)_2$, of which the Charcot-Neumann crystals are composed; found also in various organs and secretions in leukemia, asthma, and emphysema.

sperminum (sper'mi-num). Same as *spermine* (2d def.).

spermigenesis (sper'me-o-jen'is-is). The change of a spermatid into a sperm.

spermoblast (sper'mo-blast) [σπέρμα sperm + βλαστός germ]. A spermatid.

spermocytoma (sper-mo-si-to'mah). Same as *seminoma*.

spermolith (sper'mo-lith) [σπέρμα seed + λίθος stone]. A calculus in the spermiduct.

Human spermatozoa, side and flat views (Hill).

spermoloropexis (sper'mo-lo-ro-peks'is). Spermoloropexy.

spermoloropexy (sper-mo-lo-ro-peks-e) [σπέρμα semen + λῶρον thigh + πῆξις fixation]. Fixation of the spermatic cord to the periosteum of the pubes in operation for undescended testicle.

spermolysin (sper-mol'is-in). Same as *spermotoxin*.

spermolysis (sper-mol'is-is) [σπέρμα seed + λύσις solution]. Destruction of spermatozoa.

spermolytic (sper-mo-lit'ik). Destroying spermatozoa.

spermoneuralgia (sper'mo-nu-ral'je-ah) [σπέρμα seed + νῆυρον nerve + ἄλγος pain]. Neuralgic pain in the spermatic cord.

Spermophilus citellus. The small marmot; a Manchurian rodent which may harbor plague germs.

spermophlebectasia (sper'mo-fleb-ek-ta'se-ah) [σπέρμα seed + φλέβη vein + ἔκτασις distention]. Varicosity of the spermatic veins.

spermoplasm (sper'mo-plazm) [σπέρμα seed + πλάσμα plasm]. The protoplasm of the spermatis.

spermosphere (sper'mo-sfēr) [σπέρμα seed + σφαῖρα sphere]. A group or mass of spermatids formed by the segmentation of a secondary spermatocyte.

spermospore (sper'mo-spōr). Same as *spermatogonium*.

spermotoxic (sper-mo-toks'ik). Pertaining to a spermotoxin.

spermotoxin (sper-mo-toks'in). Spermatoxin.

spes phthis'ica [L.]. A feeling of hopefulness of recovery frequently felt by patients with tuberculosis.

sp. gr. An abbreviation for *specific gravity*.

sph. Abbreviation for *spherical* or *spherical lens*.

sphacelate (sfas'el-āt) [σφάκελος gangrene]. To become gangrenous.

sphacelation (sfas-el-a'shun). The formation of a sphacelus; mortification.

sphacelism (sfas'el-izm) [σφάκελισμός]. Sphacelation or necrosis; sloughing.

sphaceloderma (sfas'el-o-der'mah) [σφάκελος gangrene + δέρμα skin]. Gangrene of the skin.

sphacelotoxin (sfas'el-o-toks'in) [σφάκελος gangrene + τοξικόν poison]. 1. Same as *spasmotin*. 2. A poisonous, yellow resin obtainable from ergot. Dose, 30-12 grain (0.0022-0.0054 Gm.).

sphacelous (sfas'el-us). Affected with gangrene; sloughing.

sphacelus (sfas'el-us) [L.; σφάκελος]. A slough or mass of gangrenous tissue.

sphaeraesthesia (sfer-es-the'she-ah). See *spheresesthesia*.

Sphaeria sinensis (sfe're-ah si-nen'sis). A singular fungus found in China, where it is highly esteemed as a medicine.

sphaerobacteria. See *spherobacteria*.

Sphaerococcus (sfe-ro-kok'us) [σφαῖρα sphere + κόκκος berry]. A genus or form of bacterial cocci. **S. acidi lactici**, a species from milk.

sphagiasmus (sfa-je-az'mus) [σφαγή throat]. Contraction of the neck muscles in an epileptic attack; also same as *petit mal*.

sphagitides (sfaj-it'id-ēz) [σφαγίτις jugular; σφαγή throat]. An old name for the so-called jugular vessels, i. e., those of the loins and lower extremities.

sphagitis (sfa-ji'tis) [σφαγή throat + -itis inflammation]. Any throat inflammation.

sphagnol (sfag'no). A distillation of peat; said to contain creosote combined with sulphur: used in skin diseases.

sphenethmoid (sfen-eth'moid). Same as *sphenothmoid*.

sphenion (sfe'ne-on, pl. *sphē'nia* [σφήν wedge]). The cranial point at the sphenoid angle of the parietal bone.

sphenobasilar (sfe-no-bas'il-ar). Pertaining to the sphenoid bone and the basilar part of the occipital bone.

sphenoccipital (sfe-nok-sip'it-al). Pertaining to the sphenoid and occipital bones.

sphenocephalus (sfe-no-sef'al-us) [σφήν wedge + κεφαλή head]. A monster fetus with a wedge-shaped head.

sphenocephaly (sfe-no-sef'al-e). The condition of having a wedge-shaped head.

spheno-ethmoid (sfe-no-eth'moid). Noting the curved plate of bone in front of the lesser wing of the sphenoid bone.

sphenofrontal (sfe-no-frun'tal). Pertaining to the sphenoid and frontal bones.

sphenoid (sfe'noid) [σφήν wedge + εἶδος form]. 1. Wedged shaped. 2. The os sphenoidale, a very

Sphenoid bone, front view (Leidy). 1, Ethmoidal process; 2, sphenoidal crest and rostrum; 3, entrance of the sphenoidal sinuses; 4, small wing; 5, optic foramen; 6, superior orbital fissure; 7, rotund foramen; 8, orbital surface of the great wing; 9, temporal surface of the same; 10, ridge separating the temporal and zygomatic surfaces; 11, vaginal process; 12, pterygoid canal; 13, entopterygoid process; 14, hamulus pterygoideus (hamular process); 15, ectopterygoid process; 16, angular process; 17, oval foramen; 18, spinous foramen.

irregular wedge-shaped bone at the base of the skull. 3. A proprietary wedge-shaped suppository.

sphenoidal (sfe-noid'al). Pertaining to the sphenoid bone.

sphenoiditis (sfe-noi-di'tis). Inflammation of the sphenoid sinus.

sphenomalar (sfe-no-ma'lar). Pertaining to the sphenoid and malar bones.

sphenomaxillary (sfe-no-maks'il-a-re). Pertaining to the sphenoid bone and the maxilla.

sphenometer (sfe-nom'et-er) [σφήν wedge + μέτρον measure]. An instrument for measuring a wedge of bone removed in operations for correcting curvatures.

spheno-occipital (sfe'no-oks-ip'it-al). Pertaining to the sphenoid and occipital bones.

sphenopalatine (sfe-no-pal'at-in). Pertaining to or in relation with the sphenoid and palatine bones.

sphenoparietal (sfe'no-par-i-et-al). Pertaining to the sphenoid and parietal bones.

sphenopetrosal (sfe'no-pe-tro'sal). Pertaining to the sphenoid bone and the petrosa.

sphenorbital (sfe-nor'bit-al). Pertaining to the sphenoid bone and the orbits.

sphenosalphingostaphylinus (sfe'no-sal-ping'-o-staf-il'in-us). The tensor palati muscle.

sphenosis (sfe-no'sis) [σφήν wedge]. A wedging of the fetus in the pelvis.

sphenosquamosal (sfe'no-skwa-mo'sal). Pertaining to the sphenoid bone and the squamous portion of the temporal bone.

sphenotemporal (sfe-no-tem'po-ral). Pertaining to the sphenoid and temporal bones.

sphenotic (sfe-no'tik) [σφήν wedge + οὖς ear].

Noting a fetal bone which becomes that part of the sphenoid which is adjacent to the carotid groove.

sphenotresia (sfe-no-tre'ze-ah) [σφήν wedge + τρήσις boring]. Boring of the skull in craniotomy.

sphenotribe (sfe'no-trib) [σφήν wedge + τριβειν to rub]. An instrument for crushing the basal portion of the fetal skull.

sphenotripsy (sfe'no-trip-se). The crushing of the fetal head with the sphenotribe.

sphenoturbinal (sfe-no-tur'bin-al). Noting a thin, curved bone in front of each of the lesser wings of the sphenoid, with which bone it becomes fused.

sphenovomerine (sfe-no-vo'mer-in). Pertaining to the sphenoid and to the vomer.

sphenozygomatic (sfe'no-zi-go-mat'ik). Pertaining to the sphenoid and zygomatic bones.

sphere (sfēr) [σφαῖρα sphere]. A ball or globe.

attraction s. See under *attraction*. **embryotic s.** See *segmentation s.* **s. granule**, a large granular cell or corpuscle seen in serous exudation. **segmentation s.** 1. The morula: the mass of cells formed by the segmentation of the nucleus of an ovum. 2. A blastomere. **vitelline s., yolk s.** Same as *segmentation s.* (i).

spheresthesia, sphaesthesia (sfe-res-the'ze-ah) [σφαῖρα sphere + αἰσθησις sensation]. A morbid sensation, as of contact with a ball.

spherical (sfer'ik-al) [σφαιρικός]. Pertaining to a sphere; sphere shaped.

spherobacteria, sphaerobacteria (sfe'ro-bak-te're-ah) [σφαῖρα sphere + βακτηριον bacterium]. A group of bacterial organisms to which the micrococci belong.

spherocylinder (sfe-ro-sil'in-der). A combined spherical and cylindrical lens.

spheroid, spheroidal (sfe'roid, sfe-roid'al) [σφαῖρα sphere + εἶδος form]. Having the form or shape of a sphere.

spheroiding (sfe'roi-ding). The formation of globules; particularly, in dentistry, the formation of globules by amalgam on hardening, so that the filling of a tooth draws away from the margins of the cavity.

spherolith (sfe'ro-lith) [σφαῖρα sphere + λίθος stone]. Any one of the minute spherical deposits found in the kidney tissue of the new-born. They are probably uratic deposits.

spheroma, sphaeroma (sfe-ro'mah). A globular tumor.

spherometer (sfe-rom'et-er) [σφαῖρα sphere + μέτρον measure]. An instrument for measuring the curvature of a surface.

spherospermia (sfe-ro-sper'me-ah) [σφαῖρα ball + σπέρμα seed]. A round, tailless spermatozoon.

spherule (sfer'ül). A small sphere. **paranuclear s.**, the archiplasm.

sphincter (sfingk'ter) [L.; σφιγκτήρ binder]. A ringlike muscle which closes a natural orifice. See *muscles, table of*. **s. ani.** See under *muscles, table of*. **cardiac s.**, the ringlike muscle surrounding the esophagus where it opens into the stomach. **Giordano's s.**, a sphincter mechanism at the duodenal end of the common bile duct. **Henle's s.**, the muscular fibers which surround the prostatic urethra. **Hyrtil's s.**, an incomplete band of muscular fibers in the rectum a few inches above the anus. **s. i'ridis**, the muscle which produces contraction of the iris. **Nélaton's s.**, an occasional and often incomplete belt of muscle fibers of the rectum at the level of the prostate. **O'Beirne's s.**, a band at the junction of the colon and rectum. **s. oc'uli**, the orbicularis palpebrarum muscle. **Oddi's s.**, a contraction of the common bile duct at the neck of the ampulla of Vater. **s. or'is**, the orbicularis oris muscle. **prepyloric s.**, a band of muscle fibers in the stomach wall above the pyloric sphincter. **pyloric s.**, a thickening of the muscular wall of the stomach

around the pyloric opening. **third s.**, Houston's valve. **s. ure'thræe.** See under *muscles, table of*. **s. vagi'næ**, the bulbocavernosus muscle. **vasculolymphatic nervous s.**, a supposed contracting band of fibers at the margin of the pupil. **s. ves'i'cae.** See under *muscles, table of*.

sphincteral (sfingk'ter-al). Pertaining to a sphincter.

sphincteralgia (sfingk-ter-al'je-ah) [σφιγκτήρ sphincter + ἄλγος pain]. Pain in the sphincter ani.

sphincterectomy (sfingk-ter-ek'to-me) [σφιγκτήρ sphincter + ἐκτομή excision]. Oblique blepharotomy.

sphincterial, sphincteric (sfingk-te're-al, sfingk-ter'ik). Pertaining to a sphincter.

sphincterismus (sfingk-ter-iz'mus) [σφιγκτήρ sphincter]. Spasm of the sphincter ani.

sphincterolysis (sfingk-ter-ol'is-is) [σφιγκτήρ sphincter + λύσις loosening]. The operation of separating the iris from the cornea in anterior synechia.

sphincteroplasty (sfingk'ter-o-plas-te) [σφιγκτήρ sphincter + πλάσσειν to mold]. The plastic surgical repair of a defective sphincter.

sphincteroscope (sfingk'ter-os-kōp) [σφιγκτήρ sphincter + σκοπεῖν to view]. A speculum for inspecting the anal sphincter.

sphincteroscopy (sfingk-ter-os'ko-pe) [σφιγκτήρ sphincter + σκοπεῖν to view]. Inspection of the anal sphincter.

sphincterotomy (sfingk-ter-ot'o-me) [σφιγκτήρ sphincter + τέμνειν to cut]. The cutting of a sphincter.

sphingogalactoside (sfing'o-gal-ak'to-sid). A substance composing part of the material characteristic of the spleen in Gaucher's disease.

sphingoin (sfing'o-in). A leukomaine, $C_{17}H_{35}NO_2$, from the substance of the brain.

sphingol (sfín'gol). An alcohol, $C_6H_{15}O$, obtained from sphingomyelinic acid by hydrolysis.

sphingomyelin (sfing-o-mi'el-in). A phosphatide that is not extracted from the white substance of the brain by ether.

sphingomyelinic acid (sfing'o-mi-el-in'ik). A mono-amino-mono-phosphatide obtained from sphingomyelin by hydrolysis.

sphingosine (sfing'o-sin). A nitrogenous base, $C_{17}H_{35}NO_2$, derived from the phrenosin and kersin of brain substance by hydrolysis.

sygmic (sfíg'mik) [σφινγικός]. Pertaining to the pulse.

sphygmobologram (sfig-mo-bo'lo-gram). A tracing made by the sphygmobolometer.

sphygmobolometer (sfíg'mo-bo-lom'et-er) [σφινγμός pulse + βῶλος mass + μέτρον measure]. An instrument for measuring and recording the energy of the pulse wave, and so, indirectly, the strength of the systole.

sphygmobolometry (sfíg'mo-bo-lom'et-re). The use of the sphygmobolometer.

sphygmocardiogram (sfig-mo-kar'de-o-gram). The tracing made by a sphygmocardiograph.

sphygmocardiograph (sfig-mo-kar'de-o-graf) [σφινγμός pulse + καρδία heart + γράφειν to write]. An instrument for recording the pulse waves and heart beat at the same operation.

sphygmocardioscope (sfig-mo-kar'de-o-skōp) [σφινγμός pulse + καρδία heart + σκοπεῖν to view]. An apparatus that records on a disk, the behavior of the pulse, heart action, and sounds.

sphygmochronograph (sfíg-mo-kro'no-graf) [σφινγμός pulse + χρόνος time + γράφειν to write]. A form of self-registering sphygmograph.

sphygmodynamometer (sfíg'mo-di-nam-om'et-er) [σφινγμός pulse + δυνάμις power + μέτρον measure]. An instrument for determining the force of the pulse.

sphygmogenin (sfīg-moj'en-in) [σφυγμός pulse + γεννᾶν to produce]. An old name for *epinephrine*.

sphygmogram (sfīg'mo-gram) [σφυγμός pulse + γράμμα record]. A sphygmographic tracing; the record or tracing made by a sphygmograph. It

Radial sphygmogram from a healthy individual: *p*, The percussion wave; *t*, tidal or predicrotic wave; *n*, dicrotic or aortic notch; *d*, dicrotic wave; *E* is the sphygmic period during which the semivalves are open. (Hay.)

consists of a curve having a sudden rise (*primary elevation*), followed by a sudden fall, after which there is a gradual descent marked by a number of secondary elevations.

sphygmograph (sfīg'mo-graf) [σφυγμός pulse + γράφειν to write]. An instrument for registering the movements, form, and force of the arterial pulse. Vierordt's sphygmograph (1835) and Marey's (1860) were the earliest. The latter, variously modified, is the kind principally used.

sphygmographic (sfīg-mo-graf'ik). Pertaining to the sphygmograph.

sphygmography (sfīg-mog'raf-e). The scientific record of pulse traces.

sphygmoid (sfīg'moid) [σφυγμός pulse + εἶδος form]. Resembling the pulse.

sphygmology (sfīg-mol'o-je) [σφυγμός pulse + λόγος treatise]. The sum of what is known regarding the pulse.

sphygmomanometer (sfīg'mo-man-om'et-er) [σφυγμός pulse + μαρὸς thin + μέτρον measure]. An instrument for measuring blood pressure in the arteries. See p. 1101 for various forms of instrument. **Riva-Rocci s.** See illustration, p. 1140. **Rogers' s.**, an arm sphygmomanometer with an aneroid barometer instead of a mercury manometer.

sphygmomanometroscope (sfīg-mo-man-o-met'-ro-skōp). An apparatus that combines in one the Riva-Rocci cuff, the tonometer, the two manometers of Busch, and the water manometer used for determining the blood pressure of the upper extremity.

sphygmometer (sfīg-mom'et-er) [σφυγμός pulse + μέτρον measure]. An instrument for measuring the force and frequency of the pulse.

sphygmometrograph (sfīg-mo-met'ro-graf). An apparatus for recording the maximal and minimal arterial pressures.

sphygmometroscope (sfīg-mo-met'ro-skōp). An instrument for taking the blood pressure by the auscultatory method.

sphygmo-oscillometer (sfīg'mo-os-il-om'et-er). A form of sphygmomanometer in which the disappearance and reappearance of the pulse are indicated by an oscillating needle.

sphygmopalpation (sfīg'mo-pal-pa'shun). The act of palpating or feeling the pulse.

sphygmophone (sfīg'mo-fōn) [σφυγμός pulse + φωνή sound]. An apparatus for rendering audible the vibrations of the pulse.

sphygmoplethysmograph (sfīg'mo-ple-thiz'mo-graf). A pletysmograph which traces a record of the pulse, together with the curve of fluctuation of volume.

sphygmoscope (sfīg'mo-skōp) [σφυγμός pulse + σκοπεῖν to view]. A device for rendering the pulse beat visible. **Bishop's s.**, an apparatus for measuring the blood pressure, especially the diastolic pressure.

sphygmoscopy (sfīg-mos'ko-pe) [σφυγμός pulse + σκοπεῖν to view]. Examination of the pulse.

sphygm signal (sfīg'mo-sig-nal). Vaquez' instrument for making visible the changes in the amplitude of the pulse.

sphygm systole (sfīg-mo-sis'to-le) [σφυγμός pulse + systole]. That part of the sphygmogram that corresponds to the systole of the heart.

sphygmotonograph (sfīg-mo-to'no-graf) [σφυγμός pulse + τόνος tension + γράφειν to write]. An instrument for recording simultaneously the blood pressure, the carotid or jugular pulse, the brachial pulse, and the time in fifths of a second.

sphygmotonometer (sfīg'mo-to-nom'et-er) [σφυγμός pulse + τόνος tension + μέτρον measure]. An instrument for measuring the elasticity of the arterial walls.

sphygmoviscosimetry (sfīg'mo-vis-ko-sim'et-re) [σφυγμός pulse + viscosity + μέτρον measure]. Measurement of the blood pressure and the viscosity of the blood.

sphyractomy (sfī-rek'to-me) [σφύρα malleus + ἐκτομή excision]. Surgical removal of the malleus.

sphyrotomy (sfī-rot'o-me) [σφύρα malleus + τομή a cutting]. Surgical removal of a portion of the malleus.

spica (spi'kah) [L. "ear of wheat"]. A figure-of-8 bandage with turns that cross one another. See *bandage*.

spice bush (spīs bush). A tall shrub of North America, *Lin'dera benzo'in*: its bark is an aromatic and stimulant diaphoretic, and is said to be a good febrifuge. Dose of fluidextract, 1-2 fluidrachms (4-8 cc.).

spicular (spik'u-lar). Pertaining to a spicule.

spicule (spik'ul) [L. *spic'ulum*]. A sharp, needle-like body.

spiculum (spik'u-lum), pl. *spic'ula* [L.]. See *spicule*.

spider cells (spi'der selz). See *Deiters' cells*, under *cell*.

spider-lick (spi'der-lik). A troublesome affection of the skin in India due to an insect.

spider web (spi'der web) [L. *te'la ara'nea*; *ara'neum*]. The web of various species of spider: hemostatic.

Spiegler's test (spe'glerz) [dermatologist of Vienna, 1860-1908]. See under *tests*.

Spigelia (spi-je'le-ah) [after A. van der Spiegel, 1558-1625]. A genus of loganiaceous plants. The rhizome and roots of *S. marilan'dica*, pinkroot, are an efficient vermifuge: used especially for roundworms. Dose of fluidextract, 15-60 minims (1-4 cc.); of fluidextract of spigelia and senna, ½-2 fluidrachms (2-8 cc.).

spigelian (spi-je'le-an). Noting a lobule of the liver (named after A. van der Spiegel, or Spigelius, a Flemish anatomist, 1558-1625)—the lobulus spigelii. It is the smallest lobe of the liver, projecting from the posterior part of the under surface of the right lobe. **s. line**. See *linea simularis*.

spigelin (spi-je'lin). A bitter volatile principle from *Spigelia marilan'dica* and *S. anthel'mia*, of tropical America: purgative.

spikenard (spik'nard) [L. *nar'dus*, or *spi'ca nar'di*]. The plant, *Nardostachys jataman'si*; also the name of various fragrant valerianaceous and other plants: now chiefly used in oriental medicine. **American s.**, the *Ara'bia racemo'sa*, an aromatic plant; used mainly in domestic medicine; a stimulant diaphoretic. Dose of fluidextract of the rhizome, 1-2 fluidrachms (4-8 cc.). **false s.**, *Androp'o'gon nar'dus*, an aromatic and stimulant East Indian grass; also *Smil'a'cina racemo'sa*, a North American plant.

Spilanthes (spi-lan'thēz) [σπίλιος spot + ἔνθος flowers]. A genus of composite-flowered plants. *S. acm'e'la*, the Para cress of tropical America and Asia, is an excellent remedy for toothache.

spiloma (spi-lo'mah) [σπίλωμα spot]. Same as *nevus*.

Erlanger's sphygmomanometer.

Faught's sphygmomanometer.

Hill and Barnard's sphygmometer.

Janeway's sphygmomanometer.

Riva-Rocci's sphygmomanometer.

Stanton's sphygmomanometer.

VARIOUS FORMS OF SPHYGMOMANOMETERS.

TRANSVERSE SECTIONS OF THE SPINAL CORD STAINED WITH ANILINE BLUE-BLACK; $\times 10$.

A, Upper cervical region; B, lower cervical region.

a, Anterior median fissure; *b*, posterior median septum; *c*, anterior horn of gray matter; *d*, anterior nerve-root; *e*, posterior horn of gray matter; *f*, internal radicular fasciculus of posterior nerve-root; *g*, posterior nerve-root; *h*, pia mater; *i*, anterior white commissure; *j*, septum of pia mater, marking off internal from external subdivision of the posterior column; *k*, network of gray matter; *l*, white matter of cord; *m*, central canal of cord; *n*, nerve-cells of anterior horn.

spiloplasia (spi-lō-plā'ne-ah) [*σπίλος* spot + *πλάνος* wandering]. A transient erythema.

spiloplasia (spi-lō-plaks'e-ah) [*σπίλος* spot + *πλάξ* plate]. A red spot seen in cases of leprosy, or pellagra.

spilus (spi'lus) [*σπίλος* spot]. Same as *nevus*.

spina (spi'nah), pl. *spinae* [L. "spine," "thorn"].

Any spinelike process or projection. **s. angula-ris** [B N A], a small bony process which projects downward from the posterior lower angle of the great wing of the sphenoid bone on the base of the skull. It is just back of the foramen ovale and gives attachment to the tensor veli palatini muscle and the sphenopalatine ligament. **s. bif-ida**, congenital cleft of the vertebral column with meningeal protrusion. **s. bifida occul'ta**, spina bifida in which there is a defect of the vertebral arches without protrusion of the cord and its membranes. **s. fronta'lis** [B N A], a rough and somewhat irregular process of bone which projects downward and forward from the front part of the inferior surface of the pars nasalis of the frontal bone and fits in between the nasal bones and the ethmoid. **s. hel'icus** [B N A], a small cartilaginous projection on the anterior portion of the helix. It projects forward and is situated at about the junction of the helix and the crus helicis and is just above the tragus. **s. ili'aca ante-rior infe'rior** [B N A], a blunt bony projection from the lower part of the anterior margin of the iliac bone which projects forward and is just above the acetabulum. **s. ili'aca ante'rior supe-rior** [B N A], a blunt bony projection on the anterior border of the iliac bone which forms the anterior end of the iliac crest. **s. ili'aca poste-rior infe'rior** [B N A], a blunt bony projection from the posterior border of the iliac bone. It corresponds to the posterior lower extremity of the facies auricularis and the posterior upper extremity of the incisura ischiadica major. **s. ili'aca poste-rior supe'rior** [B N A], a blunt bony projection on the posterior border of the iliac bone which forms the posterior end of the iliac crest. **s. ischiad'ica** [B N A], a strong process of bone which projects backward and medialward from the posterior border of the ischium. It is on a level with the lower border of the acetabulum and serves to separate the major and minor ischiadic notches. **s. mea'tus**, a pointed process project-ing from the temporal bone, just above and at the back of the auditory meatus. **s. menta'lis** [B N A], a small bony projection on the internal surface of the mandible. It is near the lower end of the symphysis menti and serves for the attach-ment of the genioglossal and geniohyoid muscles. **s. nasa'lis ante'rior maxil'lae** [B N A], the sharp projecting upper anterior corner of the crista nasalis maxillae. **s. nasa'lis poste'rior os'sis palati'ni** [B N A], a small sharp backward project-ing bony spine which forms the medial posterior angle of the horizontal portion of the palatine bone. **s. scap'ulae** [B N A], a triangular plate of bone attached by one edge to the back of the scapula. Its tip is at the vertebral border of the scapula, it passes laterally toward the shoulder joint and bears at its base the acromion. **s. teg'minis**, a process of bone in the middle ear, over the entrance to the mastoid antrum. **s. trochlea'ris** [B N A], the trochlear spine. **s. tympan'ica ma'ior** [B N A], the projecting bony upper anterior end of the annulus tympanicus. **s. tympan'ica mi'nor** [B N A], the projecting upper posterior end of the annulus tympanicus. **s. vento'sa**, en-largement and thinning of a bone in cancer, or caries, with an appearance as if it were puffed full of air.

spinacin (spi'nas-in). A protein obtained from the cytoplasm of the cells of spinach leaves. It is in-soluble in water and in salt solutions, but soluble in very slight excess of either acid or alkali.

spinal (spi'nal) [L. *spina'lis*]. Pertaining to a spine or to the spinal column. **s. column**, the column

composed of the vertebrae with their fibro-cartilages and ligaments, and enclosing the spinal canal. **s. cord**, the medulla spinalis; the cord-like structure contained in the spinal canal, and extending from the foramen magnum to the second lumbar vertebra. It is directly continuous with the oblongata, and with the brain constitutes the cerebrospinal axis. It is enclosed by three mem-branes—the dura mater, arachnoid, and pia mater. The spinal cord gives off the spinal nerves, and is divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, corresponding to the nerves given off. There is an enlargement of the cord (cervical enlargement) where the nerves of the arms are given off, and one (lumbar enlargement) where those of the legs are given off. The cord is divided by anterior and posterior median fissures into two lateral halves; these halves are connected by an isthmus, which is made up of the anterior white commissure and the anterior and posterior gray commissures. The cord is pierced longitudinally by a central canal running through the cord. Each lateral half of the cord is made up of a central portion of gray matter enclosed by white matter. The gray matter consists of an anterior and a posterior horn, connected respectively with an anterior and a posterior nerve root, and of masses of nerve cells. The white matter is made up of an antero-lateral column, which consists of the direct pyrami-dal tract, or column of Türk, the crossed pyramidal tract, the cerebellar tract, the postero-external column, or column of Burdach, containing the posterior root zone, and the posteromedian column, or column of Goll. The spinal cord is a center for certain reflex actions, and forms a pathway to and from the brain. **s. nerves**, the thirty-one pairs of nerves which arise from the spinal cord and pass out between the vertebrae. They include eight pairs of cervical, twelve of dorsal, five of lumbar, five of sacral, and one of coccygeal. See *nerves*, table of.

spinalgia (spi-nal'je-ah) [*spine* + *ἄλγος* pain]. Pain in the spinal region. **Petruschky's s.**, tenderness in the interscapular region in tubercu-losis of the bronchial lymph nodes.

spinalis (spi-na'lis). See *muscles*, table of.

spinant (spi'nant). Any agent which acts directly upon the spinal cord, increasing its reflex activity.

spinat (spi'nāt) [L. *spina'tus*]. Having thorns; shaped like a thorn.

spindle (spin'dl). The fusiform figure of achromatin in the cell nucleus during mitosis. It consists of fine threads radiating out from the centrosomes and connecting the centrosomes with one another. Called also *achromatic s.*, *nuclear s.* See *karyokine-sis*. **aortic s.**, the dilated part of the aorta just below the isthmus. **central s.**, the bundle of fibers in the axial part of the spindle of an amphi-aster. **His' s.**, a spindle-shaped dilatation of the aorta just beyond the isthmus. **muscular s.**, a fiber of striated muscle. **neuromuscular s.**, a spindle-shaped structure in muscles, composed of striated muscular fibers enclosed by a sheath of connective tissue, and supplied by a nerve fiber. **nuclear s.** See *spindle*. **tigroid s.**, the spindle-shaped individuals of Nissl bodies.

spindle celled (spin'dl seld). Having slender, fusi-form cells.

spindle tree (spin'dl trē). See *Euonymus*.

spine (spin) [L. *spina*]. 1. A slender, thornlike process of bone. 2. The vertebral column. 3. The central ridge on the internal surface of a horse's hoof, between the branches of the frog. Called also *frog-stay*. **alar s.** Same as *angular s.* **angu-lar s.** See *spina angularis*. **aortic s.**, a spindle-shaped dilatation of the aorta just below the isthmus. **Ciwinini's s.**, the small eminence of the outer edge of the external pterygoid plate, to which is attached the pterygospinous ligament. **deltoid s.**, the deltoid tubercle. See *tubercle*. **dorsal s.**, the spinal column. **hemal s.**, the

- anterior part of the typical vertebra. In man it is formed by the sternum. **Henle's s.**, the spina meatus. **hysterical s.**, a condition seen in neurotic patients in which there is simulation of vertebral disease, with curvature, etc. **s's of the ilium.** See *spina iliaca*. **s. of the ischium.** See *spina ischiadica*. **meatal s.**, the spina meatus. **mental s.**, any one of the small processes on the deep aspect of the symphysis of the inner jawbone. **nasal s.**, any of the three processes, anterior, posterior, and superior, about the nasal fossae. **neural s.**, the spinous process of a vertebra. **palatine s.**, one of the ridges on the lower surface of the palatal process of the maxilla. **peroneal s.** See *trochlear process*, under *process*. **s. of the pubis**, the outer projecting end of the crest of the pubis. **railway s.**, a set of obscure nervous phenomena sometimes following railway accidents. **s. of the scapula.** See *spina scapulae*. **sciatic s.**, the spine of the ischium. **s. of the sphenoid**, the pointed backward projection of the lower angle of the great wing of the sphenoid. **Spix's s.**, a bony spine at the edge of the inferior dental foramen for the attachment of the internal lateral ligament. **suprameatal s.**, the spina meatus. **s. of the tibia**, the upward projecting eminence on the head of the tibia. **trochlear s.**, a depression on the orbital surface of the frontal bone for the attachment of the trochlea of the superior oblique muscle. **typhoid s.**, a painful condition of the spinal column following typhoid fever.
- spinibular** (spi-nib'u-lar). Same as *spinobulbar*.
- spinicerebellar** (spi'nis-er-e-bel'ar). Same as *spinocerebellar*.
- spinifugal** (spi-nif'u-gal) [L. *spi'na* spine + *fu'gere* to flee]. Going, conducting, or moving from the spinal cord.
- spiniperipheral** (spi'nip-e-rif'er-al). Spinoperipheral.
- spinipetal** (spi-nip'et-al) [L. *spi'na* spine + *pet'ere* to seek]. Tending, conducting, or moving toward the spinal cord.
- spinitis** (spi-ni'tis). Myelitis.
- spinobulbar** (spi-no-bul'bar). Pertaining to the spinal cord and the medulla oblongata.
- spinocaine** (spi-no-ka'in). A proprietary novocaine and strychnine sulphate preparation for spinal anesthesia.
- spinocellular** (spi-no-sel'u-lar). Containing, made up of, or marked by, prickle cells.
- spinocerebellar** (spi'no-ser-e-bel'ar). Pertaining to the spinal cord and the cerebellum.
- spinocortical** (spi-no-kor'tik-al). Corticospinal.
- spinocostalis** (spi'no-kos-ta'lis). The superior and inferior serratus posterior muscles together.
- spinalgalvanization** (spi'no-gal'van-iz-a'shun). Galvanization of the spinal cord, performed by moving the anode slowly up and down the spine.
- spinoglenoid** (spi-no-gle'noid). Pertaining to the spine of the scapula and to the glenoid cavity.
- spinol** (spin'ol). 1. A saccharated and borated fluidextract of spinach leaves. It is said to contain 2.6 per cent of iron, and is used as a remedy for chlorosis and anemia. 2. A pale-green powder of a composition similar to that of the fluid spinol. Dose, 1-8 grains (0.066-0.52 Gm.).
- spinomuscular** (spi-no-mus'ku-lar). Pertaining to the spinal cord and to the muscles.
- spinoneural** (spi-no-nu'ral). Pertaining to the spinal cord and to the peripheral nerves.
- spinoperipheral** (spi'no-per-if'er-al). Pertaining to the spinal cord and the periphery.
- spinopetal** (spi-nop'e-tal). Spinipetal.
- spinose** (spi'nös). Spinous.
- spinotectal** (spi-no-tek'tal). Same as *tectosspinal*.
- spinotransversarius** (spi'no-trans-ver-sa're-us). The splenius and obliquus capitis muscles together.
- spinous** (spi'nus) [L. *spino'sus*]. 1. Like a spine. 2. Pertaining to a spine or to a spinelike process.
- spinthariscopes** (spin-thar'is-köp) [σπινθήρ spark + σκοπεῖν to see]. An instrument for viewing the emanations of radium.
- spintherism** (spin'ther-izm) [σπινθερίζειν to emit sparks]. Photopsia; the appearance as of sparks before the eyes.
- spintherometer** (spin-ther-om'et-er) [σπινθήρ spark + μέτρον measure]. An apparatus for measuring the changes which occur in the vacuum of the roentgen-ray tube, and hence the penetrating power of the rays.
- spintheropia** (spin-ther-o'pe-ah) [σπινθήρ spark + ὤψ eye]. Same as *spintherism*.
- spintometer** (spin-tom'et-er). Same as *spintherometer*.
- Spir., spir.** Abbreviation for L. *spir'itus*, spirit.
- spiracin** (spi'ras-in). Methylcarboxysalicylic acid: used like salicylic acid.
- spiradenitis** (spi-rad-en-i'tis) [σπείρα coil + ἄδην gland]. Same as *hidradenitis suppurativa*.
- spiradenoma** (spi-rad-en-o'mah). Adenoma of the sweat glands.
- spiral** (spi'ral) [L. *spira'lis*]. Winding about a center like a coil or the thread of a screw. **Curschmann's s's**, coiled mucinous fibrils sometimes found in the sputum of bronchial asthma. **Herxheimer's s's**, Herxheimer's fibers. See under *fiber*. **tendon s.**, a spiral receptor connected with a tendon.
- Spiranthes** (spi-ran'thēz) [σπείρα coil + ἄνθος flower]. A genus of orchidaceous plants. **S. autumnalis**, an orchidaceous plant reputed to be aphrodisiac. **S. diuretica**, an orchidaceous plant of Chili: said to be a valuable diuretic.
- spirarsyl** (spi-rar'sil). Same as *arsenophenylglycin*.
- spirem, spireme** (spi'rem) [σπείρημα coil]. Same as *skein*. See *mitosis*.
- Spirilla, spirilla** (spi-ril'ah). Plural of *spirillum*.
- Spirillaceae** (spi-ril-a'se-e). A family of the order *Eubacteriales*, the individuals of which are curved rods. It includes the genera *Vibrio* and *Spirillum*.
- spirillan** (spi-ril'an). A solution of bismuth hydroxide in water: used for syphilis.
- spirillicidal** (spi-ril-o-si'dal). Destroying spirilla.
- spirillicide** (spi-ril'is-id). Destroying spirilla.
- spirillicidin** (spi-ril'is-i'din) [*spirilla* + L. *ca'dere* to kill]. A substance formed in the blood of patients immunized against spirilla and capable of destroying spirilla.
- spirillolysis** (spi-ril-ol'is-is) [*spirilla* + λύσις dissolution]. The breaking up of or destruction of spirilla.
- spirillosis** (spi-ril-o'sis). 1. Any disease condition attended or marked by the presence of spirilla in the body. 2. A disease of fowls marked by diarrhea, fever, malaise, and death in a few days. It is caused by *Spironema gallinarum* transmitted by ticks of the genus *Argas miniatus*.
- spirillotropic** (spi-ril-o-trop'ik). Having an affinity for spirilla.
- spirillotropism** (spi-ril-ot'ro-pizm) [*spirilla* + τροπή a turning]. The property of attracting spirilla.
- Spirillum** (spi-ril'um), pl. *spirilla* [L. "coil"]. A genus of the family *Spirillaceae*, including the longer curved rod forms and motile by means of a tuft of polar flagella (5-20) which are mostly half circular, rarely wavy bent. **S. amyliiferum**, a saprophytic species from water. **S. anserum**, a pathogenic species from geese affected with septiemia. **S. aquatilis**, a saprophytic species from river water. **S. attenuatum**, a saprophytic species from sea water. **S. aureum**. See under *Vibrio*. **S. berolinense**, a saprophytic species from water. **S. bonhoffii**, a saprophytic species from water. **S. buccale**, a species from the tartar of the teeth. **S. cholerae**, **S. cholerae**.

asiaticae. See *Vibrio cholerae asiaticae*. **S. concen'tricum**, a nonpathogenic form from putrid blood, in actively motile, screwlike rods. **S. danu'bicum**, *Vibrio danubicus*. **Deneke's s.** See *Vibrio tyrogenum*. **S. dentic'ola**, a saprophytic species from the teeth and mouth: probably not pathogenic. **S. desulphuricans**, *Vibrio desulphuricans*. **S. dunbar'ii**, a saprophytic species from river water. **S. dutto'ni**. Same as *Spirochaeta duttoni*. **S. endoparago'gicum**, a saprophytic form from an exudate of poplar trees. **s. of Finkler-Prior**, a vibrio from cholera stools. See *Vibrio proteus*. **S. flaves'cens** and **S. fla'vum**. See under *Vibrio*. **S. gallina'rum**, a species causing a fatal disease in chickens. **s. of Gamaleia**. Same as *Vibrio metchnikovii*. **S. gind'ha**. See *Vibrio gindha*. **S. helco'genes**, a species resembling *s. of Finkler-Prior*, from the stools of diarrhea. **s. of hospital gangrene**, a pathogenic form from the pulpy, membranous covering of the ulcers of hospital gangrene. **S. jenen'sis**, a saprophytic species from water. **S. leukomelae'num**, a nonpathogenic form from the tongue of a mouse. **S. maas'ei**, a pathogenic form from river water. **S. mari'num**, a saprophytic species from sea water. **S. massau'ah**, a pathogenic species from sporadic cholera in man. **S. metchnikov'ii**. Same as *Vibrio metchnikovii*. **S. mil'leri**, *Vibrio milleri*. **S. nasa'le**. See under *Vibrio*. **S. obermei'eri**. Same as *Spironema recurrentis*. **S. phosphores'cens**, **S. plicat'ile**, a saprophytic species from water. **s. of pseudocholera**, a pathogenic form from well water. **S. recti physe'teris**, a zymogenic species from ambergis. **S. rosenberg'ii**, a saprophytic species from brackish water. **S. ro'um**, a chromogenic species in two forms: one from feces, forming a red pigment, and one from gonorrheal pus, forming a rosy pigment. **S. ru'brum**, a chromogenic species from well water producing a wine-red pigment. **S. ru'gula**, a zymogenic species from water and from the mouth. **S. saproph'iles**. See under *Vibrio*. **S. ser'pens**, a saprophytic form from sewage. **S. smith'ii**, a saprophytic form from the intestines of swine: not pathogenic. **S. sputig'enum**, a species found in the saliva. **S. ten'ue**, a saprophytic species from water. **S. terrig'enum**, a saprophytic species from the soil. **S. thei'leri**, a species found in a benign affection of cattle in South Africa. **S. tyro'genum**. See *Vibrio tyrogenus*. **S. un'dula**, a saprophytic species from water. **s. of Vincent**. See *Spironema vincentii*. **S. viola'ceum**, a pathogenic species from water. **S. volu'tans**, a saprophytic species from water. **s. of Wernicke**, a pathogenic species from water.

spirit (spir'it) [L. *spir'itus*]. Any volatile or distilled liquid; also a solution of a volatile material in alcohol. **ardent s.**, any alcoholic beverage. **aromatic s. of ammonia** contains ammonia water, and the oils of lemon, lavender, and myristica. Dose, 30 minims (2 cc.). **s. of camphor**, a 10 per cent solution of camphor. Dose, 15 minims (1 cc.). **s. of chloroform**, a 6 per cent solution of chloroform. Dose, 30 minims (2 cc.). **cologne s.**, rectified ethylic alcohol. **Columbian s.**, deodorized methyl alcohol. **compound s. of juniper** contains the volatile oils of juniper, caraway, and fennel. Dose, 2½ fluidrachms (10 cc.). **compound s. of orange** contains the oils of orange, lemon, anise, and coriander. **corn s.**, an alcoholic liquor distilled from maize. **meth-ylated s.**, denatured alcohol. **Mindererus' s.**, liquor ammonii acetatis. **s. of niter**, spiritus aetheris nitrosi. **petroleum s.**, petroleum ether. See *ether*. **potato s.**, whisky distilled from potatoes. **proof s.**, dilute alcohol containing from 40 to 50 per cent of pure alcohol. **pyroacetic s.**, acetone. **pyroligneous s.**, **wood s.**, methyl alcohol. **rectified s.**, alcohol with 16 per cent of water. **s. of turpentine**, oil of turpentine. **s. of wine**, alcohol.

spirituous (spir'it-u-us) [L. *spir'ituo'sus*]. Alcoholic; containing a considerable proportion of alcohol.

spiritus (spir'it-us), pl. *spir'itus*. Latin for *spirit*. **s. frumen'ti**, whisky. **s. junip'eri**, gin. **s. lino'nis**, an official preparation of the essential oil of lemon. Dose, 1-4 fluidrachms (4-16 cc.). **s. myr'ciae**, bay rum: a preparation of the oil of myrica, oil of orange peel, oil of pimenta, and alcohol. **s. odora'tus**, cologne water. **s. vini gal'lici**, brandy.

Spiro's test (spe'ro) [Karl *Spiro*, German chemist, born 1867]. See under *tests*.

spirobacteria (spi'ro-bak-te're-ah) [*σπείρα* coil + *βακτήριον* club]. The spiral bacteria, a group containing the genera *Spirillum*, *Spirochaeta*, and *Vibrio*.

spirobismol (spi-ro-biz'mol). A combination of the bismuth-tartrate of sodium and potassium with bismuth iodo-quinine. It is used in the treatment of syphilis.

Spirochaeta, **Spirochaete** (spi-ro-ke'tah, spi-ro-ke'te) [*σπείρα* coil + *χάλη* hair]. A genus of the Spirochaetales with flexible undulating body. **S. aborigina'lis**, a species found in cases of ulcerative granuloma of the pudenda. **S. anodon'tae**, a large species found in mussels. **S. anseri'na**, a species found in geese suffering from a fatal disease, marked by fever, wasting, and diarrhea. **S. argentine'nis**, an organism found in cases of multiple sclerosis, and supposed by some to be a possible causative agent in the disease. **S. balanit'idis**, a species found in balanitis. **S. balbian'ii**, a species of Christispira occurring in oysters. **S. ber'bera** is the cause of the relapsing fever of North Africa. **S. bilio-hemoglobinu'riae**, a form found in the blood in black-water fever. **S. bronchia'lis**, a species invading the bronchi and causing bronchospirochetosis. **S. bucca'lis**, a species found in the human mouth. **S. car'teri**, a species from the relapsing fever of India. **S. cohn'ii**, found on the teeth and in the mouth. **S. cytoph'aga**, an aerobic organism which rapidly attacks cellulose and transforms it into a mucilaginous substance. **S. dentic'ola**, **S. den'tium**, a nonpathogenic species from carious teeth. **S. dutton'ii**. See *Spironema duttoni*. **S. emil'iae**, a species which has been found in the blood of typhus patients. **S. eugya'ta**, a form found in human feces and believed by some to cause a form of dysentery. **S. fo'rans**, a protozoan organism resembling *S. pallida*, named from its boring rotatory movements, with little or no flexion. It causes a rheumatoid affection (H. Reiter, 1916). **S. gallina'rum**. See *Spironema gallinarum*. **S. hebdom'adis**, a species said to be the causative agent of nanukayami of Japan. It is probably transmitted by the field mouse. *Microtus montebelli*. **S. hy'os**, a species isolated from cases of hog cholera. **S. icterohaemorrhag'iae**. Same as *Leptospira icteroides*. **S. icteroid'es**. Same as *Leptospira icteroides*. **S. inter'rogans**, a species found in the kidney in a case of yellow fever. **S. ko'chi**, a species found in cases of East African tick fever. **S. lymphat'ica**, a species found in lymphatic leukemia and lymphosarcoma. **S. microgyra'ta**, a species found by Löwenthal in ulcerated human carcinoma, in a dog tumor, and in feces. **S. mor'su mu'ris**, a spirochete found in rat-bite fever. **S. mu'ris**, a species found in mice. **S. neotropica'lis**, a species of spirochete found in the relapsing fever of Panama, transmitted by the tick. *Ornithodoros talaje*. **S. no'vyi**. See *Spironema novyi*. **S. obermei'eri**. See *Spironema recurrentis*. **S. orienta'lis**, a form found in ulcerating granuloma of the pudenda. **S. pal'lida**, a spiral organism, the pathogenic parasite of syphilis; called also *Treponema pallidum*. **S. perten'uis**, a species thought to be the specific cause of frambesia. **S. phagede'nis**, a species obtained from a case of phagedenic

Spirochaeta anserina with a blood corpuscle for comparison (Sacharoff).

Spirochaeta dentium. X 1500 (Hoffmann and Prowazek).

Spirochaeta dentium. Culture (Mühlens).

Spirochaeta duttoni (Schellack).

Spirochaeta gallinarum in blood corpuscle (Prowazek).

Spirochaeta novyi (Schellack).

Spirochaeta pallida and *Sp. refringens*. Smear from a syphilitic chancre: *a*, *Sp. pallida*; *b*, doubtful forms; *c*, *Sp. refringens*. (Bosanquet.)

Spirochaeta pallida in liver of syphilitic fetus stained by Levaditi's silver method (Bosanquet).

Spirochaeta pallida in leukocytes (Gierke).

Spirochaeta pertenuis (Castellani).

Spirochaeta recurrentis (*Sp. obermeieri*) (Schellack).

Spirochaete of ulcerated cancer (Schaudinn).

Spirochaete of *ulcus tropicum*. Sexual forms X 2250 (Prowazek).

ulcer on the external genitals of a woman. **S. plicatilis**, a large, nonparasitic species. **S. recurrentis**. Same as *Spironema recurrentis*. **S. refringens**, a species found on the healthy genital organs. **S. rosai** is the cause of the relapsing fever of East Africa. **S. schaudin'ni**, a species found in tropical ulcer of the leg. **S. theileri**, a species found in cattle suffering from a disease marked by fever, diarrhea, and enlargement of the spleen. **S. vincenti**, a species found in the throat in Vincent's angina, along with the *Bacillus fusiformis*. **S. zeiman'ni**, a species found in the blood of the owl.

Spirochaetales (spi-ro-ke-ta'les). An order of Schizomycetes intermediate between the true bacteria and the protozoa. It includes the genera *Spirochaeta*, *Treponema*, *Spironema*, and *Leplospira*.

spirochaetosis. See *spirochetosis*.

spirochetal (spi-ro-ke'tal). Pertaining to or caused by spirochetes.

spirochetalytic (spi-ro-ke-tal-it'ik). Destroying spirochetes.

spirochete (spi'ro-kēt). An individual belonging to the genus *Spirochaeta*.

spirochetemia (spi-ro-ke-te-me-ah) [*spirochete* + *aima* blood]. The presence of spirochetes in the blood.

spirocheticidal (spi-ro-ke-tis-i'dal) [*spirochete* + *L. caedere* to kill]. Destructive to spirochetes.

spirocheticide (spi-ro-ke'tos-id). A substance which destroys spirochetes.

spirochetylisis (spi-ro-ke-tol'is-is) [*spirochete* + *lysis* dissolution]. The destruction of spirochetes by lysis.

spirochetosis, spirochaetosis (spi'ro-ke-to'sis). Infection with spirochetes. **s. arthritica**, a rheumatoid affection of the joints caused by *Spirochaeta forans* (H. Reiter, 1916). **bronchopulmonary s.**, bronchospirochetosis. **gastric s.** See *grass sickness*, under *sickness*. **icterogenic s.**, **s. icterohaemorrhagiae**, infectious jaundice or Weil's disease. See *Weil's disease*, under *disease*. **s. riverensis**, a spirochetal chronic meningitis occurring in the department of Rivera in Brazil.

spirochetotic (spi-ro-ke-tot'ik). Pertaining to or characterized by spirochetosis.

spirocheturia (spi-ro-ke-tu're-ah) [*spirochete* + *ouron* urine]. The presence of spirochetes in the urine.

spirocid (spi'ro-sid). A proprietary German preparation identical with stovarsol.

spiroform (spi'ro-form). A proprietary antirheumatic, analgesic, and uric acid solvent, acetylsalol, $\text{CH}_3\text{CO.O.C}_6\text{H}_4\text{O.CO.C}_6\text{H}_5$. Dose, $\frac{1}{2}$ –15 grains (0.5–1 Gm.).

spirograph (spi'ro-graf) [L. *spira're* to breathe + *γράφειν* to write]. An instrument for registering the respiratory movements.

spirographidin (spi-ro-graf'id-in). A hyalin derived from spirographin.

spirographin (spi-ro-graf-in). A hyalogen derivable from the skeletal structures of *Spirographis*, a wormlike animal.

spiroid (spi'roid). Resembling a spiral.

spiroma (spi-ro'mah). Spiradenoma.

spirometer (spi-rom'et-er) [L. *spira're* to breathe + *metrum* measure]. An instrument for measuring the air taken into and exhaled from the lungs.

spirometric (spi-ro-met'rik). Pertaining to spirometry or the spirometer.

spirometry (spi-rom'et-re). The measurement of the breathing capacity of the lungs.

Spiromonas (spi-rom'o-nas) [*σπείρα* coil + *μονάς* a unit]. A genus or form of spirillum of various species.

spirone (spi'rōn). A preparation of acetone, potassium hyposulphite, iodine, glycerin, and water: used as a disinfectant and as a substitute for potassium iodide.

Spironema (spi-ro-ne'mah) [*σπείρα* coil + *νήμα* thread]. A genus of Spirochetes, including the organisms of relapsing fever and Vincent's angina. The name *Borrelia* is said to be the proper genus name for these organisms. **S. berbera**, the species which causes North African or Algerian relapsing fever. It is transmitted by *Pediculus humanus*. **S. carteri**, the species which causes the relapsing fever of Asia and India; it is transmitted by lice. **S. duttoni**, the species which causes African tick fever and which is conveyed by the bite of the tick, *Ornithorhynchus moubata*. **S. gallinarum**, a species which causes a fatal spirochetosis of chickens (spirillosis); it is conveyed by the bite of the tick, *Argas persicus*. **S. icterohaemorrhagiae**. See *Lepiospira icterohaemorrhagiae*. **S. ko'chi**, the species which causes East African tick fever. **S. novyi**, a species found in cases of relapsing fever in America. **S. recurrentis**, the species which causes the European relapsing fever. It is a delicate spiral thread 7 to 9 microns in length and actively motile. **S. refringens**, a form found in smegma. **S. vincenti**, an organism which is the causative agent of Vincent's angina. It occurs in the form of long spirilla and of fusiform bacteria-like rods. The latter were formerly regarded as bacteria and called *Bacillus fusiformis*.

spirophore (spi'ro-fōr) [L. *spira're* to breathe + *φορέιν* to bear]. An apparatus to effect artificial respiration.

Spiroptera neoplastica. An organism which causes cancer (epitheliomas) in the stomach of rats. The rats become infected by eating infected cockroaches.

spirosal (spi'ro-sal). A colorless, odorless fluid, $\text{OH.C}_6\text{H}_4\text{CO.O.CH}_2\text{OH}$, a monoglycolic acid ester of salicylic acid: used externally in the treatment of rheumatism.

Spiroschaudinina (spi'ro-shaw-din'e-ah). A name proposed by Sambon (1907) as the genus name for the spirochetes of the blood. See *Spirochaeta*. **S. duttoni**. Same as *Spirochaeta duttoni*. **S. recurrentis**. Same as *Spirochaeta obermeieri*.

Spiroschaudininae. The group of spirochetes causing the relapsing fevers.

spiroscope (spi'ro-skōp) [L. *spira're* to breathe + *σκοπεῖν* to view]. An apparatus for respiration exercises by which the patient can see the amount of water displaced in a given time and thus gauge his respiratory capacity.

spiroscopy (spi-ro-s'ko-pe). The use of the spiro-scope.

Spirosoma (spi-ro-so'mah) [*σπείρα* coil + *σώμα* body]. A genus of bacteria akin to *Spirillum*: the cells are rigid spirals or segments of spirals, and have no locomotive organs.

spirulina (spir-u-li'nah) [L. *spira'ula* twist]. A micro-organism occurring in coiled and twisted filaments.

spissated (spis-at'ed) [L. *spissa'tus*]. Inspissated: thickened by evaporation.

spissitude (spis'it-ūd) [L. *spissitu'do*]. The state or quality of being inspissated.

spittle (spit'l). The saliva.

Spitzka's bundle, nucleus, tract (spitz'kahz) [Edward Charles Spitzka, New York neurologist, 1852–1914]. See *bundle, nucleus, tract*.

Spix's spine (spik'ses) [Johann Baptist Spix, German naturalist, 1781–1826]. See under *spine*.

splanchnapophyseal (splan'k-nap-o-fiz'e-al). Pertaining to a splanchnapophysis.

splanchnapophysis (splan'k-nap-of'is-is) [*σπλάγχχων* viscus + *apophysis*]. A skeletal

element, like the lower jaw, connected with the alimentary canal.

splanchnectopia (splan-nek-to'pe-ah) [σπλάγχνον viscus + ἐκτοπός out of place]. Displacement of a viscus.

splanchnemphraxis (splan-k-nem-fraks'is) [σπλάγχνον viscus + ἐμφορεῖς stoppage]. Obstruction of a viscus, particularly the intestine.

splanchnesthesia (splan-nes-the'ze-ah) [σπλάγχνον viscus + αἴσθησις sensation]. Visceral sensation.

splanchnesthetic (splan-nes-thet'ik) [σπλάγχνον viscus + αἴσθησις sensation]. Pertaining to visceral consciousness or sensation.

splanchnic (splank'ník) [σπλαγχνικός; L. *splanchnicus*]. Pertaining to the viscera.

splanchnicotomy (splan-k-nik-o'to-me) [*splanchnic* nerve + τομή a cutting]. Division of a splanchnic nerve.

splanchnoblast (splank'no-blast) [σπλάγχνον viscus + βλαστός germ]. The rudiment or anlage of any viscus.

splanchnoceale (splank'no-sēl) [σπλάγχνον viscus + κήλη hernia]. Hernial protrusion of a viscus.

splanchnocoele (splank'no-sēl) [σπλάγχνον viscus + κοίλος hollow]. That portion of the body cavity, or coelom, from which are developed the abdominal, pericardial, and pleural cavities. Called also *pleuroperitoneal cavity* and *ventral coelom*.

splanchnoderm (splank'no-derm). Same as *splanchnopleure*.

splanchnodiastasis (splank'no-di-as'tas-is) [σπλάγχνον viscus + διάστασις separation]. Separation of a viscus; displacement of a viscus.

splanchnodynia (splank'no-din'e-ah) [σπλάγχνον viscus + ὁδύνη pain]. Pain in an abdominal organ.

splanchnography (splank-nog'raf-e) [σπλάγχνον viscus + γράφω writing]. The descriptive anatomy of the viscera.

splanchnolith (splank'no-lith) [σπλάγχνον viscus + λίθος stone]. An intestinal calculus or concretion.

splanchnology (splank-nol'o-je) [σπλάγχνον viscus + λόγος treatise]. The sum of knowledge in regard to the viscera.

splanchnomegalia, splanchnomegaly (splank'no-meg-a'le-ah, splank-no-meg'al-e) [σπλάγχνον viscus + μέγας large]. Enlargement of the viscera.

splanchnopathy (splank-nop'ath-e) [σπλάγχνον viscus + πάθος disease]. Disease of the viscera.

splanchnopleural (splank-no-plu'ral). Pertaining to the splanchnopleure.

splanchnopleure (splank'no-plūr) [σπλάγχνον viscus + πλευρά side]. 1. The inner layer of the mesoblast, separated from the somatopleure by the pleuroperitoneal space. Called also *splanchnic mesoblast* and *visceral mesoblast*. 2. The layer formed by the union of the splanchnopleure (1) with the hypoblast. From it are developed the muscles and the connective tissue of the intestine.

splanchnoptosis (splank-no-to'se-ah). Splanchnoptosis.

splanchnoptosis (splank-no-to'sis) [σπλάγχνον viscus + πτώσις falling]. The prolapse, or falling down, of the viscera. Called also *abdominal ptosis* and *Glenard's disease*.

splanchnosclerosis (splank'no-skle-ro'sis) [σπλάγχνον viscus + σκληρός hard]. Induration of the viscera.

splanchnoscopy (splank-nos'ko-pe) [σπλάγχνον viscus + σκοπεῖν to view]. The inspection of the viscera by transillumination.

splanchnoskeleton (splank-no-skel'et-on) [σπλάγχνον viscus + σκελετός skeleton]. The totality of the skeletal structures connected with the viscera, especially the bony structure that

forms within certain organs of animals, as in the tongue, eye, penis, etc.

splanchnosomatic (splank'no-so-mat'ik). Pertaining to the viscera and the body.

splanchnotomy (splank-not'o-me) [σπλάγχνον viscus + τέμνειν to cut]. The anatomy or dissection of the viscera.

splanchnotribe (splank'no-trib) [σπλάγχνον intestine + τριβεῖν to crush]. An instrument for crushing the intestine and so closing its lumen.

splash (splash). See *succession sound*, under *sound*.

splayfoot. Flatfoot; talipes valgus.

spleen (splē) [σπλήν; L. *splen*]. A large glandlike but ductless organ situated in the upper part of the abdominal cavity on the left side and lateral to the cardiac end of the stomach. It is of a flattened oblong shape and about 125 mm. long; it has a purple color and a pliable consistency. It disintegrates the red blood corpuscles and sets free the hemoglobin, which the liver converts into bilirubin, and has other important functions, the full scope of which is not entirely determined. **accessory s.**, a detached and outlying portion, or exclave, of the spleen. **bacon s.**, a spleen with areas of amyloid degeneration, giving its cut surfaces the appearance of fried bacon. **cyanotic s.**, a contracted form of spleen due to passive congestion. **diffuse waxy s.**, amyloid degeneration of the spleen involving especially the coats of the venous sinuses and the reticulum of the organ. **enlarged s.**, splenomegalia; also the so-called ague cake, a hypertrophy of the spleen due to chronic malarial poisoning. **floating s.**, a spleen displaced and preternaturally movable. Called also *wandering s.* **lardaceous s.** See *waxy s.* **porphyry s.**, a spleen which is the seat of nodular infiltration. **sago s.**, a spleen having on its cut surface the appearance of grains of sago: due to amyloid infiltration. **wandering s.** See *floating s.* **waxy s.**, a spleen affected with amyloid degeneration. Called also *lardaceous s.*

splenadenoma (splē'nad-en-o'mah) [σπλήν spleen + ἀδήν gland + -ωμα tumor]. Hyperplasia of the spleen pulp.

splenaemia (sple-ne'me-ah). See *splenemia*.

splenalgia (splē-nal'je-ah) [σπλήν spleen + ἄλγος pain]. Neuralgic pain in the spleen.

splenatropia, splenatroph (splē-at-ro'fe-ah, splē-at-ro'fe) [σπλήν spleen + atrophy]. Atrophy of the spleen.

splenauxe (sple-nawks'e) [σπλήν spleen + αὔξη increase]. Enlargement of the spleen.

splenceratosis (splēn'ser-at-o'sis) [σπλήν spleen + κέρασ horn]. A morbid hardening of the spleen.

splenculus (splēng'ku-lus) [L. "little spleen"]. An accessory spleen, or splenic exclave.

splenectasis (splēn-ek'tas-is) [σπλήν spleen + ἔκτασις enlargement]. Enlargement of the spleen.

splenectomize (sple-nek'to-mīz). To remove the spleen from.

splenectomy (sple-nek'to-me) [σπλήν spleen + ἐκτομή excision]. Excision or extirpation of the spleen. **subcapsular s.**, splenectomy in which the capsule of the organ is incised and the spleen decapsulated and removed.

splenectopia, splenectomy (sple-nek-to'pe-ah, sple-nek-to-pe) [σπλήν spleen + ἐκ out + τόπος place]. Displacement of the spleen; wandering or floating spleen.

splenecolosis (sple-nel-ko'sis) [σπλήν spleen + ἔλκος ulceration]. Ulceration of the spleen.

splenemia, splenaemia (splēn-e'me-ah) [σπλήν spleen + αἷμα blood]. 1. Splenic leukemia. 2. Congestion of the spleen with blood.

splenemphraxis (sple-nem-fraks'is) [σπλήν spleen + ἐμφορεῖς obstruction]. Congestion of the spleen.

spleneolus (sple-ne'o-lus). Accessory spleen.

splenepatitis (splē'nep-at-i'tis) [σπλήν spleen + ἥπαρ liver + -ιτις inflammation]. Inflammation of the spleen and liver.

splenetic (splē-net'ik). Affected with splenic disorder; ill humored.

splénial (splē-ne'al). Pertaining to the splenium or to the splenius muscle.

splenic (splē'ik) [σπληνικός; L. *splēnicus*]. Pertaining to the spleen.

splenicterus (splē-nik'ter-us) [σπλήν spleen + ἱκτερός jaundice]. Inflammation of the spleen associated with jaundice.

spleniferrin (splēn-if'er'in). A therapeutical preparation of the spleen of the ox, combined with iron albuminate, in a chocolate-brown powder.

splenification (splēn'if-ik-a'shun). Same as *splenization*.

spleniform (splēn'if-orm). Resembling the spleen.

splenin (splē'nin). A therapeutical preparation of the spleen of an animal.

spleniserrate (splēn-is-er'at). Pertaining to the splenius and the serratus muscles.

splenitis (splē-ni'tis) [σπλήν spleen]. Inflammation of the spleen: a condition that is usually produced by pyemia. It is attended by enlargement of the organ with pus, and is marked by much local pain. **spodogenous s.**, that due to accumulation of foreign particles in the spleen.

splenium (splē-ne-um) [σπληνίον]. 1. A bandage or compress. 2. The posterior rounded end of the callosus (*splēnium cor'poris callo'si* [B N A]).

splēnius (splē-ne-us). See *muscles, table of*.

splenization (splēn-iz-a'shun). That condition of a part, especially the lung, in which it has the appearance of the tissue of the spleen, due to engorgement and condensation. **hypostatic s.**, that produced by hypostatic pneumonia.

splenoblast (splē'no-blast) [σπλήν spleen + βλαστός germ]. A cell which develops into a splenocyte.

splenocoele (splēn'o-sēl) [σπλήν spleen + κήλη hernia]. Hernia of the spleen.

splēnoceratosis (splē'no-ser-at-o'sis) [σπλήν spleen + κέρα horn]. Hardening of the spleen.

splēnocleisis (splē-no-kl'i'sis) [σπλήν spleen + κλείσις closure]. Irritation of the surface of the spleen to induce the development of new fibrous tissue.

splēnocolic (splē-no-kol'ik) [L. *splēn* spleen + *colōn* colon]. Pertaining to the spleen and colon.

splēnocyte (splēn'o-sit) [σπλήν spleen + κύτος cell]. Pappenheim's term for a large mononuclear phagocytic cell which migrates to the spleen and continues to exist there. Cf. *endotheliocyte*.

splēnodiagnosis (splē'no-di-ag-no'sis). Diagnosis of typhoid fever by noting the effect on the spleen of injections of extracts of typhoid bacilli.

splēnodynia (splē-nō-din'e-ah) [σπλήν spleen + δόνην pain]. Pain in the spleen.

splēnogramulomatosis siderot'ica. See *Gamnia's disease*, under *disease*.

splēnography (splē-nog'raf-e) [σπλήν spleen + γράφω writing]. A description of the spleen.

splēnohemia (splē-no-he-me-ah). See *splēnemia*.

splēnohepatomegalia (splē'no-hep'at-o-meg-a'-le-ah). Splēnohepatomegaly.

splēnohepatomegaly (splē'no-hep'at-o-meg'al-e) [σπλήν spleen + ἥπαρ liver + μέγας large]. Enlargement of the spleen and liver.

splēnoid (splē'noid) [σπλήν spleen + εἶδος form]. Resembling the spleen.

splēnokeratosis (splē'no-ker-at-o'sis) [σπλήν spleen + κέρα horn]. Hardening of the spleen.

splēnolaparotomy (splē'no-lap-ar-ot'o-me). Same as *laparospplenotomy*.

splēnology (splē-nol'o-je) [σπλήν spleen + λόγος

discourse]. The sum of knowledge regarding the spleen, its functions and diseases.

splēnolymph (splē'no-limf). Both splenic and lymphatic in character. See under *gland*.

splēnolymphatic (splē'no-lim-fat'ik). Pertaining to the spleen and lymph glands.

splēnolysin (splē-nol'is-in) [σπλήν spleen + λύσις dissolution]. A lysine destructive to splenic tissue.

splēnolysis (splē-nol'is-is). Destruction of spleen tissue.

splēnoma (splē-no'mah), pl. *splēnomas* or *splēno-mata* [σπλήν spleen + -ωμα tumor]. A tumor of the spleen.

splēnomalacia (splē'no-mal-a'she-ah) [σπλήν spleen + μαλακία softness]. Abnormal softness of the spleen; softening of the spleen.

splēnomedullary (splē'no-med'ul-a-re). Of or pertaining to the spleen and bone marrow.

splēnomegalia, **splēnomegaly** (splē'no-meg-a'-le-ah, splē-no-meg'al-e) [σπλήν spleen + μέγας large]. Enlargement of the spleen. The term is principally applied to **s. primitiva**, a disease marked by hypertrophy of the spleen, with progressive anemia and with no leukemia or disease of the lymph glands. The disease is curable by splenectomy; and cases in which the organ is not removed are always fatal. **Gaucher's s.** See *Gaucher's disease*, under *disease*. **hemolytic s.**, splēnomegalia marked by destruction of the red corpuscles of the blood. **infantile s.** See *anemia infantum pseudoleukemica*. **infective s.**, **infectious s.**, splēnomegaly which is associated with an infection. **myelophthisic s.**, enlargement of the spleen marked by decrease in myeloid tissue and by fibrosis. **Nieman's s.** See *Nieman's disease*, under *disease*. **spodogenous s.**, enlargement of the spleen attributed to accumulation of erythrocytes in the organ. **tropical s.**, **febrile**. See *kala-azar*.

splēnomyelogenous (splē'no-mi-el-oj'en-us). Formed in the spleen and bone marrow; splēnomedullary.

splēnomyelomalacia (splē'no-mi'el-o-mal-a'se-ah) [σπλήν spleen + μυελός marrow + μαλακία softening]. Softening of the spleen and bone marrow.

splēnoncus (splē-nong'kus) [σπλήν spleen + όγκος tumor]. Tumor of the spleen.

splēnonephritic (splē-no-nēf'ri-tik). Pertaining to the spleen and the kidney.

splēnonephroptosis (splē'no-nēf-rop-to'sis) [σπλήν spleen + νεφρός kidney + πτώσις falling]. Downward displacement of the spleen and kidney on the same side.

splēnopancreatic (splē'no-pan-kre-at'ik). Pertaining to the spleen and the pancreas.

splēnoparēctama, **splēnoparēctasis** (splē'no-par-ek'tam-ah, splē'no-par-ek'tas-is) [σπλήν spleen + παρέκτασις extension]. Excessive enlargement of the spleen.

splēnopathy (splēn-op'ath-e) [σπλήν spleen + πάθος illness]. Any disease of the spleen.

splēnopexia, **splēnopexis**, **splēnopexy** (splē-no-peks'e-ah, splē'no-peks-is, splē'no-peks-e) [σπλήν spleen + πήξις fixation]. Surgical fixation of a wandering spleen to the abdominal wall by sutures.

splēnophrenic (splēn-o-fren'ik) [σπλήν spleen + φρήν diaphragm]. Pertaining to the spleen and diaphragm.

splēnopneumonia (splē'n-o-nu-mo'ne-ah) [σπλήν spleen + πνευμονία]. Pneumonia attended with splenization of the lung.

splēnoptosis, **splēnoptosis** (splē-nop-to'se-ah, -to'sis) [σπλήν spleen + πτώσις falling]. Pro-lapse or downward displacement of the spleen.

splēnorrhagia (splē-no-ra'je-ah) [σπλήν spleen + ρήγνυμαι to burst forth]. Hemorrhage from the spleen.

splenorrhaphy (sple-nor'af-e) [σπλήν spleen + ραφή suture]. Suture of wounds of the spleen.

splenotomy (sple-not'o-me) [σπλήν spleen + τέμνω to cut]. Surgical incision of the spleen.

splenotoxin (sple-no-tok'sin). The toxin contained in the splenic tissue.

splenotyphoid (sple-no-ti'foid). Typhoid fever with marked splenic involvement.

splenulus (splen'u-lus). A little spleen; an accessory spleen.

splenunculus (sple-nung'ku-lus). Same as *lienunculus*.

splint (splint). 1. A rigid or flexible appliance for the fixation of displaced or movable parts. 2. A small tumor along the metacarpal bones of horses, usually at the junction of the large and small metacarpals, producing lameness. **aeroplane s.** (See illustration on p. 1149.) **Agnew's s.**, a splint for fracture of the patella; also one for fracture of the metacarpus. (See illustrations on p. 1149.) **anchor s.**, a splint for fracture of the jaw, with metal loops fitting over the teeth and held together by a rod. **Angle's s.**, a wire splint for fastening the lower teeth to the upper ones in fracture of the mandible, the wires being held in place by bands cemented to the teeth. **Ashhurst's s.**, a bracketed splint of wire with a foot piece: made to cover the thigh and leg, and used after excision of the knee joint. **Balkan s.**, an apparatus used for continuous extension in treatment of fractures of the femur. It consists of an overhead bar, supported from the floor with pulleys attached, which supports the leg in a metal sling. **Bavarian s.**, a dressing formed by two pieces of flannel, folded once and sutured along the margin of the fold; between the layers of each fold, plaster cream is introduced, the seam serving as a hinge in the removal of the splint. **Bond's s.**, a form of splint for fracture of the lower end of the radius. (See illustration on p. 1149.) **Bowlby's s.**, a splint for fracture of the shaft of the humerus. **bracketed s.**, a splint composed of two pieces of metal or wood joined by brackets. **Cabot's s.**, a posterior wire splint. **Carter's intranasal s.**, a fenestrated steel bridge, the wings of which are connected by a hinge: used in the bridge splint operation of depressed bridge of the nose. **coaptation s's**, small splints adjusted about a fractured limb for the purpose of producing coaptation of fragments. **Dupuytren's s.**, a splint to prevent eversion in Pott's fracture. (See illustration on p. 1149.) **Engelmann s.**, a big splint consisting of two strips of metal connecting at the top with a ring which fits over the thigh as high as it can be pushed up against the crotch. It is fastened at the lower end with a spike in each side which is driven into the shoe between the sole and upper, close to the heel. **Fox's s.**, an apparatus for fractured clavicle. **Gilmer's s.**, a silver wire fastening for holding the lower teeth to the upper ones in fracture of the mandible. **Gooch s.**, a flexible coaptation splint consisting of strips of wood arranged edge to edge and glued to cloth or leather. **Gordon's s.**, a side splint for the arm and hand in Colles' fracture. **Hammond's s.**, a wire splint for use in orthodontic work. **Hodgen's s.**, a wire splint for fracture of the femur below the upper third. **interdental s.**, a splint for fracture of the jaw, held in place by wires passed around the teeth. **Jones' cock-up s.** (See illustration on p. 1149.) **Jones' nasal s.**, a splint for fracture of the nasal bones. (See illustration on p. 1149.) **Levis' s.**, a splint of perforated metal extending from below the elbow to the end of the palm. **Liston's s.**, a simple straight splint adapted to the side of the leg and body. **Mason's s.**, a splint for the after-treatment of amputation at the elbow. **McGee's s.**, a splint for fracture of both rami of the mandible. **McIntire's s.**, a posterior splint for the leg and thigh, in the form of a double inclined plane. **plaster s.**, a splint composed of gauze impreg-

nated with plaster of paris. **poroplastic s.**, a splint which can be softened with water and molded upon the limb. **Sayre's s.**, one of three varieties of splint: one for the ankle, one for the knee, and one for use in hip joint disease. (See illustration on p. 1149.) **Simpson's s.**, a shaped tampon of cotton for inserting into the nasal fossa. **Stromeyer's s.**, a splint consisting of two hinged portions which can be fixed at any angle. **s. technology**, the scientific study of splints for surgeons' use. **Thomas' knee s.**, a splint for removing the pressure of the weight of the body from the knee joint by transferring it to the ischium and perineum. **Thomas' posterior s.**, a form of splint used in hip joint disease. (See illustration on p. 1149.) **Volkman's s.**, a guttered splint with a foot piece and two lateral supports: for fracture of the lower extremity.

splint bone. The second or fourth small metacarpal bones of the horse.

splinter (splin'ter). A piece of fractured bone.

splints. The presence of masses of new bone in the forelegs of young horses, due to osteitis.

split products. See under *product*.

splitting (split'ing). Chemical separation of a complex substance into two or more simpler substances; hydrolysis.

spodiomyelitis (spo'de-o-mi-el-i'tis) [σπόδιος ash colored + μυελος marrow + -itis inflammation]. Acute anterior poliomyelitis.

spodogenous (spo-doj'en-us) [σποδός ashes + γεννᾶν to produce]. Pertaining to or caused by waste matters in an organ.

spodophagous (spod-of'ag-us) [σπόδος ashes + φαγείν to devour]. Eating up or destroying the waste materials of the body.

spodophorous (spod-of'or-us) [σποδός ashes + φορεῖν to bear]. Removing waste materials.

spondylalgia (spon-dil-al'je-ah) [σπόνδυλος vertebra + άλγος pain]. Pain in a vertebra.

spondylarthritis (spon'dil-ar-thri'tis) [σπόνδυλος vertebra + ἄρθρον joint + -itis inflammation]. Inflammation of the joints between the vertebrae.

spondylarthrocace (spon-dil-ar-throk'as-e) [σπόνδυλος vertebra + ἄρθρον joint + κάκη badness]. Tuberculosis of the vertebrae.

spondylexarthrosis (spon'dil-eks-ar-thro'sis) [σπόνδυλος vertebra + ἐξάρθρωσις dislocation]. Dislocation of a vertebra.

spondylitic (spon-dil-it'ik). 1. Affected with or of the nature of spondylitis. 2. A person affected with spondylitis.

spondylitis (spon-dil-i'tis) [σπόνδυλος vertebra + -itis inflammation]. Inflammation of a vertebra; especially tuberculous disease of the vertebrae—Pott's disease. **s. deformans**, deforming arthritis of the vertebral joints causing the vertebral column to become bent and rigid. **s. infectiosa**, inflammation of the vertebrae of infectious origin. **Kümmell's s.**, traumatic spondylitis in which the symptoms do not show themselves until some time after the receipt of the injury. **post-traumatic s.** See *Kümmell's s.* **s. rhizomelia**, advancing rigidity of the spine caused by ankylosis of the vertebrae extending from below upward. **traumatic s.**, spondylitis due to injury. **s. tuberculoosa**, tuberculous disease of the vertebral joints. **s. typhosa**. See *typhoid spine*, under *spine*.

spondylizema (spon'dil-iz-e'mah) [σπόνδυλος vertebra + ἔγμα depression]. Downward displacement of a vertebra in consequence of the destruction or softening of the one below it.

spondylocace (spon-dil-ok'as-e) [σπόνδυλος vertebra + κάκη badness]. Tuberculosis of the vertebrae.

spondylo diagnosis (spon'dil-o-di-ag-no'sis) [σπόνδυλος vertebra + διάγνωσις]. Diagnosis by the reflexes obtained by stimulating the vertebrae.

Agnew's splint for fractured patella.

Bond's splint.

Agnew's splint applied.

Dupuytren's splint in Pott's fracture.

Agnew's splint for fracture of metacarpus.

Jones' nasal splint.

Jones' cock-up splint.

Bond's splint in Colles' fracture.

Aeroplane splint (Babcock).

Anterior angular splint for fractures near the elbow joint.

Thomas' posterior splint.

Thomas' knee splint.

Hutchinson's knee joint splint.

Sayre's knee splint applied.

spondylodidymia (spon''dil-o-did-im'e-ah) [σπόνδυλος vertebra + δίδυμος twin]. Teratic union of twins by the vertebrae.

spondylodymus (spon'dil-od'im-us). A twin monster united by the vertebrae.

spondylodynia (spon''dil-o-din'e-ah) [σπόνδυλος vertebrae + δόνην pain]. Pain in a vertebra.

spondylolisthesis (spon''dil-o-lis-the'sis) [σπόνδυλος vertebra + ολισθάνειν to slip]. Forward displacement of the lumbar vertebra, with consequent contraction of the pelvis.

spondylolisthetic (spon''dil-o-lis-thet'ik). Pertaining to or caused by spondylolisthesis.

spondylopathy (spon-dil-op'ath-e) [σπόνδυλος vertebra + πάθος affection]. Any disorder of the vertebrae. **traumatic s.** See *Kümmell's disease*, under *disease*.

spondylopyosis (spon''dil-o-pi-o'sis) [σπόνδυλος vertebra + πύωσις supuration]. Suppuration of a vertebra or of vertebrae.

spondyloschisis (spon-dil-os'kis-is) [σπόνδυλος vertebra + σχίσσις fissure]. Congenital fissure of a vertebral arch.

spondylosis (spon-dil-o'sis). Ankylosis of a vertebral joint. **rhizomelic s.**, complete ankylosis of the vertebrae, with more or less ankylosis of the hip and shoulder joints.

spondylosyndesis (spon''dil-o-sin'de-sis) [σπόνδυλος spine + σύνδεσις a binding together]. Operative immobilization or ankylosis of the spine.

spondylotherapy (spon''dil-o-ther'ap-e) [σπόνδυλος vertebra + θεραπεία treatment]. Treatment by physical methods applied to the spinal region; spinal therapeutics.

spondylotomy (spon-dil-ot'o-me) [σπόνδυλος vertebra + τομή cut]. Same as *rachiotomy*.

spondylous (spon'dil-us). Pertaining to a vertebra.

spongariion (spon-ga're-on) [Gr.]. An ancient eye salve.

sponge (spunj) [L. *spongia*; σπογγία sponge]. 1. The elastic fibrous skeleton of *Euspongia officinalis*, a marine animal organism: used mainly as an absorbent. 2. A gauze pad stuffed with cotton waste and sterilized. **s. graft**, a bit of sponge inserted in an ulcer or a wound to promote granulation. **s. tent**, a piece of dry, compressed sponge to be inserted in a contracted passage, such as the os uteri. The secretions of the passage cause expansion of the sponge.

spongia (spon'je-ah) [L.; σπογγία]. Sponge. **s. cera'ta**, **s. praepara'ta**, pressed and prepared sponges used in making sponge tents. **s. compressa**, compressed sponge; a sponge tent. **s. us'ta**, burnt sponge; an alternative; its curative qualities are due to the contained iodine.

spongiform (spon'jif-orm) [σπόγγιος sponge + L. *for'ma* shape]. Resembling a sponge.

spongini (spon'jin). A horny, albuminoid material forming the basis of sponge.

spongioblast (spon'je-o-blast) [σπογγία sponge + βλαστός germ]. 1. Any one of the embryonic epithelial cells, developed about the neural canal, which becomes transformed into ependyma cells. 2. Same as *amacrine*.

spongioblastoma (spon''je-o-blas-to'mah). A tumor containing spongioblasts. In *s. multiflorum* the cells are of various forms of arrangements; in *s. unipolaris* the spongioblasts are mostly unipolar.

spongocyte (spon'je-o-sit) [σπογγία sponge + κύτος cell]. A neuroglia cell.

spongioid (spon'je-oid) [σπογγία sponge + εἶδος

form]. Resembling a sponge in structure or appearance.

spongiopilin (spon''je-o-pi'lin) [σπογγία sponge + πῖλος felt]. A fabric formed of sponge and wool felted together with a layer of caoutchouc applied to one surface: used like a poultice.

spongioplasm (spon'je-o-plazm) [σπογγία sponge + πλάσμα plasm]. 1. A substance which forms the network of fibrils pervading the cell substance and forming the reticulum of the cell. Called also *mitomes* and *fibrillar mass* of *Flemming*. 2. The granular material of an axon.

spongiosa (spon-je-o'sah). See *substantia spongiosa*.

spongiosis (spon''je-o-si'tis). Inflammation of the corpus spongiosum.

spongy (spun'je). Of a spongelike appearance or texture.

sportaneous (spon-ta'ne-us) [L. *spon'taneus*]. Voluntary; instinctive; occurring without external influence.

spoon (spoon). A metallic instrument with an oval bowl placed on a handle. **Daniel's s.**, an instrument used in removing the eye lens. **sharp s.**, a spoon with a sharp-edged bowl: used for scraping away granulations, etc. **Volkmann's s.** Same as *sharp s.*

spoon nail. Ceylonychia.

sporadic (spo-rad'ik) [σποραδικός scattered; L. *sporadicus*]. Not widely diffused or epidemic; occurring here and there.

sporadoneure (spo-rad'o-nūr) [σποραδικός sporadic + νεύρον nerve]. An isolated nerve cell occurring in any of the tissues.

sporangia (spo-ran'je-ah). The pleural of *sporangium*.

sporangial (spo-ran'je-al). Pertaining to a sporangium.

sporangiphore (spo-ran'je-o-for). The thread-like stalk which bears at its tip the sporangium of molds.

sporangium (spo-ran'je-um), pl. *sporan'gia* [σπόρος seed + ἀγγείον vessel]. Any encystment containing spores or sporelike bodies as in the larval state of trematode parasites or in certain of the mold fungi.

sporiation (spo-ra'shun). Same as *sporulation*.

spore (spōr) [L. *spōra*; σπόρος seed]. The reproductive element of one of the lower organisms, such as a protozoan or a cryptogamic plant. *Exospores* or *conidia* are nonsexual spores arising from the end of the hyphae by budding. Large ones are called *macroconidia*; small ones, *microconidia*. *Endospores* or *gonidia* are formed in the interior of special spore cases called *sporangia*. Endospores that are free and provided with locomotive flagella are *zoospores*, their cases being termed *zoosporangia*. An *ascospore* is a variety of endospore contained in a special spore case called an *ascus*. *Zygospores* are spores formed by a conjugation between two special hyphae. *Chlamydospores* are asexual resting spores, with thick walls, produced by enlargement of special cells. *Oospores* are spores formed by fertilization in a manner similar to true seeds. **asexual s.**, a spore produced by division within the walls of a mother cell. **black s.**, a degenerated blood parasite in the body of a mosquito. **swarm s's**, spores made up of numerous active motile individuals. **washed s's**, spores of bacteria which have been freed from their toxin by washing.

sporenrest (spo'ren-rest). The mass of protoplasm left after the completion of sporulation of two congregating protozoan cells. Called also *sporal residuum*.

sporetia (spo-re'she-ah). That part of the extranuclear chromatin of a cell that is concerned in the reproductive function of the cell.

sporicidal (spo-ris-i'dal) [*spore* + L. *caedere* to kill]. Destroying spores.

sporicide (spo'ris-id). 1. Same as *sporicidal*. 2. An agent that destroys spores.

sporidiosis (spo-rid-e-o'sis). Infection with sporidia.

sporidium (spo-rid'e-um), pl. *sporidia*. A protozoan organism in one of the spore stages of its growth: frequently seen in the vertebrate organism as a parasite. **S. vaccina'le**. Same as *Cylindrotheca vaccinae*.

sporiferous (spo-ri'er-us) [L. *spo'ra* spore + *fer're* to bear]. Producing or bearing spores.

sporiparous (spo-rip'ar-us) [L. *spo'ra* spore + *pa'ere* to produce]. Producing spores.

sporo-agglutination (spo'ro-ag-lu-tin-a'shun). Agglutination of spores in the diagnosis of sporotrichosis.

sporoblast (spo'ro-blast) [σπόρος seed + βλαστός germ]. One of the bodies developed within the oocyst of the malarial parasite in the mosquito from which the sporozoite later develops.

sporocyst (spo'ro-sist) [σπόρος seed + κύστις cell]. 1. Any cyst or sac containing spores or reproductive cells, especially in a vegetal or animal organism of a low type. 2. The envelope that forms about a sporoblast in its course of development into a spore. Called also *spore membrane*.

sporoduct (spo'ro-duk-t). A tubelike structure in the walls of certain sporocysts through which the spores are given off.

sporogenesis (spo-ro-jen'es-is) [σπόρος spore + γένεσις production]. The formation of spores; reproduction by spores.

sporogenic (spo-ro-jen'ik) [σπόρος spore + γεννᾶν to produce]. Capable of developing into spores.

sporogenous (spo-roj'en-us) [σπόρος spore + γεννᾶν to produce]. Reproduced by spores.

sporogeny (spo-roj'en-e) [σπόρος spore + γεννᾶν to produce]. The development of spores.

sporogony (spo-roj'o-ne) [σπόρος spore + γονεῖα generation]. Reproduction by spores; sporogenesis; especially sporulation after fertilization. Cf. *schizogony*.

sporomycosis (spo'ro-mi-ko'sis) [*spore* + μύκησις fungus]. A condition caused by infection of the lungs with the spores of a fungus.

sporont (spo'ront) [σπόρος spore + ὄντος being]. A mature protozoan in its sexual cycle.

sporophore (spo-ro-för) [σπόρος spore + φορεῖν to bear]. That part of an organism that supports the spores.

sporophyte (spo-ro-fit) [σπόρος seed + φυτόν plant]. The diploid or asexual stage in the antithetic alternation of generation.

sporoplasm (spo-ro-plazm) [σπόρος seed + πλάσμα plasm]. The protoplasm of reproductive cells.

sporoplastic (spo-ro-plaz'mik). Pertaining to or of the nature of sporoplasm.

sporotheke (spo-ro-the'kah) [σπόρος seed + θήκη chest]. The envelope enclosing a number of exotoxins of the malarial parasite before they leave the anophelis.

Sporothrix (spo-ro-thrix). Same as *Sporotrichum*.

sporotrichin (spo-rot'rik-in). An agent used for the intracutaneous diagnosis of sporotrichosis.

sporotrichosis (spo'ro-trik-o'sis). Infection by fungi of the genus *Sporotrichum*, producing an eruption of refractory subcutaneous abscesses (*cutaneous s.*). It may also occur as a generalized system disease (*extracutaneous s.*) affecting the muscles, bones, joints, and mucous membranes.

Sporotrichum (spo-rot'rik-um) [σπόρος seed + θρίξ hair]. A genus of micro-organisms resembling the yeast fungi. Some of the species are pathogenic, causing sporotrichosis. The commonest species in America is *S. schenck'i*, in France *S. beurmanni*, but other pathogenic varieties are *S. jeanselmei*, *S. gougeroti*, and *S. dori*. **S. car-**

nis, a fungus which by its growth produces "white mold" on the surface of meat in cold storage.

Sporozoa (spo-ro-zo'ah), pl.; sing. *sporozoön* [σπόρος seed + ζῶον animal]. A class of endoparasitic protozoans. They reproduce by sporulation and have no organs of locomotion. It includes the *Gregarinae*, the *Coccidia*, the *Sarcosporidia*, the *Microsporidia*, and the *Myxosporidia*.

Sporotrichum (Rivas).

sporozoite (spo-ro-zo'it) [σπόρος seed + ζῶον animal]. A spore formed after fertilization; any one of the sickle-shaped nucleated germs formed by division of the protoplasm of a spore of a sporozoan organism. In malaria, the sporozoites are the forms which are transferred from the mosquito to man. It represents one of the phases in the development of the organism. Called also *falciform body*. Cf. *merozoite*.

sporozooid (spo-ro-zo'oid). Any one of a set of falciform bodies sometimes seen in cancer: thought to be protozoan.

sporozoön (spo-ro-zo'on). 1. Any organism or species belonging to the class *Sporozoa*. 2. The female malarial parasite in the stage formed by the capsulation of a macrogamete; by division it is transformed into a crop of sporozoites. **S. furunculo'sum**. Same as *Leishmania tropica*.

spore (spört). A freak of nature, or lusus naturae.

sporular (spor'u-lar). Pertaining to a spore.

sporulation (spor-u-la'shun). A form of reproduction consisting of spontaneous division of the cell into four or more daughter elements, each with a part of the original cell nucleus. Called also *spore formation*. **arthrogenous s.**, the change of bacteria into resistant forms which, in favorable conditions, will reproduce themselves. **endogenous s.**, sporulation of a protozoan within its host. **exogenous s.**, sporulation of a protozoan to produce the infection of fresh hosts.

sporeule (spor'ül). A small spore.

spot (spot). A circumscribed area or place; a locus or macula. **acoustic s.** See *macula acustica*. **Bitot's s's**, shiny, gray, triangular spots on the cornea, consisting of flaky masses of dried epithelium, micro-organisms, etc. Called also *xerosis corneae*. **black s.**, black spots $\frac{1}{4}$ - $\frac{1}{2}$ inch in diameter which form on the surface of meat kept in cold storage. They are caused by the growth of a fungus, *Cladosporium herbarum*. **blind s.**, the spot on the retina where the optic nerve enters. See *retina*. **blue s.**, *macula caerulea*. **Carleton's s's**, sclerosed spots in the bones in gonorrheal disease. **cherry-red s.**, a red spot seen on the retina of each eye in the region of the macula lutea in amaurotic family idiocy. Called also *Tay's sign*. **cold s.**, any one of the spots on the skin where sensations of cold, but not of heat, are normally experienced. **corneal s.**, an opacity of the cornea. **cribriform s.** See *macula cribrosa*. **de Morgan's s's**, red spots, like nevus, sometimes seen on the skin of cancer patients. **embryonic s.** See *area germinativa*. **epigastric s.**, a point of tenderness exactly over the ensiform cartilage. **Filatow's s's**. Same as *Koplik's s*. **flame s's**, large hemorrhagic spots in the eye-ground. **Flindt's s's**, Koplik's spots. **focal s.**, the spot or area of the target on which the cathode stream is focused. **germinal s.**, the area germinativa or germinal vesicle. **Graefe's s's**, spots over the vertebrae, pressure on which produces relaxation of blepharofacial spasm. **hot s.**, any one of the temperature spots where heat

is normally perceived, but not cold. **hypnogenetic s.**, any superficial area stimulation of which will bring on sleep. **Jacquemin's s.** See *Jacquemin's sign*, under *sign*. **Koplik's s's**, small bluish-white spots surrounded by a reddish areola on the mucous membrane of the cheeks and lips during the prodromal stage of measles. **light s.** Same as *cone of light*. **Mariotte's s.**, the blind spot, or optic papilla. **milk s.**, a spot seen on the visceral layer of the pericardium in postmortem examinations of elderly people. **Mongolian s.**, a dark spot on the lumbar region in new-born children of the Mongolian race. **pain s's**, spots on the skin where alone the sense of pain can be produced by a stimulus. **pelvic s's**, round or oval shadows often seen on fluoroscopic examination in the region of the inferior spine of the ilium and the horizontal ramus of the pubic bone. **rose s's**, a scattered eruption of rose-colored spots, appearing on the abdomen and loins during the first seven days of typhoid fever. Called also *typhoid spots* and *typhoid roseola*. **Roth's s's**, white spots on the retina in septic retinitis. **silver s.**, a mycetome of lice occupied by symbionts and essential to the life of the louse. **Soemmering's s.** Same as *macula lutea*. **spongy s.**, the vascular zone. See under *zone*. **Tardieu's s's**, spots of echymosis under the pleura following death by suffocation. **Tay's s.**, a red spot (the choroid) surrounded by a white circle seen through the fovea centralis in amaurotic idiocy. **temperature s's**, hot and cold spots; spots on the skin normally anesthetic to pain and pressure and sensitive respectively to heat and cold; they are arranged in lines, often somewhat curved: they show the peculiar arrangement of the end-apparatus with respect to the temperature sense. **tendinous s.**, macula alba. **typhoid s's**. See *rose s's*. **vital s.**, a name sometimes given to the respiratory center in the medulla oblongata, because it is indispensable for breathing and therefore for life. **Wagner's s's**, the nucleolus of the human ovum. **white s's**, grayish, elevated spots, of varying size, sometimes seen on the ventricular surface of the anterior leaflet of the mitral valve. **Willner's s's**, efflorescent spots, soon becoming pustules, on the internal layer of the prepuce; seen in the early stages of variola. **yellow s.**, macula lutea.

spotting (spot'ing). A slight menstrual show upon a woman's napkin.

sprain (sprān). The wrenching of a joint with partial rupture or other injury of its attachments, and without luxation of bones. The signs of a sprain are rapid swelling, heat, and disablement of the joint. The pain is usually great, and is much increased by moving. The treatment is by hot or cold applications and bandaging: if recovery be too slow, immobilization of the joint is indicated. **s. fracture**. See *fracture*. **riders' s.**, sprain of the adductor longus muscle of the thigh, resulting from strain in riding horseback. **Schlatter's s.**, Schlatter's disease. See under *disease*.

spray (sprā). A liquid minutely divided as by a jet of air or steam. **ether s.**, ether applied in a nebulized form to produce local anesthesia by chilling the part.

Sprengel's deformity (spreng'elz) [Otto Gerhard Carl Sprengel, German surgeon, 1852-1915]. See *deformity*.

sprew (sprū). See *sprue*.

spring-finger (spring). See *finger*.

spring-halt. Myoclonus of the hind leg of a horse, causing a gait in which the leg is suddenly raised and then stamped on the ground.

spring hock. A swelling above and below the hock of a horse, due to inflammation of the ligaments.

sprue (sproo). 1. Thrush. 2. Psilosis; a chronic disease marked by sore mouth, with a raw-looking

tongue, gastro-intestinal catarrh with periodic diarrhea, and diminution in the size of the liver. It occurs mostly in hot countries and causes emaciation, anemia, and frequently death. It may possibly be caused by *Monilia psilosis*. Called also *tropical stomatitis*, and *Cochin-China diarrhea*. 3. In dentistry, the hole through which metal is poured into a mold; also the waste piece cast in such a hole. **Belyando s.** See *grass sickness*, under *sickness*.

Spt. Abbreviation for *L. spir'itus*, spirit.

spuman (spu'man). A thymol-resorcin-formaldehyde compound, in crayon form, used in gonorrhea or other inflammations of the female genito-urinary organs. It sets free a foam of formaldehyde.

spunk (spunk). Agaric charged with niter.

spur (spur). A projecting piece of bone. In dentistry, a piece of metal projecting from a plate, band, or other dental appliance. **Morand's s.**, the hippocampus minor.

spurge (spuri). See *Euphorbia*.

spurge-flax (spurj-flaks'). Same as *Mezereum*.

spurious (spu're-us) [L. *spu'rius*]. Simulated; not genuine; false.

spurred rye (spurd ri'). Ergot of rye.

sputamentum (spu-tah-men'tum) [L.]. Sputum.

sputamin (spu'tam-in). A proprietary disinfectant for sputum. It contains 80 per cent of chloramine.

sputum (spu'tum) [L.]. Matter ejected from the mouth; saliva mixed with buccal or nasal mucus. In lung diseases it contains mucopus and other disease products from the lungs; in bronchial, laryngeal, pharyngeal, or tonsillar disease it may be purulent, watery, fibrinous, putrid, or bloody. **s. aerogino'sum**, green expectoration. **albuminoid s.**, a yellowish, frothy sputum of persons from whom large amounts of pleural fluid have been withdrawn: believed to be due to pulmonary edema. **s. coc'tum**, the opaque mucopus of the later stages of bronchitis and laryngitis. **s. cru'dum**, the clear, tenacious mucus of the early stages of laryngitis and bronchitis. **s. cruen'tum**, bloody sputum. **egg yolk s.**, sputum of a bright-yellow color, as in some cases of jaundice. **globular s.**, sputum in yellow, spherical lumps: characteristic of the last stages of tuberculosis. **green s.**, sputum stained with a green pigment, as in certain cases of jaundice. **icteric s.**, sputum stained with a greenish or yellow tint by bile pigments, as in jaundice. **moss-agate s.**, a grayish, opalescent, gelatinous mottled sputum, usually projected from the mouth in coughing in a more or less globular form; it is characteristic of diseases of the trachea (Chevalier Jackson). **nummular s.**, sputum in rounded disks, shaped somewhat like coins. **prune juice s.**, dark, reddish-brown, bloody sputum of certain forms of pneumonia, cancer of the lung, gangrene, etc. **rusty s.**, sputum stained with blood or blood pigments; seen in pneumonia, etc. **s. septicemia**. See *septicemia*.

spirokolo (spi-ro-ko'lon). A form of syphilis occurring in Greece.

squama (skwa'mah), pl. *squa'mae* [L.]. A scale or scalelike substance; especially the vertical plate of the squamous portion of the temporal bone.

s. fronta'lis [B N A], the broad, curved portion of the frontal bone, situated above the supra-orbital margin and forming the forehead. **s. occipita'lis** [B N A], the squamous portion of the occipital bone; the large curved portion of the occipital bone which is posterior to and above the foramen magnum. **s. tempora'lis** [B N A], the squamous portion of the temporal bone.

squamate (skwa'māt) [L. *squa'matus*, from *squa'ma* scale]. Scaly; having or resembling scales.

squamocellular (skwa-mo-sel'u-lar) [L. *squa'ma* scale + *cel'lula* cell]. Having squamous cells.

squamofrontal (skwa-mo-fron'tal). Pertaining to the squama frontalis.

squamomastoid (skwa-mo-mas'toid). Pertaining to the squamous and mastoid portions of the temporal bone.

squamo-occipital (skwa''mo-ok-sip'it-al). Pertaining to the squama occipitalis.

squamoparietal, squamosoparietal (skwa''mo-par-i'e-tal, skwa-mo''so-par-i'e-tal). Pertaining to the squamous and parietal bones.

squamopetrosal (skwa''mo-pet-ro'sal). Pertaining to the squamous and petrous portions of the temporal bone.

squamosa (skwa-mo'sah) [L. "scaly" (part)]. The squamous bone or squamous portion of the temporal bone; the upper and anterior part of the temporal bone, forming an upright plate.

squamosal (skwa-mo'sal). 1. Same as *squamosa*. 2. The squamosa.

squamosphenoid (skwa-mo-sfē'noid). Pertaining to the squamous and to the sphenoid bone.

squamotemporal (skwa-mo-tem'po-ral). Pertaining to the squamous portion of the temporal bone.

squamous (skwa'mus) [L. *squamo'sus* scaly]. Scaly, or platelike. **s. bone**. See *squamosa*.

squamozygomatic (skwa''mo-zi-go-mat'ik). Pertaining to the squamous and zygomatic portions of the temporal bone.

squarrose, squarrous (skwār'ōz, -us) [L. *squarro'sus*]. Covered with scurf or dandruff.

squaw vine (skwaw vīn). The partridge berry; a small, trailing, evergreen rubiaceous herb of North America, *Mitchellia repens*: diuretic and astringent. Dose of fluidextract, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.).

Squibb's diarrhea mixture (skwibz) [E. R. Squibb, American chemical manufacturer]. A mixture of 1 ounce each of tincture of opium, tincture of opesium, and spirit of camphor, 3 drachms of chloroform, and alcohol to make 5 ounces. Dose, 15-60 minims (1-4 cc.). **S's podophyllum pills**, pills each of which contains $\frac{1}{4}$ grain of resin of podophyllum, $\frac{1}{4}$ grain of alcoholic extract of belladonna, $\frac{1}{4}$ grain of capsicum, 1 grain of sugar of milk, $\frac{1}{4}$ grain of acacia and sufficient glycerin and syrup. **S's rhubarb mixture**, compound rhubarb mixture.

squill (skwil) [L. *scilla*; σκίλλα]. The fleshy inner scales of the bulb of the white variety of *Urginea maritima*, a liliaceous plant. It contains *scillitin*, *scillipicrin*, *scilloxin*, and several other principles, and is expectorant and diuretic; in large doses emetic and purgative. It is employed in bronchitis, croup, and dropsy. Dose, 1-2 grains (0.066-0.133 Gm.); of vinegar (*acetum scillae*), 10-30 minims (0.666-2 cc.); of fluidextract, 1-5 minims (0.066-0.333 cc.); of compound fluidextract, 5-30 minims (0.333-2 cc.); of syrup, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.); of compound syrup, 10-30 minims (0.666-2 cc.); of tincture, 5-30 minims (0.333-2 cc.); of oxymel, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.).

squillitic (skwil'it'ik) [L. *scillāticus*; σκιλλαιτικός]. Pertaining to or containing squill.

squint (skwint). See *strabismus*.

Squire's catheter [Trumann Hoffman Squire, American surgeon, 1823-1889]. See *catheter*.

squirrel (skwer'el). A common rodent. **s. corn**. See *Corydalis*. **ground s.** See *Citellus*.

squirting cucumber (skwer'ting). See *Elatium*.

Sr. The chemical symbol for *strontium*.

Sroma-num. The sigmoid flexure.

Ss., ss. Abbreviation for *L. se'mis*, one half.

s.s. Abbreviation for *soapuds*.

S. s. s. Abbreviation for *L. stratum su'per stratum*, layer upon layer.

St., st. Abbreviation for *L. stel*, let it stand; or *stent*, let them stand.

stab (stab). The line formed by stabbing a culture with a needle in bacterial study. **s. culture**. See *culture*.

stabilarsen (sta-bil'ar-sen). A chemical compound of arsenphenamine and dextrose.

stabile (stab'il) [L. *stabilis* stable, abiding]. Noting an electric current applied by stationary electrodes.

stable pneumonia (sta'bl). Epizootic pleuropneumonia in horses.

staccato (stak-ah'to) [Ital. "detached"]. Noting a manner of utterance in which the speech is delivered in a quick, jerky manner, with an interval between each two syllables.

stachydrine (stak-id'rin). An alkaloid found in certain plants (*Stachys*). It is a dimethyl derivative of pyrrole, $C_4H_7N(CO.O)(CH_3)_2$.

stachyose (stak'e-ōs). A tetrasaccharide, $C_{24}H_{42}O_{21}$, from the tubers of *Stachys tubifera*. Acids hydrolyze it to dextrose, galactose, and levulose. It is not digestible.

Stacke's operation (stah'kēz) [Ludwig Stacke, German otologist, born 1859]. See *operation*.

stactometer (stak-tom'et-er) [στακτός dropping + μέτρον measure]. An instrument for measuring drops.

stadium (sta'de-um), pl. *sta'dia* [L. for "course"; στάδιον]. A stage or period in a disease. **s. ac'mes**, the height of a disease. **s. augmen'ti**, the period or stage of increase in the intensity of a disease. **s. calo'ris**, the hot stage of a fever or disease. **s. decremen'ti**, the period of decrease of severity in a disease; the defervescence of fever. **s. defervescen'tiae**, stadium decrementi. **s. fluorescen'tiae**, the stage of development of the eruption in an exanthematous disease. See also under *stage*. **s. frig'oris**, the cold stage of an intermittent fever. **s. invasio'nis**, the prodromal stage. **s. sudo'ris**, the sweating stage of a malarial paroxysm.

Stahelin's test (sta'e-lin-z). See under *test*s.

staff (stahf). An instrument introduced into the urethra as a guide in cutting. **s. of Aesculapius**, a rod or staff with a snake entwined around it, which always appeared in the ancient representations of Aesculapius, the god of medicine. It is the symbol of medicine and is now the official insignia of the American Medical Association. **attending s.**, the corps of attending physicians and surgeons of a hospital. **consulting s.**, the corps of physicians and surgeons attached to a hospital who do not visit regularly, but may be consulted by members of the attending staff. **s. of Wisberg**, an appearance seen in the normal larynx during laryngoscopic observation.

Staffordshire knot (sta'ford-shēr). See under *knot*.

stage (stāj). 1. A period or distinct phase in the course of a disease; a stadium. 2. The plate or platform of a microscope. **algid s.**, a condition characterized by a flickering pulse, subnormal temperature and varied nervous symptoms. **amphibolic s.**, the stage which intervenes between the acme and the decline of an attack. **asphyxial s.**, the preliminary stage of an attack of epidemic cholera: marked by cramps, severe pain, and great thirst. **cold s.**, the chill or rigor of a malarial attack. **defervescent s.**, the stage of falling temperature. **eruptive s.** Same as *stadium fluorescentiae*. **expulsive s.**, the stage of labor during which the child is being expelled from the uterus. **s. of fervescence**, pyrogenetic stage. **first s.**, the time during which the fetal head is being molded and the cervix

Staff of Aesculapius.

dilated. **hot s.**, the period of pyrexia in a malarial paroxysm. **incubative s.**, the early stage of an infectious disease, marked by the formation of toxins and the appearance of prodromal symptoms. **s. of invasion**, the time during which the system is coming under a morbid influence. **knäuel s.** Same as *skein*. **s. of latency**, the incubation period of any infectious disorder. **placental s.**, the third stage of labor; the period occupied by the expulsion of the placenta and the fetal membranes. **preeruptive s.**, the stage after infection and before eruption. **prodromal s.**, incubative stage. **pyrogenetic s.**, the stage of invasion of a febrile attack. **resting s.**, the stage of a cell or its nucleus when no mitotic changes are going on. **second s.** (of labor), the expulsive stage. **step ladder s.**, an early stage of enteric fever; so called from the peculiar form of the temperature curve. **sweating s.**, the final stage of a malarial paroxysm, marked by sweating. **third s.**, the placental stage of labor. **vegetative s.** Same as *resting s.* **zooglea s.**, the stage in the life history of a micro-organism in which it forms zooglea.

staggers (stag'ez). 1. One of various functional and organic diseases of the brain and spinal cord of domestic animals, known also as *blind s.*, especially a disease of sheep caused by the presence in the brain of *coenuirus cerebralis*, and marked by unsteadiness of gait. Called also *gid*, *sturdy*, *turn-sickness*, and *coenurosis*. 2. A form of vertigo observed in some cases of caisson disease. **blind s.** See *staggers*. **grass s.**, loco poisoning. **mad s.** See *staggers*. **sleepy s.**, **stomach s.**, a disease of horses, of unknown causation, but usually associated with the eating of moldy hay and grain. Called also *forage poisoning*.

stagnation (stag-na'shun) [L. *staga're* to grow stagnant]. 1. The retardation of the flow of any circulating fluid in the body as the blood or lymph. 2. In dentistry, the accumulation of glairy matter on a tooth whose antagonist in the other jaw has been removed.

stagnin (stag'nin). An extract derived from the spleen of horses by autolysis. It is a powerful styptic and hemostatic.

TABLE OF STAINS AND STAINING METHODS

Including a brief description of some of the stains, fluids, preparations, and methods most commonly employed in histologic and pathologic technic (arranged alphabetically).

Abbott's method (for spores): Stain the cover-glass preparation with Löffler's alkaline methylene blue, heating repeatedly to the boiling point; wash in water, and then in 95 per cent alcohol containing 0.2 or 0.3 per cent of hydrochloric acid; wash again in water; stain for eight to ten seconds in aniline-fuchsin solution; wash in water and mount. This stains the spores blue and the bodies of bacteria red. **acid fuchsin**: A diffuse stain used especially for axis-cylinders, and consisting of a solution of 2 Gm. of acid fuchsin in 40 cc. of 90 per cent alcohol and 160 cc. of distilled water. (For *actinomyces*.) See *Mallory's m.*, and *Wheal and Clown's m.* **alcohol**: The most common fixing fluid. It is at the same time a hardening fluid, as the water of the tissues is withdrawn and their albumin coagulated. Small or thin pieces are put immediately into absolute alcohol, in which they remain for twelve to twenty-four hours. The period required for fixation may be greatly shortened by changing the absolute alcohol at the end of one or two hours. In the case of larger pieces, a successive immersion in gradually increasing strengths of alcohol (50, 70, and 90 per cent) is the method chosen. Pieces 1 cm. in size remain for twenty-four hours in each strength of alcohol, larger pieces for a proportionately longer time. Alcohol used in this way is a hardening rather than a fixing fluid. **alcoholic borax-carmine solution**: 3 Gm. of carmine and 4 Gm. of sodium borate are placed in 93 cc. of water, after which 100 cc. of 70 per cent alcohol is added. The mixture is stirred, then allowed to settle, and later filtered. **alum-carmine**: A staining preparation of 100 cc. of a 3 to 5 per cent solution of ordinary alum, or preferably ammonia alum, mixed with 0.5 to 1 Gm. of carmine. This is boiled for one quarter of an hour, and after cooling filtered, and enough distilled water added to replace that lost by evaporation. Wash the sections in water. **alum-hematoxylin solution**: A solution

Stahl's ear (stahlz) [Friedrich Karl Stahl, German physician, 1811-1873]. See *ear*.

stain (stān). Any dye, reagent, or other material used in coloring tissues for microscopical observation. Stains used in microscopical work may be divided into basic stains, which show special affinity for the nuclei of cells, and are, therefore, known as *nuclear stains*, and acid stains, which color more readily the protoplasm—*protoplasmic stains*. Certain stains, which we may know as *selective stains* (they may be either basic or acid), color one tissue element more vividly than others, or to the exclusion of others. Since the various tissue elements show affinity for different stains, preparations may be colored with more than one stain. Accordingly, we have *simple*, *double*, *triple*, or *multiple staining*. **acid s.** See *stain*. **basic s.**, a histologic stain which is non-acid, such as the methyl and phenyl derivatives of fuchsin, rosaniline, etc. **contrast s.**, one used to color an unstained portion of a tissue another portion of which has already been stained with another color. A table of the more important stains and staining methods is appended. **green s.**, a greenish fungoid deposit on the teeth. **neutral s.**, a combination of an acid and a basic stain for staining neutrophil tissues. **nuclear s.** See *stain*. **plasmatic s.**, **plasmic s.**, a stain which colors the tissue uniformly throughout. **protoplasmic s.** See *stain*. **selective s.** See *stain*.

staining (stān'ing). The artificial coloration of tissues in order to facilitate their study under the microscope. (See table, pages 1154-1164). **bipolar s.**, staining at the two poles only, or staining differently at the two poles. **differential s.**, staining with a contrast stain; also the treatment of diseased tissues with agents which stain the bacilli and decolorize the structures in which they are embedded. **intravital s.** See *vital s.* **metachromatic s.**, staining in which the same pigment imparts different colors to different tissue elements. **pregonal s.**, vital staining. **vital s.**, staining of fresh tissues, particularly staining of fresh blood, before the cells are altered by either heat or cold. Called *intravital staining*.

of 1 part of hematoxylin crystals, 100 parts of a saturated aqueous solution of ammonia alum, 300 parts of water, and 1 crystal of thymol. (For *amebae*.) See *stain* for *Entamoeba*. **Anderson's s.**, a method of myelin staining for frozen sections. **aniline-fuchsin**: A mixture of 16 cc. of saturated alcoholic solution of fuchsin and 84 cc. of aniline water. **aniline water**: To 100 cc. of water in a stoppered bottle add 5 cc. of aniline oil. Shake vigorously and filter before using. **aniline water gentian violet**: To 108 cc. of aniline water add 12 cc. of a saturated alcoholic solution of gentian violet. **Anjesky's method** (for staining spores): A cover-glass is thinly spread with the spore-containing fluid and dried. While it is drying some 0.5 per cent hydrochloric acid is warmed in a porcelain dish until it steams, and bubbles form. When the solution is hot, the cover-glass is dropped upon the fluid, which is allowed to act upon the unfixed smear for three to four minutes. The cover is removed, washed with water, dried, and fixed, then stained with Ziehl's carbolfuchsin solution, which is warmed until fumes arise. The stain is allowed to cool, decolorized with 4 to 5 per cent solution of sulphuric acid, and counterstained with malachite green or methylene blue. **aqueous borax-carmine solution**: 8 Gm. of sodium borate and 2 Gm. of carmine are ground together and added to 150 cc. of water. After twenty-four hours the fluid is poured off and filtered. The sections, previously freed from paraffin and treated with alcohol, are placed in this fluid for several hours (as long as twelve), and then washed out in a solution of 0.5 to 1 per cent hydrochloric acid in 70 per cent alcohol. They are then transferred to 70 per cent alcohol. **Archibald's s.**, a stain for plague organisms. Solution 1: thionine, 0.5 Gm.; crystals of phenol, 2.5 Gm.; solution of formaldehyde, 1 cc.; water, 100 cc. Solution 2: methylene blue, 0.5 Gm.; crystals of phenol, 2.5 Gm.; solution of formaldehyde,

1 cc.; water, 100 cc. For use mix equal parts of each, filter, and stain for ten seconds. **Babes' aniline-saffranine:** A staining mixture prepared with aniline water (2 per cent), 100 parts; safranin O, soluble in water in excess; heating in a flask in hot water and filtering. **Balch's,** a method of polychrome methylene blue staining for dried blood films. **Baumgarten's s. (for bacillus of leprosy):** Stain six or seven minutes in dilute alcoholic solution of fuchsin; discharge one quarter of a minute in nitric acid alcohol (nitric acid, 1; alcohol, 10); wash in water; contrast stain is saturated aqueous solution of methylene blue, alcohol, xylol, balsam. **Beale's s.,** a stain made of 1 part of carmine, 3 parts of ammonia, 96 of glycerin, 96 of distilled water, and 24 of alcohol. **Benda's method (for nerve tissue):** A modification of the Weigert-Pal method. **benzalin.** See *ngrosin*. **benzopurpurin:** A protoplasmic stain of a dark-red color: used especially as a contrast stain with hematoxylin and other blue stains. **Best's carmine s.** See under *carmine*, in this table. **Bethe's method (for fixing methylene blue stains of nerve fibers):** Wash off any excess of color with normal salt solution; place in molybdate of ammonium, 1 grain; distilled water, 10 cc.; hydrogen dioxide, 1 cc.; hydrochloric acid, 1 drop. Leave it in the cold mixture surrounded by ice and salt for two to five hours; wash one half to two hours in running water, dehydrate, and harden in cold absolute alcohol: clear with xylene and embed with paraffin. **Biondi-Heidenhain s.:** A stain prepared by mixing a saturated water solution of orange G, 100 parts; saturated water solution of acid fuchsin, 20 parts; a saturated aqueous solution of methyl green, 50 parts. Before staining, dilute with water, 1 part to 100. **Biot's method (for tubercle bacilli):** A very thin spread of sputum is made. It is fixed as usual; stain with warm carbolfuchsin for two or three minutes; without washing, decolorize thoroughly first in 25 per cent nitric acid, then in absolute alcohol; wash with water; then place in ordinary solution of formaldehyde for at least three minutes; wash, dry, examine. The bacilli, colored a dark violet, stand out clearly against the unstained background. The detail of their structure comes out well, and the granules of Much take on the same stain as the bacilli themselves and are clearly seen to be of the same nature. **Birch-Hirschfeld method (for amyloid):** Stain in a 2 per cent alcoholic solution of Bismarck brown five minutes; wash in absolute alcohol, and then ten minutes in distilled water; stain in 2 per cent solution of gentian violet five to ten minutes; wash in a dilute acetic acid solution; mount in levulose. The amyloid becomes red, the tissue, brown. **Bismarck brown:** An aniline stain used in a 1 per cent aqueous solution or in a saturated solution of 40 per cent alcohol. **blue mass:** An injecting material for anatomical and histologic preparations, made by preparing a solution of gelatin warmed to 70° C., and coloring it to the desired shade with an aqueous solution of Berlin blue. **Böhmer's hematoxylin:** Hematoxylin crystals, 1 Gm.; absolute alcohol, 10 cc.; potassium alum, 10 Gm.; distilled water, 200 cc. Dissolve the hematoxylin crystals in the alcohol and the alum in the distilled water. While constantly stirring, add the first solution to the second. The whole is then left for about fourteen days in an open jar or dish, protected from the dust, during which time the color changes from violet to blue. After filtering, the stain is ready for use. Sections, either loose or fixed to the slide or cover slip, are placed in this solution, and after about half an hour are washed with water. If the nuclei are well stained, the further treatment with alcohol may be commenced. **borax-carmine solution.** See *alcoholic b.-c. sol.* and *aqueous b.-c. sol.* **Bowhill's method (for spores):** Stain the preparation for ten to fifteen minutes in a solution of 15 cc. saturated alcoholic solution of orcein, 10 cc. aqueous solution of tannin, 30 cc. distilled water, warming slightly. **Buchner's method (for anaerobic cultures):** An inoculated slant tube with a loose cotton stopper is placed in a larger sealed tube, from which the oxygen is absorbed by a mixture of 6 Gm. of pyrogallol and 1000 cc. of potassium hydroxide. The slant tube is held above the reducing mixture by a bent wire. **Buerber's method (for capsules):** 1. Mix the material with serum to make the smear. 2. As it begins to dry flood it with Zenker's fluid (made without acetic acid) and warm. 3. Wash in water, then in alcohol, and apply tincture of iodine (U. S. P.). 4. Wash in alcohol, dry, and stain with aniline water gentian violet for a few seconds. 5. Wash and examine in 2 per cent salt solution. **Bullard's hematoxylin:** 50 per cent alcohol, 144 cc.; glacial acetic acid, 16 cc.; hematoxylin crystals, 8 Gm. Dissolve by heat and add distilled water, 250 cc.; ammonia alum, 20 Gm. Heat to boiling and add slowly: mercuric oxide (red), 8 Gm. Cool quickly, filter, and add: 95 per cent alcohol, 275 cc.; glycerin, 330 cc.; glacial acetic acid, 18 cc.; ammonia alum, 40 Gm. **Bunge's mordant for Löffler's stain:** Concentrated aqueous solution of tannin 75 cc., 5 per cent solution of liquor ferri sesquichlorat 25 cc.,

concentrated aqueous solution of fuchsin 10 cc. Before use add hydrogen peroxide until a reddish-brown color is produced. **Burri's method:** A method of staining organisms, especially spirochetes, with India ink. **Cajal's double method (for ganglion cells):** A modification of Golgi's quick method by repeating the steps to get more perfect impregnation. **Carpalid culture medium:** For the bacillus of tuberculosis fluid agar in tubes is mixed with fresh egg yolk aseptically obtained, the yolk membrane being seared with a hot knife. The medium is solidified on cooling so as to form slants. **For capsules.** See *Buerber's m.*, *Curry's m.*, *Hiss's m.*, *Huntton's m.*, *John's m.*, *MacConkey's m.*, *Muir's m.*, *Ribbert's m.*, *Smith's m.*, *Wadsworth's m.*, and *Welch's m.* **carbolfuchsin:** A mixture of saturated alcoholic solution of fuchsin 10 cc., and 5 per cent solution of phenol 90 cc. See *Ziehl-Neelsen's carbolfuchsin*. **carbolic-gentian violet:** A mixture of saturated alcoholic solution of gentian violet 10 cc. and 1 per cent solution of carbolic acid 100 cc. **carbolic-thionin blue:** A bacteriologic stain consisting of thionin blue 1 Gm. and phenol 2.5 Gm. in distilled water 100 cc. Before use dilute a portion with an equal volume of water and filter. **carmine:** A section stain used in the following solutions: **alcoholic borax-carmine solution:** 3 Gm. of carmine and 4 Gm. of sodium borate are placed in 93 cc. of water, after which 100 cc. of 70 per cent alcohol is added. The mixture is stirred, then allowed to settle, and later filtered. Sections are treated as in the following. **aqueous borax-carmine solution:** 8 Gm. of sodium borate and 2 Gm. of carmine are ground together and added to 150 cc. of water. After twenty-four hours the fluid is poured off and filtered. The sections, previously freed from paraffin and treated with alcohol, are placed in this fluid for several hours (as long as twelve), and then washed out in a solution of 0.5 to 1 per cent hydrochloric acid in 70 per cent alcohol. They are then transferred to 70 per cent alcohol. **Best's carmine s. (for glycogen):** Carmine, 2 Gm.; potassium carbonate, 1 Gm.; potassium chloride, 5 Gm.; distilled water, 60 cc. Boil gently for several minutes. After cooling, add liquor ammonii caustic, 20 cc. **carmine bleu de Lyon:** Sections or pieces of tissue are first stained with carmine (alum- or borax-carmine). Bleu de Lyon is dissolved in absolute alcohol, and diluted with the latter until the solution is of a light bluish color. In this the sections or pieces of tissue are after-stained for twenty-four hours. **Chenzinsky-Plein solution (for staining blood corpuscles, etc.):** To 10 cc. of a saturated aqueous solution of methylene blue there are added 20 cc. of a 0.5 per cent alcoholic eosin solution and 40 cc. of distilled water. This stains red corpuscles red, nuclei blue, and eosinophil granules bright red. **Cohn's s. (for organic urinary sediment):** The dry slide is hardened in a 10 per cent solution of formaldehyde for ten minutes, then washed with water and placed for ten minutes in a concentrated solution of sudan stain in 70 per cent alcohol. Fat is stained red and the nuclei violet. **corrosive sublimate (fixing medium):** An excellent fixing fluid is made by saturating distilled water or a physiologic saline solution with corrosive sublimate; saline solutions keep better. Small pieces, about 0.5 cm. in diameter, are immersed in this fluid for from three to twenty-four hours, then washed in running water for twenty-four hours, and then transferred to 70 per cent alcohol. After twenty-four hours the tissues are placed in 80 per cent for the same length of time, and then preserved in 90 per cent alcohol. **Cox's modification of Golgi's corrosive sublimate method (for staining ganglion cells):** Small pieces are treated from one to three months in a 5 per cent potassium dichromate solution, 20 parts; a 5 per cent solution of corrosive mercuric chloride, 20 parts; distilled water, 30 to 40 parts; and a 5 per cent potassium chromate solution, 16 parts; then treat as for Golgi preparations. **Curry's method (for staining the capsule of the pneumococcus):** Cover with glacial acetic acid; wash away the acid with potassium hydroxide in a 1 per cent solution; wash again and stain with aniline-gentian violet. **Czaplewsky's method (for tubercle):** 1. Stain as usual with carbolfuchsin. 2. Decolorize with the following mixture: fluorescein 1 Gm., alcohol 100 cc., add 5 Gm. of methylene blue, allow to stand one day, and decant. 3. Counter-stain with a 5 per cent solution of methylene blue in alcohol. **Czocor's cochineal solution:** A tissue stain prepared as follows: 7 Gm. of powdered cochineal and 7 Gm. of excised alum are kept suspended in 100 cc. of water by stirring while the mixture is boiled down to half its volume. After cooling it is filtered and a little phenol added. Before the sections are placed in alcohol they should be washed with distilled water, as otherwise the alum is precipitated on the section by the alcohol. **Darling's method (for Entamoeba histolytica):** Stain with Wright's stain in the usual way, follow this with Giemsa's stain until the film has a purple cast. Then plunge the preparation into a small beaker of 60 per cent alcohol to which 10 to 20 drops of ammonia have

been added, when the film will have a violet color.

Delafield's hematoxylin: A strong solution of hematoxylin crystals, 4 cc.; 95 per cent alcohol, 25 cc.; saturated aqueous solution of ammonia alum, 400 cc.; expose in an unstoppered bottle to sun and air three or four days; filter, and add 100 cc. of glycerin and 100 cc. of 95 per cent alcohol. **Dervieux's s.:** 0.5 Gm. of erythrosin in 100 cc. of ammonia water. **For diptheria.** See *Hunt's m.*, *Neisser's m.*, *Ponder's m.*, and *Roux's m.* **Dunham's mixture:** Oil of cloves, 1 part; oil of thyme, 4 parts; a clearing reagent for sections in carmine or hematoxylin. **eau de javelle:** A solution of chlorinated potassium carbonate. It is used as a corrosive in studying the choroid, iris, and pigmented structures. **Ehrlich's method (for tuberculousis):** 1. Stain with hot aniline water gentian violet for three to five minutes. 2. Decolorize with 33 per cent nitric acid one half to one minute. 3. Treat with 60 per cent alcohol as long as color comes away. 4. Counterstain with methylene blue. **Ehrlich's acid hematoxylin:** Hematoxylin crystals, 2 Gm., are dissolved in absolute alcohol, 60 cc.; saturate with ammonia alum a mixture of glycerin, 60 cc.; water, 60 cc., and glacial acetic acid. Mix the solutions and expose for a long time to light, until it acquires a deep-red color. Keep it in closely stoppered bottles. **Ehrlich's neutral s.:** A mixture of 1 part of a saturated aqueous solution of methylene blue and 5 parts of saturated aqueous solution of acid fuchsin. Erythrocytes are stained fuchsin color, their nuclei black or lilac, eosinophil granules red, neutrophil granules violet, and leukocyte nuclei blackish. **Ehrlich's solution:** A bacterial staining solution prepared by mixing 4 Gm. of pure aniline, 11 cc. of saturated alcoholic solution of gentian violet, and 100 cc. of water. **Ehrlich's triacid s.:** A stain containing acid fuchsin, orange G, and methyl green. It stains erythrocytes orange, leukocyte nuclei greenish, eosinophil granules copper color, and neutrophil granules violet. **Ehrlich's triglycerin s.:** A solution, in 30 parts of glycerin, of 2 parts each of eosin, aurantia, and nigrosin. It stains erythrocytes orange, leukocytes greenish, their nuclei dark gray, and eosinophil granules bright red. **Ehrlich-Biondi triple s.:** A stain containing rubin, orange G, methyl green, prepared in concentrated aqueous solutions (rubin dissolves in the proportion of 1 : 5, orange G and methyl green about 1 : 8). These concentrated solutions are combined in the following volumes: rubin, 4; orange, 7; methyl green, 8. The stock solution thus obtained is diluted with 50 to 100 times its volume of distilled water before using. The sections should be as thin as possible, and fixed to the slide by the water method. They remain for twenty-four hours in the stain, and are then washed either in pure 90 per cent alcohol or in such with the addition of a little acetic acid (1 to 2 drops to 50 cc.), until the rinsing fluid is no longer colored. Before staining it is occasionally of advantage to treat the sections with acetic acid (2 : 1000) for one to two hours. **Ehrlich-Weigert method (for tubercle bacilli):** Place a dried cover glass preparation, film down, in the following solution: saturated alcoholic solution of methyl violet, 1.1 parts; absolute alcohol, 1 part; aniline water, 10 parts. Heat gently until steam rises, then allow to stand two to five minutes. Decolorize for a few seconds in 1 part nitric acid and 3 parts water. Wash in 60 per cent alcohol, then in water. **Ehrlich-Westphal method (for mast cells):** Harden in weak alcohol. Stain for twenty-four hours in a solution of 200 parts alum-carmine solution, 200 parts saturated solution of dahlia in absolute alcohol, 100 parts glycerin, 20 parts glacial acetic acid. Decolorize in absolute alcohol for twenty-four hours, oil, mount in Canada balsam. **For entamoeba.** See *Darling's m.* and *Mallory's s.* **For eosin:** Diffuse stain used in a 5 per cent aqueous solution, especially as a contrast stain with alum hematoxylin. It gives a rosy color, and brings out especially well red blood corpuscles and muscle fibers. **Erlicki's fluid:** A fixing solution containing potassium dichromate, 2½ Gm.; cupric sulphate, 0.5 Gm.; and water, 100 cc. It is quite similar to that of Müller's, except that it acts much more quickly. **Esmarch's method for anaerocultures:** Prepare a roll culture of the organism in glucose-gelatin on ice, and when the layer of gelatin is still cold and dispersed on the walls of the tube fill it with liquefied gelatin, solidify in cold water, and seal air tight. **Exner's method (demonstrating myelin sheaths):** Place fresh pieces of brain or cord, or over 3 cm. thick, in a 1 per cent aqueous solution of osmic acid, using at least 10 times as much fluid as the volume of the specimen; on the second day change the osmic acid solution; after five or six days wash thoroughly in water; then dehydrate and embed; examine the specimens in slightly ammoniacal glycerin: the myelin sheaths appear gray to black. **Farrant's gum-glycerin:** A mounting medium: glycerin, 50 cc.; water, 50 cc.; powdered gum arabic, 50 Gm.; arsenous acid, 1 Gm. Dissolve the arsenous acid in water; place the gum arabic in a glass mortar and mix it in the water; add the glycerin, and

filter through the muslin or wet filter paper. **Fiocca's method (for spore staining):** Put 20 cc. of a 10 per cent solution of ammonia into a watch glass; add 10 to 20 drops of a saturated aqueous solution of gentian violet, fuchsin, methylene blue, or safranin; warm the solution; a thinly spread and well-dried cover glass is dipped for three to five minutes or more, washed in a 20 per cent dilution of nitric or sulphuric acid, washed again, and counterstained with an aqueous solution of chrysoidin, malachite green, methylene blue, vesuvium, or safranin. **For flagellae.** *Bunge's m.*, *Löffler's m.*, *MacCorrie's m.*, *Muir's m.*, *Neuman's m.*, *Pitfield's m.*, *Smith-Pitfield's m.*, and *Williams' m.* **Flemming's solution:** A solution for hardening histologic specimens, consisting of osmic acid, 2 per cent; aqueous solution, 4 parts; chromic acid, 1 per cent aqueous solution, 15 parts; glacial acetic acid, 1 part. **Flemming's triple s.:** The tissue is fixed in acetic alcohol, stained in saturated aqueous solution of safranin for one hour, washed, stained in saturated aqueous methyl violet solution one-half hour, washed, and passed through orange acetone. **Flexner's method (1) (for typhoid bacilli):** (a) Stain paraffin sections in Löffler's methylene blue solution for two hours; in 1 : 1000 acetic acid solution for several minutes; dehydrate in absolute alcohol; clear in oil of cloves; xylene; xylene balsam. (b) Stain sections in Stirling's gentian violet solution for ten minutes; in 1 : 1000 acetic acid solution for several minutes; dehydrate in 95 per cent alcohol; transfer to slide, blot, add oil of cloves to differentiate; wash in xylene; mount in xylene balsam. (2) *(For bacillus of leprosy):* Stain in alum-hematoxylin; wash in water; carbol-fuchsin for two to five minutes steaming or thirty to sixty minutes cold; wash in water; treat on slide with iodine solution; water; blot, clear, and differentiate in aniline oil; xylene; balsam. **Fol's solution:** This is a modification of Flemming's fixing solution, consisting of osmic acid, 1 per cent aqueous solution, 2 parts; chromic acid, 1 per cent aqueous solution, 25 parts; acetic acid, 2 per cent aqueous solution, 5 parts; distilled water, 68 parts. **Fontana's s. (for Spirochaeta pallida):** 1. Fixing fluid: acetic acid, 1 cc.; solution of formaldehyde, U. S. P., 20 cc.; distilled water, 100 cc. 2. Mordant: tannic acid, 5 Gm.; phenol solution (1 per cent), 100 cc. 3. A 0.25 per cent solution of silver nitrate is prepared. **Process:** 1. Prepare the slide by spreading material from syphilitic lesion very thinly on a clean slide, allowing it to dry spontaneously. 2. Fix by pouring on the fixing fluid, pouring it off after a few seconds; perform this process several times. 3. Wash well in distilled water. 4. Flood with the mordant, apply gentle heat till steam arises, and continue this process for half a minute. 5. Wash thoroughly in distilled water. 6. Flood with the silver solution; then warm gently for half a minute, wash, blot, and dry. Mount in balsam. The spirochetes are stained jet black, and appear larger than when stained by ordinary methods. **Fonte's method (for acid-fast bacilli):** Stain with carbol-fuchsin, decolorize with 1 part absolute alcohol and 2 parts acetic acid, proceed as with the Gram method, counterstaining, however, with Bismarck brown. Acid-fast bacilli appear as red rods dotted with violet spots; bacilli which do not fully retain acid-fast properties appear as zigzag violet lines. **formaldehyde, formalin (formol):** A 40 per cent solution of formaldehyde gas in water has been much used as a fixing fluid. It is best employed in the form of a solution made by adding 10 parts of solution of formaldehyde to 90 parts of water or normal saline solution. Small pieces of tissue remain in this solution for twelve to twenty-four hours; larger pieces or organs, a number of days or weeks, and are then transferred to 90 per cent alcohol. **Fränkel's method:** A method for staining tubercle bacilli. The cover glass is stained with aniline water fuchsin, placed in a mixture of saturated solution of methylene blue in 50 parts of water, 30 of alcohol, and 20 of nitric acid. When the preparation seems blue, it is washed in pure water or in alcohol and acetic acid. **Fränkel's mixture:** Prepare dilutions in sterilized tubes of melted gelatin; pass hydrogen through the gelatin in the tubes to displace the air; make Esmarch rolls on ice and seal. **Freud's gold s. (for nerve fibers):** Harden in Müller's or Ehrlich's fluid and follow with alcohol; embed in celloidin; stain section in equal parts of 1 per cent solution of gold chloride and 95 per cent alcohol; wash in water; reduce in caustic soda, 1 part; distilled water, 6 parts; wash again; place in a 10 per cent solution of potassium iodide for ten to fifteen minutes; wash in water; treat with alcohol, oil, and Canada balsam. **Friedländer's glycerin-hematoxylin:** A staining preparation containing hematoxylin crystals, 2 Gm.; potassium alum, 2 Gm.; absolute alcohol, 100 cc.; distilled water, 100 cc.; glycerin, 100 cc. Dissolve the hematoxylin crystals in the absolute alcohol and the alum in the water; mix the two solutions and add the glycerin. The mixture is filtered and exposed for several weeks to the air and light, until the odor of alcohol has disappeared, and then again filtered. Sections are afterward washed in water,

and are placed for a short time in acid alcohol if the nuclei are to be especially brought out. **fuchsin:** An aniline dye used for staining blood corpuscles and bacteria. It is prepared as a saturated alcoholic solution (3 to 5 per cent) and diluted as needed. **Futcher and Lazew's s.:** A stain for malarial sporozoa. Have ready a freshly prepared fixation fluid consisting of a 0.25 per cent solution of solution of formaldehyde in 95 per cent alcohol. The staining fluid is made of 20 cc. of Coggi's thionin in a saturated solution of 50 per cent alcohol and a 2 per cent aqueous solution of phenol; stain with the supernatant liquid, which colors the parasites a reddish violet. **Gabbett's acid blue:** Methylene blue, 1 to 2 Gm.; 25 per cent sulphuric acid, 100 cc.; and water. **Gabbett's method** (for staining the bacillus of tuberculosis): Stain with solution of carbolfuchsin with heat; wash in water and cover with Gabbett's methylene blue for thirty seconds; then wash and mount. By this method the bacillus of tuberculosis is colored red, while other bacteria and cell nuclei are stained blue. **Gasis' method** (for tuberculosis): 1. Boil crystalline mercuric chloride in a mixture of alcohol 5 cc., water 5 cc., and eosin 1 Gm. until the stain is about to precipitate. 2. Flood the specimen with the above and heat one minute. 3. Treat with 1 Gm. of sodium hydroxide and 0.5 Gm. of potassium iodide in 100 cc. of 50 per cent alcohol until the red color changes to a deep green. 4. Wash in 90 per cent alcohol and then in distilled water. 5. Counterstain in the following mixture: methylene blue 0.1 Gm., hydrochloric acid 1 cc., alcohol 20 cc., and distilled water 80 cc. **Gasparini's mixture:** A nutrient medium for differentiating species of actinomycetes: it consists of wheat flour, 150 Gm.; water, 100 cc.; magnesium sulphate, 0.5 Gm.; potassium nitrate, 1 Gm.; glucose sugar, 15 Gm. **gelatin-carmin:** 4 Gm. of carmine are stirred into 8 cc. of water and thoroughly ground. Enough ammonia is added to produce a dark-cherry color and render the whole transparent; 50 Gm. of the best gelatin are soaked twelve hours in distilled water and then pressed out by hand and melted, at a temperature of 70 C., in a porcelain evaporating dish. The two solutions are mixed and stirred until the mixture becomes homogeneous. Drop a 25 per cent acetic acid solution until the color begins to change to a brick-red and the mass becomes slightly opaque. A single drop too much of the acid may spoil the whole. During this process the temperature is kept at 70 C., and constant stirring is maintained. Filter while still warm through funnel. This preparation is used for injecting vessels. **gentian violet:** An aniline dye used as a nuclear stain in a solution prepared by dissolving 0.5 Gm. in 20 cc. of 90 per cent alcohol, 80 cc. of distilled water, and 1 cc. of glacial acetic acid. As a bacteriological stain it is made up as a saturated alcoholic solution (5 per cent) from which dilutions are made as required. **Gerlach's method** (for gold staining nerve fibers): Harden the tissues in a 1 to 2 per cent solution of ammonium dichromate for from one to three weeks; put sections in a 1 to 5 per cent solution of the double chloride of gold and potassium, very slightly acidulated with HCl, until they become slightly violet; wash in 2000 to 3000 parts of water and 1 part of HCl; put them for ten minutes in a 1 to 5 per cent solution of HCl in 60 per cent alcohol; finish with absolute alcohol, oil of cloves, and Canada balsam. **Giacomi's method:** A method for staining the bacillus of syphilis. Color with hot aniline-fuchsin; wash with a dilute solution of ferric chloride; decolorize in a concentrated solution of iron chloride; wash in alcohol and finish with xylene and xylene balsam. **Giemsa's method** (1) (for malarial parasites): The formula is azur II-eosin, 3 Gm.; azur II, 0.8 Gm.; glycerin (Merck), 250 cc.; methyl alcohol (Kahlbaum D), 250 cc. The preparation is dried in air and fixed in methyl alcohol. To 1 cc. distilled water, made slightly alkaline with potassium carbonate, add 1 drop of the fluid, and cover the preparation with this mixture for from ten to fifteen minutes; wash in a stream of water; remove excess of water; dry in the air, and mount in balsam. (2) (For *Spirochaeta pallida*): Same as (1) except that to the water used for diluting the staining fluid 1 to 10 drops of a 0.1 per cent solution of potassium carbonate is added. **For glanders.** See Kuehne's m., Löffler's m., and Schuett's m. **Goldhorn's s.:** Heat 2 cc. of methylene blue solution and 2 Gm. of lithium carbonate in 200 cc. of distilled water. Cool, filter, make slightly acid with acetic acid, and add 0.5 per cent solution of eosin until the solution is pale blue and slightly fluorescent. Wash the precipitate, dry, and dissolve to 1 per cent in methyl alcohol. **Golgi's mixed method** (for staining ganglion cells and dendritic and axis-cylinder processes): Harden as in the slow method, below; transfer for from three to eight days to a mixture of a 1 per cent solution of osmic acid (2 parts) and a 2 per cent solution of potassium dichromate (8 parts); finish in a 0.75 per cent silver nitrate solution for from twenty-four to forty-eight hours. The sections are dehydrated in alcohol, cleared in oil of cloves or oil of bergamot, washed with

xylene, and mounted in xylene dammar. **Golgi's quick method:** Fresh pieces are placed in a mixture of 1 part of a 1 per cent osmic acid solution and 4 parts of a 3.5 per cent solution of potassium dichromate. If the neuroglia is to be stained, let the pieces stay two or three days; if the nerve cells, from three to five days; nerve fibers and collaterals, from five to seven days. After this the sections are dehydrated in alcohol, cleared in clove or bergamot oil; wash off with xylene, mount in xylene dammar, and dry at 40 C. **Golgi's slow method** (for staining ganglion cells and dendritic and axis-cylinder processes): The tissues are hardened for from two to six weeks in a 2 per cent potassium dichromate solution. Transfer for from two to four days or more to a 0.75 per cent solution of silver nitrate or a 0.5 per cent solution of mercuric chloride. **For gonococcus.** See Pappenheim's m. and Saahof's m. **Goodpasture's s.:** A stain used in differentiating leukocytes of marrow origin from those of lymphatic origin: alcohol, 100 cc.; sodium nitroprusside, 0.05 Gm.; benzidine, 0.05 Gm.; basic fuchsin, 0.05 Gm.; hydrogen peroxide, 0.5 cc. With the stain the cells of marrow origin show deep-blue granules (peroxidase reaction). **Gorden's method:** This is a modification of van Ermengem's method, in which the preparations remain in the second bath for two minutes, are then transferred to the third bath for two minutes, and are then washed, dried, and mounted without being returned to the second bath. **Gram's method** (1) (for film preparations): 1. Dry and fix the film in the usual way. 2. Stain for five minutes with aniline water gentian violet. 3. Pour off excess stain and apply Gram's iodine solution for two or three minutes. 4. Decolorize with 95 per cent alcohol as long as color comes away. 5. Wash in water and counterstain with Bismarck brown, dilute fuchsin, or safranin. Bacteria which decolorize when thus treated with alcohol are known as gram-negative; those which do not decolorize, as gram-positive. (2) (For paraffin sections): Stain with aniline-gentian violet for from five to twenty minutes; wash in normal salt solution or water; in iodine solution (1 or 2 : 300) one minute; wash in water, then alcohol; finish with xylene and xylene balsam. The bacteria are stained a deep blue. **Methyl violet modification of Gram's stain:** Solution A. Aniline oil, 9 cc., absolute alcohol, 33 cc., and methyl violet in excess. Solution B. Is an aqueous solution of methyl violet. For use mix 1 part of A and 9 parts of B and filter. The mixed stain remains good several weeks. **Gram's solution:** A bacterial fixing solution consisting of 1 Gm. of iodine crystals, 2 Gm. of potassium iodide, and 300 cc. of water. **For Gram's s.** See aniline water, Gram-Weigert m., Guenther's modification, Jensen's modification, methyl violet modification, Fellous' modification, Sterling's modification, and Unna's modification. **Gram-Weigert method** (1) (for staining trichophyton in hair): 1. Remove fat from the hair with ether. 2. Stain thirty minutes in a mixture of 15 parts of alcoholic solution of gentian violet and 3 parts of aniline water. 3. Treat with iodine solution and then with aniline oil. (2) (For staining colloidal sections): Stain with lithium carmine; dehydrate with alcohol, and fasten to a slide with ether vapor; then stain with aniline-gentian violet from five to twenty minutes; wash in normal salt solution; treat with iodine solution, 1 to 2 parts to 100; wash in water; dry with blotting paper; dehydrate with aniline oil; treat repeatedly with xylene, and finish with xylene balsam. **Günther's modification of Gram's method:** After exposure to the iodine-potassium iodide solution the specimen is placed for one-half minute in alcohol, then for ten seconds in 3 per cent hydrochloric acid alcohol, and finally, for complete decoloration, in pure alcohol. Before mounting the sections are cleared in oil of cloves or in xylene. **Hansen's method** (for spores): Prepare a film, fix, and stain with steaming hot carbolfuchsin for five minutes; decolorize with 5 per cent acetic acid until the film is a light pink, and wash in water; stain three minutes with Löffler's methylene blue; examine. **Harlow s.** Same as *skeleton s.* **Harris' hematoxylin:** 1 Gm. of hematoxylin is dissolved in 10 cc. of alcohol; 20 Gm. of alum are dissolved in 200 cc. of distilled water, and the hematoxylin solution is added. Bring the mixture to a boil and add 0.5 Gm. of mercuric oxide. Cool the solution at once. **Harrison's s.** (for *Pseudomonas radicola*): Take a loop of the mucilaginous or viscid growth from an agar culture of *Pseudomonas radicola* two days to several months old, and spread it on a clean slide, lashing it out in slender tongues; let the film dry in air without killing or fixing, flood the film a moment with a saturated alcoholic solution of gentian violet, wash under the tap, dry between folds of filter paper, and examine with the oil immersion lens. The mucilage in which the cells lie will be found deeply and evenly stained, and the bacteria scarcely stained at all, so that the preparation presents the appearance of a photographic negative. **Hastings' s.:** A modification of the Romanowsky method. **Heidenhain's hematoxylin s.** (for nuclei): Stain from twenty-four to forty-eight

hours in a 0.5 per cent aqueous solution of hematoxylin dissolved by the aid of heat; place the sections in a 0.66 per cent aqueous solution of potassium chromate for a day or two; wash in water thoroughly; treat with alcohol and then oil, and finish in Canada balsam.

Held's method (for nerve tissue): Sections are warmed for one or two minutes in the following solution: 1 Gm. erythrosin, 2 Gm. acetone, 150 cc. distilled water. Wash sections in water, and transfer to a solution consisting of equal parts of Nissl's methylene blue solution and a 5 per cent aqueous solution of acetone. Warm until the odor of acetone ceases. Decolorize in 0.1 per cent solution of alum until they are red. Dehydrate in alcohol, clear, and mount.

Heller's method (for myelin sheaths): Harden with Müller's fluid or by the Weigert method; embed in celloidin; place sections in a 1 per cent aqueous solution of osmic acid for ten minutes; wash in water; reduce in sodium sulphate, 125 parts; sodium carbonate, 70 parts; water, 500 parts; pyrogallic acid, 15 parts; wash in water; differentiate in an aqueous solution of potassium permanganate; decolorize with a 1 per cent aqueous solution of oxalic acid; wash in water; finish with alcohol, oil, and Canada balsam.

hemalum: 1 Gm. of hematein is dissolved by heating in 50 cc. of absolute alcohol. This is poured into a solution of 50 Gm. of alum in 1 liter of distilled water, and the whole well stirred. A thymol crystal is added to prevent the growth of fungus. After staining, sections or tissues are washed in distilled water.

hematoxylin. See *Böhmer's hematoxylin*, *Delafield's hematoxylin*, *Ehrlich's acid hematoxylin*, *Friedländer's glycerin-hematoxylin*, *Heidenhain's hematoxylin*.

hematoxylin-eosin method: Sections already stained in hematoxylin are placed for from two to five minutes in a 1 to 2 per cent aqueous solution of eosin or in a 1 per cent solution of eosin in 60 per cent alcohol. They are then washed in water, after which they remain a short time in absolute alcohol.

hematoxylin-safranin method: Sections of preparations fixed with chromic-formic acid or solution of platinum chloride are stained for a short time with Delafield's hematoxylin, then counterstained for from twelve to twenty-four hours with safranin, and washed with absolute alcohol until no more color is given off.

Hermann's solution: Osmic acid, 2 per cent aqueous solution, 4 parts; 1 per cent aqueous solution of platinum chloride, 15 parts; glacial acetic acid, 1 part.

Hermann's s. (for tuberculosis): 1. Dry and fix as usual.

2. Apply the following mixture and heat for three minutes: 3 per cent alcoholic solution of crystal violet, 1 part and 1 per cent solution of ammonium carbonate, 3 parts.

3. Decolorize with 10 per cent nitric acid or with 5 per cent sulphuric acid.

4. Wash in alcohol, then in water, and counterstain with Bismarck brown.

Hörzheimer's method (for staining elastic fibers): Harden in Müller's fluid; alcohol and other fixatives are not so good. Stain in hematoxylin, 1 part; absolute alcohol, 20 parts; water, 20 parts; saturated solution of lithium carbonate, 1 part. Decolorize in solution of ferric chloride; wash in water; treat with alcohol, oil, and Canada balsam. Elastic fibers are stained black, the surrounding tissues pale blue.

Hiss's method (for capsules of bacteria): Mix a small portion with a drop of serum on a cover glass; then spread, and allow to dry in the air, and fix by drawing through flame. Then treat in either of the following ways: 1. Stain in one-half saturated aqueous solution of gentian violet for a few seconds; then wash, mount, and examine in 0.25 per cent aqueous solution of potassium carbonate.

2. Stain in a 5 to 10 per cent solution of gentian violet, steaming for a few seconds, then wash in a 20 per cent solution of copper sulphate, blot with filter paper, dry thoroughly, and mount in balsam.

Hoyer's method with thionin: Harden in corrosive mercuric chloride, followed by alcohol. Paraffin sections are passed through xylene, chloroform, and 95 per cent alcohol to free from paraffin. Put into a 5 per cent aqueous solution of corrosive mercuric chloride for from three to five minutes; stain in a weak solution of thionin; clear in a mixture of oils of cloves and thyme; treat with turpentine oil or cedar oil and finish with balsam.

Hunt's method (for *Bacillus diphtheriae*): Stain in saturated aqueous solution of methylene blue one minute without heating; wash in water; cover with aqueous solution of tannic acid, 10 per cent, for ten seconds; wash in water; stain in saturated aqueous solution of methyl orange one minute; wash in water; dry and mount in balsam.

Huntton's method (1) (for spores) Preparation of stain: (1) Acid fuchsin (Grübler), 4 Gm.; aqueous solution acetic acid (2 per cent), 50 cc. (2) Methylene blue (Grübler), 2 Gm.; aqueous solution acetic acid (2 per cent), 50 cc. Mix the two solutions, let stand for fifteen minutes, and filter off the voluminous precipitate through moistened filter paper. The filtrate is the staining fluid. Make a rather thick smear, dry, and fix in the usual way; apply as much of the stain as will remain on the cover glass, and steam over a flame for one minute, replacing the stain lost by evaporation; wash in water; the film is bright red; dip

the preparation a few times into a weak solution of sodium carbonate (7 or 8 drops of saturated solution in a glass of water). Too long application of the carbonate will cause the spores to be blue. The instant the film turns blue, rinse well in water; dry, mount, and examine. Spores are deep red, bodies of bacteria are blue. (2) (For capsules): In making the film use a 3 per cent solution of nutrose as a diluent. Dry in the air, fix, and stain with the following: concentrated lactic acid, 0.5 cc.; 1 per cent solution of acetic acid, 1 cc.; saturated alcoholic solution of fuchsin, 1 cc.; carbolfuchsin, 1 cc., and 2 per cent solution of phenol, 100 cc.

India ink method (for *Spirochaeta pallida*): A loopful of serum from a syphilitic lesion is mixed with a drop of India ink and spread out on the slide in the thinnest possible layer; the slide is then allowed to dry. The field is stained a brownish yellow, the blood cells and spirochetes appear white.

Japanese method (for fixing paraffin sections): A little of Mayer's albumin is placed on the slide and so spread about that hardly a trace of the substance can be seen. The slide is then put in a thermostat heated to 70 C. The albumin soon coagulates, after which the sections are fixed to the slide by the water method. To every 30 cc. of the distilled water a drop of gum arabic or glycerin albumin may be added.

Jenner's s. (for blood corpuscles): A 1.25 per cent aqueous solution of Grübler's yellow, water-soluble eosin is added to a 1 per cent aqueous solution of Grübler's methylene blue. The precipitate is allowed to stand twenty-four hours, then washed, dried, and dissolved to 0.5 per cent in methyl alcohol. It colors erythrocytes terra cotta, nuclei of leukocytes blue, neutrophil granules purplish red, carminophil granules light red, basophil granules dark violet, and bacteria and malarial parasites blue.

Jensen's modification of Gram's s.: 1. Dry and fix in the usual way. 2. Stain with a 5 per cent solution of methyl violet 6B one-half minute. 3. Pour off excess of stain and apply Lugol's solution two or three times. 4. Pour off excess of iodine and wash with 98 per cent alcohol and then with absolute alcohol. 5. Counterstain with neutral red 1 Gm. glacial acetic acid 5 cc., and water 1000 cc.

John's method (for staining bacterial capsules): The preparations are stained in a warmed 2 per cent solution of gentian violet, rinsed in water, decolorized for from ten to twenty seconds in a 2 per cent solution of acetic acid, and are washed and mounted in water.

Kaiserling's method: A procedure for preserving the natural colors in museum preparations. Fix from one to five days in formaldehyde 200 cc.; water, 100 cc.; nitrate of potassium, 15 Gm.; potassium acetate, 30 Gm.; drain and lay in 80 per cent alcohol from one to six hours and in 95 per cent alcohol from one to two hours; preserve in potassium acetate, 200 Gm.; glycerin, 400 cc.; water, 2000 cc.

Kallius' method (for fixing Golgi stains): Place sections for several minutes in 1 part of a developer composed of hydroquinone, 1 part; sodium sulphite, 8 parts; potassium carbonate, 15 parts; water, 575 parts; and about five sixths as much alcohol, until the sections become gray or black. Treat with 70 per cent alcohol for from ten to fifteen minutes, and with a 20 per cent aqueous solution of sodium hyposulphite; soak in water twenty-four hours; finish with alcohol, oil, and Canada balsam.

Klotz's s. (for fat acid crystals): Fix tissues; precipitate fatty acid radical in chromalum, 2.5 Gm., and 7 per cent formaldehyde, 100 cc.; dissolve by boiling, and while cooling add glacial acetic acid, 5 cc., and then powdered neutral acetate of copper, 5 Gm.; wash in water, cut sections, and stain them in a saturated solution of hematoxylin in 60 per cent alcohol for six hours; wash in water and treat with a mixture of potassium ferri-cyanide, 2.5 Gm.; sodium borate, 2 Gm.; and distilled water, 100 cc.

Koch-Ehrlich solution: A staining solution consisting of 100 parts of a filtered aqueous solution of aniline oil, 10 parts of absolute alcohol, and 11 parts of a concentrated alcoholic solution of fuchsin, methylene blue, or gentian violet.

Kronecker's fluid: An indifferent mounting fluid consisting of distilled water, 100 cc.; sodium chloride, 5 Gm.; sodium carbonate, 0.06 Gm.

Krönig's varnish: Used in sealing mounted objects between the cover slip and the slide. Melt 2 parts of wax and stir in 7 to 9 parts of colophonium; filter while hot.

Kühne's method (1) (for staining glandular bacilli): The sections are placed for half an hour in a stain consisting of methylene blue, 1.5; alcohol, 10; and 5 per cent aqueous solution of phenol, 100. They are then washed in water, decolorized in hydrochloric acid, immersed in a solution of lithium carbonate, placed in a bath of distilled water, dipped in absolute alcohol, colored with a little methylene blue, dehydrated in aniline oil containing methylene blue, washed in aniline oil, then in light ethereal oil, cleared in xylene, and mounted in balsam. (2) (For paraffin sections): Stain the sections slightly in alum hematoxylin; wash in water; treat with a 2 per cent aqueous solution of aniline hydrochlorate for fifteen seconds; wash in water; treat with absolute alcohol; finish with xylene and xylene balsam.

Kutscher's modification of Gram's

method (for sections): Prepare a concentrated solution of gentian violet in a mixture of aniline water, 1 part; alcohol, 1 part; 5 per cent phenolated water, 1 part. Of this solution a drop at a time is added to a watch glass full of water until a layer forms upon the surface. In this the sections are placed, and after from ten to fifteen minutes are washed in water, then placed in the iodine solution for a minute, then in alcohol, xylene, and mounted in balsam. **Langhans' method:** A method for obtaining permanent mounts with iodine. Harden in alcohol; stain in Lugol's solution; dehydrate with 1 part of iodine tincture to 3 or 4 parts of absolute alcohol; clear and mount in oil of Cretan origanum. **Leishman's s.:** Mix a 1 per cent solution of methylene blue and a 0.1 per cent solution of eosin. Filter, wash, and dry the precipitate and dissolve in pure methyl alcohol to 0.15 per cent. **Lenhossek's method (for staining ganglion cells):** Harden sections in 90 per cent alcohol; then in 95 per cent, or in formaldehyde, followed by alcohol. Do not keep too long in alcohol. **For leprosy.** See Baumgarten's m. **Fleischer's m.,** and **Much's m.** **Levaditi's method (for *Spirochaeta pallida* in sections):** Sections are placed in 10 per cent solution of formaldehyde for twenty-four hours; rinsed in water, and placed in 95 per cent alcohol for twenty-four hours; placed in distilled water until they sink to the bottom; placed in a 1.5 to 3 per cent solution of silver nitrate and kept in incubator at 38 C. for from three to five days; washed in distilled water and placed in following solution for from twenty-four to seventy-two hours: pyrogallol, 2 to 4 Gm.; solution of formaldehyde, 5 cc.; distilled water, 100 cc. **lithium-carmin:** A staining mixture containing carmine, 3 to 5 Gm., in a saturated solution of lithium carbonate, 100 cc. **litmus whey:** The casein is precipitated from milk by producing a feeble acid reaction with dilute hydrochloric acid. The filtrate is boiled, filtered, neutralized, and mixed with litmus. **Löffler's method (for staining *Bacillus anthracis* in sections):** Stain paraffin sections twenty minutes in Löffler's methylene blue solution, or in equal parts of a 1:10,000 potassium hydroxide solution, and aniline gentian violet; place for five seconds in 10 cc. of distilled water containing 2 drops of concentrated sulphuric acid and 1 drop of 5 per cent oxalic acid. **Löffler's method for flagella:** Mordant the preparation for one minute with a fresh filtered solution made of 10 grains of tannic acid in 50 cc. of water, 2.5 cc. of a cold saturated solution of ferrous sulphate, and 0.5 cc. of an alcoholic or aqueous solution of fuchsin or gentian violet. Heat for one minute on the cover glass without boiling; wash the preparation, and stain with a freshly prepared and filtered solution of aniline gentian violet or with aniline fuchsin. **Löffler's method for sections:** Place in a caustic potash solution (1:10,000) for from five to ten minutes; stain in Löffler's methylene blue solution, or in equal parts of aniline gentian violet, and the same caustic potash solution twenty minutes; then five seconds in distilled water (10 cc.) with 2 drops of sulphuric acid and 1 drop of 5 per cent oxalic acid; wash quickly in water; follow in succession with absolute alcohol, xylene, and xylene balsam. **Löffler's methylene blue solution:** Saturated solution of methylene blue in alcohol, 30 cc.; aqueous solution of caustic potash (1:10,000), 100 cc. **Löffler's mixture:** Glucose bouillon, 1 part; beef blood serum, 3 parts: a culture medium for use in slants. **Löwit's formic acid method:** Place bits of fresh tissue in a mixture of formic acid (1 part) and water (1 to 2 parts) until they become transparent; put in an aqueous solution of gold chloride, 1 to 1.5 parts to 100 parts of water; then in formic acid, 1 part to 3 of water, for twenty-four hours; in concentrated formic acid twenty-four hours. Finish and preserve in glycerin or balsam. **Lustgarten's method:** A method for staining the bacillus of syphilis. Treat for twenty-four hours with aniline gentian violet, and keep for two hours in a thermostat at 40 C.; decolorize completely with potassium permanganate (0.5 per cent aqueous solution) and in an aqueous solution of sulphurous acid; wash and finish with alcohol, clove oil, and Canada balsam. **MacConkey's s. (for bacterial capsules):** Rub in mortar with 1000 cc. of distilled water, 0.5 Gm. of dahlia, and 1.5 Gm. of methyl green; add 10 cc. of saturated alcoholic solution of fuchsin, and 90 cc. of distilled water. **MacCorrie's s. (for flagella):** A mixture of 10 cc. of saturated alcoholic solution of night blue; 10 cc. of a 10 per cent aqueous solution of tannin. **For malaria.** See Fletcher and Lazewski's m., Giemsa's m., Romanowsky's m., and Wright's m. **Malassez's method (for neuroglia):** Stain in ammoniacal picocarmine, treat with a 40 per cent potassium carbonate solution for ten minutes, wash in distilled water, treat with concentrated acetic acid, mount. **Mall's method (for reticulum):** Frozen sections of fresh tissue 40 to 80 μ thick are digested for twenty-four hours in a solution of 5 Gm. pancreatin, 10 Gm. sodium bicarbonate, and 100 cc. of water; wash in water; place in test tube half full of water, and shake

thoroughly; spread on slide and allow to dry; allow a few drops of a solution of 10 Gm. of picric acid, 33 cc. of absolute alcohol, and 300 cc. of water to dry on the surface; stain for half an hour in a solution of 10 Gm. of acid fuchsin, 33 cc. of absolute alcohol, and 66 cc. of water; wash in trinitrophenol solution; treat with alcohol, xylene, balsam. **Mallory's differential s. (for *Amoeba coli*):** Harden in alcohol; stain sections in a saturated aqueous solution of thionin from three to five minutes; differentiate in a 2 per cent aqueous solution of oxalic acid for from one-half to one minute; wash in water, clear in oil of Cretan origanum; wash with xylene; finish with xylene balsam; remove to a 5 per cent aqueous solution of ammonium bichromate from four to six days in the incubator at 37 C., or for three or four weeks at room temperature; change solution on the second day; place directly in alcohol; embed in celloidin; fasten sections to slide by means of ether vapor; stain in aniline gentian violet from fifteen to twenty minutes; wash with normal salt solution; treat with iodine solution; wash and dry with paper; decolorize with xylene and aniline in equal parts; wash with xylene; finish with xylene balsam. **Mallory's differential s. (for neuroglia fibers):** (1) Fix in a 4 per cent aqueous solution of formaldehyde four days or more; place in a saturated aqueous solution of trinitrophenol four days or more. (2) (By means of phosphotungstic acid hematoxylin.) Fix and mordant tissues in exactly the same way as before given; stain in phosphotungstic acid hematoxylin from four to twenty-four hours; wash in water; treat with alcohol, and next with oil of Cretan origanum; finish with xylene balsam. **Mallory's method (1) (for actinomyces):** Stain sections in a saturated aqueous solution of eosin for ten minutes or more; wash in water; stain from two to five minutes in aniline gentian violet; wash off with normal salt solution; follow with iodine solution one minute; then with water; clear with aniline oil; treat with changes of xylene, and follow with xylene balsam. (2) (For actinomyces): Stain in alum cochineal from three to five minutes; wash with water; dehydrate in 95 per cent alcohol; fasten section to slide with ether vapor; apply aniline gentian violet from five to twenty minutes; wash with water; dry with filter paper; use aniline saturated with fuchsin from one to three minutes; wash the fuchsin out with pure aniline until the clubs are sharply differentiated; watch the process under the low power of the microscope. Apply several changes of xylene; finish with xylene balsam. Stain lightly in alum cochineal from three to five minutes; wash in water; dehydrate with alcohol; fasten on slide with ether vapor; treat from five to twenty minutes with aniline gentian violet; wash off with water; dry with filter paper; test one. **Mallory's s. (for elastic fibers):** Harden in alcohol; stain in phosphotungstic acid hematoxylin twenty-four hours, wash in water, treat with alcohol, and finish with oil and Canada balsam. **Mandelbaum's method (intra vitam staining of *Spirochaeta pallida*):** To a hanging drop of serum is added a loopful of Löffler's methylene blue solution along with a loopful of decinormal salt solution. **Marchi's fluid:** Müller's fluid, 2 parts; osmic acid, 1 per cent aqueous solution, 1 part: a fixing reagent. **Marchi's method (for degenerated nerve fibers):** The specimen is placed in Marchi's fluid, when healthy fibers appear yellow, but degenerated ones show rows of black spots. **Marx's s.:** A stain containing eosin, potassium hydroxide, and quinine. **May-Grünwald s.:** A 0.1 per cent solution of methylene blue and of eosin is allowed to stand a few days. The precipitate is washed, dried, and dissolved in methyl alcohol to saturation. **May-Grünwald solution:** An alcoholic neutral mixture of methylene blue and eosin. **Mayer's acid hemalum:** Mayer's hemalum with 2 per cent of glacial acetic acid added. **Mayer's glycerin-albumin mixture:** A mixture for affixing paraffin sections to slides, consisting of equal parts of white of egg and glycerin, with a little camphor or phenol. **Mayer's glycerin-alum-hematein solution:** Hematein, 0.4 Gm., rubbed with glycerin, 5 cc.; glycerin, 30 cc.; water, 70 cc. **Mayer's hemalum:** Hematein, 0.5 Gm.; ammonium salt, 1 Gm.; 90 per cent alcohol, 50 cc.; alum, 50 Gm.; water, 1000 cc.; thymol, 1 crystal. **Mayer's mucherstein:** Hematein, 0.2 Gm.; aluminum chloride, 0.1 Gm.; glycerin, 40 cc.; water, 60 cc. **Melrowsky's method (for *Spirochaeta pallida*):** A paste is made consisting of methyl violet and salt solution. This is rubbed into the surface of a syphilitic chancre. In the serum which exudes stained spirochaetae will be found. **methylene blue:** An aniline dye which is much used as a staining agent. It is prepared in a saturated solution (7 per cent) in absolute alcohol, which is diluted for use. See Gabbel's solution, Kühne's solution, Löffler's solution, Sahli's solution, Unna's solution. **methyl green pyronine s.** Same as Unna-Pappenheim s. **methyl violet stain:** Aniline dye much used as a bacteriological stain. It is made up as a saturated alcoholic solution from which dilutions are made as needed. It is used for staining amyloid substance, nuclei, and bacteria, which are colored pink. It

is employed in a 0.5 to 2 per cent aqueous solution.

Michaelis' method: Stain the specimen fifteen minutes with the following mixture: Dissolve 2 Gm. of methylene blue in 200 cc. of water and add 10 cc. of a normal solution of sodium hydroxide. For use add 1 part of this to 5 parts of a 0.1 per cent solution.

Michaelis' s.: A mixture of alcoholic solution of methylene blue and a solution of eosin in acetone: stains the blood corpuscles like Jenner's stain.

Moeller's method (for spore staining): The cover glass, dried in air, is placed for two or three minutes in absolute alcohol, then rinsed in water, and kept in chloroform two minutes. It is rinsed in water and treated with 5 per cent solution of carbolfuchsin solution, heated slowly until the fluid boils. It is decolorized in a 5 per cent solution of sulphuric acid, washed in water, and stained in aqueous solution of methylene blue or malachite green, rinsed again, dried, and mounted in Canada balsam.

Morris' s. (for vegetable parasites): 1. Ether, or alcohol and ether equal parts. 2. Stain in solution of 5 per cent gentian violet in 70 per cent alcohol, from five to thirty minutes. 3. Iodine solution, one minute. 4. Aniline. 5. Aniline. 6. Xylene. 7. Xylene balsam.

Much's method (for tubercle bacilli): Methyl violet B (Grübler), saturated alcoholic solution. Carbolic acid, 2 per cent watery solution. Add 10 cc. of methyl violet solution to 90 cc. phenol solution. Prepare smears rather thin and as even as possible. Dry in air. Fix gently in flame. Cover slide with methyl violet solution and heat to boiling point once or twice. Wash stain off in water. Pour on slide Lugol's solution, and keep it covered with it for five minutes. Wash off with water. Pour on a 5 per cent solution of pure nitric acid for one minute. Pour off and replace for ten seconds by a 3 per cent pure hydrochloric acid solution. Put immediately, without washing, in a mixture of equal parts of pure acetone and absolute alcohol; decolorize by moving the slide until the smear is colorless, and wash off with distilled water; dry gently with filter paper, and slowly but thoroughly dry over a flame. Counterstain with dilute fuchsin, Bismarck brown or safranin.

Muir's method (1) (for flagella): A modification of Pitfield's method. The mordant consists of a mixture of 10 cc. of 10 per cent aqueous solution of tannic acid; 5 cc. of saturated aqueous solution of corrosive mercuric chloride; 5 cc. of saturated aqueous solution of alum, and 5 cc. of carbolfuchsin. The stain consists of 25 cc. of saturated aqueous solution of gentian violet. The emulsified growth is spread thin on a watch glass, dried, fixed with heat, treated with the mordant, washed, dried, and stained.

(2) (For capsules): 1. Mordant the dried film for two minutes with the following mixture: Saturated solution of corrosive mercuric chloride 2 parts, 20 per cent solution of tannin 2 parts, and potassium alum solution 5 parts. 2. Wash with water, then with alcohol, then with water. 3. Stain two or three minutes with warm carbolfuchsin. 4. Wash with water and again apply the mordant. 5. Wash with water and stain for two minutes with a saturated aqueous solution of methylene blue. 6. Decolorize in methyl alcohol and clear in xylene.

Müller's fluid: A hardening solution consisting of potassium dichromate, 2 to 2.5 Gm.; sodium sulphate, 1 Gm.; water, 100 cc.

Neisser's method (for diphtheria): 1. Dry and fix the smear as usual. 2. Stain for from two to five seconds with the following: methylene blue, 1 Gm.; absolute alcohol, 20 cc.; glacial acetic acid, 50 cc.; and water to 1000 cc. 3. Wash in water and counterstain with 0.4 per cent solution of Bismarck brown five seconds.

Neuman's s. (for flagella): Tannic acid, 1 Gm.; potassium alum, 1 Gm.; distilled water, 40 cc. To this mixture add 0.5 Gm. of night blue dissolved in 20 cc. of absolute alcohol. Filter, and use the filtrate for the staining fluid. Stain the preparation two or more minutes; wash in water; stain with saturated aqueous solution of gentian violet for two minutes; wash and mount.

Nicoll's carbol-gentian violet. See carbol-gentian violet.

Nicoll's carbol-thionin blue. See carbol-thionin blue.

Nicoll's method: A method of staining in sections. Löffler's blue, from one to three minutes; wash in water; 10 per cent solution of tannic acid, a few seconds; wash in water; absolute alcohol, oil of cloves, xylene, Canada balsam.

nigrosin: Aniline blue black, an aniline dye used as a stain for the study of the central nervous system, having a special affinity for ganglion cells. The tissue is stained in a concentrated aqueous solution for from five to ten minutes. It is then decolorized and dehydrated in alcohol, and finished in oil and Canada balsam.

Nissl's method (for ganglion cells): Harden tissues in pieces not over 1 to 1.2 cm. across in 96 per cent alcohol; cut section as follows: remove excess of alcohol with filter paper; dip base of specimen in thick celloidin; mount on block; harden in 96 per cent alcohol; moisten at night with 96 per cent alcohol; make sections less than $\frac{1}{16}$ mm. in thickness; preserve in 96 per cent alcohol. Transfer sections to slides; dry with filter paper; apply oil of cajuput; wash with a few drops of benzene; add a little

benzene-colophonium; heat in a flame until the benzene is expelled; cover slip and warm the slide; see that the colophonium is spread evenly, and mount.

Nocht's method: Stain specimen from five to ten minutes in the following: Mix 1 per cent solution of methylene blue and 0.5 per cent solution of sodium carbonate and keep at from 50 to 60 C. for a few days. Cool and add a mixture of from 2 to 3 drops of a 1 per cent solution of eosin and 1 to 2 cc. of water, drop by drop, until the eosin tint disappears.

Noniewicz's method: Stain in Löffler's methylene blue solution from two to five minutes; wash in water; decolorize from one to five seconds in 0.5 per cent acetic acid, 75 parts; 0.5 per cent aqueous solution of tropaeolin, 25 parts; wash in water; dehydrate the section on a slide with filter paper, then in air, and then over a small flame; clear by dropping xylene on it repeatedly; finish in xylene balsam.

Oppenheim and Sachs' method (for Treponema): Very thin air-dried films are stained for from thirty seconds to three minutes with carbol-gentian violet (saturated alcoholic solution of gentian violet, 10 cc.; 5 per cent phenol, 90 cc.). Previous fixation is not necessary.

orcein: A vegetable dye obtained from certain species of lichens, and used mainly for staining elastic fibers. It is soluble in alcohol.

Orth's discharging fluid: A fluid consisting of hydrochloric acid, 1 cc.; acid alcohol, 1 cc.; and 70 per cent alcohol, 99 cc.

Orth's fluid: Müller's fluid plus 4 per cent of formaldehyde; a general fixing reagent.

Orth's lithium-carmin: Carmine, 2.5 to 5 Gm.; saturated aqueous solution of lithium carbonate, 100 cc.; thymol, a crystal: a carmine stain.

osmic acid: A reagent that kills quickly, fixes exceedingly well, and even colors certain tissues. Only small pieces can be fixed in this fluid, as it does not easily penetrate the tissues. It is ordinarily used in a 1 per cent aqueous solution, the objects remaining immersed twenty-four hours. They are then washed in running water for the same length of time, after which they are transferred to 90 per cent alcohol. Very small objects may be treated with osmic acid in the form of vapor (vaporization). This is done as follows: A very small quantity of osmic acid solution is put in a small dish. The object is then suspended by a thread in such a way that it does not come in contact with the fluid. The dish should be covered with a well-fitting lid.

Pal's modification of Weigert's myelin sheath s.: Fix as for Weigert's method; keep sections for some hours in a 0.5 per cent aqueous solution of chromic acid, or for a longer time in a 2 to 3 per cent solution of potassium dichromate; transfer to Weigert's hematoxylin solution from twenty-four to forty-eight hours; wash in water containing from 1 to 3 per cent of a saturated aqueous solution of lithium carbonate until the sections appear of a uniform deep blue; differentiate in a 0.25 per cent aqueous solution of potassium permanganate until the gray matter looks brownish yellow; transfer to a solution containing 1 part of oxalic acid and 1 part of potassium sulphite in 200 parts of water, until the gray matter is colorless, or nearly so; wash thoroughly in water; dehydrate in 95 per cent alcohol; finish in oil and Canada balsam.

Paltauf's modification of Gram's s.: Absolute alcohol 7 cc., distilled water 90 cc., and aniline oil 3 to 5 cc. Shake thoroughly, filter, and add gentian violet 2 Gm. Allow to stand twenty-four hours and filter. Use as the regular Gram stain.

Pappenheim's method (for tubercle bacilli): 1. Stain the fixed film in carbolfuchsin for three minutes without heat. 2. Without washing apply Pappenheim's solution three or four times. 3. Wash in water, dry, and mount.

Pappenheim's solution (for tubercle bacilli): 1 part rosolic acid is dissolved in 100 parts absolute alcohol; methylene blue is added to the point of saturation; to this 20 parts of glycerin are added.

Pappenheim's s. (for differentiating between basophilic granulations of red cells and nuclear fragments): Stain 1. Phenol, 0.25 cc.; distilled water, 100 cc.; methyl green, 1 Gm. Stain 11. Phenol, 0.25 cc.; distilled water, 100 cc.; pyronin, 1 cc.; 35 cc. of I and 35 cc. of II are mixed and filtered, and the blood smear is fixed by heat and stained for a few seconds in the filtrate. Basophil granules are stained bright red, nuclear fragments, deep greenish blue.

Pappenheim-Saathoff methyl green s. (for gonococcus): Methyl green, 0.15 Gm.; pyronin, 0.5 Gm.; 95 per cent alcohol, 5 cc.; glycerin, 20 cc.; and 2 per cent solution of phenol, 100 cc.

paracarmin: A stain consisting of a mixture of carminic acid, 1 Gm.; aluminum chloride, 0.5 Gm.; calcium chloride, 4 Gm.; alcohol, 70 per cent, 100 cc. Paracarmin is peculiarly adapted to the staining of large objects. Specimens are washed in 70 per cent alcohol, with the addition of 0.5 per cent aluminum chloride, or 2.5 per cent glacial acetic acid in case of overstaining.

Perl's s. See Perl's test, under tests.

peroxidase s. See Goodpasture's s.

Pfeiffer's method: A method for staining bacteria in tissues by staining for half an hour in diluted Ziehl's solution, transferring to absolute alcohol made fully acid with acetic acid. As soon as the section begins to take on a reddish-violet color it is cleared in xylene and mounted in balsam.

Pianese's solution: A fixing reagent made as follows: Mix 15 cc. of a 1 per cent aqueous solution of sodium chlorplatinate, 5 cc. of a 2 per cent aqueous solution of chromic acid, 5 cc. of a 2 per cent aqueous solution of osmic acid, and 1 drop of formic acid.

Pianese's staining solution and method: (I) *Carmine and picronigrosin:* Stain in neutral and lithium carmine; decolorize in acid alcohol; wash in water; absolute alcohol; aniline gentian violet, ten minutes; absolute alcohol so long as any color is discharged; saturated aqueous solution of trinitrophenol and nigrosin, five minutes; decolorize in a 1 per cent alcoholic solution of oxalic acid; water, several minutes; absolute alcohol; oil of bergamot; balsam. Nuclei, red; cell protoplasm, light olive green; connective tissue, dark olive green; elastic fibers, blue; bacteria, blastomycetes, violet. (II) *Methylene blue and eosin in borax solution:* Keep three solutions on hand: (a) saturated solution of sodium borate; (b) 0.5 per cent solution of "bluish eosin" in 70 per cent alcohol; (c) saturated aqueous solution of sodium borate. For use, mix together 2 parts of the filtered solution a to 1 of b and 2 of c. The steps of the staining process are as follows: (1) absolute alcohol; (2) staining solution from ten to twenty minutes; (3) decolorize in a 1 per cent solution of acetic acid; (4) wash in water; (5) absolute alcohol; (6) xylene; (7) xylene balsam. Nuclei, blue; red blood globules, cell protoplasm, granules of eosinophils, connective tissue, etc., are stained rose red. (III, a) *Malachite green, acid fuchsin, and nigrosin:* Malachite green, 1 Gm.; acid fuchsin, 4 Gm.; nigrosin, 1 Gm.; water, 50 cc.; alcohol saturated with copper acetate, 50 cc. 1. Absolute alcohol. 2. Stain in 20 drops of the above solution diluted with 10 cc. of distilled water for twenty-four hours. 3. Decolorize in a 0.5 per cent solution of oxalic acid. 4. Wash in water. 5. Absolute alcohol. 6. Xylene balsam. Resting nuclei are stained light red; protoplasm, reddish yellow; in the karyokinetic figures, nuclein green; fibrillae of the achromatic spindle and of the mitoma, bright red; centrosomes and polar bodies, red; the rest of the cell body, a reddish yellow. (III, b) *Malachite green, acid fuchsin, and Martin's yellow:* Malachite green, 5 Gm.; acid fuchsin, 1 Gm. Martin's yellow, 0.01 Gm.; distilled water, 150 cc.; alcohol, 96 per cent, 50 cc. 1. Stain in the solution, without diluting, half an hour. 2. Absolute alcohol. 3. Xylene. 4. Xylene balsam. Nuclei of resting and dividing cells, green; cell protoplasm, connective tissue, etc., rose colored; cancer bodies, mainly red, but in masses. (IV) *Acid fuchsin and picronigrosin:* Saturated alcoholic solution of acid fuchsin, 6 drops; picronigrosin, 8 drops; distilled water, 10 cc. Treat with 70 per cent alcohol; stain in the solution six hours; decolorize in dilute acetic acid; absolute alcohol; xylene, xylene balsam. Resting nuclei, red; nuclein of karyokinetic figures, yellow; cell protoplasm, dark olive green; cancer bodies, olive gray, but some may be rubry red or partly so. (V) *Lichtgrün and hematoxylin:* Ehrlich's acid hematoxylin, 15 cc.; saturated solution of Lichtgrün in 70 per cent alcohol, 5 cc.; distilled water, 15 cc. Treat with distilled water; stain in above mixture thirty minutes; wash in several waters; alcohol; oil of bergamot; balsam. Nuclei, green; cancer bodies take hematoxylin stain. (VI) *Acid fuchsin and hematoxylin:* Ehrlich's acid hematoxylin, 15 cc., in 70 per cent alcohol, 15 cc.; distilled water, 15 cc.; stain as in V. Nuclei, red; protoplasm, brick red; cancer bodies take hematoxylin stain.

pleuric acid (trinitrophenol) (fixing medium): Small and medium-sized objects (up to 1 cm.) are fixed for twenty-four hours in a saturated aqueous solution of trinitrophenol (about 0.75 per cent), although an immersion lasting for weeks is not detrimental, especially if the objects be of considerable size. The tissues are transferred to 70 per cent or 80 per cent alcohol, in which they remain until the alcohol is not colored by the trinitrophenol. They are then preserved in 90 per cent alcohol.

picrocarmine. See *van Gieson's solution*.

Piffard's method (for fixing bacteria): Distilled water, 100; pure potassium cyanide, 1; dry potassium carbonate, 0.5; rectified methylene blue, 0.5. A small drop of stain is placed on the center of the slide. A clean cover glass is pressed down on it and the excess mixture absorbed with filter paper. **Pitfield's method (for staining flagella):** Treat the preparation with a mixture of equal parts of two solutions, as follows: (a) Saturated aqueous solution of alum, 5 cc.; saturated aqueous solution of gentian violet in distilled water, 5 cc. (b) Tannic acid, 1 Gm.; distilled water, 10 cc. Filter each and mix; the mixture is placed on the cover glass to be gently heated, but not boiled, during about one minute, then washed in water and mounted.

Plehn's solution: An alkaline solution of methylene blue and eosin. This solution stains malarial plasmodia and nuclei of leukocytes blue and erythrocytes red.

polychrome methylene blue: A solution of 1 part each of potassium carbonate and methylene blue in 100 parts of distilled water, used for staining plasma cells and mast cells.

Ponder's method (for diptheria bacilli): The

film is made and fixed and is treated with the following stain: toluidine blue, 0.02; glacial acetic acid, 1; absolute alcohol, 2; distilled water to make 100. Typical diptheria bacilli stain blue with red granules.

Rabi's chromoformic acid solution: A solution prepared from 0.35 per cent aqueous solution, 200 drops; formic acid, 4 to 5 drops, to be added just before the solution is used. Direction for use: 1. Harden in the fixing solution from twelve to twenty-four hours. 2. Wash in running water from twelve to twenty-four hours. Dehydrate in 80 per cent alcohol.

Ranvier's formic acid method: Boil together 8 cc. of a gold chloride and 2 cc. of formic acid; when the solution is cold, place very small bits of tissue in it for one hour in the dark; wash quickly in water; expose to diffuse light in a mixture of formic acid (10 cc.) and water (90 cc.). Reduction takes place slowly—from twenty-four to forty-eight hours. Harden in 70 per cent, then 90 per cent, alcohol in the dark.

Ranvier's one-third alcohol: 1 part of 96 per cent alcohol and 2 parts of water; a macerating fluid for tough or hardened tissues.

Ranvier's picrocarmine: Two solutions are prepared—a saturated aqueous solution of trinitrophenol and a solution of carmine in ammonia. The second is added to the first to a point of saturation. The whole is evaporated to one fifth of its volume and filtered after cooling. The solution thus obtained is again evaporated until the picrocarmine remains in the form of a powder. A 1 per cent solution of the latter in distilled water is the fluid used for staining. To stain with this solution 1 or 2 drops are placed on the slide over the object, and the whole put in a moist chamber for twenty-four hours. A cover slip is then placed over the preparation, the picrocarmine drained off with a piece of blotting paper, and a drop of formic glycerin (1:100) brought under the cover slip by irrigation. Proper differentiation takes place only after a few days, and the acid glycerin may then be replaced by the pure glycerin.

Ravant and Ponselle's method (for spirochetes): Staining in a 2 per cent solution of silver albuminate (largin), followed by 5 per cent pyrogallic acid.

Rees' thionin solution: A stain for dried blood films. Make a solution of thionin, 1.5 Gm.; alcohol, 10 cc.; aqueous solution of 5 per cent phenol, 100 cc. Filter off 5 cc. of this solution and make up to 20 cc. with water. Fix films, stain for from ten to twenty minutes, wash, and mount. Red cells stain greenish blue; leukocytes, blue; malarial parasites, purplish.

Ribbert's method (1) (for connective tissue fibrillae): Fix, preferably in alcohol; place sections in a 10 per cent solution of phosphomolybdic acid for from five to thirty seconds; use glass or platinum needles; wash quickly in water; stain five minutes or less in phosphomolybdic acid hematoxylin. For this purpose the solution can be used after it is twenty-four hours old. Treat with water, then with alcohol, oil, Canada balsam. Fibrillae, deer blue; other tissue elements, grayish green; contrast stains incompatible. (2) *For capsules:* Stain the dried and fixed films for two seconds with the following: glacial acetic acid 12.5 cc., absolute alcohol 50 cc., and water 100 cc. Saturate the mixture with dahlia at 37 C.

Ripart and Petit's solution: An indifferent mounting medium consisting of cupric chloride, 0.3 Gm.; copper acetate, 0.3 Gm.; aqua camphorae, 75 cc.; distilled water, 75 cc.; and glacial acetic acid, 1 cc. After mixing, this solution is yellow, but clears up after a few hours, and should then be filtered.

Romanowsky's method (contrast stain for malarial parasite): A saturated aqueous solution of methylene blue and a 1 per cent aqueous solution of eosin are kept separately. The specimen is heated not less than thirty minutes at a temperature of from 105 to 110 C. The staining mixture is made just before it is to be used. To 1 part of filtered methylene blue solution are added about 2 parts of eosin solution. This mixture is carefully stirred with a glass rod and poured into a watch glass. The cover glass preparations are allowed to float upon the top of the fluid with the blood surface down. The specimens are covered by another inverted glass, and the whole by an inverted cylinder, which is moistened upon the inside. By this method the red corpuscles are stained red, the malarial parasites blue, and the nuclear chromatin a violet color.

Rosenberger's aniline black s. (for spirochetes): Reagents are: 1. Aniline oil water, prepared by adding 2 cc. aniline oil to 100 cc. of water, shaking thoroughly, and filtering. 2. Oxidizing agent, made by dissolving 5 cc. concentrated sulphuric acid and 15 Gm. potassium bichromate in 375 cc. distilled water. Heat smear 6 or 8 inches above flame to fix; cover slide with 10 drops of solution 1; after two minutes add 10 drops of solution 2; after five minutes flush slide with water. Spirochetes appear black on a granular blue background.

Roux's s.: A double stain for the bacillus of diptheria, containing 0.5 Gm. of gentian violet or dahlia, 1.5 Gm. of methyl green, and 200 cc. of distilled water.

Saathoff's s.: A modification of Unna-Pappenheim method: methyl green, 0.15 Gm.; py. onin, 0.5 Gm.; 96 per cent alcohol, 50 cc.; glycerin, 20 cc.; 2 per cent carbol water, to make 100 cc.

Stain from two to four minutes, wash in water, dehydrate in absolute alcohol, clear in xylene, and mount in balsam. **Safranin:** An aniline dye used in a concentrated alcoholic solution diluted with one-half water. See also *Babes' aniline-safranin*. **Sahli's borax-methylene blue solution:** A mixture of saturated aqueous solution of methylene blue, 24; 1 per cent sodium borate solution, 16; water, 40 parts. **Schaffer's method for staining bone:** Decalcify with nitric acid; stain sections with aqueous solution of safranin (1:2000) wash in water; place in a 0.1 per cent solution of corrosive sublimate from two to three hours; treat with alcohol; dehydrate; clear in clove or bergamot oil; mount in xylene balsam. This leaves bone uncolored, but stains cartilage orange, and connective tissue and marrow red. **Schereshewsky's s. (for spirochetes):** 1. Fix the fresh preparation with the fumes of 1 per cent osmic acid. 2. Stain for two minutes with a hot mixture of 10 cc. of a 0.5 per cent solution of glycerin and 10 drops of Giemsa's solution. **Schridde's method (for the granulations of myelocytes and leukocytes in sections):** 1. The tissue, cut sections 5 μ thick, and fix them to the slide with Mayer's albumin mixture. Stain for twenty minutes in Giemsa's stain, diluted. The preparation is washed and placed in pure acetone. The section is cleared and placed in mounted. Neutrophil granules are stained a violet red; eosin granules, red; mast cell granules, dark blue, and granulations of the cytoplasm of the megakaryocytes, violet red. All nuclei are blue; red corpuscles, grass green, and connective tissue, pale red. **Schüllbaum's solution:** Colloidin, 1 part in 3 or 4 parts of oil of cloves, is often used; cover the slide with a thin layer of the solution; arrange the sections in order on the slide, and place it in the thermostat, at 54 to 60 C., for several hours, or heat for from a few seconds to one-half minute over the flame until the oil of cloves runs together in drops. After cooling, remove the paraffin with xylene, pass through organic oil to 75 per cent alcohol, and proceed as with other paraffin sections. **Schütz's method (for staining glandular bacillus):** Stain twenty-four hours in equal parts of concentrated alcoholic solution of methylene blue and caustic potash (1:10,000); wash in acidified water; 50 per cent alcohol, five minutes; xylene; Canada balsam. **Skeleton s. (for blood smears):** Two solutions are used: (1) 1 Gm. of water-soluble eosin is dissolved in 100 cc. of absolute methyl alcohol; (2) 1 Gm. of Ehrlich's medicinal methylene blue is dissolved in 100 cc. of absolute methyl alcohol. Blood smears are made by the cover slip method and stained first in solution 1 and then in solution 2. It is rinsed, dried, and mounted. The staining should be done away from the air. Called also *Harlow's s.* **Smith's (W. H.) method (for pneumococcus in sputum):** Stain in aniline-gentian violet solution, gently warming until the staining fluid steams; wash in water; cover with Gram's solution of iodine for thirty seconds; wash with 95 per cent alcohol; wash in ether for a few seconds; wash in absolute alcohol for a few seconds; stain one or two minutes in a saturated aqueous solution of eosin; wash in absolute alcohol; clear with xylene; mount in balsam. **Smith-Pitfield method (for flagella):** The preparation is treated with a mordant consisting of a saturated solution of ammonia alum in a hot saturated solution of corrosive mercuric chloride to which has been added an equal part of a 10 per cent tannic acid solution and $\frac{1}{2}$ part of a 5 per cent carbolfuchsin solution; after this treatment the preparation is stained with a mixture of 1 part of a saturated alcoholic solution of gentian violet and 10 parts of a saturated solution of ammonium alum. **Spengler's method (for tubercle bacilli):** 1. Stain with carbolfuchsin, warm, but without too much heat. 2. Pour off the stain without washing. 3. Pour on trinitrophenol alcohol (consisting of equal parts of saturated solution of trinitrophenol and absolute alcohol). After three seconds: 4. Wash with 60 per cent alcohol. 5. Treat with 15 per cent nitric acid till yellow (thirty seconds). 6. Wash again with 60 per cent alcohol. 7. Counterstain with trinitrophenol alcohol till lemon colored. 8. Wash with distilled water and dry gently at a low heat. The bacilli appear bright red on a lemon-colored ground. **For spirochetes.** See *Burri's m.*, *Giemsa's m.*, *India ink m.*, *Levaditi's m.*, *Mandelbaum's m.*, *Meirowsky's m.*, *Oppenheim and Sack's m.*, *Reavart and Poncetti's m.*, *Rosenberger's s.*, *Schereshewsky's m.*, *Stern's m.*, and *Yamamoto's m.* **For spores.** See *Abbott's m.*, *Anjesky's m.*, *Bowhill's m.*, *Fiocca's m.*, *Hansen's m.*, *Huntro's m.*, and *Mueller's m.* **Steida's method (for permanent mounts with nuclear stains):** 1. Stain several hours in lithium carmine; wash quickly in water; place from four to six hours in a 2 per cent aqueous solution of potassium ferrocyanide. Transfer to acid alcohol for from six to twelve hours; wash quickly in water; place from four to six hours in lithium carmine. Transfer to acid alcohol for from six to twelve hours; wash quickly in water; alcohol, oil, Canada balsam. The reaction for the ferrous salts, with the exception that potassium ferriocyanide is used instead of the ferro compound. 2. *Reaction for ferric and ferrous salts:* (a) Use a mixture of potassium ferro-

cyanide and ferricyanide (1 Gm. each to 100 cc. of water), followed by acid alcohol; nuclear stains and permanent mounts may be made as above. (b) Place sections in a freshly prepared solution of sulphate of ammonium for from five to twenty minutes until they are dark or nearly black-green in color; wash quickly in water; examine in glycerin or pass through alcohol and oil to Canada balsam. **Sterling's modification of Gram's s.:** Aniline oil, 2 cc.; 95 per cent alcohol, 10 cc.; water, 88 cc.; and gentian violet, 5 Gm. **Stern's method (for Spirochaeta pallida):** The dried film is placed in the incubator for some hours, then in a 10 per cent solution of silver nitrate in a colorless glass container, and is allowed to remain in diffuse daylight for some hours. The spirocheta is stained black. **Stirling's solution:** A solution of gentian violet, 5 cc.; alcohol, 10 cc.; aniline, 2 Gm.; water, 88 cc. **Strobo's aniline blue s. (for nerve fibers in hardened sections):** Harden in Müller's fluid; stain from one-half to one hour in a saturated aqueous solution of aniline blue; wash in water; transfer to alcohol containing 20 to 30 minims of a 1 per cent alcoholic solution of potassium hydroxide until the sections become translucent and turn a bright brownish red; place in distilled water until the section becomes bright blue again; stain again in a half-saturated aqueous solution of safranin from one-quarter to one-half hour; wash and dehydrate in absolute alcohol; finish with xylene and Canada balsam. **Strohschein's method (for tubercle bacilli):** 5 to 10 cc. of sputum are mixed with three times the quantity of Wendriner's sodium borate-boric acid solution, and after vigorous shaking the mixture is set aside for four or five days to settle. The mixture becomes fluid, and the bacilli settle to the bottom. **sudan III:** A red stain, soluble in alcohol, chloroform, essential oils, and xylene; used as a stain for tubercle bacilli. **Taenzer's s.:** A solution of orcein for staining elastic tissue. **tetrachrome s.:** A stain which combines the four active staining agents of the Giemsa stain (methylene blue, eosin, methylene azure, methylene violet) ready for use. **Toisson's mixture:** A solution for diluting the blood in counting the red corpuscles. It consists of 8 Gm. of sodium sulphate, 1 Gm. of sodium chloride, 30 cc. of glycerin, 0.025 Gm. of methyl violet, and 160 cc. of distilled water. **toluidine blue solution:** Toluidine blue, 0.25 Gm.; acetic acid, 2 cc.; absolute alcohol, 5 cc., and water, 100 cc. **Touton's method:** A method for staining gonococcus; stain sections in carbolfuchsin and wash in alcohol. **triacid s.** See *Ehrlich's triacid s.* **For trichophyta.** See *Gram-Weigert m.*, *triglycerin s.* See *Ehrlich's triglycerin s.* **For tuberculozsis.** See *Biot's m.*, *Czaplewsky's m.*, *Ehrlich's m.*, *Ehrlich-Weigert m.*, *Fränkel's m.*, *Gabbell's m.*, *Gastis' m.*, *Herman's m.*, *Muck's m.*, *Pappenheim's m.*, *Spendler's m.*, *Strohschein's m.*, *Weigert-Ehrlich m.*, *Weiss' m.*, and *Ziehl-Neelsen m.* **Türk's s.:** A weak solution of iodine-potassium iodide. **For typhoid.** See *Flesner's m.* **Unna's alkaline methylene blue solution:** The strongly alkaline solution of methylene blue is valuable for staining plasma cells; has been found extremely valuable as a general stain in connection with eosin, which is to be used first. The solution is diluted 1:10 or more before use. Methylene blue, 1 part; potassium carbonate, 1 part; water, 100 parts. **Unna's orcein method (for elastic fibers):** Stain sections in this solution: Grüber's orcein, 1 part; hydrochloric acid, 1 part; absolute alcohol, 100 parts; place sections in a dish, and pour over them enough of the solution to cover them; warm gently in an incubator, or over a small flame, for ten or fifteen minutes, until the solution thickens, or leave in the solution at room temperature overnight; wash in dilute 70 per cent alcohol; wash in water to get rid of all the acid and to fix the color; follow in succession with alcohol, oil, and balsam. **Unna's method (for the connective tissue fibrillae):** Harden in alcohol, wash in water, decolorize, differentiate, and stain in a 1 per cent solution of orcein in absolute alcohol fifteen minutes; wash in absolute alcohol; follow with bergamot oil; finish with balsam. Nuclei, dark blue; protoplasm, pale blue; elastic and connective tissue fibers, deep orcein red; smooth muscle fibers, bluish; mast cell granules, red; protoplasm of plasma cells, deep blue. **Unna's method (for keratohyalin):** 1. Overstain sections in a fairly old alum-hematoxylin solution. 2. Place in a very weak solution of potassium permanganate (1:2000) for ten seconds. 3. Dehydrate and decolorize in alcohol. 4. Finish in oil and balsam. Keratohyalin granules are stained blue-black in color. **Unna's method (for hyalin and colloid material):** Harden in alcohol; acid fuchsin; 2 per cent aqueous solution, five minutes; saturated aqueous solution of trinitrophenol, two minutes; saturated alcoholic solution of trinitrophenol, two minutes; wash in alcohol; treat with oil and balsam. Hyalin and connective tissue are stained red; colloid and protoplasm, yellow. **Unna's isolated stains (for mast cells):** Harden in alcohol; stain in polychrome methylene blue solution plus a little alum for from three hours to overnight; wash in water; absolute

alcohol; oil of bergamot; balsam. **Unna's modification of Gram's s.:** Instead of Gram's iodine solution Unna uses nascent iodine produced by adding hydrogen peroxide to a 5 per cent solution of potassium iodide. **Unna's polychrome methylene blue solution:** The same as Unna's alkaline methylene blue solution, except that it has been kept several months until oxidation has caused the formation of methyl violet and methylene red. Harden in alcohol; stain in polychrome methylene blue solution one-quarter hour; wash in water; decolorize in glycerin-ether mixture for five or ten minutes; wash a long time in water; follow with absolute alcohol, oil, and balsam. **Unna's differential s. (for plasma cells and mast cells):** Harden in alcohol; stain in paraffin sections in polychrome methylene blue from one-quarter hour to overnight; decolorize in a small dish of water to which are added a few drops of glycerin-ether mixture; wash thoroughly in water; follow with absolute alcohol, bergamot oil, balsam. 1. Stain in polychrome methylene blue solution from five to fifteen minutes. 2. Wash in water. 3. Decolorize and dehydrate in a 0.25 per cent alcoholic solution of neutral orcein fifteen minutes; follow with absolute alcohol, bergamot oil, and balsam. **Unna-Pappenheim method (for plasma cells):** Methyl green, 0.15; pyronine, 0.25; alcohol, 2.5; glycerin, 20; 0.5 per cent phenolated water, to make 100. Fix in alcohol; stain from five to ten minutes in incubator; wash in cold water; differentiate and dehydrate in absolute alcohol; clear in oil of bergamot, and mount in balsam. **Unna-Tänzer s.:** Orcein stain for fibro-elastic tissue. **van Ermengem's method:** A method for staining flagella. Make a very dilute suspension in 0.6 per cent sodium chloride solution of an eighteen-hour agar culture of the organism, and place a drop of the suspension in the center of a thoroughly clear cover glass; allow the drop to dry in the air, and then fix the preparation by passing the cover glass rapidly three times through the flame. To the fixed preparation apply the following mordant for one-half hour at room temperature, or five minutes at from 50 to 60 C.: Osmic acid (2 per cent solution), 30 cc.; tannin (20 per cent solution), 60 cc., and 4 or 5 drops of glacial acetic acid. Next wash in water and in alcohol (95 per cent) and then immerse for a few seconds in a 0.25 to 0.5 per cent solution of silver nitrate. From this, without washing, transfer to a small dish containing the reinforced bath, which is made as follows: Gallic acid, 5 Gm.; tannin, 3 Gm.; fused potassium acetate, 10 Gm.; distilled water, 350 cc. In this the preparation is washed for a few seconds, and is then again immersed in the silver nitrate solution (0.25 to 0.5 per cent). The preparation is moved about in this solution until the solution begins to acquire a brown or black color, when it is removed, washed thoroughly in water, dried, and mounted in balsam. **van Gieson's contrast s.:** Stain deeply in alum-hematoxylin; wash in water; stain in van Gieson's solution from three to five minutes; wash in water, and dehydrate directly in 95 per cent alcohol; follow with oil of Cretan origanum, and finish with Canada balsam. **van Gieson's method (for staining connective tissue fibrillae):** Harden in chrome salts or in corrosive mercuric chloride solution; stain deeply in alum-hematoxylin; wash in water; stain for from three to five minutes in van Gieson's solution of trinitrophenol; dehydrate in 95 per cent alcohol; follow with oil of Cretan origanum; finish with Canada balsam. **van Gieson's solution of trinitrophenol and acid fuchsin:** A stain for connective tissue, consisting of 1 per cent aqueous solution of acid fuchsin, 5 cc.; saturated aqueous solution of trinitrophenol, 100 cc. **van Gieson's s. (for nervous tissues):** Mix a 1 per cent aqueous solution of acid fuchsin, 15 cc.; saturated aqueous solution of trinitrophenol, 50 cc.; water, 50 cc. Stain sections first rather deeply in alum-hematoxylin; wash in water; stain in above solutions from three to five minutes; dehydrate in alcohol; finish in oil and Canada balsam. **Verhoeff's s. (for elastic tissue):** Hematoxylin crystals, 1 Gm., are dissolved in 20 cc. of absolute alcohol and filtered. To this is added 20 per cent aqueous solution of ferric chloride, 8 cc., and Lugol's solution, 8 cc. **von Kossa's s. (for lime salts):** Fix in alcohol, solution of formaldehyde, or corrosive sublimate; place sections in a 1 to 5 per cent aqueous solution of silver nitrate for from thirty to sixty minutes; wash in distilled water; mount in glycerin or balsam. The lime is stained deep black. **Wadsworth's method (for capsules):** 1. The smear is made as usual and is treated with a 16 per cent solution of formaldehyde for from two to five minutes. 2. Wash in water only five seconds. 3. Stain by Gram's method or with any simple stain. **Weigert's alcohol-hematoxylin:** Hematoxylin crystals, 10 Gm.; absolute or 95 per cent alcohol, 90 cc. Ripen for a week or two to a brown color. Used in staining myelin sheaths. **Weigert's elastic tissue s.:** Aqueous solutions of resorcin and fuchsin are boiled together, solution of ferric chloride is added, and the precipitate dissolved in alcohol, to which has been added 2 per cent of hydrochloric acid. **Weigert's iron-hematoxylin (for nuclei):** Prepare

two solutions: (a) Hematoxylin, 1 Gm.; 96 per cent alcohol, 100 cc. (b) Solution of ferric chloride, 4 cc.; water, 95 cc.; hydrochloric acid, 1 cc. For use, mix equal parts. **Weigert's method (for neuroglia fibers):** (a) Fix thin pieces of tissue, not over $\frac{1}{2}$ cm. thick, in a 4 per cent solution of formaldehyde for at least four days. (b) Mordant in the following solution for four or five days in an incubator, or for eight days at room temperature: Acetate of copper, 5 Gm.; acetic acid, 36 per cent solution, 5 cc.; chrome alum, 2.5 Gm.; water, to 100 cc. Boil the chrome alum in a covered dish (it turns to a green color); remove the gas, add the acetic acid, and then the copper acetate; stir until the latter is dissolved, then cool. The solution should remain clear and without a green precipitate. (c) Wash in water; dehydrate in alcohol; embed in celloidin. (d) Reduction of copper salt in sections: 1. Place the sections, which must not be over 0.02 mm. thick, in a 0.33 per cent aqueous solution of potassium permanganate for ten minutes. 2. Wash with water. 3. Decolorize and reduce for from two to four hours in the following solution: Chromogenformic acid (specific gravity, 1.20), 5 cc.; water, to 100 cc. Add to 90 per cent of this, just before using, 10 cc. of a 10 per cent solution of sodium sulphate. The sections can now be stained in the manner to be described, but the color of the fibers will be more intense if the following steps are observed, and a slight yellowish contrast stain is obtained for the ganglion cells and ependymal cells and for the larger nerve fibers. (e) Further reduction of copper salt: 1. Wash twice in water. 2. Place sections in a carefully filtered saturated 1 per cent aqueous solution of chromogen overnight. 3. Wash in water. 4. The sections are now ready for staining, or may be preserved until wanted in 90 cc. of 80 per cent alcohol and 10 cc. of 5 per cent oxalic acid. (f) Staining of neuroglia fibers: 1. Lift section from large dish of water on to slide freshly cleared with alcohol; blot with filter paper (method recommended by Weigert for attaching sections to slide). 2. Stain in the following mixture: Saturated solution of methyl violet in 70 to 80 per cent alcohol, 100 cc. (saturated with aid of heat; decanted when cold), and 5 per cent aqueous solution of oxalic acid, 5 cc. 3. Wash with normal salt solution. 4. Iodine solution: 5 per cent potassium iodide solution saturated with iodine. This is poured on and then off. 5. Wash with water and blot with filter paper. 6. Decolorize thoroughly in equal parts of xylene and aniline oil. 7. Wash repeatedly with xylene, or the stain will not keep. 8. Canada balsam. The sections keep better if exposed for from two to three days to diffuse light before being put away. **Weigert's method.** See also Gram-Weigert staining method. **Weigert's mixture:** 1. A clearing agent for thick sections of the central nervous system after carmine and hematoxylin stains: carbofic acid in crystals, 1 part; xylene, 3 parts. 2. Aniline, 2 parts; xylene, 1 part. Used like the preceding. **Weigert's mixture of aniline and xylene:** Aniline, 2 parts; xylene, 1 part. **Weigert's myelin sheath s.:** 1. Fix and mordant the tissues in Weigert's quick mordant or in Müller's fluid. 2. Dehydrate in alcohol without washing in water. 3. Embed in celloidin. 4. Place sections for twenty-four hours in the following solution: Copper acetate, 5 parts; acetic acid, 36 per cent solution, 5 parts; chrome alum, 2 to 5 parts. 5. Stain from fifteen minutes to twenty-four hours in hematoxylin, 1 part; absolute alcohol, 10 parts; saturated aqueous solution of lithium carbonate, 7 parts; water, 90 parts. The hematoxylin and alcohol must be kept on hand for some time, in order to ripen. 6. Wash thoroughly in water. 7. Decolorize in sodium borate, 4 parts; potassium ferrocyanide, 5 parts; water, 200 parts, until the gray substance becomes distinctly yellow. 8. Wash thoroughly in water. 9. Dehydrate in 95 per cent alcohol. 10. Clear in aniline oil, 2 parts; xylene, 1 part. 11. Finish in Canada balsam. **Weigert's picrocarmine:** A stain prepared by stirring 2 Gm. of carmine in 4 cc. of ammonia and allowing it to remain standing in a well-corked bottle for twenty-four hours. This is mixed with 200 cc. of a concentrated aqueous solution of trinitrophenol, to which a few drops of acetic acid are added after a further twenty-four hours. Filter after twenty-four hours. Should the precipitate also pass through the filter, a little ammonia is added to dissolve it. **Weigert's quick method (for mordanting myelin sheaths):** 1. Fix the tissues in a 4 per cent solution of formaldehyde (10 per cent solution of formalin) for from four days to several weeks. Four days are enough for pieces not over 1 cm. thick. The solution is changed at the end of twenty-four hours. 2. Mordant the myelin sheaths in a solution of potassium dichromate, 5 parts; chrome alum, 2 parts; water, 100 parts, for from four to eight days. The tissues should not be left in it more than eight days, lest they become too brittle. 3. Transfer directly to 80 per cent alcohol, and keep in the dark until wanted for embedding, changing the alcohol occasionally as it becomes colored. **Weigert's s. (for fibrin):** Harden in alcohol. 2. Stain celloidin sections in lithium-carmin. 3. Fasten sections to slide with ether vapor. 4. Stain in

aniline gentian violet from five to twenty minutes.
 5. Wash with normal salt solution. 6. Lugol's iodine solution one minute. 7. Wash with water. 8. Decolorize in aniline, 2 parts; xylene, 2 parts. 9. Wash with three changes of xylene. 10. Canada balsam. Fibrin and gram-stainable bacteria are colored blue; nuclei become red. **Weigert-Ehrlich s.** (*for tubercle bacilli*): Alcoholic solution of fuchsin or of methyl violet is added to an aqueous solution of aniline oil. The specimens are stained, washed in water, treated with dilute hydrochloric or nitric acid, and again washed. **Weigert-Pal method.** See *Pal's method*. **Weiss' double s.** (*for tubercle bacilli*): Mix 1 part of methyl violet solution with 3 parts of carbolfuchsin. Mixture keeps a week. Otherwise as in Much's method. In both methods a counterstain is desirable—either a much diluted solution of fuchsin or a 1 per cent water solution of safranin. The results are much better if the slides are left from twenty-four to forty-eight hours in the staining solution at room temperature. **Welch's method** (*of staining the capsule of the pneumococcus*): 1. Cover the preparation with glacial acetic acid for a few seconds. 2. Drain off and replace (without washing) with aniline gentian violet solution, repeatedly added. 3. Wash in a 2 per cent solution of sodium chloride and mount in the same. **Wendrin's mixture:** 8 Gm. of sodium borate are dissolved in hot water, 12 Gm. of boric acid are added, and then 4 Gm. of sodium borate; after crystallization it is filtered. **Wheal and Clown's method** (*for actinomycetes*): 1. Stain with Ehrlich's hematoxylin and wash in tap water. 2. Stain in hot carbolfuchsin for five minutes and wash. 3. Decolorize with Spengler's trinitrophenol alcohol. See *Spengler's m.* **Williams' method** (*for flagella*): Cover the cover glass with a mordant consisting of 5 cc. of 1 per cent solution of aluminum, 5 cc. of a 2 per cent solution of osmic acid, and 15 cc. of a 20 per cent solution of tannin; shake the mixture and add 3 drops of glacial acetic acid and shake again; apply the mordant less than one minute and wash in water; cover the preparation for one minute with a 1 per cent solution of silver nitrate containing sufficient ammonium hydroxide to keep the silver in solution; wash in water; wash in a 0.6 per cent solution of sodium chloride; flood the preparation with a 30 per cent solution of ammonium hydroxide, and wash in water; apply a few drops of ortol photographic developer; wash in water; cover with a 1 per cent solution of gold chloride for a few seconds; wash in water and apply ortol developer a few seconds; wash in water and cover with a 1 per cent solution of corrosive mercuric chloride for a few seconds; wash in water, apply ortol developer a few seconds. Wash and repeat the application of chloride of gold, the washing, and the ortol developer two or more times. **Wood's modification of Giemsa's s.:** 1. Fix film in methyl alcohol. 2. Stain with 0.1 per cent solution of eosin until pink. 3. Pour off eosin and stain from one-half to one minute with 0.25 per cent solution of azure II. 4. Wash with water and dry by blotting. **Wright's s.** (*for blood and malarial parasites*): Dissolve 0.5 Gm. of sodium bicarbonate in 100 cc. of distilled water, and add 1 Gm. of methylene blue. Steam the mixture in a steam sterilizer at 100 C. for one hour. The mixture is removed, allowed to cool, and to it is added a 1:1000 solution of eosin until the mixture becomes purple in color and a yellowish metallic scum forms on the surface. The precipitate is collected on a filter, is allowed to dry, and is then dissolved in pure

methyl alcohol in the proportion of 0.5 Gm. to 1000 cc. of alcohol. Make films of the blood, spread thinly, and allow them to dry in the air; cover the preparation with the staining fluid for one minute; add to the staining fluid on the preparation sufficient water, drop by drop, until a delicate metallic scum forms on the surface, allowing the mixture to remain on the preparation for two or three minutes; wash in water until the film has a pinkish tint in its thinner portions and the red corpuscles take on a yellow or pink color; dry between filter paper and mount in balsam. **xylene balsam:** A thin, syrupy fluid prepared from Canada balsam dissolved in xylene: a mounting reagent for stained specimens. **Yamagiwa's method** (*for staining neuroglia*): The tissue, cut in very thin sections, is hardened in Müller's fluid for about a month, changing the fluid in the beginning daily for five or six days. From this solution the tissues are transferred directly, without washing in water, into absolute alcohol, where they remain for from several days to a week, the alcohol being changed daily. After embedding in celloidin and cutting, the sections are stained in a concentrated alcoholic solution of eosin for twelve days or more, then in a concentrated watery solution of aniline blue for from four to six hours, then differentiated in dilute alcohol rendered feebly alkaline with a 1 per cent potassium hydroxide solution. The deep-blue sections become reddish brown. They are then washed in distilled water and the excess of blue removed in diluted alcohol. The sections now are reddish. They are then dehydrated in absolute alcohol, cleared in oil of origanum, and mounted in balsam. Thus treated, the axis-cylinders are deep blue, the glia fibers and red blood corpuscles dark red, the myelin sheaths bright red, the protoplasm of the glia cells pale violet, the bodies of the ganglion cells pale bluish-gray with greenish granules, connective tissue fibers, adventitia, intima of blood vessels sky blue or pale greenish, the mediums bluish red, the nuclear membranes all bluish. **Yamamoto's method** (*for spiracles*): Staining with a 5 per cent solution of silver nitrate, followed by a solution of 2 per cent pyrogallol and 1 per cent tannic acid solution. **Zenker's fluid:** A fixing reagent consisting of potassium dichromate, 2.5 Gm.; sodium sulphate, 1 Gm.; corrosive mercuric chloride, 5 Gm.; glacial acetic acid, 5 cc.; water, to 1000 cc. For use, fix tissues in the solution from one to twenty-four hours, rarely forty-eight hours, according to thickness. Wash in running water from twelve to twenty-four hours. Preserve in 80 per cent alcohol until used. **Zettnow's s.:** A method of staining the flagella of bacteria. **Ziehl's carbolfuchsin solution:** A bacterial staining solution prepared by dissolving 1 Gm. of fuchsin in 10 cc. of 96 per cent alcohol and adding 90 cc. of 5 per cent phenol. **Ziehl-Neelsen carbolfuchsin:** Saturated alcoholic solution of fuchsin, 16 cc.; aniline water, 84 cc. **Ziehl-Neelsen method** (*for tuberculosis*): 1. Stain the dried and fixed film in hot carbolfuchsin for from five to ten minutes. 2. Decolorize in 5 per cent sulphuric acid, 5 per cent nitric acid or 1 per cent hydrochloric acid from three to five minutes. 3. Wash in water, then in alcohol as long as color comes away. 4. Counterstain with dilute methylene blue. **Ziehl-Neelsen-Gabbett method** (*for tubercle bacillus*): 1. Stain paraffin sections in carbolfuchsin solution, warming it three or four times until it steams. 2. Wash in water. 3. Decolorize and stain for contrast in sulphuric acid methylene blue solution one minute. 4. Wash in water. 5. Absolute alcohol. 6. Xylene. 7. Xylene balsam.

staircase (stär'käs). See *trappe*.

stalagmometer (stal-ag-mom'et-er) [σταλαγμός dropping + μέτρον measure]. An instrument for measuring surface tension by determining the exact number of drops in a given quantity of a liquid. See *miostagmin reaction*, under *reaction*.

stalagmon (stal-ag'mon). A colloidal substance which changes the surface tension of a liquid containing them.

staling (sta'ling). Urination in cattle and horses.

stalk, abdominal (stawk). The tube of mesoblast which surrounds the stem of the allantois in the embryo. **optic s.**, the embryonic structure which connects the optic vesicle with the diencephalon.

stalk disease. An eruptive disease of cattle.

stamen (sta'men). The male part of a flower.

stamina (stam'in-ah) [L.]. Vigor or endurance.

stammer, stammering (stam'er, stam'er-ing).

A faulty and interrupted manner of speech. **s.**

bladder. See *bladder*.

Stammier's reaction. See under *reaction*.

stamper (stam'per). A person affected with locomotor ataxia: so called because of the peculiar stamping gait of that disease.

stanch (stanch). To check the flow of blood from: as, to stanch a wound.

standard candle (stan'dard). A spermaceti candle burning 120 grains an hour. **s. solution**, a solution that contains a definite amount of a reagent. **permanent albumin s's**, tubes of formaldehyde gelatin containing varying amounts of formazin in a uniform suspension. They are used in the life insurance method for albumin in urine. **Pignet's s.** See *Pignet's formula*, under *formula*.

standardization (stan'dard-iz-a'shun). 1. The bringing of any preparation to a recognized standard as to quality or ingredients. 2. The formulation of standards for a substance or for a procedure.

standardize (stan'dard-iz). To compare with or conform to a standard; to establish standards.

standstill (stand'stil). The quiet state resulting from suspended activity. **respiratory s.**, suspension of the movements of respiration. When it occurs at the end of an expiration, it is termed *expiratory s.*; when at the end of an inspiration, *inspiratory s.*

stannate (stan'at). Any salt of stannic acid.

stannic (stan'ik). Containing tin as a quadrivalent element. **s. chloride**, an irritant war smoke, SnCl_4 . For stannic compounds, see *tin*.

stanniferous (stan-if'er-us) [L. *stan'num* tin + *fer're* to bear]. Containing tin.

Stannius's ligature (stan'e-us) [Herman Friedrich Stannius, German biologist, 1808-1883]. See under *ligature*.

stannous (stan'us). Containing tin as a bivalent element.

stannoxy (stan-ok'sil). A proprietary combination of metallic tin and its oxide: stated to be useful in the treatment of staphylococcal infections, *i. e.*, acne and furunculosis.

stannum (stan'um). 1. Latin for *tin*. 2. A homeopathic preparation of metallic tin.

stapedectomy (sta-pe-dek'to-me) [L. *sta'pes* stirrup + *ektomē* excision]. Excision of the stapes.

stapedial (sta-pe'de-al). Pertaining to the stapes.

stapediotomy (sta-pe''de-o-ten-ot'o-me). The cutting of the tendon of the stapedius muscle.

stapediovestibular (sta-pe''de-o-ves-tib'u-lar). Pertaining to the stapes and vestibule.

stapedius (sta-pe'de-us). See *muscles, table of*.

stapes (sta'pēz) [L. "stirrup"]. The innermost of the ossicles of the ear, shaped somewhat like a stirrup. It articulates by its head with the incus, and its base is inserted into the fenestra ovalis. Called also *stirrup*.

staphisagria (staf-is-a'gre-ah) [σταφίς raisin + ἄγριος wild]. The poisonous seeds of *Delphinium staphisagria*, stavesacre, or lousewort. The plant and its seeds are poisonous and narcotic. The seed is sometimes employed as a vermifuge, but mainly for destroying lice. Dose of fluid-extract, 1-2 minims (0.06-0.12 cc.).

staphisagrine (staf-is-a'grin). A poisonous alkaloid, $\text{C}_{22}\text{H}_{33}\text{NO}_5$, from staphisagria.

staphylagra (staf-il'ag-rah, staf-il-a'grah) [σταφύλαρα]. A forceps for holding the uvula.

staphylectomy (staf-il-ek'to-me) [σταφύλη uvula + *ektomē* excision]. Complete removal of the soft palate.

staphyledema (staf-il-e-de'mah) [σταφύλη uvula + οίδημα swelling]. An enlargement or swollen state of the uvula.

staphylematoma (staf'il-em-at-o'mah) [σταφύλη uvula + *hematoma*]. Hemorrhage from the uvula (Pauli).

staphyline (staf'il-in) [σταφύλη bunch of grapes; also the uvula]. 1. Shaped like a bunch of grapes. 2. Pertaining to the uvula.

staphylinopharyngeus (staf-il-i''no-far-in'je-us). The palatoglossus muscle.

staphylinus (staf-il-i'nus) [L.]. Pertaining to the uvula. **s. exter'nus**, the tensor palati muscle. **s. inter'nus**, the levator palati muscle.

staphylion (staf-il'e-on) [σταφύλιον little grape]. 1. A craniometrical point on the posterior edge of the hard palate at the median line. 2. The uvula. 3. A nipple or teat.

staphylitis (staf-il-i'tis) [σταφύλη uvula + *-itis* inflammation]. Inflammation of the uvula.

staphylo-angina (staf'il-o-an'jin-ah). A mild form of sore throat, marked by a pseudomembranous deposit in the throat due to a staphylococcus.

staphylobacterin (staf'il-o-bak'ter-in). The bacterial vaccine prepared from staphylococci.

staphylococcal (staf'il-o-kok'al). Pertaining to or caused by staphylococci.

staphylococcemia (staf'il-o-kok-se'me-ah) [staphylococcus + αἷμα blood]. A condition characterized by the presence of staphylococci in the blood.

staphylococcia (staf'il-o-kok'se-ah). 1. Skin suppuration due to a staphylococcus. 2. A secondary infection with a staphylococcus.

staphylococcic (staf'il-o-kok'sik). Pertaining to or caused by staphylococci.

staphylococcymycosis (staf'il-o-kok'o-mi-ko'-sis). A skin disease due to infection with staphylococci.

Staphylococcus (staf'il-o-kok'kus) [σταφυμή bunch of grapes + κόκκος berry]. A genus of bacteria of the family *Coccaceae* made up of spherical cells arranged in irregular groups and short chains, and very rarely in packets. These are the bacteria most commonly found in boils, abscesses, carbuncles, and similar suppurative processes. Staphylococcus infection of the lungs results in a highly fatal bronchopneumonia. **S. al'bus**, a species from milk and the pus of osteomyelitis: not known to be pathogenic. **S. au'reus**. **S. pyogenes-aureus**. **S. bis'krae**, a pathogenic species from the serum and pus of Biskra button: seen as immobile paired and double micrococci. **S. botryomy'ces**, a species causing the disease botryomycosis in horses. **S. can'dicans**, a nonpathogenic species from air and water. **S. ce'reus-al'bus**, a form from water and pus; not pathogenic. **S. ce'reus-au'reus**, a variety from the nasal discharge in coryza, producing an orange-red pigment. **S. ce'reus-fla'vus**, a variety from abscesses producing a yellow pigment. **S. cit'reus** a species giving a yellowish color in cultures. **S. del'en'dae-mus'cae**. See *S. muscae*. **S. epi'dermidis-al'bus** (Welch, 1892), a microbe that always inhabits the skin and the hair follicles: it sometimes becomes pathogenic in wounds. **S. ful'vus**, a species from the lungs of horses and rabbits, producing a rose-red pigment. **S. haem-orrhag'icus**, a pathogenic species from the vesicular eruption of sheep affected with garget. **S. manfre'dii**, a species occurring in the form of ovoid cocci from the sputum of lobar pneumonia. They produce lobar pneumonia when injected into animals. **S. mus'cae**, a species which causes a fatal infection in house flies and other flies. **S. parvu'lus**, an organism very similar to if not identical with *Micrococcus gazogenes*. **S. passe'tii**, a species from pus, producing a yellow pigment. **S. plicat'ilis**, a species believed to cause perlèche. **S. pyog'enes**, a micro-organism of suppuration, of which there are several varieties. **S. pyog'enes-al'bus**, a pyogenic variety with white cultures from stitch abscesses, etc. Called also *Micrococcus albus*. **S. pyog'enes-au'reus**, a pyogenic variety with golden-yellow cultures, which produce phlogosin, obtained from air, water, soil, pus, etc. It is the cause of carbuncle, and is found in cases of osteomyelitis and in some cases of bronchopneumonia. Called also *Micrococcus aureus*. **S. pyog'enes-cit'reus**, a form with citron-yellow cultures: pyogenic. **S. pyosep'ticus**, a variety resembling Staphylococcus pyogenes-albus, found in a tumor on the skin of a dog. It was pathogenic for rabbits and dogs. **S. rindfleisch'i**, a species from the capillaries in mycosis fungoides, occurring in chains of colorless cocci. **S. saliva'rius-pyog'enes**, a pyogenic form from a guinea-pig inoculated with sputum from a case of scarlatina angina. **S. tetra'genus**, an organism discovered by Gaffky in lung cavities in phthisis. It is found in abscesses in man and animals, and often occurs in the healthy mouth. It is also found in empyema following pneumonia and in the pus of war wounds. Called also *Micrococcus tetragenus*. **S. ure'ae**, the organism which produces ammoniacal fermentation in urine. **S. vir'idis-flaves'cens**, a species from the vesicles of varicella, producing a yellowish-green pigment.

staphylo dermatitis (staf''il-o-der-mat-i'tis). Inflammation of the skin due to staphylococci.

staphylo dialysis (staf''il-o-di-al'is-is) [σταφυλή uvula + διάλυσις loosening]. Relaxation of the uvula.

staphylo-edema (staf''il-o-e-de'mah). See *staphyloedema*.

staphylohemia (staf''il-o-he'me-ah) [σταφυλός a bunch of grapes + αίμα blood]. The presence of staphylococci in the blood.

staphylo leukocydin (staf''il-o-lu-ko-si'din). A toxin from staphylococcus cultures which is destructive to leukocytes.

staphylo lysis (staf''il-o-li'sin). The hemolysin of staphylococcus toxin.

staphylo ma (staf''il-o-m'ah) [σταφύλωμα]. Protrusion of the cornea or sclera, resulting from inflammation. **annular s.** 1. A staphylo ma surrounded by an atrophic choroid coat. 2. Staphylo ma of the sclera in the ciliary region, extending around the margin of the cornea. **anterior s.**, scleral staphylo ma in the anterior part of the eye; keratoglobus. **ciliary s.**, scleral staphylo ma in the part covered by the ciliary body. **s. cor'neae**. 1. Protrusion of the cornea, caused by the cornea losing its transparency and projecting beyond the eyelid. Called also *conical cornea*, *prolapsed corneae*, and *projecting staphylo ma*. 2. Staphylo ma formed by an iris which has protruded through a wound in the cornea. **s. cor'neae racemo'sum**, staphylo ma corneae (2) in which there are a number of perforations from which small portions of iris protrude. **equatorial s.**, scleral staphylo ma occurring in the equatorial region of the eye. **intercalary s.**, that which occurs in the rim of sclera anterior to the insertion of the ciliary body. **posterior s.**, **s. posti'cum**, the backward bulging of the sclera at the posterior pole of the eye. **projecting s.** See *s. corneae*. **Scarpa's s.**, posterior staphylo ma. **scleral s.**, protrusion of the contents of the eyeball at a point where the sclera has become too thin. **uveal s.**, protrusion of the uvea through a ruptured sclera.

staphylo matous (staf-il-om'at-us). Pertaining to or resembling staphylo ma.

staphylo mycosis (staf''il-o-mi-ko'sis) [σταφυλή grape + μύκης fungus]. Any systemic disorder due to staphylococci; staphylococcus infection.

staphylo ncus (staf-il-ong'kus) [σταφυλή uvula + ὄγκος mass]. A tumor or swelling of the uvula.

staphylo pharyngeus (staf''il-o-far-in'je-us). The palatopharyngeus muscle.

staphylo pharyngo rrhaphy (staf''il-o-far-in-gor'-af-e) [σταφυλή uvula + φάρυγξ pharynx + ραφή suture]. The stitching of the halves of the velum palati to the posterior pharyngeal wall.

staphylo plasmin (staf''il-o-plaz'min). A poison produced in the organism of a staphylococcus, producing supuration.

staphylo plasty (staf''il-o-plas-te) [σταφυλή uvula + πλάσσειν to mold]. Plastic surgery of the uvula.

staphylo ptosis, **staphylo ptosis** (staf''il-op-to-se-ah, -sis) [σταφυλή uvula + πτώσι-fall]. Elongation of the uvula.

staphylo rrhaphy (staf-il-or'-af-e) [σταφυλή uvula + ραφή suture]. Surgical closure of a cleft palate, especially of the soft palate. See *uranorrhaphy*.

staphylo schisis (staf-il-os'kis-is) [σταφυλή uvula + σχίσσι splitting]. Cleft uvula; fissure of the uvula and soft palate.

staphylo streptococcia (staf''il-o-strep-to-kok'-se-ah). A secondary pyogenic infection with a staphylococcus and a streptococcus.

staphylo tome (staf''il-o-tōm) [σταφυλοτόμον]. A knife or instrument for cutting the uvula.

staphylo tomy (staf-il-ot'o-me) [σταφυλή uvula + τέμνειν to cut]. 1. The surgical removal of a part of the uvula; also incision of the uvula. 2. The removal of a staphylo ma by cutting.

staphylo toxin (staf''il-o-toks'in). A toxin occurring in cultures of staphylococci.

staphylo tropic (staf''il-o-trop'ik). Having a selective affinity for staphylococci.

star (star). Any structure shaped like a star. **blazing s.**, Helonias. **daughter s.** See *diaster*. **dental s.**, a marking on the incisor teeth of horses, first appearing in the lower central incisors at about the age of eight years: used in judging a horse's age. **polar s's**, the starlike figures of the diaster. **s's of Verheyen**, the venae stellatae; rosetts of venous radicles beneath the capsule of the kidney. **Winslow's s's**, whorls of capillary vessels from which arise the vorticoso veins of the choroid coat of the eye.

star anise (star an'is). See *Illicium*.

starch (starch) [L. amylum]. A polysaccharide from various plant tissues, having the formula (C₆H₁₀O₅)_n. It is produced in plant cells by the influence of light on chlorophyll. The varieties of starch differ mainly in the form and size of their granules. The hull of the granule is composed of starch cellulose, and the interior of granulose, the two materials being isomeric. See *amylpectin* and *amylose*. The saliva and pancreatic juice convert cooked starch into maltose and then into dextrose. It is important as a food, and is used therapeutically as a dusting powder, and as an emollient in enemata, ointments, etc. Arrowroot, tapioca, tous-les-mois, salep, and sago are commercial forms of starch. The principal commercial starches are maize starch, or corn starch, potato starch, rice starch, and wheat starch. In surgery starch bandages have a considerable use. **animal s.** See *glycogen*. **corn s.**, a starch from maize. **iodized s.**, starch that has been treated with iodine, of which it contains 5 per cent: alternative and antidotal. Dose, 60 grains (4 Gm.). **lichen s.**, **moss s.**, lichenin. **soluble s.**, the first stage in the hydrolysis of starch.

stare, postbasic (stär). A peculiar expression of the eyes in posterior basic meningitis due to downward rolling of the eyeball and retraction of the upper lid.

starter (star'ter). A culture of micro-organisms used to initiate the desired fermentation, as in dairy products. **vitalait s.**, a culture of *Lactobacillus bulgaricus* and *Streptococcus acidilactici* in symbiosis.

starvation (star-va'shun). Long-continued deprivation of food. **s. treatment**. See *Allen treatment*, under *treatment*.

stasibasiphobia (stas'e-bas-if-o-be-ah) [στάσις standing + βάσις step + φόβος fear]. Insane distrust of one's ability to stand or walk.

stasimetry (stas-im'et-rē) [στάσις condition + μέτρον measure]. The measurement of the consistency of soft bodies.

stasimorphia (stas-im-or'fe-ah). Stasimorphia.

stasimorphy (stas'im-or-fē) [στάσις halt + μορφή form]. Deformity or abnormality of shape in any organ, due to arrest of development.

stasiphobia (stas-if-o-be-ah) [στάσις standing + φόβος fear]. Morbid dread of standing erect.

stasis (sta'sis) [στάσις halt]. A stoppage of the flow of blood in any part. **diffusion s.**, stasis in which there is diffusion of lymph or serum.

foot s. See *trench foot*, under *foot*. **ileal s.**, abnormal delay in the passage of the intestinal contents through the ileum; it is usually due to dilatation of the ileum. **intestinal s.**, a condition of intestinal atony, frequently with visceral ptosis, intestinal kinks, bands, or adhesions, resulting in constipation, auto-intoxication, neurasthenia, etc. **papillary s.** See *choked disk*, under *disk*. **pressure s.**, traumatic

asphyxia. See *asphyxia*. **venous s.**, stasis of blood due to venous congestion.

stasobasiphobia (stas''o-bas-if-o'-be-ah). See *stasibasiphobia*.

Stas-Otto method (stahs-ot'-o) [*Stas*, a Belgian chemist, 1813-1891]. A method of separating alkaloids and similar amino compounds. It consists in treating the substance with twice its weight of 90 per cent alcohol and about 20 Gm. of tartaric or oxalic acid, filtering, evaporating, dissolving the residue in absolute alcohol, filtering and evaporating again, dissolving the residue in water alkalinized with sodium bicarbonate, and extracting the alkaloid with ether.

Stat. Abbreviation for *L. sta'tim*, immediately.

state (stät) [*L. sta'tus*]. Condition or situation; status; also the crisis or turning point of an attack of disease. **anelectrotonic s.**, the condition which obtains in a nerve near the anode during the passage of a continuous current. **catelectrotonic s.**, the condition of a nerve near the cathode during the passage of an electric current. **correlated s.**, dynamic equilibrium. See *equilibrium*. **dream s.**, a state of defective consciousness in which the environment is imperfectly perceived. **hypnagogic s.**, that state of light slumber intermediate between sleep and waking which occurs just as one is falling to sleep or as one is awakening. **hypnoidal s.**, a condition in which portions of unrecognized past experience come up into consciousness from the subconscious life. **hypnoidic s.**, a state in which more or less connected experiences of the past come up into consciousness from the subconscious state. **hypnoleptic s.**, a state occurring between two experiences of double personality. **marble s.**, a change in the corpus striatum consisting in the appearance of myelin fibers where normally ganglion cells are found. **refractory s.**, a condition of subnormal excitability of muscle and nerve following excitation. **steady s.**, dynamic equilibrium. See *equilibrium*. **twilight s.**, a temporary absence of consciousness in which the patient may perform certain acts involuntarily and without remembrance of them afterward. **typhoid s.**, a condition of great muscular weakness and stupor, with dry, brown tongue, sordes on the teeth, muttering delirium, feeble pulse, involuntary discharge of feces and urine: seen in certain wasting diseases, as typhoid and other fevers.

static (stat'ik) [*L. sta'ticus; στατικός*]. 1. At rest; in equilibrium; not in motion. 2. Not dynamic.

Statico (stat'is-e) [*στατική* astringent]. A genus of plumbaginaceous plants. *S. limonium*, marsh rosemary, and other species are highly astringent.

statics (stat'iks). That department of mechanics which treats of matter in a state of rest or equilibrium.

statim (sta'tim). Latin for *at once*.

station (sta'shun) [*L. sta'tio*]. The manner of standing; in atactic conditions it is sometimes pathognomonic. See *attitude*. **aid s.**, a place for assembling and collecting the wounded in battle for their evacuation to the rear. **dressings s.**, a sheltered temporary retreat for soldiers wounded in battle who have been collected on the field by the litter bearers and brought in from the aid station. **rest s.**, stations for temporary relief of sick and wounded transported by hospital trains or ambulances located at definite points on a military road or railway. **s. for the slightly wounded**, an aid station for wounded soldiers who can walk and do not require transportation.

stationary (sta'shun-a-re) [*L. stationarius*]. Not subject to variations or to changes of place.

statistics (stat-is'tiks). Numerical facts pertaining to a body of things; also the science which deals with the collection and tabulation of such facts. **vital s.**, that branch of biometry which deals

with the data and laws of human mortality, morbidity, natality, and demography; called also *biostatistics*.

statoliths (stat'o-liths). Same as *otoconia*.

statometer (stat-om-et'er) [*statos* standing + *μέτρον* measure]. An apparatus for measuring the degree of exophthalmos.

statosphere (stat'o-sfēr). Same as *centrosphere*.

stature (stat'ür) [*L. sta'tura*]. The height or tallness of a person standing.

status (sta'tus) [*L.*]. State or condition. **s. arthriticus**, the gouty diathesis; predisposition to gout. **s. choleraicus**, a state occurring in the algid stage of cholera, characterized by a dull countenance, weak pulse, and cold skin. **s. choreicus**, a severe and persistent form of chorea. **s. convulsivus**, a condition marked by a series of convulsions following one after the other. **s. cribrosus**, a sievelike condition of the brain due to dilatation of the perivascular lymph spaces. **s. criticus**, a severe and persistent form of tabetic crises. **s. dysgraphicus**, dysgraphia. **s. epilepticus**, a series of rapidly repeated epileptic convulsions without any periods of consciousness between them. **s. gastricus**, a disordered state of the stomach; gastric indigestion. **s. hemicranicus**, a state marked by constantly recurring attacks of migraine. **s. lacunaris**, a condition of the brain marked by numerous small losses of substance. **s. lymphaticus**. See *lymphatism*. **s. nervosus**, the typhoid state. See *state*. **s. parathyreoprius**, a condition due to absence of parathyroid. **s. praesens**, the condition of a patient at the time of observation. **s. raptus**, a condition of ecstasy. **s. thymicolymphaticus**, a condition resembling lymphatism, with enlargement of the lymphadenoid tissue generally and with enlargement of the thymus as the special influencing factor. **s. thymicus**. See *lymphatism*. **s. typhosus**, the typhoid state. See *state*. **s. vertiginosus**, a prolonged condition of vertigo.

statuolence (stat-u'-vo-lens) [*L. sta'tus* state + *volens* willing]. A voluntary self-induced state of hypnotism.

statuolent, statuolic (stat-u'-vol-ent, stat-u'-vol'ik). Affected with or able to enter voluntarily a condition of statuolence.

statuolism (stat-u'-vo-lizm). Same as *statuolence*.

staurion (staw're-on) [*σταυρός* cross]. A point at the crossing of the median and transverse palatine sutures.

stauroplegia (staw-ro-ple'je-ah) [*σταυρός* cross + *πληγή* stroke]. Crossed hemiplegia.

Stauung's hyperemia (stau''oongs hi-per-e'me-ah) [Ger.]. Same as *Bier's hyperemia*. See *hyperemia*.

stave of the thumb (stäv). See *Bennett's fracture*, under *fracture*.

stavesacre (stävz'a-ker). Same as *Staphisagria*.

staxis (stak'sis) [*στάσις* a dropping]. Hemorrhage.

stay (stä). The bar of a horse's hoof.

stay knot (stä). See under *knot*.

steam tug murmur (stēm tug'). A murmur heard in aortic obstruction and insufficiency, and resembling the sound of the exhaust of a steam tug.

steapsin (ste-ap'sin) [*στέαρ* fat + *πέψις* digestion]. Same as *lipase*.

steapsinogen (ste-ap-sin'o-jen). A proenzyme of steapsin.

stearate (ste-ar-ät). Any compound of stearic acid.

stearentine (ste-ar-en'tin) [*στέαρ* tallow + *έντερον* intestine]. Greenish sebaceous matter occurring in feces of suckling infants.

stearic acid (ste-ar'ik). See *acid*.

stearin (ste-ar-in). A white, crystalline fat, glyceryl tristearate, $C_{57}H_{113}O_2$, found in the harder fats, such as tallow.

Stearns' alcoholic amentia (sternz) [A. Warren *Stearns*, contemporary Boston physician]. See under *amentia*.

stearoconotum (ste'ar-o-ko-no'tum) [στέαρ solid fat + κόνις dust or powder]. A yellow, pulverulent fat found in the brain mass.

steatoderma (ste'ar-o-der-me-ah) [στέαρ fat + δέρμα skin]. A disease of the skin involving the sebaceous glands.

stearodine (ste-ar'o-din). A proprietary name for calcium iodostearate, $(\text{CH}_3(\text{CH}_2)_7\text{CHI}(\text{CH}_2)_8\text{CO}_2)_2\text{Ca}$, used like inorganic iodides in the prophylaxis of goiter.

stearol (ste-ar'ol) [στέαρ fat]. A medicinal preparation with fat as an excipient.

stearopten (ste-ar-op'ten) [στέαρ fat + κήνηος volatile]. A camphor; the more solid substance which, combined with an eleopten, constitutes a typical volatile oil.

stearosan (ste-ar-o-san). A proprietary preparation of santolyl stearate: used in catarrhal inflammation of the genito-urinary tract.

stearrhea, stearrhoea (ste-ar-e'ah) [στέαρ fat + ῥοια flow]. Same as *stealorrhoea*.

steatadenoma (ste-at-ad-en-o'mah) [στέαρ fat + adenoma]. Adenoma of the sebaceous glands.

steatite (ste-at-it) [στεαίτης]. Same as *talcum*.

steatitis (ste-at-i'tis) [στέαρ fat + -itis inflammation]. Inflammation of adipose tissue.

steatocele (ste-at'o-sel) [στέαρ fat + κήλη tumor]. A fatty mass formed within the scrotum.

steatocryptosis (ste'at-o-krip-to'sis) [στέαρ fat + κρύπτη crypt]. Disorder of the function of the sebaceous glands.

steatogenous (ste-at-oj'en-us) [στέαρ fat + γεννᾶν to produce]. Causing steatosis.

steatolysis (ste-at-o'is-is) [στέαρ fat + λύσις loosing]. The emulsifying process fats undergo preparatory to absorption.

steatolytic (ste'at-o-lit'ik). Pertaining to or performing steatolysis.

steatoma (ste-at-o'mah) [στέαρ fat + -ωμα tumor]. 1. A sebaceous cyst. 2. Same as *lipoma*.

steatonecrosis (ste'at-o-nek-ro'sis) [στέαρ fat + necrosis]. Fatty necrosis.

steatopathy (ste-at-op'ath-e) [στέαρ fat + πάθος disease]. Disease of the sebaceous glands.

steatopyga, steatopygia (ste'at-o-pi'gah, ste'-at-o-pi'e-ah) [στέαρ fat + πυγή buttock]. Excessive fatness of the buttocks; Hottentot deformity.

steatopygous (ste-at-op'ig-us). Characterized by excessive fatness of the buttocks.

steatorrhea, steatorrhoea (ste'at-or-e'ah) [στέαρ fat + ῥοια flow]. 1. Same as *seborrhea*. 2. The presence of an excess of fat in the stools.

steatosis (ste-at-o'sis) [στέαρ fat]. 1. Fatty degeneration. 2. Disease of the sebaceous glands.

steatozoon (ste'at-o-zo'on) [στέαρ fat + ζῶον animal]. Same as *Demodex folliculorum*.

stechiology (ste-ke-ol'o-je) [στανχείον element + λόγος treatise]. The science of elements, especially that branch of physiology which treats of the elementary cells of tissues.

stechiometry, stoechiometry (ste-ke-om'et-re) [στανχείον element + μέτρον measure]. The measurement or estimation of the proportion in which elements combine to form compounds.

steel (stēl). A tough and elastic form of iron, usually containing a small percentage of carbon. **tincture of s.**, tinctura ferri chloridi. **wine of s.**, vinum ferri.

stage (ste'je) [στέγος roof]. The internal layer of the rods of Corti.

stegmonth (steg'month) [στέγειν to conceal + month]. The period (usually a month) between childbirth and perfect recovery.

stegnosis (steg-no'sis) [στέγνωσις stoppage]. Constriction; stenosis.

stegnotic (steg-not'ik). Relating to stegnosis; astringent.

Stegomyia (ste-go-mi'e-ah). A genus of the Culicidae (mosquitos) found in the southern United States and in the tropics. They are small marked with silvery white, and the head is covered with broad, flat scales. The female has short four-jointed palpi and the male has long five-jointed ones. **S. argen tens.** See *S. calopus*. **S. calopus**, the species which transmits yellow fever. It is now known as *Aedes aegypti*. **S. fasciatus.** See *S. calopus*. **S. scutelle'ris**, a species which transmits *Filaria bancrofti*.

Stein's test (stinz) [Stanislav Aleksandr Fyodorovich von *Stein*, Russian otologist, born 1855]. See under *tests*.

Steinach's method or operation (sti'nahks) [Eugen *Steinach*, Austrian physician, born 1861]. See under *operation*.

Stellaria (stel-a're-ah). A genus of caryophyllaceous plants: the chickweeds. *S. holostea* and *S. media* were formerly used as demulcent medicines.

stellate (stel'at) [L. *stella'tus*]. Shaped like a star, or like stars; arranged in a roset, or in rosets.

stellite (stel'it). A very hard, noncorrosive alloy of cobalt, chromium, and tungsten used for surgical instruments.

stellulae vasculosae winslowii (stel'u-le vas-ku-lo'se winz-lo'e-i). See *Winslow's stars*, under *star*. **S. verheyenii.** See *stars of Verheyen*, under *star*.

Stellwag's sign (stel'wagz) [Carl *Stellwag* von Carion, Australian oculist, 1823-1904]. See *sign*.

stem length. The length of the stem of the body consisting of the head, neck, and trunk. It is the distance from the vertex to a line joining the ischial tuberosities.

Stender dish (sten'der) [Wilhelm P. *Stender*, manufacturer in Leipsig]. A dish of various forms and sizes used in preparing and staining histologic specimens.

stenion (sten'e-on), pl. *sten'ia* [στενός narrow]. A craniometrical point situated at each end of the smallest transverse diameter in the temporal region.

steno- [στενός narrow]. A prefix signifying contracted or narrow.

Steno's duct (ste'nōz). See *duct*.

stenobregmate (sten-o-breg'māt) [στενός narrow + βρέγμα bregma]. Having the upper and anterior portion of the head narrowed.

stenobregmatic (sten'o-breg-mat'ik). Stenobregmate.

stenocardia (sten-o-kar'de-ah) [στενός narrow + καρδιά heart]. Same as *angina pectoris*.

stencarpin (sten-o-kar'pin). A proprietary mixture containing cocaine hydrochloride, salicylic acid, and atropine sulphate.

stenocephalia, stenocephaly (sten'o-sef-a'le-ah, -sef'al-e) [στενός narrow + κεφαλή head]. Excessive narrowness of the head.

stenocephalous (sten-o-sef'al-us) [see *stenocephaly*]. Having a narrow head.

stenochoria (sten-o-ko're-ah) [στενός narrow + χώρος space]. Stenosis, or narrowing.

stenocompressor (sten'o-kom-pres'or). An instrument for closing the opening of Stenson's duct during dental operations.

stenocoriasis (sten'o-ko-ri'as-is) [στενός narrow + κόρη pupil]. Contraction of the pupil of the eye.

stenocrotaphia, stenocrotaphy (sten'o-kro-ta'fe-ah, sten-o-krot'af-e) [στενός narrow + κρόταφος temple]. Narrowness of the temporal region.

stenol (ste'nol). A proprietary mixture of equal parts of caffeine and theobromine: used in gastric insufficiency, cardiac palpitation, etc.

stenopeic, stenopaëic (sten-o-pe'ik) [*στενός* narrow + *ὄρη* opening]. Containing a narrow slit or opening.

stenosal (ste-no'sal). Caused by or pertaining to stenosis.

stenosed (ste-nōzd'). Affected with stenosis or constriction.

stenosin (sten'o-sin). See *arrhenal*.

stenosis (sten-o'sis) [*στένωσις*]. Narrowing or stricture of a duct or canal. **aortic s.**, a narrowing of the aortic orifice of the heart or of the aorta itself. **cardiac s.**, a narrowing or diminution of any heart passage or cavity. **cicatricial s.**, stenosis caused by the contraction or shriveling of a cicatrix. **Dittrich's s.**, stenosis of the conus arteriosus. **granulation s.**, stenosis or narrowing caused by the deposit of granulations or by their contraction. **mitral s.**, a narrowing of the left auriculoventricular orifice. **postdiphtheritic s.**, stenosis of the larynx or trachea following diphtheria. **preventricular s.** See *preventriculosis*. **pulmonary s.**, narrowing of the opening between the pulmonary artery and the right ventricle. **pyloric s.**, hypertrophic obstruction of the pyloric orifice of the stomach, usually congenital (H. Beardsley, 1788). **tircuspid s.**, narrowing or stenosis of the tricuspid orifice of the heart.

stenostegnosis (sten'o-steg-no'sis). Stricture of Stenson's duct.

stenostenosis (ste'no-sten-o'sis) [*Stenson's duct* + *στένωσις* narrowing]. Stenosis or constriction of Stenson's duct.

stenostomia (sten-o-sto'me-ah) [*στενός* narrow + *στόμα* mouth]. Narrowing of the mouth.

stenotheimal, stenotheimic (sten-o-ther'mal, -mik) [*στενός* narrow + *θερμή* heat]. Able to withstand only a small range of temperature: a term applied to bacteria which can develop only at a certain temperature or within a narrow range of temperature.

stenotheorax (sten-o-tho'raks) [*στενός* narrow + *θώραξ* chest]. Abnormal narrowness of the chest.

stenotic (sten-ot'ik) [*στενότης* narrowness]. Affected with stenosis or abnormal narrowness.

Stenson's duct (sten'sonz) [Niels Stenson, Danish anatomist, 1638-1686]. See *duct*. **S's experiment**, the experiment of cutting off the blood supply from the lumbar region of the spinal cord of an animal by compressing the abdominal aorta: it produces paralysis of the posterior parts of the body. **S's foramen**. See *foramen*.

stent (stent) [see *Stent's composition*]. In dentistry: (1) An impression taken in Stent's composition; (2) a mold to hold a graft in place.

Stent's composition. A plastic resinous material which sets very hard: used in dentistry for taking impressions of the mouth.

stentorin (sten'to-rin). A blue pigment from protozoans of the genus *Stentor*.

stephanial (stef-a'ne-al). Pertaining to the stephanion.

stephanion (stef-a'ne-on) [*στέφανος* crown]. The point on the side of the cranium at which the coronal suture meets the temporal line of the frontal bone.

Stephenson's wave (ste'ven-sons) [William Stephenson, Scotch obstetrician, 1837-1908]. See *wave*.

steppage (step'aj). See *steppage gait*, under *gait*.

steps, Krönig's. Extension of the lower part of the right edge of cardiac dulness in a steplike form: seen in hypertrophy of the right heart.

steradian (ste-ra'de-on) [*στερ* solid + *radius*]. The unit of solid angle, being the solid angle sub-

tended at the center of a sphere by an area on the spherical surface equal to the square of the radius.

stercobilin (ster-ko-bi'lin) [*L. ster'cus* dung + *bilin*]. Hydrobilirubin occurring in the feces and derived from the bile. It is a reduced form of bilirubin.

stercoraëous (ster-ko-ra'shus) [*L. stercora'ceus*]. Consisting of or containing feces: fecal.

stercoral (ster'ko-ral) [*L. ster'cus* dung]. Stercoraceous, or fecal.

stercoremia (ster-ko-re'me-ah) [*L. ster'cus* dung + *αἷμα* blood]. A toxic state occasioned by poisons absorbed from unexpelled feces.

stercorin (ster'ko-rin) [*L. ster'cus* dung]. A crystallizable sterol, $C_{27}H_{48}O$, resembling cholesterol, extracted from the feces.

stercorolith (ster'ko-ro-lith) [*L. ster'cus* dung + *λίθος* stone]. Same as *fecalith*.

stercorous (ster'ko-rus) [*L. stercora'ceus*]. Of the nature of excrement.

Sterculia (ster-ku'le-ah) [*L. Sterculius* the god of dung]. A genus of trees and shrubs, including many species, mostly tropical: some have edible seeds and others are medicinal, while still others afford a gum resembling tragacanth.

stercus (ster'kus). Latin for *dung* or *feces*.

stere (stēr) [*στερεός* solid]. Same as *kiloliter*.

stereo- [*στερεός* solid]. A prefix signifying *solid*.

stereo-agnosis (ste're-o-ag-no'sis). Same as *astereognosis*.

stereo-arthrolysis (ste're-o-ar-thro'l-is-is) [*στερεός* solid + *ἄρθρον* joint + *λύσις* loosening]. Operative formation of a movable new joint in cases of bony ankylosis.

stereo-auscultation (ste're-o-aws-kul-ta'shun) [*στερεός* solid + *auscultation*]. Auscultation by means of two phonendoscopes each on different parts of the chest. One tube of each instrument is placed in the ears, the other tube of each being closed with the fingers.

stereochemical (ste're-o-kem'ik-al). Pertaining to stereochemistry, or the space relations of the atoms of a molecule.

stereochemistry (ste're-o-kem'is-tre). That chemical theory which supposes an arrangement of the atoms of certain molecules in three dimensional spaces; that branch of chemistry which treats of the space relations between atoms.

stereocognosy (ster-e-o-kog'no-se). Same as *stereognosis*.

stereofluoroscopy (ste're-o-flu-o-ros'ko-pe). Stereoscopic fluoroscopy.

stereognosis (ste're-og-no'sis) [*στερεός* solid + *γνώσις* knowledge]. 1. The faculty of perceiving and understanding the form and nature of objects by the sense of touch. 2. Perception by the senses of the solidity of objects.

stereognostic (ste're-og-nos'tik). Of or pertaining to stereognosis.

stereograph (ste're-o-graf). A stereoscopic radiograph.

stereo-isomer (ste're-o-i'so-mer). A compound in which the molecule contains the same number and variety of atoms as another, but in which the spatial arrangement of the atoms is different.

stereo-isomerism (ste're-o-i-som'er-izm). Stereochemical isomerism.

stereometer (ste-re-om'et-er) [*στερεός* solid + *μέτρον* measure]. An instrument for performing stereometry.

stereometry (ste-re-om'et-re) [*στερεός* solid + *μέτρον* measure]. The measurement of the cubic or solid contents of a solid body, or of the capacity of a hollow space.

stereophantoscope (ste're-o-fan'to-skōp) [*στερεός* solid + *φαντός* visible + *σκοπεῖν* to view]. A

large stereoscopic machine with rotating disks in the place of pictures.

stereophoroscope (ste're-o-for'-o-skōp). [*στερεός* solid + *φωρός* bearing + *σκοπεῖν* to view]. A form of zoetrope, employed in the study of visual perception.

stereophotography (ste're-o-fo-tog'-raf-e) [*στερεός* solid + *photography*]. Stereoscopic photography.

stereophotomicrograph (ste're-o-fo-to-mi'-kro-graf). A stereoscopic photograph of a microscopical subject.

stereoplasm (ste're-o-plazm) [*στερεός* solid + *πλάσμα* plasma]. The more solid portions of protoplasm.

stereopsis (ste-re-op'-sis) [*στερεός* solid + *ὄψις* vision]. Stereoscopic vision. See *vision*.

stereoroentgenograph (ste're-o-gent-gen'-o-graf). A stereoscopic roentgen-ray picture.

stereoscope (ste're-o-skōp) [*στερεός* solid + *σκοπεῖν* to see]. An instrument for producing the appearance of solidity and relief by combining the images of two different objects.

stereoscopic (ste're-o-skop'-ik). Having the effect of a stereoscope: giving to objects seen a solid appearance.

stereoskiagraphy (ste're-o-ski-ag'-raf-e). The making of a stereoscopic photograph by the roentgen rays.

stereotropic (ste're-o-trop'-ik). Marked by stereotropism.

stereotropism (ste-re-ot'-ro-pizm) [*στερεός* solid + *τρόπος* turning]. The movement of an organism brought about by contact with a foreign body.

stereotypy (sté're-o-ti-pe) [*στερεός* solid + *τύπος* type]. The persistent repetition of senseless acts or words. It may be a persistent maintaining of a bodily attitude (*s. of attitude*), repetition of senseless movements (*s. of movement*, echopraxia), or constant repetition of certain words or phrases (*s. of speech*, echolalia, verbigeration).

steresol (ste'res-ol). An antiseptic [varnish prepared from balsam of Tolu, benzoin, oil of cinnamon, phenol, and gluside dissolved in alcohol; used in skin diseases].

steric (ste'rik) [*στερεός* solid]. Pertaining to the arrangement of atoms in space.

steriform chloride (ste'rif-orm). A proprietary antiseptic and digestant mixture of solution of formaldehyde, 5 parts; pepsin, 20 parts; ammonium chloride, 10 parts; and lactose, 65 parts. **s. iodide**, the same as the chloride, except that the ammonium chloride is replaced by ammonium iodide.

sterigma (ste-rig'mah), pl. *sterig'mata* [*στήριγμα* support]. Any one of the radially arranged outgrowths crowded together on the upper half of the sphere into which the conidia bearers of an aspergillus expand.

Sterigmocystis, Sterigmatocystis (ste-rig-mo-sis'tis, ste-rig'mat-o-sis'tis). A genus of mold resembling *Aspergillus* except that secondary phialides project from each primary phialide. *S. nidulans* has been found in otomycosis and in the white granules of mycetoma.

sterilamin (ster-il'am-in). Vitamin E.

sterile (ster'il) [L. *ster'ilis*]. 1. Not fertile; infertile; barren; not producing young. 2. Aseptic; not producing micro-organisms; free from micro-organisms.

sterility (ster-il'ti-e) [L. *steril'itas*]. Barrenness; inability to produce young. **one-child s.**, sterility after having borne one child.

sterilization (ster'il'-iz-a'shun). 1. The act or process of rendering sterile; the process of freeing from germ life. It is usually performed by means of heat. Sterilization differs from disinfection in that it calls for the destruction of all bacterial life, while disinfection is not necessarily the de-

struction of all bacteria, but only of those that are infectious. 2. Any procedure by which an individual is made incapable of reproduction. **fractional s.**, **intermittent s.**, sterilization in which some time is permitted to elapse between the heatings. This is done so as to allow spores to develop into adult forms, which are more easily destroyed than the spores.

sterilize (ster'il-iz). To render sterile; to free from septic germs.

sterilizer (ster'il-i-zer). A mechanism used in sterilizing substances. **Arnold s.**, an apparatus for sterilizing objects by means of live steam at atmospheric pressure.

sterisol, steriosol (ster'is-ol, ster'e-o-sol). Formaldehyde, sodium phosphate, etc., in a solution of milk sugar: an antiseptic.

sternad (ster'nad). Toward the sternal surface or aspect.

sternal (ster'nal) [L. *sterna'lis*]. Pertaining to the sternum.

sternalgia (ster-nal'je-ah) [*στέρνον* sternum + *ἄλγος* pain]. Pain in the sternum; angina pectoris.

sternalis (ster-na'lis). See *muscles, table of*.

Sternberg's disease (stern'berz) [Karl Sternberg, German pathologist, born 1872]. Lymphogranulomatosis.

Sternbergia lutea (stern-ber'je-ah lu'te-ah). An amaryllidaceous plant of Asia: the bulb is locally used in preparing epithems for indolent ulcers.

sternebra (ster'neb-rah), pl. *sternebrae* [*sternum* + *vertebra*]. A sternal vertebra; any one of the segments of the sternum.

sternen (ster'nen). Pertaining to the sternum in itself.

sternochondroscapularis (ster'no-kon'dro-skap-u-la'ris) [*στέρνον* sternum + *χόνδρος* cartilage + *scapularis*]. An occasional muscle arising from the sternum and the first costal cartilage and running to the superior border of the scapula.

sternoclavicular (ster'no-kla-vik'u-lar). Pertaining to the sternum and clavicle.

sternoclavicularis (ster'no-klav-ik-u-la'ris). An occasional muscle in man. **s. anti'cus**, one arising from the sternum, near the attachment of the sternomastoid, and inserted upon the anterior surface of the clavicle. **s. post'i'cus**, a slip passing from the inner end of the manubrium to the clavicle behind the joint. **s. supe'rior**, one arising from the sternum above the sternoclavicularis anticus and running to the clavicle.

sternocleidal (ster-no-klí'dal) [*στέρνον* sternum + *κλεῖς* key]. Same as *sternoclavicular*.

sternocleidomastoid (ster'no-klí-do-mas'toid). See *muscles, table of*.

sternocostal (ster-no-kos'tal) [*sternum* + L. *cos'ta* rib]. Pertaining to the sternum and ribs.

sternodymia (ster-no-dim'e-ah) [*στέρνον* sternum + *διδυμος* twin]. The union of two monster fetuses by the anterior wall of the chest.

sternodymus (ster-nod'im-us) [*στέρνον* sternum + *διδυμος* twin]. A pair of twin monsters united by the anterior wall of the chest.

sternodynia (ster-no-din'e-ah). Same as *sternalgia*.

sternofacialis (ster'no-fa-se-a'lis) [L.]. See *muscles, table of*.

sternoglossal (ster-no-glos'al). Pertaining to the sternum and the tongue.

sternogoniometer (ster'no-go-ne-om'et-er). An instrument for measuring the sternal angle.

sternohyoid (ster-no-hi'oid). Pertaining to the sternum and to the hyoid bone. See *muscles, table of*.

sternoid (ster'noid). Resembling the sternum.

sternomastoid (ster-no-mas'toid). Pertaining to the sternum and the mastoid process of the tem-

- poral bone. See also *sternocleidomastoid*, in *muscles*, table of.
- sternopagia** (ster-no-pa'je-ah). Same as *sternodymia*.
- sternopagus** (stern-op-ag-us) [στέρον sternum + πάγος fixed]. Same as *sternodymus*.
- sternopericardial** (ster-'no-per-ik-ar'de-al). Pertaining to the sternum and the pericardium.
- sternoscapular** (ster-'no-skap'u-lar). Pertaining to the sternum and the scapula.
- sternothyroid** (ster-no-thi'roid). Pertaining to the sternum and to the thyroid cartilage or gland. See *muscles*, table of.
- sternotomy** (ster-not'o-me) [στέρον sternum + τομή a cutting]. The operation of cutting through the sternum.
- sternotracheal** (ster-no-tra'ke-al) [στέρον sternum + trachea]. Pertaining to the sternum and to the trachea.
- sternotrypsis** (ster-'no-tri-pé'sis) [στέρον sternum + τρύψις trephination]. Surgical perforation of the sternum.
- sternovertebral** (ster-no-ver'te-bral). See *rib*.
- Stern's position or posture** (sternz) [Heinrich Stern, contemporary physician in New York]. See *position*.
- sternum** (ster'nūm) [L.; στέρον]. The breast bone; a longitudinal unpaired plate of bone which forms the middle of the anterior wall of the thorax. It articulates above with the clavicles and along the sides with the cartilages of the first seven ribs. It consists of three portions, distinguished as the manubrium, the gladiolus, and the ensiform or xiphoid appendix. **cleft s.**, congenital fissure of the sternum.
- sternutatio convulsiva** (ster-nu-ta'she-o kon-vul-si'vah) [L.]. Paroxysmal and convulsive sneezing.
- sternutation** (ster-nu-ta'shun) [L. *sternutatio*]. The act of sneezing; a sneeze.
- sternutator** (ster-nu-ta-tor). A gas that causes sneezing.
- sternutatory** (ster-nu-ta-tor-e). 1. [L. *sternutatorius*]. Producing or causing sneezing; errhine. 2. [L. *sternutatorium*]. An agent that causes sneezing; an errhine.
- Sternzellen** (stern'tsel-en) German for "star cells." See *Kupffer's cells*, under *cell*.
- sterol** (ster'ol). A solid alcohol; one of a class of compounds widely distributed in nature, which, because their solubilities are similar to those of fats, have been classified with the lipins. Cholesterol is the best known member of the group.
- sterolin** (ster'o-lin). A proprietary preparation for sterilizing the skin, containing Peruvian balsam, castor oil, Venice turpentine, glycerin in alcohol.
- stertor** (ster'tor) [L.]. An act of snoring; stertorous or sonorous breathing. **hen-cluck s.**, a respiration sound like a hen's cluck in cases of post-pharyngeal abscess.
- stertorous** (ster'to-rus). Characterized by stertor.
- sterule** (ster'ul). A glass capsule containing a sterile solution.
- stetharteritis** (steth-ar-ter-i'tis) [στήθος chest + αρτηρίτις]. Inflammation of the arteries of the chest.
- stethemia** (steth-e'me-ah) [στήθος chest + αἷμα blood]. Congestion of the lungs.
- stethendoscope** (steth-en'do-skōp) [στήθος chest + ἔνδον within + σκοπεῖν to see]. A fluoroscope used in examination of the chest by roentgen rays.
- stethocyrtophograph** (steth-o-ser'to-graf). See *stethocyrtophograph*.
- stethogoniometer** (steth-'o-go-ne-om'et-er) [στήθος chest + γωνία angle + μέτρον measure]. An apparatus for measuring the curvature of the chest.
- stethograph** (steth'o-graf) [στήθος chest + γράφειν to write]. An instrument for recording movements of the chest.
- stethokyrtophograph** (steth-o-kir'to-graf) [στήθος chest + κυρτός bent + γράφειν to record]. An instrument for recording and measuring the curves of the chest.
- stethomenia** (steth-o-me'ne-ah) [στήθος chest + μήν month]. Vicarious menstruation into the bronchial tubes.
- stethometer** (steth-om'et-er) [στήθος chest + μέτρον measure]. An instrument for measuring the circular dimension or expansion of the chest or of the abdomen.
- stethomyitis** (steth'o-mi-i'tis) [στήθος chest + μῦς muscle + -ιτις inflammation]. Inflammation of the muscles of the chest.
- stethomyositis** (steth'o-mi-o-si'tis). Stethomyitis.
- stethoparalysis** (steth'o-par-al'is-is) [στήθος chest + παράλυσις]. Paralysis of the chest muscles.
- stethophone** (steth'o-fōn) [στήθος chest + φωνή voice]. 1. An instrument designed to transmit stethoscopic sounds so that many persons can hear them simultaneously. 2. A term proposed as a more accurate work for stethoscope.
- stethophonometer** (steth'o-fo-nom'et-er) [στήθος chest + φωνή voice + μέτρον measure]. An instrument for measuring the intensity of auscultatory sounds.
- stethopolyscope** (steth-o-pol'is-kōp) [στήθος chest + πολύς many + σκοπεῖν to examine]. A stethoscope for the simultaneous use of several persons.
- stethoscope** (steth'o-skōp) [στήθος chest + σκοπεῖν to inspect]. An instrument of various form, size, and material for performing mediate auscultation. By means of this instrument the respiratory, cardiac, pleural, arterial, venous, uterine, fetal, intestinal, and other sounds are conveyed to the ear of the observer. **binaural s.**, one with two adjustable branches, designed for use with both ears. **Cammann's s.**, a binaural stethoscope. **differential s.**, one by means of which sounds at two different portions of the body may be compared.
- stethoscopic** (steth-o-skop'ik). Pertaining to or performed by means of the stethoscope.
- stethoscopy** (steth-os'ko-pe). Examination by means of the stethoscope.
- stethospasm** (steth'o-spazm) [στήθος breast + σπασμ]. Spasm of the chest muscles.
- Stewart's purple, solution** (stew'arts) [Douglas Hunt Stewart, New York surgeon, born 1860]. See *purple and solution*.
- sthenia** (sthe'ne-ah). A condition of seeming strength and activity.
- sthenic** (sthen'ik) [L. *sthenicus*; σθένος strength]. Active; strong. See *fever*.
- sthenometer** (sthen-om'et-er). An instrument for measuring the muscular strength of a part.
- sthenometry** (sthen-om'et-er) [σθένος strength + μέτρον measure]. The measurement of bodily strength.
- sthenoplastic** (sthen-o-plas'tik) [σθένος strength + πλαστικός formed]. A term applied to the body form which resembles the long or dolichomorphic form.
- sthenopyra** (sthen-o-pi'rahi) [σθένος strength + πῦρ fire]. Sthenic fever.
- stibacetin** (stib-as'e-tin). An organic compound of antimony, para-acetyl-amino-phenyl-stibinate. It is used in the chemotherapeutic treatment of kala-azar, bilharziasis, trypanosomiasis, and granuloma inguinale.
- stibamine** (stib'am-in). The sodium amino-phenyl-stibinate. It is used in the treatment of kala-azar. **urea s.**, the carbamide salt of para-amino-phenyl-stibinic acid, $\text{NH}_2\text{CO.NH}_2\text{C}_6\text{H}_4$.

SbO(OH)₂. It is used in the treatment of kala-azar.

stibenyl (stib'en-il). Sodium acetyl-para-amino-phenyl-stibiate: used in kala-azar.

stibialism (stib'e-al-izm) [L. *stib'ium* antimony]. Poisoning with antimony.

stibiated (stib'e-a-ted) [L. *stibiat'us*]. Containing antimony.

stibiation (stib-e-a'shun) [L. *stib'ium* antimony]. Administration of antimonials in large quantities; treatment by bringing the patient under the full influence of antimony.

stibine (stib'in). Antimony hydride, SbH₃.

stibium (stib'e-um). Latin for antimony.

stibonium (stib-o'ne-um). The radical SbH₄.

stibosan (stib'o-san). A light-brown powder which is used in the treatment of kala-azar. It is meta-chlor-para-acetyl-amino-phenyl-stibiate of sodium, it is freely soluble in water and much less toxic than sodium antimony tartrate. Dose, 0.1-0.3 Gm. intravenously three times a week.

stiburea (stib-u-re'ah). A proprietary antimony compound, resembling urea stibamine, used in kala-azar.

stichochrome (stik'o-kröm) [*στικός* row + *χρῶμα* color]. Any nerve cell having the stainable substance (chromophilic bodies) arranged in more or less regular striae or layers.

Sticker's disease [G. *Sticker*, German physician, born 1860]. Erythema infectiosum.

sticking plaster (stik'ing). See *plaster, adhesive*.

Sticta (stik'tah) [*στικτός* pricked]. 1. A genus of lichens; lungwort. 2. A homeopathic preparation of *Sticta pulmonaria*.

Stieda's fracture. See under *fracture*.

Stifel's figure (sti'felz). See under *figure*.

stiff-neck fever (stif'nek). Epidemic cerebrospinal meningitis. See *meningitis*.

stiffe bone (sti'fel). The patella of the horse.

stifle joint (sti'fel). The femorotibial joint of the horse.

stigma (stig'mah), pl. *stigmata* or *stig'mata* [*στίγμα* mark]. 1. A spot, dot, or impression upon the skin. 2. Any space between the cells of the endothelium of a capillary. 3. Any readily stainable area in the epithelium at the points of union of groups of cells. 4. That part of the pistil of a flower which receives the pollen. **baker's s.**, lumps on the backs of the fingers of bakers, produced by kneading dough. **costal s.** Same as *Stiller's sign*. See under *sign*. **s. of degeneracy**, any of the bodily abnormalities which are found in considerable number in degenerate persons. **Giuffrida-Ruggieri s.**, abnormal shallowness of the glenoid fossa. **hysteretic s.**, bodily marks or signs characteristic of hysteria. **malpighian s.**, the points where the smaller veins enter into the larger veins of the spleen. **psychic s.**, mental conditions marked by susceptibility to suggestion. **somatic s.**, the bodily signs of certain nervous diseases.

stigmatal (stig'mal). Pertaining to a stigma.

stigmatsterol (stig-mas'te-rol). A sterol, C₃₀H₄₈O, from cacao butter.

stigmata (stig'mat-ah). The plural of *stigma*. **s. maydis**, the silk or stigmata of maize; corn silk: a diuretic. See *Zea*.

stigmatic (stig-mat'ik). Pertaining to a stigma.

stigmatism (stig-mat-izm). The condition due to or marked by stigmata.

stigmatization (stig'mat-iz-a'shun). 1. The formation of impressions on the skin. 2. The formation of bleeding points or of red lines upon the skin by hypnotic suggestion.

stigmatodermia (stig'mat-o-der'me-ah) [*στίγμα* mark + *δέρμα* skin]. Any morbid state of the prickly layer of the skin.

stigmatometer (stig-mat-om'et-er). An instru-

ment for testing the refraction of the eye by the objective method and for direct ophthalmoscopy.

stigmatosis (stig-mat-o'sis) [*στίγμα* a spot]. A skin disease marked by ulcerated spots.

stijfziekte (stef-zek'te) [Dutch]. A disease of the joints of young cattle in South Africa.

stilet, stilette (sti-let') [Fr. *stilette*]. 1. A delicate probe. 2. A wire used to stiffen or clear a catheter.

stili (sti'li). Plural of *stilus*. See *stylus*.

Still's disease [George Frederic *Still*, English physician, born 1868]. See *disease*.

stillbirth (stil'berth). The birth of a dead fetus.

Stiller's sign, theory (stil'erz) [Berthold *Stiller*, physician in Budapest]. See *sign and theory*.

stillcidium (stil-is-id'e-um) [L. *still'a* drop + *cadere* to fall]. 1. A dribbling or flowing by drops. 2. Epiphora. **s. lacrimatum**, epiphora. **s. naarium**, coryza. **s. urinae**, stranguary.

stillgout (stil-e-gowt') [Fr.; L. *stilla're* to let fall + *gutta* drop]. A form of dropper.

Stillingia (stil-in'je-ah) [after B. *Stillingia*]. A genus of euphorbiaceous trees, shrubs, and herbs. The root of *S. sylvatica*, a plant of North America, is sialogogue and diuretic. Dose of tincture or fluidextract, 16-60 minims (0.6-4 cc.).

stillingine (stil-in'jin). 1. An alkaloid from *Stillingia sylvatica*. 2. A concentration prepared from *Stillingia sylvatica*. Dose, 1-4 grains (0.066-0.266 Gm.).

Stilling's canal, cells, nucleus, raphe, etc. (stil'ingz) [Benedict *Stilling*, German anatomist, 1810-1879]. See the nouns.

stilus (sti'lus), pl. *sti'li*. See *stylus*.

stimulant (stim'u-lant) [L. *stimulans*]. 1. Producing stimulation. 2. An agent or remedy that produces stimulation. **alcoholic s.**, one of which ethylic alcohol is the basis, such as wine, brandy, whisky, and malt liquors. **bronchial s.**, a stimulating expectorant: the chief ones are ammonium carbonate, belladonna, senega, strychnine, Calabar bean, caffeine, and the emetics. **cardiac s.**, one which increases the heart's action: such are ammonia, belladonna, digitalis, ether, strophanthus, and strychnine. **cerebral s.**, one which exalts the functional activities of the brain: the principal are alcohol, caffeine, ether, opium, strychnine, and phosphorus. **cutaneous s.**, a diaphoretic agent which acts by stimulating the skin: as alcohol, ammonia, cold baths, hot drinks, etc. **diffusible s.**, one which acts promptly and strongly, but transiently: the principal are ammonia, ether, musk, and sumbul. **gastric s.**, **stomachic s.**, one which promotes the digestion of food in the stomach, like alcohol and the pungent aromatics. **general s.**, one which acts upon the whole body: such are the alcoholic and diffusible stimulants. **genital s.**, an aphrodisiac. **hepatic s.**, one which arouses the functions of the liver: the chief of these are blue mass, mild mercurous chloride, jalap, iris, aloes, podophyllin, colocynth, rhubarb, sodium phosphate, and leptandra. **intestinal s.**, a cathartic agent: a large class, including colocynth, croton oil, elaterium, scammony, etc. **local s.**, one which affects that part only, or mainly, to which it is applied: like mustard, chloral hydrate, chloroform, oil of turpentine. **nervous s.**, one which acts mainly upon the nerve centers: a cerebral or spinal stimulant. **paradoxical s.**, a warm object applied to one of the cold spots of the body produces a sensation of cold. **renal s.**, a stimulating diuretic. **respiratory s.**, one which increases the respiratory movements: the chief are ammonia, arsenic compounds, belladonna, and strychnine. **spinal s.**, one which acts upon and through the spinal cord: strychnine and caffeine are examples. **topical s.** Same as *local s.* **uterine s.**, an ecboic or emmenagogue: such are ergot, digitalis, rue, sabin, tansy, apiol, etc. **vascular s.**, **vasomotor s.**, one which appeals to the vaso-

motor centers; of this class are ammonia, ergot, strychnine, opium, and belladonna.

stimulate (stim'u-lăt) [L. *stimulare*]. To excite to functional activity.

stimulation (stim-u-la'shun) [L. *stimulatio*]. The act or process of stimulating; the condition of being stimulated. **areal s.**, stimulation of an extended portion of a sense organ. **nonspecific s.**, **paraspecific s.**, stimulation by other than the specific exciting agent. **punctual s.**, stimulation of a sense organ at a single point.

stimulin (stim'u-lin). A name given by Metchnikoff to the protective element in the blood serum that produces immunity by stimulating the action of phagocytes.

stimulus (stim'u-lus), pl. *stimuli* [L. "goad"]. Any agent, act, or influence that produces functional or trophic reaction in an irritable tissue.

adequate s., one that acts specifically upon the end-organs only, as light upon the retina. Called also *homologous s.* **chemical s.**, one which induces a chemical change in a tissue; for example, nitric acid or silver nitrate locally applied. **electric s.**, a galvanic, induced, or other electric current or shock as applied to a responsive tissue. **heterologous s.**, one which produces an effect or sensation when applied to any part whatever of a nerve tract. **heterotopic s.**, a stimulus to heart contraction arising somewhere else than in the Keith-Flack node, the normal pacemaker of the heart. **homologous s.** See *adequate s.* **mechanical s.**, a stimulant application of mechanical force, as in friction or pinching. **nomotopic s.**, a stimulus to heart contraction arising in the Keith-Flack node. **thermal s.**, application of heat.

Stipa viridula (sti'pah). A grass of the southwestern United States, called *sleeper-grass*: poisonous to cattle and horses; said to be a powerful narcotic, diuretic, sudorific, and cardiac poison.

stippling (sti'pling). A spotted condition or appearance; especially—(a) an appearance of the retina as if dotted with light and dark points; (b) the spotted appearance of red blood corpuscles in basophilia. See *basophilia*. **malarial s.**, the finely granular appearance often seen in stained red blood corpuscles which harbor tertian malarial parasites. The granules are called *Schiffner's granules*.

stirpiculture (ster'pik-ult-ür) [L. *stirps* stock + *cultura* culture]. The systematic attempt at improving a stock or race by attention to the laws of breeding.

stirrup, stirrup bone (stir'up). The stapes.

stitch (stitch). 1. See *suture*. 2. A severe pain, generally at the costal margin on one side, brought on by running or riding, and ceasing when the pace is reduced to a walk. 3. To fasten with a needle and thread.

stithe (stith). An old name for the incus.

stizolobin (sti-zo-lo'bin). The globulin of the Chinese velvet bean.

stocking (stok'ing). Edema of a horse's leg.

stoichiology, stoicheiology (stek-e-ol'o-je, stoke-ol'o-je) [στοιχείον element + λόγος law]. The physiology of the cellular elements of tissues.

stoichiometry, stoicheiometry (stek-e-om'et-re, stoi-ke-om'et-re) [στοιχείον element + μέτρον measure]. The study of the numerical relationships of chemical elements and compounds and the mathematical laws of chemical changes; the mathematics of chemistry.

Stoerk's blennorrhea (sterk) [Carl Stoerk, Austrian laryngologist, 1832-1899]. See *blennorrhea*.

Stoffel operation. See under *operation*.

Stokes' disease, lens, sign, etc. (stöks) [I. William Stokes, Irish physician, 1804-1878. 2. English physicist, 1819-1903]. See *disease, lens, sign,* etc.

Stokes' reagent (stöks) [William Royal Stokes, American pathologist, born 1870]. See *reagent*.

Stokvis' test (stok'vis) [Barend J. E. Stokvis, Dutch physician, born 1834]. See under *tests*.

Stoltz's operation (stoltz) [Joseph Stoltz, French gynecologist, 1803-1896]. See *operation*.

stoma (sto'mah), pl. *stomata* [στόμα mouth]. Any minute pore, orifice, or opening on a free surface; specifically, one of the openings (stigma, or pseudostoma) between epithelial cells of a lymph space, forming a means of communication between adjacent lymph channels.

stomacace (sto-mak'as-e) [στόμα mouth + κάκη badness]. Ulcerative stomatitis.

stomach (stum'ak) [L. *stomachus*; στόμαχος]. Ventriculus [B N A]; the ovoid, musculomembranous digestive pouch below the esophagus. The end which connects with the esophagus is the *cardiac* end, and that nearest the pylorus is the *pyloric* end, or *pylorus*. The upper concave surface or edge is the *lesser curvature*; the lower convex edge is the *greater curvature*. The coats of the stomach are four: An outer, peritoneal, or *serous* coat; a *muscular* coat, made up of longitudinal, oblique, and circular fibers (the latter forming a pyloric sphincter); a *submucous* coat lined with a muscular layer, the *muscularis mucosae*; and the *mucous* coat or membrane forming the inner lining. The secretion of the stomach is the *gastric* juice, which contains pepsin, rennin, hydrochloric acid, etc. **bilocular s.**, hour-glass stomach. **s. bucket**, a small bucket for lowering into the stomach and withdrawing some of its contents for examination. **cardiac s.**, the fundus of the stomach. **cascade s.**, an atypical form of hour-glass stomach, characterized roentgenologically by a drawing up of the posterior wall. An opaque medium first fills the upper sac and then cascades into the lower sac. **corset s.**, a displaced or deformed stomach due to pressure from tight or improper lacing of the corset. **s. cough**, a cough excited by reflex irritation from the stomach. **drum-trap s.**, water-trap stomach. **hour-glass s.**, a stomach more or less completely and permanently divided into two parts, so that it resembles an hour-glass in shape. **leather bottle s.**, severe hypertrophy of the stomach wall, usually with contraction of the cavity of the organ. Cf. *linitis plastica*. **s. oil**. See under *oil*. **Pavlov's s.**, a portion of the stomach of a dog isolated from communication with the rest of the stomach and opening on to the abdominal wall through a fistula: used in studying gastric secretion. **s. pump**, a pump for evacuating the contents of the stomach. **red s.**, a condition in which the pyloric end of the stomach is dark red. **s. reefing**, an operation for dilatation of the stomach, done by folding in the wall of the stomach and then suturing the fold. **thoracic s.**, a stomach which is situated above the diaphragm. **s. tooth**, one of the lower canine teeth of the first dentition. **trifid s.**, a stomach with two constrictions, producing three pouches. **s. tube**. 1. A siphon used in washing out the stomach. 2. A feeding tube. **wallet s.**, baglike distention of the stomach. **water-trap s.**, a stomach with an extremely high pylorus, so that it does not readily empty itself.

stomachal (stum'ak-al). Pertaining to the stomach.

stomachalgia (stum-ak-al'je-ah) [στόμαχος stomach + άλγος pain]. Pain in the stomach.

stomachic (sto-mak'ik) [L. *stomachicus*; στομαχικός]. 1. Pertaining to the stomach. 2. A medicine which promotes the functional activity of the stomach; a stomachic tonic. See *tonic*.

stomachodysnia (stum-ak-o-din'e-ah) [στόμαχος stomach + δύσνη pain]. Pain in the stomach.

stomachosan (stum-ak'o-san). A proprietary stomachic consisting of condurango and cinchona bark, valerian and gentian root, and ginger.

stomachoscopy (sto-mak-os'ko-pe) [στόμαχος

- stomach + σκοπεῖν to view]. Examination of the stomach.
- stomach reefing** (stum'ak re'fing). Gastroplication.
- stomadeum** (sto-mah-de'um). Same as *stomodeum*.
- stomatgia** (sto-mal'je-ah). Stomatgia.
- stomalix** (sto'mal-iks). A proprietary preparation for disorders of the stomach and intestines.
- stoman** (sto'man). A preparation of formaldehyde with the maltose of malt extract.
- stomata** (sto'mat-ah). Plural for *stoma*.
- stomatal** (sto'mat-al). Pertaining to stomata.
- stomatgia** (sto-mat-al'je-ah) [στόμα mouth + ἄλγος pain]. Pain in the mouth.
- stomatic** (sto-mat'ik). Pertaining to the mouth.
- stomatitis** (sto-mat-i'tis) [στόμα mouth]. Inflammation of the mouth. It is usually attended by pain and salivation, and often by fetor of the breath. **s. aphtho'sa**, **aphthous s.**, the formation of small superficial ulcers on the mucous membrane of the mouth; aphthous stomatitis canker. **s. arsenicalis**, ulcerous stomatitis due to arsenical poisoning. **catarrhal s.**, simple and uncomplicated inflammation and redness of the mouth. **epidemic s.**, **epizootic s.** See *foot and mouth disease*, under *disease*. **erythematopultaceous s.**, stomatitis marked by reddening of the mucous membrane, which is covered with a layer of thick, sticky matter: seen in uremia. **s. exanthematica**, that which is secondary to the exanthemas. **follicular s.**, stomatitis aphthosa. **s. gangreno'sa**, **gangrenous s.** Same as *noma*. **s. herpetica**. Same as *aphthous s.* **s. hyphomycetica**. Same as *thrush*. **s. intertropica**, sprue. **membranous s.**, stomatitis accompanied by the formation of false membrane. **mercurial s.**, that which is due to mercurial poisoning. It is often accompanied by salivation, looseness of the teeth, and fetor of the breath. **s. mycetogenetica**, that which is due to the presence of some microscopical fungoid organism. **mycotic s.**, thrush. **parasitic s.**, thrush. **s. pseudomembrano'sa**, that which is due to diphtheria, tuberculosis, syphilis, or other like disease. **s. scorbutica**, that which accompanies scurvy. It is attended with soreness and swelling of the gums and fetid breath. **s. simplex**, a nonexanthematous form of catarrhal stomatitis. **syphilitic s.**, stomatitis due to systemic syphilis. **s. traumatica**, that which is due to some mechanical, thermal, or chemical cause. **tropical s.**, sprue. **ulcerative s.**, a form characterized by painful, shallow ulcers on the cheeks, tongue, and lips. It is attended with slight fever, fetid breath, salivation, and frequently prostration. **vesicular s.**, stomatitis aphthosa.
- stomatocace** (sto-mat-ok'as-e) [στόμα mouth + κακή badness]. Ulcerative stomatitis.
- stomatodeum, stomatodaeum** (sto'mat-o-de'um). Same as *stomodeum*.
- stomatodynia** (sto'mat-o-din'e-ah) [στόμα mouth + ὀδύνη pain]. Pain in the mouth.
- stomatodysodia** (sto'mat-o-dis-o-de-ah) [στόμα mouth + δυσωδία stench]. A bad odor coming from the mouth.
- stomatogastric** (sto'mat-o-gas'trik). Pertaining to the stomach and the mouth.
- stomatography** (sto-mat-og'raf-e) [στόμα mouth + γράφειν to write]. A description of the mouth.
- stomatol** (sto'mat-ol). A proprietary antiseptic, said to be a solution of terpinol, soap, and glycerin in alcohol and water.
- stomatologic, stomatological** (sto-mat-o-loj'ik, sto-mat-o-loj'ik-al). Pertaining to stomatology.
- stomatologist** (sto-mat-ol'o-jist). One learned in stomatology: a specialist in diseases of the mouth.
- stomatology** (sto-mat-ol'o-je) [στόμα mouth + λόγος treatise]. That branch of medicine which treats of the mouth and its diseases.
- stomatomalacia** (sto'mat-o-mal-a'she-ah) [στόμα mouth + μαλακία softness]. Softening of the structures of the mouth.
- stomatomenia** (sto'mat-o-me'ne-ah) [στόμα mouth + μην month]. Vicarious menstruation by the mouth.
- stomatomy** (sto-mat'o-me) [στόμα mouth + τέμνειν to cut]. The surgical incision of the os uteri.
- stomatomycosis** (sto'mat-o-mi-ko'sis) [στόμα mouth + μύκης fungus]. Any mouth disease due to schizomycetes, especially the *Oid'ium albicans*.
- stomatonecrosis** (sto'mat-o-ne-kro'sis) [στόμα mouth + necrosis]. Same as *noma*.
- stomatona** (sto'mat-o-no'mah) [στόμα mouth + noma]. Same as *noma*.
- stomatopathy** (sto-mat-op'ath-e) [στόμα mouth + πάθος suffering]. Any disorder of the mouth.
- stomatoplastic** (sto-mat-o-plas'tik). Pertaining to stomatoplasty.
- stomatoplasty** (sto'mat-o-plas-te) [στόμα mouth + πλάσσειν to mold]. Plastic surgery of, or operative repair of, defects of the mouth or of the os uteri.
- stomatorrhagia** (sto'mat-or-a'je-ah) [στόμα mouth + ρήγνυμαι to burst forth]. Hemorrhage from the mouth. **s. gingivarum**, hemorrhage from the gum.
- stomatoscope** (sto-mat'o-skōp) [στόμα mouth + σκοπεῖν to inspect]. A speculum for examining the mouth.
- stomatosis** (sto-mat-o'sis). Same as *stomatopathy*.
- stomatotomy** (sto-mat-ot'o-me). Stomatotomy.
- stomatotyphus** (sto'mat-o-ti'fus). Typhus fever with severe lesions of the mouth.
- stomenorrhagia** (sto'men-o-ra'je-ah) [στόμα mouth + ρήγνυμαι to burst forth]. Hemorrhage from the mouth.
- stomocephalus** (sto-mo-sef'al-us) [στόμα mouth + κεφαλή head]. A monster fetus with a rudimentary head and jaws, so that the skin hangs in folds about the mouth.
- stomodeal, stomodaeal** (sto-mo-de'al). Pertaining to the stomodeum.
- stomodeum, stomodaeum** (sto-mo-de'um) [στόμα mouth + δαιεῖν to divide]. An invagination of the ectoderm of the embryo whence are formed the mouth and upper part of the pharynx.
- stomosan** (sto'mo-san). Methylamine phosphate.
- Stomoxys calcitrans** (sto-mok'sis kal'sit-ranz). The common stable fly. It is very annoying to man and beast. It transmits *Trypanosoma evansi*, the cause of surra, and possibly also the virus of poliomyelitis. Called also *stable fly* and *leg-sticker*.
- stomy** [στόμα mouth]. A suffix signifying the formation of a mouth or opening in a part.
- stone** (stōn). A calculus or concretion. **blue s.**, copper sulphate; cupri sulphas. **s. bruise**, a painful bruise of the subcutaneous structures without breaking of the skin. **s.-child**, a lithopedion. **gall s.**, biliary calculus. See *calculi*.
- lung s.** See *lung calculus*, under *calculi*. **pulp s.** See *pulp nodule*, under *nodule*. **s.-searcher**, a sound for exploring the bladder wherein a calculus is suspected. **skin s's**, calcareous nodules sometimes seen in the subcutaneous tissues. **struvit s.** See *struvit calculus*, under *calculi*. **womb s.**, a calcified fibroid tumor of the uterus.
- Stookey's reflex** [Byron Stookey, contemporary New York neurologic surgeon]. See under *reflex*.
- stool** (stool). The fecal discharge from the bowels.

Stomoxys calcitrans.

bilious s., the yellowish or brownish stools, turning darker on exposure, that are characteristic of bilious diarrhea. Bilious stools are green if the bowel contents are very acid. **caddy s.**, the stools seen in yellow fever; they look like dark, sandy mud. **fatty s.**, stools containing fat: seen in diseases of the pancreas. **mucous s.**, stools containing large amounts of mucus: seen in intestinal inflammation. **pea soup s.**, the characteristic liquid evacuation of typhoid fever. **rice water s.**, the characteristic watery evacuations of cholera. **spinach s.**, dark-green stool resembling cooked spinach, resulting from the use of calomel in infants.

stop needle (stop). See *needle*.

stopping (stop'ing). A dental fitting; filling of the teeth.

stop speculum (stop). See *speculum*.

storage battery (sto'rāj). See *battery*.

storax (sto'raks) [L. *sto'rax*, *stý'rax*; *στῖβαξ*]. A balsam from the wood and inner bark of *Liquidambar orientalis*, a tree of western Asia. It contains styrol, styracin, and cinnamic acid, and is diuretic and antiscorbutic. It is administered for gonorrhea, and used externally for chilblains and frost-bite. Dose, 10-20 grains (0.666-1.333 Gm.).

stoesinol (sto-rez'in-ol). A resinol obtainable from storax.

stovaine (sto-va'in) [named for the discoverer *Fourneau*, which is French for "stove"]. The hydrochloride of benzoyldimethylaminomethylpropanol, $\text{CH}_3\text{CH}_2\text{C}(\text{C}_6\text{H}_5\text{CO}_2)(\text{CH}_3)\text{CH}_2\text{N}(\text{CH}_3)_2\text{HCl}$, a crystalline compound: used as a local anesthetic, especially for subcutaneous and subconjunctival use. It is said to be much less toxic than cocaine, being similar to the procaine type of local anesthetic. Dose of 1 per cent solution, 30 minims (0.002 cc.).

stovainization (sto-va-in-iz-a'shun). Production of local anesthesia with stovaine.

stovarsal (sto-var'sol). Acetarsone; an acetyl derivative of oxyaminophenyl arsenic acid. It is a pentavalent compound and is used by oral administration in the treatment of amebic dysentery, syphilis, yaws, and other protozoal diseases. Dose, 0.25 Gm. Called also *190 Fourneau*.

strabismal, strabismic (stra-biz'mal, stra-biz'mik) [*στραβισμός* strabismus]. Pertaining to or of the nature of strabismus.

strabismometer (stra-biz-mom'et-er) [*στραβισμός* strabismus + *μέτρον* measure]. An apparatus for measuring strabismus; a strabometer.

strabismus (stra-biz-mus) [*στραβισμός*]. A squint deviation of one of the eyes from its proper direction, so that the visual axes cannot both be directed simultaneously at the same objective point. **absolute s.**, that which occurs at all distances for the fixation point. **accommodative s.**, that which is due to excessive or deficient accommodative effort. **alternating s.**, a form affecting either eye alternately. **bilateral s.**, that which affects each eye alternately. **Braid's s.**, the turning of the eyes simultaneously upward and inward; a means sometimes adopted of inducing the hypnotic state. **concomitant s.**, that which is due to a faulty insertion of the eye muscles, resulting in the same amount of deviation in whatever direction the eyes are looking, because the squinting eye follows the movements of the other eye. **constant s.**, persistent strabismus. **convergent s.**, cross-eye or esotropia. **s. deorsum ver gens**, that in which the visual axis of the squinting eye falls below the fixation point. **divergent s.**, that in which the visual axes diverge; exotropia. **dynamic s.**, the tendency to strabismus due to insufficiency of the ocular muscles, but which may be overcome by the effort of binocular vision. Called also *latent s.* **external s.**, divergent strabismus. **intermittent s.**, that which occurs only at intervals. **internal**

s., esotropia. **kinetic s.**, strabismus due to overactivity of the muscles controlling ocular movements. **latent s.**, that which occurs only when one eye is occluded. **manifest s.**, strabismus which is obvious to the observer. **mechanical s.**, that due to pressure or traction on the eye, as by a tumor, producing deflection. **monolateral s.**, that in which it is always the same eye the visual axis of which fails to pass through the fixation point. **nonconcomitant s.**, that in which the amount of deviation of the squinting eye varies according to the direction in which the eyes are turned. **paralytic s.**, that which is due to paralysis of an eye muscle. **paralytic s., acute**, strabismus attended by dizziness and double vision. **periodic s.**, that which is seen only during efforts at accommodation. **relative s.**, that which occurs for some and not for other distances of the fixation point. **spasmodic s.**, that which is due to spasm of the muscles of the eye. **suppressed s.**, heterophoria. **s. sursum vergens**, that in which the visual axis of the squinting eye falls below the fixation point. **unilateral s.**, that which affects one eye only. **unilocular s.**, strabismus affecting only one eye. **vertical s.**, hypertropia; the elevation of one visual axis above the other.

strabometer (stra-bom'et-er). See *strabismometer*.

strabometry (stra-bom'et-re). Measurement of the amount of strabismus.

strabotome (strab'o-tōm). A knife for performing strabotomy.

strabotomy (stra-bot'o-me) [*στραβισμός* strabismus + *τέμνω* to cut]. The cutting of an ocular tendon for strabismus.

Strachan's disease (strawnz) [William Henry Williams *Strachan*, English physician of the 19th century]. Pellagra.

straight-jacket (strāt'jak-et). See *jackel*.

strain (strān). 1. To overexercise; to use to an extreme and harmful degree. 2. To filter or subject to colation. 3. Injury due to exercise or overuse. 4. Excessive effort or undue exercise. **sacro-iliac s.**, strain or sprain of the sacro-iliac joint causing continuous backache.

strainer (strān'er). An apparatus for straining.

strait (strāt). Either opening, superior or inferior, of the pelvis.

strait-jacket (strāt'jak-et). See *jackel*.

stramonium (stra-mo'ne-um) [L.]. The poisonous solanaceous plant, *Datura stramonium*, or *D. tatula*, jimson weed. The leaves (*stramonii folia*) and seeds (*s. semen*) are narcotic and antispasmodic. Its action resembles that of belladonna. The smoke of its burning leaves is inhaled for asthma. Stramonium ointment is used for hemorrhoids, etc. The drug is serviceable in muscular rheumatism, cramp, dysmenorrhea, and spasmodic retention of the urine. Dose of fluidextract of the seeds, 1-5 minims (0.066-0.333 cc.); of extract, $\frac{1}{2}$ grain (0.011-0.033 Gm.); of tincture, 5-20 minims (0.333-1.333 cc.).

strangalesthesia (stran'gal-es-the'ze-ah) [*στραγγαλίζω* to choke + *αἴσθησις* feeling]. Same as *zonsthesia*.

strangle (strang'l) [L. *strangula're*]. To choke, or to be choked by compression of the windpipe.

strangles (strang'lz). An infectious disease of horses, characterized by a mucopurulent inflammation of the respiratory mucous membrane, and caused by the *Streptococcus equi*.

strangulated (strang'u-la-ted) [L. *strangula'tus*]. Congested by reason of constriction or hernial stricture. See *hernia*.

strangulation (strang-u-la'shun) [L. *strangula'tio*]. 1. Choking or throttling arrest of respiration, due to occlusion of the air passage. 2. Arrest of the circulation in a part, due to compression.

strangury (strang'u-re) [*στράγγε* strangulation

+ οἶρον urine]. Slow and painful discharge of the urine: due to spasm of the urethra and bladder.

strap (strap). 1. A band or slip, of as adhesive plaster, used in attaching parts to each other. 2. To bind down tightly. **crib s.**, a strap to be placed around the neck of a horse to prevent cribbing by compressing the windpipe. **Wyman's s's**, a set of straps for keeping a violently insane person in bed.

strapping (strap'ing). The application of strips by adhesive plaster, one overlapping the other, so as to cover a part and make pressure upon it.

Strassburg's test (strahs'boorgz) [Gustav Adolf Strassburg, German physiologist, born 1848]. See under tests.

stratification (strat'if-ik-a'shun) [L. *stratum* layer + *facere* to make]. Disposal in layers.

stratified (strat'if-id). Disposed in layers.

stratiform (strat'if-orm) [L. *stratum* layer + *forma* form]. Having the form of strata.

stratum (stratum), pl. *strata* [L.]. A layer or set of layers, as in the epidermis. **s. albocine'reum**, a twofold layer of white and gray matter within the striatum. **s. album profundum** [B N A], a layer of white matter between the corpora quadrigemina and the central gray layer of the cerebral aqueduct. **Arlt's s.** See *stratum reticulatum*. **s. bacillorum**, the layer of rods and cones in the retina. **s. cine'reum cerebel-li** [B N A], the outermost gray layer of the substantia corticalis cerebelli. It is gray in color and lies just outside of the s. gangliosum. **s. circula're membra'nae tym'pani** [B N A], the inner circular layer of the lamina propria of the tympanic membrane. It begins in the annulus fibrocartilagineus where it is thickest and thins out toward the center of the membrane. **s. compac'tum**, the superficial layer of the decidua basalis. **s. cor'neum** [B N A], the outermost or horny layer of the epidermis. See *skin*. **s. cor'neum unguis**, the outer compact horny layer of the nail. **s. cuta'neum membra'nae tym'pani** [B N A], a very thin form of skin which constitutes the lateral layer of the tympanic membrane. **s. cylin'dricum epider'midis**, a layer of columnar cells which rest on the basement membrane and form the deepest part of the epidermis. **s. denta'tum**, stratum malpighii. **s. disjunc'tum**, a layer of partially detached cells on the free surface of the stratum corneum. **s. dorsa'le**, one of the layers representing the prolongation of the tegmentum beneath the posterior part of the optic thalamus. **s. fibro'sum** [B N A], the outer layer of the capsular ligament of a joint. **s. fila'mento'sum**, stratum malpighii. **s. ganglion'a're**, the nerve cell layer, or second layer from within, of the retina. **s. ganglio'sum cerebel'li** [B N A], the thin middle gray layer of the substantia corticalis cerebelli which consists of a single layer of Purkenje cells. **s. gelatino'sum**, the innermost of the four layers of the olfactory lobe. **s. germinati'vum epider'midis (malpighii)** [B N A], the lowest layers of the epidermis and especially the layer of columnar cells which rests on the basement membrane and from which the other layers are derived. **s. germinati'vum unguis** [B N A], the lower layer of the nail from which the nail grows and which is continuous with the s. germinativum of the skin. **s. granulo'sum cerebel'li** [B N A], the inner yellowish or reddish-brown layer of the substantia corticalis cerebelli. **s. granulo'sum epider'midis**, a thin layer of the epidermis which is seen best in the thickened skin of the palm or sole. It is situated between the stratum germinativum and the s. lucidum and consists of only two or three layers of cells. These cells contain keratohyaline and seem to be in the process of transformation into keratin. **s. gris'eum centra'le** [B N A], the central gray layer of tegmentum. **s. gris'eum collic'uli superio'ris** [B N A], the gray layer of the superior col-

liculus. **s. interme'dium**, the layer of cells of the enamel organ of a tooth just outside of the ameloblast layer. **s. interoliva're lemnis'ci** [B N A], fibers from the posterior columns of the spinal cord which pass upward between the olives to the ventrolateral nucleus of the thalamus. **s. lacuno'sum**, a layer of the hippocampus major above the stratum radiatum, consisting of reticulated neuroglia. **s. lemnis'ci**, the lowermost of the three layers of the corpus quadrigeminum. **s. lu'cidum**, a thin layer of the epidermis seen best in the thickened skin of the palm or sole. It is situated between the stratum corneum and the stratum granulosum and consists of only two or three layers of cells which are quite translucent and indistinguishable due to the presence of eleidin. **s. malpigh'ii**. Same as *s. germinativum epider'midis*. **s. molecula're**, the molecular layer of the cerebral cortex. **s. muco'sum membra'nae tym'pani** [B N A], a very thin mucous membrane which constitutes the medial portion of the tympanic membrane. It consists of a very delicate connective tissue network covered by a single layer of flat epithelial cells. **s. nuclea're medulla're oblonga'tae** [B N A], a tract of gray matter in the medulla oblongata. It contains the nuclei of the lower cranial nerves and is situated just below the floor of the fourth ventricle and between the nucleus nervi hypoglossi and the nucleus tractus solitarius. **Oehl's s.**, the stratum lucidum. See *skin*. **s. olfacto'rium**, one of the four layers of the olfactory lobe. **s. opt'icum**, a layer of white fibers in the upper quadrigeminal body just below the stratum griseum and arching out toward the inferior brachium. **s. o'riens**, the layer of polymorphic cells of the hippocampus. **s. papilla're**, the outer layer of the corium. **s. pigmen'ti bul'bi oc'uli** [B N A], the layer of pigmented epithelium which extends from the entrance of the optic nerve to the pupillary margin of the iris and is divided into stratum pigmenti retinae, corporis ciliaris and iridis. **s. pigmen'ti cor'poris cilia'ris** [B N A], a single layer of heavily pigmented cells near the surface of the ciliary body. **s. pigmen'ti iridis** [B N A], a single layer of cells which contain more or less pigment and are situated in the posterior part of the iris between the dilator muscle of the pupil and the pars iridica retinae. **s. pigmen'ti retinae** [B N A], a single layer of hexagonal columnar cells on the convex surface of the retina. They are provided with pigment granules which can be adjusted to suit the intensity of the light entering the eye. **s. profun'dum**, the layer of the inferior colliculus which immediately surrounds the central gray matter. **s. pyramida'le**, the innermost layer but one of the strata of the human brain cortex. **s. radia'tum**, a layer of the hippocampus major, crossed at right angles to its surfaces by the processes of large pyramidal cells which lie along its border. **s. radia'tum membra'nae tym'pani** [B N A], the outer layer of the tunica propria of the tympanic membrane. The fibers extend radially from the umbo to the lower half of the periphery and from the lower half of the periphery though none pass to the base of the pars flaccida. **s. reticula're**. See *tunica propria*, 3d def. **s. reticula'tum**, a network of fibers which connects the occipital lobe with the thalamus. **s. spino'sum**. Same as *s. germinativum epider'midis*. **s. spongio'sum**, the middle layer of the decidua. **s. subcuta'neum**, the subcutaneous connective tissue. **s. suprapyramida'le**, the molecular layer; the principal layer of the cortical brain substance, chiefly developed in the cornu anterioris. **s. synovia'le** [B N A], the lining membrane of the capsular ligament of a joint. **s. vascula're**, the muscular wall of the uterus between the mucous and peritoneal surfaces. **s. zona'le** [B N A]. 1. A stratum of white nerve fibers covering the ventricular surface of the optic thalamus. 2. The

most superficial of the layers of the superior colliculus.

Straus' sign (strows') [Isador *Straus*, French physician, 1854-1896]. See under *sign*.

Strauss' reaction, sign, etc. (strows'ez) [Hermann *Strauss*, physician in Berlin, born 1868]. See *reaction, sign*, etc.

strawberry-cream blood. The appearance of the blood in lipemia.

strawberry tongue (straw'ber-e). See *tongue*.

straw itch. See under *itch*.

streak (strĕk). Any line, stripe, or trace. **angioid s's**, pigment striae appearing in the retina after hemorrhage. **s. culture**. See *culture*.

germinal s. Same as *primitiv s.* **Knapp's s's**, lines resembling blood vessels seen occasionally in the retina after hemorrhage. **medullary s.**, the neural, or medullary, groove. See *groove*.

meningitic s. Same as *lache cérébrale*. **primitive s.**, a faint white trace at the aftermost end of the germinal area, formed by an aggregation of cells, and constituting the first indication of the development of the blastoderm.

stream (strēm). A current or flow of water or other fluid. **axial s.**, the central core of the blood stream composed of accumulated red blood corpuscles and surrounded by a layer of plasma.

stremma (strem'ah) [στρέμμα a twist]. A sprain.

strengthening plaster. See *plaster*.

strephosymbolia (stref'ō-sim-bo'le-ah) [στρέφω to twist + σύμβολον symbol]. A condition marked by difficulty in learning to read, without evidence of mental defect.

strephtome (stref'ō-tōm) [στρέφω to twist + τέμνειν to cut]. An instrument like a corkscrew for invaginating the hernial sac.

strepitus (strep'it-us) [L.]. A noise; a sound heard on auscultation.

strepticeimia (strep-tis-e'me-ah). Streptococcemia.

strepto-angina (strep-to-an'jin-ah) [*Streptococcus + angina*]. A pseudomembranous deposit in the throat due to a streptococcus.

streptobacillus (strep'to-bas-il'us) [στρεπτός twisted + bacillus]. A variety of bacillus in the form of twisted chains of rods. One variety has been found in typhus fever. **S. pellagrae**, an organism which Tizzoni claims is the cause of pellagra. **S. pseudotuberculo'sis roden'tium**, the *Bacillus pseudotuberculo'sis*.

streptobacteria (strep'to-bak-te're-ah) [στρεπτός twisted + bacteria]. A group including those bacteria (*Streptothrix*, etc.) which are linked together into twisted chains.

streptobacterin (strep-to-bak'ter-in). The bacterial vaccine prepared from streptococci.

streptococcal (strep-to-kok'al). Pertaining to or due to a streptococcus.

Streptococceae (strep'to-kok'se-e). A tribe of the family Coccaceae. It includes the following genera: *Diplococcus*, *Leuconostoc*, *Streptococcus*, and *Staphylococcus*.

streptococcemia, streptococcaemia (strep'to-kok-se'me-ah) [*Streptococcus + alua* blood]. The presence of streptococci in the blood; streptococcus infection.

streptococcic (strep-to-kok'sik). Streptococcal.

streptococcicosis (strep-to-kok-sik-o'sis). A general term for all streptococcal infections.

streptococcolysine (strep'to-kok-ol'is-in). Same as *streptocolysine*.

Streptococcus (strep-to-kok'us) [στρεπτός twisted + κόκκος berry]. A genus of micro-organisms of the family Coccaceae including those spherical bacteria whose cells occur in chains. They are found associated in a great variety of pathologic conditions, among which are erysipelas, focal infections, ulcerative endocarditis, puerperal fever,

septic sore throat, certain form of enteritis, rheumatic fever, and bronchopneumonia. The streptococci are now divided into two classes: *a*, the *hemolytic s.* (type alpha) which produce a clear zone of hemolysis around the colonies on blood-agar plates; and *b*, the green-producing streptococcus (*Streptococcus viridans*) which produce a greenish zone about the colony on blood-agar plates. **S. ac'id'i lac'tici**, a variety which precipitates casein from milk and produced lactic acid; in long rows of nonmotile cells. **S. agalac'tiae contagio'sae**. Same as *S. masti'tidis sporad'icae*. **S. al'bus**, a saprophytic species from water. **S. ambra'tus**, the microbe which causes the pneumonia of calves: made up of cocci arranged in filaments. **S. angino'sus**, a form of *S. lon'gus*. **anhemo-lytic s.**, any streptococcus which does not hemolyze red blood corpuscles. **S. apthi'o'la**, a species from the blood, skin, and secretions of animals and men affected with foot and mouth disease. **S. articulo'rum**, a species from diphtheritic mucous membranes, in long chains of large cocci: in rabbits it produces a fatal joint disease. **S. aureola'tus**, a micro-organism derived from a patient infected with the poison of horse colic. **S. bombycis**, the species which causes flacherie in silkworms: in oval cells, single, paired, or in short rows. **S. bre'vis**, a form found in the mouth, especially in inflammatory conditions, and occurring in short chains. It is probably not pathogenic. **S. cadav'eris**, a saprophytic species from the liver of the cadaver of yellow fever. **S. cardio-arthritis**, an organism isolated from blood and throat cultures of patients with rheumatic fever. A therapeutical serum prepared from the organism has been used in rheumatic fever and chronic arthritis. **S. charr'ini**, the specific micro-organism of contagious anthrax of rabbits: in long chains of oval or spherical cocci. **S. cinnaba'reus**, a form from air, water, and red milk; in large, spherical cocci, often forming pairs or tetrads: it produces a reddish pigment. **S. citro'vus**, a form found in sour milk and in "starters." **Clarke's s.** See *S. mutans*. **S. col'i grac'ilis**, a form from meconium and from the feces of carnivora. **S. conglomerat'us**, a pathogenic species from patients with scarlatina. **S. corona'tus**, a saprophytic species from air. **S. cory'zae contagio'sae equo'rum**, a form from the contagious coryza (strangles) of horses, in undulating chains made up of pairs or groups of nonmotile, oval cocci. **S. diffu'sus**, a species causing a clouding of the fluid when cultivated on bouillon. **S. dis'sei**, a pathogenic form from the blood of a Japanese affected with syphilis; in chains of spherical encapsulated cocci, mostly nonmotile. **S. endocardit'icus**, a pathogenic species in chains or loops of small cocci from ulcerative endocarditis. **S. enter'itis**, enteritis produced by streptococci. In the acute form it resembles cholera, and in the chronic form, typhoid fever. **S. e'qui**. Same as *S. cory'zae contagio'sae equo'rum*. **S. equi'nus**, a species found in the intestines of horses and cows. **S. erysipel'atis**, the specific micro-organism of erysipelas. It is found in the lymph passages of the skin in pairs and chains of minute cocci. **S. faeca'lis**, a species found in the intestines in endocarditis, chronic cystitis, etc. **Feh-leisen's s.**, *Streptococcus erysipelatis*. **S. ferment'i**, a variety producing the ropy condition of wine by causing viscous fermentation. **S. flexuo'sus**, a species from the mouth and from the pus of erysipelas: in serpentine chains of oval or spherical cells. **S. gallina'rum**, a species causing apoplectiform septicemia in chickens. **S. gigan'teus ure'trae**, a form from the healthy urethra and from urine: in long, twisted chains of large round cocci. **S. haematosa-prus**, a species seen in spherical cells from putrefying blood. **S. havanien'sis**, a species from the vomit of yellow fever: not known to be pathogenic. **hemolytic s.**, **S. haemo-**

lyticus, any streptococcus which is capable of hemolyzing red blood corpuscles, or of producing a zone of hemolysis about the colonies on blood-agar. The great majority of streptococci found in pathologic processes belong to this type. **S. hollan'dicus**, a zymogenic species from ropy milk. **S. hydrophoborum**, a species seen in chains of spherical cocci from the brains of animals affected with rabies. **S. impetiginis**, a species from the vesicles of impetigo contagiosa. It is pathogenic for mice. **S. insectorum**, a pathogenic species from diseased insects. **S. involutus**, a species found in cattle affected with foot and mouth disease, but probably not pathogenic. **S. ko'chii**, a species from rabbits with artificial septicemia. **S. lactiticus**, a species found commonly in naturally soured milk. It has been called also *Bacillus lactici acidii*, *Bacterium lactis*, *B. lactis acidii*, *B. guntheri*, *Streptococcus acidii lactici*, and *Streptococcus lacticus*. **S. laughlini**, a species from cases of dengue: seen in chains of capsulated spherical cocci. **S. lebl'nis**, *Streptococcus acidii lactici*. **S. liquefaciens**, a species from the liver of yellow fever cadavers. **S. longus**, a nonmotile species seen as small cocci in long chains. It includes the many varieties, such as *Streptococcus pyogenes*, *S. erysip'el'itis*, *S. articulo'rum*, *S. sep'ticus*, and *S. septicopyae'micus*. **S. lu'cae**, a pathogenic species from soft chancre: seen in chains of minute cocci. It is also known as *Bacillus ul'ceris cancro'si*. **S. margaritaceus**, a species from putrid blood: in loose chains of spherical cells. **S. mastitidis sporadicae**, a species found in the mastitis of cattle. **S. meningitidis**. Same as *Neisseria meningitidis*. **S. mesenterioides**, a species found in beet and sugar solutions, occurring in the form of cocci enclosed in a capsule and arranged in chains. It causes the dextrin fermentation of cane sugar. **S. mirabilis**, a saprophytic species from sewage. **S. mitior**, a species found in endocarditis lenta. **S. monomorphus**, a species from pharyngeal ulcers. **S. morbillus**, a species from measles, in large, spherical cocci. **S. mucosus**, a capsulated species found in a case of tubo-ovarian abscess with peritonitis. 'It causes mucous exudations in animals. **S. muris ratti**, a species found in some cases of rat-bite fever. **S. mutants**, a species isolated by Clarke from carious teeth: it has been found in cases of infective endocarditis. **S. nocardii**, a pathogenic species from cows and goats affected with chronic infectious inflammation of the udder. **S. nomae**, a species from cases of noma: seen as cocci. **S. ochroleucus**, a chromogenic species from the urine, occurring as single or paired cocci or in chains. **S. of Ostertag**, a species causing vaginitis verrucosa in cattle. **S. peritonitidis equi**, a pathogenic species from horses which died of peritonitis. **S. perniciosipittacorum**, **S. psittaci**, a pathogenic species from disease of gray parrots, found in the heart and lungs in the form of cocci in chains. **S. pneumoniae**. Same as *Diplococcus lanceolatus*. **S. pyogenes**, the name for a group of pus-forming micro-organisms from various suppurative processes, in chains of cocci. **S. pyogenes malignus**, a pathogenic form from necrotic foci in the spleen of leukemia; closely resembling *S. erysip'el'itis*. **S. rheumaticus**, a variety which appears to be associated with rheumatic fever. **S. rindfleischii**, a species from the blood in mycosis fungoides, in the form of colorless cells in chains. **S. salivarius**, a species found in the saliva and in the alimentary tract in malignant endocarditis and certain terminal infections. **S. scarlatinae**, the causative agent in scarlet fever. **S. seifer'ti**, a species from the nasal mucus and sputum of influenza, in long chains of oval cells. **S. sep'ticus** a pathogenic species from foul earth: seen in chains or pairs of cocci. **S. sep'ticus liquefaciens**, a pathogenic species from blood of septic poisoning after scarlatina: seen in pairs or chains

of round cocci. **S. septicopyae'micus**, a pathogenic form from cases of phlegmonous angina. **S. suspectus**, a species from blood and spleen of cattle affected with hematuria: seen as colorless, spherical cells. **S. toxica'tus**, a species from an infusion of *Rhus toxicodendron*: said to produce one of the poisons of poison ivy. **S. tropicalis**, a species found in dermatitis cupuliformis (Castellani, 1916). **S. tyro'genes**, a species found in ripe cheese. **S. ureae**, a species from air and from stale urine; cocci in chains, wreaths, or pairs: it changes urea into ammonium carbonate. **S. ureae liquefaciens**, a zymogenic form from urine. **S. varians**, a species from water, producing a green pigment. **S. varicell'ae**, a species from the blood and lymph of chickenpox: in loose chains of round cocci. **S. vari'olae**, a pathogenic species from the blood and lymph of smallpox and from the lymph of cowpox: in loose chains of spherical cocci. **S. vermiformis**, a species from water, producing a green pigment. **S. viniper'dae**, a species from spoiled wine. **S. viridans**, a species which produces a narrow green zone when grown upon blood-agar. It is nonhemolyzing and is found in cases of endocarditis lenta. **S. weis'sii**, a pathogenic species from the lungs of cattle with infectious pneumonia; it occurs in encapsulated cocci, single, paired, or in short chains. **S. zymo'genes**, a species from the blood in acute endocarditis.

streptococlysin (strep-to-kol'is-in). A hemolysin destructive to streptococci, formed when virulent streptococci are grown in blood serum.

streptocyte (strep-to-sit) [στρεπτός twisted + κύτος cell]. An amebiform body occurring in beadlike strings from the vesicles of foot and mouth disease.

streptodermatitis (strep''to-der-mat-i'tis). Dermatitis produced by streptococci.

streptoleukocidin (strep''to-lu-ko-si'din). A toxin from streptococcus cultures which is destructive to leukocytes.

streptolysine (strep-tol'is-in). Same as *streptococlysin*.

streptomycosis (strep''to-mi-ko'sis) [στρεπτός twisted + μυκήσις fungus]. A disease condition due to a streptococcus.

Strep'topus amplexifolius [στρεπτός twisted + πούς foot]. A liliaceous plant, the seeds of which afford a popular astringent gargle: the root is used in salads.

streptosepticemia (strep''to-sep-tis-e-me-ah) [streptococcus + septicemia]. Septicemia due to a streptococcus.

streptothrichal (strep-to-thrish'al). Pertaining to or caused by streptothrix.

streptothricosis (strep-to-thri-ko'sis). Infection with streptothrix. See *nocardiosis*.

Streptothrix (strep-to-thriks) [στρεπτός twisted + θρίξ hair]. A genus of schizomycetes in the form of slim, elongated filaments enclosed in a sheath. This genus is now given the name of *Nocardia*. **S. actinomycetes**. Same as *Actinomyces bo'vis*. **S. al'ba**, a form said to cause actinomycosis. **S. bronchitidis**, a species producing gangrenous bronchitis. It resembles *Actinomyces bo'vis*, excepting that the ends of the rays are not knobbed. **S. cap'rae**, a pathogenic species causing a sort of tuberculosis in horses, and abscesses when injected into guinea-pigs and rabbits. **S. cuniculi**, a species from the intestine of the pig, producing local necrosis. **S. eppinge'ri**, a pathogenic species from a brain abscess. **S. farcin'ica**, a pathogenic species from cattle farcy: nonmotile, and made up of branching threads in lens-shaped colonies. **S. förste'ri** occurs in concretions found in the lacrimal ducts. **S. fre'eri**, a species isolated from cases of mycetoma in the Philippines. **S. hoffman'ni**, a

species that occurs in the air, causing abscesses in guinea-pigs and rabbits. **S. israeli**, a species found in actinomycosis of man. It resembles *Actinomyces bovis*. **S. leproides**, a species found in leprosy nodules. **S. maduræ**, an organism from Madura foot, or the fungus foot of India, by some identified with *Actinomyces bovis*, but probably distinct from it. **S. muris ratii**, a species found in certain cases of rat-bite fever. **S. proteus**, a pathogenic species causing a sort of actinomycosis in man, and septicæmia and pseudotuberculosis when injected into mice. **S. pseudotuberculosis**, a pathogenic species from a consolidated and caseous lung. **S. of Rosenbach**, a species found in an indolent dermatitis of the fingers and much resembled *Cladothrix asteroides*.

streptotrichal (strep-to'trik-al). Pertaining to or caused by streptothrix.

streptotrichiasis (strep''to-trik-i'as-is). Same as *streptotrichosis*.

streptotrichosis (strep-to-tri-ko'sis). A disease condition resembling actinomycosis, caused by streptothrix.

stress (stres). Forcibly exerted influence; pressure. In dentistry the pressure of the upper teeth against the lower in mastication.

stretcher (stretsh'er). A litter for carrying the sick or injured.

stria (stri'ah), pl. *striæ* [L.]. A streak or line. **acoustic striæ**, white, transverse lines across the floor of the fourth ventricle, which are connected with the roots of the auditory nerve. Called also *medullary s.*, *auditory s.*, and *s. acusticæ*. **S. of Amici**, Dobie's lines; the lines which mark or separate the alleged disks of sarcous matter from each other. **S. atrophicæ**, the lineæ albicantes of pregnancy; white lines on the abdomen produced by atrophy of the skin. **auditory s.** See *acoustic s.* **S. of Baillarger**. See *Baillarger's layer*, under *layer*. **brown s.**, Retzius' parallel stria. **S. cutis distensæ**, the wrinkled-like appearance of the skin after abnormal distention: due to tears in the cutis. **S. fornicis**. See *s. pinealis*. **S. of Gennari**. See *line of Gennari*. **S. gravidarum**, the striae seen upon the abdomen of pregnant women; striae atrophicæ. **S. intermedia trigoni olfactorii** [B N A], a more or less distinct branch of the posterior end of the olfactory tract which spreads out in the olfactory trigone and the anterior perforated space. **S. kaes-bechterewi**, a fairly dense band of fibers in the lamina suprastratiata of the cerebral cortex. It is between the pars superficialis and the pars typica. **Knapp's s.**, streaks sometimes seen in the retina after hemorrhage. **S. lancisii**. Same as *s. longitudinalis*. **S. longitudinalis lateralis corporis callosi** [B N A], a white, longitudinal band along the lateral part of the upper surface of the corpus callosum. It is covered by the gyrus cinguli and passes back to the fasciola cinerea and the fascia dentata. **S. longitudinalis medialis corporis callosi** [B N A], a white, longitudinal line near the middle of the upper surface of the corpus callosum which goes over in front into the gyrus subcallosus and behind into the fasciola cinerea. **S. malleolaris membranae tympani** [B N A], a nearly vertical radial band seen on the outer surface of the tympanic membrane. It extends from the umbo upward to the prominentia malleolaris and is caused by the manubrium mallei. **S. medialis trigoni olfactorii** [B N A], the portion of the posterior end of the tractus olfactorius which turns medialward to the area parolfactoria. **striæ medullares fossæ rhomboideæ** [B N A], superficial bands of white fibers from the dorsal cochlear nucleus which sweep around the dorsal aspect of the restiform body, cross the floor of the fourth ventricle and disappear into the sulcus medianus on their way to the lateral lemniscus. They form part of the acoustic nerve and are

quite variable. **S. medullaris thalami** [B N A], a white band which runs along the medial border of the upper surface of the thalamus and broadens behind to form the trigonum habenulae. **meningitic s.** Same as *tache cérébrale*. **S. olfactoria** [B N A], any one of three white stripes extending backward from the olfactory trigone. **S. patellaris**, a transverse stria above the upper border of the patella, seen after an attack of some infectious disease, such as typhoid fever. **S. pinealis**, either of two white lines in the third ventricle, extending from the peduncle of the pineal body to the inner side of the tubercle of the thalamus. Called also *taenia fornicis* and *taenia thalami*. **Retzius' parallel s.**, brown lines crossing the enamel prisms, seen on cutting the enamel. **Schriger's s.**, darkish, irregular lines crossing the enamel rods and striae of Retzius of the tooth enamel. **S. semicircularis**. See *s. terminalis thalami*. **S. terminalis thalami** [B N A], a band of fibers along the lateral margin of the exposed surface of the thalamus which covers the terminal vein and marks the line of separation between the thalamus and the nucleus caudatus. It extends from the region of the foramen interventriculare to the inferior horn of the lateral ventricle. Called also *terminal stria*, *stria semicircularis*, and *taenia semicircularis*. **striæ transversæ corporis callosi** [B N A], transverse bands on the upper surface of the corpus callosum due to the bundles of fibers. **S. vascularis** [B N A], the layer of fibrous vascular tissue that covers the outer wall of the scala media. **S. ventriculi tertii**, stria pinealis.

striascope (stri'as-köp). An instrument for use in ophthalmologic refraction.

striatal (stri-a'tal). Pertaining to the corpus striatum. **S. syndrome**. See *Hunt's syndrome*, under *syndrome*.

striate, **striated** (stri'ät, stri'a-ted) [L. *striatus*]. Striped; provided with striae. **S. body**. See *corpus striatum*.

striation (stri-a'shun) [L. *striatus*]. 1. The quality of being streaked. 2. A streak or scratch; also a series of streaks or scratches. **Baillarger's s's.** See *Baillarger's lines*, under *line*. **tabby cat s.**, **tigroid s.**, striations or markings on muscle tissue that has undergone marked fatty degeneration. It is seen especially in degenerated heart muscles; tabby cat striation.

striatum (stri-a'tum) [L. "grooved"]. The corpus striatum.

stricture (strik'tür) [L. *strictura*]. The abnormal narrowing of a canal, duct, or passage, either from cicatricial contraction or the deposit of abnormal tissue. **annular s.**, a ringlike obstruction around the walls of an organ. **bridle s.**, a fold of membrane stretched across a canal, and partially closing it. **cicatricial s.**, one which follows a wound or sore, producing cicatricial contraction. **contractile s.**, one which may be mechanically dilated, but which soon returns to its contracted condition. Called also *recurrent s.* **false s.** Same as *spasmodic s.* **functional s.** See *spasmodic s.* **hysterical s.**, spasmodic stricture of the esophagus seen in hysterical subjects. **impermeable s.**, one that does not permit the passage of an instrument. **irritable s.**, one in which the passage of an instrument produces severe pain. **organic s.**, a stricture due to a structural change in or about a canal, as the deposit of adventitious tissue, plastic inflammation, or neoplastic growths. **permanent s.**, organic stricture. **recurrent s.** See *contractile s.* **spasmodic s.**, **spastic s.**, one that is due to muscular spasm. Called also *false s.*, *functional s.*, and *temporary s.* **temporary s.** See *spasmodic s.*

stricturotome (strik'tür-o-töm) [L. *strictura* stricture + τέμνειν to cut]. A knife for cutting strictures.

stricturotomy (strik-tu-rot'o-me). The cutting of a stricture.

stridor (stri'dor) [L.]. A harsh, high-pitched sound like the whistling of wind. **congenital s.**, infantile respiratory spasm. **s. decu'tium**, the noise made by grinding the teeth. **s. den'tium**, grinding of the teeth. **laryngeal s.**, congenital stridor. **s. serrat'icus**, a sound like that made by filing a saw, caused by respiration through a tracheotomy tube.

stridulous (strid'u-lus) [L. *strid'ulus*]. Attended with stridor; shrill and harsh in sound.

string galvanometer. See *galvanometer*.

stringhalt (string'hawlt). Sudden and extreme flexion of the back of a horse, producing a jerking motion of the hind leg in walking.

striocellular (stri-o-sel'u-lar) [L. *stri'a* streak + *cellular*]. Composed of striated muscle fibers and cells.

striospinoneural (stri'o-spi-no-nu'al). Pertaining to the corpus striatum, the spinal cord, and the nerves: a term applied to a system of nerve fibers.

strip (strip). To press the contents from a canal, such as the urethra, by running the finger along it.

stripe (strip). A streak or stria. **Baillarger's s's**. See *Vicq d'Azyr's s's*. **Gennari's s's**. See *Vicq d'Azyr's s's*. **Hensen's s.** 1. A band near the middle of the under surface of the membrana tectoria of the ear. 2. A slightly stainable central section in certain insect muscles. **Vicq d'Azyr's s's**, the third and fifth stripes from within outward of the cortex of the cerebellum parallel to the surface. Called also *Baillarger's s's* and *Gennari's s's*.

strobila (stro-bi'lah, pl. *strobi'lae* [L.; *στροβίλη* twist]). The entire adult tapeworm including the head, neck, and proglottides.

strobile (stro'bil). See *strobila*.

strobiloid (stro'bil-oid). Resembling a row of tapeworm segments.

strobilus (stro-bi'lus) [L.; *στροβίλος* cone]. Same as *strobila*.

stroboscope (stro'bo-skōp) [*στρόβος* whirl + *σκοπεῖν* to view]. An instrument on the principle of a zoetrope, for exhibiting the successive phases of animal movements.

stroboscopic (stro-bo-skop'ik). Pertaining to the stroboscope.

Stroganoff's or Stroganov's treatment (strogan'ofs) [Vasilii Vasilovich *Stroganov*, contemporary Russian obstetrician]. See *treatment*.

stroke (strōk). A sudden and severe attack, as of apoplexy or paralysis. **apoplectic s.**, an attack of apoplexy. **back s.** 1. The recoil of the ventricles at the time the blood is forced into the aorta. 2. The influence which a peripheral organ of response exerts back upon the nerve center from which the response was generated. **s. culture**. Same as *smear culture*. See under *culture*. **heat s.**, a condition caused by exposure to excessive heat, natural or artificial. It may occur in one of three forms: (1) *thermic fever or sunstroke*, q. v.; (2) *heat exhaustion*, q. v., or more rarely (3) *heat cramps*, q. v. **light s.**, a fatal narcosis produced in sensitized mice by exposure to light. **paralytic s.**, a sudden attack of paralysis from injury to the brain or cord. **sunstroke**. See *sunstroke*.

stroke volume. See *volume*.

stroma (stro'mah) [*στροῦμα* a covering]. The tissue which forms the ground substance, framework, or matrix of an organ. **s. of the cornea**, the connective tissue layer or substantia propria of the cornea. **s. fibrin**, fibrin formed from the stroma of blood corpuscles. **s. i'ridis** [B N A], the soft mass of connective tissue fibers which make up the major portion of the iris. **s. of ovary**, **s. ova'rii**, the connective tissue of the ovary. **s. plexus**, a network formed by the ramifications of the nerves of the cornea within

the substantia propria. It is made up of two parts, the deep stroma plexus (*primary plexus*, *fundamental plexus*), and a layer of finer fibers beneath the anterior limiting membrane, called *superficial stroma plexus* (*subbasal plexus*, *accessory plexus of Ranvier*). **s. of the red blood corpuscles**, that part of the red blood corpuscles which remains after the hemoglobin has been removed. **Rollet's s.** Same as *s. of the red blood corpuscles*. **s. vit'reum**, the framework of fibers composing the vitreous body of the eye.

stromal (stro'mal). Pertaining to stroma: stromatic.

stromatic (stro-mat'ik). Pertaining to or resembling stroma.

stromatolysis (stro-mat-ol'is-is) [*stroma* + *λῑσις* dissolution]. Destruction of the enclosing membrane of a cell.

Stromeyer's splint (strom'i-erz) [Georg Friedrich Louis *Stromeyer*, German surgeon, 1804-1876]. See *splint*.

Stromuhr (ström'oor) [Ger. "stream clock"]. Ludwig's instrument for measuring the velocity of the blood flow (1867); a rheometer.

Strongyliasis (stron-jil'i-as-is). Strongylosis.

Strongylidae (stron-jil'id-e). A family of the Nematoda. It contains the following genera: *Ankylostoma*, *Eustrongylus*, *Metastrongylus*, *Necator*, *Oesophagostoma*, *Physaloptera*, *Strongylus*, *Trichostrongylus*, and *Triodontophorus*.

Strongylinae (stron-jil'i-ne). A subfamily of the Strongylidae which contains three genera: *Strongylus*, *Metastrongylus*, and *Trichostrongylus*.

Strongyloides (stron-jil-oi'dēz). A genus of nematodes (roundworms) widely distributed in the intestinal contents of mammals. **S. intestinalis**, a species of roundworm, normally saprozoic, but sometimes found in the intestinal canal of man in tropical and subtropical countries, where it may cause an intermittent diarrhea with digestive disturbance and catarrh of the small intestine. Called also *Anguillula stercoralis*. **S. papillo'sus**, a species found in sheep, goats, rabbits, and rats. **S. rat'ti**, a species found in rats. **S. stercora'lis**, a species found in the feces of man.

strongyloidosis (stron-jil-oi'do-sis). Infection with strongyloides.

Strongyloplasmata (stron-jil-o-plas'mat-ah). Lipschütz's name for filtrable viruses in the form of cell inclusions, resembling chlamydozoa, but lacking the mantle formation of the latter.

strongylosis (stron-jil-o'sis). Infection with worms of the genus *Strongylus*.

Strongylus (stron'jil-us), pl. *stron'gili* [*στρογγύλος* round]. A genus of parasitic nematode worms of the family Strongylidae. **S. equi'nus**, a worm parasitic in the intestines of horses; called also *palisade worm*. **S. fila'ria** causes the husk of sheep. **S. gibso'ni**, a species found in cattle and swine, and occasionally in man. **S. g'igas**. See *Eustrongylus g'igas*. **S. longivagina'tus**, a species found in the lungs of sheep, swine, and rabbits. **S. micru'rus** causes the disease hoose in calves. **S. paradox'us**. See *Metastrongylus abri*. **S. rena'lis**, *Eustrongylus g'igas*. **S. sub'tilis**. See *Trichostrongylus instabilis*.

strontia, **strontian** (stron'she-ah, stron'shan). An earthy substance, strontium oxide, SrO.

strontium (stron'she-um) [*Strontian* in Scotland]. A dark yellowish metal: symbol, Sr; atomic weight, 87.63. **s. arsenite**, a compound, Sr(AsO₃)₂.4H₂O: used in malaria and chronic diseases of the skin. Dose, $\frac{3}{16}$ - $\frac{1}{8}$ grain (0.002-0.004 Gm.). **s. bromide**, a clear, colorless, crystalline substance, SrBr₂ + 6H₂O. It is a gastric tonic, antinephritic, and antiepileptic: used like the other bromides. Dose, 10-60 grains (0.666-4 Gm.). **s. caffeine sulphonate**, a remedy said to be a valuable diuretic. **s. carbonate**, a white, tasteless

powder, SrCO_3 . **s. dibromhebenate**, a colorless powder, $(\text{C}_{22}\text{H}_{41}\text{Br}_2\text{O}_2)\text{Sr}$; used as a substitute for bromides. **s. glycerophosphate**, a white salt, employed in phosphaturia, locomotor ataxia, etc. **s. iodate**, an insoluble salt, $\text{Sr}(\text{IO}_3)_2$; an alternative for use in various affections of the mucous surfaces. **s. iodide**, a colorless, transparent, crystalline compound, $\text{SrI}_2 + 6\text{H}_2\text{O}$; used like potassium iodide. It is said to be an antiseptic and tenacide. Dose, 5–60 grains (0.333–4 Gm.). **s. lactate**, a white, granular compound, $\text{Sr}(\text{C}_3\text{H}_5\text{O}_2)_2 + 3\text{H}_2\text{O}$, soluble in water and alcohol; used as an antelmintic, in nephritis for reducing the albumin in the urine, and as a specific against tetany. Dose, 2–2½ drachms (8–10 Gm.). **s. loretinate**, strontium iodo-oxyquinoline sulphate. **s. peroxide**, SrO_2 , a white, insoluble powder which gradually decomposes in water with the liberation of oxygen. **s. phosphate**, a salt, $\text{Sr}_3(\text{PO}_4)_2$. **s. salicylate**, a salt, $(\text{OH.C}_6\text{H}_4.\text{CO.O})_2\text{Sr}$, in white crystals, soluble in 40 parts of water and freely in alcohol. It is recommended in gout and in certain intestinal and rheumatic disorders. Dose, 5–15 grains (0.3–1 Gm.) in a capsule.

strophanthin (stro-fan'thin). A poisonous, white, crystalline glucoside, $\text{C}_{20}\text{H}_{34}\text{O}_{10}$, or a mixture of glucosides from strophanthus. It is soluble in water and alcohol, and is used as a heart tonic. It is very powerful, and should be employed with the utmost caution. Dose, $\frac{3}{100}$ – $\frac{1}{200}$ grain (0.0002–0.0003 Gm.). **crystallized s.**, ouabain from *Strophanthus gratus*.

strophanthone (stro-fan'thōn). A proprietary preparation of strophanthin seed.

Strophanthus (stro-fan'thus) [*στροφος* cord + *ανθος* flower]. A genus of poisonous apocynaceous plants. The seeds of *S. hispidus* and *S. kombé*, African shrubs, are used like digitalis, chiefly in heart disease. Dose of the tincture, 1–6 minims (0.066–0.4 cc.); of the extract, $\frac{1}{4}$ –1 grain (0.016–0.066 Gm.). **brown s.**, *S. hispidus*. **green s.**, *S. kombé*.

strophocephalus (strof-o-sef'al-us) [*στροφος* twisted + *κεφαλη* head]. A fetal monster with portions of the head and face displaced.

strophocephaly (strof-o-sef'al-e). The condition of a strophocephalus.

strophulus (strof'u-lus) [L.]. A papular eruption of infants, called tooth rash or gum rash, of several varieties. **s. albus**, a variety known as white gum, or milium. **s. can'didus**, a variety of strophulus in which the papulae are larger, are not inflamed, but have a smooth, shining surface, which gives them a lighter color than the cuticle near them. **s. confertus**, a variety with crowded papillae. **s. intertinctus**, spotted strophulus, or red gum: a form in which the child's skin appears like cotton printed with red. **s. pruriginosus**, a form characterized by intensely itching papules: seen chiefly in children. **s. volat'icus**, flying strophulus, or wildfire rash, a form characterized by a fugitive eruption.

structural (struk'tu-ral). Pertaining to or affecting the structure.

structural-functional (struk'tur-al-funk'shun-al). Pertaining to the structure and function of a part, as of the brain.

struma (stru'mah) [L.]. 1. Scrofula. 2. Goiter. **s. aberrata**, goiter affecting an accessory thyroid gland. **adrenal s.**, suprarenal hyperplasia. **s. aneurysmatica**, vascular goiter in which the vessels are dilated. **s. colloides**, distention of the follicles of the thyroid gland with colloid secretion. **s. cystica os'sea**, cystic goiter with calcification. **s. fibro'sa**, thyroid enlargement caused by hyperplasia of the connective tissue. **s. follicularis**, parenchymatous goiter. **s. gelatinosa**, colloid goiter. **s. lipomatosus**, colloid goiter. **s. lymphaticus**, status lymphaticus. **s. maligna**, cancer of the thyroid body. **s. nodo'sa**, ade-

noma of the thyroid gland. **s. parenchymatos'a**, enlargement of the thyroid gland due to follicular hyperplasia. **s. pituitaria**, permanent enlargement of the pituitary body. **Riedel's s.**, benign granuloma of the thyroid; ligneous thyroiditis. **s. suprarenalis**, a peculiar tumor of the suprarenal capsule, consisting mainly of fatty tissue. **thymus s.**, persistence of the thymus gland beyond the time when it usually atrophies. **s. vasculo'sa**, vascular goiter.

strumectomy (stru-mek'to-me) [*struma* + *ἐκτομή* excision]. Surgical removal of a scrofulous gland or of a goiter. **median s.**, excision of a median goiter or an enlarged isthmus of the thyroid.

strumiform (stru'mif-orm) [L. *stru'ma* scrofula + *for'ma* shape]. Resembling struma.

strumiprivic (stru-mip-riv'ik). Strumiprivicus.

strumiprivicus (stru-mip-riv'us) [L. *strumiprivus*; *stru'ma* goiter + *privus* deprived]. Caused by the removal of the thyroid gland. See *cachexia*.

strumitis (stru-mi'tis). Inflammation of a thyroid gland affected with goiter. **eberthian s.**, strumitis due to infection with the typhoid bacillus.

strumoderm (stru-mo-der'mah). Same as *scrofuloderma*.

strumosis (stru-mo'sis). The state of being strumous.

strumous (stru'mus) [L. *strumo'sus*]. Scrofulous: affected with or of the nature of scrofula.

Strümpell's disease, sign, etc. (*strim'pelz*) [Adolf von *Strümpell*, physician in Leipsig, 1853–1925]. See *disease, sign*, etc.

Strümpell-Leichtenstern disease. Acute encephalitis of infancy.

Strümpell-Marie disease. Rhizomelic spondylitis.

Strunsky's sign (*strun'skēz*) [Max *Strunsky*, New York orthopedic surgeon]. See under *sign*.

Struve's test (*stru'vez*) [Heinrich *Struve*, physician in Petrograd]. See under *tests*.

struvit calculus or stone (*stroo'vit*). See under *calculus*.

struxine (*strux'in*). A white, crystalline, slightly bitter alkaloid, $\text{C}_{21}\text{H}_{30}\text{N}_2\text{O}_4$, obtained from deteriorated *nux vomica* seeds.

strychnia (*strik'ne-ah*). Same as *strychnine*.

strychnicine (*strik'nis-in*). A white, crystalline, slightly poisonous alkaloid obtained from a variety of *Strychnos nux vomica* grown in Java.

strychnine (*strik'nin*) [L. *strychni'na*, *strychninum*, *strychnia*]. A white, crystalline, bitter, and poisonous alkaloid, $\text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_2$, found most abundantly in the seeds of *Strychnos nux vomica* of the West Indies and in the beans of *S. ignatii* of the Philippine Islands. It is highly poisonous, producing excessive irritability of the spinal cord, and this results in convulsions. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.001–0.005 Gm.). Pure strychnine is less often prescribed than its salts; the hydrochloride sulphate, nitrate, citrate, and phosphate are those principally employed. The dose of these is the same as that of uncombined strychnine. See *poisons, table of*. **s. arsenite**, a soft, white, crystalline powder: tonic and diuretic; useful in tuberculosis, malaria, dyspepsia, and skin diseases. It has been used in cases of snake bite. Dose, $\frac{1}{10}$ – $\frac{1}{2}$ grain (0.001–0.005 Gm.). **s. citrate**, occurs in the iron and strychnine citrate of the U. S. P., which contains 1 per cent of strychnine. **s. glycerophosphate**, a white powder. Dose, $\frac{1}{10}$ grain (0.0015 Gm.). **s. hydride**, an agent in almost every respect opposite in its effects to the other preparations of strychnine. **s. hydrochloride**, a crystalline salt, $\text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_2.\text{HCl} + 2\text{H}_2\text{O}$: used in a 1 per cent solution (*li'quor strychni'nae hydrochlor'idis*). **s. hydriodate**, a salt, $\text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_2.\text{HIO}_4$, occurring in colorless crystals, soluble in water. It is used in paralysis and anesthesia, and as a tonic. Subcutaneous dose, $\frac{1}{10}$ – $\frac{1}{2}$ grain (0.001–0.005 Gm.).

- s. hypophosphite**, a salt recommended for use in typhoid fever. **s. iodate**, a salt of strychnine. Maximum hypodermic dose, 1 grain (0.066 Gm.). **s. nitrate**, a salt, $C_{21}H_{22}N_2O_2 \cdot HNO_3$; used for dipsomania. **saccharinated s.**, a mixture of 64.6 per cent of strychnine and 35.4 per cent of saccharin. **s. sulphate**, a white, crystalline salt, $(C_{21}H_{22}N_2O_2)_2 \cdot H_2SO_4 + 5H_2O$; it is more employed than any other of the strychnine salts. **s. valerate**, a white crystalline powder. Dose, $\frac{1}{40}$ grain (0.0015 Gm.).
- strychninism** (stri'k'nin-izm). A toxic condition due to the misuse of strychnine. See *poisons, table of*.
- strychninization** (stri'k'nin-iz-a'shun). The act of bringing under the influence of strychnine.
- strychninomania** (stri'k'nin-o-ma'ne-ah) [*strychnine* + *mania* madness]. Insanity due to strychnine poisoning.
- strychninum** (stri'k-ni'num). 1. Strychnine. 2. A homeopathic preparation of strychnine.
- strychnism** (stri'k'nizm). Poisoning by strychnine.
- strychnize** (stri'k'niz). To put under the influence of strychnine.
- Strychnos** (stri'k'nos) [*στρίχνος* nightshade]. A genus of loganiaceous tropical trees. See *curare, hoang-nan, Ignatia, nux vomica, and strychnine*.
- stuck-finger**. Trigger finger. See under *finger*.
- students' placenta** (stu'dentz). See *placenta*.
- stump** (stump). The distal end of the part of the limb left in amputation. **conical s.**, a cone-shaped amputation stump due to undue retraction of the muscles; called also *sugar loaf stump*.
- stumpfoot**. Clubfoot.
- stump root**. 1. See *finger and toe disease, under disease*. 2. See *Plasmodiophora*.
- stun** (stun). To knock senseless; to render unconscious by a blow or other force; to daze.
- stupe** (stüp) [L. *stu'pa* tow]. A cloth, sponge, or the like, for external application, charged with hot water, wrung out nearly dry, and then made irritant or otherwise medicated.
- stupefacient, stupefactive** (stu-pe-fa'shent, stu-pe-fak'tiv) [L. *stupefa'ciens*]. Narcotic or soporific.
- stupemania** (stu-pe-ma'ne-ah) [L. *stu'por* stupor + *mania* madness]. Stuporous insanity.
- stupor** (stu'por) [L.]. Partial or nearly complete unconsciousness. **anergic s.**, a form of dementia in which the patient is quiet, listless, and non-resistant. **delusion s.**, stuporous insanity or acute dementia. **epileptic s.**, stupor following an epileptic convulsion; called also *postconvulsive s.* **lethargic s.** Same as *trance*. **postconvulsive s.** See *epileptic s.*
- stuporose** (stu'por-ös). Stuporous.
- stuporous** (stu'por-us). Affected with or characterized by stupor.
- stupp** (stup). A poisonous kind of soot which accumulates in the condensers of mercury smelters. It contains metallic mercury in a finely divided condition.
- sturdy** (stur'de). Stagers in sheep.
- sturin** (stur'in) [L. *stu'rio* sturgeon]. A protamine, from the spermatozoa of the sturgeon; it is an active bactericide.
- Sturm's interval** (sturmz) [Johann Christoph Sturm, 1635-1703]. See *focal interval, under interval*.
- stuttering** (stut'er-ing). A variety of faltering and interrupted speech characterized by difficulty in enunciating and joining together syllables; partial *alalia syllabaris*, or *anarthria*. **labiochoreic s.** Same as *labiochorea*. **urinary s.**, interruption of the flow during urination.
- Stuttgart disease**. Typhus fever of dogs.
- sty, styte** (sti) [L. *horde'olum*]. Inflammation of one or more of the sebaceous glands of the eyelids. **meibomian s.**, inflammation of a meibomian gland at the posterior surface of the lid.
- zeissian s.**, inflammation of a zeissian gland occurring at the edge of the lids.
- stycosis** (sti-ko'sis). The presence of calcium sulphate in the organs of the body, especially the lymph glands.
- style, stylet** (stil, sti'let) [L. *stylus*; *στυλος* post]. 1. A wire run through a catheter or cannula to render it stiff or to clear it. 2. A slender probe; stylet.
- styliform** (sti'lif-orm) [L. *stylus* bodkin + *for'ma* shape]. Resembling or shaped like a bodkin.
- styliscus** (sti-lis'kus) [L.; *στυλίσκος* pillar]. A slender cylindrical tent.
- stylo-** [L. *stylus* pen]. A prefix implying some relation to the styloid process of the temporal bone.
- stylo-auricularis** (sti'lo-aw-rik-u-la'ris). See in *table of muscles, under muscle*.
- styloglossus** (sti-lo-glos'us) [*styloid process* + *γλῶσσα* tongue]. See *muscles, table of*.
- stylohyal** (sti-lo-hi'al). Pertaining to the styloid process and the hyoid bone.
- stylohyoid** (sti-lo-hi'oid). Pertaining to the styloid process and to the hyoid bone; also pertaining to the stylohyoid muscle.
- stylohyoideus** (sti'lo-hi-oid'e-us). See *muscles, table of*. **s. alter**, an occasional muscular slip from the styloid process to the lesser cornu of the hyoid bone; it may replace the stylohyoid ligament.
- styloid** (sti'loid) [L. *stylus* pen + *εἶδος* form]. Resembling a pen, or stylus; long and pointed. **s. process**. See under *process*.
- styloiditis** (sti-loi-di'tis). Inflammation of tissues about the styloid process; especially an irritation of the nerve due to rubbing against the styloid process.
- styloaryngeus** (sti'lo-lar-in'je-us). That portion of the stylopharyngeus muscle which is inserted into the thyroid cartilage and the epiglottis.
- stylomandibular** (sti'lo-man-dib'u-lar). Pertaining to the styloid process and the inferior maxillary bone.
- stylomastoid** (sti-lo-mas'toid). Pertaining to the styloid and mastoid processes.
- stylomaxillary** (sti-lo-maks'il-a-re). Pertaining to the styloid process and to the inferior maxilla.
- stylomyloid** (sti-lo-mi'loid) [L. *stylus* pen + *μύλη* mill + *εἶδος* form]. Pertaining to the styloid process and to the region of the molar teeth.
- stylopharyngeus** (sti'lo-far-in'je-us). See *muscles, table of*.
- stylopine** (sti'lo-pin). A crystalline alkaloid, $C_{19}H_{19}NO_6$, from *Stylophorum diphyllum*.
- Stylosanthes** (sti-lo-san'thez) [*στυλος* pillar + *ανθος* flower]. A genus of leguminous herbs, chiefly South American. *S. elatior*, the pencil-flower of North America, is a uterine sedative. Dose of fluidextract, 10-20 minims (0.666-1.333 cc.).
- stylostaphyline** (sti-lo-staf'il-in). Pertaining to the styloid process of the temporal bone and the velum palati.
- stylostoeophyte** (sti-lo's'te-o-fit) [*στυλος* pillar + *osteophyte*]. A pillar-shaped exostosis.
- stylostixis** (sti-lo-stiks'is) [*στυλος* style + *στίξις* pricking]. See *apuncture*.
- stylus** (sti'lus) [L. "pen"]. A stylet; also a pencil-shaped medicinal preparation, as a stick of caustic.
- stymatosis** (sti-mat-o'sis) [*στυμα* priapism]. Priapism with a bloody discharge.
- stypage** (sti'paj, ste-pahzh) [Fr.]. The application of a stype to produce local anesthesia.
- stypse** (stip) [*στυπή* tow]. A tampon or pledget.
- stypsis** (stip'sis) [*στυψις*]. 1. Astringency; astringent action. 2. Treatment by astringents.

styptarnin (stip-tar'nin). A trade name for cotarnine hydrochloride.

styptase (stip'tās). A proprietary mixture of tannin-calcium chloride with hamamelis and fluorides; used in checking hemorrhage.

styptic (stip'tik) [στυπτικός]. 1. Astringent; arresting hemorrhage by means of an astringent quality. 2. A markedly astringent and hemostatic remedy. The chief styptics are alum, tannic acid, copper sulphate, iron chloride and sulphate, and zinc chloride. **Binelli's s.**, a solution of creosote, used for arresting hemorrhage. **chemical s.**, one which arrests hemorrhage by causing coagulation through chemical action. **s. colloid**, a substance prepared by saturating ether with tannin and guncotton: used as a dressing for wounds, and acting as a styptic, antiseptic, and air excluder. Also called *xylostyptic ether*. **mechanical s.**, one which acts by causing coagulation mechanically, as a pledget of cotton. **vascular s.**, one which acts by producing contraction of the wounded vessels. **Warren's s.**, *lotio adstringens*: sulphuric acid (5 fluidrachms), oil of turpentine (4 fluidrachms), and alcohol (4 fluidrachms).

stypticine (stip'tis-in). A proprietary name for cotarnine hydrochloride, $C_{12}H_{15}NO_4 \cdot HCl \cdot H_2O$; a yellow, crystalline substance, soluble in water and alcohol and having styptic, analgesic, and sedative properties. It is used especially in violent hemorrhages, particularly uterine hemorrhage. Dose, $\frac{1}{2}$ – $\frac{3}{4}$ grain (0.025–0.05 Gm.). It is often administered by the subcutaneous injection of a 10 per cent solution in amounts of 1–2 minims (0.066–0.133 cc.).

styptogan (stip'to-gan). A proprietary potassium permanganate paste for hemostasis.

styptol (stip'tol). A neutral phthalate of cotarnine, $(C_{12}H_{14}NO_3)_2C_6H_4(COO)_2$, in the form of a fine, crystalline powder: used for arresting uterine hemorrhage. Dose, $\frac{1}{2}$ grain (0.05 Gm.).

styracin (sti'ras-in). A crystalline principle, $C_{18}H_{16}O_2$, obtained from styrax.

styracol (sti'rak-ol). Cinnamyl guaiacol, $C_6H_5(CH_2)_2COO.C_6H_4.OCH_3$, an antiseptic substance in colorless needles, soluble in water and insoluble in water. It is used in intestinal catarrh and in tuberculosis. Dose, 15 grains (1 Gm.).

Styrax (sti'raks) [L.; στυράξ]. 1. A genus of styraceous trees and shrubs: several species afford balsams. See *benzoin*. 2. Same as *storax*.

styrol (sti'rol) [στυράξ]. A fragrant liquid or oily hydrocarbon vinyl benzene, $C_6H_5.CH:CH_2$, from storax. It is insoluble in water, but soluble in alcohol and ether. Called also *cinnamene* and *phenylethene*.

styron (sti'ron). Cinnamyl alcohol, phenyl allyl alcohol, $C_6H_5.CH:CH.CH_2OH$, a white crystalline substance prepared from styracin and forming an emulsion with water. It is used in microscopy and histology as a bleach: an as antiseptic it is employed in a 1 per cent solution.

Su., su. Abbreviation for *L. su'met*, let him take.

sub- [L. *sub* under]. A prefix signifying *under*, *near*, *almost*, or *moderately*.

subabdominal (sub-ab-dom'in-al). Situated near or below the abdomen.

subabdominoperitoneal (sub-ab-dom'in-o-peri-to-ne'al). Situated below the abdominal peritoneum.

subacetabular (sub-as-et-ab'u-lar). Below the acetabulum.

subacetal (sub-as'e-tal). A mixture of lead subacetate and alum: used for the preparation of a solution of aluminum acetate.

subacetate (sub-as'e-tāt). Any basic acetate.

subacid (sub-as'id). Somewhat acid.

subacidity (sub-as'id'it-e). Deficient acidity.

subacromial (sub-ak-ro'me-al). Situated below or beneath the acromion.

subacute (sub-ak-ūt'). Somewhat acute; between acute and chronic.

subalimentation (sub-al-im-en-ta'shun). Insufficient nourishment.

subanal (sub-a'nal). Situated below the anus.

subanconeus (sub-an-ko-ne'us). See *muscles*, table of.

subapical (sub-ap'ik-al). Situated below the apex.

subaponeurotic (sub'ap-on-u-rot'ik). Situated beneath the aponeurosis.

subarachnoid (sub-ar-ak'noid). Situated or occurring beneath the arachnoid. **s. space**. See *space*.

subarcuate (sub-ar'ku-āt) [L. *sub* under + *arcuatus* arched]. Somewhat arched or bent.

subareolar (sub-ar-e'o-lar). Beneath the areola. **s. abscess**, a subcutaneous abscess of the areola of the nipple.

subastragalar (sub-as-trag'al-ar). Situated or occurring under the astragalus.

subastringent (sub-as-trin'jent). Moderately astringent.

subatom (sub-at'om). A hypothetical component of an atom.

subatomic (sub-at-om'ik). Pertaining to subatoms. Subatomic chemistry is the chemistry of the radioactive substances.

subaural (sub-aw'al). Situated beneath the ear.

subauricular (sub-aw-rik'u-lar). Below the auricle of the ear.

subaxial (sub-aks'e-al). Below an axis.

subaxillary (sub-ak'sil-a-re). Below the armpit.

subbasal (sub-ba'sal). Below the base. **s. plexus**. See *stroma plexus*.

subbrachial (sub-bra'ke-al). Beneath the brachium (in cerebral anatomy).

subbrachycephalic (sub-bra-ke-sef-al'ik). Somewhat brachycephalic; having the length-breadth index from 78 to 79.

subcain (sub-ka'in). A proprietary dental anesthetic made of cocaine, suprarenin, salicylic acid, etc.

subcalcarine (sub-kal'kar-in). Beneath the calcarine fissure.

subcallosal convolution (sub-kal-o'sal). See *convolution*.

subcalorism (sub-ka'lor-izm). Same as *frigorism*.

subcapsular (sub-kap'su-lar). Situated below a capsule, especially the capsule of the cerebrum.

subcapsuloperiosteal (sub-kap'su-lo-per-e-os'te-al). Beneath the capsule and the periosteum of a joint.

subcarbonate (sub-kar'bon-āt). Any basic carbonate.

subcartilaginous (sub'kar-til-aj'in-us). 1. Situated beneath a cartilage. 2. Partly cartilaginous.

subcecal fossa (sub-se'kal). See *fossa*.

subcerebellar (sub-ser-e-bel'ar). Beneath the cerebellum.

subchloride (sub-klo'rid). That chloride of any series which contains the least chlorine.

subchondral (sub-kon'dral). Beneath a cartilage.

subchordal (sub-kor'dal). Situated below or beneath the notochord.

subchorionic (sub-ko-re-on'ik). Situated beneath the chorion.

subchoroidal (sub-ko-ro'i'dal). Beneath the choroid.

subchronic (sub-kron'ik). Between chronic and subacute.

subclavian (sub-kla've-an). Situated under the clavicle.

subclavicular (sub'kla-vik'u-lar). Situated under the clavicle.

subclavius (sub-kla've-us) [L.]. See *muscles*, table of.

- subcollateral convolution** (sub-kol-at'er-al). See *convolution*.
- subconjunctival** (sub-kon-junk-te'val). Situated or occurring beneath the conjunctiva.
- subconscious** (sub-kon'shus). Imperfectly or partially conscious.
- subconsciousness** (sub-kon'shus-nes). The state of being partially conscious; the condition in which mental processes occur with the mind nearly or quite unconscious of the action. Cf. *dissociation*.
- subcontinuous** (sub-kon-tin'u-us). Nearly continuous; remittent.
- subcoracoid** (sub-kor'ak-oid). Situated beneath the coracoid process.
- subcortex** (sub-kor'teks). That part of the brain substance which underlies the cortex.
- subcortical** (sub-kor'tik-al). Situated beneath the cortex.
- subcostal** (sub-kos'tal). Situated beneath a costa or rib.
- subcostalgia** (sub-kos-tal'je-ah) [*subcostal* + *ἀλγος* pain]. Pain over the subcostal nerve, *i. e.*, in the region of the appendix, epigastrium, and kidney.
- subcranial** (sub-kra'ne-al). Beneath the cranium.
- subcrepitant** (sub-krep'it-ant). Nearly or indistinctly crepitant.
- subcrepitation** (sub'krep-it-a'shun). An indistinctly crepitant sound.
- subcruralis** (sub-kru-ra'lis). Same as *subcruraeus*.
- subcrureus** (sub-kru-re'us). See *muscles*, table of.
- subculture** (sub-kult'ur). A culture of bacteria derived from another culture.
- subcuneus** (sub-ku'ne-us). A group of convolutions under the cuneus, and continuous with the gyrus fornicatus.
- subcutaneous** (sub-ku-ta'ne-us). Situated or occurring beneath the skin.
- subcutaneous colli** (sub-ku-ta'ne-us col'i). The platysma myoides muscle.
- subcuticular** (sub-ku-tik'u-lar). Situated beneath the epidermis.
- subcutin** (sub-ku'tin). Paraphenolsulphonate of ethylaminobenzoate: used like anesthetic.
- subcutis** (sub-ku'tis) [L. *sub* under + *cutis* skin]. The subcutaneous tissue.
- subcutoyd** (sub-ku'toid). A proprietary name for a medicinal preparation for hypodermic use.
- subdelirium** (sub-de-lir'e-um). Partial or mild delirium.
- subdeltoid** (sub-del'toid). Beneath the deltoid muscle.
- subdental** (sub-den'tal) [L. *sub* under + *dens* tooth]. Beneath the teeth.
- subdermal, subdermic** (sub-der'mal, sub-der'mik). Hypodermic.
- subdiaphragmatic** (sub'di-af-rag-mat'ik). Situated beneath the diaphragm.
- subdorsal** (sub-dor'sal). Situated below the dorsal region.
- subduct** (sub-dukt'). To depress or draw down.
- subduction** (sub-duk'shun) [L. *sub* below + *ductio*]. The ducting of the eyeball exerted by the inferior rectus muscle.
- subdural** (sub-du'ral). Situated beneath the dura.
- subencephalon** (sub-en-sef'al-on). The oblongata, pons, crura, and corpora quadrigemina.
- subendocardial** (sub'en-do-kar'de-al). Situated beneath the endocardium.
- subendothelial** (sub'en-do-the'le-al). Situated beneath an endothelial membrane.
- subendothelium** (sub'en-do-the'le-um). Débove's membrane (q. v.).
- subendymal** (sub-en'dim-al). Situated beneath the endyma.
- subepidermal, subepidermic** (sub-ep-id-er'mal, sub-ep-id-er'mik). Situated or occurring beneath the epidermis.
- subepiglottic** (sub-ep-e-glot'ik). Below the epiglottis.
- subepithelial** (sub-ep-e-the'le-al). Situated beneath the epithelium. s. **endothelium**. Same as *Débove's membrane*. See under *membrane*.
- suberin** (su'ber-in). An insoluble variety of cellulose derived from cork.
- subeston** (sub-es'ton). Dibasic aluminum acetate: used as an astringent, antiseptic, and deodorizer.
- subexcite** (sub-eks-it'). To excite in a partial manner.
- subextensibility** (sub-eks-ten-sib-il'it-e). Decreased extensibility.
- subfalcial** (sub-fal'se-al). Beneath the falx cerebri.
- subfascial** (sub-fas'e-al). Situated beneath a fascia.
- subfebrile** (sub-feb'ril). Somewhat febrile.
- Sub fin. coct.** Abbreviation for L. *sub finem coctio'nis*, toward the end of boiling.
- subfissure** (sub-fish'ur). A fissure of the brain concealed by two overlapping convolutions.
- subflavous** (sub-fla'vus) [L. *sub* under + *flavus* yellow]. Yellowish.
- subfoliar** (sub-fo'le-ar). Pertaining to a subfolium.
- subfolium** (sub-fo'le-um) [L. *sub* under + *folium* leaf]. Any one of the elementary divisions of a cerebellar folium.
- subfrontal** (sub-frun'tal). Situated beneath a frontal lobe or convolution.
- subgallate** (sub-gal'at). A basic gallate. See *bismuth subgallate*.
- subgemmal** (sub-jem'al) [L. *sub* under + *gemma* bud]. Situated under a taste bud or other bud.
- subgerminal** (sub-jer'min-al). Below or under the germ.
- subglenoid** (sub-gle'noid). Situated under the glenoid fossa, as, *subglenoid* dislocation of the humerus.
- subglossal** (sub-glos'al). Same as *sublingual*.
- subglossitis** (sub-glos-i'tis) [L. *sub* under + *glossa* tongue + *-itis* inflammation]. Inflammation of the lower surface of the tongue.
- subglottic** (sub-glot'ik). Situated or occurring under the glottis.
- subgranular** (sub-gran-u'lar). Somewhat granular.
- subgrondation** (sub-gron-da'shun) [Fr.]. The depression of one fragment of bone beneath another.
- subgyre** (sub-jir). Subgyrus.
- subgyrus** (sub-jir'us). Any gyrus that is partly concealed or covered by another or by others.
- subhepatic** (sub-he-pat'ik). Situated beneath the liver.
- subhumeral** (sub-hu'mer-al). Below or beneath the humerus.
- sybhyaloid** (sub-hi'al-oid). Occurring beneath the hyaloid membrane.
- subhyoid** (sub-hi'oid). Subhyoidean.
- subhyoidean** (sub-hi-oid'e-an). Situated or occurring under the hyoid.
- subicteric** (sub-ik-ter'ik). Somewhat jaundiced.
- subicular** (sub-ik'u-lar). Of or pertaining to the uncinate gyrus.
- subiculum** (sub-ik'u-lum) [L. "support"]. That part of the gyrus hippocampi which borders the fissura hippocampi. The term is sometimes applied to the whole of this gyrus. s. **promontorii**, a ridge of bone bounding the fenestra vestibuli behind.
- subiliac** (sub-il'e-ak). Below the ilium.

- subilium** (sub-il'e-um). The lowest portion of the ilium.
- subimbibitional** (sub-im-bib-ish/on-al). Due to deficient intake of liquid.
- subincision** (sub-in-sizh'un) [L. *sub* under + *incidere* to cut]. The creation of an opening into the urethra on the under side of the penis; a custom common among various savage and barbarous races. It does not render coitus unfruitful.
- subinfection** (sub-in-fek'shun). 1. Auto-infection due to weakening of the resisting cells of the organism from constant effort in overcoming toxic cells. 2. A condition in which bacteria that have gained entrance to the system become destroyed, and with their destruction liberate toxins which poison the cells around them.
- subinflammation** (sub'in-flam-a'shun). Slight or mild inflammation.
- subinflammatory** (sub-in-flam'at-or-e). Characterized by a mild inflammation.
- subintegumental** (sub-in-teg-u-men'tal). Beneath the skin.
- subintimal** (sub-in'tim-al). Beneath the intima.
- subintrans** (sub-in'trans). Anticipating recurrence.
- subintrans** (sub-in'trant) [L. *subintrans* entering by stealth]. 1. Beginning before the completion of a previous cycle or paroxysm; anticipating. 2. Characterized by anticipating recurrences.
- subinvolution** (sub'in-vo-lu'shun). Incomplete involution; failure of a part to return to its normal size and condition after enlargement from functional activity, as, *subinvolution* of the uterus.
- subiodide** (sub-i'o-did). That iodide of any series which contains the least iodine.
- subjacent** (sub-ja'sent) [L. *sub* under + *jacere* to lie]. Lying beneath or underneath.
- subject** (sub'jekt) [L. *subjec'tus* cast under]. 1. A person or animal subjected to treatment, observation, or experiment. 2. A body for dissection.
- subjective** (sub-jek'tiv) [L. *subjectivus*]. Pertaining to or perceived only by the affected individual; not perceptible to the senses of another person, as, *subjective* symptoms, sensations, etc.
- subjectoscope** (sub-jek'to-skop) [*subjective sensation* + *σκοπεῖν* to view]. An instrument used in the study of subjective visual sensations.
- subjee** (sub'je) [Hind. *sabzi*; literally, "greenness"]. The capsules and larger leaves of *Can'nabis indica*. See *bhang*.
- subjugal** (sub-ju'gal) [L. *sub* under + *juga'le* malar bone]. Situated below the malar bone.
- sublamine** (sub'lam-in). Ethylenediamine-mercury sulphate, $\text{HgSO}_4 \cdot 2\text{C}_2\text{H}_4(\text{NH}_2)_2 \cdot 2\text{H}_2\text{O}$, a white, crystalline compound. It is a disinfectant for the hands, and has been used in syphilis.
- sublatio** (sub-la'she-o) [L.]. Removal. *s. ret'inae*, detachment of the retina.
- sublation** (sub-la'shun) [L. *subla'tio* removal]. The removal, detachment, or displacement of a part.
- sublethal** (sub-le'thal). Not quite fatal; as a dose.
- sublimate** (sub'lim-at) [L. *sublima'tum*]. A substance obtained or prepared by sublimation. *corrosive s.*, corrosive mercuric chloride.
- sublimation** (sub-lim-a'shun) [L. *sublima'tio*]. 1. The process of vaporizing and condensing a solid substance without melting it. 2. Freud's term for the process of deviating sexual motive powers from sexual aims or objects to new aims or objects other than sexual.
- sublime** (sub-lim') [L. *sublima're*]. To volatilize a solid body by heat and then to collect it in a purified form as a solid or powder.
- subliminal** (sub-lim'in-al) [L. *sub*. under + *limen* threshold]. Below the limen, or threshold, of sensation.
- sublimis** (sub-li'mis) [L.]. High; superficial.
- sublimophenol** (sub-li-mo-fe'no'l). A proprietary surgical antiseptic, mercury chlorophenolate.
- sublingual** (sub-lin'gw'al) [L. *sub* under + *lin'gua* tongue]. 1. Situated under the tongue. 2. Supplying the parts beneath the tongue. See *artery*, *gland*, etc.
- sublinguitis** (sub-lin-gwi'tis). Inflammation of the sublingual gland.
- sublobe** (sub'lōb). A division of a lobe.
- sublobular** (sub-lob'u-lar). Situated beneath a lobe.
- sublumbar** (sub-lum'bar). Situated beneath the lumbar region.
- subluxation** (sub-luks-a'shun) [L. *sub* under + *luxa'tio* dislocation]. An incomplete or partial dislocation.
- sublymphemia** (sub-lim-fe'me-ah). Same as *hypolymphemia*.
- submammary** (sub-mam'ar-e). Situated or occurring beneath a mammary gland.
- submarginal** (sub-mar'jin-al). Situated beneath or near a margin.
- submarine** (sub-mar-ēn'). In dentistry, covered with the fluids of the mouth, as, *submarine* filling.
- submaxilla** (sub-maks-il'ah) [L. *sub* under + *max-il'la* jaw]. The lower jaw or jawbone.
- submaxillitis** (sub-maks'il-ar-i'tis). Mumps affecting the submaxillary gland.
- submaxillary** (sub-maks'il-a-re). Situated beneath a maxilla. See *gland*.
- submaxillitis** (sub'maks-il'i'tis). Inflammation of a submaxillary gland; a variety of mumps.
- submedial, submedian** (sub-me'de-al, -me'de-an). Beneath or near the middle.
- submembranous** (sub-mem'bran-us). Partially membranous.
- submental** (sub-men'tal) [L. *sub* under + *men'tum* chin]. Situated below the chin.
- submersion** (sub-mer'shun) [L. *sub* under + *mergere* to dip]. The act of putting or the condition of being under the surface of a liquid.
- submicron** (sub-mi'kron). A colloid particle varying in size from 10^{-5} cm. to 5×10^{-7} cm. They are invisible with a microscope, but can be recognized with an ultramicroscope. Called also *hypomicro*.
- submicroscopical** (sub'mi-kro-skop'ik-al). Too small to be visible with the microscope.
- submorphous** (sub-mor'fus). Neither amorphous nor perfectly crystalline.
- submucosa** (sub-mu-ko'sah). The layer of areolar tissue situated beneath the mucous membrane.
- submucosal** (sub-mu-ko'sal). Beneath the mucosa.
- submucous** (sub-mu'kus). Situated beneath or under the mucous membrane.
- subnarcotic** (sub-nar-kot'ik). Moderately narcotic.
- subnasal** (sub-na'zal). Situated below the nose.
- subneural** (sub-nu'ral). Situated beneath a nerve or the neural axis.
- subnitrate** (sub-ni'trät). A basic nitrate.
- subnormal** (sub-nor'mal). Below or less than normal. A feeble-minded person having a mental level somewhat above twelve years, but below average adult level.
- subnotochordal** (sub'no-to-kor'dal). Situated beneath the notochord.
- subnucleus** (sub-nu'kle-us). A partial or secondary nucleus into which a large nerve nucleus may be split up.
- subnutrition** (sub-nu-trish'un). Defective nutrition.
- suboccipital** (sub-ok-sip'it-al). Situated below or under the occiput.

suboperculum (sub-op'er/ku-lum). The portion of the occipital gyrus that overlies the insula.

suboptimal (sub-op'tim-al). Below the optimum. See *optimum*.

suboptimum (sub-op'tim-um). A temperature lower than that which is optimal or best suited to the growth of an organism.

suborbital (sub-or'bit-al). Situated beneath the orbit.

suboxide (sub-oks'id). That oxide in any series which contains the least oxygen.

suboxidation (sub'oks-id-a'shun). Deficiency in the supply of oxygen; deficient oxidation.

subpapular (sub-pap'u-lar). Indistinctly papular.

subparalytic (sub'par-al-it'ik). Partially paralytic.

subparietal (sub-par-i'et-al). Situated beneath or below a parietal bone, convolution, or fissure.

subpatellar (sub-pat-el'ar). Situated beneath or below the patella.

subpectoral (sub-pek'tor-al). Beneath the pectoral muscle.

subpeduncular (sub-pe-dung'ku-lar). Situated beneath a peduncle.

subpelvipitoneal (sub'pel-'vip-er-it-o-ne'al). Beneath the pelvic peritoneum.

subpericardial (sub'per-ik-ar'de-al). Situated beneath the pericardium.

subperiosteal (sub'per-e-os'te-al). Situated beneath or under the periosteum.

subperiosteocapsular (sub'per-e-os-te-o-kap'su-lar). Same as *subcapsulo-periosteal*.

subperitoneal (sub'per-it-o-ne'al). Situated or occurring beneath the peritoneum.

subperitoneo-abdominal (sub'per-it-o-ne'o-ab-dom'in-al). Occurring beneath the abdominal peritoneum.

subperitoneopelvic (sub'per-it-o-ne-o-pel'vik). Occurring beneath the peritoneum of the pelvis.

subpersonal (sub-per'sun-al). Having an abnormally slight individuality.

subpetrosal sinus (sub-pe-tro'sal). The inferior petrosal sinus.

subpharyngeal (sub-far-in'je-al). Situated beneath the pharynx.

subphrenic (sub-fren'ik). Situated beneath or under the diaphragm.

subpial (sub-pi'al). Situated beneath the pia mater.

subplacenta (sub-pla-sen'tah). The decidua vera.

subpleural (sub-plu'ral). Situated beneath the pleura.

subplexal (sub-pleks'al). Beneath the cerebral plexus.

subpontine (sub-pon'tin). Situated below the pons.

subpreputial (sub-pre-pu'shal). Situated below the prepuce.

subpubic (sub-pu'bik). Situated or performed below the pubic arch.

subpulmonary (sub-pul'mo-na-re). Situated or occurring below the lung.

subpulpal (sub-pul'pal). Situated below the dental pulp.

subpyramidal (sub-pir-am'id-al). Situated below a pyramid.

subrectal (sub-rek'tal). Below the rectum.

subretinal (sub-ret'in-al). Situated below the retina.

subrostral (sub-ros'tral). Beneath the rostrum.
